Acad, Prof, & Personal Success (APPS)

APPS 1620. Current Topics: Strategies for Student Success. (; 1 cr. [max 6 cr.]; Student Option No Audit; Every Fall & Spring)
For topics see class schedule.

Academic Health Center Shared (AHS)

AHS 1101. Orientation to Health Careers. (; 1 cr. ; Student Option No Audit; Every Fall & Spring)
Interest/personality assessment, health-related academic majors/professions, professionalism/ethics in health care. Students integrate information about self and about careers to move toward major/career choice.

AHS 1102. Orientation to Health Careers. (; 1 cr. ; Student Option No Audit; Every Fall & Spring)
This one-credit, online course is for students who are exploring health careers. Students will have the opportunity to assess their work values and interests, to learn about the academic and experiential requirements of University health professional programs, and to develop a career action plan.

AHS 1104. Experiences in Health. (; 2 cr. ; Student Option; Every Spring)
AHS 1104 Experiences in Health is a two (2) credit course, offered in-person. Classes will be in the classroom every third week, and the other class days will be spent in an experiential learning opportunity in one of our health science schools. Locations will be provided on Canvas. This course is designed for students enrolled in the Health Professions Pathways program. This course will involve hands-on experiential learning in collaboration with many of our health science programs at the University. Including experiences in Dentistry, Medical Lab Science, Nursing, Occupational Therapy, Pharmacy, Physical Therapy, Public Health, and Veterinary Medicine. This course is designed for those interested in exploring a variety of health professions, learning about the different roles of a healthcare team, as well as the attributes and qualities of inter-professional teams in healthcare. The course will also cover materials related to professional development and preparation for a health professional program. prereq: Enrolled in the Health Professions Pathways Program; AHS 1101, AHS 1102 or AHS 1600.

AHS 1600. The Future Physician I: Medicine in the 21st Century. (1 cr. ; A-F only; Every Fall)
Multi-disciplinary field of medicine. Challenges shaping work of health professionals in health care field. History of medicine/health. Global health issues/health care. Roles of physicians, team members, patient.

AHS 1601. The Future Physician II. (; 1 cr. ; Student Option; Every Fall & Spring)
A career in medicine. Life/work of physicians, what it takes to be successful. Issues/

trends including Institute of Medicine core competencies, medical ethics, concept of health teams, multiculturalism, global issues, disparities in accessing medical care.

AHS 1602. Experiences in Health Care and Public Health. (; 2 cr. ; Student Option No Audit; Every Fall, Spring & Summer)
This course for students interested in a professional health career requires you to obtain a service-learning volunteer opportunity in the field in which you are interested (e.g. medicine - clinic or hospital, public health - health department, or other organization that works to promote health such as American Lung Association etc, dentistry - a dental clinic?) You will be required to complete 35 hours volunteering throughout the semester in addition to completing the weekly assignments on Canvas.

AHS 1901. Health in the Tropics: Humans, Animals, and Ecosystems. (GP; 3 cr. ; A-F only; Every Spring)
The future health of our world requires a generation of creative, motivated, strategic, and expansive thinkers prepared to collaborate across disciplines and sectors to proactively protect the health of human and animal populations and the environment in which they live. Through exploring the connections between culture and human, animal, and ecosystem health in Ecuador, this Freshman Seminar will expose freshman considering health profession careers to the variety of health professions involved in the One Health approach. Students will learn about the roles of various health professions and the challenges and opportunities for the various professions to work together on complex health challenges. Ecuador is an ideal location to incorporate cultural contexts with an understanding of the intersection between animal health, human health, and the environment. Ecuador is home to an amazing array of cultural diversity. Historically, Ecuador was home to a wide range of Amerindian groups and the Inca Empire later to be colonized by Spain and then became independent in 1830. During colonization, numerous new infectious diseases devastated parts of Ecuador. During the first half of the spring semester at UMN, students will learn about the challenges and opportunities of human, animal, and ecosystem health (One Health) in Ecuador while comparing and contrasting it to the US and/or Minnesota. Students complete reflections and journaling that will contribute to their final story project. Through taking and learning about the Intercultural Development Inventory and cultural development and reflection activities including Observe, Describe, Interpret, and Evaluate (ODIE), students will learn more about their own cultures while preparing to openly experience culture in Ecuador. During the Spring Break week, students will have the opportunity to apply the knowledge learned in the early Spring semester to observations and experiences in Ecuador. The teams will ask questions during site visits from their assigned One Health perspective in preparation for their final project on One Health in Ecuador. Site visits will include a visit to Colonial Quito and

the Mitad del Mundo City Museum. Students will visit an urban and rural health center, the CINCA Agroecological Center, the San Clemente Pukyu Pamba project featuring an indigenous community where they will share a meal with the community. Students will also participate in an indigenous healing ceremony. Finally students will visit Pambilino, a Bosque Escuela, located in the northwest of Ecuador near the community of Mashpi, a nature reserve of the Choco rainforest that has a 4 hectare permaculture farm in the North Occidental of Ecuador, nestled within the tropical foothills of Ecuador. They work to teach sustainable agroforestry techniques to those that want to learn on the Bosque-escuela. Upon returning to UMN, the students will participate in re-entry activities, present their final digital story, and have a final class debrief. Students will complete reflective journal entries throughout the semester and a final personal reflection on One Health in Ecuador compared and contrasted to Minnesota/USA.

AHS 2300. Orientation to Clinical Research. (1 cr. ; A-F only; Every Fall & Spring)
Seminar. Field of clinical research. Ethical conduct/professionalism. Research methods pertinent to dentistry, medicine, public health, pharmacy, nursing. Field experience.

AHS 2400. Writing a Personal Statement for a Health Program. (; 1 cr. ; S-N only; Every Fall, Spring & Summer)
AHS 2400 will keep you on track to write a compelling and unique personal statement. This course is designed for students who will be applying to a health professional degree program (i.e. medicine, pharmacy, physical therapy, etc.). Prerequisites: Junior or Senior status. Competitive GPA and demonstrated intention to apply to a professional health program. To be eligible for AHS 2400: Students must have a competitive GPA, and be within one year of submitting their application for a health professional degree program. You will be required to complete a form after enrolling to confirm your seat in the course. If the student does not meet these requirements they will be unenrolled from the course.

AHS 2707. Global Health Challenges for Future Health Professionals. (; 2 cr. [max 4 cr.]; A-F only; Periodic Fall, Spring & Summer)
This is a two-credit course designed for students who have an interest in learning more about global health careers, including the issues and the challenges and opportunities health professionals face as they work in global health. Every year this course is designed a little differently ? to respond to current events in global health. We have focused on topics including: pandemic flu, natural and man made disasters, social determinants of health, immigration and other topics.

AHS 3001. Health and Medicine in India in a Social and Cultural Context. (GP; 3 cr. ; A-F only; Every Spring)
Students are required to attend two pre-orientations, travel to India on the global seminar, and complete a project and presentation upon their return to the United States. prereq: instr consent

AHS 3002. Global Health in Thailand - Humans, Elephants, and Disease. (GP; 3 cr. ; A-F only; Every Spring)

Global Health in Thailand is a Global Seminar that travels to Chiang Mai, Thailand to examine the relationship between human, animal, and environmental health through the One Health approach. The course travels to Thailand over winter break and then meets for the first half of Spring semester. For more information, see the Learning Abroad Center website.

AHS 3003. Sustainable Approaches to Health in France. (GP; 3 cr. ; A-F only; Every Spring)

A wide range of factors influences health status in a country including politics, economics, culture, history and the systems that provide structure and process in country. As the global world developed the 2030 Sustainable Development Goals (SDGs) framework, we have seen an increase in innovative strategies by countries to meet the 2030 goals, with France emerging as a leader in their efforts. The 2030 Sustainable Development Goals are framed by five categories: planet, people, prosperity, peace, and partnership. France has made some innovative efforts to move the needle in each of these categories. For example, France is leading the way with food security, having introduced a new international strategy for food security, nutrition, and sustainable agriculture in October 2019. From public health and healthcare systems to food safety and security, the extensive challenges require collaboration, coordination, and an interprofessional approach to be successful. According to writer Kim Ann Zimmerman, "The culture and underlying values in France are distinctly different from the US. The French believe in 'galit?', which means equality, and is part of the country's motto: "Libert?, Egalit?, Fraternit?." Many say they place a higher importance on equality than liberty and fraternity, the other two words in the motto.? We will explore how France?s history, culture, and underlying values affect health, health disparities and systems that influence health, healthcare and SDGs

AHS 3101. The New Health Professions Team. (2 cr. ; Student Option; Every Spring)

The future health of our world population requires a generation of creative, motivated, strategic, expansive thinkers prepared to collaborate across disciplines and sectors to preempt and address the causes of poor health in patients and populations. The knowledge and skills needed to be successful come from all disciplines, not just the health professions, and require us to learn about and work with each other. In addition to sharing discipline specific knowledge, the key is to translate concepts and language so interprofessional teams can identify, dissect, define, and solve health-related grand challenges together. This course will help students grow in their understanding and capacity to work in interdisciplinary teams in a multitude of settings, from serving patients to serving communities. prereq: This course is recommended for junior and senior undergraduate students pursuing a health career.

AHS 4393. Directed Study. (1-3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Students participating in a directed study will carry out an independent project under supervision of an instructor from the Pre-Health Student Resource Center. Registering for directed study allows you to get credit for conducting research or independent studies that match with your interest as a future health professional. You should discuss your interest with an instructor prior to completing your directed study contract http://z.umn.edu/directed_activity prereq: instructor consent

AHS 5100. HIV Drug Discovery. (3 cr. ; A-F only; Every Fall)

Basic virology, medicinal chemistry, pharmacology of HIV chemotherapy. General process of drug discovery, including target selection/validation, in vitro assay development, computer-aided inhibitor design strategies/drug-like properties. Major classes of FDA-approved anti-HIV drugs. Intellectual properties, FDA regulatory issues, successful antiviral discovery story. prereq: One year of organic chemistry, [CHEM 2301 and 2302] or equivalent, [one semester of biochemistry], [BIOC 3021 or equivalent]

Accounting (ACCT)**ACCT 1911. The Language of Business.** (3 cr. ; A-F only; Every Fall & Spring)

Have you ever wondered why Tesla's stock price tripled in a 3-month time period? Why did Toys R Us go bankrupt? Why does Apple hold on to \$200 billion of cash? Why is Snapchat still not profitable yet? All of these questions can be answered by looking at a company's financial statements! Financial accounting is often called the language of business as it is the language that companies use to communicate their financial information to various parties. Regardless of whether you want to work in the field of accounting and finance, become a manager at a company, or just dabble in stock market investing, understanding how a business works, how managers make decisions, and how to analyze financial statements will be hugely beneficial for your future. This seminar will start by exposing you to basic business terminology and concepts, as well as analyzing how businesses make decisions. Next, we will focus on the ABCs of financial statements and financial analysis. Finally, we will apply these principles to real-life case studies and discussions that explore various companies such as Spotify, Tesla, Uber, Netflix, Starbucks, Apple, Snapchat, and more!

ACCT 2051. Introduction to Financial Reporting. (4 cr. ; A-F or Audit; Every Fall, Spring & Summer)

This course introduces the topics of financial reporting and accounting. The purpose of financial accounting is to provide information to the entity owners and external parties to serve as the basis for making decisions about that entity. A student who successfully completes this class should be able to 1) understand the concepts and principles of accounting,

2) analyze, record and report the accounting treatment of business transactions, and 3) prepare, interpret, and analyze financial statements.

ACCT 2051H. Honors: Introduction to Financial Reporting. (4 cr. ; A-F or Audit; Every Spring)

This course introduces the topics of financial reporting and accounting. The purpose of the financial accounting is to provide information to the entity owners and external parties to serve as the basis for making decisions about that entity. A student who successfully completes this class should be able to 1) understand the concepts and principles of accounting, 2) analyze, record and report the accounting treatment of business transactions, and 3) prepare, interpret, and analyze financial statements.

ACCT 3001. Strategic Management Accounting. (3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Costing techniques, including activity-based costing. Applying costing methods to determine costs of products, services, and production processes. Use of costs in operating/strategic decisions. prereq: ACCT 2051 or 2050

ACCT 5101. Intermediate Accounting I. (4 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Valuation, measurement, reporting issues related to selected assets/liabilities of firm. Theory underlying accounting issues. Applying accounting principles. prereq: Grade of B- or better in Acct 2050/Acct 2051 OR passed the Acct pretest (z.umn.edu/Acct5101pretest); CSOM Major, MGMT minor, mgmt grad student

ACCT 5102. Intermediate Accounting II. (4 cr. ; A-F or Audit; Every Fall & Spring)

Basic valuation problems encountered in financial reporting. Focuses on valuation of liabilities. Accounting for leases, pensions, and deferred taxes. Introduces consolidated financial statements. prereq: 5101[mgmt or grad mgmt student]

ACCT 5125W. Auditing Principles and Procedures. (WI; 4 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Concepts of auditing internal control/financial statements in accordance with generally accepted auditing/professional standards established by Public Company Oversight Board (PCAOB) and American Institute of Certified Public Accountants (AICPA). Writing Intensive course. prereq: [3101 or 5101 or 5100 or 6100], [acct major or grad mgmt student]

ACCT 5126. Internal Auditing. (2 cr. ; A-F or Audit; Every Fall & Spring)

Financial/operational auditing. Standards. Managing the function. prereq: 2050

ACCT 5135. Fundamentals of Federal Income Tax. (4 cr. ; A-F or Audit; Every Fall & Spring)

U.S. federal system of taxation. Concepts of gross income, deductions, credits. Analysis of structure of Internal Revenue Code, its provisions with respect to specific areas of law. Interrelationships between legislative,

judicial, and administrative authority. Methods, tools, and techniques to conduct tax research. prereq: [2050 and or 2051] or MBA 6030, [mgmt or grad mgmt student]

ACCT 5141. Financial-Data Analytics. (2 cr. ; A-F only; Every Fall & Spring)

This is a 2-credit undergraduate-level financial reporting data analytics course for Carlson students. The main learning objective is to introduce students specializing in business (accounting, auditing, tax, finance, marketing, operations, etc.) to data analytics, providing them the necessary knowledge and tools needed to effectively use data analytics in their specialized domain. The goal is thus for students to be able to consume and use available data analytics technologies to complement existing technical skills, rather than to train "data analytics specialists" (although this class is a good jumping-off point for students who wish to pursue a career specializing in data analytics!). Prior coding experience is thus not required, although students should have completed business statistics (SCO 2550 or BA 2551 or equivalent statistics course). After a general overview of data analytics and machine learning, we will dive into the ETL (extract, transform, load) process, covering topics and showcasing applications such as data joins, variable types, formulas, and regular expressions. We will then explore data visualization tools (including pivot tables and dashboards) and conclude the term by modeling data to create business insights via predictions. Students will gain hands-on experience using state-of-the-art data analytics tools and will learn how to conduct basic SQL queries. Students will improve their quantitative and problem-solving skills and learn how to apply scientific research methods to answer questions, present solutions, and discuss limitations. An emphasis will be placed on financial reporting datasets/applications, although the methods and concepts covered are applicable to other business settings/functions. Ultimately, students will enhance their analytical skills and achieve a deeper understanding of issues related to financial reporting specifically and business more generally. prereq: SCO 2550 or BA 2551 or equivalent statistics course and Acct 2050 or 2051

ACCT 5161. Financial Statement Analysis. (; 2 cr. ; A-F or Audit; Every Fall & Spring) Interpretation/analysis of financial statements. Introduces basic techniques of financial statement analysis and applies them in different settings (e.g., in investment/credit decisions). prereq: [5101]

ACCT 5181. Consolidations and Advanced Reporting. (2 cr. ; A-F or Audit; Every Spring & Summer) Theory underlying preparation of consolidated financial statements, as well as mechanical computations needed to prepare statements. prereq: 5101, 5102 recommended, or MBA 6031 (equiv. is also MBA 6030 before course number change in Fall 2022). MBA/Mgmt Sci MBA students must register A/F grade base.

ACCT 5201. Intermediate Management Accounting. (2 cr. ; A-F or Audit; Every Fall & Spring)

This course is an in-action course. The course explores the topic of management accounting in greater depth. The course expands introductory course material via special emphasis on decision making, problem solving skills and exploration of accounting's role within overall management. The course is an in-action class. We will have a project working on a business case from a firm as the final assessment for the course. prereq: 3001, acct or finance major

ACCT 5236. Introduction to Taxation of Business. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Introduction to the income tax laws governing the taxation of corporations, partnerships, limited liability companies, limited liability partnerships, and S corporations. Students will also increase their knowledge and skills related to tax research by writing research memorandums. prereq: 5135, acct major

ACCT 5311. International Accounting. (; 2 cr. ; A-F or Audit; Every Spring)

Causes/history of international differences in design of financial accounting/reporting systems, efforts to harmonize them into worldwide system. Role/impact of currency translation on financial statements. International Accounting Standards, conceptual framework. prereq: 5101; [5102 or concurrent registration is required (or allowed) in 5102] recommended

ACCT 5320. Financial Reporting Data Analytics. (; 2 cr. ; A-F only; Every Fall)

This is a core course for the students in the Master of Accounting program at Carlson School of Management. The main learning objective is to familiarize students with large-scale financial reporting and market information databases and to improve students' quantitative analytical and problem-solving skills in conjunction with these data. We will discuss financial reporting and corporate governance topics related to earnings management, fraud detection, audit quality, board structure, and SEC enforcement. Students will gain hands-on data analysis experience. Students will also learn how to apply scientific research methods to answer questions, present solutions, and discuss limitations. We will provide a brief overview of the concepts of probability distribution and statistical inference. Relying on the above tools, students enhance their analytical skills and ultimately achieve deeper understanding on issues related to financial reporting and capital markets. Topics vary.

ACCT 5420. MAcc directed study. (1-4 cr. ; Student Option; Every Fall, Spring & Summer) Internship or directed study in Master of Accountancy degree program. prereq: MAcc student

ACCT 5900. Topics in Accounting. (; 1-4 cr. [max 12 cr.] ; A-F only; Periodic Fall & Spring) Topics in Accounting which focus on specialized areas in ACCT that area currently relevant or have importance in the field

Addiction Studies (ADDS)

ADDS 5011. Foundations in Addiction Studies. (; 2 cr. ; A-F only; Every Fall & Spring)

Theoretical perspectives/concepts related to etiology of alcohol/drug dependency/abuse. Emphasizes bio-psycho-social models of addiction/disease: psychodynamics, social learning, contingency, family systems. Connection of theory to empirical research.

ADDS 5021. Introduction to Evidence Based Practices and the Helping Relationship. (3 cr. ; A-F only; Every Fall & Spring)

Initiating, conducting, and terminating a counseling relationship. Use of self in counseling process. Nature/process of helping. Evidence-based practices/theories. Reading, discussion, written exercises, role-play, observation, feedback, out-of-class practice.

ADDS 5031. Applied Psychopharmacology. (; 2 cr. ; A-F only; Every Spring & Summer)

This course provides a comprehensive survey of the basic concepts of psychopharmacology and psychiatric conditions for which psychoactive medication presents an appropriate intervention strategy. It is intended to be an introduction into the field and is designed to provide a working knowledge base to enable students to more competently address the experiences of their clients taking prescribed psychotropic medications.

ADDS 5041. Methods and Models I: Motivational Counseling. (2 cr. ; A-F only; Every Spring & Summer)

Concepts of motivational interviewing. Spirit of MI. Primary counseling skills. Working with resistance. Identifying/eliciting change talk. Transitioning into change, negotiating treatment plan. Strengths/shortcoming of MI.

ADDS 5051. Methods and Models II: Cognitive Behavioral Therapy. (2 cr. ; A-F only; Every Spring & Summer)

Components of cognitive model. Assessment, case formulation, automatic thoughts, core beliefs, cognitive restructuring, behavior change elements, therapeutic relationship. Learn, practice, master key concepts.

ADDS 5061. Foundations of Group Work. (3 cr. ; A-F only; Every Fall, Spring & Summer) Designing/facilitating therapy groups. Intra-/inter-personal dynamics, leadership skills, developmental aspects, ethical issues. Application to therapy of chemically addicted individuals. Lectures, discussion, experiential exercises, small groups, readings.

ADDS 5071. Foundations of Co-occurring Disorders. (; 2 cr. ; A-F only; Every Fall, Spring & Summer)

Understanding mentally ill/chemically abusive or dependent client. Intervention, advocacy, education, support for client/those part of his/her environment. Social, environmental, multicultural factors that contribute resources for these clients.

ADDS 5081. Multicultural Foundations of Behavioral Health. (3 cr. ; A-F only; Every Fall & Spring)

What is culture? How might culture, cultural practices, and history be significant in the use/abuse of substances? How is culture relevant to the attitudes/practices in the prevention/treatment of substance use/abuse? Multicultural counseling and cultural competence in addiction counseling. People as individuals. Clinician's own cultural worldview/ other cultural worldviews.

ADDS 5091. Assessment and Treatment Planning I. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Core addictions counseling. Clinical assessment, case management, documentation treatment planning, ethical issues. Students begin process of securing internship.

ADDS 5121. Professional Seminar 1: Internship Prep. (; 1 cr. ; S-N only; Every Fall, Spring & Summer)

Prepares students for successful entry into field of substance use disorder counseling by focusing on facets that are critical to their professional development. Through discussions, experiential learning activities, guest lectures and site visits, students gain further understanding of the internship placement process and requirements, settings that fit their individual training and career goals, requirements for initial licensing and renewal, the testing process, models of professional development, the importance of professional advocacy and associations, self-care and requirements and benefits of clinical supervision. Professional ethics, including state rules, statutes, codes of conduct and regulations for practitioners and agencies are also addressed. Students will also develop their job search skills and apply them to secure a field placement for the internship seminar.

ADDS 5950. Special Topics. (; 1-4 cr. [max 12 cr.] ; A-F only; Every Fall, Spring & Summer)

Special topics in addiction studies. prereq: dept consent

ADDS 5993. Directed Study. (1-3 cr. [max 9 cr.] ; Student Option; Every Fall, Spring & Summer)

Directed study. prereq: dept consent

ADDS 5996. Internship in Behavioral Health. (1 cr. [max 8 cr.] ; S-N only; Every Fall, Spring & Summer)

Internship provides Addiction Studies students with practical experience in settings where substance abuse and/or co-occurring mental health treatment services are offered. The internship experience allows students to relate academic and theoretical learning to settings outside the classroom. General counseling skills, awareness and influence of self in the counseling process and competency in the 12 Core Functions are enhanced through clinical experience, on-site individual supervision and peer group supervision.

Adult Psychiatry (ADPY)

ADPY 5515. Neuropsychology: University Hospitals. (; 3-9 cr. ; O-N or Audit; Every Fall)

Aerospace Engineering and Mech (AEM)

AEM 1301. Ballooning: Design, Build, and Fly. (; 2 cr. [max 4 cr.] ; Student Option No Audit; Every Fall)

Outer space, sometimes called the "Final Frontier," has always been difficult to reach due to the tremendous expense of rocket launches and the limited number of launch opportunities. In this hands-on course, we will hone "amateur-spacecraft"-building skills including light-weight-but-rugged structural assembly, microcontroller programming, soldering, wiring, and CAD. Then we will design and build miniature spacecraft and use relatively-inexpensive helium-filled weather balloons to carry them into the stratosphere (AKA "near-space?"), which has many of the same physical properties (and view!) as outer space. The overarching theme for Fall 2022 payloads will be "Preparing for eclipse ballooning missions (to be conducted during solar eclipses in October 2023 and April 2024)." The balloon launch and recovery will be a required day-long class activity on a weekend date in late October or early November. This activity is weather dependent, so the flight date will need to be flexible. A "primary" date and several back-up dates will be announced at the start of the semester. After the balloon flight, the remainder of the semester will involve data analysis as well as discussions and activities relating to full-fledged (i.e. outer space) spaceflight, including scientific accomplishments and engineering challenges of past, current, and future space missions.

AEM 1303. Aircraft: Design, Build, and Fly. (; 2 cr. [max 4 cr.] ; Student Option No Audit; Every Spring)

Now ubiquitous, powered aircraft flight is little more than a century old. In this hands-on seminar, we will explore the fundamentals of flight through the design, flight test, and analysis of small, UAV (uninhabited aerial vehicle) aircraft. Initially, we will cover the history and fundamentals of flight through lectures and discussion, answering questions such as, "how do aircraft fly?" and "why do aircraft look so similar?" Then, working in small teams, students will design, build, and flight test an electric remote-control aircraft. Students will analyze the flight tests to see if the aircraft performed as expected, write reports, and present on the results. Additional elements of the seminar may include lectures, discussions, and activities associated with aircraft, including the engineering challenges of past, current, and future aircraft.

AEM 1305. Rocketry: Design, Build, and Fly. (; 2 cr. [max 4 cr.] ; Student Option No Audit; Periodic Fall)

This hands-on course will take students beyond (Estes-type) "model rocketry" into the realm of "high-power rocketry," building rockets with H-size (or larger) motors, some capable of reaching altitudes of several thousand feet! The class will begin by building a "kit" rocket (in teams) then attending a day-long "Round

1" launch event with will be a required class activity for a weekend date mid-semester. This will be followed by designing then building a "Round 2" custom "scratch" rocket (in teams) then sending representatives of the team to launch it late in the semester. In addition to learning basic rocketry physics, using rocketry computer simulations, constructing high-power rockets, and flying them, this class will include lectures, discussions, and activities associated with the past, present, and future of "real-spaceflight rocketry" for manned and unmanned rocket-powered missions to low-Earth-orbit and beyond. Required all-day class flight activities, often on a Saturday mid-semester. High-power rocketry classes will have a second class flight date to which every team will need to send attendees. Specific launch date(s) will be announced at the beginning of the semester. Transportation to rocket launches will be provided. prereq: Freshman, able to attend all-day flight activities

AEM 1805. First Year Projects: Aircraft and Spacecraft. (; 2 cr. [max 4 cr.] ; Student Option No Audit; Periodic Fall & Spring)

Topics related to air and space travel with an emphasis on hands-on projects and activities.

AEM 2011. Statics. (3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Force/moment vectors, resultants. Principles of statics and free-body diagrams. Applications to simple trusses, frames, and machines. Distributed loads. Internal forces in beams. Properties of areas, second moments. Laws of friction. prereq: PHYS 1301W, [concurrent registration is required (or allowed) in Math 2374 or equiv], CSE

AEM 2012. Dynamics. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Kinematics/kinetics of particles. Newton's laws. Energy/momentum methods. Systems of particles. Kinematics/kinetics of planar motions of rigid bodies. Plane motion of rigid bodies. Mechanical vibrations. prereq: 2011, [concurrent registration is required (or allowed) in Math 2373 or equiv], CSE student

AEM 2021. Statics and Dynamics. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

Force/moment vectors, resultants. Principles of statics and free-body diagrams. Applications to simple trusses, frames, and machines. Properties of areas, second moments. Internal forces in beams. Laws of friction. Principles of particle dynamics. Mechanical systems and rigid-body dynamics. Kinematics/dynamics of plane systems. Energy/momentum of 2-D bodies/systems. prereq: Phys 1301W, [concurrent registration is required (or allowed) in Math 2374 or equiv], CSE

AEM 2031. Mechanics for Materials Engineers. (3 cr. ; A-F only; Every Spring)

This course covers the basics of equilibrium of rigid and deformable bodies for Materials Engineers. The course begins with the principles of statics, including a review of vector operations and analysis of moments and resultant forces from multiple loads, including distributed loads, equilibrium and free body diagrams, center of gravity and moments of

inertia. The course then moves on to explore stress and strain, including normal and shear stresses, and stress and strain transformations. Then the materials properties of interest to the mechanical response and testing procedures used to determine these properties are discussed. Lastly, the stresses and strains associated with common loading modes (e.g., axial, torsion, shear and bending) are covered. Modes of failure, including yielding and buckling, are also introduced. prereq: Math 2374, Math 2373 (concurrent allowed), Phys 1301W, CSE Student, Materials Engineering Major or premajor

AEM 2301. Mechanics of Flight. (; 3 cr. ; A-F or Audit; Every Spring)

Standard atmospheric properties, basic aerodynamics, generation of lift/drag. Airfoils, finite wings. Elements of aircraft performance and atmospheric flight mechanics. Introduction to MatLab and simulations for aircraft design. prereq: PHYS 1301W, [concurrent registration is required (or allowed) in MATH 2373 or equiv], CSE

AEM 3031. Deformable Body Mechanics. (3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Uniaxial loading/deformation. Stress/strain at point, Mohr's circle. Internal forces in beams. Material behavior, linear elasticity. Torsion of circular shafts. Bending of beams of symmetrical section. Column buckling. Statically indeterminate structures. prereq: [2011 or 2021 or [BMEN 3011, BMEN major]], [Math 2374 or equiv], [concurrent registration is required (or allowed) in Math 2373 or equiv], CSE

AEM 3101. Mathematical Modeling and Simulation in Aerospace Engineering. (2 cr. ; A-F or Audit; Every Fall & Spring)

Mathematical modeling of engineering systems/numerical methods for their solution. Use of MATLAB. Focus on systems found in aerospace engineering/mechanics. prereq: [MATH 2373 or equiv], AEM major

AEM 3391. Independent Design Project. (3 cr. ; A-F only; Every Fall & Spring)

Independent design project construction/testing under guidance of faculty member. Group projects allowed. Students responsible for finding faculty adviser for project. Final project report (written or oral). prereq: dept consent

AEM 4201. Fluid Mechanics. (4 cr. ; A-F or Audit; Every Fall)

First course in fluid mechanics. Stress/strain rate descriptions, fluid statics. Use of differential and finite control volume analysis with continuity. Momentum/energy equations, Bernoulli/Euler equations, vorticity, potential flow, incompressible viscous flow using Navier-Stokes equations, dimensional analysis, pipe flow, boundary layers, separation, introduction to turbulence. prereq: 2012, [Math 2373 or equiv], [Math 2374 or equiv], [CSE upper div or grad student]

AEM 4202. Aerodynamics. (; 4 cr. ; A-F or Audit; Every Spring)

Inviscid aerodynamics. Subsonic, transonic, and supersonic airfoil theory; wing theory. Introduction to compressible flow, normal

and oblique shock waves, Prandtl-Meyer expansions. Linearized compressible flow. Wing-body combinations. Computational aerodynamics methods. prereq: upper div CSE or grad, 4201

AEM 4203. Aerospace Propulsion. (; 4 cr. ; A-F or Audit; Every Spring)

Basic one-dimensional flows: isentropic, area change, heat addition. Overall performance characteristics of propellers, ramjets, turbojets, turbofans, rockets. Performance analysis of inlets, exhaust nozzles, compressors, burners, and turbines. Rocket flight performance, single-/multi-stage chemical rockets, liquid/solid propellants. prereq: 4202, [CSE upper div or grad student]

AEM 4247. Hypersonic Aerodynamics. (3 cr. ; A-F or Audit; Spring Even Year)

Importance/properties of hypersonic flow. Hypersonic shock and expansion-wave relations. Local surface inclination methods. Approximate/exact methods for hypersonic inviscid flow fields. Viscous flow: boundary layers, aerodynamic heating, hypersonic viscous interactions, computational methods. Hypersonic propulsion and vehicle design. prereq: 4202, CSE upper division

AEM 4253. Computational Fluid Mechanics. (3 cr. ; A-F or Audit; Every Fall)

Introductory concepts in finite difference and finite volume methods as applied to various ordinary/partial differential model equations in fluid mechanics. Fundamentals of spatial discretization and numerical integration. Numerical linear algebra. Introduction to engineering and scientific computing environment. Advanced topics may include finite element methods, spectral methods, grid generation, turbulence modeling. prereq: 4201, CSCI 1113, CSE upper division

AEM 4290. Special Topics in Fluid Mechanics. (; 1-3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)

Topics vary each semester within the field of Fluid Mechanics prereq: dept consent

AEM 4293. Directed Studies in Fluid Mechanics. (1-3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Topics of current interest. Individual projects with consent of faculty sponsor. prereq: dept consent

AEM 4301. Orbital Mechanics. (3 cr. ; A-F or Audit; Fall Odd, Spring Even Year)

The two-body problem. Earth-satellite operations, rocket performance, reentry dynamics, space environments, interplanetary trajectories. Numerical simulations. Design project. prereq: [2012 or equiv], [MATH 2373 or equiv], [CSE upper div or grad student]

AEM 4303W. Flight Dynamics and Control. (WI; 3 cr. ; A-F or Audit; Every Spring)

Forces/moments, trim, linearization, transfer functions, dynamic response characteristics for aircraft. Aircraft stability/control derivatives, static longitudinal/lateral stability. Phugoid, short period, spiral, roll subsidence, dutch roll modes. Handling qualities. Design project. prereq: [2012, 2301, 3101, [WRIT 1301 or

equiv], [CSE upper div or grad student]] or instr consent

AEM 4305. Spacecraft Attitude Dynamics and Control. (3 cr. ; A-F or Audit; Every Spring)

Kinematics/dynamics for six-degree of freedom rigid body motions. Euler's angles/equations. Torque free motion, spin stabilization, dual-spin spacecraft, nutation damping, gyroscopic attitude control, gravity gradient stabilization. Linear systems analysis, Laplace transforms, transfer functions. Linear control theory. PID controllers. prereq: [4301, [3101 or ME 3281 or EE 3015], CSE upper div] or grad student

AEM 4321. Automatic Control Systems. (3 cr. ; A-F or Audit; Every Fall)

Modeling, characteristics, and performance of feedback control systems. Stability, root locus, and frequency response methods. Nyquist and Bode diagrams. Lead-lag and PID compensators. Digital implementation and hardware considerations. prereq: CSE upper div or grad student

AEM 4331. Aerospace Vehicle Design. (; 4 cr. ; A-F only; Every Fall)

Multidisciplinary student teams perform conceptual designs of aerospace vehicles, components, missions, or systems that incorporate realistic constraints/applicable engineering standards. Papers on professional ethics/contemporary aerospace issues. Oral preliminary/critical design reviews. prereq: [2301, 4202, AEM sr] or instr consent

AEM 4333. Aerospace Design: Special Projects. (; 3 cr. [max 6 cr.] ; Student Option; Every Spring)

Student groups design, build, and test aerospace projects. Projects include designs from AEM4331 or projects such as microgravity experiments. Students create and maintain an electronic project data repository, prepare weekly status reports, build and test their design, and prepare a final report. prereq: 4331 or instr consent

AEM 4490. Special Topics in Aerospace Systems. (; 1-3 cr. ; A-F only; Every Fall, Spring & Summer)

Topics vary each semester within the field of Aerospace Systems

AEM 4493. Directed Studies in Aerospace Systems. (1-3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Topics of current interest. Individual projects with consent of faculty sponsor. prereq: dept consent

AEM 4501. Aerospace Structures. (; 3 cr. ; A-F or Audit; Every Spring)

Advanced strength of materials analysis of elastic structures with aerospace applications; failure modes and criteria, buckling, matrix methods for analysis, plane truss design; energy and Castigliano methods for statically determinate and indeterminate structures; torsion and bending of asymmetrical thin-walled sections. Design project. prereq: CSE upper div or grad, 3031 or equiv

AEM 4502. Computational Structural Analysis. (3 cr. ; Student Option; Fall Even Year)

Application of finite element methods to problems in structural analysis. Emphasizes properly posing problems and interpreting calculation results. Use of commercial FEA packages. Introduction to theory of finite elements. prereq: [Grade of at least C in 4501, [CSE upper div or grad student]] or instr consent

AEM 4511. Mechanics of Composite Materials. (; 3 cr. ; Student Option; Every Spring)
Analysis, design, and applications of laminated and chopped fiber reinforced composites. Micro-/macro-mechanical analysis of elastic constants, failure, and environmental degradation. Design project. prereq: 3031 (or 2031 if MatSci), [CSE upper div or grad student]

AEM 4581. Mechanics of Solids. (3 cr. ; Student Option; Fall Odd Year)
Continuum mechanics in one dimension: kinematics; mass, momentum/energy, constitutive theory. Wave propagation, heat conduction. Strings. Euler-Bernoulli theory. 3-D deformations/stress. Topics from fracture mechanics, structural stability, vibrations, thin films, layered media, smart materials, phase transformations, 3-D elastic wave propagation. Elasticity, viscoelasticity, plasticity. prereq: 3031, [Math 2373 or equiv], [Math 2374 or equiv], CSE upper div

AEM 4590. Special Topics in Solid Mechanics and Materials. (; 1-3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)
Topics vary each semester within the field of Solid Mechanics and Materials prereq: dept consent

AEM 4593. Directed Studies: Solid Mechanics. (1-3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Topics of current interest. Individual projects with consent of faculty sponsor. prereq: dept consent

AEM 4601. Instrumentation Laboratory. (; 3 cr. ; A-F or Audit; Every Spring)
Introduction to lab instrumentation. Computerized data acquisition. Statistical analysis of data. Time series data, spectral analysis. Transducers for measurement of solid, fluid, and dynamical quantities. Design of experiments. prereq: CSci 1113, EE 3005, EE 3006, [upper div BAEM]

AEM 4602W. Aeromechanics Laboratory. (WI; 4 cr. ; A-F or Audit; Every Fall)
Experimental methods/design in fluid/solid mechanics. Wind tunnel/water channel experiments with flow visualization, pressure, velocity, force measurements. Measurement of stresses/strains/displacements in solids/structures: stress concentrations, materials behavior, structural dynamics. Computerized data acquisition/analysis, error analysis, data reduction. Experiment design. Written/oral reports. Lab ethics. Writing intensive. prereq: 4201, 4501, 4601, [WRIT 1301 or equiv], [CSE upper div or grad]

AEM 4796. Professional Experience. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Work experience with substantive engineering component. Written report. prereq: CSE upper div, AEM major, dept consent

AEM 4894. Directed Studies: Senior Honors Thesis. (; 3 cr. ; A-F only; Every Spring)
Writing thesis under direction of AEM faculty member. prereq: Honors student, permission of University Honors Program, AEM major

AEM 4896. International Professional Experience. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)
International work experience with substantive engineering component. Written report. prereq: CSE upper div, AEM major, dept consent

AEM 5247. Hypersonic Aerodynamics. (3 cr. ; A-F or Audit; Spring Even Year)
Importance/properties of hypersonic flow. Hypersonic shock and expansion-wave relations. Local surface inclination methods. Approximate/exact methods for hypersonic inviscid flow fields. Viscous flow: boundary layers, aerodynamic heating, hypersonic viscous interactions, computational methods. Hypersonic propulsion and vehicle design. prereq: 4202 or equiv, CSE grad student

AEM 5253. Computational Fluid Mechanics. (3 cr. ; A-F or Audit; Every Fall)
Introductory concepts in finite difference and finite volume methods as applied to various ordinary/partial differential model equations in fluid mechanics. Fundamentals of spatial discretization and numerical integration. Numerical linear algebra. Introduction to engineering and scientific computing environment. Advanced topics may include finite element methods, spectral methods, grid generation, turbulence modeling. prereq: [4201 or equiv], [CSci 1113 or equiv], CSE grad student

AEM 5321. Modern Feedback Control. (; 3 cr. ; Student Option; Every Fall)
State space theory for multiple-input-multiple-output aerospace systems. Singular value decomposition technique, applications to performance/robustness. Linear quadratic gaussian and eigenstructure assignment design methods. Topics in $H[\infty]$ symbol]. Applications. prereq: 4321 or EE 4231 or ME 5281 or equiv

AEM 5333. Design-to-Flight: Small Uninhabited Aerial Vehicles. (3 cr. ; A-F only; Periodic Spring)
Designing, assembling, modeling, simulating, testing/flying of uninhabited aerial vehicles. Rapid prototyping software tools for vehicle modeling. Guidance, navigation, flight control, real-time implementations, hardware-in-the-loop simulations, flight tests. prereq: [[4202, concurrent registration is required (or allowed) in 4303W, 4601] or equiv], instr consent

AEM 5401. Intermediate Dynamics. (; 3 cr. ; A-F or Audit; Every Fall)
Three-dimensional Newtonian mechanics, kinematics of rigid bodies, dynamics of rigid bodies, generalized coordinates, holonomic constraints, Lagrange equations, applications. prereq: CSE upper div or grad, 2012, Math 2243

AEM 5451. Optimal Estimation. (; 3 cr. ; Student Option; Fall Even Year)
Basic probability theory. Batch/recursive least squares estimation. Filtering of linear/non-linear systems using Kalman and extended Kalman filters. Applications to sensor fusion, fault detection, and system identification. prereq: [[MATH 2243 or STAT 3021 or equiv], [4321 or EE 4231 or ME 5281 or equiv]] or instr consent

AEM 5501. Continuum Mechanics. (; 3 cr. ; Student Option; Every Fall)
Concepts common to all continuous media; elements of tensor analysis; motion, deformation, vorticity; material derivatives; mass, continuity equation; balance of linear, angular momentum; geometric characterization of stress; constitutive equations. prereq: CSE upper div or grad, 3031, Math 2243 or equiv or instr consent

AEM 5503. Theory of Elasticity. (; 3 cr. ; A-F or Audit; Every Spring)
Introduction to the theory of elasticity, with emphasis on linear elasticity. Linear and nonlinear strain measures, boundary-value problem for linear elasticity, plane problems in linear elasticity, three dimensional problems in linear elasticity. Topics from nonlinear elasticity, micromechanics, contact problems, fracture mechanics. prereq: 4501 or equiv, Math 2263 or equiv or instr consent

AEM 5581. Mechanics of Solids. (3 cr. ; Student Option; Fall Odd Year)
Continuum mechanics in one dimension: kinematics; mass, momentum/energy, constitutive theory. Wave propagation, heat conduction. Strings. Euler-Bernoulli theory. 3-D deformations/stress. Topics from fracture mechanics, structural stability, vibrations, thin films, layered media, smart materials, phase transformations, 3-D elastic wave propagation. Elasticity, viscoelasticity, plasticity. prereq: 3031 or equiv, [Math 2373 or equiv], [Math 2374 or equiv], [CSE grad student]

AEM 5651. Aeroelasticity. (; 3 cr. ; A-F or Audit; Every Fall)
Static aeroelastic phenomena, torsional divergence of a lifting surface, control surface reversal. Aeroelastic flutter, unsteady aerodynamics. Problems of gust response, buffeting. Design project. prereq: 4202, 4301, [grad student or CSE upper div]

Aerospace Studies (AIR)

AIR 1000. Leadership Laboratory. (1 cr. [max 10 cr.] ; S-N or Audit; Every Fall & Spring)
LLAB events allow cadets to practice the knowledge and skills learned in AS classes and other Practical Military Training (PMT) events. LLAB-accomplished training occurs at three different levels. First, the General Military Course (GMC) cadets gain knowledge and have an opportunity to carry out activities using practical applications. Second, LLAB gives Professional Officer Course (POC) cadets an opportunity to practice their leadership skills to plan, set up, execute, and provide GMCs feedback while executing LLAB. Finally, cadre provide feedback to the POCs on their

leadership skills in relation to their plan, set up, execution, and feedback provided to GMCs. As a POC, LLAB is your chance to practice your leadership skills that will help you learn and grow into a Second Lieutenant in today's Air or Space Force.

AIR 1104. United States Air Force Heritage and Values I. (; 1 cr. ; A-F or Audit; Every Fall) This course provides an introduction to the Air and Space Forces, encouraging students to pursue an AF career or seek additional information to be better informed about the role of the USAF. The course allows students to examine general aspects of the Department of the Air Force, communication basics, leadership fundamentals, service benefits, and opportunities for officers. The course lays the foundation for becoming an Air or Space professional by outlining our heritage and values through the study of topics ranging from dress and appearance to customs and courtesies. As a foundational course, AIR 1104 focuses on the principles of Airmanship. This course provides students with a knowledge-level understanding of air and space power, from a practical and institutional perspective. The students will be introduced to the military way of life and gain knowledge on what it means to be an Air or Space professional.

AIR 1105. Air Force Heritage & Values II. (; 1 cr. ; A-F or Audit; Every Spring) This course builds on Air Force Heritage and Values I and continues the introduction of the Air and Space Forces. AIR 1105 provides a more historical perspective such as lessons on war, the US military, AF operations, principles of war, and tenets of airpower. As a whole, this course provides students with a knowledge-level understanding for the employment of air and space power, from a historical and doctrinal perspective. The students will be introduced to the military way of life and gain knowledge on what it means to be an Air or Space professional.

AIR 1201. Def. (1 cr. ; A-F only;)

AIR 1202. Def. Derm.. (1 cr. ; A-F only;)

AIR 1204. Team and Leadership Fundamentals I. (; 1 cr. ; A-F or Audit; Every Fall & Spring) This course is designed to provide the foundation for both leadership and team building. You will build on this course every year of your Air Force ROTC career, so it is crucial that you do the readings and homework. Likewise, all of these lessons will be directly applicable to your field training experience. We will learn about things that don't pop into your mind when you think of leadership, but they are essential to understanding how good leaders operate. These topics include listening, followership, and problem solving efficiently. All of these concepts will be applied in team-building activities and when discussing topics like conflict management with the class. Though the theme of this course is "Team and Leadership Fundamentals," you are also expected to demonstrate basic verbal and written communication skills at the end of this course--these are skills that can help you in

every aspect of your academic, professional, and personal lives.

AIR 1205. Team and Leadership Fundamentals II. (; 1 cr. ; A-F or Audit; Every Spring)

This course builds on Team and Leadership Fundamentals I and provides a fundamental understanding of both leadership and team building. It is imperative that cadets are taught from the beginning that there are many layers to leadership. In this class we will dive deeply into team building and ethical decision making, as these are critical skills to have in the Air Force and beyond. We will use a blend of instruction, class discussion, and activities to fully understand these topics. Cadets in this class this will attend field training in the summer following instruction. The students will apply these leadership perspectives when completing team building activities and discussing things like conflict management. Students should demonstrate basic verbal and written communication skills. Cadets will apply these lessons at Field Training, in the summer after AS 200 school year.

AIR 3301. Leading People and Effective Communication I. (; 3 cr. ; A-F or Audit; Every Fall)

This course is designed to build on the leadership fundamentals taught in AS200. The theme of this year is "Leading People and Effective Communication." You will have the opportunity to utilize your skills as they begin more of a leadership role in the detachment. The goal is for each of you to have a more in-depth understanding of how to effectively lead people, and this semester will emphasize building core Air Force communication skills and how to navigate change and diversity as a leader.

AIR 3302. Leading People and Effective Communication II. (; 3 cr. ; A-F or Audit; Every Spring)

This course is designed to build on the leadership fundamentals taught in AS200. The theme of this year is "Leading People and Effective Communication." You will have the opportunity to utilize your skills as you transition to more of a leadership role in the detachment. The goal is for each of you to have a more in-depth understanding of how to effectively lead people, and this semester will emphasize leadership theories, personal leadership skills and ethics, and fostering innovation. prereq: 3301 recommended

AIR 3401. National Security Policy and Leadership Responsibilities I. (; 3 cr. ; A-F or Audit; Every Fall)

The AS400 cadet should comprehend the basic elements of national security policy and process. The student should know basic Department of the Air and Space Force operations as well as understand selected roles of the military in society and current domestic and international issues affecting the military profession. Cadets should understand the responsibility, authority, and functions of a Department of the Air and Space Force commanders and selected provisions of the military justice system.

AIR 3402. National Security Policy and Leadership Responsibilities II. (; 3 cr. ; A-F or Audit; Every Spring)

The AS400 cadet should comprehend the variety of base agencies and programs that support Air and Space Force members. The student should know basic information on officer/enlisted evaluations, financial benefits, the military justice system, and leadership authorities. Cadets should understand what life as a second lieutenant entails and what their initial months in the Air and or Space Force will look like. prereq: 3401 recommended

African Amer & African Studies (AFRO)

AFRO 1009. History of Women in Africa: 1500 to the Present. (GP; 3 cr. ; Student Option; Every Fall)

This course examines the histories of women on African frontiers. The course will highlight the role of women in their relation with family, with other African/nonAfrican peoples, as well as the role of women of the border regions of Sahel-Savanna, SavannaForest, within the country of Morocco, and along the Indian Ocean-Swahili Coast and Atlantic Coast frontiers. AFRO 1009 will compare the roles of African women from specific regions to others in different times and places in Africa, as well as with their contemporaries in Asia, Europe, and the Americas. We will consider the ways in which the women under scrutiny played a critical role in the dynamic changes that transformed their worlds and the worlds around them. Indeed, the historical lens that informs and underpins this course is premised on the understanding that people make change and that change does not just happen in and of itself. In recognizing the process of change over time, AFRO 1009 emphasizes the significance of social and cultural context in shaping the extent and nature of women's participation in these processes. Therefore, the course will seek to understand the cultural beliefs and the rich ethnic, economic, religious networks, which buttressed the women's roles and examine their associated factors. In addition to stressing the importance of change over time, AFRO 1009 engages students in a reflection of the past in an attempt to understand those reflections within the continuum of past, present, and future. Accordingly, AFRO 1009 impels us to think about the long term effects of any change, however slight or insignificant it may seem.

AFRO 1011. Introduction to African American Studies. (; 3 cr. ; Student Option; Every Spring)

The study of peoples of African descent including the evolution of African American culture, comparative race relations, feminism and social policy change.

AFRO 1021. Introduction to Africa. (GP; 3 cr. ; Student Option; Every Fall & Spring)

A comparative regional examination of contemporary African challenges and varied struggles using case studies, and a range of analytical parameters. Of particular focus will

be issues of political destabilization, social fragmentation, economic disruption; internal displacement and international migration within regional and global contexts.

AFRO 1023W. Introduction to African World Literature. (GP,WI,LITR; 3 cr. ; A-F only; Every Fall & Spring)

Childhood is a time of intense growth and dramatic change; of rapid physical, mental and emotional development. It is a time of discovering, experiencing, exploring; of exuberant curiosity and creativity. It is a state characterized by play and activity, innocence and wonder, surprise and delight. But childhood can also be a time of great confusion and uncertainty; of doubt, turmoil and anxiety. Through select pieces of short fiction, prose, essays and cinematic works, we will analyze the popularity of the coming-of-age genre (or bildungsroman) as a primary mode of formative response within the African world literary tradition. We will consider how the autobiographical or semi-autobiographical story, told by a narrator who is growing up and becoming conscious of their body, their familial and wider social surroundings, their emotions, their very identity, dramatizes the cultural, political, and historical contexts in which it is set. Through our exploration of socialization as a thematic component of the bildungsroman, we will examine how coming-of-age comes to represent something very different for boys and for girls.

AFRO 1131. Contemporary Issues in Africa. (; 3 cr. ; A-F only; Every Fall & Spring)

Course Description: Welcome to AFRO 1131! This course aims to provide an overview of contemporary African concerns from an interdisciplinary perspective. Locating present-day realities within an historical continuum, the course covers a wide array of political, social, and economic themes, including their interrogation in core fields of study. Emphasis on threats to human rights and challenges to democratic governance; political engagement and civil society activism. The rise of the middle class in sub-Saharan Africa; population growth and urbanization. Dislocation and displacement as observed in rural-urban, intra-African and international migrations; religious, ethnic, and civil conflicts; climate and environmental change in terms of a sustainable livelihood framework; gender, equity, and women's rights as crucial to sustainable development; postcolonial ethics of nature and nurture; technological advances, disparities, and compelling factors for future growth.

AFRO 3002. West African History: 1800 to Present. (GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

West African history from late 18th century to present. Past/profound changes including new 19th century state formation, European colonialism, post-colonial issues.

AFRO 3006. Impact of African Migrations in the Atlantic World. (; 3 cr. ; A-F or Audit; Periodic Fall)

People of African descent through history. Archeology, geography, literature. Migrations/activities in the Atlantic world. African history in

the New World. Transfer of African rice growing technology and other skills. Development of African American society in the United States.

AFRO 3013. Cities and States in Ancient Africa. (ENV; 3 cr. ; A-F only; Periodic Fall, Spring & Summer)

In this course, students will learn about the nexus between society and the environment, the underlining environmental issues that transformed ancient cities, and the implications they have on the contemporary ecological problems Africa is facing. The continent is endowed with a hugely diverse environment, ranging from desert to equatorial rainforest, as well as diverse cultures. Africa's various natural and cultural environments have played a part in shaping human activities, including agriculture, trade, and technology which in turn have shaped the nature of the cities and states that have emerged across the continent. Technological innovations such as irrigation have allowed complex societies to develop and grow in an otherwise inhospitable desert climate with limited natural resources. Although the prevalence of animal diseases and all-year-round rainfall restricted surplus agricultural production by affecting the use of animals as a source of draft power and cultivation of cereal crops, advances in technology, including ironwork and adoption of the tropical rainforest crops, facilitated the transformation of the physical environment and emergence of cities and states in the rainforest. The course examines how the nature of early agriculture, the environment, and technology shaped the history of African societies to equip learners with a better understanding of the contemporary social and environmental challenges. It assesses the dynamism in the relation between African societies and the environment over time.

AFRO 3015. Food Sovereignty in Africa.

(ENV,SOCS; 3 cr. ; A-F only; Every Spring)
Course Description: Food Sovereignty in Africa? critically evaluates how the physical environment and historical processes shaped agricultural productivity in Africa, as well as exploring the subsequent relationship the continent has had with the rest of the world. The course uses multi-disciplinary resources to examine historical factors that have contributed to contemporary food security issues, and discusses grassroots food movements that embrace the ethics and values of African societies in their efforts to achieve both food security and environmental sustainability. It also examines the interplay between food security, indigenous knowledge, and environmental sustainability by comparing various standpoints on African food production, scrutinizing the challenges the continent is facing and the unique perspectives it offers in terms of agricultural development in the globalized world. Finally, the course examines how agricultural systems in Africa are affected by the new global land rush. After taking the course, students will have better knowledge of emerging research directions on Africa and will be equipped with sufficient research and practical skills to pursue independent studies beyond the classroom.

AFRO 3016. Africa and African Diaspora Archaeology. (GP,HIS; 3 cr. ; Student Option; Every Fall)

Africa and African Diaspora Archaeology (AFRO/ ANTH 3016/5016) examines the evolution of human behavior in Africa and looks at subsequent social, cultural, and technological developments as shown in archaeological records including artifacts, ecofacts, rock art, and structures at archaeological sites. It also discusses methods used to identify archaeological records and how these records can be used to reconstruct past ways of life. Students will obtain hands-on experience in identifying, classifying, and interpreting archaeological objects. The course covers Africa from around 2.6 million years ago to the recent past, focusing primarily on the last 10,000 years. It examines the development and spread of food production, pottery, metallurgy, trade, and African connections with the Atlantic world dating back to the fifteenth century.

AFRO 3103. World History and Africa.

(GP,HIS; 3 cr. ; A-F or Audit; Periodic Fall, Spring & Summer)

This course is an interdisciplinary survey of the history of the African continent. It examines the social, cultural, economic and political transformations that shaped varied African communities from prehistory to the present. Focusing primarily on the intricate intersection of culture, society, economics, and politics, the course examines the concept of world history and Africa's location in the production of this history as theoretical and analytical lenses. It puts particular emphasis on the social, cultural and political developments that informed individual and collective experiences of various African peoples and societies, including the historical narratives and scholarly discourses associated with them.

AFRO 3108. Black Music: A History of Jazz.

(; 3 cr. ; Student Option; Every Spring)
The development of jazz in America and in the world, with special emphasis given to the roots or jazz in the African American experience.

AFRO 3112. In the Heart of the Beat: the Poetry of Rap. (; 3 cr. ; A-F or Audit;)

Contemporary African American poetry as expressed by popular culture contributors. Students analyze/evaluate poems used in rap, in context of African American literature, American culture, and aesthetics.

AFRO 3120. Social and Intellectual Movements in the African Diaspora.

(GP,HIS; 3 cr. ; A-F or Audit; Every Fall)
Political, cultural, historical linkages between Africans, African-Americans, African-Caribbean. Black socio-political movements/radical intellectual trends in late 19th/20th centuries. Colonialism/racism. Protest organizations, radical movements in United States/Europe.

AFRO 3125W. Black Visions of Liberation: Ella, Martin, Malcolm, and the Radical Transformation of U.S. Democracy. (CIV,WI; 3 cr. ; A-F only; Every Spring)

Course on the critical thought of Black intellectual-activists and others enmeshed in

the struggles for the radical transformation of U.S. democracy. Introduces the following three leaders and activists--Ella Baker, Martin Luther King, Jr., and Malcolm X--whose work in the building of the Black freedom movement spanned the period from the 1930s to the late 1960s. Course proposition is that their life and times in the struggle for liberation offer important insights into the transformation of the U.S. political economy from the welfare/warfare state to the neoliberal state. These intellectual-activists, as well as others who translate their radical traditions through Black-Brown and Afro-Asian solidarity projects (e.g. Grace Lee Boggs of Detroit) have responded to racial formation in the U.S. and presented not just visions of liberation but concrete alternatives at the grassroots to usher in a more just, egalitarian, and ethical society.

AFRO 3135. Political Dynamics in the Horn of Africa. (GP,SOCS; 3 cr. ; Student Option; Every Spring)

Who wields political power? Who challenges those in power? And how do they legitimize their claims and go about enforcing them? These are the core questions that will guide our exploration of the political dynamics in the Horn of Africa. Just like most regions in Africa, the Horn is home to diverse cultures and languages. What distinguishes it, however, is the contested nature of state borders, which have been redrawn in ways not observed anywhere else in Africa since the end of European colonialism. The purpose of this class is to delve deeper into these conflicts, to examine the interactions between incumbent governments, armed rebel groups and international actors in shaping war and peace in the Horn. Throughout this journey, we will pay special attention to ideas of sovereignty, identity and violence and draw on literature outside of the Horn to help us better dissect what is going on within it.

AFRO 3205. History of South Africa from 1910. (; 3 cr. ; Student Option; Periodic Fall)

The history of South Africa from the Union to the present. Focus on such issues as African and Afrikaner nationalism, structures of apartheid, forced population removals, divestment and sanctions, and the post-apartheid era.

AFRO 3251W. Sociological Perspectives on Race, Class, and Gender. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)

Analytical overview of three major forms of inequalities in the United States today: race, class, gender. Focus on these inequalities as relatively autonomous from one another and as deeply connected/intertwined with one another. Intersectionality key to critical understanding of these social forces. Social change possibilities.

AFRO 3301. The Music of Black Americans. (AH,DSJ; 3 cr. ; A-F only; Every Fall, Spring & Summer)

This course examines the variety of ways African and African Americans express social history through music. It will consider the union of African elements and European elements that combined to present a new syncretized African-American product. To

do this it is imperative that we explore the diversity of musical "voices" found within the African American culture. This diversity can be seen in the struggles to retain African cultural effects and the desire to be eclectic, creative, and contemporary. Such an approach to the study of the place of Black music in American music corresponds with the criteria of Diversity and Social Justice in the United States Liberal Education. The "multi-layered operation of power, prestige, and privilege" can be understood through an examination of the music of African Americans, which represents both a Free African voice and an enslaved African voice; the western-trained Black performer/composer and the self-taught performer/composer. It also represents the habits of well-to-do African Americans and the poor African Americans. Students will examine the complexities of the history of African Americans and how this is played out in the development of musical styles and genres. From this, students will then begin to understand how this unique diversity within a community affects those outside of those communities. Such an approach to the study of the place of Black music in American music corresponds with the criteria of Diversity and Social Justice in the United States Liberal Education. We will follow elements found in West African culture and music such as "call and response" and the "2nd Line" as they travel to the "New World" and expressed through Spirituals, Symphonies, Gospel Music, Jazz, Rock and Roll, Step Bands and more. Through lectures, readings, discussion, audiovisual examples, and homework assignments student can expect to gain a deeper understanding of the ways music both reflects and influences the social history of all Americans.

AFRO 3341. Black Geographies. (3 cr. ; Student Option; Every Fall)

This course will engage the sub-discipline of Black Geographies by looking at Geographical literature on the question of Blackness as well as case studies on the ways in which Afro-descendant populations make place. Course readings and films will attend to Blackness as it manifests across the African Diaspora, with specific focus on the Americas. We will discuss the experiences and struggles of enslaved Africans in the Americas, struggles against slavery, the ways in which we can understand histories of Blackness, and different forms of struggle employed by Afro-descendant populations today. At the end of the semester students will have a solid grounding in the literature around Black Geographies, as well as a nuanced understanding of the different ways in which Black populations analyze and create space.

AFRO 3402. Pleasure, Intimacy and Violence. (3 cr. ; Student Option; Spring Odd Year)

Gender/sexual violence to poststructural, anti-racist theories and debates about social construction of sexuality. How intimacy and violence are co-constituted within normative frameworks of U.S. governmentality. Writings by black feminist criminologists who have linked incarceration, welfare reform, and other

forms of state regulation to deeply systemic forms of violence against people of color.

AFRO 3426. African Americans, Social Policy, and the Welfare State. (; 3 cr. ; Student Option; Every Spring)

Period between New Deal (1930s) and present. History/impact of federal policy (presidential, congressional, judicial) and race on African Americans. Politics of allocation of insurance versus relief in Social Security Act of 1935. Race and expansion of social benefits after World War II. School desegregation. Kennedy's civil rights policy, LBJ's War on Poverty. Affirmative Action. Warren court. Busing. Conservative retreat from welfare state under Ronald Reagan and George Bush.

AFRO 3431. Early Africa and Its Global Connections. (GP,HIS; 3 cr. [max 4 cr.] ; Student Option; Every Fall & Spring)

Survey of African history from earliest times to 1800. Focuses on socioeconomic, political, and cultural development in pre-colonial Africa from ancient Egypt through the era of the trans-Atlantic slave trade.

AFRO 3432. Modern Africa in a Changing World. (GP,HIS; 3-4 cr. ; Student Option; Every Fall, Spring & Summer)

Socioeconomic, political, and cultural development in Africa, from abolition of trans-Atlantic slave trade through postcolonial era.

AFRO 3433. Economic Development in Contemporary Africa. (GP,SOCS; 3 cr. ; A-F only; Every Spring)

Major socio-economic challenges that confront post-independence sub-Saharan African countries in quest for sustainable economic development/growth. Causes of persistent poverty/inequality, role of institutions/multinational agencies. Growth in 21st century. prereq: APEC 1101 or ECON 1101

AFRO 3436. Fighting for History: Historical Roots of Contemporary Crises in Africa. (3 cr. ; Student Option; Periodic Fall)

Open any newspaper and there is almost certain to be one or more articles about crises or chaos in Africa. Journalistic accounts highlight famines, tribalism, failed states, ethnic cleansing, the plight of refugees, and the AIDS pandemic. There rarely, if ever, is a serious discussion of the underlying causes of this instability. Instead, it is implicitly assumed that this is the natural order of events in the Dark Continent. This course challenges the racially inspired cultural arrogance which underlies assumptions about Africa and explores it with the long-term structural and historical roots of the crises which confront many parts of Africa. It is a course about Africans and how they responded to the challenges and legacies that date back to the colonial period and before. Throughout this course we will be concerned with African initiatives in a rapidly changing political, economic, social, and ideological context and the changing ways that the Global North has represented Africa. In doing so we will be fighting for a more accurate history of Africa.

AFRO 3578. Contemporary Sub-Saharan African Popular Art Forms. (AH,TS; 3 cr. ; A-F only; Periodic Fall & Spring)

This course explores popular art practices and representations ? mediated through the lens of television, radio, popular cinema, sequential art, and the internet ? as the everyday expressions of modern African identities. As sites where the tensions, frictions, collisions and notably, the productive creativities of the local and the global are circulated, negotiated and contested, African popular cultures provide insights into a unique and increasingly crucial facet of contemporary African artistic practice as critical intervention. The course is designed on the premise that Africans of all social strata and lifestyles are strategic and deliberate consumers of popular cultural forms, generated within local cultures as signifiers of larger social, political, and economic processes. In light of prevailing studies which sometimes end up naively celebrating agency and resistance, AFRO 3578 underscores the role of popular cultures as public/private sites of power's ideological and material (re-) production, contestation, or transformation. It considers creative practices as sites of both resistance and accommodation; of creative adaptation, innovation, and resilience. Through our discussion of communication technologies and their role in transmitting artistic and political ideas beyond the confines of dominant discourses and established institutions, we will evaluate the interface of technology and sociocultural shifts.

AFRO 3592W. Introduction to Black Women Writers in the United States. (DSJ,WI,LITR; 3 cr. ; A-F only; Periodic Fall & Spring)

The literature of African American women writers explored in novels, short stories, essays, poetry, autobiographies, and drama from the 18th to the late-20th century.

AFRO 3593. The African American Novel. (3 cr. ; Student Option; Every Spring)

Explore African American novelistic traditions. Plot patterns, character types, settings, symbols, themes, mythologies. Creative perspectives of authors themselves. Analytical frameworks from contemporary literary scholarship.

AFRO 3597W. Introduction to African American Literature and Culture I.

(DSJ,WI,LITR; 4 cr. ; Student Option; Every Fall)

African American oral tradition, slave narrative, autobiography, poetry, essay, fiction, oratory, and drama, from colonial era through Harlem Renaissance.

AFRO 3598W. Introduction to African American Literature and Culture II.

(DSJ,WI,LITR; 4 cr. ; Student Option; Every Spring)

African American oral tradition, autobiography, poetry, essay, fiction, oratory, drama. From after Harlem Renaissance to end of 20th century.

AFRO 3601W. African Literature.

(GP,WI,LITR; 3 cr. ; A-F only; Every Fall, Spring & Summer)

The globalized present has witnessed increased mobility as economic, political, and social unrest intensify, forcing mass migration of populations across scorching deserts,

treacherous mountains and perilous seas. In the United States and in Western Europe specifically, the consequence of this mobility? immigration?remains the single most cross-cutting issue and the most vexed political challenge of the day. Defined as threatening and intrusive, frequently criminalized in discourse and in action, immigrants have become scapegoats for a wide range of problems that bedevil every aspect of life in every country. Blamed for everything from taking jobs from locals to rising crime and the spread of communicable diseases, immigrants have become victims of xenophobic violence and repositories for the routine fear-mongering prevalent in post-9/11 global terror and counter-terror climate. This course addresses the keys issues that arise in contemporary immigration and global security debates. Throughout the course of the semester, we will interrogate the literary and audio-visual arts as a mirror of the times, reflecting socio-political conditions. In a bid to place the current ?crisis? in a historical perspective, we will examine select works by African writers, filmmakers and artists, which provide examples that enable us to move beyond stereotypes and common assumptions.

AFRO 3625W. Women Writers of Africa and the African Diaspora. (GP,WI,LITR; 3 cr. ; A-F only; Spring Even Year)

Works of black women writers from Europe, Africa, South America, and the Caribbean. Novels, drama, films, and essays.

AFRO 3654. African Cinema. (AH,GP; 3 cr. ; A-F only; Periodic Fall & Summer)

This course introduces you to films written and directed by African filmmakers beginning the 2nd part of the 20th Century. Through an exploration of the stylistic and thematic issues raised by each film, it is expected that students will gain a broad understanding of how African filmmakers portray African social and cultural life, including the artistic and political contexts within which they work. In this way, students will gain an historical perspective on the origins of African filmmaking, confront the basic social, cultural and aesthetic questions raised by African filmmakers and critics, and consider how questions raised by African filmmakers and their films fit into the larger context of world cinema. We will contrast postcolonial African films with Hollywood jungle epics, settler/adventure romances in safari paradise, and colonial movies about Africa. Moving beyond strict categories and standards we will also examine the role of documentary films in shaping our understanding of African people's lives and the social construction of reality. We will review the place of documentary film in the current media-scape and discuss its functions and limitations. Most films will be screened in original languages with English subtitles.

AFRO 3655. African-American Cinema.

(AH,DSJ; 3 cr. ; Student Option; Spring Even Year)

African American cinematic achievements from silent films of Oscar Micheaux through contemporary Hollywood and independent films. Class screenings, critical readings.

AFRO 3745. Black Cultural Studies.

(AH,DSJ; 3 cr. ; Student Option; Every Spring) What is black life? And what does it mean to talk about black life in the context of the push toward the liberation of black lives? In recent years we have become accustomed to hearing about and debating the efficacy of the term and movement "Black Lives Matter," but what, other than precarity, constitutes these lives that matter? How have black people collectively thrived even under conditions that would assume otherwise? In this course we will consider the myriad ways black people have gone about creating, dreaming, struggling, building, educating, loving, and living, even in the midst of all that works to bring death near. We will explore a range of cultural forms, including stand-up comedy, hip hop and R&B music, reality television, social media, and film, in order to contemplate the urgency and necessity of black social life, or, what it means to be with and for black people.

AFRO 3864. African American History: 1619 to 1865. (CIV,HIS; 3 cr. ; Student Option; Periodic Spring)

Importance of dynamics of class, gender, region, and political ideology. Changing nature of race/racism.

AFRO 3865. African American History: 1865 to the Present. (3 cr. ; Student Option; Every Fall, Spring & Summer)

History of African American men and women from the beginning of the 20th century to the present. Discussion of internal migrations, industrialization and unionization, The Great Depression, world wars, and large scale movements for social and political change.

AFRO 3866. The Civil Rights and Black Power Movement, 1954-1984. (3 cr. ; Student Option; Every Fall)

Modern black civil rights struggle in the U.S., i.e., the second reconstruction. Failure of reconstruction, abdication of black civil rights in 19th century. Assault on white supremacy via courts, state, and grass roots southern movement in 1950s and 1960s. Black struggle in north and west. New emphasis on Black Power, by new organizations. Ascendancy of Ronald Reagan, conservative assault on the movement.

AFRO 3867. Black Men: Representations and Reality. (3 cr. ; Student Option; Every Spring)

This course will explore the lived reality of black men in the United States. Ranging historically-far and thematically-wide, this course will introduce students to the experience of black male labor force participation and employment outcomes; deconstruct representations of black masculinity in popular culture; explore academic dilemmas associated with primary and secondary educational pursuits; and uncover issues connected with law, incarceration, and criminal justice. In addition, this course will examine relationship complexities involving black men and black women, black men and white women, and black men and black men, looking closely at the African-American role in traditional and non-traditional family structures. The

course will also address the most central of questions: What is the black male experience, given the growing diversity of black maleness in Minnesota, the United States, and the Diaspora. At the center of the course is not only what other people have said about the black male historical and contemporary experience, but also how black men have imagined and constructed their own experience over time.

AFRO 3868W. Race, War, and Race Wars in American History. (CIV,WI; 3 cr. ; A-F or Audit; Fall Odd Year)

Role that race has played in American war history. Impact that wars have had on race and race relations in the United States and the world. Literature and film.

AFRO 3896. Internship for Academic Credit. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)

An applied learning experience in an agreed-upon, short-term, supervised workplace activity, with defined goals, which may be related to a student's major field or area of interest. The work can be full or part time, paid or unpaid, primarily in off-campus environments. Internships integrate classroom knowledge and theory with practical application and skill development in professional or community settings. The skills and knowledge learned should be transferable to other employment settings and not simply to advance the operations of the employer. Typically the student's work is supervised and evaluated by a site coordinator or instructor. A student may only earn credit for a given internship through one course at a time.

AFRO 3910. Topics in African American and African Studies. (; 1-3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)
Topics specified in Class Schedule.

AFRO 3993. Directed Study. (1-5 cr. [max 10 cr.] ; Student Option; Every Fall, Spring & Summer)

Guided individual research and study. Prereq- instr consent, dept consent, college consent.

AFRO 4105. Ways of Knowing in Africa and the African Diaspora. (; 3 cr. ; A-F only; Every Fall)

Impact of European knowledge systems on African world. How peoples on African continent and across African diaspora have produced/defined knowledge. Continuity/change in the way African peoples have thought about and left their epistemological imprints upon the world.

AFRO 4231. Color of Public Policy: African Americans, American Indians, Asian Americans & Chicanos in the U.S.. (3 cr. ; Student Option; Periodic Fall)

Examination of structural or institutional conditions through which people of color have been marginalized in public policy. Critical evaluation of social theory in addressing the problem of contemporary communities of color in the United States.

AFRO 4335. African American Politics. (3 cr. ; Student Option; Periodic Fall & Spring)
This course examines the historical and contemporary efforts by African Americans

to gain full inclusion as citizens in the U.S. political system. Specifically, the course explores advocacy efforts by civil rights organizations and political parties to obtain and enforce civil and political rights for blacks. An examination of these efforts begins in the Reconstruction Era and concludes with the historic election of the nation's first African American president. The course will cover topics such as the politics of the civil rights movement, black presidential bids and racialized voting in federal and state elections. Finally, the course examines how political parties and organized interests used the Voting Rights Act to increase the number of minorities in Congress. The course focuses on whether the growing number of minorities in Congress increases citizens' trust in government and their involvement in voting and participation in political organizations.

AFRO 4406. Black Feminist Thought. (; 3 cr. ; Student Option; Periodic Spring)
Critically examine spatiality of African descendant women in Americas/larger black diaspora. Writings from black feminist/queer geographies, history, contemporary cultural criticism. Recent black feminist theorizing.

AFRO 4478W. Contemporary Politics in Africa and the Colonial Legacy. (GP,WI; 3 cr. ; Student Option; Every Spring)

At the core, this class is about the interaction between the assertion of and challenge to political authority in Africa. Who should have the right to make decisions that structure people's lives? To what extent is "might" an important source of political authority? How, in turn, do people respond to these different means of establishing political authority? Using these questions as a springboard, this class will examine some broader themes relating to colonialism, state building, conflict and development in Africa. Politics in Africa, just as in any other place in the world, is complex and for that reason, the objective of the class is not to give you answers, but to have you think critically about the issues we cover. Towards this end, this class will draw on different sources ranging from novels to manifestos so as to illustrate both the mundane and extraordinary events that have helped shape the political landscape of the continent.

AFRO 4991W. Thesis Research and Writing. (WI; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Preparing a research paper that satisfies major project requirement. Defining a research problem. Collecting/analyzing data. Writing the research paper. prereq: dept consent

AFRO 5015. Food Sovereignty in Africa. (ENV,SOC; 3 cr. ; A-F only; Every Spring)
Food Sovereignty in Africa critically evaluates how the physical environment and historical processes shaped agricultural productivity in Africa, as well as exploring the subsequent relationship the continent has had with the rest of the world. The course uses multi-disciplinary resources to examine historical factors that have contributed to contemporary food security issues, and discusses grassroots food movements that embrace the ethics and

values of African societies in their efforts to achieve both food security and environmental sustainability. It also examines the interplay between food security, indigenous knowledge, and environmental sustainability by comparing various standpoints on African food production, scrutinizing the challenges the continent is facing and the unique perspectives it offers in terms of agricultural development in the globalized world. Finally, the course examines how agricultural systems in Africa are affected by the new global land rush. After taking the course, students will have better knowledge of emerging research directions on Africa and will be equipped with sufficient research and practical skills to pursue independent studies beyond the classroom.

AFRO 5016. Africa and African Diaspora Archaeology. (GP,HIS; 3 cr. ; Student Option; Every Fall)

Africa and African Diaspora Archaeology (AFRO/ ANTH 3016/5016) examines the evolution of human behavior in Africa and looks at subsequent social, cultural, and technological developments as shown in archaeological records including artifacts, ecofacts, rock art, and structures at archaeological sites. It also discusses methods used to identify archaeological records and how these records can be used to reconstruct past ways of life. Students will obtain hand-on-experience in identifying, classifying, and interpreting archaeological objects. The course covers Africa from around 2.6 million years ago to the recent past, focusing primarily on the last 10,000 years. It examines the development and spread of food production, pottery, metallurgy, trade, and African connections with the Atlantic world dating back to the fifteenth century.

AFRO 5101. Seminar: Introduction to Africa and the African Diaspora. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Comparative frameworks, related theories, and pivotal texts in study of Africa and African Diaspora.

AFRO 5103. World History and Africa. (3 cr. ; A-F or Audit; Fall Even Year)
Contributions of African American thinkers to making of African history/strategies to rework theoretical/analytical foundations of world history. Writings/intellectual networks of major thinkers whose historical/ethnographic works on Africa spanning nineteenth to twentieth century. prereq: Grad student or instr consent

AFRO 5120. Social and Intellectual Movements in the African Diaspora. (3 cr. ; A-F or Audit; Every Fall)
Political, cultural, historical linkages between Africans, African-Americans, African-Caribbean. Black socio-political movements/radical intellectual trends in late 19th/20th centuries. Colonialism/racism. Protest organizations, radical movements in United States/Europe. prereq: Grad student or instr consent

AFRO 5181W. Blacks in American Theatre. (WI; 3 cr. ; Student Option; Periodic Spring)
Historical survey of significant events in the development of American Black theatrical

tradition; essays, plays, playwrights, and theatres from early colonial references to Black Arts Movement.

AFRO 5182W. Contemporary Black Drama and Dramaturgies. (WI; 3 cr. ; Student Option; Every Spring)

This course is an exploration of the impact and evolution of Black Theatre in America, covering the period rising from the Black Arts Movement to the present. The exploration will entail an understanding of cultural and socio-political issues as they are reflected in key and significant plays written and produced from the late 1950's to the present. The plays and essays will be read against the background of significant cultural, social and literary movements - the Civil Rights Movement, Cold War politics, the Women's Movement, Gay Liberation, the Culture Wars, post-modernism, deconstruction, multiculturalism, afro-futurism, etc. as well as the evolution of identity nomenclature and racial classification from Colored to Negro to Black to African American. In addition to play analysis and criticism, students will garner a knowledge of significant Black cultural institutions and their impact on the ever-changing American theatre landscape.

AFRO 5191. Seminar: The African American Experience in South Africa. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Ideological, political, religious, and cultural ties that have informed African American and black South African relations from late 18th century to present.

AFRO 5406. Black Feminist Thought. (; 3 cr. ; Student Option; Periodic Spring)

Critically examine spatiality of African descendant women in Americas/larger black diaspora. Writings from black feminist/queer geographies, history, contemporary cultural criticism. Recent black feminist theorizing.

AFRO 5593. The African American Novel. (3 cr. ; Student Option; Every Spring)

Explore African American novelistic traditions. Plot patterns, character types, settings, symbols, themes, mythologies. Creative perspectives of authors themselves. Analytical frameworks from contemporary literary scholarship.

AFRO 5625. Women Writers of Africa and the African Diaspora. (; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)

In *Coming to America*, a 1988 film which blends humor and romance with some fairly pertinent observations, an African prince travels to Queens, NY, in search of a bride who will be both an equal and valued partner in life's great adventure. In the thirty years since, the African immigrant story has become an intrinsic component of the booming canon of contemporary American immigrant literature, which includes such names as Edwidge Danticat, Jhumpa Lahiri, Junot Diaz, Chang-rae Lee, Gary Shteyngart, and others. This literary phenomenon mirrors trends identified in surveys and other similar data gathering activities. According to a 2009 study of the Migration Policy Institute, for instance,

more than 75% of the foreign born African population in the United States has arrived since 1990. For these newcomers, Africa is not an imagined ancestral ?motherland? impressed in collective memory. Nor is it a faraway continent of parental origin whose negative media portrayal at times foments a problematic identification. Africa is a lived space, a home left behind, the anchor of childhood memories and?all too frequently? a horizon that perpetually beckons. As for America, it is the idealized land of freedom, prosperity, and opportunity that sometimes gives more than it promised, but oftentimes disenchant. This course situates gender squarely within the interlocking contexts of dynamic, complex and ever-changing African and American landscapes. Over the course of the semester, we will read short stories, novellas, personal narratives and essays, interspersed with visual excerpts from selected films and other representations of immigration, migration and border crossing in contemporary African and American cultural landscapes.

AFRO 5627. Seminar: Harlem Renaissance. (3 cr. ; Student Option; Every Fall)

Review Harlem Renaissance from variety of perspectives. Literary, historical, cultural, political, international. Complex patterns of permeation/interdependency between worlds inside/outside of what W.E.B. Du Bois called "the Veil of Color." prereq: Grad student or instr consent

AFRO 5866. The Civil Rights and Black Power Movement, 1954-1984. (3 cr. ; A-F or Audit; Every Fall)

The "second reconstruction." Failure of Reconstruction, abdication of black civil rights in 19th century. Post-1945 assault on white supremacy via courts/state, grass-roots southern movement in 1950s/1960s. Black struggle in north and west, emphasis on Black Power by new organizations/ideologies/leaders. Ascendancy of Reagan, conservative assault on movement.

AFRO 5910. Topics in African American and African Studies. (; 3 cr. [max 9 cr.] ; A-F only; Every Fall, Spring & Summer)

Topics vary by instructor.

AFRO 5932. The Production of Knowledge, Negotiating the Past, and the Writing of African Histories. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

Recent scholarship on social history of Africa. Focuses on new literature on daily lives of ordinary people in their workplaces, communities, households. prereq: Grad student or instr consent

AFRO 5993. Directed Study. (; 1-3 cr. ; Student Option; Every Fall, Spring & Summer)

Guided individual reading/study for qualified seniors and graduate students. prereq: instr consent

Ag Educ, Comm & Mktg (AECM)

AECM 1001. Introduction to Agricultural Education, Communication & Marketing. (; 1 cr. ; Student Option; Every Fall)

Historical development of the discipline of agricultural education; orientation to career opportunities; areas and expectations of specialization; issues in the field.

AECM 2051. Current Technical Competencies. (; 4 cr. ; Student Option; Fall Odd Year)

Prepares agricultural education teachers and other agricultural professionals to use technology in the areas of welding and small gas engines. Develop basic skills and knowledge to plan, implement, operate, and maintain agricultural structural and mechanical systems. Experiential learning principles and applied problem solving.

AECM 2096. Career Exploration & Early Field Experience in Agricultural Education, Communication, and Marketing. (; 2 cr. ; A-F only; Every Fall)

Analyses of occupations, employment potential, expectations for work, and readiness for careers in agricultural education, communication, and marketing. Field placement experiences examine career options and professionals in the field. Observe schools, extension offices, and agricultural businesses to learn about the work/workplaces in agricultural education, communication, and marketing.

AECM 2221W. Foundations of Leadership Practice. (WI; 3 cr. ; A-F or Audit; Every Fall)

How to be an effective leader in profit/non-profit agricultural settings. Roles, responsibilities, knowledge, attitudes, and skills to hire staff, set goals, coach, mentor/manage teams, and improve communication.

AECM 2421W. Professional Communication for Agriculture, Food, and the Environment. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)

Speaking/writing about scientific/technical issues. Student-centered, relies on interaction/participation. Public communication. Lectures for this course will be online, while discussion sections will be held in-person.

AECM 3000. Seminar on Current Issues in Agricultural Education. (; 1 cr. [max 4 cr.] ; A-F or Audit; Periodic Fall)

This seminar is designed to introduce students to current issues and trends in agricultural education. Small group discussion, in-depth/focused intellectual debate. Topics depend on faculty selection or student interest.

AECM 3051. Building Construction/ Woodworking Technology. (; 4 cr. ; A-F or Audit; Fall Even Year)

Instructional/lab exercises in light frame building construction. Foundations, concrete/masonry, framing, plumbing, electrical, insulating, roofing. Safe work procedures in a wood shop through small wood project construction will be utilized. Emphasizes safety and use of modern tools and materials.

AECM 3096. Experiential Learning: Production and Business. (; 1-3 cr. [max 9 cr.] ; Student Option; Every Fall)

Experiential learning in agricultural production and business. Planned, organized, monitored, and evaluated based on a per-experience

diagnosis of learning prerequisite to higher level courses in technical agriculture and agricultural business. prereq: AgEd major, instr consent

AECM 3106. Agricultural Policy and Issues in Minnesota. (3 cr. ; A-F only; Spring Odd Year)

This course will introduce students to advocacy and policy-making that affects Minnesota's agricultural industry, specifically at the farm level. They will experience the policy-making process from an initial idea to building support, lobbying, legislative work, implementation, and the effect policies have on Minnesota farmers. Students will get a behind-the-scenes look at the policy process in action by meeting lawmakers, lobbyists, and staff while on field trips to the Minnesota State Capitol and Minnesota Department of Agriculture. Students will also shadow a current legislator, participate in a mock senate, hear from multiple guest speakers, and research the decision-making process by following an agricultural bill through the legislative session. prereq: 30 credits or instructor approval

AECM 3431. Communicating Food, Agriculture & Environmental Science to the Public. (3 cr. ; A-F or Audit; Every Spring)

Planning/strategy for communication campaigns related to food/agriculture. Student-centered, relies on interaction/participation.

AECM 3434. Utilizing Social Media for Food, Agricultural and Natural Resource Sciences. (3 cr. ; A-F only; Spring Odd Year)

The convergence of multiple forms of media, newspaper, video, radio, and photojournalism on the internet is impacting how we communicate complicated scientific issues related to topics such as food safety, agricultural production, and good stewardship of natural resources, and social media have been found to play a critical role in shaping science literacy. Because of the increasing presence of social media in our everyday lives, agriculturists are challenged with how to best package these complex scientific topics to increase science literacy through social media networks. This course aims to provide agriculturists who possess a strong background and understanding of food, agriculture and natural resource sciences with the skills needed to communicate these complex topics to audiences across social media platforms.

AECM 3444. Layout and Design for Food, Agricultural and Natural Resource Sciences. (3 cr. ; A-F only; Spring Even Year)

This course provides students with in-depth, integrated use of leading industry-adopted software (Adobe Illustrator and Adobe InDesign) to develop print communication pieces. The class addresses layout aspects and file preparation critical to printing a project successfully and cost-effectively. Students will learn to create graphic art designs and develop effective print layouts. Serves as a foundational course that covers a range of topics related to layout and design from principles of design, typography, color, and technical software use. Class assignments focus on developing tools for use in food,

agricultural and natural resources strategic and data-driven communications programs.

AECM 3452. Digital Media Essentials for Agriculture, Food and the Environment. (3 cr. ; A-F only; Every Fall)

This course introduces basic digital and video communication skills necessary to be successful in today's workplace specific to professions in agriculture, food, and the environment. Students will infuse learning strategies into basic audio/visual productions and basic website construction focused on informing and communicating complex science topics.

AECM 3462. Podcasting for Science Literacy. (3 cr. ; A-F only; Every Spring)

This course will introduce students to the art of audio storytelling and develop the professional skills used to communicate complex science topics to an intended audience. The course explores a variety of concepts used in audio storytelling and educational programming. Science topics will be researched and scripted in order to maximize acquired production skills with the intention of offering informative content to a target market.

AECM 3480. Special Topics in Agricultural Education, Communication & Marketing. (1-4 cr. [max 24 cr.] ; Student Option; Periodic Fall & Spring)

Lectures by visiting scholar or regular faculty member. Topics specified in Class Schedule.

AECM 3993. Directed Study in Agricultural Education, Communication & Marketing. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

AECM 4011. Applied Agribusiness Marketing Strategies. (2 cr. [max 3 cr.] ; Student Option; Every Spring)

Application of marketing knowledge that involves building a complete marketing plan for an agricultural product or device. Team projects are used.

AECM 4115. Culturally Responsive Engagement in Agriculture, Food & Natural Resources. (3 cr. [max 6 cr.] ; A-F only; Every Spring)

The course is broken up into five thematic and progressive modules. Module 1 will provide the opportunity for students to investigate contemporary and historical manifestations oppression and inequities within Agricultural, Food and Natural Resource Sciences (AFNR) with a special focus on community and educational spaces. Module 2 will support students to explore oppression, power,

privilege, and white supremacy. Students will explore how these show in society at large, as well as how they personally embody and enact these very things. Module 3 will prompt students to consider the nature of knowledge that is legitimized and knowledge that is suppressed. We will then learn about diverse knowledge systems and decolonizing work. Module 4 will support students to explore culture, identity, intersectionality, and positionality ? their own and those of other cultural groups. We will consider how some cultures are lifted while others are marginalized in different spaces. Module 5 brings us to learning about methods of bring culturally responsive and anti-racist in AFNR work in educational and community spaces. We will employ the use of equity audits to assess various organizations and to design plans moving forward.

AECM 4432. Advanced Video Production for Agriculture, Food and the Environment. (3 cr. ; A-F only; Every Spring)

This course focuses on advanced digital media production skills necessary to be successful in today's workplace specific to professions in agriculture, food and the environment. Students will infuse learning strategies into advanced documentary-style audio/visual productions. Content will be used to produce educational websites focused on informing and communicating complex science topics. prereq: AECM 3452 or Instructor Consent

AECM 4444. Food and Agricultural Marketing Campaigns. (3 cr. ; A-F only; Every Fall)

This course discusses the strategy and tactical tools and techniques required to create and execute an integrated marketing communications program in the food and agricultural industries. We will cover the issues and elements of audience analysis and segmentation, advertising, brand management, product development/naming, product placement, package design and labeling, advertising and marketing avenues, and evaluation of advertising effectiveness.

AECM 4451W. Advanced Persuasive Writing for Agricultural and Environmental Sciences. (WI; 3 cr. ; A-F or Audit; Every Fall)

In this course, students research, write, and edit stories for agricultural, food and environmental organizations and media. Students produce a final portfolio that demonstrates their ability to create professional-level work, such as magazine articles, news stories, biographies, marketing materials, blog posts, news releases and scripts.

AECM 4452. Virtual Field Trip Production for Agriculture, Food & Natural Resource Science Education & Comm. (3 cr. ; A-F only; Every Fall)

This course explores the process of using digital media production skills to develop educational virtual field trips. Produced content will focus on reaching students in the K-12 classroom. Topics range from basic to complex agriscience concepts and often times will rely on the virtual setting due to limitations of

biosecurity hazards, OSHA guidelines and industry regulations. Students will script and produce curriculum driven video content as well as develop supplemental media assets to be used as classroom activities for field trip participants. prereq: AECM 3452 or Instructor Consent

AECM 5111W. Agricultural Education: Methods of Teaching. (WI; 4 cr. ; Student Option; Every Fall)

Use of teaching resources; principles of teaching and learning; problem-solving techniques, lesson plan construction for large group, small group and individual investigations; student management; and assessment.

AECM 5115. Foundations of Agricultural Education. (3 cr. ; A-F only; Every Fall)

This course explores historical and philosophical foundations and current structures of school-based agricultural education programs. Students will understand, value, and apply strategies to implement and manage the integrated program model of agricultural education.

AECM 5125W. Designing Curriculum & Instruction for Agricultural Education. (WI; 3 cr. ; Student Option; Every Spring)

This course provides students an opportunity to understand, observe, and experience the process of developing curriculum and instruction for school-based agricultural education. Through coursework and a part-time clinical field experience (minimum of 25 hours at an assigned placement) in a school setting (grades 5-12), students will engage in the development of middle and secondary school agricultural education curricula. Special consideration in planning will be given to identifying regional, state, and community needs as well as student interest and prior knowledge. Students will have the opportunity to determine a programmatic framework, outline a scope and sequence of courses within a school-based agricultural education program, develop course outlines and materials, and create units, sub-units, and daily lessons for a variety of content areas. Additionally, using the integrated program model, curricular and instructional opportunities related to experiential learning (Supervised Agricultural Experience ? SAE) and leadership development (FFA) will be addressed. prereq: Jr or Sr Ag Ed student, or Ag Ed MS IL student.

AECM 5135. Instructional Methodology for Agricultural Education. (3 cr. ; A-F only; Every Fall)

This course focuses on instructional methodology for use in school-based agricultural education. Students will understand and apply psychological principles of teaching and learning, practice a variety of instructional strategies, develop pedagogical content knowledge, and apply the integrated program model of agricultural education to classroom teaching. Prerequisites: Junior or senior Ag Ed student or Ag Ed MS IL student

AECM 5145. Agricultural Education Classroom & Program Leadership. (3 cr. ; A-F only; Every Fall)

This course examines models of classroom and program leadership within school-based agricultural education. Through coursework and a part-time clinical field experience (minimum of 25 hours) in a school setting (grades 5-12), students will learn, observe, and experience the ways in which school-based agricultural education teachers create and maintain an effective classroom/lab environment, manage student behavior, communicate and engage with school district leaders, program stakeholders, and community members to ensure student success. (3 credits) Prereqs: Jr or Sr Ag Ed student or Ag Ed MS IL student

AECM 5155. Agricultural Education Teaching Seminar. (3 cr. ; A-F only; Every Spring)

This course emphasizes professionalism and the code of ethics for school-based agricultural educators. Students are prepared for the job search and teacher licensure application process. Students take this course concurrent with AECM 5698-Teaching Internship and apply professionalism and the integrated program model in their classroom, school, and community. Prereqs: Jr or Sr Ag Ed Student or Ag Ed MS IL student

AECM 5220. Special Topics in Agriculture Education and Extension. (; 1-3 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Content varies by offering.

AECM 5231. Agricultural Education Curriculum K-12. (; 2 cr. ; A-F or Audit; Periodic Fall)

Philosophy, organization, and administration of instruction in agricultural education programs at the elementary, middle, and high school levels.

AECM 5233. Advanced Procedures in Teaching Agricultural Education. (; 2 cr. ; A-F or Audit; Periodic Fall)

New developments in methodology; assessment of innovations and procedures; consideration of various levels of instruction.

AECM 5235. Experiential Learning in Agricultural Education. (; 3 cr. ; Student Option; Periodic Fall & Spring)

The organization and administration of agricultural experience programs for middle and secondary level students: career exploration, improvement projects, experiments, placement in production/business/community settings, entrepreneurship. Current state and national programs and resource material.

AECM 5280. Current Issues for the Beginning Agricultural Education Teacher. (; 1-3 cr. [max 6 cr.] ; Student Option; Every Fall & Spring)

Reflection, analysis on current problems and issues confronting beginning teachers of agricultural education. Issues in teaching methods, classroom and program management, discipline, curriculum, FFA and SAE development, school-to-work relationships.

AECM 5696. Teaching Internship. (; 2-10 cr. [max 20 cr.] ; A-F only; Every Spring)

Agricultural Education teaching experience in a school system that provides instruction to grades 5-12. prereq: Admission to initial licensure program

AECM 5993. Directed Study in Agricultural Education and Extension. (; 1-4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Topics may be chosen to permit study of areas within education or to supplement areas of inquiry not provided in the regular course structure.

AECM 5995. Integrating Paper--Master of Education: Agricultural and Extension Education. (; 1-5 cr. [max 10 cr.] ; A-F or Audit; Every Fall, Spring & Summer) Students prepare paper dealing with issues in agricultural education applied to professional responsibilities. AFEE 5995 can be taken for 1-5 credits, and students can enroll for two semesters for a combined max total of 5 credits.

Agronomy and Plant Genetics (AGRO)

AGRO 1101. Biology of Plant Food Systems.

(BIOL; 4 cr. ; Student Option; Every Spring) Designed for students who are not majors in a life science program, but who wish to acquire a better understanding of biological concepts especially as they relate to their lives. We examine current issues related to food, food production and the environment which provide the context to investigate fundamental concepts of biology including productivity, energy, genetic change in populations, and environmental responses to human activity. We use a problem-based learning approach to explore three contemporary issues of great importance: risks and benefits of GMOs, farming and food, and the dead zone in the Gulf of Mexico. Lab, greenhouse, field, and classroom discussions.

AGRO 1103. Crops, Environment, and Society. (ENV; 4 cr. ; Student Option; Every Fall)

Plants that supply food, fiber, beverages, and medicine to humans. Plant identification, plant physiology, plant breeding/biotechnology, plant ecology, crop culture/management.

AGRO 1661W. Engaging Plant Science. (WI; 2 cr. ; A-F only; Every Fall)

This course engages students in educational experiences to develop skills to navigate the plant sciences. As an orientation course, it will introduce you to some of the important resources available to you as a student at the University of Minnesota in the College of Food Agricultural, and Natural Resources Sciences. A major learning objective is to increase your ability to access and utilize the primary literature in the plant sciences. This course will also introduce you to fundamental skills and best practices in managing and analyzing data that you will use in subsequent plant science courses. As a writing intensive course, you will get instruction and practice in scientific writing. This course is delivered in a hybrid

(in person/online) format. This will require careful planning, self-discipline, and good time management to view pre-recorded lectures and successfully complete the various online learning activities, quizzes and assignments. The specific plant science content that you will learn will come from your research to complete a literature review assignment, reading and analyzing papers, and working with data sets from published research. The ultimate goal is to enhance your competency as a self-learner to serve you in your academic pursuit of a degree at the University of Minnesota and beyond.

AGRO 2022. Growth and Development of Minnesota Field Crops. (1 cr. [max 2 cr.]; S-N only; Every Fall)

Students learn how field crop species grow and develop, how unique traits of crop species contribute to ecosystem services, and how to identify important growth stages of crops. In addition to traditional agronomic crops (small grains, alfalfa, soybean and corn), students will work with annual and perennial species that represent emerging crops grown for grain, oil seed, novel products, cover crops and biomass. Course work includes lectures, labs (greenhouse and field), and online assignments and quizzes. prereqs: AGRO 1101 or HORT 1001 or BIOL 1009 or BIOL 1001 and AGRO 1103

AGRO 2402. The Science of Cannabis. (2 cr. ; Student Option; Every Fall)

Botany, growth and development of cannabis, industrial and medical uses, cultivation of industrial and medical cannabis, human health and social impacts, federal and state regulations.

AGRO 2501. Plant Identification for Urban and Rural Landscapes. (; 1 cr. ; Student Option; Periodic Fall)

Identification of weed species and native herbaceous plants that are important in crop production, turf management, horticulture production, and landscapes systems. This course will emphasize the identification of weed species and other plants found in Minnesota and the upper Midwest area of the United States. Plant families, life cycles, habitats and relationships to humans. prereq: Biol 1009 or equiv

AGRO 2502. Introduction to Integrated Weed Management. (1 cr. [max 2 cr.]; A-F or Audit; Every Fall)

Weeds reduce crop yield and quality, affect human health, and result in significant economic loss. This course is for undergraduate students interested in learning more about weed management techniques in an applied context. The goal is to develop a basic understanding of how weed biology and ecology are used to select and integrate weed control tools for effective long-term management of weeds in annual and perennial cropping systems. The topics to be covered in this course will include basic understanding of weed biology/ecology, knowledge of different mechanical, cultural, and chemical weed control tools, and process for integration to meet specific goals. The course involves active, hands-on learning

around new technologies as well as guest lecturers from industry. Agro 1103 or Biol 1009 is recommended. Agro 2501 is highly encouraged.

AGRO 3093. Directed Study. (; 1-4 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer)

Directed Study: A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

AGRO 3203W. Environment, Global Food Production, and the Citizen. (GP,WI; 3 cr. ; Student Option; Every Spring)

Ecological/ethical concerns of food production systems in global agriculture: past, present, and future. Underlying ethical positions about how agroecosystems should be configured. Decision cases, discussions, videos, other media.

AGRO 3305. Agroecosystems of the world. (GP; 3 cr. ; Student Option; Every Fall)

Explore four different areas of world (Minnesota, Morocco, Nepal, Costa Rica) by networking with locals on ground in each region through online interactions. Food, agriculture, environment. Biophysical/socio-cultural aspects of agroecosystems through unique multi-disciplinary lens.

AGRO 3660. Plant Genetic Resources: Identification, Conservation, and Utilization.

(; 3 cr. ; A-F only; Spring Even Year) Importance of plant genetic diversity. Morphological, molecular, and computational methods of identifying/conserving genetic resources. Biological basis of genetic diversity. Case studies in crop improvement. prereq: Introductory biology

AGRO 4093. Directed Studies for Advanced Students. (; 1-4 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer)

Allows study of agronomy in greater depth or in areas not currently offered in formal courses. Tutorial instruction under staff guidance. prereq: 15 cr in agronomy, instr consent

AGRO 4094W. Undergraduate Directed Thesis Research. (WI; 2 cr. ; S-N only; Every Fall, Spring & Summer)

Research and thesis writing experience conducted under supervision of a CFANS faculty advisor and course instructor. The student is responsible for identifying the faculty advisor and conducting research prior to registering for this course. A course permission number is given after providing a student-faculty learning contract. The goal of this course is to produce a written thesis in the format of a peer-reviewed scientific article. Students will meet weekly with the course instructor to discuss writing about

research. Students will complete a series of staged writing assignments for each section of the thesis (Introduction, Methods, Results, Discussion etc.). After review by the faculty advisor, the student will revise and submit their final draft. Final drafts will be published in the University of Minnesota Library Digital Conservancy (<https://conservancy.umn.edu/handle/11299/203510>).

AGRO 4096W. Professional Experience Program: Internships. (WI; 2 cr. [max 6 cr.]; A-F only; Every Fall, Spring & Summer)

Supervised professional experience with a private company, public agency, or non-profit organization involved in plant production or food systems. Reflective analysis of professional experience and technical communication on a topic related to the internship. This course meets on campus once in late spring and twice in early fall with several online activities during the summer.

AGRO 4105. Crop Management Field School: A Hands-on Immersion. (1 cr. [max 2 cr.]; A-F only; Every Summer)

In this course, you will apply and integrate principles and concepts of agronomy, plant pathology, entomology, and soil and weed science in a hands-on field setting with real-life scenarios and problems common in production agriculture. prereqs: BIOL 1001, 1009 or HORT 1001; AGRO 1103, and SOIL 2125

AGRO 4505. Biology, Ecology, and Management of Invasive Plants. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Ecology/biology of invasive plant species (weeds). Principles of invasive plant management in agricultural/horticultural, urban, wetland, aquatic, and other non-cropland landscape systems, utilizing biological, cultural, and chemical means. Management strategies to design systems that optimize invasive plant management in terms of economic, environmental, and social impacts. prereq: 4005, [Bio 3002 or equiv], Soil 2125, [Agro 2501 or Hort 1011]

AGRO 4605. Strategies for Agricultural Production and Management. (3 cr. ; Student Option; Every Fall)

Information/tools necessary to make informed land management decisions in ever-evolving economic, policy, climate environments. Evaluate hows, whats, whys of crop management by solving real-world problems that agricultural professionals face. State-of-the-art production/management practices for major agricultural crops in Minnesota. Lectures feature agricultural professionals/experts. Lab component provides hands-on experience with modern equipment/data interpretation. prereq: 1101 or equivalent, [CHEM1015/17 or equivalent], SOIL1125 or equivalent], [jr or sr or grad student or instr consent]

AGRO 4888. Issues in Sustainable Agriculture. (; 2 cr. ; Student Option; Every Fall)

Agroecology, sustainable practices, production economics, environmental quality, holistic resource management, healthy food/water, rural communities. Meet sustainable-agriculture

advocates, including farmers, faculty, and representatives of non-profit sustainable-agriculture organizations. prereq: 1103, Soil 1125 or 2125 or equiv

AGRO 5021. Plant Breeding Principles. (; 3 cr. ; Student Option; Every Fall)

This course is intended for advanced undergraduate students and graduate students that are either: 1) not plant breeding majors who will benefit from a basic understanding of how genetics is applied to plant improvement; or 2) plant breeding majors lacking prior coursework in plant breeding. The objective of this course is to develop an understanding of the underlying principles, ideas, and concepts important to applying genetic principles to plant breeding, evaluating breeding methods, and enhancing genetic progress and efficiency.

AGRO 5121. Applied Experimental Design. (; 4 cr. ; Student Option; Every Spring)

Principles of sampling methodologies, experimental design, and statistical analyses. Methods/procedures in generating scientific hypotheses. Organizing, initiating, conducting, and analyzing scientific experiments using experimental designs and statistical procedures. prereq: Stat 5021 or equiv or instr consent

AGRO 5311. Research Methods in Crop Improvement and Production. (; 1 cr. ; S-N or Audit; Every Fall & Summer)

Demonstrations and discussions of techniques in crop improvement and/or production research. Presentations integrate biotechnology with traditional breeding methods; production sessions emphasize ecologically sound cropping systems. prereq: applied plant sciences grad

AGRO 5321. Ecology of Agricultural Systems. (; 3 cr. ; A-F or Audit; Every Spring)

Ecological approach to problems in agricultural systems. Formal methodologies of systems inquiry are developed/applied. prereq: [3xxx or above] course in [Agro or AnSc or Ent or Hort or PIPa or Soil] or instr consent

AGRO 5431. Applied Plant Genomics and Bioinformatics. (3 cr. ; Student Option; Every Spring)

Analysis, interpretation, visualization of large plant genomic datasets. Basic computer programming, applying large-scale genomics to answer basic/applied biological questions, understanding limitations of each application, presenting concise visual findings from large-scale datasets. prereq: Grad student or [undergrad with genetics course]

AGRO 5999. Special Topics: Workshop in Agronomy. (; 1-6 cr. ; Student Option; Every Fall, Spring & Summer)

Workshops on various topics in agronomy and plant genetics. Presenters/faculty may include guest lecturers/experts. Topics specified in class schedule.

Akkadian (AKKA)

AKKA 5011. Elementary Akkadian I. (; 3 cr. ; Student Option; Periodic Fall)

Introduction to cuneiform script. Basics of Old Babylonian morphology and syntax. Written drills, readings from Hammurabi laws, foundation inscriptions, annals, religious and epic literature. prereq: Adv undergrads with instr consent or grads

AKKA 5012. Elementary Akkadian II. (; 3 cr. ; Student Option; Periodic Fall)

Continuation of 5011. Readings include The Gilgamesh Epic, The Descent of Ishtar, Mari Letters, Annals of Sennacherib and Essarhaddon, Sargon II. prereq: 5011

American Indian Studies (AMIN)

AMIN 1001. Introduction to American Indian & Indigenous Peoples. (DSJ; 3 cr. ; Student Option; Every Fall & Spring)

Introduction to how voices/visions of indigenous peoples have contributed to history of cultural expression in North America. Historic contexts/varieties of this expression by region, tribal cultures. Emphasizes contributions in literature, philosophy, politics, fine arts.

AMIN 1002. Indigenous Peoples in Global Perspective. (GP; 3 cr. ; A-F or Audit; Every Fall & Spring)

Colonial experiences of selected indigenous peoples in Americas, Euroasia, Pacific Rim.

AMIN 1003. American Indians in Minnesota. (DSJ,HIS; 3 cr. ; A-F or Audit; Every Fall & Spring)

History, culture, and lived experience of American Indian people in Minnesota. Self-representation and histories of Anishinaabe (Ojibwe) and Dakota peoples through film, music, oral traditions, and written texts. Work by non-Indian scholars focuses on cultural, philosophical, and linguistic perspectives of Anishinaabe and Dakota peoples.

AMIN 3001. Public History. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

Interpretations of collective past as produced in public venues, including museum exhibitions, films, theme parks, and websites. Intellectual and political issues in history produced for public audiences. Career opportunities.

AMIN 3107. The Structure of Anishinaabemowin: The Ojibwe Language. (; 3 cr. ; A-F or Audit; Periodic Spring)

Analysis of Anishinaabemowin (Ojibwe language) structure in the context of an endangered Algonquian language. Examine writing systems, phonological (sound) features, morphology (word parts), and grammatical structures as documented historically and presently. The aim of the course is to provide students with an overview of the structure of Anishinaabemowin and introduce them to primary sources readings. Unlike language courses students may be familiar with from other departments, this course will not require memorization of extensive amounts of vocabulary ? our focus will be on understanding the structure of the language and acquiring an appreciation of the relevant linguistic issues and language revitalization issues.

AMIN 3141. American Indian Language Planning. (; 3 cr. ; A-F or Audit; Periodic Fall)

Planning for maintenance/revitalization of North American indigenous languages. Condition/status of languages. Documentation, cultivation, literacy, education.

AMIN 3201W. American Indian Literature. (DSJ,WI,LITR; 3 cr. ; A-F only; Every Fall & Spring)

Comparative studies of oral traditions, modern literature from various tribal cultures.

AMIN 3301. American Indian Philosophies. (AH,DSJ; 3 cr. ; Student Option; Every Fall, Spring & Summer)

World views of indigenous people of Americas. Topics include native medicines/healing practices, ceremonies/ritual, governance, ecology, humor, tribal histories, status of contemporary native people.

AMIN 3303. American Indians and Photography. (AH,DSJ; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Historical/comparative overview of photos in which American Indian people are central subjects. Primary features of images in American Indian photos. Relationships among those involved in making/viewing photos. Ways in which photos are interpreted. Relation of photos to social contexts in which they are produced and to agencies of those who stand behind their making.

AMIN 3304. Indigenous Filmmakers. (AH; 3 cr. ; Student Option; Every Spring)

Analysis of film/video made by American Indian writers, directors, producers within contexts of tribally specific cultures/histories, as well as within context of US culture/film history.

AMIN 3312. American Indian Environmental Issues and Ecological Perspectives. (ENV; 3 cr. ; Student Option; Every Spring)

American Indian environmental issues in U.S./Canada. Analysis of social, political, economic, legal forces/institutions. Colonial histories/tribal sovereignty.

AMIN 3402. American Indians and the Cinema. (AH,DSJ; 3 cr. ; A-F or Audit; Every Spring & Summer)

Representations of American Indians in film, historically/contemporarily. What such representations assert about Native experience and cultural viability. What they reflect about particular relationships of power.

AMIN 3409. American Indian Women: Ethnographic and Ethnohistorical Perspectives. (DSJ,HIS; 3 cr. ; Student Option; Fall Even Year)

Comparative survey of ethnographic/ethnohistorical writings by/about American Indian women.

AMIN 3501. Indigenous Tribal Governments and Politics. (DSJ,HIS; 3 cr. ; A-F or Audit; Fall Even Year)

History, development, structure, politics of American Indian Governments. North American indigenous societies from pre-colonial times to present. Evolution of aboriginal governments confronted/affected by colonizing forces of

European/Euro-American states. Bearing of dual citizenship on nature/powers of tribal governments in relation to states, federal government.

AMIN 3602. Archaeology and Native Americans. (DSJ; 3 cr. ; Student Option; Fall Even Year)

Historical, political, legal, and ethical dimensions of the relationship of American archaeology to American Indian people. Case studies of how representational narratives about Native people are created through archaeology; responses by Native communities; and the frameworks for collaborative and equitable archaeological practice. Professional ethics in archaeology/ heritage studies in American contexts.

AMIN 3604. Indigenous Immersion Methods for the Home, Classroom, and Community.

(3 cr. ; A-F only; Every Spring)
Prepares students as advanced language students to participate in and facilitate immersion environments within both formal and informal settings including the home, second language classrooms, immersion classrooms, language tables, immersion camps, and other community settings. prereq: OJIB 3104, DAKO 3124 or four semesters of another target language, or with instructor approval.

AMIN 3711. Dakota Culture and History.

(DSJ,HIS; 3 cr. ; Student Option; Every Fall & Spring)
Dakota culture, language, history, literature. Contemporary issues, the arts.

AMIN 3871. American Indian History: Pre-Contact to 1830.

(DSJ,HIS; 3 cr. ; Student Option; Every Fall & Spring)
American Indian history from the era of ancient Native America to the removal era. Social, cultural, political, and economic diversity of Native American peoples and Native American experiences with European colonialism.

AMIN 3872. American Indian History: 1830 to the Present.

(DSJ,HIS; 3 cr. ; Student Option; Every Fall & Spring)
Focus on the impact of federal Indian policy on American Indian cultures and societies, and on American Indian culture change.

AMIN 3896. Internship for Academic Credit.

(; 1-4 cr. ; A-F only; Every Fall, Spring & Summer)
Allows students to examine, reflect on, and construct meaning from their internship experience through self assessment of personal and career needs and goals, examination of what it means to be a "professional" and operate within professional environments, evaluation of performance and accomplishments, articulation of knowledge and skills via effective resume writing. A student may only earn credit for a given internship through one course at a time.

AMIN 3920. American Indian Studies Topics.

(; 3 cr. [max 6 cr.] ; A-F or Audit; Every Fall & Spring)

Various topics in American Indian Studies.

AMIN 4231. Color of Public Policy: African Americans, American Indians, Asian

Americans, & Chicanos in the U.S.. (3 cr. ; Student Option; Periodic Fall)

Structural or institutional conditions through which people of color have been marginalized in public policy. Critical evaluation of social theory in addressing the problem of contemporary communities of color in the United States.

AMIN 4501. Law, Sovereignty, and Treaty Rights.

(; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)
History of American Indian law and the post-contact effects of colonial and U.S. law on American Indians through the 20th century. prereq: 1001

AMIN 4511. Indigenous Political Economies.

(; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)
Sources, nature, consequences of social/ economic development/change in Indian communities. Precontact Indian communities. Effect of European contact. Social movements into 20th century, including phenomenon of urban Indian communities. prereq: 1001

AMIN 4525W. Federal Indian Policy.

(WI; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)
Formulation, implementation, evolution, comparison of Indian policy from pre-colonial times to self-governance new millennium. Theoretical approaches to federal Indian policy. Major federal Indian policies. Views/attitudes of policy-makers, reactions of indigenous nations to policies. Effect of bodies of literature related to policies.

AMIN 4532. Vine Deloria, Jr.: A Renaissance Indigenous Figure.

(3 cr. ; Student Option; Periodic Fall & Spring)
In-depth consideration of indigenous scholar and activist Vine Deloria Jr.'s intellectual works, and impacts on fields such as law, religion and theology, history, natural and social science, literary criticism, education, anthropology, paleontology, and political science. Students read, discuss, produce research on an aspect of Deloria's work.

AMIN 4821W. Capstone Seminar.

(WI; 3 cr. ; A-F only; Every Fall)
Seminar for preparation/completion of American Indian Studies Senior Project requirement.

AMIN 4990. Topics in American Indian Studies.

(; 1-4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)
Topics specified in Class Schedule.

AMIN 4994. Directed Research.

(1-12 cr. [max 18 cr.] ; Student Option; Every Fall, Spring & Summer)
Individually arranged research with faculty to meet student needs and interests. Prereq-instr consent, dept consent, college consent.

AMIN 4996. Field Study. (1-12 cr. [max 18 cr.] ; Student Option; Every Fall & Spring)
Opportunities for experiential learning in a variety of American Indian community settings. Consult department faculty at least one term before enrolling. Prereq-instr consent, dept consent, college consent.

AMIN 5107. The Structure of Anishinaabemowin: The Ojibwe Language.

(; 3 cr. ; A-F or Audit; Periodic Fall)
Analysis of Anishinaabemowin (Ojibwe language) structure in the context of an endangered Algonquian language. Examine writing systems, phonological (sound) features, morphology (word parts), and grammatical structures as documented historically and presently. The aim of the course is to provide students with an overview of the structure of Anishinaabemowin and introduce them to primary sources readings. Unlike language courses students may be familiar with from other departments, this course will not require memorization of extensive amounts of vocabulary ? our focus will be on understanding the structure of the language and acquiring an appreciation of the relevant linguistic issues and language revitalization issues.

AMIN 5141. American Indian Language Planning.

(; 3 cr. ; A-F or Audit; Periodic Fall)
Planning for maintenance/revitalization of North American indigenous languages. Condition/status of languages. Documentation, cultivation, literacy, education. prereq: 3103 or 3123 or instr consent

AMIN 5202. Indigenous Peoples and Issues Before the United States Supreme Court.

(3 cr. ; Student Option; Periodic Fall & Spring)
Seminar explores the role and the practice of the US Supreme Court as a policy-making institution when dealing with indigenous nations and their citizens. Analysis of theoretical, behavioral, political, and institutional perspectives. Student work includes reading and textual analysis, leading discussions, analytical research paper.

AMIN 5402. American Indians and the Cinema.

(AH,DSJ; 3 cr. ; A-F or Audit; Every Spring & Summer)
Representations of American Indians in film, historically/contemporarily. What such representations assert about Native experience and cultural viability. What they reflect about particular relationships of power.

AMIN 5409. American Indian Women: Ethnographic and Ethnohistorical Perspectives.

(DSJ,HIS; 3 cr. ; Student Option; Fall Even Year)
Comparative survey of ethnographic/ ethnohistorical writings by/about American Indian women.

AMIN 5412. Comparative Indigenous Feminisms.

(GP; 3 cr. ; Student Option No Audit; Periodic Fall & Spring)
The course will examine the relationship between Western feminism and indigenous feminism as well as the interconnections between women of color feminism and indigenous feminism. In addition to exploring how indigenous feminists have theorized from 'the flesh' of their embodied experience of colonialism, the course will also consider how indigenous women are articulating decolonization and the embodiment of autonomy through scholarship, cultural revitalization, and activism.

AMIN 5602. Archaeology and Native Americans. (DSJ; 3 cr. ; Student Option; Fall Even Year)

Historical, political, legal, and ethical dimensions of the relationship of American archaeology to American Indian people. Case studies of how representational narratives about Native people are created through archaeology; responses by Native communities; and the frameworks for collaborative and equitable archaeological practice. Professional ethics in archaeology/heritage studies in American contexts.

AMIN 5890. Readings in American Indian and Indigenous History. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Students in this course will read recently published scholarship in American Indian and Indigenous history that takes up pressing research questions, promises to push inquiry in new directions, and that theorizes important interventions in our thinking to understand where the field is situated and moving. Reflecting the instinctively interdisciplinary nature of American Indian and Indigenous history, readings will be drawn not just from the discipline of history but across other disciplines such as Anthropology, American Studies, Geography, Literature, Political Science, and Legal Studies. As well, readings will include scholarship that reaches out to embrace the Global Indigenous studies turn. prereq: Advanced undergrad with instr consent or grad student

AMIN 5920. Topics in American Indian Studies. (; 3 cr. [max 12 cr.] ; A-F or Audit; Every Fall & Spring)

Various topics in American Indian studies, depending upon instructor/semester.

AMIN 5991. Graduate Level Directed Studies. (; 1-6 cr. [max 9 cr.] ; A-F or Audit; Every Spring)

Contact department for further information. prereq: dept consent

American Sign Language (ASL)**ASL 1701. American Sign Language I.** (; 5 cr. ; Student Option; Every Fall, Spring & Summer)

The first dynamic course of a four-course sequence is designed to prepare the students for the visual modality of American Sign Language. This course introduces basic grammatical structure and basic vocabulary to develop communicative proficiency and cultural knowledge. The course utilizes a practical approach to learning vocabulary, grammar, fingerspelling, and cultural aspects through conversational activities. Students will study units 1, 2, 3, and 4 in the Signing Naturally textbook. Community involvement in the ASL/Deaf community is required outside of class for Fall/Spring (not required for May/Summer Term).

ASL 1702. American Sign Language II. (; 5 cr. ; Student Option; Every Fall, Spring & Summer)

The second dynamic course of a four-course sequence further acclimates the students

to the visual modality of American Sign Language and draws upon previously acquired knowledge in ASL 1701. The course utilizes a practical approach to learning vocabulary, grammar, fingerspelling, and cultural aspects through conversational activities. In ASL 1702, students' production and comprehension skills continue to develop qualitatively and quantitatively as they are exposed to a greater variety of interaction activities. Students will study units 5, 7, and 8 in the Signing Naturally Level 1 textbook. Community involvement in the ASL/Deaf community is required outside of class for Fall/Spring (not required for May/Summer Term). prereq: 1701 with grade of at least [S or C-] or dept consent

ASL 3001. Cultural and Sociolinguistic Views within the Deaf Community. (; 3 cr. ; Student Option; Every Fall & Spring)

This course investigates the Deaf community using an ethnocentric view of culture. Students will explore cultural readings and various sources in class discussion using multi-disciplinary approaches: sociological, educational, and linguistic views. Can be taken concurrently with ASL 1701-3704. Class instruction conducted entirely in ASL with an English interpreter.

ASL 3703. American Sign Language III. (; 5 cr. ; Student Option; Every Fall, Spring & Summer)

The third dynamic course of a four-course sequence draws upon previously acquired knowledge in ASL 1702. The course includes comprehension and production activities, vocabulary, grammatical structure, fingerspelling, and cultural aspects to further develop communicative proficiency and cultural knowledge. In ASL 3703, students are provided with various conversational opportunities to expand their production and comprehension skills in ASL. Students will study units 9, 10, and 11 in the Signing Naturally textbook. Community involvement in the ASL/Deaf community is required outside of class for Fall/Spring (not required for May/Summer Term). prereq: 1702 with grade of at least [S or C-] or dept consent

ASL 3704. American Sign Language IV. (; 5 cr. ; Student Option; Every Fall, Spring & Summer)

The final dynamic course of a four-course sequence draws upon previously acquired knowledge in ASL 3703. The course includes comprehension and production activities, vocabulary, grammatical structure, fingerspelling, and cultural aspects to further develop communicative proficiency and cultural knowledge. In ASL 3704, students are provided with various conversational opportunities to expand their production and comprehension skills in ASL. Students will study units 15, 17-18, and 22-23 in the Signing Naturally textbook. Community involvement in the ASL/Deaf community is required outside of class for Fall/Spring (not required for May/Summer Term). prereq: 3703 with grade of at least [S or C-] or dept consent

American Studies (AMST)**AMST 1012. Migrants, Refugees, Citizens, and Exiles: The U.S. on an Immigrant Planet.** (CIV; 3 cr. ; Student Option; Every Spring)

Immigration to the United States at various historical periods and across geographical/political terrains. How immigration, as a national/racial project, is shaped by legal categories and discursive practices based on race, class, gender, and sexuality. Diverse ways marginalized groups produce national/transnational political practices.

AMST 1401. Comparative Genders and Sexualities. (DSJ; 3 cr. ; Student Option; Every Spring)

Gender/sexual practices/identities within international framework. How such practices/identities reflect/refract national ideals and express national/international division.

AMST 1511. Americans Abroad: Rethinking Travel, Culture, & Empire. (GP,HIS; 3 cr. ; Student Option; Every Spring)

In this course, we will look at Americans (including ourselves) who travel abroad and what their experiences, both in the present and historically, tell us about how we imagine others and our/their place in the world. What do these experiences tell us about who we are as a people, a culture, and a nation? This course will examine how these experiences have transformed (and continue to transform) Americans and the countries and cultures with which they interact. Indeed, this course challenges students to consider the overall effects that these processes have had on America's relationship with the rest of the world.

AMST 1912. Baseball and American Culture. (; 3 cr. ; A-F only; Periodic Fall & Spring)

To an extent not seen in any other sport, America's National Pastime is intertwined with the very fabric of life in America, and this is reflected in the prominent place of baseball in American cultural production such as film and literature. On the one hand, baseball provides a means through which the American dream has often been viewed and has itself been viewed as an idyllic representation of that dream and all that is good about American culture. But on the other hand, throughout history baseball has also reflected many of the struggles seen in the broader society. Whether it be racism, the realities of war, the place of women, the labor movement and unionization, or any of a number of other issues, baseball has provided a view into societal issues? sometimes leading the way and shining a spotlight on the issues and sometimes lagging behind other parts of society in dealing with the issues. Throughout this course we will look at these different sides of the connection between baseball and American culture.

AMST 2011. The United States since September 11. (CIV,HIS; 3 cr. ; Student Option; Every Fall)

How American citizenship and nationhood have changed since 9/11. The event and its aftermath in historical perspective. Political, economic, and military antecedents. How 9/11 has changed relations between the U.S.

government, U.S. citizens, immigrants, and international community. How 9/11 has been remembered.

AMST 2031. Chasing the American Dream: Economic Opportunity & Inequality in the U.S.. (DSJ,HIS; 3 cr. ; Student Option; Every Spring)

This course begins by focusing on the historical origins and meanings of the American dream. How did this dream of unlimited opportunity come about? What has it meant in different historical moments and to divergent social groups? And, why does it continue to be such a powerful and compelling idea in the United States and around the world?

AMST 2041. The Politics of Pandemics. (3 cr. ; A-F only; Every Fall & Spring)

This course examines public health in the United States, its institutions, practices, and policies and how they have been applied to infectious and chronic disease, as well as related to health and wellness more broadly. American public health is contextualized historically and pandemic problems, such as AIDS, tuberculosis, heart disease, obesity, and infectious disease, are examined critically relation to American culture and politics, including the most recent corona-virus pandemic. Students will gain an in-depth perspective on public health in the United States and how the history of American public health is deeply influenced by politics and culture, particular the dimensions of race, class, gender, and sexuality.

AMST 3001. Contemporary Perspectives on Asian America. (DSJ; 3 cr. ; Student Option; Every Spring)

Interdisciplinary overview of Asian American identities. Post-1965 migration/community. History, cultural productions, and concerns of Americans of Chinese, Japanese, Korean, South Asian, Filipino, and Southeast Asian ancestry.

AMST 3003. Public History. (3 cr. [max 4 cr.] ; A-F or Audit; Periodic Fall & Spring)

Interpretations of collective past as produced in public venues, including museum exhibitions, films, theme parks, websites. Intellectual and political issues in history produced for public audiences. Career opportunities.

AMST 3112. Prince, Porn, and Public Space: The Cultural Politics of the Twin Cities in the 1980s. (DSJ,HIS; 3 cr. ; Student Option; Every Fall)

This course uses music (especially Prince and the Replacements), debates around pornography/sex, and shifts around access to public space in order to explore the local culture and national importance of the Twin Cities during the 1980s.

AMST 3113W. Global Minnesota: Diversity in the 21st Century. (DSJ,WI; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Diverse cultural (racial, ethnic, class) groups in America. Institutions/processes that shape their relations and create domination, resistance, hybridity, nationalism, racism, alliance. Specific content may vary.

AMST 3114. America in International Perspective. (DSJ; 3 cr. ; Student Option; Every Fall & Spring)

The nature of international cultural exchange. The impact of U.S. cultures and society on other countries of the world as well as the impact of other cultures and societies on the United States.

AMST 3212. Dissident Sexualities in U.S. History. (3 cr. ; A-F or Audit; Every Fall)

History of sexuality in United States. Emphasizes sexualities that have challenged dominant social/cultural norms. Development of transgender, bisexual, lesbian, gay identities/communities. Politics of sex across lines of race/ethnicity. Historical debates over controversial practices, including sex work.

AMST 3214. Queer Kinship: Undoing the American Family. (AH,DSJ; 3 cr. ; Student Option; Periodic Fall & Summer)

What is the American family? Is it a part of the "American Dream"? Is it a claim to national belonging? The American family only exists within US mythology built on imperialism and settler colonialism. This course will explore how the heteronormative nuclear family structure symbolizes modern capitalist society that emphasizes the core American values of individualism, democracy, and the ability to reproduce. Thus, the individual family members are not only transformed into productive citizens but are also tasked with the responsibility to reproduce the nation(alism). For example, the recent advancement for gay marriage is scripted as a new phenomenon that poses as both a threat to the American values and a sign of progress. This paradox exposes the limits of gay identity politics and nationalist ideology within neoliberalism, which later used to justify and rationalize racist and xenophobic ideologies. This course asks: how is the American family always already queer?

AMST 3252W. American Popular Culture and Politics: 1900 to 1940. (CIV,WI,HIS; 3 cr. ; Student Option; Every Fall & Summer)

Historical analysis of how popular arts represent issues of gender, race, consumerism, and citizenship. How popular artists define boundaries of citizenship and public life: inclusions/exclusions in polity and national identity. How popular arts reinforce/alter political ideologies.

AMST 3253W. American Popular Culture and Politics: 1940 to the Present. (CIV,WI,HIS; 4 cr. ; Student Option; Every Spring & Summer)

Historical analysis of how popular arts represent issues of gender, race, consumerism, and citizenship. How popular artists define boundaries of citizenship and public life: inclusions/exclusions in polity and national identity. How popular arts reinforce/alter political ideologies.

AMST 3361. Asian Americans and Food. (3 cr. ; Student Option; Periodic Fall)

Asian Americans have always been intimately connected to food practices and institutions in the American imagination. Food is the medium through which Asian American cultural

difference, their status as "perpetual foreigners" and the "model minority character" are typically expressed and disseminated. Historically, Asian migration to the United States was fueled by labor needs particularly in the agricultural sector. In addition, Asian labor has been stereotypically linked to food service and preparation such as the ubiquitous Chinese take-out place and more recently, the sushi and Korean fusion joints. This course is an introduction to the interdisciplinary study of food to better understand the historical, social, and cultural aspects of Asian American food preparation, distribution and consumption. Students will investigate the politics and poetics of Asian American foodways by examining social habits, and rituals around food in restaurants, homes and other public venues. The course texts include ethnographic essays, fictional works, memoirs, magazines, and television shows.

AMST 3814. Women, Rage, and Politics. (3 cr. ; Student Option; Periodic Fall & Spring)

This course explores the relationship between women, rage, and politics. Following bell hooks, we ask where is the rage? Doing so, invites us to interrogate how rage is gendered, how politics are gendered, and how do rage and gender intersect to mobilize for justice. Drawing on political organizing by women of color during the recent Black Lives Matter uprising, we consider what it means to make and claim space as women of color in politics. We also look at how rage - BIPOC women's rage, white rage, rage against women - gets mobilized to cement and/or combat racism, xenophobia, and misogyny. Finally, the course reframes women's rage as intrepid and redemptive, capable of sparking change during this political movement.

AMST 3896. Internship for Academic Credit. (1-4 cr. ; Student Option; Every Fall, Spring & Summer)

An applied learning experience in an agreed-upon, short-term, supervised workplace activity, with defined goals, which may be related to a student's major field or area of interest. The work can be full or part time, paid or unpaid, primarily in off-campus environments. Internships integrate classroom knowledge and theory with practical application and skill development in professional or community settings. The skills and knowledge learned should be transferable to other employment settings and not simply to advance the operations of the employer. Typically the student's work is supervised and evaluated by a site coordinator or instructor.

AMST 3920. Topics in American Studies. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Topics specified in Class Schedule.

AMST 3993. Directed Studies. (; 1-9 cr. ; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study. prereq: instr consent

AMST 4101. Gender, Sexuality, and Politics in America. (DSJ,HIS; 3 cr. ; Student Option; Every Fall)

Ways public and private life intersect through the issues of gender, sexuality, family, politics, and public life; ways in which racial, ethnic, and class divisions have been manifest in the political ideologies affecting private life.

AMST 4301. Workers and Consumers in the Global Economy. (DSJ; 3 cr. ; Student Option; Every Spring)

Impact of global economy on workplaces/workers in the United States, Mexico, and Caribbean countries. Influence on consumption. Consequences for American culture/character. Effects on U.S./Mexican factory work, service sector, temporary working arrangements, offshore production jobs in Dominican Republic, and professional/managerial positions.

AMST 4962W. Proseminar in American Studies. (WI; 3 cr. ; Student Option No Audit; Every Spring)

This course serves as the capstone course for majors of the American Studies BA program. prereq: AmSt sr or instr consent

AMST 5412. Comparative Indigenous Feminisms. (GP; 3 cr. ; Student Option; Periodic Fall & Spring)

The course will examine the relationship between Western feminism and indigenous feminism as well as the interconnections between women of color feminism and indigenous feminism. In addition to exploring how indigenous feminists have theorized from 'the flesh' of their embodied experience of colonialism, the course will also consider how indigenous women are articulating decolonization and the embodiment of autonomy through scholarship, cultural revitalization, and activism.

AMST 5920. Topics in American Studies. (; 1-4 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)

Topics specified in Class Schedule.

Anatomy (ANAT)

ANAT 3001. Human Anatomy. (; 3 cr. ; Student Option; Every Fall)

Anatomical relationships. Function based upon form. Clinical applications. Gross (macroscopic) anatomy, histology (microscopic anatomy). Neuroanatomy (nervous system), embryology (developmental anatomy). prereq: [BIOL 1002W or BIOL 1009 or BIOL 2002 or equiv], at least soph

ANAT 3601. Principles of Human Anatomy. (; 3 cr. ; Student Option; Every Spring)

Anatomical relationships. Function based upon form. Clinical applications. Gross (macroscopic) anatomy, histology (microscopic anatomy). Neuroanatomy (nervous system), embryology (developmental anatomy). prereq: [BIOL 1002 or BIOL 1009 or BIOL 2002 or equiv], [concurrent registration is required (or allowed) in 3602 or concurrent registration is required (or allowed) in 3612], at least soph

ANAT 3602. Principles of Human Anatomy Laboratory. (; 2 cr. ; Student Option; Every Spring)

Complements 3601 or 3611. prereq: 3001 or 3301 or INMD 3001 or 3301 or concurrent registration is required (or allowed) in 3601 or concurrent registration is required (or allowed) in 3611

ANAT 3608H. Principles of Human Anatomy Laboratory for Honors Students. (; 3 cr. ; A-F only; Every Spring)

Lab work required for 3602 or 3612. Additional dissection of human cadavers/related projects. Supplements 3001 or 3601 or 3611. prereq: [concurrent registration is required (or allowed) in 3601 or concurrent registration is required (or allowed) in 3611] or 3001], sophomore, junior or senior, honors

ANAT 3611. Principles of Human Anatomy. (; 3 cr. ; Student Option; Every Spring)

Anatomical relationships. Function based upon form. Clinical applications. Gross (macroscopic) anatomy, histology (microscopic anatomy). Neuroanatomy (nervous system), embryology (developmental anatomy). prereq: [BIOL 1002 or BIOL 1009 or BIOL 2002 or equiv], at least soph; [concurrent registration is required (or allowed) in 3602 or concurrent registration is required (or allowed) in 3612] recommended

ANAT 3612. Principles of Human Anatomy Laboratory. (; 2 cr. ; Student Option; Every Spring)

Complements 3601 or 3611. prereq: 3001 or 3301 or INMD 3001 or 3301 or concurrent registration is required (or allowed) in 3601 or concurrent registration is required (or allowed) in 3611

ANAT 4900. Directed Studies in Anatomy. (; 1-6 cr. [max 18 cr.] ; S-N only; Every Spring)

x prereq: instr consent

ANAT 5095. Advanced Problems in Anatomy. (; 1-6 cr. [max 12 cr.] ; A-F only; Every Fall, Spring & Summer)

Exceptional projects that do not easily fit within confines of other ANAT offerings. Examples include but not limited to individual teaching or research projects. prereq: one or more ANAT classes, instr consent

ANAT 5150. Human Gross Anatomy. (5 cr. ; A-F only; Every Fall)

Human cadaveric dissection based on traditional preparation, lab dissection, review sections, radiographic analysis, clinical correlations. Taught by regions. Extremities, torso, head/neck. Assessment by mid-semester/final written/practical examinations. prereq: instr consent, For Medical Students, or Graduate students enrolled in an appropriate graduate program as determined by instructor.

ANAT 5525. Anatomy and Physiology of the Pelvis and Urinary System. (; 1-2 cr. ; A-F only; Every Spring)

Two-day intensive course. Pelvis, perineum, and urinary system with cadaveric dissection. Structure/function of pelvic and urinary organs, including common dysfunction and pathophysiology. Laboratory dissections, including kidneys, ureters, urinary bladder, pelvic viscera and perineum (male or female), pelvic floor, vascular and nervous structures.

Grand rounds section. prereq: One undergrad anatomy course, one undergrad physiology course, instr consent

ANAT 5999. Head and Neck Anatomy. (; 3 cr. ; A-F or Audit; Every Summer)

N/A prereq: instr consent

Anesthesiology (ANES)

ANES 5587. Adv Clinical Physiology I for Nurse Anesthetists. (; 3 cr. ; A-F or Audit; Every Fall)

Cellular mechanisms underlying systems physiology. Cellular physiology, physiology of excitable tissues, renal physiology, cardiovascular physiology, hemostasis.

ANES 5588. Advanced Clinical Physiology II for Nurse Anesthetists. (; 3 cr. ; A-F or Audit; Every Spring)

Respiratory physiology, acid-base physiology, gastrointestinal physiology, metabolism, endocrinology, reproductive physiology, physiology of pregnancy/labor. prereq: Advanced Clinical Physiology I for Nurse Anesthetists

ANES 5686. Chemistry and Physics for Nurse Anesthetists. (; 3 cr. ; A-F or Audit; Every Summer)

Chemical equilibrium, organic chemistry, physics of fluids/gases, anesthetic applications. prereq: General chemistry or instr consent

Animal Science (ANSC)

ANSC 1001. Orientation to Animal Science. (1 cr. ; A-F or Audit; Every Fall)

Current issues, career planning, professional development. Interviews with faculty and other resource persons.

ANSC 1011. Animals and Society. (CIV; 3 cr. ; Student Option; Every Spring)

This online course is designed for anyone interested in the ways in which we as a human society interact with, affect and are affected by non-human animals. Students will gain a broad understanding of the major ways in which humans use animals in contemporary society, including as food, as companions, as research subjects, and as entertainment. Other topics will include: social and ethical issues concerning animal use, the human-animal bond, animals in culture, and animals and the law.

ANSC 1101. Introductory Animal Science. (4 cr. ; Student Option; Every Fall & Spring)

Fundamental concepts of animal breeding, physiology, nutrition, and management as they apply to the production of beef, dairy, horses, poultry, sheep, swine, and other livestock. Fall term class open only to ANSC majors. Spring term class open to all majors.

ANSC 1201. Backyard Chickens - Science and Practice. (; 3 cr. ; Student Option; Every Spring)

Backyard Chickens - Science and Practice is an online course designed to meet the needs of students interested in understanding chickens

in general, and for those who engage or are planning to engage in small scale farming of chickens. This course, expanded over 6 modules; (1) Basic biology and behavior (2) Selection (3) Housing (4) Nutrition (5) Management and (6) Diseases as it relates to chickens, will help the students understand the basic science of rearing chickens. Each of the six modules encompasses pertinent short video or PowerPoint lectures that provide fundamental and applied information on backyard chicken rearing.

ANSC 1205. Animal Handling - Livestock. (1 cr. ; A-F only; Every Fall & Spring)

Students will learn how to handle and restrain animals safely. Cattle, sheep, and pigs in the Animal Science Department's St. Paul animal units are the animals primarily worked with. Students will perform common animal husbandry techniques on these animals. Proper techniques that promote animal welfare will be emphasized. This course is meant for Animal Science freshmen students that have minimal experience working with livestock.

ANSC 1403. Companion Animal Nutrition and Care. (; 3 cr. ; Student Option; Every Fall & Spring)

This course is designed for individuals having no prior training with animals or nutrition but have interest in caring for and understanding the contemporary importance of companion animals. Emphasis will be on nutrition of healthy animals and the various factors that play a role in feeding an animal adequately. These factors include animal behavior, environmental conditions, food type, and availability. The course will emphasize basic principles of nutrition. The target audience of this course is all undergraduate students interested in nutrition and care of companion animals. The course will focus on companion animals, but not exclusively dogs and cats.

ANSC 1480. Topics in Animal Science. (; 1-3 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Various topics

ANSC 1511. Food Animal Products for Consumers. (; 3 cr. ; Student Option; Every Fall)

Introduction to the compositional variation, processing, selection, storage, cookery, palatability, nutritional value, and safety of red meat, poultry, fish, and dairy products. Meets CFANS interdisciplinary requirement.

ANSC 1701. Historical Influence of the Horse on Society. (HIS; 3 cr. ; Student Option; Every Fall)

Concepts of historical inquiry using the powerful/changing relationship between Man and horse. Students function as historians: framing questions, searching for appropriate sources, developing explanation model with reasoned arguments, and finally, write/defend interpretation.

ANSC 2011. Dairy Cattle Judging. (; 2 cr. ; Student Option; Every Fall)

Evaluation of dairy animals on the basis of physical appearance, including classes of

heifers and cows from the six major dairy breeds. Held in conjunction with the Minnesota State Fair. Training in oral reasons. prereq: instr consent

ANSC 2012. Livestock and Carcass Evaluation. (; 3 cr. ; Student Option; Every Spring)

Evaluation of cattle, swine, and sheep. Breeding stock evaluated on live appraisal, performance records, and breeding values. Market animals evaluated, graded, and priced on physical appearance followed by evaluation and grading of their carcasses.

ANSC 2013. Beginning Livestock Judging.

(; 2 cr. ; Student Option; Fall Odd Year) Visual evaluation of beef cattle, swine, and sheep for type, muscling, degree of finish, structure, and soundness. Short oral presentations. Preparation for collegiate livestock judging competition.

ANSC 2015. Animal Welfare Science and Ethics. (3 cr. ; A-F only; Every Fall)

This multidisciplinary course helps students develop an intellectual framework for understanding and interpreting issues involving animal welfare and ethics of animal use in agriculture, science and society.

ANSC 2016. Introduction to Applied Animal Behavior. (3 cr. ; A-F only; Every Fall)

Basic concepts and applications of animal behavior within the contexts of human use. Emphasis on domesticated species, but other species within captive environments also examined.

ANSC 2055. Horse Management. (; 2 cr. ; Student Option; Every Fall)

This course is offered online (semi-self paced) and provides an introduction to equine-related careers, the equine industry, and horse breeds and behavior. Current events will be discussed including topics such as horse slaughter and unwanted horses. Students will learn about the importance of bodyweight estimation, body condition scoring, hay analysis, plants poisonous to horses, liability, insurance options, as well as feeding, pasture, manure, and facility management. Equine health care will be discussed including colic, hoof care, vaccinations, deworming, and the role of genetics. Each week, students will participate in a course discussion, quiz, or exam.

ANSC 2401. Animal Nutrition. (; 3 cr. ; Student Option; Every Fall)

Classification/function of nutrients. Use of nutrients for body maintenance, growth, egg production, gestation, and lactation. Comparative study of digestive systems of farm animal species.

ANSC 3007. Equine Nutrition. (; 3 cr. ; Student Option; Every Spring)

Principles of nutrition. Emphasizes unique aspects of equine nutrition. Nutritional needs of healthy animals. Factors in feeding. Animal behavior, growth/development, physiological status, environmental conditions, food type, availability. How physiology of horse's gastrointestinal tract, utilization of feedstuffs, and horse's nutritional requirements interrelate.

Balanced rations, nutritional related ailments. Pasture management, forage selection, use of dietary feed additives/enhancers. prereq: 2401

ANSC 3011. Statistics for Animal Science. (; 4 cr. ; Student Option; Every Fall)

Basic statistical concepts. Develop statistical reasoning/critical thinking skills. Descriptive statistics, probability, sampling and sampling distributions, hypothesis testing, experimental design, linear correlation, linear regression and multiple regression. How to make sound arguments/decisions based on statistics when reviewing news articles or scientific publications with statistical content. Explore/draw conclusions from data using a basic statistical software package.

ANSC 3015. Animal Welfare Judging and Assessment. (3 cr. ; Student Option; Every Fall)

Advanced application of animal welfare science toward the assessment of real-life scenarios in agriculture, companion, and exotic animals. Top students will compete on the UMN team at the Intercollegiate Animal Welfare Judging and Assessment Competition held in November each year.

ANSC 3092. Undergraduate Research in Animal Science. (; 1-3 cr. [max 6 cr.] ; A-F only; Every Fall & Spring)

Students conduct research project under supervision of faculty member.

ANSC 3093. Directed Study. (1-4 cr. [max 6 cr.] ; A-F only; Every Fall & Spring)

Directed Study: A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

ANSC 3094. Directed Research. (1-4 cr. [max 6 cr.] ; A-F only; Every Fall & Spring)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

ANSC 3141. Advanced Dairy Judging. (; 1 cr. ; Student Option; Every Spring)

Training in presentation of oral reasons in dairy cattle judging. Selected students from this course participate in fall intercollegiate dairy judging contest. prereq: 2011 or instr consent

ANSC 3142. Advanced Livestock Judging. (; 2 cr. ; Student Option; Fall Even Year)

Visual evaluation of beef cattle, swine, and sheep for muscling, finish, structure, and soundness. Use of production (growth and reproduction) records in evaluation. Oral presentations. Preparation for national collegiate livestock judging contest. prereq: instructor consent

ANSC 3203W. Environment, Global Food Production, and the Citizen. (GP,WI; 3 cr. ; Student Option; Every Spring)

Ecological/ethical concerns of food production systems in global agriculture: past, present, and future. Underlying ethical positions about how agroecosystems should be configured. Interactive learning using decision cases, discussions, videos, other media.

ANSC 3221. Animal Breeding. (; 4 cr. ; Student Option; Every Fall)

Application of qualitative and quantitative genetics to animal breeding. Concepts of livestock improvement through selection and mating programs.

ANSC 3301. Human and Animal Physiology.

(3 cr. ; Student Option; Every Fall & Spring)
Functions of major systems in mammals. Nervous system, muscles, cardiovascular system, respiration, renal system. Endocrinology/metabolism. Blood, immunology, reproduction. prereq: Must have taken a Biology and Chemistry course. Biol 1009 or equivalent is strongly recommended.

ANSC 3302. Human and Animal Physiology Laboratory. (; 1 cr. ; Student Option; Every Fall & Spring)

Companion course to 3301. Physiological principles are demonstrated using active learning approaches. Nervous system, muscles, cardiovascular, respiration, renal, endocrinology/metabolism, blood, immunology, reproduction. prereq: 3301 or concurrent registration is required (or allowed) in 3301

ANSC 3303W. Human and Animal Physiology with lab. (WI; 4 cr. ; A-F only; Every Fall & Spring)

Companion course to 3301. Physiological principles are demonstrated using active learning approaches. Nervous system, muscles, cardiovascular, respiration, renal, endocrinology/metabolism, blood, immunology, reproduction. prereq: Biol 1009 or equivalent is strongly recommended.

ANSC 3305. Reproductive Biology in Health and Disease. (; 4 cr. ; Student Option; Every Fall)

Reproductive organ functions, fertilization, estrous cycle and endocrine control, reproductive efficiency, problems/principles of artificial insemination. Anatomy, physiology, biochemistry of mammary gland. Mammary growth, initiation/maintenance of lactation, milk synthesis, factors influencing lactation curve. prereq: Biol 1009 or equiv

ANSC 3307. Artificial Insemination Techniques. (; 1 cr. ; S-N or Audit; Every Spring)

Hands-on training/techniques of artificial insemination at an off-campus laboratory setting. Techniques of AI and semen handling.

Criteria for selection of bulls. prereq: instr consent

ANSC 3403. Companion Animal Hot Button Issues. (; 3 cr. ; Student Option; Every Fall)

Various issues that affect companion animals in our society. Students debate pros/cons of each issue and formalize their own opinions based on information presented by debate teams.

ANSC 3480. Topics in Animal Science. (; 1-3 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Various topics

ANSC 3509. Animal Biotechnology.

(BIOL,TS; 4 cr. ; Student Option; Every Fall)
ANSC 3509 is a course for undergraduates seeking a broad understanding of animal biotechnology in a single semester. The course covers the major concepts and principles of modern animal biotechnology. Topics include: genes and genomes, recombinant DNA technology, genetically modified foods and medicines, proteins as products, DNA fingerprinting and forensic analysis, bioremediation, aquatic biotechnology, medical biotechnology, and bioethics as it pertains to biotechnology. The course does not require any prerequisites and is targeted at students from all backgrounds and majors. We will discuss this history of biotechnology through current events. The laboratory component will focus on basic skills required in a molecular lab including aseptic technique, DNA extraction, pipetting, PCR, casting and running gels, data analysis, and guided bioinformatics lessons. The laboratory component will also teach molecular techniques necessary in forensic DNA fingerprinting, and how to gather DNA profiling data of individual animals to study population genetics. The course focuses primarily on the science biotechnology, but has strong components on ethics, policy, and society. For each topic, career paths are discussed, including how to prepare for careers in biotechnology fields.

ANSC 3511. Animal Growth and Development. (; 3 cr. ; Student Option; Every Spring)

Principles of animal growth. Interaction of nutrition, hormones, exercise, heredity, and disease in regulating growth. prereq: College-level biology course

ANSC 3555. Applied Livestock and Poultry Microbiology. (2 cr. ; A-F only; Spring Even Year)

This applied microbiology course is intended to provide theoretical basis and hands-on experience to students on major pathogenic bacteria colonizing livestock and domestic poultry. This course will provide skills to the students who seriously consider farm animal and poultry microbiology research and/or teaching in their careers. Pathogenic bacteria in livestock and poultry such as *Listeria monocytogenes*, *Escherichia coli* O157:H7, and *Salmonella*, fungal microorganisms (*Aspergillus*), and beneficial microorganisms such as *Lactobacillus*, will be discussed. In addition, the course will introduce feed testing

methods (Bacteriological Analytical Manual (BAM) methodology), common antibacterials/antibiotics used for decontamination and disinfection, and the emerging alternatives to antibiotics with a perspective on bacterial antibiotic resistance. In a flipped class room format, the students will gather necessary information provided by the instructor, listen to short lectures on the methods and mechanisms, participate in demonstrations, and apply it in a typical BSL2 laboratory set up under supervision. All students should undergo BSL2 training prior to enrollment. Online training counts to approximately 5-6 hours. Not more than 4 students will be allowed for each session due to BSL2 pathogenic microbiology space restriction, access to RAR facilities, and some non-conventional microbiological methods. Special health conditions, pregnancy, and immunocompromised situations must be consulted with the instructor prior to enrollment. The students must obtain clearance from ROHC for their tetanus vaccination status. prereq: Instructor Permission

ANSC 3609. Business Planning for Animal Enterprises. (; 2 cr. ; Student Option; Every Fall)

Systems approach to decision making and problem solving in production enterprises. Planning, long range goal setting, production analysis, risk analysis, and cost-benefit analysis. Quality-of-life issues.

ANSC 3701. Poultry Products Technology.

(3 cr. ; A-F only; Every Summer)
Explores procurement, processing, and distribution of poultry meat, eggs, and further processed products. Composition, quality measurements, preservation, and economics are related to the biochemistry, microbiology, and technology involved in current processing methods.

ANSC 3702. Applied Avian Physiology. (3 cr. ; A-F only; Every Summer)

Applied Avian Physiology is an intensive 3-credit lecture and laboratory course designed to introduce industry relevant aspects of avian physiology with emphasis on behavior, neurology, muscle, cardiovascular, immunology, digestive, endocrinology, and reproductive systems for egg and meat producing birds.

ANSC 3703. Avian Health. (3 cr. ; A-F only; Every Summer)

Trains students to identify diseases that commonly plague poultry. Instruction on animal well-being, transport regulations, disease surveillance, and methods of disinfection and sanitation are included.

ANSC 3704. Poultry Nutrition. (3 cr. ; A-F only; Every Summer)

Develop a conceptual understanding of nutrient requirements and feed production for optimal growth and production of commercial poultry species. The use of computer programming for feed formulation is emphasized.

ANSC 3801. Livestock Merchandising. (; 3 cr. ; Student Option; Spring Odd Year)

Promotion/merchandising of purebred livestock. Hands-on training in advertising,

livestock photography, showing/fitting, sale organization. Field trips to seed stock operations/auctions. Presentations by industry and breed association leaders. Students conduct annual sale. prereq: Jr or sr or instr consent

ANSC 4009W. Undergraduate Research Thesis. (WI; 1-6 cr. [max 12 cr.]; A-F or Audit; Every Fall, Spring & Summer)
Usually one full year. Research/thesis experience under supervision of CFANS faculty member. Written bound thesis, oral presentation of research results. prereq: Jr or sr major in AnSc, instr consent

ANSC 4011. Dairy Cattle Genetics. (3 cr. ; Student Option; Every Spring)
Quantitative genetic principles of breeding dairy cattle. Evaluation of males, females. Systems of mating. Rates of genetic improvement with/without AI. prereq: (prereq 3221, previous or current registration in 4604, at least junior status)

ANSC 4092. Special Problems in Animal Science. (1-4 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer)
Independent study in an area of animal science, under supervision of faculty member. prereq: instr consent

ANSC 4093. Tutorial in Animal Science. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)
Informally structured to encourage in-depth study of specific disciplines in animal science. Pertinent readings; preparation of written essays of high quality required. prereq: instr consent

ANSC 4096. Professional Experience Program: Internship. (1-3 cr. [max 6 cr.]; S-N only; Every Fall, Spring & Summer)
Supervised professional experience in animal industries and farm enterprise systems. Various aspects of the industry and related fields. Evaluative reports. Consultations with faculty advisers and employers. prereq: CFANS undergrad, instr consent, agreement form

ANSC 4099. Special Workshop in Animal Science. (; 1-4 cr. [max 8 cr.]; Student Option; Every Fall & Spring)
Independent study in an area of animal science, under supervision of faculty member. prereq: instr consent

ANSC 4401. Swine Nutrition. (; 3 cr. ; Student Option; Every Fall)
A comprehensive review of major considerations in providing optimum, cost-effective nutrition to swine in all stages of production. prereq: 2401, 3511 recommended

ANSC 4403. Ruminant Nutrition of Production & Exotic Animals. (; 3 cr. ; Student Option; Every Spring)
This is a hybrid course with approximately 75% of material delivered via on-line lectures. Students will meet once per week for a in-class hands-on activity or a guest lecture. Species focus will include dairy, beef, small ruminants, deer, buffalo and zoo ruminants. Topics include digestive tract physiology, microbiology of

the rumen, nutrient requirements, nutrient utilization, nutrient content of feedstuffs, diet formulation and feeding challenges.

ANSC 4404. Applied Dairy Nutrition. (; 2 cr. ; Student Option; Periodic Fall)
Application of nutrition principles to dairy cow nutrition. Nutrient requirements of dairy cows, feed ingredient selection/usage, formulation/evaluation of dairy cow rations using computer programs. Case study analysis of feeding programs used on dairy farms. prereq: AnSc 4403 recommended

ANSC 4601. Pork Production Systems Management. (4 cr. ; Student Option; Fall Odd Year)
Interrelationships of business, marketing, and biological performance of pigs in various types of production systems.

ANSC 4602. Sheep Production Systems Management. (; 4 cr. ; Student Option; Every Spring)
Nutrition, management, genetics, reproduction, health. Application of production records, selection, and marketing technology. Current research. Social concerns, consumer affairs, industry practices. Field trips to sheep farms and related industries.

ANSC 4603. Beef Production Systems Management. (; 4 cr. ; Student Option; Every Fall)
How to resolve problems and manage cow-calf, stocker, or feedlot operations. Segments of beef industry, challenges. Nutrition, reproduction, genetics, and health in beef cattle production. Students evaluate a beef cattle enterprise and contribute in marketing, selection, reproduction, nutrition, or health management. prereq: concurrent registration is required (or allowed) in 4613

ANSC 4604. Dairy Production Systems Management. (4 cr. ; Student Option; Spring Even Year)
Practical applications of principles of dairy cattle health and welfare, nutrition, reproduction, housing, genetics, and economics in a problem solving context. Lectures, farm evaluations and case studies. prereq: AnSc 1101, AnSc 2401

ANSC 4613. Advanced Beef Production Systems Management. (; 2 cr. ; Student Option; Every Fall)
Half semester course. Student enterprise-analysis teams evaluate a beef cattle enterprise and solve problems in marketing, selection, reproduction, nutrition, or health management. prereq: 4603

ANSC 4711. Breeder Flock & Hatchery Management. (3 cr. ; A-F only; Every Summer)
History of artificial incubation relevant to the U.S. hatching industry. Practices involved in successful incubation of hatching eggs and embryonic development in birds. Management factors involved in breeder hen production and operating a hatchery.

ANSC 4712. Poultry Enterprise Management. (3 cr. ; A-F only; Every Summer)

Poultry Enterprise Management is designed to compile various aspects of previous poultry classes and is designed to expose students to the business and management aspects of the poultry industry. It is also designed to teach students how to interact and communicate effectively within the poultry industry and train them to make business decisions that impact the economic welfare of various poultry industry sectors. Students will learn how to develop a poultry operation business plan that includes everything from building design to an overall economic analysis of their operation.

ANSC 5015. Animal Welfare Science and Ethics. (3 cr. ; A-F only; Every Fall)
This multidisciplinary course helps students develop an intellectual framework for understanding and interpreting issues involving animal welfare and ethics of animal use in agriculture, science and society.

ANSC 5025. Gut Microbiome Systems. (3 cr. ; A-F or Audit; Every Fall)
This course is primarily focused on providing conceptual and methodological tools to understand how diet and the gut microbiome converge to impact the physiological landscape of animals and humans, considering diet, host and microbiome as one highly integrated system. To that end, the course relies on concepts of data analysis, gastrointestinal microbiology, the breadth of scientific literature produced up to date and hands on experiences to immerse attendants in the ever-growing microbiome field and open them to consider a microbiome lens to address different research questions in their respective fields. The course emphasizes three main conceptual areas: 1. Compositional and functional organization of microbial communities in the mammalian gut: From cells to functional communities. 2. Dietary drivers of the mammalian gut microbiome: Nutritional Ecology in the mammalian gut 3. Host-microbiome interactions: Physiological impact of the mammalian gut microbiome Rather than memorizing these concepts, the course emphasizes the need to apply them to real life issues in animal and human nutrition and health. As such, recognizing these conceptual areas in context, and using them for problem solving in their respective research areas is the ultimate goal of the course. Undergraduate level course in microbiology and physiology are suggested to enroll in this course. Also, previous completion of statistics courses and familiarity with the R statistical interface and command line are recommended.

ANSC 5035. Animal Welfare Judging and Assessment. (3 cr. ; A-F only; Every Fall)
Advanced application of animal welfare science toward the assessment of real-life scenarios in agriculture, companion, and exotic animals. Top students will compete on the UMN team at the Intercollegiate Animal Welfare Judging and Assessment Competition held in November each year.

ANSC 5091. Research Proposals: From Ideas to Strategic Plans. (3 cr. ; Student Option; Every Spring)
You have a great research idea, now what? How do you turn your idea into a proposal?

It has been said paraphrasing Edison, that innovation is one percent inspiration, ninety-nine percent perspiration. In this course, we will start with an inspiring idea and sweat our way to develop a research proposal. The students will go through a step-by-step process that starts choosing and defining a research idea, then proceeding to do literature reviews and to the development of hypothesis, aims, objectives and a research strategy. The aim of this course is to provide students with tools to understand the structure of scientific reports and proposals, literature searches and basic data interpretation. The student will learn about different research approaches and how to achieve consistency in their research projects. We will guide students in how to begin and develop a written research proposal that will satisfy the requirements of their advisers, institution and funding organizations. prereq: There are no prerequisites, however, having taken ANSC 3011 Statistics for Animal Science is desirable.

ANSC 5099. Special Workshop in Animal Science. (; 1-6 cr. [max 12 cr.] ; Student Option; Every Spring)

Topics vary. See Class Schedule or department. Topics may use guest lectures/experts. prereq: instr consent

ANSC 5200. Statistical Genetics and Genomics. (4 cr. ; Student Option; Fall Even Year)

Gene discovery. Genomic selection. Data analysis. Phenotypes/DNA markers. Parametric/non parametric linkage analysis. Mapping quantitative trait loci (QTL). Parentage testing. prereq: [Stat 3021 or equiv], [Biol 4003 or equiv]

ANSC 5555. Applied Livestock and Poultry Microbiology. (2 cr. ; A-F only; Spring Even Year)

This applied microbiology course is intended to provide theoretical basis and hands-on experience to students on major pathogenic bacteria colonizing livestock and domestic poultry. This course will provide skills to the students who seriously consider farm animal and poultry microbiology research and/or teaching in their careers. Pathogenic bacteria in livestock and poultry such as *Listeria monocytogenes*, *Escherichia coli* O157:H7, and *Salmonella*, fungal microorganisms (*Aspergillus*), and beneficial microorganisms such as *Lactobacillus*, will be discussed. In addition, the course will introduce feed testing methods (Bacteriological Analytical Manual (BAM) methodology), common antibacterials/antibiotics used for decontamination and disinfection, and the emerging alternatives to antibiotics with a perspective on bacterial antibiotic resistance. In a flipped class room format, the students will gather necessary information provided by the instructor, listen to short lectures on the methods and mechanisms, participate in demonstrations, and apply it in a typical BSL2 laboratory set up under supervision. All students should undergo BSL2 training prior to enrollment. Online training counts to approximately 5-6 hours. Not more than 4 students will be allowed for each

session due to BSL2 pathogenic microbiology space restriction, access to RAR facilities, and some non-conventional microbiological methods. Special health conditions, pregnancy, and immunocompromised situations must be consulted with the instructor prior to enrollment. The students must obtain clearance from ROHC for their tetanus vaccination status.

ANSC 5625. Nutritional Biochemistry. (; 3 cr. ; Student Option; Every Fall)

Overview of biochemical molecules and pathways important in nutritional events. prereq: BIOC 3021 or instr consent

ANSC 5626. Nutritional Physiology. (; 3 cr. ; A-F only; Every Spring)

Whole body macronutrient metabolism as it relates to etiology of metabolic diseases. Signaling between tissues to control homeostasis. How dysregulation of crosstalk can lead to metabolic diseases. How diet, exercise, or starvation impact metabolism. Regulation of food intake and energy expenditure. Designing/analyzing/interpreting research data.

ANSC 5702. Cell Physiology. (; 4 cr. ; A-F only; Every Fall)

Cell Physiology involves the study of control mechanisms involved in maintaining homeostasis with respect to a variety of parameters including regulation of pH, volume, nutrient content, intracellular electrolyte composition, membrane potential, receptor signaling and aspects of intercellular communication. The first half of this team-taught course is organized in a partially on-line format where students learn from on-line materials and then take an on-line quiz each week before meeting with the instructor to review key concepts in class. The second half of the course is presented in lecture format. Student evaluation is based on quiz scores, in-class exams and graded problem sets.

Anthropology (ANTH)

ANTH 1001. Human Evolution. (BIOL; 4 cr. ; Student Option; Every Fall, Spring & Summer)

What does it mean to be human? This question, central to the discipline of anthropology, has provided inspiration to scientists, philosophers, and artists for many centuries. In this course, we will begin to answer this question using the scientific study of the biological and cultural evolution of the human lineage. The first half of the term will introduce you to basic concepts in evolutionary theory: natural selection, genetics, behavioral ecology, and comparative anatomy. Using these tools, we will then spend the rest of the semester reconstructing the ecology, diet, anatomy, and behavior of our early ancestors, from the first apes to walk on two legs to the modern humans that conquered the globe. Weekly readings and lectures will provide the theoretical framework for understanding the evolutionary biology of *Homo sapiens*; laboratory sections will give you an opportunity to apply these theories and evaluate the fossil evidence for yourself. Through this combined approach, we will tackle such important

questions as: What features define the human lineage? In what ecological setting did our ancestors become bipedal? What role did global climate change play in our evolution? How did tool use and cultural evolution feedback into our biological evolution? When and where did modern humans originate and what behaviors characterized this emergence? Why were there many species of humans in the past but only one today? Why is it important for the future of humanity for the average citizen to understand the principles of evolution as applied to the human animal? Upon completion of this course, you will have a broad knowledge of the role biological anthropology plays within the discipline of anthropology. More importantly, however, you will acquire a better understanding of the biological heritage of our species and our place among other forms of life on our planet.

ANTH 1003V. Understanding Cultures: Honors. (GP,WI,SOCS; 4 cr. ; A-F only; Every Fall & Spring)

Introduction to social/cultural anthropology. Comparative study of societies/cultures around world. Adaptive strategies. Economic processes. Kinship, marriage, gender. Social stratification. Politics/conflicts. Religion/ritual. Personality/Culture. prereq: Honors

ANTH 1003W. Understanding Cultures. (GP,WI,SOCS; 4 cr. ; Student Option; Every Fall & Spring)

Introduction to social and cultural anthropology. Comparative study of societies and cultures around the world. Topics include adaptive strategies; economic processes; kinship, marriage, and gender; social stratification; politics and conflicts; religion and ritual; personality and culture.

ANTH 1911W. Changing Human Adaptations. (ENV,WI; 3 cr. ; A-F only; Periodic Fall & Spring)

Humans, like other species, are integral to the ecology of the earth. We display a series of adaptations that allow us to eat, grow, find mates, and raise offspring. Do humans have a fundamental ecological niche? How have humans adapted to climate change over time and space, for example, as we spread out of Africa, into Eurasia and then into the Americas? We consider how climate, environmental, and habitat reconstructions are made by scientists; and how diets, food acquisition strategies, geographic distribution, and social structure are known to paleoanthropologists. We consider changes in the human gut, tooth size, body size, and social behaviors. We also explore how long humans have made a significant impact on the environment, via hunting and overhunting, planting food, population growth and greenhouse gas emissions. When did the "Anthropocene" begin?

ANTH 1918. Justice?. (GP; 3 cr. ; Student Option; Periodic Fall)

What is justice, and how do we know it? Where does it begin and end? And, who gets to decide? Is justice a stable concept that can be applied universally, or a socially constructed (and therefore unstable) category that should

only be approached in contextually specific ways? This course takes an interdisciplinary approach to the concept of justice. Students will be exposed to a variety of texts - in philosophy, political science and economy, religion, anthropology, literature and law ? and contexts from which conceptions of justice have emerged and/or been challenged. As the title of this course, suggests, students will not merely be tracing the history and development of "justice," but also identifying and interrogating its conceptual limits.

ANTH 2001V. Being Human - A Comprehensive Introduction to the Four Fields of Anthropology. (WI; 3 cr. ; A-F only; Periodic Fall & Spring)

Whenever you take a trip, do you people-watch and wonder about these interesting humans that surround you? Why they look the way they do? How they know how to behave in different situations? Why they eat really weird foods? Anthropology answers these questions using a holistic, bio-cultural framework. In this course we will explore the relationship between human bodies and human culture, using the five fields of anthropological inquiry: biological anthropology, archaeology, cultural anthropology, linguistics and applied anthropology. We will answer questions such as: How and why did our physiques evolve into the form we see today? What cultural and environmental influences affect human variation throughout the world? What effects do religion, law, and society have on the way people think about, discuss, and use their bodies today? How do we learn about our past from examining human remains? How and why do differences in language use define us as persons? How can anthropological insight lead to great careers in law, medicine, business and public service?

ANTH 2006. Humans and Aliens: Learning Anthropology through Science Fiction. (GP; 3 cr. ; Student Option; Periodic Fall & Spring)

Science Fiction has been one of the most popular genres of literature over the last century and a half. Despite its great popularity, however, many fans of the genre do not realize how much it has in common with the discipline of Anthropology. Anthropology is the study of what it means to be human in all times and places. Science fiction, for its part, explores human existence in equally diverse contexts, except that those imagined contexts frequently have not yet happened. Despite this similarity, anthropology is extremely poorly known compared to science fiction. This course uses the stimulating and entertaining literature of science fiction to expose students to anthropology who, having never been exposed to it in high school, are likely to leave university without learning the power of the discipline's perspective on humanity. Through individual pairings of anthropology texts and science fiction stories, the course explores the relevance of biological anthropology, social anthropology, linguistic anthropology, and archaeology to humanity's future. The course's juxtaposition of anthropological literature to science fiction stories is designed to provide

students with the ability to see how our future is more dependent on how humanity works (as anthropology understands it), than merely what the next technological invention has to offer us. This course introduces students to the breadth of anthropological topics using the literature of such award-winning science fiction (SF) authors as Isaac Asimov, Elisabeth Bear, Jerome Bixby, Octavia Butler, Ted Chiang, Arthur C. Clarke, Philip K. Dick, Robert Heinlein, Frank Herbert, Ursula K. Le Guin, Catherine Moore, Mike Resnik, Kim Stanley Robinson, Neil Stephenson, James Tiptree, Jr., and Kurt Vonnegut. While the course is not designed to cover the literary criticism of SF literature nor the social analysis of the SF community of readers and authors, the choice of which SF authors to oppose to select anthropological topics was shaped by my understanding of the historical development of SF literature. Students will thus read stories written from the Golden Age of magazine SF to the most recent post-cyberpunk novelists. The selection of SF stories is of course idiosyncratic but it is designed to reflect the goal of learning something of anthropology while having a blast reading SF.

ANTH 3001. Introduction to Archaeology.

(SOCS; 4 cr. ; Student Option; Every Fall) Archaeology is the study of humans in the past, primarily through the material remains they left behind. It seeks to answer fundamental questions, such as ?When did humans first become dependent on fire??. ?What factors led to the development of agriculture??. or ? How can we explain the rise and fall of early civilizations?? The study of each of these big questions relies on answering many small questions that are asked in the context of archaeological excavations and laboratory analyses. A common theme underlies them: archaeology aims to reconstruct and understand why past human cultures changed. The goal of this class is to provide an understanding of the methods and techniques used by archaeologists in their investigations. It includes not only hands-on learning of specific analytical techniques, such as faunal and lithic analysis as well as site survey and excavation strategies, but also focuses on the theoretical approaches that guide the questions we ask and the methods we apply to answer them. This class, therefore, prepares students for more upper-level classes in archaeology. It also leads to a new way of thinking. This way of thinking is primarily critical and analytical. It leads one to think about how data are interpreted, and how theoretical frameworks as well as innate biases color these interpretations. Seeking solutions to interpretive problems requires the creative application of multidisciplinary approaches. Therefore, the study of archaeology leads to a new way of thinking about and doing science.

ANTH 3002. Sex, Evolution, and Behavior: Examining Human Evolutionary Biology. (; 4 cr. ; A-F or Audit; Every Spring)

Methods/theories used to understand humans in an evolutionary framework. What can be known only, or primarily, form an evolutionary perspective. How evolutionary biology of

humans might lead to better evolutionary theory. How physiology, development, behavior, and ecology coordinate/co-evolve in humans.

ANTH 3003. Cultural Anthropology. (; 3 cr. ; Student Option; Every Fall, Spring & Summer) Topics vary. Field research. Politics of ethnographic knowledge. Marxist/feminist theories of culture. Culture, language, and discourse. Psychological anthropology. Culture/transnational processes.

ANTH 3004. Great Controversies in Anthropology. (GP,SOCS; 3 cr. ; A-F or Audit; Every Spring)

Notable controversies in anthropology: Is human "reason" the same in all cultures? What makes up evidence/truth when we study people? Whose "voices" should be heard? Should anthropologists support contemporary attempts at economic "development"? Is it possible to agree on a set of universal individual or cultural rights? Can we make qualitative judgments about cultures? What civic/political responsibilities does the anthropologist have at home and with the people whom she or he studies? In-class debates.

ANTH 3005W. Language, Culture, and Power. (DSJ,WI,SOCS; 4 cr. ; Student Option; Every Spring)

Studying language as a social practice, students transcribe and analyze conversation they record themselves, and consider issues of identity and social power in daily talk.

ANTH 3006. Humans and Aliens: Learning Anthropology through Science Fiction. (GP; 3 cr. ; Student Option; Periodic Fall & Spring)

Science Fiction has been one of the most popular genres of literature over the last century and a half. Despite its great popularity, however, many fans of the genre do not realize how much it has in common with the discipline of Anthropology. Anthropology is the study of what it means to be human in all times and places. Science fiction, for its part, explores human existence in equally diverse contexts, except that those imagined contexts frequently have not yet happened. Despite this similarity, anthropology is extremely poorly known compared to science fiction. This course uses the stimulating and entertaining literature of science fiction to expose students to anthropology who, having never been exposed to it in high school, are likely to leave university without learning the power of the discipline's perspective on humanity. Through individual pairings of anthropology texts and science fiction stories, the course explores the relevance of biological anthropology, social anthropology, linguistic anthropology, and archaeology to humanity's future. The course's juxtaposition of anthropological literature to science fiction stories is designed to provide students with the ability to see how our future is more dependent on how humanity works (as anthropology understands it), than merely what the next technological invention has to offer us. This course introduces students to the breadth of anthropological topics using

the literature of such award-winning science fiction (SF) authors as Isaac Asimov, Elisabeth Bear, Jerome Bixby, Octavia Butler, Ted Chiang, Arthur C. Clarke, Philip K. Dick, Robert Heinlein, Frank Herbert, Ursula K. Le Guin, Catherine Moore, Mike Resnik, Kim Stanley Robinson, Neil Stephenson, James Tiptree, Jr., and Kurt Vonnegut. While the course is not designed to cover the literary criticism of SF literature nor the social analysis of the SF community of readers and authors, the choice of which SF authors to oppose to select anthropological topics was shaped by my understanding of the historical development of SF literature. Students will thus read stories written from the Golden Age of magazine SF to the most recent post-cyberpunk novelists. The selection of SF stories is of course idiosyncratic but it is designed to reflect the goal of learning something of anthropology while having a blast reading SF.

ANTH 3008. Introduction to Flintknapping.

(; 3 cr. ; A-F or Audit;)

Hands-on experience in replication of prehistoric stone tools, as basis for archaeological analysis and as art form in itself.

ANTH 3009. Prehistoric Pathways to World Civilizations. (HIS; 3 cr. ; Student Option; Every Spring)

How did complex urban societies first develop? This course addresses this question in ten regions of the world including Maya Mesoamerica, Inca South America, Sumerian Near East, Shang Civilization in East Asia, and early Greece and Rome.

ANTH 3015W. Biology, Evolution, and Cultural Development of Language & Music. (SOCS,WI; 3 cr. ; Student Option; Every Spring)

Language is the most human form of behavior, and the investigation of the ways language and culture interact is one of the most important aspects of the study of human beings. The most fascinating problem in this study is how language itself may have evolved as the result of the interaction between biological and cultural development of the human species. In this course we will consider the development of the brain, the relationship between early hominins, including Neanderthals and Modern Humans, and such questions as the role of gossip and music in the development of language.

ANTH 3016. Africa and African Diaspora Archaeology. (GP,HIS; 3 cr. ; Student Option; Every Fall)

Africa and African Diaspora Archaeology (AFRO/ ANTH 3016/5016) examines the evolution of human behavior in Africa and looks at subsequent social, cultural, and technological developments as shown in archaeological records including artifacts, ecofacts, rock art, and structures at archaeological sites. It also discusses methods used to identify archaeological records and how these records can be used to reconstruct past ways of life. Students will obtain hand-on-experience in identifying, classifying, and interpreting archaeological objects. The course covers Africa from around 2.6 million years ago

to the recent past, focusing primarily on the last 10,000 years. It examines the development and spread of food production, pottery, metallurgy, trade, and African connections with the Atlantic world dating back to the fifteenth century.

ANTH 3021W. Anthropology of the Middle East. (GP,WI,SOCS; 3 cr. ; A-F or Audit; Fall Even Year)

Anthropological methods of analyzing/ interpreting Middle Eastern cultures/societies.

ANTH 3023. Culture and Society of India.

(GP,SOCS; 3 cr. ; Student Option; Spring Even Year)

Contemporary society and culture in South Asia from an anthropological perspective with reference to nationalism; postcolonial identities; media and public culture; gender, kinship and politics; religion; ethnicity; and the Indian diaspora.

ANTH 3027W. Archaeology of Prehistoric Europe. (HIS,WI; 3 cr. ; Student Option; Every Fall)

How archaeologists analyze/interpret artifacts to develop knowledge about formation of European society, from earliest evidence of human occupation to Roman period.

ANTH 3028. Historical Archaeology. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

In this course, we will explore the theories and methods of historical archaeology ? such as material culture studies, landscape perspectives, archival, and oral historical interpretation - as a means of intervening in contemporary discussions of diversity in the United States. Historical archaeology can be a very effective means to challenge some of the standard American narratives about our diverse past. Our aim is to move beyond either a simplistic ethnic pluralism or the superficial ?melting pot? progressive history and instead grapple with the materiality of settler colonialism, white supremacy, and capitalism. In learning about this field, we will consider what has distinguished historical archaeology from American archaeology more broadly, and how those differences are parlayed into specific research strengths. This includes several themes: colonialism; the modern world and globalizing economies; intersectional identities (race and ethnicity, class, sex and gender, religion, age, ability/ disability) and social movements; public memory and commemoration; landscapes and social space; citizenship and subjectivity. Although historical archaeology until recently has been restrictively defined as addressing the European-colonized New World, the discipline in the past twenty years has significantly broadened its scope and impact on the practice of archaeology as a whole. Throughout the course we will discuss these developments, and what directions archaeology may take in the future as a result. Course work includes both reading/discussion and learning methods through practical exercises, and handling of archaeological material.

ANTH 3034W. Roots Music in American Culture and Society. (DSJ,WI; 3 cr. ; Student Option; Periodic Fall)

This course focuses on aspects of southern American vernacular music that came to public attention in the 1920s and 1930s as commercial recordings and field recordings of rural music became available. Although the music had deep roots in the American past, it also underwent dramatic transformations as a result of the coming of industrial capitalism to the south and as a result of the commercial recording process itself. This music continues to profoundly shape popular music today. We will try to consider as many questions as possible during the semester, but we will focus especially on three sets of issues. First, we will consider the music in terms of the historical contexts that shaped it. Second, we will consider the cultural politics surrounding the music as we focus on question of how historical narratives, popular media and popular perceptions, and scholarly works represent and interpret (in often problematic ways) certain genres of popular music and what the politics of those representations might be; and we will consider also how we listen to ?roots music,? how our listening is shaped by contemporary social and political circumstances. Third, we will attempt to understand musical genres in relation to the production of race and class and the experience of racial and class inequalities in the United States, and this may in turn prompt us to think critically about the idea of musical genre itself.

ANTH 3035. Anthropologies of Death.

(GP,SOCS; 3 cr. ; A-F or Audit; Every Spring) Anthropological perspectives on death. Diverse understandings of afterlife, cultural variations in death ritual, secularization of death in modern era, management of death in medicine, cultural shifts/conflicts in what constitutes good or natural death.

ANTH 3036. The Body in Society. (; 3 cr. ; Student Option; Spring Odd Year)

Body-related practices throughout the world. Readings, documentaries, mass media.

ANTH 3037. Food Sovereignty in Africa.

(ENV,SOCS; 3 cr. ; A-F only; Every Spring) "Food Sovereignty in Africa" critically evaluates how the physical environment and historical processes shaped agricultural productivity in Africa, as well as exploring the subsequent relationship the continent has had with the rest of the world. The course uses multi-disciplinary resources to examine historical factors that have contributed to contemporary food security issues, and discusses grassroots food movements that embrace the ethics and values of African societies in their efforts to achieve both food security and environmental sustainability. It also examines the interplay between food security, indigenous knowledge, and environmental sustainability by comparing various standpoints on African food production, scrutinizing the challenges the continent is facing and the unique perspectives it offers in terms of agricultural development in the globalized world. Finally, the course examines how agricultural systems in Africa are affected by the new global land rush. After taking the course, students will have better knowledge of emerging research directions on Africa and will be equipped with sufficient research and

practical skills to pursue independent studies beyond the classroom.

ANTH 3043. Art, Aesthetics and Anthropology. (; 3 cr. ; Student Option; Summer Odd Year)

The relationship of art to culture from multiple perspectives including art as a cultural system; the cultural context of art production; the role of the artist in different cultures; methodological considerations in the interpretation of art across cultural boundaries.

ANTH 3046W. Romance and Culture.

(GP,WI; 3 cr. ; A-F only; Every Spring)
Romance, aspects of this kind of love relationships from different perspectives in social/biological sciences. Draws on cross-cultural materials.

ANTH 3047W. Anthropology of Sex, Gender and Sexuality. (WI; 3 cr. ; Student Option; Periodic Spring)

This course explores the concepts of "sex," "gender," and "sexuality" through the scholarship of feminist anthropology, queer anthropology, and their antecedents. Students will read ethnographies that grapple with the contingent and shifting formations of these social constructions - when they emerge, disentangle, re-entangle, submerge, etc. The course will highlight the roles of imperialism, (settler) colonialism, capitalism, racism, heteropatriarchy, ableism, and other forms of social power in shaping these formations as well as the social categories - "sex," "gender," and "sexuality" - themselves.

ANTH 3145W. Urban Anthropology. (WI; 3 cr. ; Student Option; Periodic Spring)

This class explores anthropological approaches to urban life. On one hand, the course examines the ontological nature of the city by looking into the relation between cities and their environment, and asking whether and how people differentiated "urban" and "non-urban" spaces. It uncovers the social practices and behaviors that define urban life; urban-rural distinctions; the material and ecological processes that constitute cities; and popular representations of city and/or countryside. On the other hand, the course investigates the spatial and social divisions of the city, seeking to understand the historical struggles and ongoing processes that both draw together and differentiate the people of an urban environment. It studies how cities influence decision-making, contributing to the uneven distribution of power and resources. It considers: industrialization; urban class conflict; gendered and racialized spaces; and suburbanization. Both of these approaches will also critically consider the city as a social object that we encounter and learn about through our engagement with kinds of media, such as novels and film. Hence, reading for the class will include literature from the social sciences and humanities, as well as critical works of fiction. Students will engage with these broader anthropological issues through an investigation of several global cities, especially Minneapolis-St. Paul, Chicago, Paris, Mexico City, Brasilia, and New Delhi. The class mixes lecture, discussion, and

guided research. Lectures will introduce the history of urbanism and urban anthropology. Discussions will critically examine the readings, and offer insights and examples to better understand them. By participating in a guided research project, students will uncover hidden aspects of their own city, using ethnography or archaeology to shed light on the urban environment, social struggles over space, or other themes.

ANTH 3206. Sex, Murder, and Bodily Discharges: Purity and Pollution in the Ancient World. (3 cr. ; Student Option No Audit; Every Spring)

"Dirt is dangerous" wrote Mary Douglas more than 50 years ago in her groundbreaking study, *Purity and Danger: An Analysis of the Concept of Pollution and Taboo*. Her work has been influential in ancient Near Eastern and Mediterranean studies when dealing with issues of sacred/profane, purity/pollution, and ritual sacrifice and purification. Douglas' work provides a framework within which to understand ancients' thinking about these concepts that range from the sacredness of space and bodies to perceived pollutions cause by bodily leakage or liminal stages of life and death. In this course, we will examine Douglas' theory in light of ancient evidence, with special attention to ancient Israelite literature (the Tanakh or Old Testament) and ancient Jewish literature (the Dead Sea Scrolls), but we will also analyze other ancient Near Eastern and Mediterranean examples of purity and pollution (from epigraphical and documentary evidence).

ANTH 3221. Field School. (; 6 cr. [max 18 cr.] ; Student Option; Every Summer)

Field excavation, survey, and research. Intensive training in excavation techniques, recordation, analysis, and interpretation of archaeological materials or prehistoric remains. prereq: instr consent

ANTH 3242W. Hero, Savage, or Equal? Representations of NonWestern Peoples in the Movies. (WI; 3 cr. ; A-F only; Every Fall)

This course will explore images of nonWestern peoples and cultures as they have appeared in the movies and in other popular media. It has four aims: 1) to introduce the problem of nonWestern peoples in the West from historical points of view, 2) to discuss the relationship between mass media and issue of representation to the marketplace, 3) to introduce the concept of morality in and through collective representations as developed by Durkheim, and 4) to analyze the problem of moral agency in a series of Hollywood and Independent movies which portray nonwestern peoples and cultures. We will watch movies portraying three different groups of cultures, Pacific Islanders, Native Americans, and the Japanese. In each unit, we will first read important commentary on Western representations of each of these peoples, such as Bernard Smith on Pacific Islanders and Vine Deloria on images of Native Americans and Gina Marchetti on Hollywood's Japanese.

ANTH 3255. Archaeology of Ritual and Religion. (3 cr. ; Student Option; Fall Even Year)

The course discusses evidence for the origins of religion and its diverse roles in human societies over millennia. It focuses on how artifacts and architecture are essential to religious experience. It asks: What constitutes religion for different cultures? Why is religion at the heart of politics, social life, and cultural imagination?

ANTH 3306W. Medical Anthropology.

(GP,WI; 3 cr. ; A-F or Audit; Every Fall)
Relations among human affliction, health, healing, social institutions, and cultural representations cross-culturally. Human health/affliction. Medical knowledge/power. Healing. Body, international health, colonialism, and emerging diseases. Reproduction. Aging in a range of geographical settings. prereq: 1003 or 1005 or entry level soc sci course recommended

ANTH 3327W. Inca, Aztec & Maya Civilizations. (HIS,WI; 3 cr. ; A-F only; Periodic Fall)

This course is an intensive examination of the emergence, growth, and conquest of native civilizations in ancient America, focusing on the Maya, Aztec, and Inca states. Lectures and discussions examine the culture and history of these Native American civilizations, while also introducing students to anthropological theories of the state, religion, aesthetics, and history.

ANTH 3401. The Human Fossil Record. (; 3 cr. ; A-F only; Fall Even Year)

Fossil evidence paleoanthropologists use to reconstruct human evolutionary history. Taxonomy, phylogeny, behavior, ecology, tool use, land use, biogeography. Hands-on examination of fossil casts, readings from primary/secondary professional sources. prereq: 1001 or instr consent

ANTH 3402. Zooarchaeology Laboratory. (; 3 cr. ; A-F only; Every Fall)

How archaeologists reconstruct past societies, diets, and environments. Bones and bone fragments to skeletal element (e.g., femur, humerus, tibia), side, age, and taxon (e.g., horse, bison, antelope, hyena). Adaptations and functional morphology of animals? anatomy. Tool marks, tooth marks, burning, and types of bone breakage. Past societies' hunting, sharing, cooking practices as well as environmental reconstruction using vertebrates.

ANTH 3405. Human Skeletal Analysis. (; 4 cr. ; Student Option; Every Spring)

Structure, design, and variability of modern human skeleton. Anatomy, functional morphology, development, evolutionary history. Bone histology/biology, excavation/preservation, taphonomy, pathology, forensic analyses. Differentiating between males/females, adults/sub-adults, and humans/non-humans.

ANTH 3501. Managing Museum Collections. (3 cr. ; A-F or Audit; Fall Even Year)

This course provides a hands-on and research experience in collections management utilizing artifact, archival, and digital collections. Museum collections, the objects or specimens they contain, the information associated with

them, and their care and maintenance are a crucial part of both the sciences and the humanities. While seemingly disparate, many of the issues faced by those responsible for collections are quite similar: how to preserve and care for those collections, legal issues surrounding the materials they contain, how to organize and classify the items, how to facilitate discovery and access, and how to make the information contained in them available to the broadest audience possible. The course includes lectures by museum professionals, hands-on activities and selected readings. Credit will not be granted if credit has been received for ANTH 5501.

ANTH 3601. Archaeology and Native Americans. (DSJ; 3 cr. ; Student Option; Fall Even Year)

Historical, political, legal, and ethical dimensions of the relationship of American archaeology to American Indian people. Case studies of how representational narratives about Native people are created through archaeology; responses by Native communities; and the frameworks for collaborative and equitable archaeological practice. Professional ethics in archaeology/ heritage studies in American contexts.

ANTH 3631. Islam in America: A History of the Present. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

From the "Age of Discovery" and the African slave trade, to Malcolm X and the War on Terror, Islam has long been an integral part of the American landscape. In this course, students will examine the history of Islam and social formation of Muslim communities in the United States. We will approach this history in the plural: as histories of Islam in America, paying particular attention to the different local and global dynamics that led to the migration of this racially, ethnically, and class variegated community. This course will explore how racial, national, cultural, and sectarian differences within and between Muslim communities shape and challenge the notion of a singular Islam or Muslim community. We will ask how and why Islam and Muslims have been characterized - both historically and today - as a "problem" in/for America. What does the emergence of terminology like "American Muslim" and "American Islam" tell us about these historical tensions, conceptions of good/bad citizenship, and identity politics more broadly, in the United States today?

ANTH 3896. Internship for Academic Credit. (1-4 cr. ; Student Option; Every Fall, Spring & Summer)

An applied learning experience in an agreed-upon, short-term, supervised workplace activity, with defined goals, which may be related to a student's major field or area of interest. The work can be full or part time, paid or unpaid, primarily in off-campus environments. Internships integrate classroom knowledge and theory with practical application and skill development in professional or community settings. The skills and knowledge learned should be transferable to other employment settings and not simply to advance

the operations of the employer. Typically the student's work is supervised and evaluated by a site coordinator or instructor.

ANTH 3913. Directed Study: Independent Capstone Project Planning. (1 cr. ; A-F only; Every Fall & Spring)

The Anthropology Independent Capstone Project Planning course is the first semester in a two-semester project sequence. In this first semester course, ANTH 3993, students plan their project and carry out preliminary research in consultation with their faculty mentor. Students and faculty mentors meet throughout the semester. The resulting project typically consists of an annotated bibliography, project proposal, Interdisciplinary Review Board application if appropriate, and/or pilot study. A directed study contract between the student and faculty mentor is required for registration. prereq: [Jr or sr] anth major, instr consent

ANTH 3980. Topics in Anthropology. (; 3 cr. [max 6 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Topics specified in Class Schedule.

ANTH 4003W. Contemporary Perspectives in Cultural Anthropology. (WI; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

This course considers issues of race, class, gender, "culture," and globality across multiple genres of writing (ethnography, history, fiction, poetry, memoir). We do this by reading the work of writers who, with an ethnographic sensibility, focus on a particular person whose life is lived in obscurity, at the margins. We ask how such an approach that aims to evoke a world through a life might allow the reader to understand how people move across space and time and through their social worlds, in ways that other kinds of ethnographic or historical writing might not. prereq: [1003 or 1005], or instr consent

ANTH 4007. Laboratory Techniques in Archaeology. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Plant remains, material culture, faunal remains, human osteology. Emphasizes lab experience. Instructor consent required. prereq: instr consent

ANTH 4009W. Warfare and Human Evolution. (WI; 3 cr. ; A-F or Audit; Spring Odd Year)

Armed, violent conflict among groups? warfare? is a distinctive and devastating trait of many human societies. The practice of warfare brings together a number of unusual characteristics of our species, including the ability to cooperate, to discuss plans, and to make and use weapons, which together combine to create immense human suffering. War has long been a central topic of anthropologists, who have raised many questions. Is warfare a human universal? Are there truly peaceful societies? Why does war occur more often at some times and places than others? How, when and why did warfare evolve? What, if anything, does warfare have to do with intergroup aggression in other animals? What role has warfare, or

its more primitive antecedents, played in the evolution of our species? Efforts to explain war have themselves been contentious, with some scholars arguing that war is a recent phenomenon resulting from factors such as the development of agriculture, and other scholars arguing that war is an evolutionarily ancient phenomenon with roots in the common ancestor of humans and chimpanzees. In this seminar, we will read and discuss classic and recent texts on this broad and often divisive subject. To better assess the arguments presented in survey and theoretical papers, we will read original ethnographic materials, with each student choosing one subsistence society as the focus of their research efforts.

ANTH 4013. Capstone Project Writing Seminar. (; 3 cr. ; A-F only; Every Fall & Spring)

This seminar is designed for students participating in the Anthropology Senior Capstone Project. The purpose of this seminar is to provide students with instructional support and a structured environment in which to develop their research and writing skills within the practical context of writing a senior thesis for the Capstone. The thesis is based on original research for the Senior Capstone Project conducted by students in consultation with their advisors, and it is advised that students finish conducting research before enrolling in this course. In some cases it is possible research may continue from the planning course into this seminar. The seminar meets once a week, during which time students engage in active learning exercises, in-class discussions, and peer review as they write their thesis. The goal of this course is to align the writing abilities of students with the writing criteria developed by departmental faculty as part of the Center for Writing's Writing Enriched Curriculum. This course compliments student's advisor-advisee relationship for the Senior Capstone Project, and it is required that students set up regular meetings with their advisors to discuss their progress in the course in addition to consulting about the content of their projects. prereq: sr major, instr consent

ANTH 4013H. Capstone Project Writing Seminar. (; 3 cr. ; A-F only; Every Fall & Spring)

The purpose of this seminar is to provide Honors students with instructional support and a structured environment in which to develop their research and writing skills within the practical context of writing the Honors Thesis for the Capstone. The thesis is based on original research for the Senior Capstone Project conducted by students in consultation with their advisors, and it is advised that students finish conducting research before enrolling in this course. In some cases it is possible research may continue from the planning course into this seminar. The seminar meets once a week, during which time students engage in active learning exercises, in-class discussions, and peer review as they write their thesis. The goal of this course is to align the writing abilities of students with the writing criteria developed by departmental faculty as part of the Center for Writing's Writing

Enriched Curriculum. This course compliments student's advisor-advisee relationship for the Senior Capstone Project, and it is required that students set up regular meetings with their advisors to discuss their progress in the course in addition to consulting about the content of their projects. prereq: Sr major, honors student, instr consent

ANTH 4019. Symbolic Anthropology. (; 3 cr. ; Student Option; Periodic Fall)

Pragmatic/structural aspects of social symbolism cross-culturally. Focuses on power, exchange, social boundaries, gender, and rituals of transition/reversal. prereq: 1003 or 1005 or grad student or instr consent

ANTH 4025. Studies in Ethnographic Classics. (; 3 cr. ; A-F or Audit; Periodic Fall)

Five types of explanations employed in ethnographic research: diffusionism and theory of survivals; functionalist response; British structuralists; French structuralism; interpretive turn. Problems in ethnographic practice, analysis, and writing. Focuses on several classic monographic examples and associated theoretical writing. prereq: 1003 or 1005

ANTH 4029W. Anthropology of Social Class.

(WI; 3 cr. ; A-F only; Periodic Fall & Spring)
This course is divided into three parts, each of which has different, but related, purposes. The initial part has general and theoretical goals. First, differences between cultural anthropology and sociology with respect to the study of class difference will be introduced. Secondly, the major theories about hierarchy in pre-state society will be examined. Third, central theories and concepts in the study of stratification in complex societies will be surveyed. In particular, attention will be paid to the relationship between class and individual taste in the work of Pierre Bourdieu. The second part will focus on attitudes about class difference in N. American society. Topics will center on class in everyday life, with special reference to the domains of education, consumption and romantic love. The third part of the course will concern class in nonWestern and/or developing countries, specifically in the Pacific and India. Throughout the course, in addition to readings and lectures, use will be made of representations of class in popular culture, such as magazines and the movies.

ANTH 4031W. Anthropology and Social Justice. (WI,CIV; 4 cr. ; Student Option; Spring Odd Year)

Practical application of theories/methods from social/cultural anthropology. Issues of policy, planning, implementation, and ethics as they relate to applied anthropology. prereq: 1003 or 1005 or 4003 or grad student or instr consent

ANTH 4035. Ethnographic Research Methods. (; 3 cr. ; Student Option; Every Spring)

History of and current issues in ethnographic research. Research projects, including participant observation, interviewing, research design, note taking, life history, and other ethnographic methods. prereq: 1003 or 1005 or grad student

ANTH 4043. Romans, Anglo-Saxons and Vikings: Archaeology of Northern Europe. (; 3 cr. [max 4 cr.]; Student Option; Periodic Spring)

Archaeology of the British Isles, Scandinavia, and northern continental Europe, from the Romans through the Viking Period. Themes to be examined include social and political organization, cross-cultural interaction, art and symbolism, and religion and ritual.

ANTH 4047. Anthropology of American Culture. (SOCS; 3 cr. ; Student Option; Every Spring)

Anthropological approaches to contemporary American society/culture. Tensions between market and family. Unity, diversity. Individualism, community.

ANTH 4049. Religion and Culture. (; 3 cr. ; Student Option; Periodic Fall)

Religious beliefs and world views cross-culturally. Religious dimensions of human life through theories of origins, functions, and forms (e.g. myth, ritual, symbolism) of religion in society. prereq: 1003 or 1005 or instr consent

ANTH 4053. Economy, Culture, and Critique.

(GP,SOCS; 3 cr. ; Student Option; Every Fall)
Systems of production/distribution, especially in nonindustrial societies. Comparison, history, critique of major theories. Cross-cultural anthropological approach to material life that subsumes market/nonmarket processes.

ANTH 4069. Historical Ecology & Anthropology of the Environment. (; 3 cr. ; Student Option; Periodic Fall)

This seminar course discusses current approaches to historical ecology, the study of human-environmental relationships over time. The course draws on and combines perspectives from the four subdisciplines of anthropology (archaeological anthropology, bioarchaeological anthropology, linguistic anthropology, and sociocultural anthropology), and similar disciplines, to understand the varying ways that scholars have analyzed and defined ecologies and environmental problems. It places particular emphasis on theories that define human relationships to the environment as recursive and interdependent. These theories stand in contrast to common Western theological suppositions that see the environment as a framework to which human societies adapt or a set of resources for human communities to exploit. Rather, historical ecologists argue that the environment is a true ecology with humans in it. They contend that human communities are fundamentally and inextricably intertwined with the life cycles and needs of other species, and consequently they study how human-environmental interactions emerge through distinct historical processes and cultural circumstances.

ANTH 4075. Cultural Histories of Healing. (GP,SOCS; 3 cr. ; A-F or Audit; Spring Even Year)

Introduction to historically informed anthropology of healing practice. Shift to biologically based medicine in Europe, colonialist dissemination of biomedicine,

political/cultural collisions between biomedicine and "ethnomedicines," traffic of healing practices in a transnationalist world.

ANTH 4077. Neanderthals: Biology and Culture of Humanity's Nearest Relative. (; 3 cr. ; Student Option; Periodic Fall)

Paleontological/archaeological record. Students reconstruct behavioral similarities/differences between Neanderthals and modern humans. Why humans alone survived end of Pleistocene. prereq: 1001 or 3001 or 3002 or instr consent

ANTH 4093. In-Class Capstone Project. (1 cr. ; A-F only; Every Fall & Spring)

Course that fulfills the senior capstone requirement as an add-on directed study in association with an upper-level 4xxx-5xxx-level ANTH course. Instructor or department consent required.

ANTH 4101. Decolonizing Archives. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Archives are not neutral. In order to decolonize them, scholars in anthropology and other disciplines must first understand the ways in which Western settler values have structured them. Who decides acquisition policy? How are items indexed, described, and related to one another? Who has access, and under what conditions? And who is structurally excluded? In this course we decolonize by recontextualizing both the archives as institutions and their contents. In other words, we use methods appropriate for contemporary anthropological archival research. We will consider preservation, curation, organizational bias in archives, analytic scale, voice, and how historical texts are material culture. Students engage in original archival research.

ANTH 4121. Business Anthropology. (; 3 cr. ; Student Option; Every Spring)

Anthropological/ethnographic understandings/research techniques.

ANTH 4329. Primate Ecology and Social Behavior. (; 3 cr. ; A-F or Audit; Periodic Fall)

Primates as model system to explore animal/human behavior. Factors influencing sociality/group composition. Mating systems. Prevalence of altruistic, cooperative, and aggressive behavior. Strength of social bonds in different species. Evolution of intelligence/culture. prereq: BIOL 1009 or BIOL 1951 or BIOL 3411 or ANTH 1001 or instr consent

ANTH 4344. Europe and its Margins. (; 3 cr. ; A-F only; Every Fall)

This course explores some of the forms of human imagining (literary, artistic, political, social scientific) engendered by the notoriously hard to define entity known as "Europe." It does so by focusing on regions and populations that have been thought of at various times as marking Europe's inner and outer cultural and/or geographical limits. Topics addressed include: the relationship between physical geography, cultural memory, and the formation (or subversion) of identity claims; the reconfigured political landscapes of post-socialism and European integration; immigration, refugee flows, and the rise of

far-right ethno-nationalisms; and the effects of pandemics past and present. prereq: One course in [ANTH or GLOS]

ANTH 4991. Independent Study. (; 1-6 cr. ; Student Option; Every Fall, Spring & Summer) Under special circumstances and with the approval of the instructor, qualified students may register for a listed course on a tutorial basis. prereq: instr consent

ANTH 4992. Directed Readings. (; 1-6 cr. ; Student Option; Every Fall, Spring & Summer) Allows students to pursue special interests in anthropology through reading materials under the guidance of a faculty member. prereq: instr consent

ANTH 4993. Directed Study. (; 1-6 cr. ; Student Option; Every Fall, Spring & Summer) Allows students to pursue special interests in anthropology under the guidance of a faculty member. prereq: instr consent

ANTH 4994W. Directed Research. (WI; 1-6 cr. ; Student Option; Every Fall, Spring & Summer) Qualified students may conduct a well-defined research project under the guidance of a faculty member. prereq: instr consent

ANTH 5008. Advanced Flintknapping. (; 3 cr. ; A-F or Audit; Periodic Fall) Hands-on training in techniques of advanced stone tool production, artifact reproduction, and lithic experimental design for academic/artistic purposes. prereq: [3008 or 5269] or instr consent

ANTH 5009. Human Behavioral Biology. (; 3 cr. ; A-F or Audit; Every Spring) In-depth introduction to, and critical review of, human behavioral biology, examining the approaches in anthropology and related fields. Classic texts/recent empirical studies of humans and other species. Theoretical underpinnings of this new discipline/how well theoretical predictions have been supported by subsequent research.

ANTH 5015W. Biology, Evolution, and Cultural Development of Language & Music. (SOCS,WI; 3 cr. ; Student Option; Every Spring) Language is the most human form of behavior, and the investigation of the ways language and culture interact is one of the most important aspects of the study of human beings. The most fascinating problem in this study is how language itself may have evolved as the result of the interaction between biological and cultural development of the human species. In this course we will consider the development of the brain, the relationship between early hominins, including Neanderthals and Modern Humans, and such questions as the role of gossip and music in the development of language.

ANTH 5016. Africa and African Diaspora Archaeology. (GP,HIS; 3 cr. ; Student Option; Every Fall) Africa and African Diaspora Archaeology (AFRO/ ANTH 3016/5016) examines the evolution of human behavior in Africa and

looks at subsequent social, cultural, and technological developments as shown in archaeological records including artifacts, ecofacts, rock art, and structures at archaeological sites. It also discusses methods used to identify archaeological records and how these records can be used to reconstruct past ways of life. Students will obtain hands-on experience in identifying, classifying, and interpreting archaeological objects. The course covers Africa from around 2.6 million years ago to the recent past, focusing primarily on the last 10,000 years. It examines the development and spread of food production, pottery, metallurgy, trade, and African connections with the Atlantic world dating back to the fifteenth century.

ANTH 5021W. Anthropology of the Middle East. (GP,WI,SOCS; 3 cr. ; Student Option; Fall Even Year) Anthropological field methods of analyzing/interpreting Middle Eastern cultures/societies.

ANTH 5027W. Archaeology of Prehistoric Europe. (HIS,WI; 3 cr. ; Student Option; Every Fall) How archaeologists/historians analyze/interpret artifacts to develop knowledge about formation of European society, from earliest evidence of human occupation to Roman Period. Interpreting archaeological evidence from specific sites to understand broad trends in human past.

ANTH 5028. Historical Archaeology. (3 cr. ; A-F or Audit; Periodic Fall & Spring) In this course, we will explore the theories and methods of historical archaeology ? such as material culture studies, landscape perspectives, archival, and oral historical interpretation - as a means of intervening in contemporary discussions of diversity in the United States. Historical archaeology can be a very effective means to challenge some of the standard American narratives about our diverse past. Our aim is to move beyond either a simplistic ethnic pluralism or the superficial ?melting pot? progressive history and instead grapple with the materiality of settler colonialism, white supremacy, and capitalism. In learning about this field, we will consider what has distinguished historical archaeology from American archaeology more broadly, and how those differences are parlayed into specific research strengths. This includes several themes: colonialism; the modern world and globalizing economies; intersectional identities (race and ethnicity, class, sex and gender, religion, age, ability/disability) and social movements; public memory and commemoration; landscapes and social space; citizenship and subjectivity. Although historical archaeology until recently has been restrictively defined as addressing the European-colonized New World, the discipline in the past twenty years has significantly broadened its scope and impact on the practice of archaeology as a whole. Throughout the course we will discuss these developments, and what directions archaeology may take in the future as a result. Course work includes both reading/discussion and learning methods through practical

exercises, and handling of archaeological material.

ANTH 5037. Food Sovereignty in Africa. (ENV,SOCS; 3 cr. ; A-F only; Every Spring) Food Sovereignty in Africa critically evaluates how the physical environment and historical processes shaped agricultural productivity in Africa, as well as exploring the subsequent relationship the continent has had with the rest of the world. The course uses multi-disciplinary resources to examine historical factors that have contributed to contemporary food security issues, and discusses grassroots food movements that embrace the ethics and values of African societies in their efforts to achieve both food security and environmental sustainability. It also examines the interplay between food security, indigenous knowledge, and environmental sustainability by comparing various standpoints on African food production, scrutinizing the challenges the continent is facing and the unique perspectives it offers in terms of agricultural development in the globalized world. Finally, the course examines how agricultural systems in Africa are affected by the new global land rush. After taking the course, students will have better knowledge of emerging research directions on Africa and will be equipped with sufficient research and practical skills to pursue independent studies beyond the classroom.

ANTH 5045W. Urban Anthropology. (WI; 3 cr. ; Student Option; Periodic Spring) This class explores anthropological approaches to urban life. On one hand, the course examines the ontological nature of the city by looking into the relation between cities and their environment, and asking whether and how people differentiate "urban" and "non-urban" spaces. It uncovers the social practices and behaviors that define urban life; urban-rural distinctions; the material and ecological processes that constitute cities; and popular representations of city and/or countryside. On the other hand, the course investigates the spatial and social divisions of the city, seeking to understand the historical struggles and ongoing processes that both draw together and differentiate the people of an urban environment. It studies how cities influence political decision-making, contributing to the uneven distribution of power and resources. It considers: industrialization; urban class conflict; gendered and racialized spaces; and suburbanization. Both of these approaches will also critically consider the city as a social object that we encounter and learn about through our engagement with kinds of media, such as novels and film. Hence, reading for the class will include literature from the social sciences and humanities, as well as critical works of fiction. Students will engage with these broader anthropological issues through an investigation of several global cities, especially Minneapolis-St. Paul, Chicago, Paris, Mexico City, Brasilia, and New Delhi. The class mixes lecture, discussion, and guided research. Lectures will introduce the history of urbanism and urban anthropology. Discussions will critically evaluate the readings, and offer insights and examples to better

understand them. By participating in a guided research project, students will uncover hidden aspects of their own city, using ethnography or archaeology to shed light on the urban environment, social struggles over space, or other themes.

ANTH 5112. Reconstructing Hominin

Behavior. (3 cr. ; A-F or Audit; Spring Even Year)

Major hypotheses regarding evolution of human behavior. Combine evidence from realm of biological anthropology as we consider link between bone biology/behavior. Archaeological record. Hypotheses about biocultural evolution regarding tool-use, hunting, scavenging, food sharing, grandmothers, cooking, long distance running. prereq: Previous coursework in Biological Anthropology or Archaeology

ANTH 5113. Primate Evolution. (3 cr. ; A-F only; Fall Odd Year)

Evolutionary history of primates. Particular focus on origin/diversification of apes/Old World monkeys. prereq: Anthropology major, junior or senior

ANTH 5121. Business Anthropology. (2 cr. ; Student Option; Every Spring)

Anthropological/ethnographic understandings/ research techniques. prereq: MBA student

ANTH 5128. Anthropology of Education. (3 cr. ; Student Option; Spring Odd Year)

Cross-cultural perspectives in examining educational patterns. Implicit/explicit cultural assumptions. Methods/approaches to cross-cultural studies in education.

ANTH 5221. Anthropology of Material Culture. (3 cr. ; A-F or Audit; Periodic Fall)

The course examines material culture as a social creation, studied from multiple theoretical and methodological perspectives (e.g., social anthropology, archaeology, primatology, history of science). The course examines the changing role of material culture from prehistory to the future.

ANTH 5244. Interpreting Ancient Bone. (3 cr. [max 4 cr.]; A-F or Audit; Periodic Fall & Spring)

To Interpret Ancient Bone we must sharpen observational skills, read about observations and analysis by previous workers, and learn to record and analyze complex information. The class combines seminar/discussion formats, in which we read literature about how to best accomplish this type of research, and laboratory time, to give students the opportunity to observe and record modifications to bones that form the basis of archaeological and forensic observations. Students analyze different kinds of tool marks on bone, weathering, carnivore modifications, eco-morphology, ages of death, bone tools, and bones from archaeological sites to infer the "life history" of a bone. We recommend you take the Human Skeleton or Zooarchaeology Laboratory before you take this class, but it is not absolutely required.

ANTH 5255. Archaeology of Ritual and

Religion. (3 cr. ; Student Option; Fall Even Year)

The course discusses evidence for the origins of religion and its diverse roles in human societies over millennia. It focuses on how artifacts and architecture are essential to religious experience. It asks: What constitutes religion for different cultures? Why is religion at the heart of politics, social life, and cultural imagination?

ANTH 5269. Analysis of Stone Tool Technology. (4 cr. ; A-F or Audit; Fall Even Year)

The course offers practical lab experience in analyzing archaeological collections of stone tools to learn about human behavior in the past. Students gain experience needed to get a job in the cultural resource management industry.

ANTH 5327W. Inca, Aztec & Maya Civilizations. (HIS,WI; 3 cr. [max 6 cr.]; A-F only; Periodic Fall)

This course is an intensive examination of the emergence, growth, and conquest of native civilizations in ancient America, focusing on the Maya, Aztec, and Inca states. Lectures and discussions examine the culture and history of these Native American civilizations, while also introducing students to anthropological theories of the state, religion, aesthetics, and history.

ANTH 5401. The Human Fossil Record. (3 cr. ; A-F only; Fall Even Year)

Fossil evidence paleoanthropologists use to reconstruct human evolutionary history. Taxonomy, phylogeny, behavior, ecology, tool use, land use, and biogeography. Examination of fossil casts, readings from primary/secondary professional sources. prereq: 1001 or instr consent

ANTH 5402. Zooarchaeology Laboratory. (3 cr. ; A-F only; Every Fall)

How archaeologists reconstruct the past through the study of animal bones associated with artifacts at archaeological sites. Skeletal element (e.g., humerus, femur, tibia), and taxon (e.g., horse, antelope, sheep, bison, hyena) when confronted with bone. Comparative collection of bones from known taxa.

ANTH 5403. Quantitative Methods in Biological Anthropology. (4 cr. ; Student Option; Periodic Fall)

Quantitative methods used by biological anthropologists. Applying these methods to real anthropometric data. Lectures, complementary sessions in computer lab. prereq: Basic univariate statistics course or instr consent

ANTH 5405. Human Skeletal Analysis. (4 cr. ; Student Option; Every Spring)

Structure, design, and variability of modern human skeleton. Anatomy, functional morphology, development, evolutionary history. Bone histology/biology, excavation, preservation, taphonomy, pathology, forensic analyses. Differentiating between males/females, adults/sub-adults, and humans/non-humans. Quizzes, exams, research paper, project.

ANTH 5412. Comparative Indigenous Feminisms. (GP; 3 cr. ; Student Option No Audit; Periodic Fall & Spring)

The course will examine the relationship between Western feminism and indigenous feminism as well as the inter connections between women of color feminism and indigenous feminism. In addition to exploring how indigenous feminists have theorized from 'the flesh' of their embodied experience of colonialism, the course will also consider how indigenous women are articulating decolonization and the embodiment of autonomy through scholarship, cultural revitalization, and activism.

ANTH 5442. Archaeology of the British Isles. (3 cr. ; A-F only; Every Fall)

Have you ever wondered how archaeologists interpret the vast amount of archaeological evidence from the British Isles, one of the most studied and best documented parts of the world? And how do archaeologists and governmental agencies protect the heritage of Britain, from major monuments such as Stonehenge, Roman forts, and Shakespeare's theaters, to the minor products of craft industries such as personal ornaments and coins? This course teaches you about the archaeology of the British Isles, in all of its aspects. You learn how archaeologists study the changing societies of Britain and Ireland, from the first settlers about a million years ago to modern times. You learn about the strategies that public institutions employ to preserve and protect archaeological sites, and about the place of archaeology in tourism in the British Isles and in the formation of identities among the diverse peoples of modern Britain.

ANTH 5448. Applied Heritage Management. (3 cr. ; A-F only; Every Spring)

Contexts of cultural heritage applicable to federal/state protection. Approaches to planning/management. Issues of heritage/stakeholder conflict.

ANTH 5450. Spatial Analysis in Anthropology: Research Design and Field Applications. (3 cr. ; Student Option No Audit; Spring Even Year)

This advanced undergraduate and graduate course introduces students to spatial analyses essential to anthropological ethnography, archaeology, and historical ecology. It builds on introductory courses at UMN, providing students an opportunity to learn anthropological applications of spatial analysis methods, including: research design, field mapping, database management, digital survey platforms, GIS analyses, and integration of quantitative and qualitative (ethnographic and historical) data. The structure of the course will follow the trajectory of a typical doctoral-level anthropological project, from pre-field data acquisition and preparation, to in-field data collection, post-field analysis, and presentation. Students who take this course will master skills that are crucial for successful anthropological spatial analysis in the field and laboratory.

ANTH 5501. Managing Museum Collections. (3 cr. ; A-F or Audit; Fall Even Year)

This course provides a hands-on and research experience in collections management utilizing artifact, archival, and digital collections. Museum collections, the objects or specimens

they contain, the information associated with them, and their care and maintenance are a crucial part of both the sciences and the humanities. While seemingly disparate, many of the issues faced by those responsible for collections are quite similar: how to preserve and care for those collections, legal issues surrounding the materials they contain, how to organize and classify the items, how to facilitate discovery and access, and how to make the information contained in them available to the broadest audience possible. The course includes lectures by museum professionals, hands-on activities, and selected readings. Credit will not be granted if credit has been received for ANTH 3501.

ANTH 5601. Archaeology and Native Americans. (DSJ; 3 cr. ; Student Option; Fall Even Year)

Historical, political, legal, and ethical dimensions of the relationship of American archaeology to American Indian people. Case studies of how representational narratives about Native people are created through archaeology; responses by Native communities; and the frameworks for collaborative and equitable archaeological practice. Professional ethics in archaeology/heritage studies in American contexts.

ANTH 5980. Topics in Anthropology. (; 3 cr. [max 6 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Topics specified in Class Schedule.

Apparel Design (ADES)

ADES 1221. Apparel Assembly Fundamentals. (; 3 cr. ; A-F or Audit; Every Fall)

Methods/applications of apparel assembly, from micro to macro perspective.

ADES 2196. Work Experience in Apparel Design. (; 1-4 cr. [max 8 cr.] ; S-N only; Every Fall, Spring & Summer)

Supervised work experience in business, industry, or government, related to student's area of study. Integrative paper or project. prereq: Plan submitted/approved by [adviser, internship supervisor], written approval of supervisor, instr consent

ADES 2211. Fashion Illustration and Portfolio Development. (4 cr. ; A-F or Audit; Every Spring)

Illustration skills specific to garments/textiles. Traditional media/CAD applications. Critique/analysis of visual communication of apparel design concepts.

ADES 2213. Textile Analysis. (; 4 cr. ; A-F or Audit; Every Fall)

Physical, chemical, and biological characteristics of fibers, yarns, textile structures, and finishes. Their effect on performance/appearance of textile products, including apparel, interior, and industrial textiles. prereq: DHA major or pre-major or instr consent

ADES 2214. Softlines Analysis. (; 3 cr. ; A-F or Audit; Every Spring)

Physical characteristics of softline products related to function for target market.

Class experiences based on methods of analysis, including visual inspection, quality, construction, costing, and fit/sizing. prereq: DHA major or minor or instr consent

ADES 2221. Apparel Design Studio I. (; 4 cr. ; A-F or Audit; Every Spring)

Theories/methods in designing apparel for various user groups. Relation of two-dimensional pattern shape to three-dimensional body. Introduction to flat-pattern draping. prereq: [DHA 1201 or RM 1201], [1221 or DHA 1221],

ADES 2222. Apparel Design Studio II. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

Design process in developing apparel for specific user group. Advanced principles/methods of developing patterns for body, including flat pattern, draping, fitting. Computer-aided design tools for illustration, pattern making. prereq: [2221 or DHA 2221] with a grade of at least C-, Apparel Design major, pass portfolio review

ADES 3196. Field Study: National or International. (; 1-10 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Faculty-directed field study in a national or international setting. prereq: instr consent

ADES 3217. Fashion: Trends and Communication. (; 3 cr. ; A-F or Audit; Every Fall)

Relation of fashion trends to visual analysis of apparel. Application to design/retail. Study of techniques and processes of identifying socio-cultural indicators, past and present trends, and methods for determining future trends in fashion and related industries. Communication skills are developed through assignments, in-class activities, lecture/discussion, guest-speaker presentations, and a trend forecasting project.

ADES 3223. Apparel Design Studio III. (4 cr. ; A-F or Audit; Every Spring)

Study tailored/non-tailored apparel structures. Experiment with various materials/structures using traditional/innovative methods. Principles of manipulating materials/structures applied to series of garments. prereq: [2222 or DHA 2222] with grade of at least C-, Apparel Design major, pass portfolio review

ADES 3224W. Apparel Design Studio IV. (WI; 4 cr. ; A-F or Audit; Every Spring)

Principles and theory of functional apparel design. Conduct and apply research in designing apparel for situations requiring thermal or impact protection, accommodation for mobility, or facilitation for bodily function. prereq: apparel design major

ADES 3225. Apparel Design Research. (; 1 cr. ; A-F only; Every Spring)

Market/visual research to support development of apparel line directed at specific audience. prereq: 3324 or concurrent registration is required (or allowed) in DHA 3224

ADES 3227. Technical Design Studio. (4 cr. ; A-F only; Every Fall)

Technical development of sewn product for production. Variability in human physical sizes, and grading and fit across a population. In team-based projects, you will develop a sewn

product pattern; generate prototypes and technical specifications; source materials; and plan, execute, and evaluate a production run for a sewn product. prereq: 2213, [3223 with grade of C or above]

ADES 4121. History of Fashion, 19th to 21st Century. (; 4 cr. ; A-F or Audit; Every Spring)

Survey of apparel/appearances in Western cultures, from 18th century to present. Role of gender, race, and class with respect to change in dress within historical moments and social contexts. Research approaches/methods in study/interpretation of dress.

ADES 4160H. Honors Capstone Project. (; 2 cr. [max 4 cr.] ; A-F only; Every Fall & Spring)

Individualizes honors experience by connecting aspects of major program with special academic interests. prereq: DHA honors

ADES 4193. Directed Study in Apparel Design. (1-4 cr. [max 8 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Independent study in Design, Housing, and Apparel under tutorial guidance. prereq: Undergrad, instr consent

ADES 4196. Internship in Apparel Design. (; 1-4 cr. ; S-N or Audit; Every Fall, Spring & Summer)

Supervised work experience relating activity in business, industry, or government to student's area of study. Integrative paper or project may be required. prereq: Completion of at least one-half of professional sequence, plan submitted and approved in advance by adviser and internship supervisor, written consent of faculty supervisor, instr consent

ADES 4215. Product Development: Softlines. (; 4 cr. ; A-F or Audit; Every Spring)

Product development for apparel and other sewn products. Developing products in a lab studio for effectiveness, reliability, and marketability. Team approach using merchandising/design principles to develop products for specific markets. prereq: 2213 or DHA 2213 or apparel design major or clothing design major or retail merchandising major or instr consent

ADES 4218W. Fashion, Design, and the Global Industry. (WI; 3 cr. [max 6 cr.] ; A-F only; Every Fall)

Relationship of fashion, dress, and culture to fashion industry. Globalization, fashion centers, design, time/place. Focuses on Chinese fashion industry. prereq: Upper level undergraduate or grad student

ADES 4225. Apparel Design Studio V. (4 cr. ; A-F or Audit; Every Fall)

Market research information/implementation. Designing for specific audience, market, user group. Applying market research to design line of apparel. Research of promotional methods for design project. prereq: [[3224 or DHA 3224], [3225 or DHA 3225]] with grade of at least C-, apparel design major

Apparel Studies (APST)

APST 5117. Retail Environments and Human Behavior. (; 3 cr. ; A-F or Audit; Every Fall)

Theory/research related to designed environment across retail channels. prereq: Grad student or instr consent

APST 5121. History of Fashion, 19th to 21st Century. (; 4 cr. ; A-F only; Every Spring)

Analysis/interpretation of primary data about 19th/20th centuries based on historical methods. Critique of cultural, social, economic, technological, political, and artistic data presented through lens of dress in film/literature.

APST 5123. Living in a Consumer Society.

(; 3 cr. ; A-F only; Fall Odd Year)
Consumerism within U.S. society. Commodification of health care, education, and production of news. Commercialization of public space/culture. What drives consumer society. How meaning is manufactured. What the lived experiences are of consumers today. Postmodern market. Alternatives to consumer society. prereq: Sr or grad student

APST 5170. Topics in Apparel Studies. (;

1-4 cr. [max 16 cr.] ; A-F or Audit; Periodic Fall, Spring & Summer)
In-depth investigation of specific topic, announced in advance.

APST 5193. Directed Study in Apparel Studies. (; 1-4 cr. [max 8 cr.] ; A-F or Audit;

Every Fall, Spring & Summer)
Independent study in apparel studies under tutorial guidance. prereq: instr consent

APST 5218. Fashion, Design, and the Global Industry. (; 3 cr. ; A-F only; Every Fall)

Relationship of fashion, dress, and culture to time, place, and design. Focuses on fashion centers, fashion industry, and globalization. Chinese fashion industry as case study.

APST 5224. Functional Clothing Design. (4 cr. ; A-F only; Every Spring)

This class uses an engineering design process to analyze and meet the functional needs of specific user groups. We will be designing clothing that protects users from environmental conditions, and that facilitates and/or expands body function and movement. Physical principles of clothing and human anatomy are explored. A theoretical understanding of human anatomy and movement is applied through advanced patterning techniques for a variety of body types, work environments, and activities. Class projects are often conducted with an outside partner. Project work focuses on developing skills in collecting, synthesizing (in written and visual form) and using evidence to inform the design of a solution to a user-centered problem. Written documentation, developmental prototypes, and final design solutions are produced and evaluated.

Applied Business (ABUS)

ABUS 3029W. Writing Workshop for Applied & Professional Studies Majors. (WI; 2 cr. ;

A-F only; Every Fall & Spring)
Writing is omnipresent throughout Applied and Professional Studies (APS) courses; nearly all require some form of written product and assess students in some way through their writing ability. Focusing on in-depth

instruction, constructive feedback, and hands-on experience, this 7-week writing workshop is designed for students who find themselves struggling with writing concepts in their other classes or who want more writing practice to refine and hone their existing skills. Students will learn to understand writing expectations in their disciplines and develop techniques for brainstorming, organizing, outlining, and researching. Students will also practice the drafting process, focusing on mastering business grammar, avoiding common mistakes, and cultivating a clear and concise style. Students will learn the components of clear structure such as transitioning between ideas, logical organization, and integrating research. Students will also develop reliable editing techniques to test their own writing for clarity, logic, and appropriate tone, as well as methods for thinking through critical feedback and incorporating changes into revisions of existing documents. Students must be enrolled in a CCAPS undergraduate major (premajor status is allowed).

ABUS 3051. Career Search for the Professional Environment. (; 2 cr. ; Student Option; Every Fall, Spring & Summer)

An introduction to the nuts and bolts of job search strategies, including r?sum? writing, interviewing, networking, and the use of technology and the Internet in job seeking. You will begin to make realistic decisions about what kinds of jobs and work environments will best suit you after graduation and into the future, and formulate a concrete plan for how to attain this important career goal. In addition, you will have an understanding of the professional environment of business. This will include appropriate on-the-job behavior and how knowledge of corporate culture, communication, and etiquette can make the difference between struggling in the business world and succeeding and advancing. Professional presentation, dress, and communication are highlighted. Assignments will focus on practical and applied knowledge relating to career-oriented skills, exploration, and success. Prerequisites: None, but upper-division status recommended.

ABUS 3052. Career Building in the Remote Gig Economy. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Businesses are shifting from full-time permanent employment models to a greater reliance on short-term contract work and freelance projects. This trend is referred to as the emerging "gig economy." Already, more than one in three people earn a full or partial income from leveraging this evolving marketplace. In 2019, Amazon announced plans to hire over a thousand remote customer service reps. Technical coders, freelance photographers, consultants, bloggers, rideshare contractors, career coaches, and online affiliate marketers are just a few among many remote gig opportunities experiencing rapid growth. This course examines the structure of a remote gig economy and corresponding career opportunities. Students will develop a deep understanding of the current gig landscape, develop initiatives

and self-direction tactics to meet its needs, and leave armed to succeed in a growing remote gig economy. Activities are centered around obtaining work in the gig economy and being an exceptional remote "gigger" as an individual contributor. Additionally, students will learn how to parlay those talents into endless career path opportunities, including leadership and management roles in a quickly evolving, exciting workplace. Prerequisites: None

ABUS 3201. Digital Design Strategies for Small Business. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

Basics of multi-platform strategies to promote small businesses or a personal brand. Primary concepts include developing a cross-platform digital presence, creating brand identity, analyzing strategy effectiveness, and researching the competition. Students will work to develop a complete digital strategy for their own small business or personal brand by working both individually and in groups to find creative solutions for reaching their target audience in today's market. Prerequisites: None.

ABUS 3301. Introduction to Quality Management. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Principles/concepts of managing quality in business applications. Improving business processes with six sigma method. Implementing/leading process improvement. Baldrige Award, ISO 9000. prereq: Introductory statistics

ABUS 3510. Communicating Virtually Across Global Teams in Applied Business Settings. (; 4 cr. ; A-F or Audit; Every Fall)

Collaborative exploration of virtual communication within teams/across cultures. Impact of technologies on global business/societies. Virtual team functioning/dynamics. Influence of cultural perspective on communication within group. Role of communication technology in cultural development. Ethical/legal implications.

ABUS 4013W. Legal, Ethical, and Risk Issues for Managers. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)

Key legal, ethical, and risk frameworks in business activity and civic life. Students will identify areas of exposure within their specific industry and learn about best practices to minimize legal liability and manage risk. The writing-related instruction is designed to develop effective management-level communication skills regarding legal, ethical, and other risks and to develop a thoughtful analytical approach to addressing real-world risks. prereq: CMgt 4011 recommended for CMgt students, 45 semester credits

ABUS 4022W. Management in Organizations. (WI; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Demands on today's managers, with a focus on small to medium-sized organizations. Techniques/ideas beyond traditional studies. Applying management theory at all levels. Managing in a global workplace. Organizational planning and decision making. Organizing resources. Leading/motivating people.

Controlling/evaluating organizational activities. This writing intensive designated course will spend significant time focusing on the writing process. Writing is crucial to this discipline because clear, accurate, and professional communication is essential to organization management. The ability to write effectively in terms of specified audiences ensures, in the professional world, successful communication between team members as well as the success of the projects, companies, and employees they represent. prereq: 45 semester credits recommended

ABUS 4023W. Communicating for Results. (WI; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Aspects of communication essential for being persuasive/influential. Organizing/presenting ideas effectively, strategies for audience analysis, choosing communication methods, making appropriate use of informal influence methods, handling dissent. Processes for intercultural communication. prereq: 45 cr completed

ABUS 4041. Dynamics of Leadership. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer) Successful leadership via flexible approach. Knowledge, skills, and abilities that leaders develop from eight leadership strategies: academic, bureaucratic, eclectic, economic, fellowship, military, political, social. Ways to lead diverse populations in a global environment. prereq: 45 cr completed

ABUS 4043. Project Management in Practice. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Introduction to project management: tools and techniques for defining, scheduling, and managing a project. Learn about team development and ways to enhance team performance through planning and executing a project. Requires use of MS Project, which will be made available to students without cost via download. prereq: 45 cr completed

ABUS 4101. Accounting and Finance for Managers. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Cost accounting concepts. Cost behavior. Management decision making using cost data. Time value of money. Cost of capital. Capital budgeting techniques. Financial statement analysis. Assignments draw on business/industry examples. prereq: Financial accounting, 45 cr

ABUS 4104. Management and Human Resource Practices. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Providing day-to-day leadership. Organizing work, motivating employees. Delegating, coordinating, and achieving results. Front line human resource practices, including selection, induction, and training of new employees, employee appraisal. Handling grievances/discipline. prereq: 45 cr completed

ABUS 4105. Becoming an Authentic Leader in an Applied Business Setting. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Students will gain proficiency in various leadership modalities within a self-reflective

framework. They will learn to build their own authentic leadership capabilities as well as assess those of fellow leaders across individual, group, and organization levels. Assignments will examine temperament and decision-making, goal setting and personal beliefs, change-making and coping with pressure, and developing personal strengths and professional authenticity. Prerequisites: None

ABUS 4151. Innovation for Leaders and Organizations. (; 3 cr. ; A-F or Audit; Every Spring)

Innovation as cornerstone of knowledge economy. History of innovation process, importance to individuals/organizations. Strategies to foster innovation. Responsibilities in innovation skill-building/leadership. prereq: 45 cr

ABUS 4211. Facility Asset Management, Finance, and Budgeting. (; 2 cr. ; A-F or Audit; Every Fall)

Examination of different types of leases. Relevance of BOMA (Building Office & Managers Association) space standards. Understanding components of total annual and capital facility costs. Analyzing and interpreting facility financial statements and reports. Constructing facility capital and operating budgets. Illustrating GAAP (generally accepted accounting principles) related to asset capitalization, and applying financial terminology when speaking to the chief financial officer. Recommended prereq: ABUS 4101 or basic accounting/finance knowledge/experience

ABUS 4213. Facility Management Fundamentals. (; 3 cr. ; A-F or Audit; Every Fall)

Managing operation and maintenance of building systems and facility management departments. Operation of mechanical, electrical, and plumbing systems. Critical spaces, fire/life safety systems, utilities. Maintenance for specific building systems. Technology and resources used to support building operations and maintenance.

ABUS 4217. Real Estate Development: Process and Tools. (; 2 cr. ; A-F or Audit; Every Fall)

Real estate development creates and alters our built environment. Working with architects, engineers, contractors, financing teams, government, and a host of consultants, real estate developers transform ideas into buildings, and with this, the spaces in which we live, work, and play. So, how do developers identify good and bad opportunities, and then, once committed, manage a wide group of stakeholders, often with disparate interests, to get the project completed and operating as planned? It is a challenge every step of the way, with a myriad of risks and obstacles to overcome, but with significant potential rewards. This course traces the development process from beginning to end, introducing foundational knowledge in project feasibility analysis and financial modeling, and integrating real world examples via case studies and interviews with Twin Cities-based practitioners.

Prereq: 45 credits. Familiarity with finance and accounting concepts helpful.

ABUS 4218. Real Estate Finance. (; 2 cr. ; A-F or Audit; Every Fall)

Real estate finance, as commonly understood, is about the capital that transforms development ideas into the built form. But in this course, we will focus on real estate finance as a dynamic and significant industry and explore the internal language, norms, and practices of financiers, ranging all the way from hedge funds seeking returns rivaling those of Wall Street, to those backing community redevelopment and affordable housing projects. It will begin with an overview of the industry and introduce common tools of finance such as pro forma, then move on to sources of finance, from hedge funds to commercial banks and community-based lenders. We will be visited by finance practitioners, including several operating in the Twin Cities, as well as their development clients. There is an entire real estate finance ecosystem to explore, and students will leave the class with an understanding of its products, sources, and roles while developing facility with its analytical tools.

ABUS 4501. Building and Running a Small Business Enterprise. (; 4 cr. ; A-F or Audit; Every Fall)

Basic marketing, finance, and leadership principles that apply to the formation of a small business enterprise. A variety of class discussions and independent reflective exercises will enable students to assess their resources and develop management, leadership, and business administration skills. The final project is collaborative: the creation of a business plan for a start-up. Prerequisites: None, although previous business experience or study will be helpful.

ABUS 4502. Inclusive Business Leadership: Advancing Diversity. (; 3 cr. ; A-F or Audit; Every Fall)

This course explores leveraging an organization's diversity through inclusive leadership. Taking consideration of the value of diversity to the next level, we ask: How do we unleash the full potential of a diverse organization? To answer, students will do personal reflection on diversity, inclusiveness, and unconscious biases, and also take the Cultural Orientations Indicator (COI). This increased self-awareness will serve as a foundation for students to strategically plan and actively engage business leaders in creating more inclusive business practices.

ABUS 4509. New Product Development. (; 3 cr. ; A-F or Audit; Every Spring)

How new consumer, industrial, and service products are planned/developed. Idea generation, concept/buyer testing, pricing, sales/profit strategies, product positioning, promotion, packaging/distribution. Marketing case histories. Student projects. prereq: [[4103 or 4701 or Mktg 3001], at least 45 cr] or instr consent

ABUS 4515. Strategy and Management for a Sustainable Future. (; 3 cr. ; A-F or Audit; Every Spring)

Sustainability in business. Relationship of sustainable environments to organizations. Economic/strategic enterprise value. Relationship of sustainable business practices to marketplace trends/realities. prereq: 45 cr completed

ABUS 4518. Leadership and Innovative Decision Making in Applied Business. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

This course is a deep immersion in essential skills for businesspeople: change management, creative problem solving, and innovation, leading to effective decision-making. Huge changes in our world require creative and innovative responses. You might be called upon to make important decisions for the next half-century, so why not learn the tools right now to make them great ones? These skills are the pillars of a successful personal and professional life, and workplace managers are pleading for more creativity in their employees. Be one of those outstanding individuals who can be a creative problem solver, not a problem. Though the course is built as a guide in using these important concepts to launch and build a successful business of your own, it is recommended for anyone contemplating a business career. Prerequisites: None

ABUS 4545. Defying Racial Bias in the Workplace: Individual Action and Accountability. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

This course focuses on the employee as an individual and the ways unconscious bias adversely affects organizational culture, including stifling decision-making, productivity, innovation, and market competitiveness. Inclusion and multiculturalism take center stage. Through self-examination and reflection within the context of their own experience, students will explore the concepts of identity, privilege, and conscious and unconscious bias, as well as their financial impacts on the organization. They will identify ways they can mitigate racial workplace bias by holding themselves and their organization accountable. The concept of allyship will also be explored. Students will learn how, by putting allyship into practice, they can contribute to the creation of an antiracist work environment. By building empathy, embracing difference, and using emotional intelligence techniques, they will learn how to foster diversity, inclusion, and equity. Throughout the course, they will develop an understanding of the ways recognition of individual racial bias will unlock the potential of both themselves and the organization. Prerequisites: None

ABUS 4571W. Introduction to Grant Writing for Health Care and Nonprofit Organizations. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)

Nonprofits and health care entities will continue to be challenged by limited resources and increased needs in communities they serve. This reality also results in an increased need for these groups to find additional financial support. This course will provide an understanding of ways to find, research, and write proposals for grants offered by

government and private entities. As a writing intensive course, it will spend significant time focusing on the writing process. Writing is crucial to the field because the only way for a nonprofit to be awarded a grant is by submitting a written proposal. The strength of the proposal has a significant impact on the money that an organization will receive. Students will become familiar with various sections of the proposal by drafting, editing, and seeking feedback, and by revising a needs assessment, goal statement, budget justification, and statement of organizational purpose. By learning how to write well in the field, students will increase their chances of being employed by a nonprofit and securing funding for their organization.

ABUS 4701. Introduction to Marketing. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Conceptual tools for creating a marketing plan. How marketing relates to other functional areas of business. Importance of an ethical, global view. prereq: [Macroeconomics or microeconomics], 45 cr

ABUS 4702. Applied Digital Marketing. (; 3 cr. ; A-F or Audit; Every Fall)

Digital marketing represents the fastest growing sector in most marketing departments. But what is digital marketing? Understanding the digital realm of marketing requires a curiosity about how new technologies will change business, while grasping the key strategies that drive tactics and trends. This course is designed to be a primer on the world of digital marketing and ways it will affect both your future employment and larger business trends. Through case studies, discussion forums, and interactive activities, you will learn about the latest research and best practices in the industry to have a solid grasp of the core concepts and tools of digital marketing management, both today and in the future. Prerequisites: None

ABUS 4703. Marketing for the Professional Practice. (; 3 cr. ; A-F or Audit; Every Spring)

Principles of marketing applied to the management of the professional practice. Begins with an introduction to marketing and its overall role and function. We will examine the four P's of marketing (product, price, place, and promotion), then move on to developing a marketing plan, which serves as a map that highlights a path towards success. We look at the major components of a marketing plan and provide you with an opportunity to gain knowledge and experience by completing one. Topics include understanding the internal and external environment, segmenting the market, positioning, differentiating, branding, and formulating a marketing plan with goals, strategies, and financial considerations. prereq: 45 semester cr recommended

ABUS 4705. Leadership and Management for the Professional Practice. (; 3 cr. ; A-F or Audit; Every Fall)

An introduction to organizational behavior for students and professionals interested in leading or managing a professional practice. Its purpose is to improve your effectiveness as a leader or manager through an understanding of the sociological, economic, and political

factors that affect organizations. The course will progress from an introspective look at leadership and your own personal preferences and style, to interactions with others in groups or teams, to the structure and dynamics of organizations and how they respond to external factors. prereq: 45 semester cr recommended

ABUS 4707. Financial Management for the Professional Practice. (; 3 cr. ; A-F or Audit; Every Spring)

Provides professional practitioners with the skills they need to make informed financial decisions for their business. It introduces the fundamental concepts of finance and also touches on related topics in financial and managerial accounting, marketing, and personal finance. Students will work in small groups to implement the principles they have learned by developing and analyzing a business plan of the kind used to request funding for a professional practice. prereq: 45 semester cr recommended

ABUS 4709. Managing the Professional Practice I: Business Design. (; 3 cr. ; A-F or Audit; Every Summer)

Factors/challenges involved in designing structure of professional practice. Core values/mission, design of services, physical design, risk management, equipment/IT, partners/staffing. Exercises in applied practice development/management. prereq: 45 cr

ABUS 4711. Managing the Professional Practice II: Operations. (; 3 cr. ; A-F or Audit; Every Summer)

Factors/challenges in day-to-day operations of professional practice. Marketing, human resources, finance, entrepreneurial spirit, inventory management, operational quality, transitions. Exercises in applied operations. prereq: 4709, 45 cr

ABUS 4993. Directed Study. (; 1-3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Specially arranged projects, trips, or field work. prereq: instr consent, dept consent

Applied Economics (APEC)

APEC 1001. Orientation to Applied Economics. (; 1 cr. ; A-F or Audit; Every Fall)

Introduction to curriculum offerings, liberal education requirements, employment opportunities, faculty in the Department of Applied Economics. Emphasizes historical development of the discipline, areas of specialization, coursework expectations, career planning.

APEC 1101. Principles of Microeconomics. (GP,SOCS; 4 cr. ; Student Option; Every Fall & Spring)

Economic behavior of consumers/firms in domestic/international markets. Demand, supply, competition. Efficiency, Invisible Hand. Monopoly, imperfect competition. Externalities, property rights. Economics of public policy in environment/health/safety. Public goods, tax policy.

APEC 1101H. Principles of Microeconomics. (GP,SOCS; 4 cr. ; A-F only; Every Fall)

Economic behavior of consumers/firms in domestic/international markets. Demand, supply, competition. Efficiency, Invisible Hand. Monopoly, imperfect competition. Externalities, property rights. Economics of public policy in environment/health/safety. Public goods, tax policy. prereq: Honors student, proficiency in high school algebra

APEC 1102. Principles of Macroeconomics. (3 cr. ; Student Option; Every Spring)
Unemployment/inflation, measures of national income, macro models, fiscal policy/problems. Taxes and the national debt. Money/banking, monetary policy/problems. Poverty and income distribution. International trade and exchange rates. Economic growth/development. prereq: 1101 or Econ 1101

APEC 1201. Applications of Excel in Economics and Management. (; 1 cr. ; Student Option; Every Fall & Spring)
This course offers students the opportunity to master the basic and intermediate functionality of Microsoft Excel, and apply those skills to economic and managerial applications such as the financial impact of loans and investments, growth accounting, basic regression analysis, demand and cost estimation, and resource allocation. In addition, this course also emphasizes competencies regarding presenting and discussing quantitative information: interpreting quantitative/graphical data (demonstrating quantitative literacy), determining effective data display with charts, and making adequate choices about the graphical presentation of data. This course will enable students to become proficient in assembling and presenting data using Microsoft Excel.

APEC 1251. Principles of Accounting. (3 cr. ; A-F only; Every Fall)
Financial accounting. Theory, concepts, principles, procedures. Preparation/understanding of the four financial statements.

APEC 1905. The Ordinary Business of Life: Issues in Business, Government, and Macroeconomics. (; 3 cr. ; A-F only; Every Fall)
The world of economics is sometimes referred to as the study of the ordinary business of life. In this course we will discover, reflect on, and teach ourselves about a selected group of topics in the fields of business management and economics. While the first quarter of our meetings will be on business and economic history to provide context (the "Economic Revolution," the Federal Reserve System, and the role of government in the economy), the second quarter of class will analyze macro issues related to the domestic and world economies (economic growth, income inequality, the New Economy, and globalization). The third and fourth quarters of our time together will be micro-related. As part of this class, we will investigate the fields of leadership and business ethics through a series of readings and films. In addition, throughout the term some of our class discussions will be dedicated to helping you make your transition to and navigation of the University a smooth one. prereq: freshman

APEC 1906. The Farm Bill's Impact on You. (; 1 cr. ; A-F only; Every Fall)
The Farm Bill has widespread bipartisan support from the U.S. Congress. The course looks at each component of the most recent Farm Bill: Crop insurance, commodities, forestry, rural development, food aid, trade, nutrition including school nutrition, SNAP and WIC, research, extension, and education, and other components. Each week will include a look at one component and students will choose a component to write short essays and oral presentations looking at the history, authorization and appropriation language, and how it is implemented by USDA. Each class will include a short remote presentation by a CFANS faculty member discussing how their research fits within that week's component. Students will meet with the instructor individually to discuss their essays and presentations.

APEC 3001. Applied Microeconomics: Consumers, Producers, and Markets. (; 4 cr. ; Student Option; Every Fall & Spring)
Consumer/producer decisions. Theory of supply/demand. Markets, pricing, investment, effect regulation, market failures. prereq: [[1101 or ECON 1101 or 1101H or ECON 1101H], [MATH 1142 or MATH 1271]] or instr consent; intended for undergrads in [Ag/Food Bus Mgmt, Appl Econ]

APEC 3002. Managerial Economics. (; 4 cr. ; Student Option; Every Fall & Spring)
Microeconomic theory, its application to managerial problems. Introduction to regression analysis, demand analysis, demand function estimation, forecasting, cost function estimation, resource allocation decisions, linear programming, market structure, pricing policy, risk analysis, investment analysis. prereq - ApEc 3001 or Econ 3101 AND SCO 2550 or Stat 3011

APEC 3003. Introduction to Applied Econometrics. (4 cr. ; A-F only; Every Spring)
Econometrics is the core empirical methodology used in economics. It allows economists (and others) to learn about the world through data in non-experimental situations. This course teaches student how to use common types of econometric analysis to answer research questions in an experiential learning environment. prereq: APEC 1101 or equiv., STAT 3011 or equiv.

APEC 3006. Applied Macroeconomics: Government and the Economy. (; 3 cr. ; Student Option; Every Fall & Spring)
This course covers the core topics in macroeconomics including monetary policy, fiscal policy (including government expenditures and taxation), output, output growth, interest rates, exchange rates, inflation, expectations, GDP accounting, and balance of payments statements. The course modality alternates between in person and remote, depending on the semester and instructor. prereq: [[1102 or Econ 1102], [3001 or Econ 3101]] or instr consent

APEC 3007. Applied Macroeconomics: Policy, Trade, and Development. (GP; 3 cr. ; Student Option; Every Fall & Spring)

Indicators of economic development, growth in trade, and welfare of developing countries. Globalization. Drivers of growth, productivity, technical change, and research. Comparative advantage. Distribution consequences of trade. Trade policy instruments/institutions. prereq: [1101 or ECON 1101], [1101H or ECON 1101H], [1102 or ECON 1102], [1102H or ECON 1102H]; 3001, 3006 recommended

APEC 3061. Economic Development in Contemporary Africa. (GP,SOCS; 3 cr. ; A-F only; Every Spring)
Major socio-economic challenges that confront post-independence sub-Saharan African countries in quest for sustainable economic development/growth. Causes of persistent poverty/inequality, role of institutions/multinational agencies. Growth in 21st century. prereq: 1101 or ECON 1101

APEC 3071. Microeconomics of International Development. (; 3 cr. ; Student Option; Every Spring)
Characteristics and performance of peasant agriculture; potential role of agriculture in economic development, and design of economic policies to achieve agricultural and economic development; role of women in agricultural development. prereq: 1101, 1102, Econ 1101, 1102, or instr consent

APEC 3202. An Introduction to the Food System: Analysis, Management and Design. (3 cr. ; Student Option; Every Fall)
Introduction to use of systems thinking for exploration of problems in contemporary food system from multidisciplinary perspective. System concepts. Historical evolution of food system. Analysis, management, design.

APEC 3411. Commodity Marketing. (; 3 cr. ; Student Option; Every Fall)
Economic concepts related to marketing agricultural commodities. Conditions of competitive markets, historical perspectives on market institutions/policy, structural characteristics of markets, policies/regulations affecting agricultural marketing of livestock, crop, and dairy products. prereq: 1101 or Econ 1101

APEC 3451. Food and Agricultural Sales. (; 3 cr. ; Student Option; Every Spring)
Professional selling of agricultural and food products. Students build/refine sales abilities, identify/qualify prospects, deliver sales presentations, close the sale. Principles of market research. prereq: 1101 or Econ 1101

APEC 3480. Topics in Applied Economics. (; 1-4 cr. [max 24 cr.] ; Student Option; Every Fall, Spring & Summer)
Lectures and discussion on applied economics subjects. Topics specified in Class Schedule.

APEC 3501. Agribusiness Finance. (; 3 cr. ; Student Option; Every Fall)
Analysis of financing and investment strategies for agribusiness firms and their effects on liquidity, solvency, and profitability. Analysis of financial institutions, markets, and instruments. Management problems, issues facing financial intermediaries serving agriculture. prereq: [[1251 or Acct 2050], 60 cr] or instr consent

APEC 3511. Retail Supermarket Case**Analysis.** (3 cr. ; A-F only; Every Fall)

This is a course in which students will work in teams to address a real-world issue faced by a retail food company. The National Grocers Association (NGA) determines the particular case annually, and the event is held at their annual meeting along with the Industry-University Coalition. Elements of the solution may involve marketing, budgeting, strategic pricing, and market research. Students are asked to prepare a presentation to a group of retail grocers at the annual meeting of NGA, typically held in Las Vegas, NV. Students will complete weekly assignments in which they lay the groundwork for the competition. The competition is held in February. During the Fall semester, students engage in research and evaluation of options on the case study. During the Spring semester, students finalize their presentations and compete at the NGA Show with teams from about 18 other universities that are members of the NGA Industry-University Coalition. The competition involves a 15-minute presentation on the first day with 10 minutes of questions and answers. Students are guaranteed to present twice with a second presentation on the second day. Four finalists are chosen for the finals on the third day with the winning team being recognized at the evening banquet and a cash prize. Students will also have the opportunity to interact with industry representatives at the show in a number of ways during the four days. prereq: APEC 1101 or 1101H or Econ 1101 or 1101H

APEC 3521. Agribusiness and Food Supply / Value Chain Issues. (; 3 cr. ; Student Option No Audit; Every Spring)

The course is an introductory survey of the global food economy and current issues. Included in this course is information on marketing channels, value chains, and supply chains; factors that make the global food economy unique relative to other industries; and current policy topics including labeling, Farm Bill, and trade.

APEC 3551. Concept Design and Value-Added Entrepreneurship in Food, Agricultural and Natural Resource Sciences. (; 3 cr. ; A-F only; Every Fall)

Explore the core skills required by entrepreneurs in opportunity identification and problem framing that lead to creating viable concepts that provide solutions to real consumer challenges. Students will tackle innovation challenges from an in-depth exploration of entrepreneurial and design thinking and learn how to incorporate these skills into their future professional work. Master techniques for exploring problems from a systems viewpoint through a series of hands-on projects from concept design to product mapping and consumer testing. Students get to select a project of their choosing directly from their major of study and will pitch their new product or service concept to an expert panel.

APEC 3611W. Environmental and Natural Resource Economics. (ENV,WI; 3 cr. ; Student Option; Every Spring)

Concepts of resource use. Financial/economic feasibility. External effects, market failures.

Resource use, environmental problems. Measuring impacts of resource development. Economics of alternative resource programs, environmental strategies. prereq: 1101 or ECON 1101 or 1101H or ECON 1101H

APEC 3811. Principles of Farm**Management.** (; 3 cr. ; Student Option; Every Fall)

Strategic and operations aspects of farm management; financial analysis, budgeting, strategic management; marketing plan and control; enterprise and whole farm planning and control; investment analysis, quality, risk, and personnel management. prereq: 1101 or Econ 1101

APEC 3841. Agricultural and Consumer Cooperatives and Mutuals. (3 cr. ; Student Option; Every Fall)

Introduction to the cooperative and mutual form of business. Each class begins with a speaker, usually a producer member or manager, from a cooperative or mutual including coffee, cocoa, farm supply, dairy, and other types of cooperatives. About 25% of the speakers are from global cooperatives. Students will choose a cooperative or mutual at the beginning of the semester and most homework assignments will be applied to your cooperative including a final digital media project. The course has one live lecture and one asynchronous lecture each week.

APEC 3993. Directed Study in Applied**Economics.** (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

APEC 3994. Directed Research in Applied**Economics.** (1-4 cr. [max 6 cr.] ; Student Option; Periodic Fall, Spring & Summer)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

APEC 4451W. Food Marketing Economics. (CIV,WI; 3 cr. ; Student Option; Every Fall)

Economics of food marketing in the United States. Food consumption trends, consumer food behavior, marketing strategies, consumer survey methodology, food distribution/retailing system. Policy issues related to food

marketing. Individual/group projects. prereq: [[1101 or Econ 1101], [1101H or Econ 1101H], SCO 2550 or STAT 3011 or equiv, 60 cr] or instr consent

APEC 4461. Horticultural Marketing. (; 3 cr. ; A-F only; Every Spring)

Major areas in horticultural marketing. Difference between horticultural products and commercial commodities. Core marketing components that should be used by every small horticultural business. Approaches to consumer research.

APEC 4481. Futures and Options Markets.

(; 3 cr. ; Student Option; Every Spring) Economics of futures/options trading in theory/application. Basis/price relationship in storable/nonstorable commodities. Hedging/commercial use of futures/options contracts. Speculation. Pricing efficiency. Market performances/regulation. prereq: [[3001 or Econ 3101], [AnSc 3011 or SCO 2550 or Stat 3011],] or instr consent

APEC 4501. Financial Modeling:**Spreadsheet Applications in Finance, Management, and Marketing.** (; 2 cr. [max 3 cr.] ; A-F or Audit; Every Spring)

Designing/implementing solutions to problems in finance, management, and market analysis with MS Excel? spreadsheet, VBA language, MS Power BI and Power Excel tools. Exercises cover topics such as proforma financial statement analysis, efficient portfolio derivation, VBA macros and functions, and building interactive dashboards for analysis of market trends. prereq: [APEC 3501 or FINA 3001], [APEC 1251 or ACCT 2050]

APEC 4821W. Business Economics and Strategy. (WI; 3 cr. ; Student Option; Every Spring)

Strategic management for production, processing, wholesaling, retailing, and service. Strategy formulation, implementation, and control. Business plans. Case study analysis. prereq: 3002, [3501 or FINA 3001], and [ACCT 3001 or MGMT 3001 or MKTG 3001]

APEC 5031. Methods of Economic Data**Analysis.** (; 3 cr. ; Student Option; Every Fall)

Statistical and econometrics techniques for applied economists. Theory and application of multivariate regression model using data sets from published economic studies. Emphasis on use of statistical techniques to understand market behavior. prereq: APEC 3001, Math 1142 or Math 1272, Stat 3001 or Sco 2550 or grad student or instructor consent

APEC 5032. Economic Data Analysis for Managerial and Policy Decisions. (; 3 cr. ; Student Option; Every Spring)

Statistical and econometric methods for the analysis of large data sets to support managerial and policy decisions. Methods for organizing, accessing, and ensuring the quality of data. Estimation techniques include panel data methods, limited dependent variable models, and time series analysis. Clarity of reporting and design of procedures for maintaining and updating data estimates. prereq: 5031 or instr consent

APEC 5151. Applied Microeconomics: Firm and Household. (; 3 cr. ; Student Option; Every Fall)

Quantitative techniques for analysis of economic problems of firms and households. Links between quantitative tools and economic analysis Regression analysis, mathematical programming, and present value analysis. prereq: (APEC 3001, Math 1142 or Math 1272, and Stat 3011 or Sco 2550) or equiv or grad student or instr consent

APEC 5321. Regional Economic Analysis. (; 3 cr. ; Student Option; Every Spring)

Development patterns. Role of resources, transportation, and institutional constraints. Migration, investments in growth and change. Economic information in investment and location decisions. Economic development policies and tools. Economic impact analysis. prereq: 3006 or ECON 3102 or instr consent

APEC 5411. Commodity Marketing. (3 cr. ; Student Option; Every Fall)

Economic concepts related to marketing agricultural commodities. Conditions of competitive markets, historical perspectives on market institutions/policy, structural characteristics of markets, policies/regulations affecting agricultural marketing of livestock, crop, and dairy products. prereq: graduate student and 1101 or Econ 1101

APEC 5451. Food Marketing Economics. (; 3 cr. ; A-F or Audit; Every Fall)

Economics of food marketing in the United States. Food consumption trends. Consumer food behavior, expenditure, data collection. Consumer utility models, demand forecasting. Food distribution system. Changes in supply chain, industry structure that serves retail food outlets. Individual/group projects.

APEC 5481. Futures and Options Markets. (; 3 cr. ; Student Option; Every Spring)

Economic concepts related to futures/options trading. Hedging, speculation.

APEC 5511. Labor Economics. (; 3 cr. ; Student Option; Periodic Fall)

Theoretical foundations of labor markets. Intertemporal/household labor supply. Demand for labor, efficiency wages. Human capital theory, unemployment, migration decisions. Analysis of econometric research applied to labor policy issues such as minimum wage, tax policy, social insurance, education. prereq: [[3001 or Econ 3101 or PA 5021], [PA 5032 or equiv]] or instr consent

APEC 5711. Agricultural and Environmental Policy. (; 3 cr. ; Student Option; Periodic Spring)

This is a topics course which changes from year to year. This year we will consider the relationship between famines and armed conflict. The general supposition (conventional wisdom) is that famines are the result of the forces of nature ? floods, droughts, and earthquakes. In fact, the evidence supports the argument that famines result from the actions of man to do harm to others. We will consider a variety of cases including the Irish Famine of the 19th Century, the hunger after

the conclusion of World War II, and the Bengal Famine of 1948. prereq: 3001 or Econ 3101

APEC 5721. Economics of Science and Technology Policy. (; 3 cr. ; Student Option; Every Fall)

This course covers the economic effects of science and technology policies, such as intellectual property rights. The course considers the effects of policies on: (1) the economic growth and development levels of countries; (2) the international technology transfers that occur between countries through trade, foreign direct investment, and licensing arrangements; and (3) differences in the economic welfare of developed and developing countries. prereq: APEC 3001 or ECON 3101 or instr consent

APEC 5731. Economic Growth and International Development. (; 3 cr. ; Student Option; Periodic Spring)

Economics of research and development. Technical change, productivity growth. Impact of technology on institutions. Science and technology policy. prereq: 3002 or [Econ 3101, Stat 3022]; Econ 4211 recommended

APEC 5751. Global Trade and Policy. (; 3 cr. ; Student Option; Fall Even Year)

Trade policies of import/export nations, gains from trade, trade negotiations/agreements. Free trade and common market areas. Exchange rate impacts. Primary commodities and market instability. Current trade issues. prereq: 3001 or Econ 3101 or PA 5021

APEC 5821. Business Economics and Strategy. (3 cr. ; Student Option; Every Spring)

Strategic management for production, processing, wholesaling, retailing, and service. Strategy formulation, implementation, and control. Business plans. Case study analysis. prereq: graduate student and 3002, [3501 or FINA 3001], and [ACCT 3001 or MGMT 3001 or MKTG 3001]

APEC 5831. Food and Agribusiness Marketplace. (; 2-3 cr. ; A-F or Audit; Every Spring)

This is a graduate student survey course of the industrial organization and current policy issues in the food and agribusiness marketplace. It represents a collaboration between the College of Food, Agricultural, and Natural Resource Sciences and the Carlson School of Management. The course uses short readings and speakers. A comprehensive look at all of the sectors in the food and agribusiness value chain is described. Topics include food policies (Farm Bills, food stamps, food labeling, and similar topics); environmental policies (water, invasive species, agriculture production and similar topics); and industrial organization issues (marketing and production contracts, overview of firm strategic orientation, distribution and similar topics). Readings, guest speakers, and presentations are used. prereq: graduate student

APEC 5832. The Business of Food Systems. (1 cr. ; Student Option; Every Fall)

This is a graduate survey course to introduce students to the Minnesota food industry

through its regulatory process, research and development, and industry structure. It is an integrated week long course that includes field study tours of Minnesota agriculture and food economy coupled with classroom instruction. Each year the course will focus on two Minnesota industries such as dairy, beef, soybean, corn, potatoes, and other agricultural and food industries. The course has been developed through a collaboration with College of Veterinary Medicine, School of Public Health, and College of Food, Agricultural, and Natural Resource Sciences.

APEC 5841. Agricultural and Consumer Cooperatives and Mutuals. (3 cr. ; Student Option; Every Fall)

Introduction to the cooperative and mutual form of business. Each class begins with a speaker, usually a producer member or manager, from a cooperative or mutual including coffee, cocoa, farm supply, dairy, and other types of cooperatives. About 25% of the speakers are from global cooperatives. Students will choose a cooperative or mutual at the beginning of the semester and most homework assignments will be applied to your cooperative including a final digital media project. The course has one live lecture and one asynchronous lecture each week.

APEC 5990. Special Topics in Applied Economics. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Special topics courses - focus on areas not covered in regularly offered courses. prereqs: graduate student or instructor consent

APEC 5991. Independent Study in Applied Economics. (1-4 cr. [max 32 cr.] ; Student Option; Every Fall, Spring & Summer)

Independent study and supervised reading/research on subjects/problems not covered in regularly offered courses. prereq: instr consent

Applied Professional Studies (APS)**APS 5101. Ecological Design for Horticulture.** (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Polyculture and Ecological Design is the design science of assembling plants into ecologically balanced systems. Natural polycultures are self-supporting plant communities in forests, wetlands, and prairies. Investigate ecological functions and services that are important components for sustainable horticultural design. Learn to apply the ecological landscape design language and technique while using the permaculture design process to create ecologically functional plant communities. Crucial discussions will assess the solutions in horticultural design for adapting to accelerated climate disruption, and follow nature's momentum as a guide to sustainable production systems. Lab sessions will demonstrate, and you will develop, the skills and foresight needed to assess, research, concept, design, and present polycultures in a sequential and professional process.

APS 5102. Garden Design: Theory and Application. (; 2 cr. ; A-F or Audit; Periodic Spring)

This course provides an overview of the garden design process, the analysis and conceptual design of the landscape, exploration of the design characteristics of plants, sustainable design and a descriptive journey into several historical garden styles. You will be introduced to a variety of topics, including the design process, basic design principles, and the basic concepts of graphic communication in garden design. A working knowledge of design process and principles is critical to quality design. This course is intended to strengthen student awareness and knowledge of design rather than fully develop the skills necessary to draw, develop and implement garden designs. This course is different from fact-based horticulture science courses. Although you will be held responsible for learning a broad range of principles and processes in this course, there are typically no absolute right answers relative to design assessment and critique. What is more important is that you gain the ability to articulate and assess design character and quality and give evidence of your thought process.

APS 5103. Integration of Sustainable Agriculture Concepts. (3 cr. ; A-F only; Every Fall)

Biodiversity, ecological balance, nutrient cycling, soil quality. Organic practices of tillage, fertility management, weed control, insect control. Specific practices compared with conventional/integrated pest management. Economic analysis of both organic/conventional practices. prereq: AGRO 1101 or AGRO 1103 or BIOL 1001 or BIOL 1009 or HORT 1001 or HORT 6011 or instr consent, [sr or grad student admitted to MPS in horticulture] Because of the 5xxx level, undergraduates need permission numbers to register. Students can obtain permissions by writing to: reefx001@umn.edu

APS 5104. Conservation at Botanic Gardens. (1 cr. ; A-F or Audit; Periodic Fall)

In this class, students will explore conservation strategies of botanic gardens using the Plant Conservation Program at the University of Minnesota Landscape Arboretum as a model. Discussions will center around scientific and non-scientific strategies, as well as limitations and strengths of the botanic garden system in regards to rare plant conservation. There are many different conservation programs around the continent and world, all of them working on different species and attacking conservation issues with different toolsets, goals, and even philosophies. Some of these gardens interact with each other and combine resources, but some do not. Some gardens work at very large scales of conservation and some work at much smaller, local scales. During this course, there will be opportunities to interact with conservation programs at other botanic gardens.

APS 5950. Topics in APS. (; 1-3 cr. [max 18 cr.]; A-F only; Periodic Fall, Spring & Summer) Topics in APS

APS 5993. Directed Studies. (; 1-6 cr. ; Student Option; Every Fall, Spring & Summer) Directed Studies prereq: dept consent

Arabic (ARAB)

ARAB 1101. Beginning Arabic I. (5 cr. ; Student Option No Audit; Every Fall & Summer)

After learning the Arabic script, you will develop your ability to communicate in Arabic about yourself, your community, and your environment. You will learn to speak, write, read, and listen to meet the demands of daily life. You will learn to inquire about others and negotiate meaning with them, and to interpret concise print, oral, and digital texts. You will also begin to explore the rich cultural diversity of the Arab world. This class is taught following a communicative and interactive approach and is focused on practice.

ARAB 1102. Beginning Arabic II. (5 cr. ; Student Option No Audit; Every Spring & Summer)

As the continuation of ARAB-1101, ARAB-1102 focuses on the equal development of the fundamental skills of speaking, writing, reading, and listening in Modern Standard Arabic. Content is tailored to meet the communicative demands of daily life. Class time is mostly devoted to practice. In addition to daily homework assignments, students give oral presentations, compose basic essays, and work on an oral or written project. Attendance of this class is required for all five weekly contact hours. Pre-req: pass in ARAB-1101/4101, or equivalent experience as assessed through a placement test.

ARAB 1900. Topics in Arabic. (; 2-4 cr. [max 8 cr.]; Student Option No Audit; Periodic Fall, Spring & Summer) Topics specified in course guide.

ARAB 3030. Arabic Content-Based Instruction. (; 1-3 cr. ; S-N or Audit; Periodic Fall & Summer)

Topics in Arabic culture held in conjunction with colloquial language courses.

ARAB 3101. Intermediate Arabic I. (5 cr. ; Student Option No Audit; Every Fall)

This course is designed for students who have successfully completed two semesters of intensive Beginner Modern Standard Arabic. Like its prequels, Intermediate Arabic I focuses on the equal development of the fundamental skills of speaking, writing, reading, and listening in Modern Standard Arabic. This course is designed as a communicative and interactive learning environment, with a strong emphasis on practice. Presentations, oral interaction and writing samples are expected to become lengthier and more intricate. Students study increasingly complex grammar through engagement with authentic oral, print and digital texts. prereq: pass in Arab 1102/4102 or equivalent experience as assessed through a placement test.

ARAB 3102. Intermediate Arabic II. (5 cr. ; Student Option No Audit; Every Spring & Summer)

This course is designed for students who have successfully completed three semesters of intensive Modern Standard Arabic. Like its prequels, Intermediate Arabic II focuses on the

equal development of the fundamental skills of speaking, writing, reading, and listening in Modern Standard Arabic. Thematic units, however, transcend the communicative needs of daily life to include communication about subjects of a broader cultural, historical and sociological relevance. This course is designed as a communicative and interactive learning environment, with a strong emphasis on practice. Presentations, oral interaction, and writing samples are expected to become lengthier and more intricate. Students study increasingly complex grammar through engagement with authentic oral, print, and digital texts. Pre-req: pass in ARAB-3101/4122 or equivalent experience as assessed through a placement test.

ARAB 3290. Arabic Language Teaching Tutorial. (; 1 cr. [max 2 cr.]; S-N only; Every Fall & Spring)

Students tutor beginning students of Arabic and are part of department's Arabic language team. prereq: Grade of A in 3102/4122

ARAB 3542. Medieval Islam. (; 3 cr. ; Student Option;)

Islamic dynasties, Mamluks and Mongols, Crusaders and Assassins. Abbasid Caliphate's disintegration and rise of Seljuk Turks.

ARAB 3811. Egyptian Colloquial Arabic I. (2-3 cr. ; Student Option No Audit; Periodic Fall, Spring & Summer)

This course is designed for students of Arabic who have taken a minimum of two semesters of Modern Standard Arabic (ARAB 1101 and 1102), or the equivalent thereof as determined by a placement test. The course provides training in the fundamentals of Egyptian Colloquial Arabic, one of the most widely-spoken and widely-understood Arabic vernaculars. Students practice the expression and comprehension of communicative needs in a variety of daily-life, informal situations. In addition, they are acquainted with a range of authentic cultural materials (film, TV broadcasts, songs) in Egyptian Arabic. The course relies heavily on oral practice and class periods are designed to be interactive. Credit will not be granted if student has already taken ARAB 3900 Fall 2015, Summer 2016

ARAB 3813. Jordanian Colloquial Arabic. (3 cr. ; A-F only; Periodic Spring)

This course is designed for students of Arabic who have taken minimum two semesters of Modern Standard Arabic (ARAB 1101 & 1102), or the equivalent thereof as determined by a placement test. The course provides training in the fundamentals of Jordanian and Palestinian spoken Arabic, which is widely understood all over the Arab world, and is also very similar to the Arabic spoken in Syria and Lebanon. This course specifically revolves around the development of your speaking, listening and transcultural skills. It will provide you with many opportunities to speak, watch, and listen to Jordanian Arabic and to learn about the cultures and societies of the Levant. The course aims to increase your ability to successfully navigate the variety of Arabic language registers, and to substantially improve your cultural competence. This course

is open to non-native speakers and non-heritage learners of Arabic only. As a 3-credit course, it cannot be taken in lieu of ARAB 3101 or ARAB 3102 to fulfill the CLA second language requirement. It can, however, be taken concurrently with these classes.

ARAB 3814. Gulf Colloquial Arabic. (3 cr. ; A-F only; Periodic Fall & Spring)

This course is designed for students of Arabic who have taken minimum two semesters of Modern Standard Arabic (ARAB 1101 & 1102), or the equivalent thereof as determined by a placement test. The course provides training in the fundamentals of the spoken Arabic of the Arabian Peninsula region. You will learn how to participate with ease and confidence in informal conversations in Gulf Colloquial Arabic around topics in the domestic and informal sphere, as well as some general interest topics of communal/regional relevance. You will engage with a wide variety of authentic popular culture materials from the region, and will explore a variety of cultural practices prevalent in the Arabian Peninsula region, thereby substantially improving your intercultural competence. This course is open to non-native speakers and non-heritage learners of Arabic only. As a 3-credit course, it cannot be taken in lieu of ARAB 3101 or ARAB 3102 to fulfill the CLA second language requirement. It can, however, be taken concurrently with these classes.

ARAB 3900. Topics in Arabic. (; 1-4 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer) Topics specified in course guide.

ARAB 3920. Topics in Arabic Culture. (; 1-3 cr. [max 9 cr.] ; Student Option No Audit; Periodic Fall, Spring & Summer) Selected topics in Arabic culture. Topics specified in the Class Schedule.

ARAB 3993. Directed Study. (1-5 cr. [max 12 cr.] ; Student Option; Periodic Fall, Spring & Summer) For advanced students with individual faculty members. Prereq-instr consent, dept consent, college consent.

ARAB 4101. Beginning Arabic I for Graduate Student Research. (5 cr. ; Student Option No Audit; Every Fall & Summer) After learning the Arabic script, you will develop your ability to communicate in Arabic about yourself, your community and your environment. You will learn to speak, write, read, and listen to meet the demands of daily life. You will learn to inquire about others and negotiate meaning with them, and to interpret concise print, oral, and digital texts. You will also begin to explore the rich cultural diversity of the Arab world. This class is taught following a communicative and interactive approach and is focused on practice.

ARAB 4102. Beginning Arabic II for Graduate Student Research. (5 cr. ; Student Option No Audit; Every Spring & Summer) Comprehension, oral practice, reading of standard Arabic. Meets with 1102. prereq: 4101 or equiv

ARAB 4121. Intermediate Arabic I for Graduate Student Research. (5 cr. ; Student Option No Audit; Every Fall)

This course is designed for students who have successfully completed two semesters of intensive Beginner Modern Standard Arabic. Like its prequels, Intermediate Arabic I focuses on the equal development of the fundamental skills of speaking, writing, reading, and listening in Modern Standard Arabic. This course is designed as a communicative and interactive learning environment, with a strong emphasis on practice. Presentations, oral interaction, and writing samples are expected to become lengthier and more intricate. Students study increasingly complex grammar through engagement with authentic oral, print, and digital texts. prereq: pass in Arab 1102/4102 or equivalent experience as assessed through a placement test.

ARAB 4122. Intermediate Arabic II for Graduate Student Research. (5 cr. ; Student Option No Audit; Periodic Spring & Summer) Advanced grammar, analyses of readings, oral comprehension. Meets with 3102. prereq: 4121 or equiv

ARAB 4811. Egyptian Colloquial Arabic I for Graduate Research. (3 cr. ; A-F only; Periodic Fall)

This course is designed for students of Arabic who have taken a minimum of two semesters of Modern Standard Arabic (ARAB 1101 and 1102), or the equivalent thereof as determined by a placement test. The course provides training in the fundamentals of Egyptian Colloquial Arabic, one of the most widely-spoken and widely-understood Arabic vernaculars. Students practice the expression and comprehension of communicative needs in a variety of daily-life, informal situations. In addition, they are acquainted with a range of authentic cultural materials (film, TV broadcasts, songs) in Egyptian Arabic. The course relies heavily on oral practice and class periods are designed to be interactive. Meets with ARAB 3811.

ARAB 4813. Jordanian Colloquial Arabic for Graduate Research. (3 cr. ; A-F only; Periodic Spring)

This course is designed for students of Arabic who have taken minimum two semesters of Modern Standard Arabic (ARAB 1101 & 1102), or the equivalent thereof as determined by a placement test. The course provides training in the fundamentals of Jordanian and Palestinian spoken Arabic, which is widely understood all over the Arab world, and is also very similar to the Arabic spoken in Syria and Lebanon. This course specifically revolves around the development of your speaking, listening and transcultural skills. It will provide you with many opportunities to speak, watch, and listen to Jordanian Arabic and to learn about the cultures and societies of the Levant. The course aims to increase your ability to successfully navigate the variety of Arabic language registers, and to substantially improve your cultural competence. This course is open to non-native speakers and non-heritage learners of Arabic only.

ARAB 4814. Gulf Colloquial Arabic for Graduate Research. (3 cr. ; A-F only; Periodic Fall & Spring)

This course is designed for students of Arabic who have taken minimum two semesters of Modern Standard Arabic (ARAB 1101 & 1102), or the equivalent thereof as determined by a placement test. The course provides training in the fundamentals of the spoken Arabic of the Arabian Peninsula region. You will learn how to participate with ease and confidence in informal conversations in Gulf Colloquial Arabic around topics in the domestic and informal sphere, as well as some general interest topics of communal/regional relevance. You will engage with a wide variety of authentic popular culture materials from the region, and will explore a variety of cultural practices prevalent in the Arabian Peninsula region, thereby substantially improving your intercultural competence. This course is open to non-native speakers and non-heritage learners of Arabic only.

ARAB 5040. Readings in Arabic Texts. (; 2-4 cr. [max 9 cr.] ; A-F only; Every Fall) Post-advanced study of extensive, complex original Arabic texts and development of students' Arabic discussion and writing skills in the realms of literature, academia, media and/or business. All primary and secondary readings, assignments, in-class analysis and discussion are done fully in Arabic. Topics specified in Class Schedule.

ARAB 5041. Classical and Modern Arabic Prose. (3 cr. ; A-F only; Periodic Fall & Spring) In this class, students read extensive, complex, original Arabic texts and develop their academic discussion and writing skills in Arabic. The course covers a substantial number of Arabic literary texts of different genres and time periods: excerpts of the Prophet's biography, classical treatises and travel writing, stories from the "1001 Nights," 20th-century short stories, and short novels. To contextualize the literary texts, students read secondary texts also composed in Arabic and engage with Arabic audiovisual materials (video clips, TV interviews, songs) in class and at home. In-class analysis and discussion of the texts is conducted exclusively in Arabic. prereq: ARAB 5102 or the equivalent thereof as established by a placement test

ARAB 5101. Advanced Arabic I. (4 cr. ; Student Option No Audit; Every Fall) Advanced readings in classical/modern Arabic. Compositions based on texts. prereq: Grade B- or higher in 3102 or instr consent

ARAB 5102. Advanced Arabic II. (4 cr. ; Student Option No Audit; Every Spring) Readings of Arabic texts. Writing compositions based on texts. Continuation of 5101.

ARAB 5993. Directed Studies. (; 1-5 cr. [max 20 cr.] ; Student Option; Every Fall & Spring) Students enrolling in this directed study/research course will complete the University's common Directed Study/Research contract with the faculty mentor/evaluator. The Faculty member will ensure academic standards are upheld, including: -The work proposed is at the appropriate level for the course, academic in nature, and the student will be involved intellectually in the project. -The project scope is reasonable for one semester and the number of credits specified (42 hours of work per

credit). -The faculty mentor is qualified to serve in this role. -Assessment of student learning and grading criteria are clear and appropriate. -The student will be working in a respectful, inclusive environment.

Arabic Lang/Culture in Morocco (MRCO)

MRCO 1301. Accelerated Colloquial

Moroccan Arabic I. (6 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MRCO 1401. Intensive Colloquial Moroccan

Arabic I. (3 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MRCO 1701. Accelerated Modern Standard

Arabic I. (6 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MRCO 1801. Intensive Beginning Modern

Standard Arabic. (10 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MRCO 2301. Accelerated Colloquial

Moroccan Arabic II. (6 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MRCO 2701. Accelerated Modern Standard

Arabic II. (6 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MRCO 2801. Intensive Low Intermediate

Modern Standard Arabic. (10 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MRCO 3005. Introduction to the Arabic

Newspaper. (3-5 cr. [max 10 cr.] ; Student Option; Every Fall, Spring & Summer)
Basic newspaper vocabulary/structure. Analysis of headlines.

MRCO 3006. Media Arabic.

(3-5 cr. [max 10 cr.] ; Student Option; Every Fall, Spring & Summer)

Media vocabulary sufficient to grasp gist of newspaper article/broadcast. Graded newspaper readings from Middle Eastern dailies. Taped material from Moroccan television/radio.

MRCO 3007. Gender, Modernization, and

Social Change in Morocco. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Interrelationships between gender, modernization, and social change in post-colonial Morocco. Emphasizes social institutions, religion, development, traditions, and contemporary issues.

MRCO 3008. Trajectories of Representation: Indigenous and Western Images of

Morocco. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Contemporary Moroccan literature. Selected texts, their social/political contexts. Issues that have shaped national literature and postcoloniality since 1950s.

MRCO 3009. Moroccan Society and Culture.

(; 1-3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Political, economic, societal, and cultural trends in old/modern Moroccan society. Walking tour, discussions, guest lecturers.

MRCO 3010. Readings in Contemporary

Maghrebi Literature. (3-5 cr. [max 10 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

MRCO 3011. Readings in Islamic Texts I.

(3-5 cr. [max 10 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

MRCO 3012. Readings in Islamic Texts II.

(3-5 cr. [max 10 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

MRCO 3013. Islam: Past and Present.

(; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

MRCO 3014. Morocco: Changes and

Cultural Identities. (3 cr. ; Student Option; Every Fall, Spring & Summer)

The course examines the major social, cultural, political, intellectual, and human rights transformations in Morocco over the last four decades, stressing the undergoing tensions between the secular liberals and conservatives (especially Islamists) across gender, religion, language, and sexual politics. It also explores changing identities and the complexity of Moroccan cultural politics. It is based on a balanced combination of the exploration of major academic scholarship from a comparativist and multi-disciplinary perspective, and insight into the lives and experiences of Moroccans, with particular focus on the inhabitants of Fez and the region. Above all, it traces the blended trajectories and trends in Moroccan society and culture, stressing the pressuring challenges to Moroccan national identities posed by globalization, secularism, conservatism, and fundamentalism.

MRCO 3599. Morocco in Context.

(1-3 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MRCO 3701. Accelerated Modern Standard

Arabic III. (6 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MRCO 3702. Accelerated Modern Standard

Arabic IV. (6 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MRCO 3801. Intensive Intermediate Modern

Standard Arabic. (10 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MRCO 3802. Intensive High Intermediate

Modern Standard Arabic. (10 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MRCO 3803. Intensive Low Advanced

Modern Standard Arabic. (10 cr. ; Student Option; Every Fall, Spring & Summer)

Study abroad course.

MRCO 3804. Intensive Advanced Modern

Standard Arabic. (10 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MRCO 3901. Accelerated Modern Standard

Arabic V. (6 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MRCO 3902. Accelerated Modern Standard

Arabic VI. (6 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MRCO 3903. Accelerated Modern Standard

Arabic VII. (6 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MRCO 3911. Proficiency Arabic I.

(; 5 cr. [max 10 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MRCO 3993. Directed Research.

(1-3 cr. ; Student Option; Every Fall, Spring & Summer)
This directed research provides students with the opportunity to investigate a cultural or societal topic related to Moroccan society, history, or culture under the supervision of a designated program faculty member. Students design the topic, readings, and methodology at the start of the semester with the faculty member and meet weekly with the faculty member to discuss topic development, additional readings (as needed), additional resources and considerations, and course paper progress. Semester-only students enrolled in the 3-credit research option will have a classroom component (Morocco in Context) as well as individualized instruction; academic year students will have all contact hours through individual faculty meetings. Semester and academic year students enrolled in the course for 3 credits will receive the same amount of individualized contact hours and put forth a total of 100 hours of research effort over the course of the semester. In rare circumstances, a semester student may enroll in a 1-credit research project if they completed the summer program and are continuing into the semester. They have the option to join the semester group for the Morocco in Context discussions and will be graded only on their research project.

Architecture (ARCH)

ARCH 1281. Design Fundamentals I.

(AH; 4 cr. ; A-F only; Every Fall)

Using architecture broadly defined, students will develop essential habits of work and mind, as well as an ability to understand the relationship between drawing, making and exploring. The course will introduce and begin to build an understanding of the role of iteration and critique, as well as traditional and contemporary modes of representation in architecture.

ARCH 1621V. Introduction to Critical Inquiry in Practice.

(WI; 3 cr. ; A-F only; Every Fall)

This course introduces beginning architecture and landscape architecture students to critical inquiry in disciplinary research and professional practice through guest lectures, readings, and discussions. Weekly exercises help develop a beginning-level understanding of the depth and breadth of architectural inquiry in its contemporary context, i.e., as a complex, multi-dimensional, multidisciplinary endeavor with myriad ethical implications. For the final project, students will extend individual curiosity from course materials and presentations into a meaningful proposal for basic or applied research. Students who are engaged in course materials will begin to understand: architecture, landscape architecture, and design more broadly as an ecology of practices; the historical, contemporary, and projective framework for architecture education; the historical, contemporary, and projective framework for architecture as a profession; and specifically how these relate especially in this region.

ARCH 1621W. Introduction to Critical Inquiry in Practice. (WI; 3 cr. ; A-F only; Every Fall)

This course introduces beginning architecture and landscape architecture students to critical inquiry in disciplinary research and professional practice through guest lectures, readings and discussions. Weekly exercises help develop a beginning-level understanding of the depth and breadth of architectural inquiry in its contemporary context, i.e., as a complex, multi-dimensional, multidisciplinary endeavor with myriad ethical implications. For the final project, students will extend individual curiosity from course materials and presentations into a meaningful proposal for basic or applied research. Students who are engaged in course materials will begin to understand: architecture, landscape architecture and design more broadly as an ecology of practices; the historical, contemporary and projective framework for architecture education; the historical, contemporary and projective framework for architecture as a profession; and specifically how these relate especially in this region.

ARCH 2281. Design Fundamentals II. (4 cr. ; A-F only; Every Spring)

Foundation architectural design studio. Design principles, technical drawing, material manipulation.

ARCH 2301. Drawing and Critical Thinking. (4 cr. ; A-F only; Every Fall & Spring)

This course provides an in-depth foundation for understanding how drawing functions as a discipline-specific way of thinking, brings self-critical precision to non-verbal production, and supports processes of conceptual exploration. prereq: Arch 2281 or department consent

ARCH 3150. Topics in Architecture. (; 1-6 cr. [max 24 cr.] ; Student Option; Periodic Fall & Spring)

Selected topics in architecture design, theory, representation, or history.

ARCH 3212. BDA: Analytical Modeling of Contemporary Architecture. (3 cr. ; A-F only; Periodic Fall & Spring)

Insight into analytical modeling as one of the most important tools for a designer. Exercises, activities and iterative making of analytical models will help students to gain insight into works of contemporary architecture; analyze constituent elements and systems of form, space and order; investigate and make visible the underlying conceptual notions that generated the work; explore physical modeling as modes and techniques of analysis and representation; explore the specific issue of scale in analysis, representation and design resolution; read 2-D architectural drawings and translate them into 3-D physical form; and generally improve physical modeling skills.

ARCH 3222. BDA Box Problem. (2 cr. ; A-F only; Periodic Fall & Spring)

Students gain insight into the process of making by designing a wooden box that addresses a specific ritual, ceremony, event or activity of their choosing. The box will be evaluated on creativity, technique, craft, and risk. Introduction and practice with a variety of woodworking joints and techniques used to construct a wooden box.

ARCH 3223. BDA: Screen Test: Metal Work. (2 cr. ; A-F only; Periodic Fall & Spring)

Understanding the screen as an architectural element and screening as an architectural device. Understanding the nature of making and material craft in the design process, specifically metals and metal alloys designed and fabricated as architectural screen panels. Students develop: ability to understand, work with and transform metals; design vocabulary around screens, screening and patterns in architecture; design ideas as material assemblies and spatial propositions; verbal and visual communication skills as part of the design process; criteria for making design decision relevant for using screens, screening and patterns in architecture.

ARCH 3231. Intensive Applications Design Workshop. (3 cr. [max 15 cr.] ; A-F only; Every Fall & Spring)

BDA design core workshops develop your ability to critically approach a broad range of conditions through the lens of architecture. This course will focus on critical inquiry of tangible architectural attributes such as material (assembly), site (context), or program (need). This workshop foregrounds analysis of measurable, physical and specific conditions, and favors local project sites and/or precedent projects. The course offers a structure for moderately directed learning (including guided peer review), emphasizes iteration and process, and offers an opportunity to discover where and how your own interests align with broader opportunities as an emerging designer in architecture and/or other allied disciplines and design fields.

ARCH 3232. Extensive Applications Design Workshop. (3 cr. [max 15 cr.] ; A-F only; Every Fall & Spring)

BDA design core workshops develop your ability to critically approach a broad range of conditions through the lens of architecture. This course focuses on the critical inquiry of latent or intangible attributes such as architecture's

experiential, social, cultural, political, ethical, and poetic dimensions. Students in this course will engage architecture from the point of view of ephemeral conditions, theoretical understandings and operations, spatializing of data, and/or architectural inquiry applied to complex conditions or translations. The course offers a structure for moderately directed learning (including guided peer review), emphasizes iteration and process, and offers an opportunity to discover where and how your own interests align with broader opportunities as an emerging designer in architecture and/or other allied disciplines and design fields.

ARCH 3250. Design Workshop. (; 1-6 cr. [max 54 cr.] ; A-F only; Every Fall & Spring)

Design process as it relates to architecture. Hands-on projects involving interactive design process. Students develop rigorous/inventive graphic means of communicating. prereq: 2281, [Arch BA or BDA major]

ARCH 3261. BDA: The Art of Daylighting Design: Exquisite Rooms. (3 cr. ; A-F only; Periodic Fall & Spring)

Daylighting design and luminous phenomena have long captured the imagination of designers and architects. The beauty and power of light and shadow inspires the work of the greatest architectural masters. This BDA Workshop explores the many roles of daylighting in architectural design and how it is shaped by the intersection of both poetic and performance goals and aspirations. A select group of exquisite rooms of leading modern and contemporary architects will be compared and contrasted to gain insight into larger luminous design concepts, principles, strategies, and lessons on the art of daylighting design. Physical and computer models, photography, rendered drawings, diagramming, and computer analysis will be explored to understand the daylighting design philosophies, strategies, and details of 'Masters of Light' and the application of daylighting design lessons to an individual daylight investigation. Learning objectives are: to compare and contrast poetic and performance daylighting design concepts, principles, and strategies of modern and contemporary masters; to develop a comparative knowledge of daylighting theories and practices from case studies of exquisite rooms to gain the knowledge and skills necessary to effectively develop and assess qualitative and quantitative daylighting strategies; and to develop a personal daylighting design theory, process, and practice.

ARCH 3271. BDA: Watercolor Sketching: Exploring Iconic Sites. (2 cr. ; A-F only; Periodic Fall & Spring)

Students will develop skills in representation and visualization using watercolor as a medium for examining architecture as material, structure and attitude. Students will explore creative methods in representation through a process of working en plein air. A new site of architectural significance will be visited each week. The goal of this design workshop is for students to discover and capture a sense of space, material and design in a personal

manner, developing skills in representation as well as in design process. The way of working en plein air reflects a tradition in architecture of studying precedents in situ as well as an attitude captured by Frederick Frank in *The Zen of Seeing*, namely: To stop rushing around, to sit quietly on the grass, to switch off the world and come back to the earth, to allow the eye to see a willow, a bush, a cloud, a leaf, is an unforgettable experience.

ARCH 3281. Architecture Studio 01:

Material. (; 6 cr. ; A-F only; Every Spring)
Students in this undergraduate studio practice an iterative, open-ended design process as it relates especially to the technical and experiential role of materials, material assembly, construction, structure, and tectonics in architecture. Students develop their ability to think through multiple modes of media, including physical and digital drawings and models, with an emphasis on physical model-making. prereq: Arch BS major and Arch 2301

ARCH 3282. Architecture Studio 02: Site. (; 6 cr. ; A-F only; Every Fall)

Students in this undergraduate studio practice an iterative, open-ended design process as it relates especially to the fundamental role of site as a technical and experiential context in architecture. Students learn to identify and explore the static, dynamic, tangible, and intangible forces that impact, and are impacted by, architectural interventions. Students develop their ability to think through multiple modes of media, including physical and digital drawings and models, with an emphasis on physical model-making. prereq: [3281 or 4281], BS Arch major

ARCH 3351. AutoCAD I. (; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)
Concepts, tools, and techniques of computer-aided drawing with current AutoCAD Release. Producing dimensioned/annotated drawings for plotting. 3-D drawing capabilities. Use of dimension variables, attributes, blocks, symbols. prereq: Arch major or BED major or instr consent

ARCH 3391. Design and Representation with BIM. (3 cr. ; A-F or Audit; Every Fall)
In this course, students will be introduced to the concept of Building Information Modeling (BIM) through the use of Autodesk Revit, one, one of the BIM software tools most commonly used in architectural practice today. Students will engage in a series of design exercises that will require both learning and applying Revit in the context of real world architectural scenarios. In addition to learning Autodesk Revit as a design tool, we will examine the use of BIM technology within the architectural industry through a series of case study examples. Also, presenters will share firsthand accounts of CAD and BIM Software being implemented in architectural practice.

ARCH 3411V. Architectural History to 1750. (GP,WI,HIS; 3 cr. ; A-F only; Every Fall)
This course will begin to situate us, and our work, in the context of the much larger, much longer human story. Architecture, both in practice and in its historical study, is

fundamentally about people. In studying the human past through the built environment, from prehistory to 1750, we will see how architecture, both the ordinary and the extraordinary, is the product of its cultural, political, and social context. People make buildings and spaces, and buildings and spaces shape the ideas and behaviors of people. By studying architectural history we will learn about trends of style and form, but our primary emphasis is to learn about the relationships, practices, narratives, and beliefs that have constituted human culture around the world and across time. prereq: first year writing requirement; Soph or above

ARCH 3411W. Architectural History to 1750.

(GP,WI,HIS; 3 cr. ; A-F or Audit; Every Fall)
Built environment as a tool to study the human past from ancient times to 1750. Major trends of style and form and the relationships, practices, beliefs that have shaped human behavior. prereq: Soph or above

ARCH 3412V. Honors: Architectural History

Since 1750. (GP,WI,HIS; 3 cr. ; A-F only; Every Spring)
Examples of the built environment from the Enlightenment to the present are studied within a broad social, cultural, and political context. Major architectural movements and their associated forms and designs. prereq: Soph or above

ARCH 3412W. Architectural History Since 1750.

(GP,WI,HIS; 3 cr. ; A-F or Audit; Every Spring)
Examples of the built environment from the Enlightenment to the present are studied within a broad social, cultural, and political context. Major architectural movements and their associated forms and designs. prereq: Soph or above

ARCH 3511. Material Transformations: Technology and Change in the Built Environment.

(TS; 3 cr. ; A-F only; Periodic Fall)
Surveys development of significant architectural material technologies/their relationships to society/natural environment.

ARCH 3611. Design in the Digital Age. (; 3 cr. ; A-F or Audit; Every Spring)

Introduction to design, design process. Developing/understanding ways of seeing, thinking, and acting as a designer. Changes in design being wrought by digital technology. Team design project.

ARCH 3711V. Honors: Environmental Design and the Sociocultural Context.

(CIV,WI,SOCS; 3 cr. ; A-F only; Every Fall)
Designed environment as cultural medium and as product of a sociocultural process and expression of values, ideas, and behavioral patterns. Design/construction as complex political process. prereq: Honors, [soph or above]

ARCH 3711W. Environmental Design and the Sociocultural Context.

(CIV,WI,SOCS; 3 cr. ; A-F only; Every Fall)
Designed environment as cultural medium/product of sociocultural process/expression of values, ideas, behavioral patterns. Design/

construction as complex political process. prereq: Soph or above

ARCH 3756. Public Interest Design: Principles and Practices. (3 cr. ; A-F or Audit; Every Spring)

As the allied fields of design evolve in response to an increasing number of global challenges - inequity, social and political turmoil, disruptive climate-change, accelerating population growth - the question of how designers will address the needs of the most vulnerable among us is fundamental. Public Interest Design (PID), an emerging area of specialization within the design professions, specifically considers the concerns of the vast majority of the world's inhabitants who are historically under-resourced and ill-equipped to respond to the Grand Challenges? facing humankind. With this mind, this introductory survey course has two aims: First, to critically examine the range of environmental, economic, social, and ethical issues that underpins work with under-resourced domestic and international communities? including how these concerns can be collectively addressed to become more resilient; and second, to investigate organizational models that seek to broaden the traditional scope of the allied design fields as disciplines and professions by advocating a humanitarian basis for practice.

ARCH 3993. Directed Study. (; 1-3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)
Guided individual reading or study. prereq: instr consent

ARCH 4150. Topics in Architecture. (; 1-4 cr. [max 24 cr.] ; A-F or Audit; Periodic Fall & Spring)

Design, technology, history, theory, representation, or urbanism. prereq: Arch major or instr consent

ARCH 4194H. Thesis/Capstone Project. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall & Spring)
Individualizes honors experience by connecting aspects of major program with special academic interests. prereq: Arch major, sr, honors

ARCH 4231. Advanced Intensive Applications Design Workshop. (3 cr. [max 15 cr.] ; A-F only; Every Fall & Spring)
BDA design core workshops develop your ability to critically approach a broad range of conditions through the lens of architecture. This course will focus on the critical inquiry of tangible architectural attributes such as material (assembly), site (context), or program (need). This workshop foregrounds the analysis of more measurable, physical and specific conditions, and will favor local project sites and/or precedent projects. Appropriate to an advanced design workshop, this course provides a structure for more guided, self-directed learning in service of iteratively advancing a design project through the lens of architecture.

ARCH 4232. Advanced Extensive Applications Design Workshop. (3 cr. [max 15 cr.] ; A-F only; Every Fall & Spring)
BDA design core workshops develop your ability to critically approach a broad range of

conditions through the lens of architecture. This course focuses on the critical inquiry of latent or intangible attributes such as architecture's experiential, social, cultural, political, ethical, and poetic dimensions. Students in this course will engage architecture from the point of view of ephemeral conditions, theoretical understandings and operations, spatializing of data, and/or architectural inquiry applied to complex conditions or translations. Appropriate to an advanced design workshop, this course provides a structure for more guided, self-directed learning in service of iteratively advancing a design project through the lens of architecture.

ARCH 4283. Architecture Studio

03:Program. (; 6 cr. ; A-F only; Every Fall)
Students in this undergraduate studio practice an iterative, open-ended design process as it relates especially to the fundamental role of program as a technical and experiential aspect of architecture. Students learn to broadly explore and critically evaluate the needs and activities required and possible through design interventions in the built environment. Students develop their ability to think through multiple modes of media, including physical and digital drawings and models, with an emphasis on digital model-making.

ARCH 4284. Architecture Studio 04: Urban Design. (; 6 cr. ; A-F only; Every Spring)

Students in this undergraduate studio develop design sensibilities around the role of architecture in the urban environment. Students engage the complex realities and discourses that relate to urban design; develop their ability to work with multiple layers of consideration, related terminology and means of representation; develop their ability to work with ways of observing, interpreting, and synthesizing that are specific to urban conditions and processes; and further develop a sensibility for the broad possibilities of doing urban design.

ARCH 4321. Architecture in Watercolor. (3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Watercolor as tool in design process. Foundation principles, techniques, medium, tools, materials. Color relationships, mixing, composition, applications to design. prereq: 2301

ARCH 4341. Architecture Portfolio Design.

(3 cr. ; A-F only; Every Fall & Spring)
An introduction to design principles as they relate to the architecture portfolio. Students extend design thinking and visual communication skills in architecture into broader, life-long applications within the architecture profession by designing a portfolio that represents in a meaningful way a range of architecture and/or other coursework.

ARCH 4361. 3-D Computer Architectural Modeling and Design. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Use of 3D computer modeling for representation in abstract/realistic ways. Creation/arrangement of objects. Setting up lighting. Developing surface materials. Creating still renderings/animations. Ways

computer visualization can be used for design exploration, feedback during idea development, and realistic representation of designs. prereq: 3351, Arch major

ARCH 4410. Topics in Architectural History. (; 1-4 cr. [max 24 cr.]; A-F only; Periodic Fall & Spring)

Selected topics in Architectural History

ARCH 4421W. Architecture and Interpretation: The Cave and the Light. (WI;

3 cr. ; A-F or Audit; Periodic Spring)

Historical/hermeneutical investigation of iconography of grotto. Intertwined themes of descent into earth and ascent to light, from earliest strata of human culture to present day. prereq: [3411, 3412] or instr consent

ARCH 4424. Renaissance Architecture. (; 3 cr. ; A-F or Audit; Periodic Fall)

History of architecture and urban design in Italy, from 1400 to 1600. Emphasizes major figures (Brunelleschi, Alberti, Bramante, Palladio) and evolution of major cities (Rome, Florence, Venice). prereq: 3411 or instr consent

ARCH 4425W. Baroque Architecture. (WI; 3 cr. ; A-F or Audit; Periodic Fall)

Architecture and urban design in Italy, from 1600 to 1750. Emphasizes major figures (Bernini, Borromini, Cortona, Guarini) and evolution of major cities (Rome, Turin). prereq: 3411 or instr consent

ARCH 4431W. Eighteenth-Century Architecture and the Enlightenment. (WI; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Architecture, urban planning, and garden design in Europe and America, 1650 to 1850.

ARCH 4432. Modern Architecture. (; 3 cr. ; A-F or Audit; Fall Odd Year)

Architecture and urban design in Europe and the United States from early 19th century to World War II. prereq: 3412 or instr consent

ARCH 4434. Contemporary Architecture. (; 3 cr. ; A-F or Audit; Fall Even Year)

Developments, theories, movements, and trends in architecture and urban design from World War II to present. prereq: 3412 or instr consent

ARCH 4435. History of American Architecture. (3 cr. ; A-F or Audit; Periodic Fall)

Through lectures, readings, discussion, and research, we will analyze buildings and spaces?architect designed and ?vernacular?? in the context of social, political, economic, technological, and ecological change. As we address these issues, we will examine the ways design and daily life, performed locally, interacted with national and global systems and flows; and the role the built environment has played in advancing structures and concepts of class, gender, race, ethnicity, and power. Students will gain a broad familiarity with the history of American buildings and landscapes, develop critical frameworks for analysis, and enhance their understanding of the environments they interact with every day?as designers, citizens, consumers, and professionals.

ARCH 4451. Contemporary Architectural Thinking. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

This course examines major architectural theories and debates which have informed, catalyzed, or destabilized the discourse of architecture in the past seven decades. Focusing on selected key texts, ideologies, and figures, the course considers the changing role of architectural theory?as a vehicle of thought, a guide for practice, a catalyst for design, and a platform for debate. Topics shows formal or theoretical resonances in the problematics and poetics of architectural productions apropos of the technofantast neo-avant-gardism, the post-structural semiosis, the postmodern consumerism, conceptual architecture, pop architecture, hippie counterculture, etc.

ARCH 4511. Materials and Methods I. (; 3 cr. ; A-F or Audit; Every Fall)

Building materials, assemblies, construction operations shaping building designs. Material properties for designing/detailing building systems, elements, components. Applications. Modeling, hands-on building experiences. prereq: BS Arch major or BDA major jr/sr

ARCH 4521. Environmental Technology I. (; 3 cr. ; A-F or Audit; Every Fall)

Issues related to environmental quality/design. Climate response. Heating, cooling, lighting design. Indoor air quality. prereq: BS Arch major

ARCH 4561. Architecture and Ecology.

(ENV; 3 cr. ; A-F or Audit; Every Spring)
Introduction to theories/practices of ecological approaches to architectural design. Ecological context, implications/opportunities of architecture. Historical/theoretical framework for ecological design thinking. Issues studied at various scales: site/community, building, component.

ARCH 4571. Architectural Structures I. (; 3 cr. ; A-F or Audit; Every Fall)

Structural mechanics, graphic/quantitative analysis. Loads, materiality, strength, equilibrium, stability, serviceability, reliability. External/internal forces. Shear/moment diagrams/calculations. Structural behavior of building systems. Design using wood/steel members. prereq: BS Arch major

ARCH 4672. Historic Building Conservation. (; 3 cr. ; A-F or Audit; Every Fall)

Historic building materials, systems, methods of conservation. Structural systems, building repair/pathology. Introducing new environmental systems. Conserving interiors. Research on materials/techniques, using primary/secondary resources. Documenting with photography/measured drawings. prereq: 4671 or concurrent enrollment in 4671 or instr consent

ARCH 4674. World Heritage Conservation. (; 3 cr. ; A-F only; Periodic Fall)

Design/planning options for conservation of historic buildings/cultural heritage sites. Case studies link current practices, methods/solutions with expert preservationists, site conservationists, local communities in

development/design of conservation proposals.
prereq: Jr or sr or instr consent

ARCH 4701W. Introduction to Urban Form and Theory. (WI; 3 cr.; A-F only; Every Spring)

Urban form, related issues of design/theory/culture. Thematic history of cities. Lectures, discussions, assignments. prereq: [3411, 3412] or instr consent

ARCH 5001. Architectural Design Studies: Representation & Design. (1 cr.; A-F only; Every Summer)

During this six week, summer intensive course, students will focus on basic issues of visual thinking and conceptual representation in architecture. This sequence of complementary exercises introduces issues and ways of working intended to complement educational backgrounds from other, non-architectural, disciplines. To do that we have designed the exercises to juxtapose different ways of perceiving and understanding constructed environments. While exploring these architectural ways of thinking, the exercises will also help to acknowledge preconceptions that may hinder one's ability to explore conceptual decisions.

ARCH 5110. Architecture as Catalyst. (1 cr. [max 3 cr.]; S-N only; Every Spring)

Topical workshops on design methods, theories, or emerging practices. prereq: M.Arch

ARCH 5212. Undergraduate Architecture Studio 05: Advanced Design. (6 cr.; A-F only; Every Fall)

Advanced design studio to engage students in range of critical subjects to be determined by respective instructors. Intended to challenge students with independent/experimental approach to design that builds on prior knowledge, develop working methodologies/design ethics. prereq: C- or better in 3281, 3282, 4283, 4284

ARCH 5250. Advanced Topics in Design. (; 1-6 cr. [max 24 cr.]; A-F only; Every Fall, Spring & Summer)

Advanced topics in architectural design.

ARCH 5301. Conceptual Drawing. (; 3 cr.; A-F only; Every Spring)

Drawing as way of analyzing, exploring, and generating design ideas. Projection systems, diagramming, mapping. Different modes of visual perception. Nonverbal structures. prereq: MArch major or instr consent

ARCH 5313. Visual Communication Techniques in Architecture. (; 3 cr.; A-F or Audit; Every Fall & Spring)

Delineation, presentation, and design techniques. Various visual media and methods of investigation. prereq: M Arch major or instr consent

ARCH 5321. Architecture in Watercolor. (; 3 cr.; A-F or Audit; Every Fall, Spring & Summer)

Watercolor as a tool in design process. Foundation principles, techniques, medium, tools, materials. Color relationships, mixing, composition, applications to design. prereq: M Arch grad student or instr consent

ARCH 5350. Topics in Architectural Representation. (; 1-4 cr. [max 16 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Selected topics in architectural representation.

ARCH 5391. Design and Representation with BIM. (3 cr.; A-F or Audit; Every Fall)

In this course, students will be introduced to the concept of Building Information Modeling (BIM) through the use of Autodesk Revit, one, one of the BIM software tools most commonly used in architectural practice today. Students will engage in a series of design exercises that will require both learning and applying Revit in the context of real world architectural scenarios. In addition to learning Autodesk Revit as a design tool, we will examine the use of BIM technology within the architectural industry through a series of case study examples. Also, presenters will share firsthand accounts of CAD and BIM Software being implemented in architectural practice.

ARCH 5392. Facade Design & Construction. (3 cr.; A-F or Audit; Every Fall)

This course explains and explores contemporary facade design by introducing students to key technical principles that will empower them to be more thoughtful and informed facade designers. We will take an in-depth look at four fundamental facade materials ? stone, clay, metal, and glass ? followed by exploration and development in a 3D environment of the students' choice.

ARCH 5410. Topics in Architectural History. (; 3 cr. [max 12 cr.]; A-F or Audit; Every Fall & Spring)

Advanced study in architectural history. Readings, research, seminar reports.

ARCH 5411. Principles of Design Theory. (; 3 cr.; A-F or Audit; Every Spring)

Principles of design and their instrumentation. How and why architecture theory is generated. Types and significance of formal analysis. Theoretical positions and modes of criticism. prereq: M Arch major or instr consent

ARCH 5412. Architecture: A Global and Cultural History. (3 cr.; A-F only; Every Fall)

This course examines the history of architecture from a global perspective, addressing a variety of traditions and geographical locations, and following their interconnections and exchanges.

ARCH 5413. Modern and Contemporary Global Architecture. (3 cr.; A-F only; Every Spring)

This course is a global history of modern and contemporary architecture, tailored to graduate students in the M.Arch. program. The course examines the architectural production of the 20th and 21st centuries through the focused study of buildings, urban plans, unbuilt designs, manifestos, and other visual and textual documents. Students will be called upon to reflect on issues of design, planning, programming, technology, and representation, connecting this course to their architectural training and future professional practice. At the same time, the course will offer a critical and multidisciplinary perspective, presenting architecture in the context of

culture, politics, economics, ideology, and other historical developments. The premise of this course is the fundamental role of history for contemporary and future architectural practice. The course assignments, readings, and activities aim to spur a productive dialogue between critical reflection and historical knowledge with an eye towards creative action.

ARCH 5421. Architecture and Interpretation: The Cave and the Light. (; 3 cr.; A-F only; Periodic Spring)

Historical/hermeneutical investigation of iconography of grotto. Intertwined themes of descent into earth and ascent to light, from earliest strata of human culture to present day. prereq: [3411, 3412] or instr consent

ARCH 5423. Gothic Architecture. (; 3 cr.; A-F or Audit; Spring Odd Year)

History of architecture and urban design in Western Europe, from 1150 to 1400. prereq: MS Arch or M Arch major or instr consent

ARCH 5424. Renaissance Architecture. (3 cr.; A-F or Audit; Periodic Fall & Spring)

History of architecture and urban design in Italy, from 1400 to 1600. Emphasizes major figures (Brunelleschi, Alberti, Bramante, Palladio) and evolution of major cities (Rome, Florence, Venice). prereq: MS Arch or M Arch major or instr consent

ARCH 5425. Baroque Architecture. (; 3 cr.; A-F or Audit; Fall Odd Year)

Architecture and urban design in Italy, from 1600 to 1750. Emphasizes major figures (Bernini, Borromini, Cortona, Guarini) and evolution of major cities (Rome, Turin). prereq: MS Arch or M Arch major or instr consent

ARCH 5431. Eighteenth-Century Architecture and the Enlightenment. (3 cr.; A-F or Audit; Periodic Fall & Spring)

Architecture, urban planning, and garden design in Europe and America from 1650 to 1850.

ARCH 5432. Modern Architecture. (; 3 cr.; A-F or Audit; Periodic Fall)

Architecture and urban design in Europe and the United States, from early 19th century to World War II. prereq: MS Arch or M Arch major or instr consent

ARCH 5434. Contemporary Architecture. (; 3 cr.; A-F or Audit; Every Fall)

Developments, theories, movements, and trends in architecture and urban design, from World War II to present. prereq: MS Arch or M Arch major or instr consent

ARCH 5435. History of American Architecture. (3 cr.; A-F or Audit; Periodic Fall)

Through lectures, readings, discussion, and research, we will analyze buildings and spaces?architect designed and ?vernacular?? in the context of social, political, economic, technological, and ecological change. As we address these issues, we will examine the ways design and daily life, performed locally, interacted with national and global systems and flows; and the role the built environment has played in advancing structures and concepts of class, gender, race, ethnicity, and

power. Students will gain a broad familiarity with the history of American buildings and landscapes, develop critical frameworks for analysis, and enhance their understanding of the environments they interact with every day?as designers, citizens, consumers, and professionals.

ARCH 5441. Minnesota: Architecture and Landscapes. (; 3 cr. ; A-F only; Every Spring)
History of major architectural monuments, urban phenomena, and landscape forms of Minnesota. Interrelationships between architecture, geography, and people. prereq: [3411, 3412] recommended

ARCH 5450. Topics in Architectural Theory. (; 1-3 cr. [max 9 cr.] ; A-F or Audit; Periodic Fall & Spring)
Selected topics in architectural theory and criticism.

ARCH 5451. Architecture: Defining the Discipline. (; 4 cr. ; A-F only; Periodic Fall & Spring)
Paradigms through which architecture has defined itself. Implications for its practice, product, and architecture in general. Lecture, discussion, design exercises. prereq: M Arch major

ARCH 5452. Architecture: Design, Form, Order, and Meaning. (; 4 cr. ; A-F or Audit; Every Fall & Spring)
Architecture and the issue of meaning. Explores fundamental and constituent elements of architectural form and order; their inherent tectonic, phenomenal, experiential, and symbolic characteristics; their potential and implications for the creation and structure of meaningful human places. prereq: M Arch major or instr consent

ARCH 5516. Technology Two: Luminous and Thermal Design. (; 6 cr. ; A-F only; Every Spring)
Concepts/principles of daylighting, thermal, energy, and systems integration. Architectural/technological implications of lighting and thermal design. Ecological thinking in support of sustainable design decision making. prereq: M Arch

ARCH 5518. Environmental Technology: Integrative Ecological Design for Responsive Architecture. (3 cr. ; A-F only; Every Fall)
This course introduces the ecological design concepts and principles of daylighting, thermal, energy, and building systems integration. The course will provide students with an understanding of the primary architectural and technological implications of lighting and thermal to inform design and ecological thinking and to support sustainable design decision-making.

ARCH 5521. Material Investigation: Concrete. (; 4 cr. ; A-F only; Every Spring)
Design projects identify common problems/improvements, investigate alternatives, and develop solutions where concrete is primary building material. prereq: MArch or MS

ARCH 5527. Material Investigations: Stone and Water. (; 4 cr. ; A-F only; Every Spring)

Design projects identify common problems/improvements, investigate alternatives, and develop solutions where wood is primary building material. prereq: M.Arch or M.S.

ARCH 5539. Daylighting and Architecture Design. (; 3 cr. [max 4 cr.] ; A-F only; Every Spring)

This 15-week seminar will explore approaches to daylighting and architectural design that weave together diverse layers of ecological, physiological, and psychological issues to enhance our understanding and relationship of light in place and time. We will explore how the formal, aesthetic, atmospheric, and experiential aspects of daylighting also support and foster more sustainable and regenerative approaches to architectural design. The goal of the seminar is to familiarize students with daylighting from an ecological perspective in order to use both creatively in the design process.

ARCH 5550. Topics in Technology. (; 1-4 cr. [max 12 cr.] ; A-F only; Every Fall, Spring & Summer)
Selected topics in architecture technology, e.g., construction, environmental management, energy performance, lighting, materials.

ARCH 5561. Tech 1, Structures for Building. (3 cr. ; A-F or Audit; Every Fall)
Role of structure in architectural design. Common systems found throughout history. Review systems to identify parameters that influence structural decisions. prereq: M Arch major or instr consent

ARCH 5562. Tech 2, Intro to Building Technology. (3 cr. ; A-F only; Every Fall)
Origin/development of architectural idea. Designs as direct means of representing our underlying intentions. prereq: M.Arch or instr consent

ARCH 5563. Tech 3: Advanced Building Technology Integrated Building Systems. (3 cr. ; A-F only; Every Fall)
Logic of integrating building systems. Improving understanding of/thinking critically about integration principles, theories, practice, application. Identifying/working through problems the project architect must address. prereq: M.Arch or instr consent

ARCH 5564. Tech 4: Building Structural Systems. (3 cr. ; A-F only; Every Fall)
Main concepts related to building structures. Basic knowledge of flow of forces. Review of rules for sizing structures. Calculations to understand systems behavior. Knowledge/tools to design buildings considering structure within design process. prereq: M.Arch or instr consent

ARCH 5609. Development and Implementation of Research. (3 cr. ; A-F only; Every Fall)
Bridge gaps among architectural research, design, practice. Forum for students to independently develop research topics/implement research methods related to architectural scholarship/practice, aided by classmates, instructor, guest lecturers. prereq: instr consent

ARCH 5611. Design in the Digital Age. (; 3 cr. ; A-F or Audit; Every Spring)

Introduction to design, design process. Developing/understanding ways of seeing, thinking, and acting as a designer. Changes in design being wrought by digital technology. Team design project. prereq: Grad student or upper level undergrad student

ARCH 5621. Professional Practice in Architecture. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Legal, ethical, business, and practical requirements of architectural practice. Contemporary and historical models of contract formation, business principles, accounting, project management, design services, and marketing. prereq: M Arch major or instr consent

ARCH 5630. Practicum: Advanced Issues in Practice. (3 cr. [max 6 cr.] ; Student Option No Audit; Every Fall & Spring)
Advanced architectural practice topics not normally covered in curricula are examined/evaluated as foundation for licensure/ARE 4.0 testing processes. prereq: M.S. Architecture or M.Arch

ARCH 5650. Topics in Architectural Practice. (; 1-4 cr. [max 16 cr.] ; Student Option; Every Fall, Spring & Summer)
Topics in architectural practice, methods of design production, marketing, operation, and relationships among clients, architecture, and society. prereq: 5621, Arch major or 5621, M Arch major or instr consent

ARCH 5651. Building Stories. (; 3 cr. [max 12 cr.] ; A-F only; Every Spring)
Professional practice education by means of case study analysis.

ARCH 5670. Topics in Historic Preservation. (; 1-3 cr. [max 12 cr.] ; Student Option; Periodic Fall)
Selected topics in the theory, philosophy, research, and methods of architectural historic preservation.

ARCH 5671. Historic Preservation. (3 cr. ; Student Option; Every Fall)
Philosophy, theory, origins of historic preservation. Historic archaeology/research, descriptive analysis, documentation of historic buildings. Government's role in historic preservation, preservation standards/guidelines, preservation/building codes, preservation advocacy.

ARCH 5672. Historic Building Conservation. (; 3 cr. ; Student Option; Every Spring)
Historic building materials, systems, and methods of conservation. Discussion of structural systems, building repair and pathology, introduction of new environmental systems in historic buildings, and conservation of historic interiors. Research on historic building materials and techniques using primary and secondary resources and on documentation of a specific historic site through large-format photography and measured drawings. prereq: 3412, 5671 or instr consent

ARCH 5673. Historic Property Research and Documentation. (3 cr. ; Student Option; Every Spring)

Philosophy, theory, methods of historic building research. Descriptive analysis of buildings, building documentation, historical archaeology, architectural taxonomy. prereq: [3412, 3641, 4671, 5671, 4672 or 5672] or instr consent

ARCH 5674. World Heritage Conservation. (; 3 cr. ; A-F only; Periodic Fall)

Investigations of World Heritage conservation and nomination for the preservation of historic buildings and sites and their management for public use. Case studies link current practices, methods, and solutions with expert preservationists, site conservationists and local communities in the development and design of preservation strategies. prereq: MS in Arch-HP concentration or M.ARCH or MLA or instr consent

ARCH 5676. Economics of Heritage

Preservation. (; 3 cr. ; A-F only; Periodic Fall) Theory and practice of heritage preservation-based community redevelopment/economics. Financial aspects of real estate development. Case studies of recent historic rehabilitation projects throughout Minnesota. Financial feasibility and compliance with design guidelines/regulatory aspects. Financial incentives in other states/how new policies in Minnesota might positively influence preservation activity.

ARCH 5686. Research Practices Final Project: Research into Practice. (4 cr. ; A-F only; Every Fall)

The course is the first of a three-??course final project sequence required as the capstone experience for MS-??RP students. The course provides a forum for understanding the current state of research in the design and building industry and its trajectories and trends. Student projects will apply this knowledge to a regionally based commercial or non-????profit practices in the building industry, assessing the firm??s research capacity, mapping its potential in context of innovative precedents and suggesting future growth. prereq: MS-RP student

ARCH 5687. Research Practices Final Project: Practice into Research. (4 cr. ; S-N only; Every Fall)

Course is the second of a three-??course final project sequence required as the capstone experience for MS-??RP students. Building upon the previous semester understanding the state of research in the building industry, this course develops a single case study project in comparative context of contemporary practice. The work of individual students adds to a collective knowledge base on project best practices and development of industry-???? wide metrics and standards. Course meets concurrently with ARCH 5688 Representation of Case Studies. prereq: Arch 5686

ARCH 5688. Research Practices Final Project: Representation of Case Studies. (1 cr. ; A-F only; Every Fall)

The course is the third of a three-??course final project sequence required as the capstone experience for MS-??RP students. This course meets concurrently to ARCH 5687 Practice into Research. Information graphics are essential to

understanding and explaining critical issues in a case study. The format of information can be designed to emphasize comparisons between projects or to highlight unique characteristics of individual projects. This course will explore a variety of strategies commonly used in case study documentation and ask the student to apply one method to present the case developed in ARCH 5687. prereq: Arch 5686

ARCH 5689. Advanced Inclusive Professional Practice. (3 cr. ; A-F only; Every Fall)

Advanced inclusive professional practice class focuses on new and emerging issues in architectural practice including: Lean design, research practices, collaborative intercultural competence. Student projects include creation of interactive material and diagrams.

ARCH 5711. Theory and Principles of Urban Design. (; 3 cr. ; A-F or Audit; Every Spring) Seminar. Debate on dominant theories/paradigms informing city design from renaissance to 21th century. Critical issues central to current debates. prereq: M Arch major or LA grad major or grad student or instr consent

ARCH 5721. Case Studies in Urban Design. (; 3 cr. ; A-F or Audit; Every Spring)

Reading seminar. Evolution of contemporary city. Dynamics that created contemporary urban spatial patterns. Planning/design theories that have guided public interventions in built environment. Thematic texts, classroom discussions. prereq: Grad student or instr consent

ARCH 5731. Territorial City. (; 3 cr. ; A-F only; Every Fall)

Seminar. Students research, define, and test conditions within which the territory and contemporary city coexist. Site for research is Twin Cities metropolitan area. Readings, discussions, field trips, collaborative development of urban proposals.

ARCH 5750. Topics in Urban Design. (; 1-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer) Special topics in theory/practice of urban design.

ARCH 5756. Public Interest Design: Principles and Practices. (3 cr. ; A-F or Audit; Every Spring)

As the allied fields of design evolve in response to an increasing number of global challenges?inequity, social and political turmoil, disruptive climate-change, accelerating population growth?the question of how designers will address the needs of the most vulnerable among us is fundamental. Public Interest Design (PID), an emerging area of specialization within the design professions, specifically considers the concerns of the vast majority of the world's inhabitants who are historically under-resourced and ill-equipped to respond to the "Grand Challenges" facing humankind. With this mind, this introductory survey course has two aims: First, to critically examine the range of environmental, economic, social, and ethical issues that underpins

work with under-resourced domestic and international communities?including how these concerns can be collectively addressed to become more resilient; and second, to investigate organizational models that seek to broaden the traditional scope of the allied design fields as disciplines and professions by advocating a humanitarian basis for practice.

ARCH 5993. Directed Study. (; 1-4 cr. [max 8 cr.] ; A-F or Audit; Every Fall & Spring)

Guided individual reading or study. prereq: instr consent

Art (ARTS)

ARTS 1001. Introduction to Contemporary Art and Theory. (DSJ,AH; 3 cr. ; Student Option; Every Fall & Spring)

Introductory overview of contemporary artistic practices/theoretical foundations. Familiarization with contemporary critical/creative practices. Approaches to contemporary art through lens of cultural diversity/social justice.

ARTS 1001H. Honors Introduction to Contemporary Art and Theory. (AH,DSJ; 3 cr. ; A-F or Audit; Every Fall & Spring)

Introductory overview of contemporary artistic practices/theoretical foundations. Familiarization with contemporary critical/creative practices. Approaches to contemporary art through lens of cultural diversity/social justice. Prereq: Honors student

ARTS 1002. Art and Life: Thinking About Ethics Through Art. (AH,CIV; 3 cr. ; Student Option; Every Fall & Spring)

Case examples from visual arts. Ethical theories. Philosophical take on relationship between art, life, ethics.

ARTS 1101. Introduction to Drawing. (AH; 4 cr. ; Student Option; Every Fall, Spring & Summer)

This is an introductory studio course that exposes students to the ideas, methods, and materials of drawing. Fundamental elements such as line, value, texture, shape and space are explored in works using media such as graphite, charcoal and ink on a variety of surfaces. Found and other source materials are utilized in collage and mixed-media works. In hands-on exercises and projects, students will create original work based on observation and imagination. This course will also introduce techniques and methods to realize and evaluate visual ideas. Technical demonstrations, lectures and exhibition visits will provide starting points for further explorations. Individual and group critiques will help students to address technical concerns and contextualize their work within the rich history of drawing. Studio work outside of class time is expected.

ARTS 1102. Introduction to Painting. (AH; 4 cr. ; Student Option; Every Fall, Spring & Summer)

This is an introductory studio course that will focus on the fundamentals of painting (oil and/or acrylic). We will explore a variety of media, techniques, and subject matter.

Our assignments will emphasize developing the skills and understanding of basic painting fundamentals, using traditional and experimental approaches to painting, such as: color mixing and relationships, tone, mark-making, texture, abstraction, space, and visual language. There will be demonstrations, practice, field trip(s) and class discussion. We will develop the verbal and analytical skills necessary to critically examine students' work. We will look at historical and contemporary painters. This course provides an introduction the creative process through hands-on investigation, observation of the immediate environment, and the exploring the artist's imagination. Studio work outside of class is expected.

ARTS 1103. Introduction to Printmaking: Relief, Screen and Digital Processes. (AH; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Students will be introduced to techniques of relief printing using oil based inks, screenprinting using water based inks, and digital printmaking. Relief projects (linoleum and woodcut) emphasize the exploration of mark making, printing techniques and color layering. Screen print and digital applications will explore layering, color and image making strategies. Students will learn digital strategies for creating images in screen printing, working from both photo and drawn sources. The course includes the historical context and recent innovations for each process in order to develop contemporary applications for these each method. Students will develop meaningful content in conjunction with the acquisition of technical skills. Individual and group critiques will help students to address technical concerns and contextualize their work within the rich history of printmaking. Studio work outside of scheduled class time is expected.

ARTS 1104. Introduction to Drawing and Printmaking. (4 cr. ; Student Option; Every Fall & Spring)

This course exposes students to the ideas, methods, and materials of drawing and printmaking. Fundamental elements such as line, value, texture, shape and space are explored in works using media such as graphite, charcoal and ink on a variety of surfaces. Students will be introduced to printmaking methods through monoprinting and other immediate techniques. In hands-on exercises and projects, students will create original work based on observation and imagination. Slide lectures and critiques will help students to address technical concerns and contextualize their work within the rich history of these two graphic media. Studio work outside of scheduled class time is expected.

ARTS 1107. Introduction to Digital Drawing. (AH; 4 cr. ; Student Option; Every Fall & Spring)

This course introduces students to digital drawing as a means of expression. Students will experiment with methods of making marks on a surface or virtual surface, and the materiality and process of making those marks.

In this introductory drawing course, students will explore the realm of possibilities of digital technology as an essential component in a contemporary drawing practice. Elements such as line, value, texture, shape and space are explored in works using digital technology. Students will learn the basics of drawing using Wacom Bamboo, Cintiq tablets, and Adobe software applications. This class provides students with hands on experience with technological aids in art making such as a laser cutter, digital router, 3d printers, digital embroidery machine, vinyl cutter, and sonic welder. Students will also gain experience using large format Epson printers with a variety of materials. This class will use drawing to explore conceptual development and critical thinking. Individual and collaborative projects are aimed to provide students with technical ability while building concept and content in the work. Individual and group critiques will help students to address technical concerns and contextualize their work within the rich history of drawing. Studio work outside of scheduled class time is expected.

ARTS 1201. Art + Change: The Transformational Power of Art. (4 cr. ; Student Option; Every Fall & Spring)

Art+ Change: The Transformational Power of Art is an introduction to the complex and varied artist-centered approaches to the social, ethical, political, and environmental challenges of our times. As an emerging form of art, contemporary socially engaged art is not a monolithic practice and goals amongst practitioners exhibit a wide range of approaches. Artists may work towards changing dominant systems in order to foster more positive outcomes; other artists strive to acknowledge and call out complexity and contradictions of those same systems. While artists working in this field, commonly called social practice work, investigate a broad set of topics and media approaches, with varying motivations and intentions, what they share is a foregrounding of the subject and content that informs the work. This course examines the way engaged social art practice can lead to sustained connections and shared visions within communities and institutions; can create a more just and equitable culture; and can address many pressing environmental and social issues of our day. The class investigates the role of the art as a catalyst for social change. We will approach this through questions and dialogue, acknowledging that many of the tensions and contradictions cannot be resolved but are still worth the effort to recognize and address. This course combines a research-based learning environment with a strong studio- based component. Through readings, presentations, field trips, experiential and sensory opportunities, case studies, video presentations, and class project initiatives, we will explore the spectrum of contemporary strategies to a socially engaged approach to art. Students will create hands-on and a culminating collaborative creative project and will learn to identify themes, develop ideas individually, and collectively and execute these ideas through multiple ways of knowing and making of art projects. Through a variety of

media, students will be encouraged to explore issues and address themes that they are passionate about. Students will be assessed through their participation in discussion, through their writing, and the quality of their creative projects

ARTS 1203. Art + The Mississippi River. (4 cr. ; Student Option; Every Fall & Spring)

As the Mississippi River flows through campus, it shapes the site of a seventy-two-mile urban national park in the heart of Dakota homeland. Using the river as a basis for artistic inquiry, research, and collaborative practices, students engage in interdisciplinary creative explorations while learning about water ecologies and politics: mapping, book-making, digital photography, sound portraits, aerial photography, underwater photography, and performance. The Mississippi River, increasingly identified with the University of Minnesota, sparks our collective imagination and connects us through time, water, land, and culture. In this course we will focus on learning about the Mississippi, and ourselves, by cultivating a personal relationship with the river and experimenting with art to convey this. We will examine why place-based learning, systems thinking, and engaged individual and collective creative engagement can lead to out-of-the-box learning, art-making, and innovative solutions to challenging social and ecological problems. Students are not expected to have previous art experience but will be introduced to a number of media approaches. This class provides multiple opportunities to learn about how art intersects with other disciplines, including physics, geology, history, anthropology. Our process will value multiple ways of knowing, generate varied perspectives, emphasize peer-to-peer learning, and introduce a range of creative media, materials, and technologies. Class activities will include traveling on a river boat, launching aerial balloon cameras, visiting cultural, scientific, and historic places, and engaging in conversations with guest artists, architects, composers, scientists, and culture keepers. Many students at the University of Minnesota are looking for ways to be creative in how they connect to issues that they care about. This course introduces approaches that will assist students in learning how to initiate and create these types of art projects and practices.

ARTS 1701. Introduction to Photography.

(AH; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Presents conceptual, technical, historical aspects of photography within fine arts context. Emphasis on creative process through hands-on experience in use of camera, digital, black/white, darkroom processes.

ARTS 1704. Introduction to Moving Images.

(AH; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Introduction to Moving Images provides students with the fundamentals of moving image production including camera work, lighting, and sound. Students will explore audio/visual aesthetics and fundamental elements of narrative, experimental, and

animated moving images. Students create several short film projects, both individually and in groups and develop skills in critical evaluation through critique sessions that investigate the aesthetic, technical and cultural interpretation of moving images. This course is the prerequisite for intermediate level Department of Art courses in Moving Images including Narrative Digital Filmmaking, Experimental Film and Video, Animation and Super 8 and 16 mm Filmmaking.

ARTS 1801. Introduction to Ceramics: Wheel-Throwing and Hand-Building Techniques. (AH; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Interested in working with a material and practice that dates back 20,000 years? Want direct engagement with creative processes and materials that correlate the hand and the eye with the mind? The course introduces an exciting hands-on experience of ceramic three-dimensional object making. The course introduces general aspects of ceramic practice in art form, based on wheel-throwing and hand-building techniques, using electric and gas firing methods. It also deals with the basic visual concepts of three-dimensional form whether utilitarian object or non-utilitarian object. The assignments in this course introduce various fundamental elements, technically and artistically, of artistic ceramic production. Students become familiar with the processes and techniques of working with and firing clay, and also the artistic formal languages and experience of externalizing inner thought. Critiques will be used as a tool for developing critical thinking and project development. Finished pieces will be produced that reflect the full ceramic production experience.

ARTS 1802. Introduction to Sculpture: Understanding the Fundamentals of the Practice of Sculpture. (AH; 4 cr. ; Student Option; Every Fall, Spring & Summer)

This course will help you gain an understanding of the fundamentals of sculpture through a studio practice with a variety of materials, concepts, techniques, and styles. The course is an introduction to the inherent nature of materials, the development of form in real space, and the shops and tools with which to create sculptural forms in our state-of-the-art facilities. We will focus on the foundations of sculpture through hands-on demonstrations of basic sculptural processes: for example, carving, modeling, assembling, and casting. You will also be exposed to, and experiment with, the diverse range of approaches, work methods, and topics that have occupied sculptors both past and present. Students learn the proper use and function of the wood and metal shops, as well as a variety of other tools and techniques, including new technologies such as the Laser Cutter and VR (Virtual Reality), along with more traditional techniques such as metal casting, paper folding, clay, and plaster. You will discover your individual creative process and aid the sculptural articulation of your conceptual issues through discussion and critique of your class accomplishments. Critiques will be used as a

tool for developing critical thinking and project development.

ARTS 1803. Introduction to Sculpture and Ceramics. (4 cr. ; Student Option; Every Fall & Spring)

This course introduces the fundamentals of sculpture and ceramics through a studio practice with a variety of materials, methods, and ideas. Through a studio practice, students will explore hands on experience to find a way to engage with creative production process. The finished pieces will be discussed through various points of views. The instruction in this class will be given through: 1. Demonstrations of techniques 2. Slide presentations and lectures 3. Individual assistance and instruction 4. Individual and group critiques / discussion and evaluation

ARTS 1914. Say Something, Make Something: Art and Language. (; 3 cr. ; A-F only; Every Fall)

Say Something, Make Something: Art and Language focuses on the ways contemporary artists use, re-use, and re-interpret language in their artworks. By utilizing the written word, artists expand their practice from traditional art materials to engage with the interdisciplinary field of language. Utilizing their interests and abilities in a variety of subjects and media, students in this course create works that are personal, engage audiences, and comment on the world around us. Classes include discussions of readings, writing warm-ups, demonstrations of technical skills, visiting artists, field trips, and more. Students will undertake a number of small writing assignments, complete three main art projects, attend art-related field trips, and participate in group discussion. Students learn and utilize a variety of art techniques in this course, including writing, photography, bookmaking, and printmaking.

ARTS 3110. Intermediate Drawing. (; 4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

An intermediate level course that expands upon skills learned in beginning drawing. Specialized drawing techniques in dry and wet media will be introduced as well as contemporary, experimental, and conceptual approaches and issues. prereq: 1101 or 1104

ARTS 3120. Intermediate Painting. (; 4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

This course explores traditional and nontraditional concepts and techniques of painting and the development of artistic voice. The goal of this course is to provide students with a working knowledge of techniques, materials, processes and aesthetic sensibilities related to contemporary painting. Exploration of individual approach and self-directed concepts are stressed. Students can choose to work with acrylics and/or oils. Studio work outside of scheduled class time is expected. prereq: 1102

ARTS 3130. Intermediate Printmaking: Traditional and Contemporary Approaches. (; 4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

The print as vehicle for conceptual/personal expression. Traditional printmaking techniques, evolving contemporary processes for realizing visual concepts. Historical/cultural development of multiple/matrix as means of communication. prereq: 1103 or 1104

ARTS 3140. Figure Drawing. (4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

This course is designed to develop ability in drawing through observation and interpretation of the human form. Some in class work and assignments will be structured with strict limitations, including choices of media. Students will explore contemporary viewpoints and modern aspects of the figure through slide lectures and class discussions. Prereq: 1101 or 1104

ARTS 3150. Dimensional Painting. (; 4 cr. [max 12 cr.] ; Student Option; Every Spring)

This course explores the hybridization of painting, sculpture, and installation. The illusionary space and techniques of two dimensional media is combined and co-exists with three dimensional sculptural approaches. Students will discover their own solutions to painting in space. Formats for projects include wall constructions, wall paintings, object-based paintings, found objects, assemblage, reliefs, floor works, and installations. The students will also explore a vast number of materials, and the technical problems and solutions that are possible. Historical and contemporary artists and concepts that are relevant to dimensional painting will also be introduced. Studio work outside of class is expected. prereq: 1102

ARTS 3170. Intermediate Digital Drawing. (; 4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Possibilities of digital technology as tool and component in contemporary, creative drawing practice. prereq: 1107

ARTS 3180. Zines, Comics, and Books. (4 cr. [max 12 cr.] ; A-F or Audit; Every Spring)

This class introduces students to the culture and creation of artists books, comics, and zines. Students will generate one example of each format, while being exposed to a wide range of works and relevant processes. We will view and read examples across cultures and develop an understanding of the history and contemporary context for making artists books. We will look at zines that embrace punk culture, gay culture, counter culture, and feminist movements. We will read graphic novels and connect with the local comics scene. We will visit archives of artists books in the Twin Cities, starting with the impressive collection at the University of Minnesota. Students will learn basic letterpress printing and screen printing as well as other generative techniques for self-publishing, from the copy machine to internet publishing. Students will also be introduced to binding techniques for the artists' book section of this class.

ARTS 3190. Mixed Media on Paper. (; 4 cr. [max 12 cr.] ; Student Option; Every Spring)

Discover the artistic possibilities of wet and dry mixed media on paper, including water-based painting, wet and dry drawing, and collage. Learn strategies for image-making, techniques

for pairing different media, and color theory through both representational and abstract imagery. Explore various subject matter, including images from the imagination, direct observation of the immediate environment, and reference images from a variety of sources. Projects encourage self-directed content and the development of individuals' artistic voice. Students are introduced to contemporary and historical painting, drawing, and mixed media practices as context for art-making. We will develop the verbal and analytical skills necessary to critically examine students' work. This course provides a focus on the creative process through hands-on investigation. Class time includes student work time, introduction to projects, demonstrations, individual feedback from the instructor, and class critiques. Studio work outside of class is required.

ARTS 3206W. Art + Ecology. (WI; 4 cr. ; A-F or Audit; Every Fall)

Art + Ecology explores the history, theory, and contemporary practice of artists engaged with the ecological issues of our time. This seminar offers an introduction to the dynamic and emerging field of Environmental Art, focusing on the ways in which artists use creativity to work across disciplines to address ecological concerns. This course investigates the role contemporary artists play as catalysts in relation to a range of concerns, including environmental justice, mass extinction, climate change, and treatment of "waste" as well as issues of the quality of the air, water, soil, and habitat. This seminar also will introduce the notion of artists as agents of change who build communities of ecologically aware practices around interrelated environmental and social issues. Students will be encouraged to see how their creativity and imagination can contribute to finding solutions to pressing environmental problems.

ARTS 3230. Sound Art. (; 4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

This Sound Art course is designed to cultivate your curiosity about the sonic as a contemporary art modality. It provides an introduction to diverse practices, techniques, and ways of thinking about sound while encouraging you to develop and expand upon your creative work. Students produce creative projects using sound as primary material. History of experimental sound art from early 20th century to present. Critiques, readings, writing, public presentations will be included weekly.

ARTS 3250. Art + Performance. (; 4 cr. [max 12 cr.] ; Student Option; Periodic Fall & Spring)

Studio practice, investigation of forms of expression involving narrative, performance, installation. Hybrid art forms introduced by Dada movement in 1920's, continued by Fluxus movement in 1950's, to contemporary performance/installation artists.

ARTS 3401V. Honors: Critical Theories and Their Construction From a Studio Perspective. (AH,WI,CIV; 3 cr. ; A-F or Audit; Every Fall)

This honors course examines primary critical theories that shape analysis of works of art.

Evaluation of works from artist's perspective. Theory as organizational structure from which to understand contemporary works. prereq: [junior] or instr consent

ARTS 3401W. Critical Theories and Their Construction From a Studio Perspective. (WI,CIV,AH; 3 cr. ; Student Option; Every Fall & Spring)

Primary critical theories that shape analysis of works of art. Evaluation of works from artist's perspective. Theory as organizational structure from which to understand contemporary works. prereq: instr consent

ARTS 3404W. Professional Practices in the Arts. (WI; 3 cr. ; A-F only; Periodic Fall & Spring)

Professional Practices in the Arts is a course that examines practical applications of presentation, documentation, business skills, and career planning specific to studio art. It provides a foundation of practical information to assist undergraduate and graduate studio majors in building a successful career. The course consists of lectures, discussions, readings, presentations, and demonstrations. The class will spend a significant amount of time discussing different types of art venues and the appropriate contexts for different types of work. Additionally, we will assess and interpret individual students' work as a means to generating appropriate questions and insights for artists statements. prereq: Grad student or [Art BFA student or Art Major, jr or sr]

ARTS 3415H. Honors Exhibition. (; 2 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Advanced problems in studio and research, leading to a magna or summa exhibition. prereq: [Magna or summa honors candidate], instr consent, dept consent

ARTS 3416H. Honors Thesis: Supporting Paper. (; 1 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Summa thesis paper written in support of honors exhibition or in relation to candidate's visual/conceptual interests. prereq: Summa level honors candidate, instr consent

ARTS 3481. Curatorial Practice Field Experience. (; 3 cr. ; A-F only; Every Fall & Spring)

This course looks at current critical questions of curating and exhibition making. We explore the process of developing an exhibition, building working relationships with artists and understanding how to effectively communicate ideas to turn a concept into a project. The course assumes that curating has also evolved from a practice associated with a museum art expert to something that is increasingly framed as a creative marketable skill related to cultural production. Discussions, readings, and coursework include consideration of gallery and public space and audience experience. Curatorial trends will be explored via site visits to established and alternative exhibit spaces. Students are introduced to a wide variety of artists and how their work is contextualized by the exhibition format. Site visits to exhibition spaces and conversations

with professional curators reinforce the course material. Through practice and application, students examine the evolving definitions and responsibilities of a curator, and a variety of issues related to the development of a coherent and relevant exhibition. Students participate in hands-on, curatorial workshops, and curate a professional, public presentation using a nontraditional space, gallery space, digital space or other local venue.

ARTS 3490. Workshop in Art. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Selected topics and intensive studio activity; topics vary yearly.

ARTS 3499. Internship at Katherine E. Nash Gallery. (3 cr. ; A-F only; Every Fall, Spring & Summer)

Hands-on experience in day-to-day operation/mission of Department of Art's professional gallery. prereq: 1001 or ARTH 1XXX or instr consent

ARTS 3710. Black and White Darkroom Photography. (; 4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Classical photographic practice, concentrating on camera and darkroom controls. Historical overview of the medium. Conceptual and contemporary approaches to traditional themes. prereq: 1701

ARTS 3720. The Extended Image. (; 4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

This course explores the use of photography and moving image in expanded interdisciplinary practice. Modes could include installation, performance, social engagement, online and interactive formats, incorporating sound, text and traditional 2D and 3D media. prereq: 1701 or 1704

ARTS 3730. Intermediate Digital Photography. (4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Photographic digital imaging in fine arts. Manipulation, computer applications. Editing in photo imaging software. prereq: 1701

ARTS 3740. Lighting and the Constructed Image. (4 cr. [max 12 cr.] ; Student Option; Every Spring)

Take charge of your photographs and moving images. This class is about making pictures vs. taking pictures. Students will learn to use flash and continuous light sources to shape the content and feeling of your work, to create worlds, characters, and stories. Some projects will be specific to still photography, but you will have the option of working with moving image in others. You will learn principles of lighting that apply to all media. In addition to lighting, the use of props, sets, costumes and digital manipulation will be explored in a series of student projects. We will learn to control and shape light in the studio and on location, in table-top setups and large-scale outdoor productions. We will look at contemporary and historic artists in all genres who are masters of the constructed image. There will be a lot of hands-on skills taught in this class, but always

in the service of exploring and expressing your personal vision. prereq: ARTS 1701 Introduction to Photography

ARTS 3750. Narrative Digital Filmmaking. (4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Narrative forms of video. Documentary, live action, memoir, experimental forms. Digital video production and editing. Personal aesthetic and conceptual directions. Theory, critical readings about historical and contemporary works in video. prereq: [1704 or instr consent]

ARTS 3760. Experimental Film and Video. (4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Experimental approaches in producing digital video within a contemporary art context. Using digital media technologies in installation, performance, and interactive video art. Emphasizes expanding personal artistic development. Theoretical issues, critical/historical readings/writings in media arts. prereq: ARTS 1704

ARTS 3770. Animation. (; 4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Creating ideas visually with 2- and 3-dimensional animation technologies. Vector- and layer-based raster animation. Modeling objects and spaces, creating textures, lighting, movement, sound track. prereq: ARTS 1704

ARTS 3780. Super 8 and 16 MM Filmmaking. (4 cr. [max 8 cr.] ; A-F or Audit; Every Fall & Spring)

This course will explore the medium of Super 8 filmmaking in the tradition of the experimental and avant ?garde. We will focus on the physicality of the film stock, the basic mechanics of the camera and projector, and how these elements translate into a visual language and aesthetic. Students will learn how to shoot, process, edit, splice, project, and transfer their own super 8 films. This course will balance the technical, conceptual, and historical aspects of small? gauge or amateur analog filmmaking, and address what it means to work in this medium at the beginning of the 21st century. The course will include presentations, readings, and discussions on contemporary and historical artists in the medium, as well as outside film screenings and lectures. Classroom visits by artists will also provide an informed context for the primary course objective.

ARTS 3790. Phone It In: Mobile Imaging and the Connected World. (; 4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

The making and sharing of still and moving images has fundamentally changed since the advent of the smartphone. And these images help change the world. The 10-minute video of the murder of George Floyd by Minneapolis police on May 24, 2020 was shot by a high school student, who said ?The world needed to see what I was seeing.? Social distancing in response to the COVID-19 pandemic also highlights the impact of this technology. While our physical mobility may be limited, our mobile devices not only augment our

experience of the world, in many ways they replace it. This is a hybrid art class involving both making and sharing of photographs, as well as readings, presentations and discussions. We will explore how mobile imaging technology and connectivity have transformed photography, as well as every other aspect of our lives- emotional, social, political, economic, and health. We will learn about the history, technology and infrastructure of mobile devices and the internet. This is a rapidly changing topic, and our exploration format will be one of co-teaching and co-learning for instructor and students alike. This is not your grandparents' photo class (although it is open to all generations.)

ARTS 3820. Ceramic: Wheel Throwing. (; 4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Expands wheel-throwing skills, develops aesthetic awareness of ceramic forms. Kiln firing, glaze formulation. prereq: 1801

ARTS 3830. Ceramic Sculpture. (; 4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Intermediate hand building. Development of abilities, critical awareness. Kiln firing, glaze formulation. prereq: 1801

ARTS 3850. Foundry and Metal Sculpture. (; 4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Metal casting of sculpture in bronze, iron, aluminum, other metals. Studio practice, investigation of historical/contemporary methods and concepts. Development of personal sculptural imagery. prereq: ARTS 1802

ARTS 3860. Sculpture and Installation. (4 cr. [max 12 cr.] ; Student Option; Periodic Fall & Spring)

This class will examine the historical and contemporary aspects of sculpture installation art. The structure of this studio course provides space for in-depth research, idea development, individual exploration, experimentation, play and critical feedback. This course is not media specific, you will be working with materials that work with the concepts in your practice. You are encouraged to explore the use of sound, video and performance in your installations. A generous amount of studio time is allowed for studio work and personal exploration augmented by readings, field trips and visiting artist lectures. prereq: 1802

ARTS 3890. 3D Modeling and Digital Fabrication. (4 cr. [max 12 cr.] ; Student Option; Every Spring)

In this class, students will learn the basic skills of 3D computer modeling and digital fabrication to generate objects using the Department of Art's 3D Printers, 3-axis CNC Router and Laser Cutter. Instruction includes computer modeling in Adobe Illustrator and Rhino, transfer of files and object fabrication.

ARTS 3896. Internship. (; 1-3 cr. [max 6 cr.] ; S-N or Audit; Every Fall, Spring & Summer)

Field work at local, regional, national, or international arts organization or with professional artist provides experience in activities/administration of art/art-based

organizations. prereq: BFA Art major, instr consent

ARTS 5105. Advanced Dimensional Painting. (; 4 cr. ; Student Option; Every Spring)

Illusionary space applied to sculptural forms. Practical applications of spatial/painterly concepts. Emphasizes critical/visual judgment. Development of cohesive body of work reflecting interaction of two/three dimensions. prereq: 3105 or instr consent

ARTS 5110. Advanced Drawing. (; 4 cr. [max 16 cr.] ; Student Option; Every Fall & Spring)

This studio course provides students the opportunity to investigate individual ideas and work on self-guided projects within a communal learning environment. Students will be encouraged to develop and execute their ideas with skillfulness and clarity. Through a consideration of diverse materials and practices, students will develop a proficiency in the language of contemporary drawing or painting. This course is designed to assist students in making connections between their own work and larger global themes and issues. Group and individual critiques, field trips, reviewing the work of other artists and readings will supplement studio work. Students are expected to spend time working on their projects outside of scheduled class time. prereq: Art major and ARTS 3110

ARTS 5120. Advanced Painting. (; 4 cr. [max 16 cr.] ; Student Option; Every Fall & Spring)

This studio course provides students the opportunity to investigate individual ideas and work on self-guided projects within a communal learning environment. Students will be encouraged to develop and execute their ideas with skillfulness and clarity. Through a consideration of diverse materials and practices, students will develop a proficiency in the language of contemporary painting. This course is designed to assist students make connections between their own work and larger global themes and issues. Group and individual critiques, field trips, reviewing the work of other artists and readings will supplement studio work. Students are expected to spend time working on their paintings outside of scheduled class time. prereq: ARTS 3120 and ARTS major

ARTS 5140. Advanced Printmaking. (; 4 cr. [max 16 cr.] ; Student Option; Every Fall & Spring)

In-depth research of personal imagery using a broad range of historical and contemporary applications. Development of imagery using color, photo-mechanical, digital processes. Cross-media approaches. Prereq: ARTS 3130

ARTS 5230. Advanced Art + Sound. (; 4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Sound art practice/theory. Emphasizes individual creative projects using sound as primary material. History of experimental sound art from early 20th century to present. Critiques, readings, writing, public presentations. prereq: ARTS major and 3605 or 3230

ARTS 5250. Art + Performance. (; 4 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring) Studio practice in performance art and installation; investigation of historical and contemporary methods and concepts of interdisciplinary expression. Development of personal imagery. Prereq: ARTS major

ARTS 5260. Art + Interdisciplinary Collaborations. (; 3 cr. [max 9 cr.]; Student Option; Every Fall & Spring) Interdisciplinary, collaborative artist teams explore modes of creative expression at intersections of the arts. Students collaborate to co-author/produce works of art for public presentation. Emphasizes integration of media arts with visual art, music, dance, and theater to produce interdisciplinary/collaborative art. prereq: Upper-division undergraduate or graduate student in art, creative writing, dance, music or theater.

ARTS 5401W. BFA Seminar Capstone 1: Concepts and Practices in Art. (WI; 3 cr.; Student Option; Every Fall & Spring) Various ideologies, cultural strategies that influence practice/interpretation of art. Emphasizes diversity of viewpoints. Application of issues in developing final BFA exhibition.

ARTS 5404. BA Capstone and Exhibition. (3 cr.; S-N only; Every Fall & Spring) The BA Capstone and Exhibition will focus on building professional skills, developing a strong studio practice, and preparing for an exhibition in Regis Center Public Spaces.

ARTS 5407. BFA Capstone 2: Critique and Exhibition. (; 4 cr.; A-F only; Every Spring) This critique-based seminar will provide a structured critical forum for the discussion of your work, help you to verbally articulate and defend your work and prepare you in the presentation of your work. This is a self-motivated and self-directed class. It is expected that you will produce a substantial amount of work to show in this course. Your work is self-directed artwork created from assignments (in other classes) will not be critiqued. Each artist will have two one-hour critiques of their work over the course of the semester. Critiques may include members from the arts community such as local artists, MIA, Midway Contemporary Art, Walker Art Center, The Soap Factory and Franklin Artworks. Grades are based on critique participation, attendance and your artist presentation. This class culminates in the BFA Exhibition in the Nash Gallery. Throughout the semester, we will meet with Nash Gallery staff to develop this final show.

ARTS 5490. Workshop in Art. (; 1-4 cr. [max 48 cr.]; Student Option; Every Fall, Spring & Summer) Selected topics and intensive studio activity. Topics vary yearly.

ARTS 5610. New Media: Making Art Interactive. (; 4 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring) Conceptual/aesthetic development with digital, interactive art. Experimental approaches to interactive technologies. Projects with responsive/tangible media. Theory/history of new media. prereq: 3601 or instr consent

ARTS 5710. Advanced Photography and Moving Image Projects. (; 4 cr. [max 16 cr.]; Student Option; Every Fall & Spring) Design/implementation of individual advanced projects. Demonstrations, lectures, critique. Reading, writing, discussion of related articles/exhibitions. prereq: previously completed a 3XXX course in Photography or Moving Images and Art major

ARTS 5750. Advanced Narrative Digital Filmmaking. (; 4 cr. [max 12 cr.]; Student Option; Every Fall & Spring) Narrative forms of video. Documentary, live action, memoir, experimental forms. Digital video production and editing. Personal aesthetic and conceptual directions. Theory, critical readings about historical and contemporary works in video. prereq: 3750

ARTS 5760. Experimental Film and Video. (; 4 cr. [max 12 cr.]; Student Option; Every Fall & Spring) Experimental approaches in producing digital video within a contemporary art context. Using digital media technologies in installation, performance, and interactive video art. Emphasizes expanding personal artistic development. Theoretical issues, critical/historical readings/writings in media arts. prereq: ArtS major, ArtS 1704

ARTS 5770. Animation. (; 4 cr. [max 12 cr.]; Student Option; Every Fall & Spring) Creating ideas visually with 2- and 3-dimensional animation technologies. Vector- and layer-based raster animation. Modeling objects and spaces, creating textures, lighting, movement, sound track. prereq: Art major

ARTS 5780. Advanced Super 8 and 16 MM Filmmaking. (4 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring) This course will explore the medium of Super 8 filmmaking in the tradition of the experimental and avant ?garde. We will focus on the physicality of the film stock, the basic mechanics of the camera and projector, and how these elements translate into a visual language and aesthetic. Students will learn how to shoot, process, edit, splice, project, and transfer their own super 8 films. This course will balance the technical, conceptual, and historical aspects of small gauge or amateur analog filmmaking, and address what it means to work in this medium at the beginning of the 21st century. The course will include presentations, readings, and discussions on contemporary and historical artists in the medium, as well as outside film screenings and lectures. Classroom visits by artists will also provide an informed context for the primary course objective. Prereq: Art major

ARTS 5810. Advanced Ceramics. (; 4 cr. [max 16 cr.]; Student Option; Every Fall & Spring) Critical discourse of aesthetics. History of, contemporary issues in clay and criticism. Independent, advanced projects. prereq: ARTS major and ARTS 3820 or ARTS 3830

ARTS 5850. Advanced Foundry and Metal Sculpture. (4 cr. [max 12 cr.]; Student Option; Every Fall & Spring)

Metal casting of sculpture in bronze, iron, aluminum, other metals. Studio practice, investigation of historical/contemporary methods and concepts. Development of personal sculptural imagery. prereq: Art major

ARTS 5860. Advanced Sculpture. (; 4 cr. [max 12 cr.]; Student Option; Every Fall & Spring)

This advanced Sculpture course is a self-motivated and self-directed studio class to help you develop and maintain a personal studio practice. The structure of this studio course provides space for in-depth research, idea development, individual exploration, experimentation, play and critical feedback. Prereq: ARTS major and ARTS 3860

ARTS 5890. 3D Modeling and Digital Fabrication. (4 cr. [max 12 cr.]; Student Option; Every Spring) In this class, students will learn the basic skills of 3D computer modeling and digital fabrication to generate objects using the Department of Art's 3D Printers, 3-axis CNC Router, and Laser Cutter. Instruction includes computer modeling in Adobe Illustrator and Rhino, transfer of files, and object fabrication. Prereq: ARTS major

ARTS 5990. Independent Study in Art. (1-4 cr. [max 12 cr.]; Student Option; Every Fall & Spring) Independent study project designed by student in consultation with instructor. prereq: Major, completed regular course with instructor, instr consent

Art History (ARTH)

ARTH 1001. Introduction to Art History: Prehistoric to Contemporary. (AH; 4 cr.; Student Option; Every Fall & Spring) Major monuments/trends in art, prehistoric to present. Style, subject matter, patronage. Reconstructing artworks' original setting: religious, political, and social contexts. Western canon, occasionally in comparison with non-Western works.

ARTH 1002W. Why Art Matters. (AH,WI,GP; 4 cr.; Student Option; Every Fall) Introduction to history of topics that investigate power/importance of art both globally and in its diverse forms, from architecture and painting to video and prints. Sacred space, propaganda, the museum, art/gender, art/authority, tourism.

ARTH 1004W. Introduction to Asian Art. (HIS,WI; 4 cr.; Student Option; Every Fall & Spring) This one-semester course is an introduction to painting, sculpture, and architecture from South, Southeast, and East Asia. It will cover works from ancient cultures to those of contemporary Asian diasporas. Resisting the impossible task of covering everything, we will instead home in on specific objects in order to understand them in their broader cultural, religious, and social contexts. We will trace the ways in which common themes and problems appear in different art forms and in different places, and we will discover the ways in which seemingly disparate styles and objects may be

productively understood in conversation with each other. We will work together to create an interpretive model that is synthetic, critical, and appreciative of the enormously diverse field that is Asian Art. Lectures will move from explanatory descriptions of objects and histories that are covered in the textbook to critical interpretations of the historiographies that shape the contemporary reception of Asian art.

ARTH 1915. Broadcasts: Art, the Media, and Political Turmoil, the 1960s and Today. (; 3 cr. ; A-F only; Periodic Fall)

Violence, racial reckoning, war, and media manipulation, the 1960s and the 2000s are periods of political turmoil where artists examine, question, and create alternatives to the news media. This course studies artistic responses to such public crises as the Kennedy Assassination and the Capitol Insurrection, the Vietnam War, and Black Lives Matter.

ARTH 1916. Witches, Ghosts, and Evil Clowns: Figures of Fear in Art, Folklore, and Popular Culture. (; 3 cr. ; Student Option; Every Fall)

From ancient images through popular culture and social media, our art, stories, and beliefs have been filled with figures of fear. The returning dead, people with weird powers, demons, monsters, and mad killers haunt our dreams, but also seem to show up during waking hours. People have committed acts of violence based on fears of such beings. Yet we are also drawn to them, depicting and playing with them, and taking on their guises to scare ourselves for fun. This course will investigate these figures of fear, using approaches from art history, folklore, anthropology, and other fields. We will read a variety of texts, and will also encounter and think about legends, art, movies, literature, games, costumes, haunted houses, and objects used for magic and protection. This course will help you build skills of close observation and visual analysis, learn surprising things about your own surroundings, think critically about culture, and deepen your appreciation for the cultural knowledge and play of communication that make folklife, art, and popular culture so rich and remarkable.

ARTH 1921W. Introduction to Film Study.

(AH,WI; 4 cr. ; Student Option; Every Fall)
Fundamentals of film analysis and an introduction to the major theories of the cinema, presented through detailed interpretations of representative films from the international history of the cinema.

ARTH 3005. American Art. (AH; 3 cr. [max 4 cr.] ; Student Option; Periodic Fall & Spring)

Artistic practice in the United States: colonial period to cold war. America as idea/identity shaped, expressed, represented, and contested through art. Canon of American art history. Works by individuals outside of traditional channels of art instruction/reception. Questions about what does/does not count as art history.

ARTH 3009. Medieval Art. (AH; 3 cr. ; Student Option; Every Fall & Spring)

Medieval art in Western Europe, from around 1000 to the mid-14th century. Works from France, Spain, Germany, Italy, and England examined in their historical context. Cross cultural relations, development of completely new forms of art and techniques, and the processes of realization.

ARTH 3012. 19th and 20th Century Art. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Major monuments/issues of modern period. Sculpture, architecture, painting, prints. Neo-classicism, romanticism, realism, impressionism, evolution of modernism, symbolism, fauvism, cubism, dadaism, surrealism, abstract expressionism, pop art, conceptualism, postmodernism.

ARTH 3014W. Art of India. (AH,WI,GP; 3 cr. ; Student Option; Every Spring)

Indian sculpture, architecture, and painting from the prehistoric Indus Valley civilization to the present day.

ARTH 3015W. Art of Islam. (AH,WI,GP; 3 cr. ; Student Option; Every Fall)

Architecture, painting, and other arts from Islam's origins to the 20th century. Cultural and political settings as well as themes that unify the diverse artistic styles of Islamic art will be considered.

ARTH 3018. Art of the Ottoman Empire. (3 cr. ; Student Option; Periodic Fall & Spring)

This course offers a wide-ranging introduction to visual culture under the Ottoman Empire. Initially formed as a small principality at the beginning of the fourteenth century in Anatolia, the Ottoman polity established itself as a major political and military power through the early modern period and beyond. With emphasis placed upon key monuments and objects, we will examine an array of artistic media, ranging from manuscript illumination and calligraphy to ceramics, textiles, metalwork, glasswork and jewelry. Major themes include the urban transformation of the Byzantine capital; the formation of imperial ideology and its visual articulation, the formation of a distinctive imperial style across media; the operation of court ateliers and societies of artists and artisans; contacts and interactions with the European and Islamic contemporaries; and cultural and artistic "decline."

ARTH 3019. Buddhist Art and Architecture.

(3 cr. ; Student Option; Periodic Fall & Spring)
This class provides an introduction to Buddhist art and architecture, from the sixth-century BCE to the present. Beginning with the life of the historical Buddha (563-483), it will follow the development of Buddhist art in India before tracing it across the Silk Road to China, Korea, and Japan. The class will consider how art and architecture evolved to serve the needs of Buddhism as its doctrine and practice evolved. At the same, we will consider how Buddhist cosmology and metaphysics were translated into culturally specific modes that served the multifarious cultural and artistic traditions of Asia.

ARTH 3021. Art and Revolution, 1789-1889. (3 cr. ; Student Option; Periodic Fall & Spring)

The visual arts both reflected and shaped the large-scale transformations?from imperialism to the rise of the ?new? woman?that defined the modern world as we know it. Focusing on European artworks produced between 1789 and 1889, we'll investigate how paintings, sculptures, prints, and photographs both illustrated and fashioned the revolutionary character of the period and the enduring legacies of the nineteenth century today.

ARTH 3152. Art and Archaeology of Ancient Greece. (HIS; 3 cr. ; Student Option; Periodic Fall & Spring)

This course will provide an introduction to the history of Greek art, architecture and archaeology from the formation of the Greek city states in the ninth century BCE, through the expansion of Greek culture across the Mediterranean and Asia in the Hellenistic period, to the coming of Rome in the first century BCE. While this survey concentrates on the main developments of Greek art, an important sub-theme of this course this is the changes Classical visual culture underwent as it served non-Greek peoples, including the role it played for Alexander and his successors in forging multiethnic, globally minded empires in Western, Central and South Asia. No background in the time period or discipline is expected and therefore this class will also serve as an introduction to interdisciplinary study of art history and the classical world. A number of art historical methodologies will be introduced in order to not only give students a useful background in art history but to give them the tools to think as art historians and incorporate related visual and textual evidence meaningfully into their writing.

ARTH 3162. Roman Art and Archaeology. (HIS; 3 cr. ; Student Option; Fall Odd, Spring Even Year)

Introduction to history of Roman art, from formation of city-state of Rome under Etruscan domination, to transformation of visual culture in late antiquity under peoples influenced by the Romans.

ARTH 3182. Egypt and Western Asia: Art and Archaeology of Ancient Egypt and Western Asia. (AH,GP; 3 cr. ; Student Option; Every Fall & Spring)

This course will provide students with foundational knowledge in the art, architecture, and archaeology of Egypt, East Africa, Asia Minor, Mesopotamia, Iran and Central Asia from the Neolithic through Late Antiquity (ca. 7,000 B.C.E. - 650 C.E.). Students will gain an understanding of the relationship between the visual material and the social, intellectual, political, and religious contexts in which it developed and functioned. In this regard, students will also gain an understanding of the evolution of, and exchanges and differences among, the visual cultures of these time periods and regions. It will also expose them to the preconditions for contemporary geopolitics in the region.

ARTH 3216W. Chicana and Chicano Art. (WI; 3 cr. ; Student Option; Periodic Fall & Spring)

A Chicana/o has been described as a Mexican-American with a political sense of identity

that emerges from a desire for social justice. One journalist bluntly stated, "A Chicano is a Mexican-American with a non-Anglo image of himself" (Ruben Salazar, Los Angeles Times, 1970). This identity emerged through the Chicano Movement, a social and political mobilization that began in the 1960s and 1970s. The Chicano Movement witnessed the rise of community-based political organizing to improve the working conditions, education, housing opportunities, health, and civil rights for Mexican-Americans. For its inception, the Chicano Movement attracted artists who created a new aesthetic and framework for producing art. A major focus of Chicana/o artists of the 1960s and 1970s was representation, the right to self-determination, and the role of art in fostering civic and public engagement. This focus continues to inform Chicana/o cultural production. Social intervention, empowerment, and institutional critique remain some of the most important innovations of American art of the last several decades, and Chicana/o artists played a significant role in this trend.

ARTH 3309. Renaissance Art in Europe. (AH; 3 cr. ; A-F or Audit; Every Fall & Spring) Major monuments of painting/sculpture in Western Europe, 1400-1600. Close reading of individual works in historical context. Influence of patrons. Major social/political changes such as Renaissance humanism, Protestant Reformation, market economy.

ARTH 3311. Baroque Art in Seventeenth Century Europe. (AH; 3 cr. ; Student Option; Every Spring) Dominant trends/figures of Italian, French, Flemish, and Dutch Baroque period. Works of major masters, including Caravaggio, Bernini, Poussin, Velazquez, Rembrandt, and Rubens. Development of illusionistic ceiling decoration. Theoretical basis of Baroque art. Art's subservience to Church and royal court.

ARTH 3312. European Art of the Eighteenth Century: Rococo to Revolution. (HIS; 3 cr. ; Student Option; Every Fall) Major developments in 18-century painting, sculpture, and interior decoration, from emergence of Rococo to dawn of Neoclassicism. Response of art to new forms of patronage. Erotics of 18-century art. Ways art functioned as social/political commentary.

ARTH 3313. Spanish Baroque Masters: Tradition and Experimentation in Golden Age Spain. (HIS; 3 cr. ; Student Option; Periodic Fall & Spring) This seminar focuses on some of the major masters of Spanish Baroque art, including Francisco de Zurbarán, Diego Velázquez, Jusepe de Ribera, Bartolomé Esteban Murillo, and Juan Sánchez Cotán. We will explore their works from a variety of perspectives in an effort to understand the unique character and contributions of the art of the Spanish Golden Age.

ARTH 3315. The Age of Curiosity: Art, Science & Technology in Europe, 1400-1800. (AH,TS; 3 cr. ; Student Option; Periodic Fall & Spring)

Diverse ways in which making of art and scientific knowledge intersected in early modern Europe. Connections between scientific curiosity and visual arts in major artists (e.g., da Vinci, Durer, Vermeer, Rembrandt). Artfulness of scientific imagery/diagrams, geographical maps, cabinets of curiosities, and new visual technologies, such as the telescope and microscope.

ARTH 3335. Baroque Rome: Art and Politics in the Papal Capital. (HIS; 3 cr. ; Student Option; Fall Even Year) Center of baroque culture--Rome--as city of spectacular and pageantry. Urban development. Major works in painting, sculpture, and architecture. Ecclesiastical/private patrons who transformed Rome into one of the world's great capitals.

ARTH 3401W. Art on Trial. (AH,WI,CIV; 3 cr. ; Student Option; Periodic Fall & Spring) Why does art so often elicit anger, debate, protest, and vandalism? Arts controversies raise many difficult questions that this class examines: should artists be allowed to use taxpayer funds to create works of art critical of the government or that some find offensive? Should public sculptures commemorate Confederates, slave owners, or colonialists? How do we know when something is obscene? Is censorship ethical? Do artists have the right to control the fate of their work after it is sold? Who should decide what artists are chosen for public commissions, what artworks are selected for public buildings, or how works of art should be interpreted? Does public opinion make bad art? This course trains students in the history of arts controversies in the United States from the 19th century to the present and in the changing social conditions through which art has become a flashpoint for public debate. Assignments focus on discipline-specific research and writing techniques that build toward a group project in which students research, take up positions, and debate the merits of important case studies. The class is primarily designed for students to learn about the arts and arts policy today, i.e., the art world of which they are and will be citizens. They are asked to inspect the sources of dominant cultural beliefs and to gain a deeper understanding of and take responsibility for their own cultural, political, and artistic values.

ARTH 3422. Off the Wall: History of Graphic Arts in Europe and America in the Modern Age. (; 3 cr. [max 4 cr.] ; Student Option; Periodic Fall & Spring) History/theory of creation of lithography, social caricature (e.g., Daumier, Gavarni), revival of etching (e.g., Goya/mid-century practitioners, Whistler), and color lithography (e.g., Toulouse-Lautrec, Vuillard, Bonnard). Media changes of 20th century. Revolutionary nature of new media.

ARTH 3434. Art and the Environment. (AH,ENV; 3 cr. ; Student Option; Every Fall & Spring) Historical development of land, earth, and environmental art since 1968. Artists' engagement with environmental problems. Responses to changing aesthetic,

political, biological, economic, agricultural, technological, and climactic conditions from global perspective.

ARTH 3464. Art Since 1945. (HIS; 3 cr. ; Student Option; Periodic Spring) The end of the Second World War is commonly understood as a watershed moment in art history when the center of western art shifted from Paris to New York and the old tradition of art academies and annual salons disappeared once and for all. It is a moment that sees dramatic changes in who artists are, how they are trained, what kind of art they make, and the audiences to whom they appeal. This course surveys U.S. and European art history from 1945 to the present so that students gain a thorough understanding of the social, political, and economic forces that contributed to the development of significant art movements including abstract expressionism, pop art, and minimalism, as well as key modes of artmaking including painting and sculpture, happenings, installations, video, earthworks, and participatory art. The course also trains students in philosophies of art and tracks the dramatic changes in aesthetics over the period. Primarily a lecture course, students' historical knowledge is assessed through two in-class examinations in which they identify, compare, contrast, and think critically about works of art. In addition, students practice discipline-specific research skills by compiling an annotated bibliography and writing short papers that rigorously examine primary sources.

ARTH 3481. Curatorial Practice Field Experience. (; 3 cr. ; A-F only; Every Fall & Spring) This course looks at current critical questions of curating and exhibition making. We explore the process of developing an exhibition, building working relationships with artists, and understanding how to effectively communicate ideas to turn a concept into a project. The course assumes that curating has also evolved from a practice associated with a museum art expert to something that is increasingly framed as a creative marketable skill related to cultural production. Discussions, readings, and coursework include consideration of gallery and public space and audience experience. Curatorial trends will be explored via site visits to established and alternative exhibit spaces. Students are introduced to a wide variety of artists and how their work is contextualized by the exhibition format. Site visits to exhibition spaces and conversations with professional curators reinforce the course material. Through practice and application, students examine the evolving definitions and responsibilities of a curator, and a variety of issues related to the development of a coherent and relevant exhibition. Students participate in hands-on, curatorial workshops, and curate a professional, public presentation using a nontraditional space, gallery space, digital space, or other local venue.

ARTH 3577. Photo Nation: Photography in America. (AH; 3 cr. ; Student Option; Every Fall & Spring) Development of photography, from 19th century to present. Photography as legitimate

art form. Portraits/photo albums in culture. Birth of criminal justice system. Technological/market aspects. Politics of aesthetics. Women in photography. Ways in which idea of America has been shaped by photographs.

ARTH 3655. African-American Cinema. (AH,DSJ; 3 cr. ; Student Option; Spring Even Year)

African American cinematic achievements from silent films of Oscar Micheaux through contemporary Hollywood and independent films. Class screenings, critical readings.

ARTH 3765. Chinese Art and Architecture. (3 cr. ; Student Option; Periodic Fall & Spring)

This class provides an introduction to Chinese art and architecture, from prehistory to the present. Proceeding chronologically and thematically, the class will consider a broad range of artistic media including jade, stone, bronze, paintings, calligraphy, ceramics, printing, photography, and architecture. Through a close connoisseurial engagement and visual analysis these materials, the class will examine how Chinese art developed in relation to broader themes of Chinese political, religious, and cultural history. At the same time, it will consider how the art of China engaged in cultural and artistic dialogue with other traditions and cultures of East Asia.

ARTH 3777. The Diversity of Traditions: Indian Empires after 1200. (3 cr. ; Student Option; Periodic Fall & Spring)

This class considers the development of Indian and Pakistani art and architecture from the introduction of Islam as a major political power at the end of the 12th century to the colonial empires of the 18th century. We will study how South Asia's diverse ethnic and religious communities interacted, observing how visual and material cultures reflect differences, adaptations, and shared aesthetic practices within this diversity of traditions. Students in this class will have mastered a body of knowledge about Indian art and probed multiple modes of inquiry. We will explore how Muslim rulers brought new traditions yet maintained many older ones making, for example, the first mosque in India that combines Muslim and Indic visual idioms. We will study the developments leading to magnificent structures, such as the Taj Mahal, asking why such a structure could be built when Islam discourages monumental mausolea. In what ways the schools of painting that are the products of both Muslim and Hindu rulers different and similar? The course will also consider artistic production in the important Hindu kingdoms that ruled India concurrently with the great Muslim powers. In the 18th century, colonialist forces enter the subcontinent, resulting in significant innovative artistic trends. Among questions we will ask is how did these kingdoms influence one another? Throughout we will probe which forms and ideas seem to be inherently Indian, asking which ones transcend dynastic, geographic and religious differences and which forms and ideas are consistent throughout these periods of political and ideological change. To do all this we must constantly consider how South Asia's diverse ethnic and religious communities

interact. There are no prerequisites for this course.

ARTH 3778. Traditions of South Asian Painting: Past to Present. (3 cr. ; Student Option; Periodic Fall & Spring)

This course surveys the rich diversity of painted media in India, Pakistan, Sri Lanka, and Nepal, from 5th-century murals to contemporary canvases that travel the world. We will locate the works in their physical, ritual, and intellectual contexts. We will explore how the familiar categories with which we describe painting, such as Landscape, Portraiture, Narrative, and even Modern, might be productively reassessed in light of South Asian aesthetic traditions by locating the works in their physical, ritual, and intellectual contexts. The course culminates in the contested spaces of contemporary art, where questions of politics, identity, and intention come to the fore. Although mainly focusing on the painting traditions of India, the course will include painting from Pakistan, the Himalayas, Sri Lanka, and the South Asian diaspora. The humanities sharpen our ability to develop critical questions and to judge why and how one answer or interpretation may be stronger than another. Humanistic thinking is developed in dialogue; it emerges between individuals in conversation with each other and with their objects of study. This course asks you to boldly bring your curiosity, convictions, and blind-spots to our collective conversation, close reading, and individual writing. The course consists of two weekly meetings, and one or two trips to nearby museums or galleries.

ARTH 3779. Visions of Paradise: The Indian Temple. (3 cr. ; Student Option; Periodic Fall & Spring)

This course traces the development and diversity of the Indian temple, focusing the ways in which people interact with sacred space and how religious art addresses its viewers. We primarily focus on Hinduism, but also include Buddhism and Jainism. We will discuss the role of sculpture, painting, textiles, dance, and food within the temple. We will also examine how the legacy of colonial and orientalist scholarship inflects our study of these traditions and monuments. Although the architecture of both structural and rock-cut temples will be our main object of study, we will also discuss the role of sculpture, painting, textiles, and food within the temple. Our consideration of the structures will be attentive to the ways in which people interact with the space and how objects of sacred art address their viewers. In classroom discussions we will work together to create an interpretive model that is synthetic, critical, and appreciative of the enormously diverse field that is South Asian Art. Lectures will move from explanatory descriptions of objects and histories that are covered in the textbook to critical interpretations of the historiographies that shape their contemporary reception. Class discussions and assignments are intended to encourage students to bring their own ways of looking at this art, to read critically in light of what they see, and to consider new approaches to the material. No prior

experience in the history of art or religions of South Asia is required for this course.

ARTH 3896. Directed Professional Experience. (; 1-2 cr. ; Student Option; Every Fall, Spring & Summer)

Internship or research assistantship in approved program, art institution, business or museum. prereq: instr consent

ARTH 3921W. Art of the Film. (AH,WI; 4 cr. ; Student Option; Every Spring)

This course will engage with the history of film as an art form through a selection of significant movements, styles, filmmakers, institutions, and, of course, individual films from around the world. While this will not be a comprehensive study, it will address both mainstream, commercial films as well as oppositional, experimental, underground, and otherwise challenging works. Some of the wide-ranging selection of films we will watch and discuss: Germaine Dulac's *La Coquille et le Clergyman* (*The Seashell and the Clergyman*) (1922), Gillo Pontecorvo's *The Battle of Algiers* (1966), Julie Dash's *Daughters of the Dust* (1991), and Alfonso Cuarón's *Roma* (2018).

ARTH 3929. Cinema Now. (AH; 3 cr. ; Student Option; Fall Odd Year)

Course examines contemporary cinema, including fiction films, documentaries, animation, and avant-garde experiments. Focuses on feature-length theatrical films, but will also consider other aspects of the contemporary media world: graphic novels, video games, television series and the Internet (e.g., Youtube). Examines media production, distribution, marketing, exhibition, and reception. Course will also present a survey of developments in contemporary cinema studies, since the choice of films will support a variety of critical approaches including economic, aesthetic (generic, auteurist, formalist), ideological (race, class, gender), and reception studies.

ARTH 3940. Topics in Art History. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)
Topics specified in Class Schedule.

ARTH 3971V. Honors: Art History Capstone. (WI; 3 cr. ; A-F only; Every Fall & Spring)

Capstone course for art history majors, which teaches writing skills and strategies, and aids students in the completion of senior paper projects through the study of art historical methods. Students work with both the class instructor and individual faculty advisers on independent research and writing.

ARTH 3971W. Art History Capstone. (WI; 3 cr. ; A-F only; Every Fall & Summer)

Capstone course for art history majors, which teaches writing skills and strategies, and aids students in the completion of senior paper projects through the study of art historical methods. Students work with both the class instructor and individual faculty advisers on independent research and writing. prereq: Arth major, instr consent

ARTH 3993. Directed Study. (; 1-4 cr. [max 12 cr.]; A-F or Audit; Every Fall, Spring & Summer)

TBD prereq: instr consent

ARTH 3994. Directed Research. (; 1-4 cr. [max 12 cr.] ; A-F or Audit; Every Fall)
TBD prereq: instr consent

ARTH 5252. History of Early Christian Art in Context. (; 3 cr. [max 4 cr.] ; Student Option; Periodic Spring)

This course will introduce graduate and advanced undergraduate students to Christian visual art from its evident beginnings (ca. 200) to the dawn of the early Middle Ages, attending to its transformation under imperial patronage. Working with both objects and texts, core themes include the continuity between Christian and pagan art of Late Antiquity, the influence of imperial ceremonies and style, the emergence of sacred icons, the development of Passion iconography, the influence of Islam, and the divergent styles, motifs, and theological perspectives on the validity and role of images from the Byzantine East to the early Medieval West.

ARTH 5302. The Image Multiplied: Prints in Early Modern Europe. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

The technology of mechanically reproducing complex visual images on paper, a development of fifteenth-century Europe, transformed the early modern world no less than the emergence of digital media has transformed our own. Techniques of woodcut, engraving and etching quickly became important media for innovation within the fine arts. At the same time, they became equally important as sources for devotional imagery, for disseminating copies of other artworks, for the expansion of knowledge through scientific illustration, and for the effective broadcasting of political and religious messages during centuries of extraordinary political and religious upheaval. In this course we will investigate the cultural history of printed images in Europe from the time of their emergence in the fifteenth century through the mid-eighteenth century. Through lectures and class discussion, you will develop a familiarity with the technical aspects of printmaking and apply that understanding to the historical interpretation of specific works. The course will not be an exhaustive survey of printmakers and printmaking styles during the early modern era but will instead approach the early modern print through the changing cultural circumstances of its production and reception. While we will consider the work of many lesser-known (and anonymous) artists, we will concentrate on the work of major printmakers such as Mantegna, Dürer, Goltzius, Rembrandt, Callot, Hogarth, and Piranesi. The course will include visits to local collections.

ARTH 5313. Spanish Baroque Masters: Tradition and Experimentation in Golden Age Spain. (HIS; 3 cr. ; Student Option; Periodic Fall & Spring)

This seminar focuses on some of the major masters of Spanish Baroque art, including Francisco de Zurbarán, Diego Velázquez, Jusepe de Ribera, Bartolomé Esteban Murillo, and Juan Sánchez Cotán. We will explore their works from a variety of perspectives in an

effort to understand the unique character and contributions of the art of the Spanish Golden Age.

ARTH 5315. The Age of Curiosity: Art, Science & Technology in Europe, 1400-1800. (AH,TS; 3 cr. ; Student Option; Periodic Fall & Spring)

Diverse ways in which making of art and scientific knowledge intersected in early modern Europe. Connections between scientific curiosity and visual arts in major artists (e.g., da Vinci, Durer, Vermeer, Rembrandt). Artfulness of scientific imagery/diagrams, geographical maps, cabinets of curiosities, and new visual technologies, such as the telescope and microscope.

ARTH 5335. Baroque Rome: Art and Politics in the Papal Capital. (; 3 cr. ; Student Option; Fall Even Year)

Center of baroque culture--Rome--as city of spectacle and pageantry. Urban development. Major works in painting, sculpture, and architecture. Ecclesiastical/private patrons who transformed Rome into one of the world's great capitals.

ARTH 5336. Transformations in 17th Century Art: Caravaggio, Velazquez, and Bernini. (3 cr. ; Student Option; Periodic Fall & Spring)

This course offers an in-depth examination of three of the most innovative masters of early modern European art, the painters Michelangelo Merisi da Caravaggio and Diego Velázquez, and the sculptor and architect Gianlorenzo Bernini. Through selected readings, slide presentations and discussions, we will explore the lives and works of these artists, paying particular attention to the ways they created an entirely new relationship between the work of art and the viewer and ushered in a radically new way of conceiving visual imagery.

ARTH 5411. Gender and Sexuality in Art Since 1863. (; 3 cr. ; Student Option; Periodic Fall & Spring)

In 1863, Édouard Manet painted a scandalous nude titled Olympia, which was met with outrage by critics when it was exhibited at the Paris Salon in 1865. The painting has been the subject of extensive discussion ever since among critics, curators, and art historians who examine not only its modernist style and formal qualities, but also the class, racial, and sexual identities of the two figures it depicts. This course surveys the role gender and sexuality have played in the historical development of western art from Manet's Olympia to the present, and the role that art has played in both reinforcing and challenging dominant theories of gender identity. It considers modernism and postmodernism not only as products of the rise of industrial and post-industrial capitalism, urbanization, colonialism, and globalization, etc., but also as tangled up with the establishment of gender and sexuality as powerful ideas that bring into being the very categories they name. Students gain knowledge not only about the historical development of art throughout this period, but also about diverse strategies for

scholarly research that is informed by theories of gender and sexuality, and art historical models for reading bodies, gestures, texts, and works of art. They complete guided or independent research papers, prepare an in-class presentation on a work of art in a local museum, and complete a structured literature review through which they learn to read and critically evaluate art historical scholarship.

ARTH 5413. Alternative Media: Video, Performance, Digital Art. (; 3 cr. ; A-F or Audit; Periodic Fall)

One rather old and rigid concept in the history of art and aesthetics is that artistic media, each with its distinct qualities, are most successful when they remain separate. The best painting, according to this view, is one that explores its own properties of flatness, abstraction, and color. What became known in the first half of the 20th century as the philosophy of "medium specific purity" was radically challenged in the 1960s when the differences between painting and sculpture were intentionally blurred and when new media (performance, body art, happenings, video art, installations and digital art) were introduced. This course seeks to understand how alternative media were developed not through the invention of new technologies nor in isolation, but through revolutionary modes of thinking about time and space, human and non-human life, machines, archives, cyborgs, and interactivity (some of which date back to the 18th and 19th centuries). Through assigned readings and discussions as well as structured essay assignments, the class provides students with extensive practice in the critical analysis of theoretical texts and ample experience synthesizing diverse intellectual ideas and arguments in written form. More broadly, through a creative "timeline" assignment, the course seeks to teach students to think inventively about new media and their histories, to learn strategies for looking at, evaluating, and thinking about works of new media art. It also provides instruction in research techniques and resources in contemporary art, as well as on writing in art history.

ARTH 5417. Twentieth Century Theory and Criticism. (; 3 cr. ; Student Option; Periodic Fall)

Since the 19th century, artists, critics, and historians have deployed philosophical and theoretical ideas to think self-reflexively about the meaning of art. What counts as a work of art and who qualifies as an artist? What is the role of the viewer and how should works of art be interpreted? Are they passive reflections of their historical milieu or do they play an active role in forming cultural values? In the 1920s, the surrealists were reading Karl Marx and Sigmund Freud to answer these questions. Artists of the Harlem Renaissance studied the sociological essays of W.E.B. Dubois and Zora Neale Hurston. Conceptualist artists in the 1960s read books on semiotics; performance artists studied phenomenology reading the work of Maurice Merleau-Ponty. Feminist artists in the 1970s read up on psychoanalysis and feminist philosophy. Following in their footsteps, this

is primarily a readings course designed to familiarize students with important theoretical ideas applied to the visual arts of the 20th century. The course focuses on significant trends in that century's art theory, historical methodology, and criticism. It examines key philosophical ideas of modernism and postmodernism including formalism, semiotics, poststructuralism, feminism, Marxism, psychoanalysis, deconstruction, critical race and queer theory. Because the course is organized chronologically as well as thematically and follows the lives and writings of key figures, it is also intended to help students trace intellectual histories as they develop over the century. In addition, it seeks to foster students' critical reading skills, discipline-specific writing skills, and to help them consider the historical implications of art theory for the production and reception of works of art today.

ARTH 5422. Off the Wall: History of Graphic Arts in Europe and America in the Modern Age. (; 3 cr. [max 4 cr.] ; Student Option; Periodic Fall & Spring)

History/theory of creation of lithography, social caricature (e.g., Daumier, Gavarni), revival of etching (e.g., Goya, mid-century practitioners, Whistler), and color lithography (e.g., Toulouse-Lautrec, Vuillard, Bonnard). Media changes of 20th century. Revolutionary nature of new media.

ARTH 5431. Art and Activism: French Painting 1789 to 1870. (3 cr. ; Student Option; Periodic Fall)

This course surveys art major movements, institutions, and debates in France and its expanding overseas empire from the late eighteenth to the late nineteenth centuries, paying particular attention to the intersection of art and politics. Artists and movements we will consider include some of the most well-researched and revered in art history: neo-classicism-David and Ingres; Romanticism-Corot, Gericault, Delacroix; landscape and peasant painting-the Barbizon group; Realism-Courbet; and Impressionism-Manet, Pissarro, Morisot, and Degas. Major themes to be addressed in the course include, but are not limited to, the following: artists' challenge to established institutions and exhibition practices; their participation in, and responses to, revolutionary political movements; the artist as worker; censorship and exile; visions of empire and abolition; the New Woman; and, finally, contemporary artists' appropriations of nineteenth-century French art to advance their own artistic/political agendas in the present.

ARTH 5466. Contemporary Art. (; 3 cr. ; Student Option; Periodic Spring)

The art of today as it is practiced around the globe takes a bewildering variety of forms? from traditional painting and sculpture to AI, interactive digital media, film projections, bio art (involving human, plant, and animal blood, tissue and DNA), participatory and community engaged projects, and environmental interventions. It addresses urgent social and political themes including globalization, institutionalized racism, climate crisis, big

data, and mechanized vision. Just as today's citizens should inform themselves about contemporary politics and current events, so is it crucial that we understand the art of our own time. In this course students gain an understanding of art's development since the late 20th century and key ideas that are central to interpreting the art of this period. The course begins with a review of important movements, significant artists, and influential theories and issues. It then takes up and studies specific themes through the reading and analysis of theoretical texts. Students are asked to read, participate in class discussions, complete guided or independent research papers, prepare an in-class presentation on one of the course themes, and complete a book review for a textbook on contemporary art history. Each of these assignments is designed to impart specific historical knowledge about the period of the contemporary, to provide students with opportunities to practice critical reading and synthetic writing, and to offer them a chance to inspect their own positions regarding key debates.

ARTH 5565. American Art in the Gilded Age. (; 3 cr. ; Student Option; Periodic Fall & Spring)

In 1873, Mark Twain coined the phrase "Gilded Age" to describe an era in which public displays of national prosperity and optimism barely covered over the deeper realities of racial violence, labor inequities, and strident political divisions in the barely reunited republic, still recovering from a bloody Civil War. This class will examine the social and cultural history of the United States from 1865-1910, by following the visual record of paintings, sculpture, photographs, architecture, and landscape and furniture design. We will look closely at works by artists including Winslow Homer, Abbott Thayer, Cecilia Beaux, Henry Ossawa Tanner, Jacob Riis, Gertrude K?sebier, Thomas Nast, Bernhard Gillam, Frederick Law Olmsted, McKim, Mead & White, and Candace Wheeler. We will consider the role of creatively made images and objects as both a tool of the elite and the weapon of the critic. And we will actively investigate the kinds of questions art historians ask about this era, so as to ask new questions and produce new scholarship that might productively address the concerns of our own. Open to interested students from all majors, this course culminates in an independent research project suitable for development as a senior capstone project.

ARTH 5575. Boom to Bust: American Art from the Roaring Twenties to the Great Depression. (; 3 cr. ; Student Option; Periodic Fall & Spring)

American art/culture from 1917 to 1940. Boom of post-WWI affluence, bust of stock market crash, Midwestern Dust Bowl. How tumultuous times influenced painting, sculpture, photography, and industrial design.

ARTH 5655. African-American Cinema. (AH,DSJ; 3 cr. ; Student Option; Periodic Fall)

African American cinematic achievements, from silent films of Oscar Micheaux through contemporary Hollywood and independent films. Class screenings, critical readings.

ARTH 5765. Early Chinese Art. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Art/material culture of early China from Neolithic age (ca. 10000-2000 BCE) to early imperial period (221 BCE-906 CE).

ARTH 5766. Chinese Painting. (3 cr. ; Student Option; Periodic Fall & Spring)

Major works from the late bronze age to the modern era that illustrate the development of Chinese landscape painting and associated literary traditions.

ARTH 5769. Connoisseurship and Curatorial Practice in Early Chinese Art. (; 3 cr. ; Student Option; Periodic Fall & Spring)

This course provides students an immersive experience in the study of early Chinese art and material culture from the Neolithic age (ca. 8000?ca. 2000 BCE) to the early imperial period (221 BCE-220 CE). Geographical coverage uses today's China as a point of departure, but its scope also extends to the rest of the world. This course will explore artifacts in a variety of media, including ceramic, jade, metal, lacquer, silk, painting and writing, as well as ephemeral arts. Students are expected to think each artwork as the embodiment of the complex socio-cultural history of the period, in which they were produced. Guided by the instructor, students will have a selective examination of representative works of art from MIA (the Minneapolis Institute of Art), where they are supposed to be engaged in comprehensive object study, consultation and investigation with the curators, and develop essential curatorial skills of working with artworks. Based on two or more selected artworks, students are expected to finish a short research paper that is thoroughly studied and potentially publishable.

ARTH 5774. The Body in Indian Art. (3 cr. ; Student Option; Periodic Fall & Spring)

This course explores the concept of embodiment and the nature of representation, from images of gods to human portraits, in Hindu, Jain, Buddhist, Muslim, and courtly contexts. We consider diverse media from ancient to modern periods, including painting, sculpture, photography, architecture, inscriptions, and literature. This course explores the concept of embodiment in the diverse artistic traditions of South Asia. We will consider how ideas of representation of an individual have been understood and expressed differently across the history of South Asian art and religions. The course will consider the embodied representation of deities and semidivine figures along with those of "real" people; we will consider, given the ontologies of such representations in their religious and cultural contexts. Representation of an individual? a portrait? is a foundational subject in the canon of art history. What does the very idea of a portrait mean so far outside the canon of (Western) art history? As we survey the diverse traditions and media of images of the body, we will be attentive to questions such as, Does media make meaning for these types of images? Can a "portrait" be textual? Is verisimilitude essential to the depiction of a person? In what ways are

practices of depiction informed by other modes of image-making, such as images of religious devotion, and traditions of representation encountered through trade or gift? We will consider diverse media from Ancient India to the modern period, including painting, stone and metal sculpture, photography, architecture, inscriptions, and even a Sanskrit play.

ARTH 5777. The Diversity of Traditions: Indian Empires after 1200. (3 cr.; Student Option; Periodic Fall & Spring)

This class considers the development of Indian and Pakistani art and architecture from the introduction of Islam as a major political power at the end of the 12th century to the colonial empires of the 18th century. We will study how South Asia's diverse ethnic and religious communities interacted, observing how visual and material cultures reflect differences, adaptations, and shared aesthetic practices within this diversity of traditions. Students in this class will have mastered a body of knowledge about Indian art and probed multiple modes of inquiry. We will explore how Muslim rulers brought new traditions yet maintained many older ones making, for example, the first mosque in India that combines Muslim and Indic visual idioms. We will study the developments leading to magnificent structures, such as the Taj Mahal, asking why such a structure could be built when Islam discourages monumental mausolea. In what ways the schools of painting that are the products of both Muslim and Hindu rulers different and similar? The course will also consider artistic production in the important Hindu kingdoms that ruled India concurrently with the great Muslim powers. In the 18th century, colonialist forces enter the subcontinent, resulting in significant innovative artistic trends. Among questions we will ask is how did these kingdoms influence one another? Throughout we will probe which forms and ideas seem to be inherently Indian, asking which ones transcend dynastic, geographic and religious differences and which forms and ideas are consistent throughout these periods of political and ideological change. To do all this we must constantly consider how South Asia's diverse ethnic and religious communities interact.

ARTH 5778. Traditions of South Asian Painting: Past to Present. (3 cr.; Student Option; Periodic Fall & Spring)

This course surveys the rich diversity of painted media in India, Pakistan, Sri Lanka, and Nepal, from 5th-century murals to contemporary canvases that travel the world. We will locate the works in their physical, ritual, and intellectual contexts. We will explore how the familiar categories with which we describe painting, such as Landscape, Portraiture, Narrative, and even Modern, might be productively reassessed in light of South Asian aesthetic traditions by locating the works in their physical, ritual, and intellectual contexts. The course culminates in the contested spaces of contemporary art, where questions of politics, identity, and intention come to the fore. Although mainly focusing on the painting traditions of India, the course will include

painting from Pakistan, the Himalayas, Sri Lanka, and the South Asian diaspora. The humanities sharpen our ability to develop critical questions and to judge why and how one answer or interpretation may be stronger than another. Humanistic thinking is developed in dialogue; it emerges between individuals in conversation with each other and with their objects of study. This course asks you to boldly bring your curiosity, convictions, and blind-spots to our collective conversation, close reading, and individual writing. The course consists of two weekly meetings, and one or two trips to nearby museums or galleries.

ARTH 5781. Age of Empire: The Mughals, Safavids, and Ottomans. (3 cr.; Student Option;)

Artistic developments under the three most powerful Islamic empires of the 16th through 19th centuries: Ottomans of Turkey; Safavids of Iran; Mughals of India. Roles of religion and state will be considered to understand their artistic production.

ARTH 5787. Visual Cultures in Contact: Cross-Cultural Interaction in the Ancient and Early Medieval Worlds. (3 cr.; Student Option; Fall Even Year)

Evaluate critical perspectives from variety of interdisciplinary conversations. Framework for studying cross-cultural interaction among ancient visual cultures that integrates practical, cognitive, object oriented approaches. Cross-continental movement/selective appropriation of objects/motifs.

ARTH 5930. Junior-Senior Seminar. (3 cr.; A-F or Audit; Periodic Fall & Spring)

Major art-historical theme, artist, period, or genre. Topics specified in Class Schedule. prereq: [Jr or sr] Arth major, instr consent

ARTH 5950. Topics: Art History. (3 cr. [max 9 cr.]; Student Option; Every Fall, Spring & Summer)

Topics specified in Class Schedule.

ARTH 5993. Directed Study. (1-4 cr. [max 12 cr.]; A-F or Audit; Every Fall, Spring & Summer)

TBD prereq: instr consent

ARTH 5994. Directed Research. (1-4 cr.; A-F or Audit; Every Fall, Spring & Summer)

tbd prereq: instr consent

Arts and Cultural Leadership (ACL)

ACL 5100. Topics in Arts and Cultural Leadership. (1-4 cr. [max 24 cr.]; A-F or Audit; Periodic Fall, Spring & Summer)

Topics in Arts and Cultural Leadership.

ACL 5211. Trends and Impacts in Arts and Cultural Leadership and Management. (3 cr. [max 6 cr.]; A-F or Audit; Every Fall)

Through discussion and analysis, research and peer presentation projects, this seminar will investigate and question the theoretical nuances from which nonprofit arts and cultural organizations are built and the practical influences that affect them daily. Leadership in the cultural sector is evolving rapidly; textbook strategies are being re-evaluated and organizations are re-inventing themselves

in creative ways in response to current social and economic conditions. Emphasis is placed on current events, immediate and long-term trends and research into what is happening now. Topics include the role of arts and cultural organizations within the community; past, current and future concepts in organizational structures; and the application of traditional and integrated relationship-based strategies.

ACL 5221. Creative Entrepreneurship and Resource Development. (3 cr.; A-F or Audit; Every Spring)

An entrepreneurial approach to developing resources (including financial, human, and partnership) for arts and culture based enterprises whether using a nonprofit, for-profit or social enterprise business model. The course will investigate and discuss the complexities and nuances of how to determine the appropriate business model and develop both earned and philanthropic income. Students focus on framing and articulating the relevance of the enterprise as well as understanding the perspectives of audiences, customers, funders and donors. The course also explores the role of communications strategies in support of fundraising, and the importance of leadership in acquiring resources to sustain and grow successful organizations. Students develop both a broad understanding of resources as well as detailed strategies for supporting work in arts and culture based enterprises.

ACL 5231. Ethical Dilemmas and Legal Issues for Cultural Leaders. (3 cr.; A-F or Audit; Every Spring)

This course explores topics in ethics, law and leadership. Through interactive sessions, readings, presentations, discussions, papers and guest speakers, student-leaders will develop knowledge, tools and resources for assessment of ethical and legal issues within arts and cultural contexts. The course will engage student-leaders with an overview of relevant topics and a foundation for further exploration of self selected topics. Student-leaders will learn to spot issues and identify when to seek legal guidance, and assess considerations relevant to critical problem solving and informed decision-making.

ACL 5241. Financial Management for Arts Nonprofits, Community Organizations, and Artists. (3 cr.; A-F or Audit; Spring Even Year)

This course introduces students to concepts and applications of financial management and leadership practices with a specific focus on nonprofit arts and cultural organizations. The goal of the course is to develop both theoretical and practical understanding of the central responsibilities of financial management and leadership to equip students to use financial information, identify business models, and employ a financial lens for planning and decisions. Focus will be on the fundamentals of budgeting and accounting, interpretation of financial statements, data, and procedures for operational forecasts, as well as the fiduciary responsibilities of nonprofit boards. This course is designed for individuals working within arts nonprofits or community organizations,

considering a career in the arts, or interested in learning more about nonprofit financial management principles. Individuals interested in financial sustainability as individual artists or cultural leaders will also benefit from this foundation in financial best practices. The goal of the course is to develop both theoretical and practical understanding of the central responsibilities of solid financial management to benefit arts, cultural, and/or community organizations and the sector as a whole. Students will have the opportunity to apply what is learned to a case study organization.

ACL 5251. Courageous Imagination in Action: Art and Culture as Forces and Resources of Change. (3 cr. ; A-F or Audit; Every Fall)

This class is for anyone passionate about the unique capacities embedded in arts and cultural work, concerned about the cascade of challenges facing humanity, and determined to lead with and through the powerful resources of the arts and culture. Fundamental changes in organizations, programs, and resources are needed to meet the complex challenges of our times. A key emphasis of the course is development of a personal mission and purpose by each student as a leader in working with existing organizations and systems and leading changes essential for a sustainable, humane, creative, and thriving future. The course is designed to challenge and support students as they choose a direction and purpose they wish to address ? contacts, examples, resources, local, regional, national, websites, people, and examples will be provided. The course examines existing organizations and systems, those in transformation and the opportunity, need and challenge in creating new forms. Students meet key people in different sectors and stages of change. This is a highly interactive course, with simulations, imaginative work and a variety of visitors, site visits, and explorations of ideas and beliefs that may be challenging. These may include connections with Minnesota State legislature, regional arts councils, City of Minneapolis and/or St Paul, large and small arts and culture organizations in the area. National networks including USDAC, Americans for the Arts, Climate Generation, The Wounded Warrior Project, and others. Students will prepare a presentation that links their personal purpose and mission with the work they seek and the differences they hope to make and support.

ACL 5251. Courageous Imagination in Action: Art and Culture as Forces and Resources of Change. (3 cr. ; A-F only; Every Fall)

This class is for anyone passionate about the unique capacities embedded in arts and cultural work, concerned about the cascade of challenges facing humanity, and determined to lead with and through the powerful resources of the arts and culture. Fundamental changes in organizations, programs, and resources are needed to meet the complex challenges of our times. A key emphasis of the course is development of a personal mission and purpose by each student as a leader in

working with existing organizations and systems and leading changes essential for a sustainable, humane, creative, and thriving future. The course is designed to challenge and support students as they choose a direction and purpose they wish to address ? contacts, examples, resources, local, regional, national, websites, people, and examples will be provided. The course examines existing organizations and systems, those in transformation and the opportunity, need and challenge in creating new forms. Students meet key people in different sectors and stages of change. This is a highly interactive course, with simulations, imaginative work and a variety of visitors, site visits, and explorations of ideas and beliefs that may be challenging. These may include connections with Minnesota State legislature, regional arts councils, City of Minneapolis and/or St Paul, large and small arts and culture organizations in the area. National networks including USDAC, Americans for the Arts, Climate Generation, The Wounded Warrior Project, and others. Students will prepare a presentation that links their personal purpose and mission with the work they seek and the differences they hope to make and support.

ACL 5261. Culture, Place and Equitable Communities: Ways of Living Together in the 21st Century. (3 cr. ; A-F or Audit; Periodic Summer)

The rise of the creative economy, creative cities, the creative class, and creative placemaking are generally considered unique to the 21st century. Are these new phenomena or just new brand identities for the historic role of cities as centers of cultural production and exchange? As contemporary phenomena, they have also been linked to a rise in social and economic inequities. Creativity, culture, and the role of artists are of increasing significance in the ways cities and communities are planned, form, and function. What roles can artists, activists, cultural leaders, urban planners, and other civic leaders play with regard to making cities more equitable and culturally vibrant? This course explores the evolving relationships of arts, culture, and the creative sector with city planning, development, and democratic practices. Students will hear directly from community leaders and undertake their own community change projects.

ACL 5950. Special Topics. (; 1-4 cr. [max 12 cr.] ; A-F or Audit; Periodic Fall, Spring & Summer)

Special topics. prereq: dept consent

ACL 5993. Directed Studies. (; 1-4 cr. [max 15 cr.] ; A-F only; Every Fall, Spring & Summer)

Guided individual reading or study for qualified graduate students. prereq: Grad student, dept consent

Asian & Middle Eastern Studies (AMES)

AMES 1001. Asian Film and Animation. (AH,GP; 3 cr. ; Student Option; Periodic Fall & Spring)

Various film styles within Asian film/animation production. Ways of analyzing film. Work of 20th-century directors in Asia.

AMES 1201. Arrow, Fist, and Sword: Conceptions of the Hero in Asian Cultures. (GP,LITR; 3 cr. ; Student Option; Periodic Fall & Spring)

Concepts of the "hero" in Persian, Indian Chinese, Korean, and Japanese cultures: How did various societies in these countries define the ethos of the "hero" and his relationship to the community? How did versions of the hero change over time, and how was the hero redefined in the context of modern nationalism? What part have traditional gender roles played in defining the hero, and is a "female" hero possible within these traditions? And how has popular film allowed modern Asian societies to reinterpret their traditional conceptions of the hero? Specific explorations: the Persian hero Rostam in *The Book of Kings*; Rama and retellings of the Indian Ramayana; Mulan and the Chinese female warrior; the Korean hero Hong Gildong; and the Japanese story of the forty-seven ronin.

AMES 1601. Clothing Matters: Culture and Fashion in India. (3 cr. ; Student Option No Audit; Periodic Fall & Spring)

This interdisciplinary course demonstrates the importance of dress and adornment practices in the formation of collective identities in India. By exploring past and current trends in literature, art, media and performance, it shows how cultural texts construct norms and practices regarding space, body and gender. It also focuses on ways different social groups and communities, through creative acts of (un)dressing in the public sphere, create a complex relationship between structures of power and aesthetics. In addition to highlighting the significance of gender and material culture in Indian literature, this course traces the history of dress practices to offer new perspectives on class, caste, religion and nationalism. The readings will further highlight historical and political events where clothing and accessories become crucial sites for resisting established social order and registering collective protest. Texts will also be complemented with screenings of films to show the rich and complex intersection of dress practices with discourses of tradition and modernity.

AMES 1806. Modern Arab Cultures and Societies. (AH,GP; 3 cr. ; Student Option No Audit; Periodic Fall & Spring)

What we commonly and monolithically refer to as "The Arab World" in fact consists of 22 individual nation-states, each with their own particular historical trajectory and a combined population of nearly 400 million people encompassing a plethora of religious faiths, political orientations, social formations, and individual identities. This course provides a starting point for comprehending this frequently misunderstood part of the world, the diverse peoples who inhabit it, and the myriad cultures they practice. We will address the various problems we encounter when approaching such an unwieldy concept as "The Arab World," key moments that have shaped modern Arab

cultures and societies, and examples of how cultural production functions in the context of modern Arab history and politics.

AMES 1836. Modern Middle Eastern Literature. (GP,LITR; 3 cr. ; A-F only; Periodic Fall & Spring)

This course introduces students to the diversity of contemporary Middle Eastern cultures, identities, and histories through readings in modern literature. Reading novels, stories, poetry, and memoirs translated from Arabic, Hebrew, Persian, and Turkish, we will follow a number of key concerns shaping Middle Eastern cultural production: legacies of colonialism and the manner they shaped the relationship between classical and modern literary forms, the ethical and aesthetic challenges of bearing testimony to violence, and the manner literature reflects and subverts racial hierarchies, ethnic divisions, and gender dynamics. These themes will be debated in a range of spaces and contexts: the desert, the city, and the ocean as quintessential environments in times of great social and ecological upheavals; migration flows and refugee identities; the alternating banality and grotesqueness of war; and the formation of intimate, personal relationships.

AMES 1915. Objections to 'Members Only': Female Participants in All-Male Classical Music in Japan. (; 3 cr. ; Student Option; Periodic Fall & Spring)

"Membership" is a peculiar thing. While the matter is certainly an issue of critical moment here and now, and to an intense degree at that, at no place nor time in human history is it totally irrelevant. For, just as with many animate beings, humans have lived in a way in which the action of "grouping" is omnipresent. On the level of both theory and practice, the notions and actions of classification of people into categories have been deeply ingrained in how many civilizations have flourished across time and space. The criteria of such classification are not only myriad but also diverse with no single governing principle (e.g., ancestry, birthplace, race and ethnicity, sex and gender, sexuality, social standing such as class and rank, religion, and so on and so forth). Groups thus formed--be they country, nations, clans, circles, communities, men, women, and the like--are also heavily varied and respective definitions and expectations of "members," and "non members" for that matter, are wide-ranging. Using a specific case study from performing arts in Japan (described below), this seminar helps introduce fresh"man" students at the U to critical thinking in the humanities, by encouraging them to grapple with such a significant and formidable topic as membership, which will provide them with a methodological tool and contemplation ability that promises to be useful throughout (and hopefully beyond) their education at the U. Two key elements of such training are "intersection-ness" and "self reflectiveness." Relying on "intersectionality" (i.e., a well-known concept established in the context of black feminism signifying a hub of various interlocking intersections in a system), the former is to remind students of the aforementioned

diverse nature of grouping. The latter is a caution that the seminar is not merely for us to gather information about the performing arts in question, but to critically contemplate the phenomenon with the understanding that we are not any pure, perfect, unrelated observer with an imaginary objective perspective. To these purposes, the seminar utilizes two pedagogical methods: scaffolding (small multiple tasks to achieve a semester-long project) and group activities for stimulation and mutual support. The performing arts in Japan that the seminar uses as a case study is giday? music. The audio component of the four-century-old puppet theater in Japan now known as bunraku, giday? is usually if not always conducted by two musicians: string-music played by an instrumentalist and the entire lines of all characters on stage narrated solo by a single chanter, who also sings descriptive recitation. Bunraku is an all-male theater, and giday? all-male theatrical vocal-music. Female performers have long been playing giday? as stand-alone music, however, almost always under men's names and sometimes in men's clothing. In premodern times (through 1867), when females' were prohibited from participating in performing arts since 1629-proclamations, female giday? players frequently endured such drastic ordeals as bans, property-confiscation, and incarceration imposed by samurai authorities. In modern times (from 1868 to date), these female performers were no longer subject to such physically violent sentence, but epistemological turmoil they faced was no less radical. The seminar will pay attention to these female musicians. In addition, since the instructor knows some contemporary female giday? musicians in person, the seminar might have an opportunity to learn their stories from themselves, possibly using such technology as Zoom (contingent).

AMES 3001. Concepts in Asian and Middle Eastern Studies. (; 3 cr. ; A-F or Audit; Every Fall)

Introduction to questions of modernity in Asia and the Middle East and foundational course for the major and the minor in Asian and Middle Eastern Studies. Reflecting the range of geography covered by the department, it will cover topics related to the Middle East, South Asia, and East Asia, and highlight connections among them. Our primary goal is to become versed in a number of key concepts and issues that are essential to being a successful student in upper-division AMES courses. Furthermore, we will engage with theoretical, literary, and filmic texts concerning various regions of the Asian continent and develop the ability to respond to major questions in Asian and Middle Eastern Studies through the close reading of primary and secondary materials and the practical employment of key terms and concepts. There will be a strong focus on proper definitions and historical contextualization, and on analytical application and interpretation.

AMES 3232W. "Short" Poetry in China and Japan. (WI; 3 cr. ; Student Option; Periodic Fall & Spring)

Short poetic forms of China and Japan. Chinese quatrains and octets. Japanese tanka and haiku. Translations by modern poets. Texts in original languages (with provided glosses). Art of translation. Translators' conceptions of East Asian 'exoticism.'

AMES 3256. Graphic Novels: Conflict, Peace and Protest. (AH,GP; 3 cr. ; Student Option; Periodic Fall & Spring)

This course will examine a particular medium? graphic novel?which is inherently rich in visual, narrative, and linguistic components. The materials chosen for this course are driven by wars and conflicts in the following four regions: East Asia, South Asia, Southeast Asia, and the Middle East. Through these selected works, we will explore histories of political conflicts, state violence, anticipation for peace as well as understandings and praxes of protest in various forms, namely, social movements; mourning; remembrance; art making; and writing. Given the nature of conflict that always goes above and beyond the question of nation-state, this course will also discuss its amplification to the question of migration, refugee crisis, displacement, and multi-generational trauma among diasporic subjects. Located at the intersection of conflict, peace, and protest, this course not only introduces students to historical processes and complexities of these conflicts? both from the national and international points of view?but also challenges students to question the potentials of graphic novels in mediating these histories and discourses around human rights for readers. Finally, this class explores ways in which we can engage with each other via our shared history and vulnerability, and questions whether peace and resolution promised to our generation via the discourse of human rights are, or will ever be, attainable.

AMES 3265W. The Fantastic in East Asia: Ghosts, Foxes, and the Alien. (LITR,WI; 3 cr. ; Student Option; Periodic Fall & Spring)

How the strange/alien is constructed in premodern Chinese/Japanese literature. East Asian theories of the strange and their role in the classical tale, through the works of Pu Songling, Edo-era storytellers, and others. Role of Buddhist cosmology and salvation. prereq: Some coursework in East Asia recommended

AMES 3336. Revolution and Modernity in Chinese Literature and Culture. (GP,LITR; 3 cr. ; Student Option; Periodic Fall & Spring)

Introduction to modern Chinese literature, visual culture, and critical thought from beginning of 20th century to end of Mao era. Examples of literature/culture, parallel readings of Chinese critical essays. Readings are in English translation.

AMES 3337. Contemporary Chinese Literature and Popular Culture. (GP,LITR; 3 cr. ; Student Option; Periodic Fall & Spring)

Contemporary Chinese literature, popular culture. End of Mao era to present. Creative results of China's "opening and reform." Commercialization and globalization of culture. Literature, visual culture, popular music.

AMES 3351. Martial Arts in Chinese Literature and Film. (AH,GP; 3 cr. ; A-F only; Periodic Fall & Spring)

Investigation of the martial arts motif in Chinese literature and its cinematic descendants.

Class materials include ancient stories about sage kings, assassin-retainers, lady knights-errant; recent blockbusters such as "Crouching Tiger, Hidden Dragon," "Hero," and "Kung Fu Hustle;" the careers and stardoms of Bruce Lee, Jet Li, and Jackie Chan; and American animated films featuring martial arts themes, such as "Mulan" and the "Kung Fu Panda" series. While reflecting cultural transformations across history, these examples manifest a consistent poetics of emptiness, due to the genre's thematic preoccupation with resistance and transcendence, as well as its roots in Confucian-Daoist-Buddhist philosophies. In these regards, the martial arts genre, other than being a pop culture phenomenon, offers a meaningful gateway toward rediscovering the Chinese tradition's cosmopolitan potentials.

AMES 3356W. Chinese Film. (AH,WI; 3 cr. ; A-F or Audit; Periodic Fall & Spring)
Survey of Chinese cinema from China (PRC), Taiwan, and Hong Kong. Emphasizes discussion/comparison of global, social, economic, sexual, gender, psychological, and other themes as represented through film.

AMES 3357. Taiwan Film. (3 cr. ; A-F only; Periodic Fall & Spring)
This course examines the history of Taiwan film from the Japanese colonial period to the early 21st century along with the increased (though still quite limited) availability of pre-1980s films on DVD with English subtitles. We will cover topics such as dialect films; Nationalist propaganda; "healthy realism;" connections with the Hong Kong, Hollywood, and mainland Chinese film industries; the aesthetics of New Taiwan Cinema; the imagination of Taiwan as a postcolonial Southeast Asian rather than East Asian or Chinese polity; and the battle for commercial viability in the global film market. Throughout the course, we will closely analyze cinematic form and narrative structure in addition to broader issues of nation, society, politics, and ecology.

AMES 3362. Women Writers in Chinese History. (AH,GP; 3 cr. ; A-F only; Periodic Fall & Spring)
This class surveys the surprisingly diverse and vibrant tradition of women writers in Chinese cultural history, which during its long imperial period (221 B.C.E.-1911 C.E.) was dominated by a male-centered cultural order. The class situates individual women writers within their specific historical settings and larger cultural backdrops, thus introducing students to literary themes, gender dynamics, and conditions of cultural production in Chinese history. The class also addresses complex shifts in female writing and its social presence across the premodern-modern transition. Taught in English and no prerequisites.

AMES 3372. History of Women and Family in China, 1600-2000. (3 cr. ; Student Option; Fall Even, Spring Odd Year)
Marriage/family life, foot binding, cult of women's chastity. Women in nationalist/communist revolutions. Gender relations in post-socialist China. Effect of ideologies

(Confucianism, nationalism, socialism) on women/family life. Differences between ideology and social practice.

AMES 3373. Religion and Society in Imperial China. (HIS; 3 cr. ; Student Option; Periodic Fall & Spring)
Varieties of religious experience in imperial China. Religion as lived practices. Textual traditions. Buddhism, Daoism, Confucianism, relations among them. Western missionary enterprise in China.

AMES 3374. Patterns in Chinese Cultural History. (3 cr. ; Student Option No Audit; Periodic Fall & Spring)
A survey course of Chinese cultural history across its long evolution. It connects historical and cultural knowledge to the Chinese literary and intellectual traditions, and unveils larger trends in the developments of Chinese culture and society during the pre-20th-century period and across the tradition-modern divide. Taught in English and no prerequisites.

AMES 3377. A Thousand Years of Buddhism in China: Beliefs, Practices, and Culture. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Buddhism in China, 4th-15th centuries. Introduction of Buddhism to China. Relevance of Buddhist teaching to indigenous thought (e.g., Taoism, Confucianism). Major "schools": Tiantai, Huayan, Chan/Zen, etc.. Cultural activities of monks, nuns, and lay believers.

AMES 3420. Topics in Japanese Culture. (; 1-3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)
Selected topics in Japanese culture. Topics specified in the Class Schedule.

AMES 3433. Traditional Japanese Literature in Translation. (LITR; 3 cr. ; A-F or Audit; Periodic Fall & Spring)
Survey of texts in different genres, from 8th to early 19th centuries, with attention to issues such as "national" identity, gender/sexuality, authorship, popular culture. No knowledge of Japanese necessary.

AMES 3436. Postwar Japanese Literature in Translation. (GP,LITR; 3 cr. ; Student Option; Periodic Fall & Spring)
This is an introductory survey of modern Japanese literature and its role in the postwar debates around Japanese culture, aesthetics, politics, and environment. Beginning with the occupation of Japan by the US military and ending with the 2020 Tokyo Olympics (postponed by a global pandemic), students will analyze the main movements in postwar Japanese literary production and the core issues featured in this literature. We will explore national genres in Japan, their premodern precursors, and postmodern manifestations. The course has no prerequisite and assumes no prior knowledge of Japanese cultures or experience with literary analysis. All materials, lectures, and discussions are in English.

AMES 3437. The Japanese Novel. (GP,LITR; 3 cr. ; A-F only; Periodic Fall & Spring)
Survey of the principal authors of the period spanning Japan's opening to the West (1860s

to World War II. Writers include Natsume Soseki, Shiga Naoya, Kawabata Yasunari, Edogawa Rampo, Hayashi Fumiko, and Tanizaki Junichiro.

AMES 3441W. Japanese Theater. (AH,WI; 3 cr. ; A-F or Audit; Periodic Fall & Spring)
Japanese performance traditions. Emphasizes noh, kabuki, and bunraku in their literary/cultural contexts. Relationship between these pre-modern traditions and modern theatrical forms (e.g., Takarazuka Revue).

AMES 3456. Japanese Film. (GP; 3 cr. ; Student Option; Periodic Fall & Spring)
Themes, stylistics, and genres of Japanese cinema through work of classic directors (Kurosawa, Mizoguchi, and Ozu) and more recent filmmakers (Itami, Morita). Focuses on representations of femininity/masculinity.

AMES 3457. War and Peace in Japan Through Popular Culture. (; 4 cr. ; A-F or Audit; Periodic Fall & Spring)
War-related issues in Japan. Animation films, comics from 1940s to 1990s. Mobilization of culture for WWII. Conflict between constitutional pacifism/national security. Japan's role in cold war/post-cold war worlds.

AMES 3458. Japanese Animation. (GP; 3 cr. ; A-F only; Periodic Fall & Spring)
This course takes up the technologies, genres, and themes of Japanese animation. By examining the works of important directors alongside media theories and other related writings, the course will cover not only the major genres and recurrent themes of anime, but also the cultural and critical contexts for apprehending anime.

AMES 3467. Science Fiction, Empire, Japan. (3 cr. ; A-F only; Periodic Fall & Spring)
Premised on its historical position as a non-Western colonial empire, this course takes up Japan as a focal point for examining the relations between science fiction and imperialism. Discussions center on the colonial underpinnings of Japanese science fiction and how particular motifs (future war, time travel, posthuman bodies) critically interrogate this history.

AMES 3468. Environment, Technology and Culture in Modern Japan. (ENV; 3 cr. ; Student Option; Periodic Fall & Spring)
Read/view historical, literary, visual texts to discover guiding ideas about nature, environment, technology use in Japan. No prior knowledge of Japan is necessary.

AMES 3471. Introduction to Japanese Religions. (3 cr. ; Student Option; Periodic Fall & Spring)
An introduction to the development of different forms of religious practice in Japan over the past fourteen hundred years. A survey of Japanese religions and their development will be combined with specific examples (past and present) that demonstrate the way that religious belief has manifested itself in various forms of cultural practice.

AMES 3478. Modern Japan, Meiji to the Present (1868-2000). (HIS; 3 cr. ; Student Option; Every Fall & Spring)

Japan's development as industrial/imperial power after Meiji Restoration of 1868. Political developments in Taisho years. Militarization/mobilization for war in 1930s. Japan's war with China, Pacific War with US. American Occupation. Postwar economic recovery, high growth. Changing political/popular culture of 1980s, '90s.

AMES 3520. Topics in Korean Culture. (; 1-3 cr. [max 9 cr.]; A-F only; Periodic Fall & Spring)
Selected topics in Korean culture. Topics specified in the Class Schedule.

AMES 3536. Modern Korean Literature. (GP,LITR; 3 cr. ; Student Option; Periodic Fall & Spring)
Modern Korean literature in English translation from the colonial period until the 1990s. Read literary texts critically, using genre categories, theories of narrative voice, different understandings of modern literary subjectivity, and historical contextualization.

AMES 3556. Korean Film and Media. (AH,GP; 3 cr. ; Student Option; Periodic Fall & Spring)
This course is an introduction to Korean film from the Japanese colonial period (1910-1945) to the present day. We discuss the emergence of the Korean film industry under the conditions of colonial modernity and the various political pressures put on film production in South Korea until the 1990s. We will then turn to the last twenty years, during which South Korean film and television have experienced a boom in popularity in East Asia and globally. Throughout, we will focus on the formal and technical aspects of film, representations of history and historical memory, genre borrowing and genre mixing, and the relationships between art-house and culture industry productions.

AMES 3558. Korean Popular Culture. (AH,GP; 3 cr. ; A-F only; Periodic Fall & Spring)
This course is an introduction to contemporary Korean popular culture, with a focus on television, video, and online media. We will learn how to think critically about a variety of popular culture phenomena, including dramas, variety shows, comedy performances, video games, food-related programs and videos, political satire and commentary, and music videos. By engaging with the academic scholarship on popular culture, we will learn how to analyze the stories, images, and sounds of Korean popular culture, while situating these within their various cultural and social contexts. Topics covered will include the Korean Wave (hallyu), the culture industry, digital platforms and economies, celebrity, fandom, and globalization. Attention will be given both to the local conditions of cultural production and the transnational influences of Korean media on East and Southeast Asia, as well as Europe and the Americas.

AMES 3576. Language & Society of the Two Koreas. (3 cr. ; A-F only; Periodic Fall & Spring)
This course is designed to offer an introduction and contrastive analysis of the language and

society of the two Koreas; the Republic of Korea (better known as South Korea) and the Democratic People's Republic of Korea (better known as North Korea). This course will introduce the growing divide of the past 70 years between North and South Korea in the areas of language, society, and culture.

AMES 3586. Cold War Cultures in Korea. (3 cr. ; A-F only; Periodic Fall & Spring)
In this course we will analyze the Cold War (1945-1989) not only as an era in geopolitics, but also as a historical period marked by specific cultural and artistic forms. We focus on the Korean peninsula, looking closely at the literary and film cultures of both South Korea and North Korea. We discuss how the global conflict between U.S.-centered and Soviet-centered societies affected the politics, culture, and geography of Korea between 1945 and 1989, treating the division of Korea as an exemplary case extending from the origins of the Cold War to the present. We span the Cold War divide to compare the culture and politics of the South and the North through various cultural forms, including anti-communist and socialist realist films, biography and autobiography, fiction, and political discourse. We also discuss the legacy of the Cold War in contemporary culture and in the continued existence of two states on the Korean peninsula. The primary purpose is to be able to analyze post-1945 Korean cultures in both their locality and as significant aspects of the global Cold War era.

AMES 3587. Current Affairs and Everyday Life in Two Koreas. (3 cr. ; Student Option; Periodic Fall & Spring)
This course is designed to offer an in-depth look at current affairs and social, cultural, and economic interactions that are influenced by everyday hierarchical structures in both North and South Korea. This course will specifically deal with issues that affect individuals and small groups in the two Koreas rather than focusing on issues at the state and international level. The course will take macro-level issues such as hierarchical structures that are remnant of the feudal era and examine their impact at the micro-level for people in the two Koreas. The two Koreas share centuries upon centuries of common socio-cultural structures and ways of being that, despite the recent separation, continue to exert a powerful influence on individuals' daily life even though they may inhabit drastically different political and economic states.

AMES 3636. South Asian Women Writers. (3 cr. ; A-F only; Periodic Fall & Spring)
Survey of South Asian women's writing, from early years of nationalist movement to present. Contemporary writing includes works by immigrant writers. Concerns, arguments, and nuances in works of women writing in South Asia and diaspora.

AMES 3637W. Modern Indian Literature. (GP,WI,LITR; 3 cr. ; A-F or Audit; Periodic Fall & Spring)
Survey of 20th century literature from South Asian countries, including India, Pakistan, and Sri Lanka. All readings in English. Focuses

on colonialism, post-colonialism, power, and representation.

AMES 3638. Islam and Modernity in South Asia. (; 3 cr. ; A-F only; Periodic Fall & Spring)
This course explores the multiple genealogical trajectories of Islamic thought in South Asia through the varied lens of its literary traditions. For centuries, literature has remained an important site for the expression of Islamic identity and its interaction with the larger history of the subcontinent. Muslim writers have traversed diverse domains of human experience through multiple genres: while poetry has been a widely celebrated genre for the expression of private love, drama has emerged as a crucial site for public politics and activism. In this course, students will read texts that have circulated across South Asia and interpret them in relation to enduring questions about power, justice, identity, community and love (both human and divine) in Islam. Reading a wide array of works from diverse temporal and spatial locations, this course examines how the aesthetic and discursive world of South Asia provides a terrain on which the Islamic "socius" of the region has come to define itself in a unique manner. In addition, we also investigate how these literary cultures-at different historical junctures-articulated a secular ethos to define Hindu-Muslim relations in the subcontinent. We further discuss questions of genres-epic, romance, drama, novel and lyric-as a way of thinking about the circulation of literary forms across languages, cultures and national spaces in the past and the present.

AMES 3651. Ghosts of India. (GP; 3 cr. ; A-F only; Periodic Fall & Spring)
Writers, filmmakers, and other creative art practitioners from almost every corner of this living world use the figure of the ghost to address questions of ethics, justice, violence, and repression. This course focuses on India's modern ghosts as well as ghosts and spirits from classical Indian literature. In every sphere of our lives, public and private, we are chased by various ghosts that often appear in forms of memory, remembrance, nostalgia, and forgetfulness. Ghosts scare us, enchant us, and capture our imagination. Our intellectual engagement will consist of theorizations around the figure of the ghost and its various conceptual offshoots (hauntology, specter, the uncanny, etc.) as encountered through literary and filmic texts. The course will also connect these ghostly tales with issues of nationalism, gender, communal and ethnic violence, and capitalism.

AMES 3671. Hinduism. (3 cr. ; Student Option; Periodic Fall & Spring)
Development of Hinduism focusing on sectarian trends, modern religious practices, myths/rituals, pilgrimage patterns/ religious festivals. Interrelationship between Indian social structure/Hinduism.

AMES 3672. Buddhism. (GP; 3 cr. ; Student Option; Periodic Summer)
Historical and contemporary account of the Buddhist religion in Asia/world in terms of its rise, development, various schools, practices,

philosophical concepts, and ethics. Current trends in the modern faith and the rise of "socially engaged" Buddhism.

AMES 3673. Survey of India: Languages, Literature, and Film. (GP; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Survey course of Indian languages and literatures that explores the languages of India from genealogical, linguistic, typological, historical and sociological perspectives. Diachronic analysis of the languages of India in relation to some structural features will be also investigated. This course will also provide an overview of literatures of several main South Asian languages with a focus on Hindi - Urdu literatures. We will address the origin of Hindi-Urdu literatures, periodization, and naming of each period. We will also examine the important writers and their representative work, along with the literary trends and influences of each period, including political, social, and cultural situations which helped to shape the writers and their work. Among the representative literary works in Hindi-Urdu, some have been made into films.

AMES 3679. Religion and Society in Modern South Asia. (AH,GP; 3 cr. ; Student Option; Periodic Fall & Spring)

Survey of religious formations in modern South Asia (Hindu, Islamic, Sikh, Buddhist). Transformation of religious practice/thought in modernity. Relation between religion and nationalism. Geopolitical dimensions of religious transformation in South Asia.

AMES 3700. Topics in Southeast Asian Literature. (; 1-3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)

Selected topics in Southeast Asian literature. Topics specified in the Class Schedule.

AMES 3720. Topics in Southeast Asian Culture. (; 1-3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)

Selected topics in Southeast Asian culture. Topics specified in the Class Schedule.

AMES 3756. Southeast Asian Cinema. (3 cr. ; Student Option; Periodic Fall & Spring)

This course examines the social life and political functions of cinema and media cultures in Southeast Asia in relation to various contexts in which they emerged and circulate. The course is attentive to the impact of historical processes on film and media culture as well as to how film and media process historical events?colonialism, militarism, religious conflict, economic turmoil. The course will be divided into three different periods. We will, first, explore the period of the early twentieth century where colonialism in the region activates claims around nation and nationalism and we will examine the role modern media plays in these debates by looking at how notions of ?national media? produces ?others? who are at the margin of such development. Second, we will explore polarized ideological conflicts during the Cold War?the period in which Americanization and anti-American sentiment were expressed in media through genres that are now considered propaganda. We will also look at films and graphic literature that overtly document

and critique violence. The final part of the course will focus on contemporary Southeast Asia?the financial crisis of 1996 and many forms of authoritarianism that still impact the discussions, understandings, and practices of human rights in the region.

AMES 3771. History of Southeast Asia. (GP; 3 cr. ; A-F or Audit; Every Fall & Spring)

Origins of civilization/indigenous states. impact of world religions and Western colonialism on gender, social, political, and economic structures. Nationalism. Establishment of Vietnam, Thailand, Indonesia, and the Philippines.

AMES 3772. Hmong Language and Culture Immersion in China. (4 cr. ; A-F only; Periodic Summer)

This instructor-led study abroad course in Kunming, China, focuses on Hmong language and culture in the trans-historical context of China. Students will gain a deeper understanding of the intricate differences within the Hmong linguistic and cultural diaspora through a comparative approach examining the complexity of Hmong dialects and regional cultural shifts. Instructors will work with all student levels, and instruction is oriented towards helping students learn to use the language effectively. All aspects of linguistic performance - speaking, reading, writing and listening - will be addressed. Open to all students interested in Hmong language and culture, regardless of language level.

AMES 3773. Hmong Language and Culture Immersion in Thailand. (GP; 4 cr. ; Student Option No Audit; Periodic Summer)

This is an instructor-led study abroad course in Thailand. Hmong in the United States trace their story of diaspora directly to Thailand as the most recent country of immigration. While many traced their refugee stories to Thailand, before immigrating to the United States and other countries, Thailand is also a country where many Hmong settled. Thailand is a country of many Hmong stories, intertwined with settlement, immigration, social economic struggles and successes, language development, and more. This study abroad course will focus on learning, observing and exploring the Hmong diaspora through language and culture in Thailand. The course will explore the historical, cultural, and linguistic contexts of Hmong settlement and immigration in Thailand as well as compare to contexts of Hmong in the United States.

AMES 3800. Topics in Arab Literature. (; 3 cr. [max 9 cr.] ; A-F only; Periodic Fall & Spring)

Topics specified in Class Schedule.

AMES 3820. Topics in Arab Culture. (; 3 cr. [max 9 cr.] ; A-F only; Periodic Fall & Spring)

Topics specified in Class Schedule.

AMES 3832. The Politics of Arabic Poetry. (GP,LITR; 3 cr. ; A-F only; Periodic Fall & Spring)

This course engages with Arabic poetry in its socio-political context. How have Arab poets from the pre-Islamic era till the present time used their verse as a tool to affirm the structure of their society, or to struggle with it? What

roles did Arabic poetry play at the Abbasid imperial courts? How does Arabic poetry participate in the constitution and promulgation or subversion of political ideologies? And what presence has it had in Arab peoples' struggles for independence or reform, historically and today as part of the Arab Spring?

AMES 3833. Jinn, Ghosts, and Demons in Arabic Literature. (GP,LITR; 3 cr. ; A-F only; Periodic Fall & Spring)

Jinn, also known as genies, are supernatural beings intrinsic to Islamic cosmology and culture: neither human nor divine, of our world but (usually) invisible to us. This course traces the trope of the jinni in Arabic literature: from the place of jinn in the Quran and Islamic tradition, through their role in the composition of the greatest poetry, to their reincarnation in modern works of literature. Following a survey of classic texts and contexts, we will ask why modern authors summon demons and resurrect ghosts, and what political and cultural work these unruly beings are called to perform. More specifically, we will explore the manner in which jinn are latched onto modern debates on personal and collective trauma, memory, madness, relations between East and West (or North and South), political and state violence, gender relations and hierarchies, and virtual realities.

AMES 3837. Orienting Hebrew Literature. (GP,LITR; 3 cr. ; A-F only; Periodic Fall & Spring)

An introductory survey of Modern Hebrew Literature and its journey from Eastern Europe through Ottoman/British Palestine to the State of Israel. The class centers on the manner in which Hebrew literature has envisioned the Middle East or ?the Orient,? reflecting, manipulating, or challenging orientalist paradigms. The first part of the course focuses on Hebrew literature written by Eastern European writers, their fantasies of the East as well as their engagements with orientalist or anti-Semite prejudices. The second part examines Hebrew literature?s attempts to ?nativize? in Palestine. Finally, we will read a series of texts by Ashkenazi, Mizrahi, and Palestinian Israeli writers that complicate any attempt to position Hebrew within an Orient/Occident dichotomy. No prior familiarity with Hebrew literature is necessary. All texts will be read in English.

AMES 3856W. Palestinian Literature and Film. (GP,WI; 3 cr. ; A-F only; Periodic Fall & Spring)

This course examines modern literature and film of the Palestinian people both for artistic significance and interactions with the broader historical and political situations confronted by Palestinians. We will ask how cultural production, namely literature and film, interacts with, responds to, and even anticipates historical and political events. At the same time, we will problematize a strictly historicist and political reading of literary and cinematic texts, which reduces such artistic works to mere sociological documents, overlooking their creative and artistic achievements. Ultimately, this leads us to a number of questions: what is the relationship between history/politics

and art? Can artistic texts transcend the historical and political contexts in which they are produced? How has artistic production functioned within the context of Palestinian statelessness, exile, and anti-colonial struggle? All texts covered in the course will be in English translation, however those able to read texts in the original Arabic are encouraged to do so.

AMES 3867. Orientalism and the Arab World. (AH,DSJ; 3 cr. ; A-F only; Periodic Fall & Spring)

This course explores the various manners in which the Arab World? is constructed and re/presented in American and European discourses. Reading through scholarly writings, literature, visual arts, and popular media, this course illuminates the manner in which the idea of a monolithic Arab World? and quintessential Arab? subject are constructed and re/produced for western consumption. Crucially, this course also examines the manner in which this re/production of the Arab World/Subject? is integral to the construction of western identity itself? serving as a foil to western self-conceptualization. The concept of orientalism was introduced into western scholarship by Edward Said through his seminal 1978 work, *Orientalism*, often credited as a foundational text in the field of postcolonial studies. In the first part of the course, we will closely read *Orientalism* and some of the influential critical engagements with Said's book. We will also discuss how orientalist discourse has been subsumed under the debates on the Clash of Civilizations? and The War on Terror? in the 21st century. The second part of the course will look at orientalist representations in a variety of mediums, from literature and visual art to video games. In the final part of the course, we will try to inventory the traces? of Orientalism on the Oriental subject, or examine the manner Arab artists and writers have engaged with orientalism's legacies.

AMES 3871. Islam: Religion and Culture. (3 cr. ; Student Option; Every Fall)

This course is a brief survey of the religion and civilization of Islam. It introduces students to 1) Islamic history from its inception in the seventh century CE to the present, with emphasis on the life of the Prophet Muhammad and the early Caliphate; 2) The authoritative texts of Islam, i.e. the Quran and Prophetic traditions (Hadith); 3) The institutions and discourses characteristic of Islamic civilization; and 4) The transformation of Muslim life and thought in the modern period. By taking this course, students become familiar with the chief ideas, characters, narratives, rites, localities, and movements associated with Islam. prereq: Soph or jr or sr

AMES 3872. The Cultures of the Silk Road.

(3 cr. ; Student Option; Every Fall & Spring)
Past/present state of cultures that flourished in Central Asia (present-day CA republics, Iran, Afghanistan) after Alexander the Great. Decline with opening of sea routes.

AMES 3877. The Arab Renaissance: Narrating Modernity. (AH,GP; 3 cr. ; A-F only; Periodic Fall & Spring)

The Nah?a, a word meaning renaissance, awakening, or simply the act of standing up, is the name Arab writers and intellectuals of the 19th c. gave their own historical period. What does it mean to view oneself as living through a revival? How does this view shape the contours of the past, or of the future? This class will address these questions through a survey of the political, intellectual, social, and cultural aspects of Arab modernity. We will examine how Arab thinkers of the late 19th and early 20th century produced new genres, identities, and communal affiliations to narrate their experience of modernity, which they often coded as the encounter with the West. Our readings, all in English translation, will cover the first confrontations (and love affairs) with European powers, the self-professed urgency of projects of reforming language, literature, and cultural institutions, the growing schism between religious and secular thought, and the attempts to articulate indigenous alternatives to Western-style modernity.

AMES 3886. Petrofictions: Oil Wars, Wealth, and Waste in the Middle East. (AH; 3 cr. ; A-F only; Periodic Fall & Spring)

In 1992, the novelist Amitav Ghosh wondered why the "oil-encounter," the most significant, culture-altering development of the twentieth century, has not been narrativized. Twenty years later, in *The Great Derangement*, he concluded that our prevalent narrative forms are inadequate to narrate the slow catastrophe of climate change, simply because they are so implicated, even complicit, in the extractive logics of petromodernity. This course explores our contemporary modernity of oil dependence through critical engagement with Middle Eastern cultural production. It postulates that to think about oil is not solely to think about derricks or spectacular spills or barrel prices, but about the basic narratives, fictions, and ideologies that underline our daily lives; that reading fictions (conceived broadly) is both a method and resource to map and critique ways in which the world's resources are unevenly produced, extracted, and exploited on a global-local scale; and that humanistic inquiry can challenge the common assumption that existing energy systems are inevitably necessary in modern life. Throughout the semester, the students will engage in critical readings of novels, films, and visual art that emerge from and react to the networked reality of an oil-addicted world. They will critically analyze the narrative forms and visual vocabularies through which the petro-industry has been depicted, as well as learn about the violent history of oil extraction and its environmental effects. Finally, they will consider how creative works allow us to imagine and promote alternative and more sustainable energy futures.

AMES 3900. Topics in Asian Literature. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)

Topics specified in Class Schedule.

AMES 3920. Topics in Asian Culture. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)

Topics specified in Class Schedule.

AMES 3993. Directed Study. (1-4 cr. [max 16 cr.] ; Student Option; Every Fall & Spring)
Individual reading/study, with guidance of a faculty member, on topics not covered in regular courses. Prereq-instr consent, dept consent, college consent.

AMES 4901W. Capstone Project in Asian & Middle Eastern Studies. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)

The capstone project in the department of Asian and Middle Eastern Studies is meant to demonstrate the cumulative language, critical thinking, and analysis skills developed by students over the course of their undergraduate studies. It consists of a thesis of at least 6000 words, in which students must synthesize research in primary language sources (i.e. texts, films, or other forms of cultural production in the original language of student's declared subplan) with secondary research. prereq: AMES major, sr

AMES 5220. Pedagogy of Asian Languages and Literatures. (; 3 cr. [max 9 cr.] ; A-F only; Every Fall & Spring)

Second language acquisition theory, methods, testing, and technology applicable to the teaching of less commonly taught languages.

AMES 5351. Chinese New Media. (3 cr. ; A-F only; Periodic Fall & Spring)

This course explores new media and intermediality from specific moments in the history of modern China. The new visibility of the late Qing Dynasty offers examples of how new forms of visual culture became both reflexive and constitutive of modernity. Later, silent cinema of the Republican era both drew upon and defined itself against existing Chinese dramatic forms, particularly opera. In the 1930s, the arrival of sound in cinema provided a space for phonographic modernity to be expressed through film. In the People's Republic, the productive interplay between traditional art forms and cinema entered a new era, culminating in the cinematic adaptations of the model plays? of the Cultural Revolution. Finally, recent years have seen the explosive growth of digital cinema, computer animation, internet culture, and gaming communities.

AMES 5358. Realism, Revolution, and the Moving Image. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Cinema associated with socialist realism as a global, transnational phenomenon at the heart of the aesthetics of the 20th-century's communist movement. The work of revolutionary filmmakers from China, Soviet Union, North Korea, Cuba, Eastern Europe, and Africa informs our exploration of socialist realism. Formalized by Maxim Gorky and other Soviet artists, theorists, and cultural officials in the early 1930s, socialist realism would become the official literary and artistic style of Communist revolutionary movements and resulting states throughout the world. Certain consistencies of style and theme spread to various sites across histories and geographies, yet much variation also was evident and will be explored in this class. Rejecting the dismissal of socialist realism as mere propaganda, we will take seriously

its theorization and its aesthetic innovations, as well as its relationships with classical Hollywood narration, melodrama, and the psychoanalytic concept of sublimation. Through an examination of socialist realism's variations and limits, we will grapple with larger questions of modernity, authority, and the function of art in modern societies.

AMES 5359. Early Shanghai Film Culture. (3 cr. ; Student Option; Periodic Fall & Spring) Shanghai film culture, from earliest extant films of 1920s to end of Republican Era in 1949. Influences on early Chinese film, from traditional Chinese drama to contemporary Hollywood productions. Effects of leftist politics on commercial cinema. Chinese star system, material film culture.

AMES 5374. The Monkey King and Transcultural China: Chinese Myth, Legend, and Ideology. (; 3 cr. ; Student Option No Audit; Periodic Fall & Spring) Early Chinese myths/legends/historical narratives about the Monkey King. Cultural formations from later periods, including contemporary popular culture and Asian American literature. Construction of China/Chinese in 20th Century seen through the Monkey as a figure of otherness and in-betweenness in relation to globalization and cross-cultural identity.

AMES 5420. Topics in Japanese Culture. (; 3 cr. [max 9 cr.] ; A-F only; Periodic Fall & Spring) Topics specified in course schedule.

AMES 5446. Kabuki: A Pop, Queer, and Classical Theater in Japan. (3 cr. ; A-F only; Periodic Fall & Spring) Kabuki, an all-male theater of "song (ka)/dance (bu)/acting (ki)" that came into being in the 17th century, still boasts popularity in Japan. This course explores kabuki in several contexts: historical, theatrical, literary, and theoretical. It aims to historicize this performing art in its four-hundred-year dynamic trajectory against the static understanding that it is a national, high culture. No less importantly, we inquire into theoretical implications of subject matter, such as citationality, gender construction, and the like. Furthermore, this course attends to what is usually marginalized and overlooked in kabuki historiography: *koshibai* (unlicensed small troupes of kabuki); *onna yakusha* (women kabuki actors who mastered the acting techniques established by male kabuki actors—including the technique of female impersonation). Open to anyone with an interest, no previous knowledge of Japanese studies, theater studies, or Japanese is required. All of the readings will be available in English. Audio-visual materials will be used whenever available and appropriate.

AMES 5486. Images of "Japan". (3 cr. ; A-F only; Periodic Fall & Spring) This course examines non-Japanese texts that deploy the imagination of "Japan" in their narratives. Discussions will take up such focal points as: ethnographic cinema, the politics of travel and translation, the intersections of race and gender, the cultural politics of alternate

histories, and the ramifications of techno-orientalist discourse.

AMES 5556. Korean Film and Media. (3 cr. ; Student Option; Periodic Fall & Spring) This course is an introduction to Korean film from the Japanese colonial period (1910-1945) to the present day. We discuss the emergence of the Korean film industry under the conditions of colonial modernity and the various political pressures put on film production in South Korea until the 1990s. We will then turn to the last twenty years, during which South Korean film and television have experienced a boom in popularity in East Asia and globally. Throughout, we will focus on the formal and technical aspects of film, representations of history and historical memory, genre borrowing and genre mixing, and the relationships between art-house and culture industry productions.

AMES 5620. Topics in South Asian Culture. (; 3 cr. ; A-F only; Periodic Fall & Spring) Topics specified in Class Schedule.

AMES 5636. South Asian Women Writers. (; 3 cr. ; Student Option; Periodic Fall & Spring) Survey of South Asian women's writing, from early years of nationalist movement to present. Contemporary writing includes works by immigrant writers. Concerns, arguments, and nuances in works of women writing in South Asia and diaspora.

AMES 5720. Topics in Southeast Asian Culture. (; 1-3 cr. ; Student Option; Periodic Fall & Spring) Selected topics in Southeast Asian culture. Topics specified in the Class Schedule.

AMES 5820. Topics in Arab Culture. (; 3 cr. [max 9 cr.] ; A-F only; Periodic Fall & Spring) Topics specified in Class Schedule.

AMES 5837. Arab Prison Writing. (3 cr. ; Student Option; Periodic Fall & Spring) From colonial-era prisons to post-colonial regimes' widespread use of detention to neo-colonial spaces of confinement such as Guantanamo and Abu Ghraib, incarceration and its threat have been prominent features of modern Arab life spawning a distinct genre: prison writing. This course surveys novels and memoirs of this genre to examine the various forms imprisonment and incarceration take in Arab literature and the often surprising ways in which they are represented.

AMES 5866. Gender and Sexuality in Modern Arabic Literature. (3 cr. ; Student Option; Periodic Fall & Spring) Survey of modern Arabic literature's key role in the articulation, construction, and subversion of gendered subjectivities. Explores the construction of masculine and feminine subjectivities, as well as the blurring of the dichotomy between the two. Also explores how homoerotic desire is presented in modern Arabic novels. Engages the complex interplay between the gender politics of literary texts, and the broader historical and political contexts from which they emerge. All texts covered in this course will be in English translation, however those able to read texts in the original Arabic are encouraged to do so.

AMES 5877. The Arab Renaissance: Narrating Modernity. (3 cr. ; Student Option; Periodic Fall & Spring) The Nah'aa, a word meaning renaissance, awakening, or simply the act of standing up, is the name Arab writers and intellectuals of the 19th c. gave their own historical period. What does it mean to view oneself as living through a revival? How does this view shape the contours of the past, or of the future? This class will address these questions through a survey of the political, intellectual, social, and cultural aspects of Arab modernity. We will examine how Arab thinkers of the late 19th and early 20th century produced new genres, identities, and communal affiliations to narrate their experience of modernity, which they often coded as "the encounter with the West." Our readings, all in English translation, will cover the first confrontations (and love affairs) with European powers, the self-professed urgency of projects of reforming language, literature, and cultural institutions, the growing schism between religious and secular thought, and the attempts to articulate indigenous alternatives to Western-style modernity.

AMES 5886. Petrofictions: Oil Wars, Wealth, and Waste in the Middle East. (3 cr. ; A-F only; Periodic Fall & Spring) In 1992, the novelist Amitav Ghosh wondered why the "oil-encounter," the most significant, culture-altering development of the twentieth century, has not been narrativized. Twenty years later, in *The Great Derangement*, he concluded that our prevalent narrative forms are inadequate to narrate the slow catastrophe of climate change, simply because they are so implicated, even complicit, in the extractive logics of petromodernity. This course explores our contemporary modernity of oil dependence through critical engagement with Middle Eastern cultural production. It postulates that to think about oil is not solely to think about derricks or spectacular spills or barrel prices, but about the basic narratives, fictions, and ideologies that underline our daily lives; that reading fictions (conceived broadly) is both a method and resource to map and critique ways in which the world's resources are unevenly produced, extracted, and exploited on a global-local scale; and that humanistic inquiry can challenge the common assumption that existing energy systems are inevitably necessary in modern life. Throughout the semester, the students will engage in critical readings of novels, films, and visual art that emerge from and react to the networked reality of an oil-addicted world. They will critically analyze the narrative forms and visual vocabularies through which the petro-industry has been depicted, as well as learn about the violent history of oil extraction and its environmental effects. Finally, they will consider how creative works allow us to imagine and promote alternative and more sustainable energy futures.

AMES 5920. Topics in Asian Culture. (; 3 cr. [max 12 cr.] ; A-F only; Periodic Fall & Spring) Topics specified in Class Schedule.

AMES 5993. Directed Study. (1-4 cr. [max 16 cr.] ; Student Option; Every Fall, Spring & Summer)

Individual reading/study, with guidance of a faculty member, on topics not covered in regular courses. Prereq-instr consent, dept consent, college consent.

Asian American Studies (AAS)

AAS 1101. Imagining Asian America.

(DSJ,SOCS; 3 cr. ; Student Option; Every Fall) Issues in Asian American Studies. Historical/recent aspects of the diverse/multifaceted vision of "Asian America," using histories, films, memoirs, and other texts as illustrations.

AAS 3001. Contemporary Perspectives on Asian America.

(DSJ; 3 cr. ; Student Option; Every Fall) Interdisciplinary overview of Asian American identities. Post-1965 migration/community. History, cultural productions, and concerns of Americans of Chinese, Japanese, Korean, South Asian, Filipino, and Southeast Asian ancestry.

AAS 3211W. Race & Racism in the U.S..

(DSJ,WI; 3 cr. ; A-F or Audit; Every Fall & Spring) We live in a society steeped in racial understandings that are often invisible?some that are hard to see, and others that we work hard not to see. This course will focus on race relations in today's society with a historical overview of the experiences of various racial and ethnic groups in order to help explain their present-day social status. This course is designed to help students begin to develop their own informed perspectives on American racial ?problems? by introducing them to the ways that sociologists deal with race, ethnicity, race relations and racism. We will expand our understanding of racial and ethnic dynamics by exploring the experiences of specific groups in the U.S. and how race/ethnicity intersects with sources of stratification such as class, nationality, and gender. The course will conclude by re-considering ideas about assimilation, pluralism, and multiculturalism. Throughout, our goal will be to consider race both as a source of identity and social differentiation as well as a system of privilege, power and inequality affecting everyone in the society albeit in different ways.

AAS 3251W. Sociological Perspectives on Race, Class, and Gender.

(DSJ,WI,SOCS; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer) In the midst of social unrest, it is important for us to understand social inequality. In this course we will analyze the impact of three major forms of inequality in the United States: race, class, and gender. Through taking an intersectional approach at these topics, we will examine the ways these social forces work institutionally, conceptually, and in terms of our everyday realities. We will focus on these inequalities as intertwined and deeply embedded in the history of the country. Along with race, class, and gender we will focus on other axes of inequality including sexuality, citizenship, and dis/ability. We will analyze the meanings and values attached to these social categories, and the ways in which these social constructions help rationalize, justify, and reproduce social inequality.

AAS 3271. Learning in the Asian American Community.

(; 3 cr. [max 8 cr.] ; Student Option; Periodic Fall & Spring) This course is intended to give students a general introduction to participatory learning through engagement with Asian American community organizations and/or leaders. The course is based within Asian American studies, an interdisciplinary field of inquiry that examines how histories of immigration, exclusion, racialization, and citizenship have shaped Asian American communities and identities. In turn, Asian American studies asks how Asian Americans, configured as immigrants, refugees, "forever foreigners," and "model minorities," impact how American nation, empire, rights, and belonging are constructed. Working with community partners, students will have the opportunity to learn several different community-based research skills: newspaper article search, archival research and/or archival organization, interviewing skills, and audio/video production. Students also have the option to complete service learning with an organization throughout the semester; with this option, students will write a short reflection statement on their service learning as their final project. prereq: AAS and CRES minors must register A-F.

AAS 3301. Asian America Through Arts and Culture.

(AH,DSJ; 3 cr. ; Student Option; Spring Even Year) The course focuses on the close analysis and interpretation of individual works by a range of modern and contemporary artists. Students will analyze, critique, and interpret these works in light of the historical and social contexts in which they were produced, their creation and uses of aesthetic form, and their impact on individuals and communities. Discussion, writing assignments, and oral presentations will focus on different ways of encountering and evaluating artistic work; for instance, students will write critical analyses and production reviews as well as dialogue more informally through weekly journal entries and online discussion forums. We will examine what it means to define artists and their work as being "Asian American" and explore how other categories of identity such as gender, sexuality, or class intersect with race. We will study how art works not only as individual creativity but also as communal and social practice; for instance, we look at the history of theaters, such as East-West Players or Pan Asian Repertory Theatre, that have sustained Asian Americans as actors, playwrights, and designers.

AAS 3303W. Writing Differences: Literature by U.S. Women of Color.

(DSJ,WI,LITR; 3 cr. ; Student Option; Fall Odd Year) Interpret/analyze poetry, fiction, drama of U.S. women minority writers. Relationship of writer's history, ethnicity, race, class, gender to her writings.

AAS 3311. Asian American Theater.

(3 cr. ; Student Option; Periodic Fall & Spring) Through submerging students in both theater history and practice, this class brings students

closer to the history, experiences, and politics of Asian Americans. Why are Asian American stories needed and how do we tell them? What are the artistic and social agendas driving the making of Asian American theater? How have the styles of performance shifted? While we will be actively working on readings and original theater projects, you don't need to be a theater expert to enjoy this class. Topics will include reading plays by Frank Chin, David Henry Hwang, Wakako Yamauchi, Naomi Iizuka, and others; looking at the history of Asian American theater companies; discussing creative approaches to casting, acting, directing, and design; and building collaborations among companies, audiences, and communities.

AAS 3341. Asian American Images.

(AH,DSJ; 3 cr. ; Student Option; Periodic Fall & Spring)

From 19th-century anti-Chinese political cartoons to Harold and Kumar, visual representations of Asians in the United States have long influenced how Asian Americans are seen and treated. What are some of the ways that photography, graphic arts, and digital culture have pictured Asian Americans as aliens, citizens, immigrants, workers, family and community members, entertainers, and artists? Course topics will relate visual images to particular historical moments, including the early exclusion period and the "yellow peril" stereotype; WWII Japanese American incarceration and the drawings of Min? Okubo, and photo-journalism documenting U.S. military involvement in Southeast Asia and its aftermath. How do photographic and other images work to counter historical amnesia, heal traumatic loss, and document social injustice? Other weeks of the class will explore the ways that individuals, families, and communities use photographs, video, and other visual media to preserve a sense of connection and belonging. We will also look at how contemporary Asian American photographers such as Tseng Kwong Chi, Nikki Lee, and Wing Young Huie experiment with visual images to raise questions of racial and national identity, social inequality, gender, sexuality, and political agency. The course also includes a digital storytelling project that encourages students to create video images and sound reflecting Asian American immigration stories from local communities.

AAS 3351. Asian Americans and Popular Culture.

(AH,DSJ; 3 cr. ; Student Option; Periodic Fall & Spring) Over the past few decades, Asian Americans have become increasingly visible both as the subjects and producers of popular culture in the United States. This course will explore how this new recognition of Asian Americans in popular literature, cinema, television, and entertainment is related both to longer histories of Asian immigration and racial exclusion and to post-1960s efforts to forward racial awareness, community activism, and social justice. Our first unit will look at how particular stereotypes such as the yellow peril or the wartime enemy encouraged anti-Asian feeling and violence and legal restrictions on immigration and naturalization. We will

then examine how throughout history, Asian immigrants and their descendants used song, dance, theater, writing, and other forms of popular culture to express personal desires and foster collective ties. Our final unit concentrates on contemporary popular culture and its relationship to the changing identities of Asian Americans. How do Asian Americans influence the current essays, films, and videos that are consumed by millions today? How are increasingly pan-ethnic, interracial, multiracial, transnational, and global experiences reflected in popular culture?

AAS 3361. Asian Americans and Food. (3 cr. ; Student Option; Periodic Fall)

Asian Americans have always been intimately connected to food practices and institutions in the American imagination. Food is the medium through which Asian American cultural difference—including their status as “perpetual foreigners” or their “model minority character”—are typically expressed and disseminated. Historically, Asian migration to the United States was fueled by labor needs particularly in the agricultural sector. In addition, Asian labor has been stereotypically linked to food service and preparation such as the ubiquitous Chinese take-out place and more recently, the sushi and Korean fusion joints. This course is an introduction to the interdisciplinary study of food to better understand the historical, social, and cultural aspects of Asian American food preparation, distribution and consumption. Students will investigate the politics and poetics of Asian American foodways by examining social habits, and rituals around food in restaurants, homes and other public venues. The course texts include ethnographic essays, fictional works, memoirs, magazines, and television shows.

AAS 3409W. Asian American Women's Cultural Production. (AH,WI,DSJ; 3 cr. ; Student Option; Every Fall)

Diversity of cultures designated “Asian American.” Understanding women’s lives in historical, cultural, economic, and racial contexts.

AAS 3483. Hmong History Across the Globe. (; 3 cr. ; Student Option; Fall Odd, Spring Even Year)

Hmong interaction with lowland Southeast Asian states (Laos, Vietnam) and Western colonial powers (French, American) since 19th century. Changes to religious, social, political, and gender institutions. Aspirations for political autonomy.

AAS 3486. Hmong Refugees from the Secret War: Becoming Americans. (3 cr. ; Student Option; Spring Odd Year)

Socio-economic, political, gender, cultural/religious changes in Hmong American community during last three decades. How Hmong are racialized in American society. Impact to first/second generations.

AAS 3503. Asian American Identities, Families, & Communities. (SOCS,DSJ; 3 cr. ; A-F or Audit; Periodic Spring)

This course provides a sociological overview of Asian American identities, families and communities. To place these experiences

within a broader historical, structural, and cultural context the course will begin with a brief introduction to the history of Asians and Asian Americans in the United States and sociological theories about incorporation and racial stratification. We will then examine the diversity of Asian American communities and families, highlighting ethnic, gender, and class variations. Other topics of focus include racialization and discrimination, education, ethnic enclaves, family and intergenerational relationships, identity, media, culture, and politics and social action. Throughout the course we will consider the ways in which society affects individuals, and how in turn, individuals affect society. Students will have an option to do community-engaged learning or another course project.

AAS 3601W. War and Empire: Asian American Perspectives. (GP,WI; 3 cr. ; Student Option; Periodic Spring)

This course examines the reach of war and empire in Asian America since the turn of the twentieth century. Starting with US wars in the Philippines (1898-1910) and the formation of the colonial state, the course will track the ascendancy of US empire in Asia and paths toward wars against imperialist Japan (1941-1945), in Korea (1950-53), and in Vietnam (1955-1975). The course will address the relevance of the unending Global War on Terrorism (2001-) in contemporary Asian America. Together, the course explores how these wars have shaped and continue to inform the lives and memories of Asian immigrants and refugees, their children, and other Asian Americans.

AAS 3862. American Immigration History.

(DSJ,HIS; 3 cr. ; A-F or Audit; Every Spring) Global migrations to U.S. from Europe, Asia, Latin America, and Africa, from early 19th century to present. Causes/cultures of migration. Migrant communities, work, and families. Xenophobia, assimilation/integration, citizenship, ethnicity, race relations. Debates over immigration. Place of immigration in America's national identity.

AAS 3875W. Comparative Race and Ethnicity in U.S. History. (DSJ,WI,HIS; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

This writing-intensive course examines the racial history of modern America. The focus is placed on how American Indians, African Americans, and immigrants from Europe, Asia, and Latin America struggle over identity, place, and meanings of these categories in society where racial hierarchy not only determined every aspect of how they lived, but also functioned as a lever to reconstitute a new nation and empire in the aftermath of the Civil War. We are interested in studying how these diverse groups experienced racialization not in the same way but in various and distinct ways in relation to each other.

AAS 3877. Asian American History, 1850 to Present. (DSJ,HIS; 3 cr. ; Student Option; Every Fall & Spring)

Asian American history and contemporary issues, from 1850 to present. Immigration, labor, anti-Asian movements, women/families,

impact of World War Two, new immigrant/refugee communities, civil rights, Asian American identity/culture.

AAS 3920. Topics in Asian American Studies. (; 2-4 cr. [max 8 cr.]; Student Option; Every Fall & Spring)
Topics specified in Class Schedule.

AAS 3993. Directed Studies in Asian American Studies. (; 1-9 cr. ; Student Option; Every Fall, Spring & Summer)
Guided individual reading or study. prereq: instr consent

AAS 4231. Color of Public Policy: African Americans, American Indians, Asian Americans & Chicanos in the U.S.. (3 cr. ; Student Option; Periodic Fall)

Structural or institutional conditions through which people of color have been marginalized in public policy. Critical evaluation of social theory in addressing the problem of contemporary communities of color in the United States.

AAS 4232. American Drama by Writers of Color. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Selected works by Asian American, African American, American Indian, Latino, and Chicano playwrights. How racial/ethnic differences are integral to shaping different visions of American drama. History of minority/ethnic theaters, politics of casting, mainstreaming of the minority playwright.

AAS 4311. Asian American Literature and Drama. (DSJ,LITR; 3 cr. ; A-F or Audit; Fall Odd Year)

Literary/dramatic works by Asian American writers. Historical past of Asian America through perspective of writers such as Sui Sin Far and Carlos Bulosan. Contemporary artists such as Frank Chin, Maxine Hong Kingston, David Henry Hwang, and Han Ong. Political/historical background of Asian American artists, their aesthetic choices.

AAS 5993. Directed Readings. (; 1-4 cr. [max 8 cr.]; Student Option; Periodic Fall)
Directed reading—must be set up with individual instructor.

Astronomy (AST)

AST 1001. Exploring the Universe. (ENV,PHYS; 4 cr. ; Student Option; Every Fall, Spring & Summer)

The human place in the Universe. Study of Earth, other planets, sun, stars, galaxies. Background and fragility of life on Earth. Scale, origin, history of universe and our relationship to it.

AST 1011H. Exploring the Universe, Honors. (ENV,PHYS; 4 cr. ; A-F only; Every Fall & Spring)

Human place in universe. Earth, other planets, sun, stars, galaxies. Background/fragility of life on Earth. Scale, origin, history of universe, our relationship to it. Honors version of 1001. prereq: High school trigonometry, [high school physics or chemistry]

AST 2001. Fundamental Astrophysics. (; 4 cr. ; Student Option; Every Fall & Spring)

Physical principles and study of solar system, stars, galaxy, and universe. How observations/conclusions are made. prereq: [One yr calculus, PHYS 1302] or instr consent

AST 2993. Directed Studies. (1-5 cr. [max 10 cr.]; Student Option; Every Fall & Spring) Independent, directed study in observational and theoretical astrophysics. Arranged with faculty member. prereq: 1 yr calculus, Phys 1302, instr consent

AST 4001. Astrophysics I. (; 4 cr. ; A-F or Audit; Periodic Fall) Astrophysics of stars and stellar populations. Stellar formation, evolution, interiors/atmospheres. Stellar populations, galactic distribution of stars. prereq: 2001, Phys 2601

AST 4002. Astrophysics II. (; 4 cr. ; A-F or Audit; Every Spring) Astrophysics of galaxies and the universe. Diffuse matter, galactic structure, and evolution. Clusters of galaxies. Introductory cosmology, evolution of the universe. prereq: 2001, Phys 2601

AST 4031. Interpretation and Analysis of Astrophysical Data. (4 cr. ; A-F only; Every Spring) Introduction to analysis techniques with applications to modern astrophysics. Methods to interpret/analyze large data sets from experiments. Principles/methods of analysis, with applications to current research. For senior undergraduate/graduate students in Physics/Astronomy. prereq: [Math 2243 or 2373 or equivalent], [Math 2263 or 2374 or equivalent], Ast 2001 or instr consent

AST 4041. Computational Methods in the Physical Sciences. (; 4 cr. ; Student Option; Periodic Fall & Spring) Introduction to using computer programs to solve problems in physical sciences. Selected numerical methods, mapping problems onto computational algorithms. Arranged lab. prereq: PHYS 3041

AST 4299H. Senior Honors Astrophysics Research Seminar. (; 1 cr. ; Student Option; Every Fall & Spring) Based on department's research seminar. prereq: upper div honors student in IT or CLA, inst consent

AST 4993. Directed Studies. (1-5 cr. [max 10 cr.]; Student Option; Every Fall & Spring) Independent, directed study in observational and theoretical astrophysics. Arranged with faculty member. prereq: 2001, instr consent

AST 4994W. Directed Research. (WI; 2-5 cr. ; A-F only; Every Fall & Spring) Independent research in observational or theoretical astrophysics. Senior Thesis for undergraduate astrophysics majors. Arranged with faculty member.

AST 5012. The Interstellar Medium. (; 4 cr. ; Student Option; Periodic Fall & Spring) Survey of physical processes in the interstellar medium. Dynamic processes, excitation processes, emission and absorption by gas and dust. Hot bubbles, HII regions, molecular clouds. prereq: 2001, Phys 2601 or instr consent

AST 5022. Relativity, Cosmology, and the Universe. (; 4 cr. ; Student Option; Periodic Fall & Spring)

Large-scale structure/history of universe. Introduction to Newtonian/relativistic world models. Physics of early universe, cosmological tests, formation of galaxies. prereq: [2001, Phys 2601] or instr consent

AST 5031. Interpretation and Analysis of Astrophysical Data. (4 cr. ; A-F only; Every Spring)

Introduction to analysis techniques with applications to modern astrophysics. Methods to interpret/analyze large data sets from experiments. Principles/methods of analysis, with applications to current research. For graduate students in Physics/Astronomy

AST 5201. Methods of Experimental Astrophysics. (; 4 cr. ; Student Option; Spring Even Year)

Contemporary astronomical techniques and instrumentation. Emphasizes data reduction and analysis, including image processing. Students make astronomical observations at O'Brien Observatory and use department's computing facilities for data analysis. Image processing packages include IRAF, AIPS, IDL, MIRA. prereq: Upper div CSE or grad or instr consent

AST 5731. Bayesian Astrostatistics. (4 cr. ; A-F only; Every Fall)

This course will introduce Bayesian methods for interpreting and analyzing large data sets from astrophysical experiments. These methods will be demonstrated using astrophysics real-world data sets and a focus on modern statistical software, such as R and python. Prerequisites: MATH 2263 and MATH 2243, or equivalent; or instructor consent Suggested: statistical course at the level of AST 4031, AST 5031, STAT 3021, or STAT 5021

Biochemistry (BIOC)

BIOC 1010. Human Health and Disease. (; 3 cr. ; Student Option; Every Fall & Spring)

Introduction to molecular basis of common human diseases. Human genome, cellular/molecular biology, biochemical reactions, organ relationships, whole body physiology. Inherited Diseases, metabolic diseases. Aging. Methods to diagnose, treat, and prevent disease. Gene therapy, regenerative medicine, drug-based interventions.

BIOC 2011. Biochemistry for the Agricultural and Health Sciences. (3 cr. ; Student Option; Every Fall & Spring)

Survey of organic chemistry and biochemistry outlining structure and metabolism of biomolecules, metabolic regulation, principles of molecular biology. prereq: Chem 1015, Bio 1009

BIOC 3021. Biochemistry. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Fundamentals of biochemistry. Structure/function of nucleic acids, proteins, lipids, carbohydrates. Enzymes. Metabolism. DNA replication and repair, transcription, protein synthesis. Recommended prerequisites:

Introductory biology (BIOL 1009 or BIOL 2003 or equivalent), organic chemistry (CHEM 2301 or CHEM 2081/2085 or equivalent). Note: CBS students should take BIOC 3022 not 3021.

BIOC 3022. Biochemistry for Life Scientists. (3 cr. [max 6 cr.]; Student Option; Every Fall & Spring)

This course provides an introduction to biochemistry including discussion of the structure and functions of biomolecules (proteins, carbohydrates, lipids, and nucleic acids), central metabolic pathways, and the mechanisms of enzyme action. This course is intended for students in the College of Biological Sciences. Students from other colleges should register for BIOC 3021. prereq: CHEM 2301 or CHEM 2081/2085 or equivalent

BIOC 4025W. Laboratory in Biochemistry. (WI; 2 cr. ; Student Option; Every Fall & Spring) Theory, principles, and use of fundamental techniques in modern biochemistry labs. prereq: 3021, 3022, or 4331 or equiv

BIOC 4125. Laboratory in Molecular Biology and Biotechnology. (; 3 cr. ; A-F or Audit; Every Spring & Summer)

This molecular biology laboratory course is designed to give students hands-on experience performing common techniques used in modern molecular biology, as well as the background information needed to understand what kind of information can be obtained by using them. Because of the dual nature of this course, a portion of the laboratory time will be spent on lectures explaining the theory behind the techniques being used as well as practical aspects of experimental design. In addition, readings will be assigned that explain the history and principles behind some of the techniques used. Basic recombinant DNA techniques: methods for growing, isolating, and purifying recombinant DNA and cloning vectors, DNA sequencing and sequence analysis, gene expression, Polymerase Chain Reaction (PCR), other current techniques. prereq: Biol 3015 or Biol 3020 or Biol 3025 or Bioc 3021 or Bioc 3022 or Bioc 4331 or Biol 4003 or instructor consent

BIOC 4225. Laboratory in NMR Techniques. (; 1 cr. ; S-N only; Every Summer)

Practical aspects of nuclear magnetic resonance (NMR) spectrometry. Hands-on experience with 500/600 MHz instruments. Sample preparation/handling, contamination sources, tube/probe options, experiment selection, experimental procedures, software, data processing. prereq: 4331; 4521 recommended; intended for biochemistry majors

BIOC 4325. Laboratory in Mass Spectrometry. (; 1 cr. ; S-N only; Every Spring)

Hands-on experience with techniques/instruments. Sample preparation/handling, 2-dimensional gels, MS-MS, MALDI-TOF, electrospray/LC-MS, experiment selection/procedures, software, data processing. prereq: 4332, 4521

BIOC 4331. Biochemistry I: Structure, Catalysis, and Metabolism in Biological

Systems. (; 4 cr. ; Student Option; Every Fall & Spring)

Advanced survey of structure/catalysis, metabolism/bioenergetics. prereq: (BIOL 1009 or 2003 or equiv) AND (Chem 2302 or CHEM 2081/2085 or equiv)

BIOC 4332. Biochemistry II: Molecular Mechanisms of Signal Transduction and Gene Expression. (; 4 cr. ; Student Option; Every Fall & Spring)

Advanced survey of molecular biology. Mechanisms of gene action/biological regulation. prereq: BioC 4331 or Bioc 3201 or BioC 3022

BIOC 4351. Protein Engineering. (3 cr. ; A-F only; Every Fall)

Key properties of enzymes/molecular basis, computer modeling strategies, mutagenesis strategies to create protein variants, expression/screening of protein variants. Evaluate research papers, identify unsolved practical/theoretical problems, plan protein engineering experiment. prereq: 4331 or instr consent

BIOC 4521. Introduction to Physical Biochemistry. (3 cr. ; Student Option; Every Fall & Spring)

Physical chemical principles, their applications in biochemistry. Thermodynamics, kinetics, spectroscopy, solution dynamics as applied to biochemical reactions/ biopolymers. prereq: 4331 recommended, (Chem 1081 or 1061 and 1065) AND (Physics 1221 or 1201W or 1301W) required

BIOC 4793W. Directed Studies: Writing Intensive. (WI; 1-7 cr. ; S-N only; Every Fall, Spring & Summer)

Writing Intensive Directed Studies is an individual-study, literature-based investigation in which the student is mentored directly by a faculty member. One main feature of this course is that the student will receive writing instruction and the written output of the course will be revised during the semester. The project needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, how writing instruction will take place, a timeline for when student writing will be handed in and how it will be assessed, methodology to be used by the student, and how assessment of learning will be conducted by the mentor. Additional oversight is established for this course near the end of the semester the written output is submitted to the DUGS for the major. The DUGS is responsible to determine that the writing meets standards set by the CBS Education Policy Committee for quality of writing, appropriate citation of literature, well-constructed figures, tables, and legends (if present), appropriate use and interpretation of statistics (if present), conclusions that are supported by evidence, and well-formatted references. This course is graded S/N and approval of the DUGS is required before a grade of S can be given by the faculty mentor. prereq: department consent,

instructor consent, no more than 7 credits of 4793W, 4794W, 4993, 4994 counts towards CBS major requirements.

BIOC 4794W. Directed Research: Writing Intensive. (WI; 1-7 cr. ; S-N only; Every Fall, Spring & Summer)

Writing Intensive Directed Research is an individual-study, laboratory or field research experience in which the student is mentored directly by a faculty member. This course is intended for students who already have initiated a research project in the lab of the mentor and already have results. In this course the student will receive writing instruction.

The written output usually is in the form of a scientific paper describing the results of the student's project. Written output of the course must be revised during the semester and a schedule for writing, assessment and revision needs to be in place at the beginning of the semester. The project needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the Director of Undergraduate Studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, how writing instruction will take place, a timeline for when student writing will be handed in and how it will be assessed, methodology to be used by the student, and how assessment of learning will be conducted by the mentor. Additional oversight is established for this course - near the end of the semester the written output is submitted to the DUGS for the major. The DUGS is responsible to determine that the writing meets standards set by the CBS Education Policy Committee for quality of writing, appropriate citation of literature, well-constructed figures, tables, and legends (if present), appropriate use and interpretation of statistics (if present), conclusions that are supported by evidence, and well-formatted references. The DUGS can call for a final revision before a grade is given. This course is graded S/N and approval of the DUGS is required before a grade of S can be given by the faculty mentor. prereq: department consent, instructor consent, no more than 7 credits of 4793W, 4794W, 4993, 4994 counts towards CBS major requirements.

BIOC 4993. Directed Studies. (; 1-7 cr. ; S-N only; Every Fall, Spring & Summer)

Directed Studies is an individual-study, literature-based investigation in which the student is mentored directly by a faculty member. The topic for the course needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, methodology to be used, and how the assessment of learning will be conducted. prereq: department consent, instructor consent, no more than 7 credits of 4793W, 4794W, 4993, 4994 counts towards CBS major requirements.

BIOC 4994. Directed Research. (; 1-7 cr. [max 42 cr.] ; S-N only; Every Fall, Spring & Summer)

Directed Research is an individual-study, laboratory or field investigation course. The research topic needs to be agreed on by both the student and the faculty mentor and explained in a Research/Directed Studies contract. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, methodology to be used, and how the assessment of learning will be conducted. prereq: department consent, instructor consent, no more than 7 credits of 4793W, 4794W, 4993, 4994 counts towards CBS major requirements.

BIOC 5002. Critical Evaluation of Biochemistry Research. (1 cr. ; S-N only; Every Fall & Spring)

BioC 5002 guides advanced undergraduates and new graduate students as they learn how to design experiments and to critically evaluate a wide variety of cutting-edge research projects, both as readers and as researchers. Introductory lectures include peer review, experimental design, critical thinking and the psychology of judgment and decision-making. This is followed by a series of guest speakers who will guide students as they develop their skills in evaluation of current research papers.

BIOC 5216. Current Topics in Signal Transduction. (; 2 cr. ; A-F only; Every Spring)

Mechanisms by which biological signals evoke biochemical responses.

BIOC 5225. Graduate Laboratory in NMR Techniques. (; 1 cr. ; S-N only; Every Spring)

Practical aspects of nuclear magnetic resonance (NMR) spectrometry. Hands-on experience with 500/600 MHz instruments. Sample preparation/handling, contamination sources, tube/probe options, experiment selection, experimental procedures, software, data processing. prereq: 8001 or instr consent

BIOC 5309. Biocatalysis and Biodegradation. (3 cr. ; Student Option; Every Spring)

Fundamentals of microbial enzymes/ metabolism as pertaining to biodegradation of environmental pollutants/biosynthesis for making commodity chemicals. Practical examples. Guest speakers from industry.

BIOC 5351. Protein Engineering. (3 cr. ; A-F or Audit; Every Fall)

Key properties of enzymes/molecular basis, computer modeling strategies, mutagenesis strategies to create protein variants, expression/screening of protein variants. Evaluate research papers, identify unsolved practical/theoretical problems, plan protein engineering experiment.

BIOC 5352. Biotechnology and Bioengineering for Biochemists. (; 3 cr. ; A-F or Audit; Periodic Spring)

Protein biotechnology. Microorganisms used as hosts for protein expression, protein expression, and engineering methods. Production of enzymes of industrial interest.

Applications of protein biotechnology in bioelectronics. Formulation of therapeutic biopharmaceuticals. Recommended prerequisites: Biochemistry (BIOC 3021 or 3022 or 4331) and Microbiology MICB 3301

BIOC 5361. Microbial Genomics and Bioinformatics. (; 3 cr. ; Student Option; Every Fall & Spring)

Introduction to genomics. Emphasizes microbial genomics. Sequencing methods, sequence analysis, genomics databases, genome mapping, prokaryotic horizontal gene transfer, genomics in biotechnology, intellectual property issues. Hands-on introduction to UNIX shell scripting, genomic data analysis using R and Excel in a computer lab setting. prereq: College-level courses in [organic chemistry, biochemistry, microbiology]

BIOC 5444. Muscle. (; 3 cr. ; Student Option; Every Spring)

Muscle molecular structure/function and disease. Muscle regulation, ion transport, and force generation. Muscular dystrophy and heart disease. prereq: 3021 or BIOC 3021 or 4331 or BIOC 4331 or PHSL 3061 or instr consent

BIOC 5528. Spectroscopy and Kinetics. (; 4 cr. ; Student Option; Every Spring)

Biochemical dynamics from perspectives of kinetics and spectroscopy. Influence of structure, molecular interactions, and chemical transformations on biochemical reactions. Focuses on computational, spectroscopic, and physical methods. Steady-state and transient kinetics. Optical and magnetic resonance spectroscopies. prereq: Intro physical chemistry or equiv; intro biochemistry recommended

BIOC 5535. Introduction to Modern Structural Biology -- Diffraction. (2 cr. ; A-F or Audit; Every Fall)

Theory and practice in the determination of three-dimensional structures of macromolecules using x-ray and neutron diffraction and electron microscopy. prereq: (Introductory biochemistry, introductory physics, college calculus) or physical chemistry or instr consent

BIOC 5536. Introduction to Modern Structural Biology - Nuclear Magnetic Resonance. (2 cr. ; Student Option; Every Fall)

Theory and practice in the determination of three-dimensional structures of macromolecules using NMR. Recommended prerequisite courses: (Introductory biochemistry, introductory physics, college calculus) or physical chemistry

BIOC 5960. Biophysical Spectroscopy. (; 2 cr. [max 4 cr.] ; A-F only; Every Spring) In-depth study of topics in biochemistry. prereq: [[3021 or equiv], CHEM 2301] or instr consent or grad

Bioethics, Center for (BTHX)

BTHX 5000. Topics in Bioethics. (; 1-4 cr. [max 8 cr.] ; Student Option; Periodic Fall & Spring)

Bioethics topics of contemporary interest. Topics specified in Class Schedule.

BTHX 5010. Bioethics Proseminar. (; 2 cr. ; A-F only; Every Fall)

Introduction to topics in bioethics. prereq: Bioethics grad student or grad minor

BTHX 5100. Introduction to Clinical Ethics. (; 3 cr. ; Student Option; Every Fall & Spring)

Most frequent ethical problems faced by clinicians, patients/families, and ethics consultants. Forgoing life sustaining treatment, decisional capacity, informed consent, treatment refusals, death/dying, pediatric ethics, reproductive issues, research ethics, psychiatric illness. Real cases.

BTHX 5110. Ethical Issues in Pediatrics. (; 2 cr. ; Student Option; Fall Odd Year)

Bioethics concerns the identification, analysis, and resolution of ethical problems that arise in planning for the care of patients in biomedical research, and in relation to the natural world. This course deals with ethical problems that occur frequently in pediatrics settings, in clinical and public health venues, in research and in the environment. The course emphasizes the ethical responsibilities of laypersons, health professionals, researchers and policy makers in planning for and resolving bioethics issues in pediatrics, including the prenatal and perinatal period. Issues addressed include reproductive issues, death and dying, forgoing life-sustaining treatment, conflicts and war, research with children and pregnant women, genetics, public and global health, social justice and other topics.

BTHX 5120. Dying in Contemporary Medical Culture. (2 cr. ; Student Option; Every Fall)

Examines practices of dying and death in contemporary U.S. culture, moral problems associated with these practices, possible solutions, and practical applications. Readings will consist of cultural critiques, bioethics literature, and empirical research.

BTHX 5210. Ethics of Human Subjects Research. (; 3 cr. ; Student Option; Fall Even Year)

Issues in ethics of human subjects research. prereq: Grad student or instr consent

BTHX 5220. Standards for Research with Human Participants: A Lecture Series for Researchers. (1 cr. ; Student Option; Fall Even Year)

This series of lectures presents various legal and regulatory standards that apply to research using human participants. Some are of general interest (e.g., Informed Consent); others will interest more specialized researchers (e.g., International Research).

BTHX 5300. Foundations of Bioethics. (3 cr. ; Student Option; Every Spring)

Overview of major contemporary frameworks used to approach ethical issues in bioethics. prereq: Grad student or instr consent

BTHX 5325. Biomedical Ethics. (; 3 cr. ; Student Option; Every Fall)

This course, delivered entirely online, examines issues in bioethics spanning clinical ethics, public health ethics, and research ethics. The course also introduces conceptual frameworks and methods that can be used to analyze these

issues. prereq: Jr or sr or grad student or instr consent

BTHX 5400. Intro Ethics in Hlth Policy. (3 cr. ; Student Option; Spring Even Year)

Topics vary to reflect issues of current significance. Relates to law/politics as appropriate but focuses on moral analyses of policy issues. prereq: Grad student or professional student or instr consent

BTHX 5411. Health Law and Policy. (; 3 cr. ; A-F or Audit; Spring Even Year)

Organization of health care delivery. Physician-patient relationship. informed consent. Quality control. Responses to harm and error, including through medical malpractice litigation. Access. Proposals for reform. prereq: Grad student or instr consent

BTHX 5453. Law, Biomedicine, and Bioethics. (; 3 cr. ; A-F only; Spring Even Year)

Law/bioethics as means of controlling important biomedical developments. Relationship of law and bioethics. Role of law/bioethics in governing biomedical research, reproductive decisionmaking, assisted reproduction, genetic testing/screening, genetic manipulation, and cloning. Definition of death. Use of life-sustaining treatment. Organ transplantation. prereq: Grad student or instr consent

BTHX 5510. Gender and the Politics of Health. (3 cr. ; Student Option; Periodic Fall & Spring)

Significance of gender to health and health care. Feminist analysis regarding moral/political importance of gender, possibly including contemporary western medicine? s understanding of the body, childbirth, and reproductive technologies; cosmetic surgery; chronic illness; disability; participation in research; gender and classification of disease. Care work, paid/non-paid. Readings from feminist theory, history, social science, bioethics, and moral philosophy.

BTHX 5520. Social Justice and Bioethics. (3 cr. ; Student Option; Fall Even Year)

This course explores matters of social justice related to health. Readings from multiple disciplinary perspectives ground examination of how to understand social justice in this context. Class sessions will predominantly focus on specific practical issues such as health disparities, the politics of inclusion and exclusion in clinical research, resource allocation in resource poor settings, and health professional roles during war. Discussions incorporate consideration of these issues? institutional and broader social contexts. This course is appropriate for a wide audience including students from the health professions, philosophy, social science, and law.

BTHX 5530. Investigative Journalism and Bioethics. (3 cr. ; Student Option; Periodic Fall & Spring)

This seminar will explore the links between bioethics and journalism, examining classic and contemporary works of investigative health journalism, works of literary non-fiction related to medicine and health, and investigative work by bioethicists. It will also examine the art of muckraking, non-profit investigative journalism,

the public relations industry, the decline of print journalism and the rise of digital media, and how these developments are shaping the relationship between bioethicists and the press.

BTHX 5540. Bioethics, Psychiatry & Psychology. (3 cr. ; A-F only; Periodic Fall & Spring)

Explore philosophical and ethical issues in psychiatry and psychology. Potential topics include the moral responsibility of psychopaths for their actions, false memories of Satanic ritual abuse, insanity pleas, the sociology of institutionalization, clinical trials of psychiatric drugs, cosmetic psychopharmacology, recent work in experimental philosophy, and classic experiments in social psychology.

BTHX 5610. Research & Publication Seminar. (1 cr. ; A-F only; Every Fall)

Publication strategy/venues. Authorship issues/ethics in publication. Manuscript formatting/letters of submission. Peer review. prereq: [Junior or senior or grad student], bioethics grad majors must register A-F

BTHX 5620. Social Context of Health and Illness. (; 3 cr. ; Student Option; Spring Even Year)

Social context in which contemporary meanings of health and illness are understood by providers/patients. Ethical implications. Readings from history, social science, literature, and first-person accounts. prereq: Grad student or instr consent

BTHX 5630. Bioethics Colloquium. (1 cr. [max 2 cr.] ; S-N only; Every Fall & Spring)

This course features presentations from a variety of departments and programs across campus that deal in some way with ethics as a theoretical and/or applied concept. Students will attend these presentations; engage with scholars thinking about ethics from multiple perspectives; and be able to bring these perspectives to bear upon their own research. The course is thus an opportunity to explore ethics as it might be conceptualized or practiced in the social sciences, law, public policy, global health, and many other arenas, and in turn to think about how these disparate frameworks and practices can be usefully put into conversation with bioethics, and with their own projects.

BTHX 5650. Disability Ethics. (3 cr. ; A-F only; Spring Odd Year)

This course is an examination of ethical issues pertaining to disability, with an emphasis on discussion and consideration of widely contrasting perspectives. Issues discussed include physician-assisted suicide, euthanasia, selective abortion, cochlear implant technology, sterilization, special versus inclusive education, Universal Design/Universal Instructional Design, disability accommodations, and built and social environments, examined within social, legal, policy, and cultural environments. Assignments include, readings, viewings, journaling, field projects, and research papers.

BTHX 5710. Ethical Issues in Global Health. (3 cr. ; Student Option; Fall Even Year)

This course examines ethical issues related to global health. Topics may include religion, morality, public policy, and the connection

between health and human rights. Open to juniors, seniors, graduate and professional students.

BTHX 5800. Animal Ethics. (3 cr. ; Student Option; Periodic Fall & Spring)

Human relationships with animals are changing and this course offers a venue for exploring some of the ethical issues in these evolving relationships. The course will discuss the differences between animal ethics and animal welfare and examine the morality and ethics of human-animal interactions in various contexts. These include cultural and historical views of animals; animals as companions; the use of animals in scientific research, entertainment, and service work; euthanasia; animal production and sustainability; and conservation issues.

BTHX 5900. Independent Study in Bioethics. (; 1-4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Students propose area for study with faculty guidance, write proposal which includes outcome objectives and work plan. Faculty member directs student's work and evaluates project. prereq: instr consent

Biology (BIOL)

BIOL 1001. Introductory Biology: Evolutionary and Ecological Perspectives. (BIOL; 4 cr. ; Student Option; Every Fall & Spring)

A one-semester exploration of the genetic, evolutionary, and ecological processes that govern biological diversity from populations to ecosystems. We explore how these processes influence human evolution, health, population growth, and conservation. We also consider how the scientific method informs our understanding of biological processes. Lab. This course is oriented towards non-majors and does not fulfill prerequisites for allied health grad programs.

BIOL 1001H. Introductory Biology I: Evolutionary and Ecological Perspectives. (BIOL; 4 cr. ; A-F only; Every Fall)

A one-semester exploration of the genetic, evolutionary, and ecological processes that govern biological diversity from populations to ecosystems. We explore how these processes influence human evolution, health, population growth, and conservation. We also consider how the scientific method informs our understanding of biological processes. Lab. This course is oriented towards non-majors and does not fulfill prerequisites for allied health grad programs.

BIOL 1003. Evolution and Biology of Sex. (BIOL; 4 cr. ; Student Option; Every Fall & Spring)

This course is designed as a one-semester exploration of biology from the standpoint of the evolution and biology of sex. It emphasizes scientific processes, evolution, sexual behavior, reproductive biology, and diversity with respect to sexual orientation, reproductive strategies, and gender identity. Lab activities complement these topics. This course does not fulfill prerequisites for allied health grad programs.

BIOL 1009. General Biology. (BIOL; 4 cr. ; Student Option; Every Fall, Spring & Summer) A comprehensive introduction to biology - includes molecular structure of living things, cell processes, energy utilization, genetic information and inheritance, mechanisms of evolution, biological diversity, and ecology. Includes lab. This comprehensive course serves as a prerequisite and requirement in many majors.

BIOL 1009H. Honors: General Biology. (BIOL; 4 cr. ; A-F only; Every Spring)

A comprehensive introduction to biology - includes molecular structure of living things, cell processes, energy utilization, genetic information and inheritance, mechanisms of evolution, biological diversity, and ecology. Includes lab. This comprehensive course serves as a prerequisite and requirement in many majors.

BIOL 1012. Human Biology: Concepts and Current Ethical Issues. (BIOL,CIV; 4 cr. ; Student Option; Every Fall & Spring)

One semester exploration of human anatomy and physiology within the context of ethics; topics such as human genetic diversity, organs and tissues, disease and reproduction. Weekly policy debates. Active learning format. Animal dissections required. Suitable for students in any major. Does not fulfill prerequisites for allied health grad programs. This course explores several interdisciplinary questions, each of which addresses biology through an ethical and societal lens. In ?What makes humans unique?? we will consider the evolution of human traits, how the concept of race relates to human genetic diversity, and the fallibility of human memories. In ?How does blood and organ donation work?? we will examine how our bodies can recognize and respond to foreign materials, how vaccines work, and who should have access to life saving tissue and organ transplants. In ?How do stress, diet and exercise affect health?? we will consider disparities in access to adequate nutrition, exposure to stress, and exercise, and how these affect our bodies and our mental health. Lastly, in ?How does a unique individual develop from a single cell? we will examine how a single cell develops into a fully functional human being, and how similar processes lead to cancer. We will also consider the role of genes and hormones in human reproduction and the development of reproductive structures in embryos, while explicitly addressing the ethics of the distinctions between the concepts of sex characteristics, sex assigned at birth, and gender. We will learn how a cell can become cancerous, as well as how a cell develops into a fully functioning human being. Additionally, we will consider the role of hormones in the development of male, female, and intersex organs, while being explicit about the differences between gender, sexual orientation, and sex assigned at birth. In lecture, instructors and teaching assistants will support students as they evaluate data and work through concepts in teams. Students will also dedicate significant time to the consideration of ethical questions in human biology, and work with teammates to organize

and present a position on a policy related to an ethics question. In lab, students will further explore human anatomy and physiology, connecting structure and function through several dissections and activities. Students will read and share scientific papers, make observations, design experiments and analyze data. Students will work in teams to complete a multi-week project on the physiology of stress. We will continue our exploration of ethics topics in lab, where we will discuss and apply ethics in human subjects research and research on non-human animals. About 75% of the course grade will be based on four traditional lecture exams and a final lab exam. The remainder of the course grade is comprised of open notes quizzes, in class team assignments, individual assignments, and team projects. Course grading is based on mastery of concepts and skills, and students are encouraged to collaborate in understanding course material.

BIOL 1015. Human Physiology, Technology, and Medical Devices. (BIOL,TS; 4 cr. ; Student Option; Every Fall & Spring)

Course is organized around homeostasis, information flow, and other concepts in physiology. For non-biology majors who wish to explore interests in health care or medical device engineering. Active learning format. Labs focus on data collection and simple organ dissections. Does not fulfill prerequisites for most biomedical graduate programs.

BIOL 1020. Biology Colloquium. (; 1 cr. [max 2 cr.]; S-N or Audit; Every Fall & Spring)

Introduction to the diverse fields of biology through seminars, lab tours, trips to Itasca Biological Station, and interaction with other biology students and faculty. Course may be repeated once.

BIOL 1052. Environmental Biology: Science and Solutions. (ENV; 3 cr. ; Student Option; Every Fall)

This course explores the science behind environmental topics. It delves into the interface of science and policy, environmental decision-making and ethics. Topics include biodiversity, environmental toxicology, food production, and global climate change. Students looking to fulfill the liberal education requirement-Biological Sciences with Lab in this topic should take Biology 1055.

BIOL 1055. Environmental Biology: Science and Solutions with Laboratory. (BIOL,ENV; 4 cr. ; Student Option; Every Fall & Spring)

Explores science behind environmental topics. Delves into the interface of science and policy, environmental decision-making and ethics. Topics include biodiversity, env. toxicology, food production, and climate change. In lab students conduct the work of biologists, proposing hypotheses, conducting experiments, and analyzing/interpreting data. This course is intended to engage non-biology majors in the work of biology, studying current biological knowledge through evidence-based discussions of what is currently known, and by addressing science that is unknown to the students (and, at times to the biological community) through the generation and testing of hypotheses, collection and analysis of

data, and practice of making data-informed conclusions.

BIOL 1093. Biology Colloquium: Directed Study. (; 1 cr. ; S-N or Audit; Every Fall & Spring)

Individual study or research undertaken by a student concurrently enrolled in Biol 1020 with oversight by a faculty sponsor. prereq: 1020 and concurrent registration is required (or allowed) in 1020

BIOL 1101. Genetics and Society. (CIV; 3 cr. ; Student Option; Every Spring)

Principles of heredity and their social and cultural implications. prereq: Credit will not be granted if credit has been received for: BIOL 3020, Biol 4003, GCD 3022. No CBS Major Juniors or Seniors.

BIOL 1301. Dean's Scholar: Introduction to Leadership. (; 1 cr. ; S-N only; Every Fall)

Leadership theory/concepts. Personal views on leadership. Characteristics for effective leadership. Course uses experiential teaching methods, self-reflection. prereq: Dean's Scholar

BIOL 1805. Nature of Life: Introducing New Students to the Biological Sciences. (; 0.5 cr. ; S-N or Audit; Every Fall & Spring)

Building on incoming student summer programming to get started in the Biological Sciences in CBS. Providing transition programming, academic success tools, college learning, and guidance as a foundation for success in the biological sciences. Introduction to the College of Biological Sciences community and opportunities through class content, guild activities, and peer mentoring. prereq: Fr in College of Biological Sciences

BIOL 1806. Nature of Life, Part Two. (0.5 cr. ; S-N only; Every Spring)

Second semester of Nature of Life with focus on building intentional pathway in CBS/student success/engagement. prereq: 1805

BIOL 1904. Innovation and Imagination in Ireland. (GP; 3 cr. [max 6 cr.]; A-F only; Every Spring)

Sundials, color photography, stethoscopes, iPhones. Our world is continually shaped by great ideas. This class will explore components of education, culture, and business management that cultivate creativity and innovation. We will study current examples of success and failure. As a class we will move beyond our natural constraints and travel abroad over spring break to Dublin to understand the rich Irish history of innovation across disciplines, including art, science, and technology. Dublin is the emerging "heart of technology in Europe" and home to a slew of start-ups and to proven juggernauts such as Google, Facebook, and Amazon. Learn why and how this shift from an agricultural-based economy has occurred. This course involves a study abroad component to Ireland during Spring Break 2022. Please note that you must also apply and confirm your spot for this seminar through the Learning Abroad Center. Application deadline is: December 1, 2021. For more information, visit: <https://umabroad.umn.edu/programs/europe/innovation-imagination-ireland> or contact

Amy at garw0005@umn.edu. Class Link: <https://umabroad.umn.edu/programs/europe/innovation-imagination-ireland>

BIOL 1912. Photographing the University Community. (; 2 cr. ; A-F only; Every Fall)

This seminar will provide students and faculty an opportunity to explore the art of photojournalism and/or documentary photography. Students and faculty will take photographs on the University campus or the surrounding neighborhoods and then each person will assemble their photographs into a coherent essay. The seminar will include social themes, and will have a strong writing component, as well as the obvious focus on photography.

BIOL 1913. Understanding the Evolution-Creationism Controversy. (; 1 cr. ; A-F only; Every Fall)

This seminar has two goals: 1) to help you succeed at the University of Minnesota, and 2) to help you develop your own understanding and appreciation of the evolution-creationism controversy. We will discuss the many aspects of the evolution-creationism controversy, including its history, legacy, relevance, and key people. We will also discuss a variety of issues related to the controversy, including those involving court decisions, public opinion, racism, politics, etc. Many people are emotional and opinionated about the evolution-creationism controversy. Although this seminar is not focused on opinions, we will talk about why so many people feel strongly about this issue, and why the controversy persists. You will be interested in, and probably surprised by, what you learn. Each week we will also talk about concerns and/or questions you have about life at the University. Although I can't fix your parking tickets, I can offer advice about what you'll need to do to succeed here.

BIOL 1915. Genomics in Your Current and Future Life. (; 1 cr. ; A-F only; Every Fall & Spring)

Our understanding of DNA and genomes has infiltrated every aspect of society including medicine (diagnosis and susceptibilities to disease as well as developing new gene-based therapies, including gene therapy), CSI, ethics, GMOs for sustainable agriculture, and even designing our kids genomes. Class lectures and all reading material will be available online. Students will share their thoughts on a variety of controversial issues both online. In class, we will use the on-line blogs and lecture material as a starting points to discuss further various aspects of different applications of modern precision genetic technologies. The fundamental goal of the class is to encourage students to develop their processes of thinking about, and discussing in a small group, current complex and controversial issues. No final papers and no final exam.

BIOL 1917. Experimental Evolution. (; 3 cr. ; A-F only; Every Fall)

Life originated over four billion years ago. Since that time, evolution has shaped living systems, generating tremendous biological diversity. Experimental evolution is a dynamic approach to investigating life, examining how and why

biological systems change over evolutionary time. We will focus on how experimental evolution is done, what we have already learned, and the bright future for new research. Topics will include adaptive radiation, infectious diseases, the genetic basis of phenotypes, speciation, and the evolution of multicellularity. Readings will be primary literature and review articles, to be discussed every meeting. Toward the end of the semester, students will propose their own experimental evolution study based upon the readings, class discussions, and meetings with faculty.

BIOL 1921. The Nexus Between Art and Biology. (; 2 cr. ; A-F only; Every Fall)

This seminar will explore the many and diverse interactions between art and biology. The topics covered range from the portrayal of biology in classic art, to the use of artistic venues for studying and remediating environmental problems, to the utility of photography, painting, sculpture, and other art forms to explore levels of biology ranging from molecular and cellular structures to landscapes. The course includes hands-on creation of artistic biological objects. Topics will be explored using recorded media and presentations by students, the instructor, and invited speakers to cover novel topics at the art/biology interface.

BIOL 1925. Biological Wonder to Scientific Discovery. (; 1 cr. ; A-F only; Every Spring)

?In the field of observation, chance favors only the prepared mind.? Louis Pasteur
When exploring the beauty and wonder of the natural world, scientists must unleash their creative side. For example, if you are a scientist and have a history of experiments that have been conducted, the lessons from those past experiments may help you to succeed in the new experiment. This is especially true if you keep an open mind when you get an unexpected result. The primary literature, small group activities and class discussion will be used in this course to explore how biological wonders have turned into scientific discoveries. Molecular biology will be emphasized, but all biological science topics are open for discussion.

BIOL 1928. Inventing Nature: The Art and Science of Natural History. (; 2 cr. ; A-F only; Every Spring)

Natural history is often presented as a series of dry facts about the world. But how were these facts arrived at, what kind of data are they based on, and who decided they were important? In this seminar, we will learn about the invention of modern natural history. We will collect specimens, practice scientific illustration, and visit real collections. We will explore the exploitative history of Western naturalists and how modern natural history can be expanded to include alternative knowledge systems. Finally, we will learn how natural history collections provide crucial data on how we have impacted the world, especially via climate change.

BIOL 1929. Drawn to Nature: Observing the World Around Us. (; 1 cr. ; S-N only; Every Fall)

Keeping a nature journal is one way to hone your skills of observation, enjoy the natural world around you, and relax. In this seminar we will explore nature through the practice of keeping a nature journal. Lessons will include the history of sketchbooks in exploration, approaches for starting your own journal, what materials to use, and how to get outside and start. There will be little reading, but all students are expected to participate and share their work weekly. Class will include field trips to the College of Biological Science Plant Conservatory and the Landscape Arboretum. No prior experience in art is required.

BIOL 1930. What Can Jellyfish Tell Us about Human Eyes? The Evolution of Animal Sensory Systems. (; 1 cr. ; S-N only; Every Fall)

If we tracked our ancestors back 750 million years ago, we'd see an animal who's offspring would later become humans and jellyfish. This animal would already have most of the same gene families that we do today. Genomic content, embryonic development, cell physiology, and animal behavior are fundamentally similar in all animals, with minor tweaks at the right moment resulting in organisms as different as a worm or a bird. This course will explore how evolution builds a trait, focusing on some of the best studied traits that can be compared across animals: visual systems. We will touch on how the fields of genomics, embryology, neurophysiology, and animal behavior are intertwined in sensory systems, and how they have helped us learn about Biology more broadly. We will explore examples from different animals, especially overlooked invertebrates, and understand how their study can help human health and society. Class will primarily be discussion and low-stakes presentations based on both assigned and student-chosen readings from scientific literature, pop sci. articles, and news sources.

BIOL 1942. The History, Science, and Politics of Genetics and Reproduction. (TS; 3 cr. ; A-F only; Every Fall)

In this seminar, students will read, discuss, debate, and generally engage with a myriad of issues surrounding the science of genetics and the application of revolutionary technologies to human reproduction. Students will explore topics and controversies relating to the past, present, and future of human sexual activity and human reproduction, and how reproductive technologies (such as in vitro fertilization) have helped shape our modern society. Through the use of both fiction and non-fiction literature, students will learn the details of current scientific breakthroughs such as "designer babies." This seminar aims to engage students in an exploration of their personal beliefs about the roles of science, the government, and also religious institutions on human reproductive rights.

BIOL 1951. Foundations of Biology Lecture I for Biological Sciences Majors. (BIOL; 4 cr. ; A-F only; Every Fall & Spring)

Core biological concepts, from biomolecules to ecosystems. Emphasizes evolution, organismal diversity, and genetics within context of

problem solving/applications. Students must take both BIOL 1951 and BIOL 1961 to be awarded the Biological Sciences LE. This course is required for all CBS majors

BIOL 1951H. Foundations of Biology Lecture I for Biological Sciences Majors.

(BIOL; 4 cr. ; A-F only; Every Fall & Spring)
Core biological concepts, from biomolecules to ecosystems. Emphasizes evolution, organismal diversity, and genetics within context of problem solving/applications. Students must take both BIOL 1951H and BIOL 1961 to be awarded the Biological Sciences LE. This course is required for all CBS honors students

BIOL 1961. Foundations of Biology Lab I for Biological Sciences Majors. (BIOL; 2 cr. ; A-F only; Every Fall & Spring)

Core biological concepts, from biomolecules to ecosystems. Emphasizes evolution, organismal diversity, and genetics within context of problem solving/applications. Students must take both BIOL 1951 and BIOL 1961 to be awarded the Biological Sciences LE. This course is required for all CBS majors

BIOL 2001. Career Planning for Biologists. (1 cr. ; S-N or Audit; Every Fall & Spring)

Course structured to provide career planning and exploration guidance based on individual's specific goals. Option to focus coursework on identifying career interests, exploring career options in the biological sciences, preparing for job or internship applications, or organizing graduate school application materials. Provides career coaching on topics related to resume writing, interviewing and professional relationship building, and introduces resources to engage in effective career exploration and planning in the biological sciences.

BIOL 2003. Foundations of Biology for Biological Sciences Majors, Part II. (; 3 cr. ; A-F only; Every Fall & Spring)

Second of two courses. Biological concepts, from biomolecules to ecosystems. Ecology/biochemistry concepts within problem solving/application.

BIOL 2003H. Foundations of Biology for Biological Sciences Majors, Part II. (; 3 cr. ; A-F only; Every Fall & Spring)

Second of two courses. Biological concepts, from biomolecules to ecosystems. Ecology/biochemistry concepts within problem solving/application.

BIOL 2005. Animal Diversity Laboratory. (; 2 cr. ; Student Option; Every Fall, Spring & Summer)

Dissection, direct observation of representatives of major animal groups.

BIOL 2007. Marine Animal Diversity Laboratory. (1 cr. [max 2 cr.] ; A-F only; Every Fall & Spring)

Survey of marine animal diversity. Understanding major animal groups, how they relate to one another, how they differ in structure, how each group achieves survival/reproduction in diverse environments. Lab includes dissections, including vertebrates, such as fish. Prereq/coreq: Biol 2005/Biol 2012/Biol 3012

BIOL 2101. Brewing: The Biology, History, and Practice. (3 cr. ; A-F only; Periodic Fall & Spring)

Rigorous look at the history of brewing, microbiology, biochemistry, and biological concepts associated with brewing, such as competition, and practical aspects of modern brewing. This lecture/laboratory hybrid course will teach students the components used in brewing and how they contribute to the final product as well as the process of brewing using hands on laboratory. Textbook is online and will be posted on the Canvas site. prereq: BIOL 1001 or 1009 or 1951 or 2002 or 2003 or 2004 Students must be 21 by the first day of class to register, we will check IDs on the first day of class. There are three required field trips. For the field trips students meet in McNeal Hall at 1:00pm and return approximately at 5pm to McNeal Hall.

BIOL 2301. Dean's Scholar: Critical Service Learning. (; 2 cr. ; S-N only; Every Fall & Spring)

Importance of service in leadership. How personal experiences influence perspectives on social issues. Techniques for group work. Service project with community organization related to biological sciences. prereq: 1301, CBS Dean's Scholar

BIOL 2800. Understanding the Environment: Ecology for Educators. (5 cr. ; A-F only; Every Summer)

Ecology/earth systems science content, concepts, and investigation skills that environmental educators, science communicators, and natural history interpreters should be proficient in when addressing respective audiences about science, environmental issues, and nature studies.

BIOL 2905. Nature of Life, Part III. (; 0.5 cr. ; S-N only; Every Fall)

Reflect on aspirations, personal characteristics, experiences. Resources/practical tools to reach educational/professional goals. Special focus on developing personal/professional goals, articulating personal experiences in light of aspirations. prereq: 1805, 1806

BIOL 2906. Nature of Life, Part IV. (0.5 cr. ; S-N only; Every Spring)

Reflect on aspirations, personal characteristics, experiences. Resources/practical tools to reach educational/professional goals. Special focus on developing personal/professional goals, articulating personal experiences in light of aspirations. prereq: 2905

BIOL 2960H. Exploring Research in the Biological Sciences. (; 1 cr. ; A-F only; Every Fall)

Explore areas of biological research. Learn where/how to access research papers. Prepare in-depth review paper. prereq: CBS, Honors program, soph, dept consent

BIOL 2996. Directed Introduction to Research. (1 cr. [max 2 cr.] ; S-N only; Every Fall & Spring)

Directed Introduction to Research is an introduction to laboratory or field biological research for students with no prior experience, normally first- and second-year students.

The University directed studies contract will be used to describe the training experience which could include attending lab meetings, reading and discussing research papers from the lab, learning basic lab and field techniques, assays, and approaches used by the research group, and learning to keep a lab or field notebook. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course and how the assessment of learning will be conducted. Lab or field training can be led by graduate students or postdocs in the research group but one-on-one meetings with the PI should be included. The course is one credit and the student and PI agree that 45 hours of work will be done. There will be one group meeting per semester per major for all of the students enrolled in 2996 to discuss the research experience with the Director of Undergraduate Research for the major and a panel of more experienced undergraduate researchers. The goal of that meeting is community building and to introduce students to opportunities for further research experience. The grading option is S/N, similar to all directed studies/research courses in CBS. This course can be repeated, if it is done with a different mentor, for a total of two credits. One credit of this course can be counted as a degree requirement for each CBS major.

BIOL 3001. Nature of Science and Research. (1 cr. ; S-N only; Every Fall)

Explore how to read/use research papers. Role of research ethics. Financial, legal, regulatory oversight on research/other topics. **This course is for new CBS transfer students from other institutions. prereq: College-level biology

BIOL 3004. Foundations of Biology for Biological Sciences Majors, Part II Laboratory. (3 cr. ; A-F only; Every Fall & Spring)

This course follows BIOL 1961 and is required for all CBS majors. Students design and perform research projects that will require an additional 4-to-6 hours per week of work outside of class; times to be arranged. Each section is devoted to a single research area; check the section details to see which sections correspond to each research area. Research projects in zebrafish environmental toxicology and zebrafish microbiome sections will require in-person work in the BIOL 3004 laboratory. Only students with previous command line coding experience should enroll for a computational microbiology section. All projects involve applying quantitative skills, scientific method, and modern biological tools to real-world questions. prereq: Foundations of Biology Lab I: BIOL 1961, 1961H, 2002, or 2002H AND CHEM 1021, 1061, 1071H, or 1081. Credit will not be granted if credit has been received for: BIOL 3004H.

BIOL 3012. Animal Diversity and Evolution. (4 cr. ; Student Option; Every Fall & Spring)

This course is a survey of animal diversity, with an emphasis on understanding the major animal groups, how they are related to one another, how they differ in structure, and how each group achieves survival and reproduction

in the diverse environments of the Earth. We will place particular emphasis on major evolutionary transitions that animals have made through their history, including the origins of multicellularity, the achievement of motion, invasion of terrestrial habitats, and the achievement of flight. We will also emphasize the science behind our contemporary understanding of animals, from multiple perspectives ? behavioral, evolutionary, physiological, and ecological. Lab requires dissection, including mammals. prereq: BIOL 1001/1001H, or BIOL 1009/1009H, or BIOL 1951/1951H

BIOL 3015. Molecular Biology. (; 2 cr. ; Student Option; Every Fall, Spring & Summer)

All areas of biology have been transformed by the recent advances in molecular biology technology. Every life scientist, whether they study viruses or crashes of elephants, uses DNA cloning, sequencing, and genomic analysis. This technology has also impacted all aspects of health care by generating highly specific diagnostic tools and personalized treatments. The purpose of this course is to give students a solid foundation in the principles and tools of molecular biology. Biol 3015 will introduce concepts and techniques for understanding gene expression and the flow of genetic information. We will discuss the structure of nucleic acids and proteins, the replication and repair of DNA, transcription and its regulation, and translation. Students will also learn about current technologies used in molecular biology including cloning, PCR, DNA sequencing, mass spectrometry, DNA microarrays, proteomics, bioinformatics, and whole genome analysis. Credit will not be granted if credit has been received for: BIOL 3025

BIOL 3025. Molecular Biology and Society. (TS; 3 cr. ; Student Option; Every Fall & Spring)

An in-depth analysis of molecular biology topics and methods related to the Central Dogma of modern biology. This course is open to both CBS majors and non-CBS majors. Prerequisites include Biol2003/2003H or [Biol1009/1009H AND Chem1061/1061H].

BIOL 3051. Genome Editing and Engineering. (TS; 3 cr. ; Student Option; Every Spring)

Allowing researchers to modify genetic information in nearly any organism's genome, genome editing, and engineering technologies have been widely used in all areas of biology. These technologies have evolved rapidly in recent years and not only hold the promise to revolutionize medical and agricultural fields, but also make profound impacts on our society. The purpose of the course is to give students a comprehensive overview of principles, development and applications of genetic engineering and genome editing technologies in both prokaryotes and eukaryotes. This course will introduce concepts and history of genome engineering in both prokaryotes and eukaryotes. We will discuss the mechanisms and applications of both techniques using examples in bacteria and plant genome and metabolic pathway engineering. Students will also have hands-on experience to design

CRISPR and modify bacterial and plant genomes. In addition, this course will contribute to students' liberal education by discussing the consequences of these technologies for society and technological development, including the ethics of altering genomes, consequences on ecosystems, and the benefits, drawbacks, and limitations of these technologies. Recommended prerequisites: Introductory biology such as Biol 1951 and 2003, Biol 1009 or BMEN 2501

BIOL 3209. Understanding the Evolution-Creationism Controversy. (CIV; 3 cr. ; A-F only; Every Fall & Spring)

Aspects of evolution-creationism controversy, including its history, legacy, relevance, and key people. Court decisions, public opinion, and related issues (e.g., racism, politics). prereq: BIOL 1001, 1009, 1951 or 2002, or equiv

BIOL 3211. Physiology of Humans and Other Animals. (3 cr. ; Student Option; Every Fall & Spring)

Study of the various solutions to common physiological problems faced by humans, other vertebrates, and invertebrates. Core concepts in physiology including flow down gradients, homeostasis, cell-cell communication, interdependence of body systems, cell membrane dynamics, and mathematical modeling of physiological processes. Active learning format. prereq: [1009 or 2003], [CHEM 1062/1066 or 1082/1086], [2005 is recommended]

BIOL 3272. Applied Biostatistics. (; 4 cr. ; A-F only; Every Fall & Spring)

Conceptual basis of statistical analysis. Statistical analysis of biological data. Data visualization, descriptive statistics, significance tests, experimental design, linear model, simple/multiple regression, general linear model. Lectures, computer lab. prereq: High school algebra; BIOL 2003 recommended

BIOL 3272H. Applied Biostatistics. (; 4 cr. ; A-F only; Every Fall & Spring)

Conceptual basis of statistical analysis. Statistical analysis of biological data. Data visualization, descriptive statistics, significance tests, experimental design, linear model, simple/multiple regression, general linear model. Lectures, computer lab. prereq: High school algebra; BIOL 2003 recommended.

BIOL 3302. Dean's Scholar: Leadership Capstone Experience. (1 cr. ; S-N only; Every Fall & Spring)

In BIOL 3302, students will actively refine their perspectives about leadership, through examining their past experiences, their previous and future growth as a leader, and their personal effectiveness across situations and contexts. They will explore emotional and social awareness, vulnerability, feedback, perspective taking, critical thinking, empathy, and effective communication through conversation, written narratives, and creative expression. prereq: 1301, 2301, CBS dean's scholar

BIOL 3303. Dean's Scholar: Peer Leadership Development. (; 1 cr. ; S-N only; Every Fall)

This course teaches theoretical frameworks, principles, and practices of effective peer

leadership. As a Dean's Scholars Peer Mentor, you are in a peer leadership role that requires you to serve as a support, resource, connection, and bridge between first year students and their campus experience. This course will teach you in-depth, academic frameworks about the theory behind peer leadership; how it impacts the college student experience, why it works, and tools and practices that distinguish role modeling from exceptional peer leadership. The course also offers a learning laboratory for you to reflect and synthesize various aspects of your student leadership experience with a community of fellow leaders.

BIOL 3503. Biology of Aging. (2 cr. ; A-F only; Periodic Fall)

Age-related changes in individuals/populations. Evolution of senescence. Genes that influence aging. Interventions. Prospects for an aging human society. prereq: 1002 or 1009 or 2003 or equiv

BIOL 3600. Directed Instruction. (; 1-2 cr. [max 6 cr.]; S-N or Audit; Every Fall & Spring) Students assist with biology colloquium. prereq: 1020, upper div, application, instr consent; up to 4 cr may apply to major

BIOL 3610. Internship: Professional Experience in Biological Sciences. (1-6 cr. ; S-N or Audit; Every Fall, Spring & Summer)

Matches student's academic or career goals with opportunities in industry, non-profit organizations, and government agencies. Prereq-Acceptance into CBS Internship Program, internship workshop, college consent.

BIOL 3700. Undergraduate Seminar. (; 1-3 cr. [max 9 cr.]; Student Option; Every Fall & Spring)

Faculty members lead students in discussions on topics of interest.

BIOL 3905. Beyond the Nobel Prize: Examining the Evolution of Swedish Innovation. (GP; 3 cr. ; A-F only; Every Spring)

This course is open to undergraduates from all disciplines and will appeal to students with a broad interest creativity and innovation. Students will examine innovation across a variety of disciplines and consider how solutions to problems facing society require creativity, collaboration, and new ways of thinking. In particular, we will explore personal creativity, as well as how environments can foster innovation, particularly in the Swedish context by traveling to Stockholm over spring break. We examine the reasons behind Sweden's ranking (#2 in 2017) on the Global Innovation Index, as well as the Nobel Prize, international awards bestowed by Swedish institutions that recognize significant academic, cultural and scientific advances. In addition, as a learning abroad seminar, students will learn about their own level of and strategies to increase their intercultural competence, and engage in a practical experience of navigating another culture in an intentional and reflective way.

BIOL 3960H. Communicating in the Biological Sciences. (; 1 cr. ; A-F only; Every Fall)

Oral reports on topics of current interest to biologists. Progress reports on lab and field research by students.

BIOL 4003. Genetics. (; 3 cr. ; Student Option; Every Fall, Spring & Summer) Genetic information, its transmission from parents to offspring, its expression in cells/organisms, and its course in populations. prereq: Biol 2003/2003H or BioC 3021 or BioC 4331 or grad

BIOL 4004. Cell Biology. (; 3 cr. ; Student Option; Every Fall, Spring & Summer) Processes fundamental to cells. Emphasizes eukaryotic cells. Assembly/function of membranes/organelles. Cell division, cell form/movement, intercellular communication, transport, secretion pathways. Cancer cells, differentiated cells. prereq: Completion of Biol 4003 is preferred, Biol2003/2003H or Biol4003 or grad

BIOL 4201. Teaching in the Biology Laboratory. (; 1 cr. [max 2 cr.]; S-N only; Every Fall & Spring) Pedagogical underpinnings for teaching in lab. prereq: Student who is teaching in CBS lab course

BIOL 4321W. Deconstructing Research: Writing about Biological Research for Non-scientists. (WI; 2 cr. ; Student Option; Every Spring)

Deconstructing Biology Research is designed to help majors in the College of Biological Sciences improve their skills in selecting primary research papers, understanding the experimental approaches taken by the authors of those papers, and evaluating the results and conclusions. Students will then share that knowledge by writing effective deconstructions that explain the research approaches and results for different audiences, including the public at large.

BIOL 4590. Coral Reef Ecology. (2 cr. ; A-F only; Every Fall)

Contemporary issues in tropical reef ecology from diverse perspectives. Option of two-credit seminar during fall semester plus additional two-credit field option (BIOL 4596) to involve SCUBA diving/snorkeling on tropical reef. prereq: Introductory biology course with lab

BIOL 4793W. Directed Studies: Writing Intensive. (WI; 1-7 cr. ; S-N only; Every Fall, Spring & Summer)

Writing Intensive Directed Studies is an individual-study, literature-based investigation in which the student is mentored directly by a faculty member. One main feature of this course is that the student will receive writing instruction and the written output of the course will be revised during the semester. The project needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, how writing instruction will take place, a timeline for when student writing will be handed in and how it will be assessed,

methodology to be used by the student, and how assessment of learning will be conducted by the mentor. Additional oversight is established for this course near the end of the semester the written output is submitted to the DUGS for the major. The DUGS is responsible to determine that the writing meets standards set by the CBS Education Policy Committee for quality of writing, appropriate citation of literature, well-constructed figures, tables, and legends (if present), appropriate use and interpretation of statistics (if present), conclusions that are supported by evidence, and well-formatted references. This course is graded S/N and approval of the DUGS is required before a grade of S can be given by the faculty mentor. prereq: department consent, instructor consent, no more than 7 credits of 4793W, 4794W, 4993, 4994 counts towards CBS major requirements.

BIOL 4794W. Directed Research: Writing Intensive. (WI; 1-7 cr. ; S-N only; Every Fall, Spring & Summer)

Writing Intensive Directed Research is an individual-study, laboratory or field research experience in which the student is mentored directly by a faculty member. This course is intended for students who already have initiated a research project in the lab of the mentor and already have results. In this course the student will receive writing instruction. The written output usually is in the form of a scientific paper describing the results of the student's project. Written output of the course must be revised during the semester and a schedule for writing, assessment and revision needs to be in place at the beginning of the semester. The project needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the Director of Undergraduate Studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, how writing instruction will take place, a timeline for when student writing will be handed in and how it will be assessed, methodology to be used by the student, and how assessment of learning will be conducted by the mentor. Additional oversight is established for this course - near the end of the semester the written output is submitted to the DUGS for the major. The DUGS is responsible to determine that the writing meets standards set by the CBS Education Policy Committee for quality of writing, appropriate citation of literature, well-constructed figures, tables, and legends (if present), appropriate use and interpretation of statistics (if present), conclusions that are supported by evidence, and well-formatted references. The DUGS can call for a final revision before a grade is given. This course is graded S/N and approval of the DUGS is required before a grade of S can be given by the faculty mentor. prereq: department consent, instructor consent, no more than 7 credits of 4793W, 4794W, 4993, 4994 counts towards CBS major requirements.

BIOL 4950. Special Topics in Biology. (; 1-4 cr. [max 12 cr.] ; S-N only; Periodic Spring)

In-depth study of special topic in life sciences.

BIOL 4960H. Thesis Writing in the Biological Sciences: Developing the Literature Review. (; 1 cr. ; A-F only; Every Fall)

In the Fall semester of the two-semester capstone thesis support course, CBS honors students will develop and refine the literature review introduction component of the honors thesis. The course will focus on conceptualizing the gap in knowledge, drafting the literature review, and revising in response to peer and outside reader feedback. We will use the literature to unpack the conventions of authentic scientific writing so that students can begin to draft other sections of their thesis (methods, results narrative, publication ready figures, legends) By the end of the term, students will have developed and peer-workshopped at least one draft module of each data-related thesis section and they will have a revised version of the thesis introduction/literature review to deliver to their faculty research mentor for feedback before the start of the Spring term. Students should be in a research lab and have started their research project before the start of the semester. Students who have not yet fulfilled an upper division WI course in the biological sciences should wait until the Spring (final) semester to register for their major's version of WI directed research or WI directed studies (for example, MicB 4794W or 4793W). The completed and approved thesis will count for the WI.

BIOL 4961H. Thesis Writing in the Biological Sciences: Conveying and Contextualizing Results. (; 1 cr. ; A-F only; Every Spring)

In this second semester of the CBS thesis support course, honors students will continue work initiated Biol 4960H to develop/draft/revise results/methods/discussion sections of their honors thesis. In addition, they will prepare and present a professional research poster at the University of Minnesota Undergraduate Research Symposium in April. The complete thesis will be assessed by two or three faculty readers against standards outlined in CBS Thesis Assessment Rubric. Students who have not yet fulfilled an upper division WI course in the biological sciences should concurrently register for their major's version of WI directed research or WI directed studies (for example, MicB 4794W or 4793W). The completed and approved thesis will count for the WI.

BIOL 4993. Directed Studies. (; 1-7 cr. ; S-N only; Every Fall, Spring & Summer)

Directed Studies is an individual-study, literature-based investigation in which the student is mentored directly by a faculty member. The topic for the course needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, methodology to be used, and how the assessment of learning will be conducted. prereq: department consent,

instructor consent, no more than 7 credits of 4793W, 4794W, 4993, 4994 counts towards CBS major requirements.

BIOL 4994. Directed Research. (; 1-7 cr. ; S-N only; Every Fall, Spring & Summer)

Directed Research is an individual-study, laboratory or field investigation course. The research topic needs to be agreed on by both the student and the faculty mentor and explained in a Research/Directed Studies contract. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, methodology to be used, and how the assessment of learning will be conducted. prereq: department consent, instructor consent, no more than 7 credits of 4793W, 4794W, 4993, 4994 counts towards CBS major requirements.

BIOL 5272. Applied Biostatistics. (; 4 cr. ; A-F only; Every Fall & Spring)

Conceptual basis of statistical analysis. Statistical analysis of biological data. Data visualization, descriptive statistics, significance tests, experimental design, linear model, simple/multiple regression, general linear model. Lectures, computer lab. prereq: High school algebra; BIOL 2003 recommended.

BIOL 5309. Molecular Ecology And Ecological Genomics. (; 3 cr. ; Student Option; Fall Even Year)

Application of molecular tools (PCR, sequencing, AFLP, SNPs, QTL) and analyses of molecular data for understanding ecological/evolutionary processes. Strengths/weaknesses of techniques/analyses. Questions molecular tools are used to answer. prereq: BIOL 3407 or BIOL 3409 or BIOL 4003

BIOL 5701. Science Communication: A Primer for Scientists. (; 2 cr. [max 3 cr.] ; Student Option; Every Fall, Spring & Summer)

Are you interested in honing your skills as a communicator? This class will help you improve your skills and gain confidence through practice and feedback. At the end of the course, you will have two finished pieces that you can use for fellowship applications or to publish. Topics covered include, translating technical concepts and avoiding jargon, understanding your audience and employing storytelling to engage them, identifying what makes science newsworthy, exploring concepts in inclusive science communication, and writing science stories and a three-minute thesis talk. The skills and practice from this course will help you in your future writing, presentations, and networking whether you want a career in academia, industry, nonprofit, government, or beyond. In addition to gaining a solid foundation in science communication, you will hear from guest speakers and experts about careers translating science.

BIOL 5910. Special Topics in Biology for Teachers. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Spring & Summer)

Courses developed for K-12 teachers depending on topics or subtopics which might include any of the following: plant

biology, animal biology, genetics, cell biology, biochemistry, microbiology. prereq: BA or BS in science or science education or elementary education or K-12 licensed teacher

BIOL 5950. Special Topics. (; 1-4 cr. [max 8 cr.]; Student Option; Periodic Fall, Spring & Summer)
In-depth study of special topic in life sciences.

Biology, Society, and Environ (BSE)

BSE 2001. An Introduction to Biology, Society, and Environment. (; 2 cr. ; A-F only; Every Fall & Spring)

The BSE major is built on the idea that problems of biology, health, and the environment emerge at the intersection of natural and human systems. Understanding these problems and their solutions, and building skill sets to address them, requires experience in the biological and natural sciences as well as in the social sciences and humanities. In this introduction to the BSE major, you'll explore the interconnectedness of biology, society, and environment through a series of "case study" modules that include lectures, videos, readings, and discussions. You'll also complete some very practical exercises to help you consider how you might develop your own unique path through the BSE major, in ways that are relevant to your personal and/or professional interests and goals. Must be completed prior to senior year.

BSE 2001H. Introduction to Biology, Society, and Environment - Honors. (; 2 cr. ; A-F only; Every Fall)

The BSE major is built on the idea that problems of biology, health, and the environment emerge at the intersection of natural and human systems. Understanding these problems and their solutions, and building skill sets to address them, requires experience in the biological and natural sciences as well as in the social sciences and humanities. In this introduction to the BSE major, you'll explore the interconnectedness of biology, society, and environment through a series of "case study" modules that include lectures, videos, readings, and discussions. You'll also complete some very practical exercises to help you consider how you might develop your own unique path through the BSE major, in ways that are relevant to your personal and/or professional interests and goals. Must be completed prior to senior year.

BSE 3991. Biology, Society and Environment Capstone. (; 1 cr. ; S-N only; Every Fall & Spring)

This course will help you reflect on your path through the BSE major, assess the knowledge and skills you developed during your degree program, and articulate how your knowledge and skills support your personal and professional interests and goals. BSE 3991 is open to second-semester Junior and Senior BSE majors.

BSE 3991H. BSE Capstone Honors. (; 1 cr. ; A-F only; Every Spring)

This course will help you reflect on your path through the BSE major, assess the knowledge and skills you developed during your degree program, and articulate how your knowledge and skills support your personal and professional interests and goals. BSE 3991 is open to second-semester Junior and Senior BSE majors.

BSE 3994. Directed Research in Biology, Society, and Environment. (1-8 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer)

Students work with a faculty supervisor on an Individual guided research project.

BSE 3996. Senior Project Directed Research. (3-4 cr. [max 8 cr.]; A-F only; Every Fall, Spring & Summer)

Individual guided research course taken in fulfillment of BSE senior project requirement. Prereq-instr consent, dept consent, college consent.

BSE 3997. Senior Project. (2 cr. [max 4 cr.]; A-F only; Every Fall, Spring & Summer)

Senior Project add-on credit. Must be taken concurrently with "BSE Core" or "BSE Theme Elective" course related to area of specialization. Prereq-instr consent, dept consent, college consent.

Biomedical Engineering (BMEN)

BMEN 1601. Biomedical Engineering Undergraduate Seminar I. (1 cr. ; A-F only; Every Fall)

Introduction to biomedical engineering from academic/industrial perspectives. Survey of current/emerging areas. prereq: CSE student or instructor approval.

BMEN 1602. Biomedical Engineering Undergraduate Seminar II. (1 cr. ; A-F only; Every Spring)

Continuation of 1601. Emphasizes biomedical engineering design and numerical analysis. prereq: CSE student or instructor approval.

BMEN 2101. Biomedical Thermodynamics and Kinetics. (; 3 cr. ; A-F only; Every Spring)

Introduction to thermodynamics and kinetics, framed in the context of biomedical technologies and applications. Topics include principles of probability, extremum principles and equilibria, entropy & the Boltzmann distribution law, thermodynamic driving forces, solutions & mixtures, solvation & transfer of molecules between phases, phase transitions, biological rate processes, noncovalent binding interactions, binding equilibria and kinetics, enzyme kinetics, gene expression, protein trafficking, and network dynamics. Prerequisites BMEN 2501, CHEM 1022, MATH 2373, concurrent registration is required (or allowed) in MATH 2374

BMEN 2151. Introductory Medical Device Prototyping. (3 cr. ; A-F only; Every Spring)

Engineering drawing with SolidWorks; CAM and 3D FDM printing; Lathe, mill, and other shop instruction; Biomaterials & biocompatibility; Digital and analog electronics, SPICE and test equipment; Programming in C; and Microcontrollers, sensors and actuators.

BMEN 2401. Programming for Biomedical Engineers. (; 2 cr. ; A-F only; Every Fall)

Introduction to structured programming in biomedical engineering. Development of programming skills/logic relevant for numerical methods used for analyzing biomedical signals and solving algebraic/differential equations using Matlab. Programming logic/structured programming, introduction to scientific computation motivated by signal representations. Weekly lecture, computer lab modules. prereq: CSE student, PHYS 1302W, and MATH 2373 or MATH 2374

BMEN 2501. Cellular and Molecular Biology for Biomedical Engineers. (BIOL; 4 cr. ; A-F or Audit; Every Fall)

Fundamentals of cellular/molecular biology. Chemistry of proteins, lipids, and nucleic acids. Applications to biomedical engineering. Function/dynamics of intracellular structures and differentiated animal cells. Application of physical/chemical fundamentals to modeling cellular/subcellular processes. Lecture/lab. prereq: concurrent registration is required (or allowed) in CHEM 1022, concurrent registration is required (or allowed) in MATH 1372, concurrent registration is required (or allowed) in PHYS 1302, CSE student

BMEN 3011. Biomechanics. (3 cr. ; A-F or Audit; Every Fall)

Statics, dynamics, deformable body mechanics applied to biological/biomedical problems. Mechanical properties of biological/commonly used biomedical engineering materials. Techniques for numerical solution of biomechanics problems. Lecture/Discussion. prereq: BME Upper Div or dept consent

BMEN 3015. Biomechanics Lab. (1 cr. ; A-F or Audit; Periodic Fall)

Lab accompanies BMEN 3011 Biomechanics. prereq: [BME UD or dept consent], concurrent registration is required (or allowed) in 3011

BMEN 3111. Biomedical Transport Processes. (3 cr. ; A-F or Audit; Every Spring)

Principles of momentum, heat, mass transfer illustrated with applications in physiological processes. Fluid mechanics, heat condition, mass diffusion, convection. Lecture. prereq: [3011, 3015], [BMEN upper div or dept consent]

BMEN 3115. Biomedical Transport Processes Lab. (1 cr. ; A-F or Audit; Every Spring)

Lab accompanies BMEN 3111 Biomedical Transport Processes. prereq: [3011, concurrent registration is required (or allowed) in 3111], [BMEN upper div or dept consent]

BMEN 3151. Medical Device Practicum. (1 cr. ; A-F only; Every Summer)

BMEN 3151 "Medical Device Practicum" allows students to use the skills they learned in BMEN 2151 "Introductory Medical Device Prototyping" for making an actual medical device prototype. Weekly seminars introduce advanced medical device topics that will be fundamental to senior design. Students will become acquainted with the following topics: Design opportunities in medicine, conceiving and vetting a medical device, FDA regulations and guidance,

intellectual property, commercialization licensing and entrepreneurship, and building a medical device prototype.

BMEN 3211. Bioelectricity and Bioinstrumentation. (3 cr. ; A-F or Audit; Every Fall)

Principles of electrical phenomena, instruments relevant to biomedical applications. Lecture/discussion. prereq: BME Upper Div or dept consent

BMEN 3215. Bioelectricity and Bioinstrumentation Lab. (1 cr. ; A-F or Audit; Periodic Fall)

Lab accompanies BMEn 3211 Bioelectricity/Bioinstrumentation. prereq: [BMEN Upper Div or dept consent], concurrent registration is required (or allowed) in 3211

BMEN 3311. Biomaterials. (3 cr. ; A-F or Audit; Every Spring)

Principles of biomaterials. Organic chemistry/biochemistry of natural/artificial biomaterials. Physical characterization/mechanical testing. Biomedical applications. Lecture/discussion. prereq: 2101, [BMEn Upper Div or dept consent]

BMEN 3315. Biomaterials Lab. (1 cr. ; A-F or Audit; Every Spring)

Lab accompanies BMEn 3311 Biomaterials. prereq: [2101, concurrent registration is required (or allowed) in 3311], [BMEN Upper Div or dept consent]

BMEN 3411. Biomedical Systems Analysis. (3 cr. ; A-F or Audit; Every Spring)

Quantitative analysis of physiological/biological systems. First/second order systems, linear time-invariant systems, systems classification/identification. Linear control theory/controller synthesis. Electrical, mechanical, thermal, chemical/biomedical control systems. prereq: 3211, [BME Upper Div or dept consent]

BMEN 3415. Biomedical Systems Analysis Lab. (1 cr. ; A-F or Audit; Every Spring)

Lab accompanies BMEn 3411 Biomedical Systems Analysis. prereq: [3211, concurrent registration is required (or allowed) in 3411], [BME Upper Div or dept consent]

BMEN 3601. Biomedical Engineering Careers and Practice in the Med Tech Industry. (1 cr. ; A-F only; Every Fall)

Local industry speakers describe various job roles available to BBME graduates at graduation. Input from Career Center on internship/job searching/interviewing. Exposure to other aspects of the medical devices industry (e.g. failure mode analysis, tolerancing, reading/critiquing clinical literature, etc).

BMEN 4001W. Biomedical Engineering Design I. (WI; 3 cr. ; A-F or Audit; Every Fall)

Design/analysis of biomedical devices/technologies. Students work in teams on open ended design project, present completed work at design show. prereq: 2501, 3001, 3101, 3201, 3301, 3701

BMEN 4002W. Biomedical Engineering Design II. (WI; 3 cr. ; A-F or Audit; Every Spring)

Continuation of 4001W. prereq: 4001W

BMEN 4011. CAD/CAE of Bioelectrical Devices. (1 cr. ; A-F or Audit; Every Fall)

Simulation, analysis, design of industry common Bioelectrical Devices with using CAD software. Altium Designer CAD/LT Spice. prereq: [3211, 3215] or instr consent

BMEN 4013. CAD of Biomechanical/transport Devices. (1 cr. ; A-F or Audit; Every Fall)

Introduction to CAD modeling/analysis for medical device engineers using SOLIDWORKS CAD platform. Emphasis on practical applications of CAD for engineers using real-world examples from actual industry projects. prereq: BME Upper Division or instr consent

BMEN 4015. CAE of Biomechanical/Transport Devices. (1 cr. ; A-F or Audit; Every Fall)

Computational modeling and simulation of biomechanical and biotransport devices using COMSOL Multiphysics software. prereq: 3011, 3015, 3111, 3115

BMEN 4793. Directed Study. (; 1-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Directed study under faculty supervision. prereq: instr consent, dept consent

BMEN 4794. Directed Research. (; 1-4 cr. [max 6 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Independent laboratory research under faculty supervision. prereq: instr consent, dept consent

BMEN 4794H. Directed Research Honors. (; 1-4 cr. [max 24 cr.] ; A-F only; Every Fall, Spring & Summer)

Independent laboratory research under faculty supervision. prereq: BME UD, UHP student, instr consent, dept consent

BMEN 4896. Industrial Assignment I: Co-op Program. (; 2 cr. ; A-F only; Every Summer)

Industrial assignment in co-op program. Industrial work assignment in engineering intern program. Evaluation based on student's formal written report covering semester's work assignment. Please visit the Engineering Co-op Program's website for the full syllabus and course information: <http://co-op.umn.edu> prereq: BMEn upper div, completion of required courses in BMEn prog through spring sem of 3rd yr, registered in co-op prog prereq: BMEn upper div, completion of required courses in BMEn prog through spring sem of 3rd yr, registered in co-op prog

BMEN 4996W. Industrial Assignment II: Co-op Program. (WI; 4 cr. ; A-F only; Every Fall & Spring)

Industrial assignment in co-op program. Solution of system design problems that require developing criteria, evaluating alternatives, and generating a preliminary design. Final report emphasizes design communication and describes design decision process, analysis, and final recommendations. Please visit the Engineering Co-op Program's website for the full syllabus and further course information: <http://co-op.umn.edu> prereq: 4896, registered in co-op prog

BMEN 5001. Advanced Biomaterials. (; 3 cr. ; A-F or Audit; Every Fall)

Commonly used biomaterials. Chemical/physical aspects. Practical examples from such areas as cardiovascular/orthopedic applications, drug delivery, and cell encapsulation. Methods used for chemical analysis and for physical characterization of biomaterials. Effect of additives, stabilizers, processing conditions, and sterilization methods. prereq: 3301 or MatS 3011 or grad student or instr consent

BMEN 5031. Engineering Extracellular Matrices. (3 cr. ; A-F only; Every Fall)

This class explores the complex set of fibrous and linking proteins of tissues, namely the extracellular matrix (ECM). The ECM is crucial not only for maintaining the structure of tissues but also for guiding and maintaining cellular functions and fate processes. The purpose of the course is to become acquainted with ECM proteins and to investigate how control or manipulation of ECM proteins impacts on cell and tissue function with an emphasis on impacts for regenerative medicine. In the course of this study, we will apply fundamentals of physics, chemistry, and mathematics to make predictions, solve problems and optimize outcomes related to ECM engineering. Required prerequisites: Upper Division Undergraduate or Graduate level student standing in CSE. Recommended prerequisites: BMEn 2501, 3011/3015, 3111/3115, 3311/3315, or equivalents (introductory cell/molecular biology, biomaterials, biotransport, biomechanics).

BMEN 5041. Tissue Engineering. (; 3 cr. ; Student Option; Every Spring)

Fundamentals of wound healing and tissue repair; characterization of cell-matrix interactions; case study of engineered tissues, including skin, bone marrow, liver, vessel, and cartilage; regulation of biomaterials and engineered tissues. prereq: CSE upper div or grad student or med student or instr consent

BMEN 5101. Advanced Bioelectricity and Instrumentation. (; 3 cr. ; Student Option; Periodic Spring)

Instrumentation, computer systems, and processing requirements for clinical physiological signals. Electrode characteristics, signal processing, and interpretation of physiological events by ECG, EEG, and EMG. Measurement of respiration and blood volume/flow. prereq: [CSE upper div, grad student] or instructor consent

BMEN 5111. Biomedical Ultrasound. (; 3 cr. ; Student Option; Every Spring)

Introduction to biomedical ultrasound, including physics of ultrasound, transducer technology, medical ultrasound imaging, photoacoustic imaging, applications of non-linear acoustics, and high-intensity ultrasound. prereq: [[PHYS 1302 or equiv], [MATH 2374 or equiv]] or instr consent

BMEN 5151. Introduction to BioMEMS and Medical Microdevices. (; 2 cr. ; A-F or Audit; Every Spring)

Design/microfabrication of sensors, actuators, drug delivery systems, microfluidic devices, and DNA/protein microarrays. Packaging,

biocompatibility, ISO 10993 standards. Applications in medicine, research, and homeland security. prereq: CSE sr or grad student or medical student

BMEN 5201. Advanced Biomechanics. (3 cr. ; Student Option; Periodic Fall & Spring) Introduction to biomechanics of musculoskeletal system. Anatomy, tissue material properties. Kinematics, dynamics, and control of joint/limb movement. Analysis of forces/motions within joints. Application to injury, disease. Treatment of specific joints, design of orthopedic devices/implants. prereq: [[3001 or equiv], [CSE upper div or grad student]] or instr consent

BMEN 5311. Advanced Biomedical Transport Processes. (3 cr. ; Student Option; Every Spring) Fluid flow and mass transfer in the body, bioreactors, and medical devices. Pulsatile flows. Flows around curved and deformable vessels. Boundary layer flows. Blood rheology. Interstitial (porous media) flows. Oxygenation. Cell migration. Student critiques of published papers.

BMEN 5321. Microfluidics in Biology and Medicine. (3 cr. ; A-F or Audit; Every Fall) Fundamentals of microfluidics. Fluid mechanics/transport phenomena in microscale systems. Pressure/surface driven flows. Capillary forces, electrokinetics, hydraulic circuit analysis. Finite element modeling for microfluidic systems. Design/fabrication methods for microfluidic devices. prereq: [3111, AEM 4201, ChEn 4005, [ME 3331 or ME 3332 or CSE grad student or instr consent]

BMEN 5351. Cell Engineering. (3 cr. ; Student Option; Periodic Fall & Spring) Engineering approaches to cell-related phenomena important to cell/tissue engineering. Receptor/ligand binding. Trafficking/signaling processes. Applications to cell proliferation, adhesion, and motility. Cell-matrix interactions. prereq: [2401, [2501 or concurrent registration is required (or allowed) in 5501], [MATH 2243 or MATH 2373]] or CSE upper div or grad student or instr consent

BMEN 5361. 3D Bioprinting. (2 cr. ; A-F only; Every Spring) 3D Bioprinting has recently emerged as a new biofabrication technology that merges many engineering fields (eg. BME, MechE, ChemE) with other disciplines such as Materials Science, Stem Cell Biology, Physiology, Surgery and Pharmacology. This course serves as an introduction to the field and how its disciplines interface, while providing the student with knowledge of many of the most common bioprinting methods and applications being developed today through lectures by experts in the field (academia and industry) as well as hands-on lab exercises in the UMN 3D Bioprinting Facility.

BMEN 5401. Advanced Biomedical Imaging. (3 cr. ; A-F or Audit; Every Fall) Functional biomedical imaging modalities. Principles/applications of technologies that offer high spatial/temporal resolution. Bioelectromagnetic and magnetic resonance

imaging. Other modalities. prereq: CSE upper div or grad student or instr consent

BMEN 5411. Neural Engineering. (3 cr. ; Student Option; Every Fall) Theoretical basis. Signal processing techniques. Modeling of nervous system, its response to stimulation. Electrode design, neural modeling, cochlear implants, deep brain stimulation. Prosthetic limbs, micturition control, prosthetic vision. Brain machine interface, seizure prediction, optical imaging of nervous system, place cell recordings in hippocampus. prereq: 3401 recommended

BMEN 5412. Neuromodulation. (3 cr. ; A-F or Audit; Every Fall) Fundamentals of bioengineering approaches to modulate the nervous system, including bioelectricity, biomagnetism, and optogenetics. Computational modeling, design, and physiological mechanisms of neuromodulation technologies. Clinical exposure to managing neurological disorders with neuromodulation technology.

BMEN 5413. Neural Decoding and Interfacing. (3 cr. ; A-F or Audit; Every Spring) Neural interface technologies currently in use in patients as well as the biophysical, neural coding, and hardware features relating to their implementation in humans. Practical and ethical considerations for implanting these devices into humans. prereq: CSE upper division student, CSE graduate student, or instructor approval. recommended: BMEN 3411

BMEN 5421. Introduction to Biomedical Optics. (3 cr. ; A-F or Audit; Periodic Spring) Biomedical optical imaging/sensing principles, laser-tissue interaction, detector design, noise analysis, interferometry, spectroscopy. Optical coherence tomography, polarization, birefringence, flow measurement, fluorescence, nonlinear microscopy. Tours of labs. prereq: CSE sr or grad student

BMEN 5501. Biology for Biomedical Engineers. (3 cr. ; Student Option; Periodic Fall & Spring) Concepts of cell/tissue structure/function. Basic principles of cell biology. Tissue engineering, artificial organs. prereq: Engineering upper div or grad student

BMEN 5601. Cardiovascular Devices. (1 cr. ; A-F or Audit; Every Spring) Design of cardiovascular devices with experts from local medtech companies. Discussion of clinical need, the generic design (emphasizing use of engineering principles), typical testing and validation methods, and major limitations of the available devices. Design, analysis, and testing of these and related devices. prereq: BMEN 3011, 3111, 3211, or equivalents with instr consent

BMEN 5701. Cancer Bioengineering. (3 cr. ; A-F or Audit; Every Fall) Cancer-specific cell, molecular/genetics events. Quantitative applications of bioinformatics/systems biology, optical imaging, cell/matrix mechanics. Drug transport (with some examination of design of novel therapeutics).

prereq: [Upper division CSE undergraduate, CSE graduate student] or instr consent

BMEN 5910. Special Topics in Biomedical Engineering. (3 cr. [max 6 cr.] ; Student Option; Periodic Fall & Spring) Special topics in biomedical engineering.

BMEN 5920. Special Topics in Biomedical Engineering. (1-3 cr. [max 6 cr.] ; Student Option; Periodic Fall & Spring) Special topics in biomedical engineering.

Bioproducts and Biosystems Eng (BBE)

BBE 1001. Bioproducts and Biosystems Engineering Orientation. (1 cr. ; S-N or Audit; Every Fall) Academic programs/careers related to bioproducts and biosystems engineering. Required field trip.

BBE 1002. Biorenewable Resources. (TS; 3 cr. ; Student Option; Every Fall & Spring) In this course you will gain a basic understanding of what biorenewable resources are and the benefits and challenges that biorenewable materials provide. You will learn how to evaluate the environmental impact of various material choices and the technical and economic implications of these options.

BBE 2001. Mechanics and Structural Design. (4 cr. ; A-F or Audit; Every Fall) Fundamental treatment of statics, dynamics, and principles of structural design. Techniques for individual components, including trusses, beams, and columns. Using conventional lumber products, engineered wood products, and steel. Lab. Prerequisite: Math 1272 or Math 1372 or Math 1572H and Phys 1101W or Phys 1301W or Phys 1401V)

BBE 2003. Computer Applications in Bioproducts and Biosystems Engineering. (3 cr. ; A-F or Audit; Every Fall) Applications of computational methods for solving practical problems in Bioproducts and Biosystems Engineering. Applications of computer software, for instance, Matlab, R, and Excel, in assisting engineering calculations and designs in Bioproducts and Biosystems Engineering. Prereq: (Math 1271 or Math 1371, Math 1272 or Math 1372, Concurrent registration in [(Math 2243 or 2373) OR {Math 2263 or 2374}]) CSE lower division or CSE Upper Division BBE Majors or CFANS Pre-BBE (Premajor) or instructor consent.

BBE 2201. Renewable Energy and the Environment. (TS; 3 cr. ; Student Option; Every Fall, Spring & Summer) There is a growing sense of national and global urgency regarding carbon and climate change with particular emphasis on our energy system. Unfortunately, the answers are not simple. In this course, students explore our wide range of traditional and renewable energy sources and how these options impact our environment and society. Students are also exposed to the complex and compelling ethical issues raised by global, national, and local changes in how we produce and use energy. This course informs and engages students to be thoughtful,

rather than passive consumers of energy. Students gain the knowledge necessary to be articulate in career, community, and personal arenas regarding renewable energy resources. In addition, students develop the ability to evaluate and respond to present and future technological changes that impact their energy use in the workplace, at home, and in the community. This course was designed and offered as an online course since 2011. For more details on the course please look at the syllabus and some comments from previous students by going to bbe2201.cfans.umn.edu

BBE 3002. Introduction to Engineering Design. (3 cr. ; A-F only; Every Fall)

Identify, formulate, develop/complete open-ended designs in bioproducts & biosystems engineering at the conceptual level; engineering economics principles, safety/health considerations, and ethics for design project. Written, graphical, and oral presentations. prereq: BBE 2003, Chem 1061, Math 2243 or Math 2373, BBE or Pre-BBE student or instr consent

BBE 3012. Transport in Biological Processes I. (4 cr. ; A-F only; Every Fall)

Introduction to fluid mechanics. Fluid statics/kinematics. Differential/finite control volume analysis with continuity, momentum, energy equations. Bernoulli/Euler Equation. Dimensional analysis. Potential flow. Non-Newtonian Fluids. Applications to biological fluids/biological systems. prereq: BBE 1001 or concurrent registration and BBE 2001 and BBE 3033 and Math 2243 or Math 2373 or Math 2574H and Math 2263 or Math 2374 or Math 2573H and Phys 1302W or Phys 1402V

BBE 3013. Engineering Principles of Molecular and Cellular Processes. (3 cr. ; A-F or Audit; Every Fall)

Applied engineering principles in biological processes. Classification of microbes of industrial importance. Parameters for cellular control. Modeling of cell growth/metabolism, enzymatic catalysis, bioreactor design, product recovery operations design. Case studies. prereq: BBE 1001 or concurrent reg and BIOL 1009 and CHEM 1062 or equiv and CHEM 1066 or equiv and MATH 1372 or equiv and BIOC 2011 or CHEM 2301, or instructor consent

BBE 3023. Ecological Engineering Principles. (3 cr. ; Student Option; Every Fall)

Physical, thermal, texture, strength, moisture properties of soil. Saturated/unsaturated moisture movement. Quantitative descriptions of mass/energy flux/storage in ecosystems. Distribution of vegetation in landscapes. Engineering/management impacts on soil-water-plant systems. prereq: BIOL 1009, [3012 or concurrent registration is required (or allowed) in 3012] or instr consent

BBE 3033. Material and Energy Balances in Biological Systems. (3 cr. ; A-F or Audit; Every Spring)

Basic principles of materials and energy balances, their applications in biological systems. prereq: [CHEM 1062 or equiv], [CHEM 1066, or equiv], [MATH 1372 or equiv], [PHYS 1302W or equiv]

BBE 3043. Biological and Environmental Thermodynamics. (3 cr. ; A-F or Audit; Every Spring)

Laws of thermodynamics for energy, environmental and biological sciences. First/second laws of thermodynamics in representing phase change, biochemical reactions, metabolic cycles, and photosynthesis. prereq: BIOL 1009, [CHEM 1061 or equiv], [CHEM 1065, or equiv], [MATH 1372 or equiv], [PHYS 1302 or equiv]

BBE 3093. Directed Studies. (1-5 cr. ; Student Option; Every Fall, Spring & Summer)

Independent study of topic(s) involving physical principles as applied to agricultural production and land resources. prereq: instr consent

BBE 3201. Sustainability of Food Systems: A Life Cycle Perspective. (GP; 3 cr. ; A-F only; Every Fall & Spring)

Consequences of global food system. Diversity in food systems. Current topics in food sustainability.

BBE 3394. Directed Research. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

BBE 3396. Industry Assignment. (1 cr. ; A-F or Audit; Every Fall & Spring)

Students participating in industrial or experiential learning assignment. Evaluation based on formal final report; coordinated with faculty and industry advisor.

BBE 3480. Special Topics. (1-4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Topics specified in Class Schedule.

BBE 4001. Chemistry of Biomass and Biomass Conversion to Fuels and Products. (ENV; 4 cr. ; A-F or Audit; Every Fall)

Chemistry of biomass and its sustainable utilization for biofuels and bioproducts, including bio-based materials. Chemicals/energy and their environmental implications within the context of chemical principles and associated reactions underlying the structure, properties, processing, and performance of plant materials. prereq: CHEM 2301 or instr consent

BBE 4013. Transport in Biological Processes II. (3 cr. ; A-F or Audit; Every Spring)

Application of thermodynamics, fluid flow, heat/mass transfer to design problems. Biological processes/materials at cell, organism, system level. Agricultural, environmental, food, bioprocess applications. Solution of equations involving computer programming assignments. prereq: 3012, 3043, [upper div CSE or instr consent]

BBE 4023W. Process Control and Instrumentation. (WI; 3 cr. ; A-F or Audit; Every Fall)

Measurement of motion, force, pressure, flow, temperature, size, shape, color, texture, rheology, moisture, water mobility, fat, and pH. Linking physical and biological control systems. prereq: Upper div CSE or grad student

BBE 4301. Applied Surface and Colloid Science. (3 cr. ; Student Option; Every Fall)

Introduction to surface/colloid science concepts. Surface tension, wetting, adsorption, capillarity. Formation/stability of sols, emulsions, and foams. Water solubility. Partition coefficients of organic species. Properties of both surfactants and water soluble polymers. Focuses on interdisciplinary applications. prereq: 3043 or BMEN 2101 or CHEN 3101 or CHEM 4501 or instr consent

BBE 4302. Biodegradation of Bioproducts. (3 cr. ; Student Option; Every Spring)

Organisms of importance to bio-based products. Deterioration, control, bioprocesses for benefit. prereq: 1002 or instr consent

BBE 4303. Introduction to Bio-based Materials Science. (3 cr. ; A-F or Audit; Every Spring)

Principles of materials science, their application to bio-based materials. prereq: 2001 or instr consent

BBE 4305. Pulp and Paper Technology. (3 cr. ; Student Option; Every Spring)

Pulping processes, fiber refining/processing, paper manufacturing, fiber/paper properties, recycling. Water requirements, effluent treatment. Chemical/mechanical pulping, pulp preparation, secondary fiber, de-inking, wet end additives. Lab problems/exercises, lectures. Online course. prereq: Junior or senior or instr consent

BBE 4333. Off-road Vehicle Design. (4 cr. ; A-F or Audit; Every Spring)

Mechanics involved in designing/testing off-road vehicle. Vehicle mechanics, traction, and performance. Complexity/modeling of vehicle interaction with soil, muskeg, and snow. prereq: [[2001, 4303] or [AEM 2021, AEM 3031], [3012 or CECE 3502 or concurrent registration is required (or allowed) in CECE 3502], upper div CSE] or instr consent

BBE 4401. Bioproducts Separation and Purification Processes. (3 cr. ; A-F or Audit; Every Fall)

Unit operations of bioproducts engineering/manufacture; separations and purification processes.

BBE 4402. Bio-based Products Engineering Lab II. (2 cr. ; A-F or Audit; Every Fall)

Unit operations laboratory exercises in bio-based products engineering/manufacture. prereq: BBE 2003 and BBE 4013, [jr or sr or instr consent]

BBE 4403. Bio-based Products Engineering Lab I. (2 cr. ; A-F or Audit; Every Spring)

Lab exercises in bio-based products engineering. prereq: BBE 4001

BBE 4404. Biopolymers and Biocomposites Engineering. (3 cr. ; A-F or Audit; Every Fall)

Structure/properties of biopolymers. Engineering of composites from these biopolymers or plant-based materials. prereq: [BBE/CSE upper division] or instr consent

BBE 4502W. BBE Capstone Design. (WI; 4 cr. ; A-F or Audit; Every Spring)
Students develop, select, formulate, and complete an open-ended, comprehensive engineering process/product design project. This course should be taken during the last spring semester before graduation. prereq: BBE 3002 and BBE 3012 and BBE 4013 and or concurrent with BBE 4013 and CSE Upper Division.

BBE 4523. Ecological Engineering Design. (; 3 cr. ; A-F or Audit; Every Spring)
Application of ecological engineering to design of remediation systems. Artificial ecosystems, ecosystem/wetland restoration, constructed wetlands. Biological engineering for slope stability. Waste treatment. Restoring ecological service of watersheds. prereq: BBE 3012 and CSE upper division or instr consent

BBE 4533. Sustainable Waste Management Engineering. (; 3 cr. ; A-F or Audit; Every Spring)
Sources/characteristics of agricultural wastes. Livestock, food processing, domestic wastes. Physical, biological, chemical, rheological, microbiological properties. Effects on environment. Collection, storage, treatment (aerobic/anaerobic), use/disposal. Land application. prereq: 3023, upper div CSE

BBE 4535. Assessment and Diagnosis of Impaired Waters. (; 3 cr. ; A-F only; Every Fall)
Assessing impaired waters and developing TMDL for conventional pollutants. Preparing/communicating legal, social, and policy aspects. TMDL analysis of real-world impaired waters problem. Field trip to impaired waters site. prereq: BBE 3012 and Upper division in CSE or CFANS or CBS student or instr consent

BBE 4608. Environmental and Industrial Microbiology. (3 cr. ; A-F only; Every Fall)
Use of organisms in remediation of waste and pollution problems related to bio-based product industries. Types, characteristics, identification of useful microorganisms. Applications of microbes to benefit industrial processes of wood and fiber. prereq: [BIOL 1001 or BIOL 1009], CHEM 1011

BBE 4713. Biological Process Engineering. (; 3 cr. ; A-F or Audit; Every Spring)
Material/energy balances. Homogeneous reactions of bioprocess engineering/biological systems. Fermentation engineering, reactor design. Filtration, centrifugation, separation, absorption, extraction, chromatography. Biorefining. Conversion of biomass. prereq: [3033, [4013 or concurrent registration is required (or allowed) in 4013], upper div CSE] or instr consent

BBE 4723. Food Process Engineering. (; 3 cr. ; A-F or Audit; Every Spring)
Material/energy balance, fluid dynamics, heat/mass transfer in refrigeration, freezing, psychometrics, dehydration, evaporation, non-thermal processing, and separation.

Development control for production of food products. prereq: [[4013 or concurrent registration is required (or allowed) in 4013], upper div CSE] or instr consent

BBE 4733. Renewable Energy Technologies. (TS; 3 cr. ; A-F or Audit; Every Spring)
Energy security. Environmental, economic, societal impacts. Current/emerging technologies for production/use, characteristics of renewable energy, key methods for efficient production. Current/probable future. Impact on sustainable development. prereq: Junior or senior

BBE 4743. Nanobioengineering & Nanobiotechnology. (3 cr. ; Student Option; Every Spring)
This course will educate on the interdisciplinary areas of bionanotechnology/nanobiotechnology and nanobioengineering, including engineering principles and inherent technological applications. Prereq: Upper division in CSE or juniors and seniors in physical sciences, biological sciences and engineering (including CBS and CFANS) or equivalent or instructor consent.

BBE 4744. Engineering Principles for Biological Scientists. (; 4 cr. ; A-F or Audit; Every Fall)
Material/energy balances applied to processing systems. Principles of fluid flow, thermodynamics, heat, mass transfer applied to food and bioprocess unit operations such as pumping, heat exchange, refrigeration/freezing, drying, evaporation, and separation. prereq: [Math 1142 or Math 1271], Phys 1101; intended for non engineering students

BBE 4753. Air Quality and Pollution Control Engineering. (3 cr. ; A-F or Audit; Every Spring)
Air quality and pollution control engineering systems. Air pollutant sources, emissions transformations, dispersion, fate and impacts. Introduction to air quality and pollution laws, regulations and permits. Control technologies including energy conservation, cyclones, electrostatic precipitators, fabric filters, absorbers, adsorbers, incinerators and biofilters. prereqs: BBE 3012, 3043, upper division CSE, graduate student or instructor consent. Credit will not be granted if credit has been received for CEGE 5561

BBE 4900. Intern Reports. (; 2 cr. [max 4 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Students participating in industrial or experiential learning assignment. Evaluation based on formal final report; coordinated with faculty and industry advisor. prereq: [CSE or CFANS] student in BBE, instr consent

BBE 5001. Chemistry of Biomass and Biomass Conversion to Fuels and Products. (; 4 cr. ; A-F or Audit; Every Fall)
Chemistry of biomass. Sustainable utilization for biofuels/bioprocesses. Bio-based materials, chemicals, energy. Environmental implications. Chemical principles/reactions underlying the structure, properties, processing, and performance of plant materials. prereq: Grad student or instr consent

BBE 5023. Process Control and Instrumentation. (; 3 cr. ; Student Option; Every Fall)
Fundamental principles in system dynamics/control. Emphasizes process systems and problems faced by process engineers. prereq: Grad student or instr consent

BBE 5093. Directed Study. (; 1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

BBE 5094. Directed Research. (; 1-5 cr. ; Student Option; Every Fall, Spring & Summer)
Advanced individual-study project. Application of engineering principles to specific problem. prereq: instr consent

BBE 5301. Applied Surface and Colloid Science. (; 3 cr. ; Student Option; Every Fall)
Introduction to surface/colloid science concepts. Surface tension, wetting, adsorption, capillarity. Formation/stability of sols, emulsions, and foams. Water solubility. Partition coefficients of organic species. Properties of both surfactants and water soluble polymers. Focuses on interdisciplinary applications.

BBE 5302. Biodegradation of Bioproducts. (; 3 cr. ; Student Option; Every Spring)
Organisms and their importance to bio-based products: deterioration, control, bioprocesses for benefit. prereq: Grad student or instr consent

BBE 5303. Introduction to Bio-based Materials Science. (; 3 cr. ; Student Option; Every Spring)
Principles of materials science, their application to bio-based materials. Project required. prereq: Grad student or instr consent

BBE 5305. Pulp and Paper Technology. (; 3 cr. ; Student Option; Every Spring)
Pulping processes, fiber refining/processing, paper manufacturing, fiber/paper properties, paper recycling. Water requirements, effluent treatment. Chemical/mechanical pulping, pulp preparation, secondary fiber, de-inking, wet end additives. Lab problems/exercises supplemented by lectures. Online course.

BBE 5333. Off-road Vehicle Design. (4 cr. ; A-F only; Every Spring)
Mechanics involved in designing/testing off-road vehicles. Vehicle mechanics, traction, performance. Complexity/modeling of vehicle interaction with soil, muskeg, snow. Case study or literature review. Develop paper for publication. prereq: [[2001, 4303] or [AEM 2021, AEM 3031], [3012 or concurrent registration is required (or allowed) in 3012

or CEGE 3502 or concurrent registration is required (or allowed) in CEGE 3502], upper div CSE] or instr consent

BBE 5401. Bioproducts Separation and Purification Processes. (; 3 cr. ; A-F or Audit; Every Fall)

Unit operations of bioproducts engineering/manufacture. Project required. prereq: Grad student or instr consent

BBE 5402. Bio-based Products Engineering Lab II. (; 2 cr. ; A-F or Audit; Every Fall)

Unit operations laboratory exercises in bio-based products engineering/manufacture.

BBE 5403. Bio-based Products Engineering Lab I. (2 cr. ; A-F or Audit; Every Spring)

Laboratory exercises in bio-based products engineering. prereq: Grad student or instr consent

BBE 5404. Biopolymers and Biocomposites Engineering. (; 3 cr. ; A-F or Audit; Every Fall)

Structure/properties of biopolymers. Engineering of composites from biopolymers/plant-based materials. prereq: grad student or instr consent

BBE 5480. Special Topics. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Topics specified in Class Schedule.

BBE 5513. Watershed Engineering. (; 3 cr. ; A-F or Audit; Every Fall)

Application of engineering principles to managing surface runoff from agricultural, range, and urban watersheds. Design of facilities and selection of land use practices for controlling surface runoff to mitigate problems of flooding and degradation of surface-water quality. prereq: 3023, upper div CSE or grad student

BBE 5523. Ecological Engineering Design. (; 3 cr. ; A-F only; Every Spring)

Application of ecological engineering to design of remediation systems. Artificial ecosystems, ecosystem/wetland restoration, constructed wetlands, biological engineering for slope stability, waste treatments. Restoring ecological service of watersheds. prereq: Graduate student or instr consent

BBE 5535. Assessment and Diagnosis of Impaired Waters. (; 3 cr. ; A-F only; Every Fall)

Assessing impaired waters and developing TMDL for conventional pollutants. Preparing/communicating legal, social and policy aspects. TMDL analysis of real-world impaired waters problem. Field trip to impaired waters site. prereq: Grad student or instr consent

BBE 5608. Environmental and Industrial Microbiology. (; 3 cr. ; A-F only; Every Fall)

Use of microbes/enzymes to detoxify contaminants in field or in containment facilities. Contaminants, sources, fates. Biological organisms, pathways, catalysts utilized in bioremediation. Site inspection practices, bioremediation technologies, application in real-world situations. prereq: [BIOL 1001 or BIOL 1009], CHEM 1011

BBE 5713. Biological Process Engineering. (; 3 cr. ; A-F only; Every Spring)

Material/energy balances. Homogeneous reactions of bioprocess engineering and biological systems. Fermentation engineering, reactor design fundamentals. Filtration, centrifugation, separation, absorption, extraction, chromatography. Biorefining. Conversion of biomass into bioenergy, biochemicals, and biomaterials. prereq: [3033, [4013 or concurrent registration is required (or allowed) in 4013], or instr consent

BBE 5723. Food Process Engineering. (; 3 cr. ; A-F or Audit; Every Spring)

Food processing engineering. Applications of material balance, energy balance, fluid dynamics, and heat/mass transfer to refrigeration, freezing, psychometrics, dehydration, evaporation, non-thermal processing, and separation. Development/control for food products. prereq: [[4013 or concurrent registration is required (or allowed) in 4013], or instr consent

BBE 5733. Renewable Energy Technologies. (; 3 cr. ; A-F or Audit; Every Spring)

Energy security and its environmental, economic and societal impacts. Current and emerging technologies for production and use, characteristics of renewable energy, key methods for efficient production, current and probable future, and impact on sustainable development. prereq: Grad student or instr consent

BBE 5743. Nanobioengineering & Nanobiotechnology. (3 cr. ; Student Option; Every Spring)

This course will educate on the interdisciplinary areas of bionanotechnology/nanobiotechnology and nanobioengineering, including engineering principles and inherent technological applications. prereq: Instructor consent

BBE 5753. Air Quality and Pollution Control Engineering. (3 cr. ; A-F or Audit; Every Spring)

Air quality and pollution control engineering systems. Air pollutant sources, emissions transformations, dispersion, fate and impacts. Introduction to air quality and pollution laws, regulations and permits. Control technologies including energy conservation, cyclones, electrostatic precipitators, fabric filters, absorbers, adsorbers, incinerators and biofilters. Course Prerequisites Graduate student or instructor consent Credit will not be granted if credit has been received for CEGE 5561

Business Administration (BA)

BA 1011. Leading Self & Teams. (; 2 cr. [max 3 cr.] ; A-F only; Every Fall & Spring)

This course guides Carlson students through a self-reflective journey as they learn about interpersonal competencies and the role of these competencies in their own leadership style and when leading teams. As leadership and teamwork are an essential component in the Carlson education and more broadly in the business community, this class provides the foundational skills necessary for future success. The course is structured into two

parts: understanding individual perspectives and understanding team dynamics. The course begins by providing students with a theoretical foundation on interpersonal differences that influence how people lead and interact in teams. Specifically, we explore differences in personality, identity, values, opinions, and cultures and the role they play when interacting with others. The focus of the course is providing students with essential skills to uncover, appreciate and navigate differences to create a solid foundation upon which to develop their own leadership skills and work together as a team. The second half of the course will focus on understanding team dynamics. This class provides students with a unique learning opportunity to learn how teams work while simultaneously working in their teams. In doing so, they will witness the direct application of course material to their own learning teams while completing their team project. Students will learn the science behind how teams are structured, team roles, processes within teams and what leads to effective teams. Specifically, the topics examined will include team decision making, conflict resolution, power, influence, analyzing team dynamics, and providing team feedback. At the end of this course, students will have a deeper understanding of themselves and will master skills for working in and leading teams. prereq: Carlson School of Management student

BA 1021. Design Your Life. (1 cr. ; S-N only; Every Fall & Spring)

Design Your Life is a class about customizing your college experience to get the most out of it. Using a process rooted in Design Thinking, the course equips students with tools to design and prototype a college experience that best aligns with who they are and what they hope to get from college. Students will explore the purpose of college, reflect on personal values and strengths, learn about educational and career opportunities, and create a prototype of their college experience. Through in-class activities and out of class assignments, students will also learn and practice professional and personal leadership skills Prerequisite: Carlson School student

BA 1990. Topics in Business. (; 1-4 cr. [max 12 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Topics vary.

BA 2005. Business Ethics, Corporate Responsibility & Sustainability. (CIV; 3 cr. ; A-F only; Every Fall & Spring)

This course seeks to give you the vocabulary necessary to describe and explain the ethical issues you will learn to identify through lectures, readings, and case studies. It will provide you with a decision-making framework that you can use to disentangle the most complicated scenarios, which will then allow you to use critical thinking and analysis to arrive at a decision on how you would respond as an individual in an ethically-defensible manner. This course will also anticipate your future career growth into positions of management and leadership, and will help give you the tools to manage people, money, and

business affairs both effectively and ethically. Mgmt 1005 was previously offered as BA 2005

BA 2005H. Business Ethics, Corporate Responsibility and Sustainability. (CIV; 3 cr. ; A-F only; Every Spring)

This course seeks to give you the vocabulary necessary to describe and explain the ethical issues you will learn to identify through lectures, readings, and case studies. You will be provided with a decision-making framework that you can use to disentangle the most complicated scenarios, which will then allow you to use critical thinking and analysis to arrive at a decision on how you would respond as an individual in an ethically-defensible manner. This course will also anticipate your future career growth into positions of management and leadership, and will help give you the tools to manage people, money, and business affairs both effectively and ethically. BA2005H was previously offered as MGMT1005H prereq: Honors student

BA 2021. Design Your Career. (; 1 cr. ; S-N only; Every Fall & Spring)

The focus of this course is to increase your awareness, knowledge, and skills associated with the career and job search process. The course includes major/career exploration and discovery, as well as the tactical pieces of a job search. You will learn how to write a professional resume and cover letter and will learn how to navigate the interview process. You will be exposed to a variety of individuals who will give you different perspectives on the process, including recruiters from local organizations, alumni, and other business professionals. This development will increase your ability to undertake a successful career and job search in your succeeding years. (Credit will not be granted if credit was received for BA 3000.?) prereq: Carlson School undergraduate student

BA 2051. Modeling Business Scenarios in Excel. (; 2 cr. ; A-F only; Every Fall & Spring)

The title of the course says it all. You will build and use Excel-models to analyze real-world business problems. You are introduced to basic skills for analyzing data and presenting recommendations to management. In this class you will work extensively with Microsoft Excel and will be better prepared to use it in internships and upper division classes. Excel is a critical business tool. As business students, your familiarity and proficiency in Excel will aid you in upper-level classes and ultimately greatly improve your career prospects. We will learn the tension between parsimony and relevance. You will use models to answer many what-ifs. Most importantly, we hope to instill a disciplined method of structured and rigorous thinking.

BA 2062. Powerful Problem Solving. (2 cr. ; A-F only; Every Fall & Spring)

One of the key distinguishing characteristics of effective leaders is the ability to parse through the overwhelming number of inputs we all receive to understand what needs to be done. What problem are we trying to solve? is a crucial question that too often goes unaddressed in the rush to just fix it?

Powerful Problem Solving will expose students to a clear problem solving framework and process, a variety of perspectives on how to approach problems, as well as individual and group activities and assignments to inform and sharpen skills.

BA 2551. Business Statistics in R. (MATH; 4 cr. ; A-F or Audit; Every Fall & Spring)

The purpose of the course is to develop skills for improving data-driven decision-making using statistical techniques in the powerful statistical software environment R. As an introductory statistics course, the content will include three main areas of statistics: Descriptive Statistics, Statistical Inference, and Analysis of Relationships with Scatterplots, Correlation and Linear Regression. Developing statistical literacy is increasingly important in understanding data and engaging in the complex business world. BA 2551 focuses on statistical reasoning and how to implement statistical methods in a business context using R. Topics include (but are not limited to) descriptive statistics, statistical inference, variability, sampling, distributions, correlation analysis, confidence intervals, hypothesis testing, graphical summaries of data, and introduction to linear regression. Through weekly in-class lab sessions and critical thinking assignments related to statistics in business, the course will train students to become informed consumers of numerical information and provide foundational skills in R to compute statistical procedures in future courses. We use existing packages in R as a tool to enable us to solve business problems that can leverage mathematical and statistical thinking. prereq: [Math 1031 or equiv]

BA 2990. Topics in Business. (; 1-4 cr. [max 12 cr.] ; Student Option; Periodic Fall, Spring & Summer)
Topics vary.

BA 3001. Race, Power, and Justice in Business. (DSJ; 3 cr. ; A-F only; Every Fall & Spring)

The United States is a diverse nation founded on the principle of equality, and yet has roots in slavery, indigenous genocide, colonialism, and dispossession. These roots shaped economic relations and business practices that continue today. Rather than seeing business as ahistorical organizations in which bundles of functional practices seek economic efficiency and respond to idealized market conditions, this course considers the socially-embedded nature of business in which racial and other structural inequalities are inherent in the development and contemporary practice of business. This includes questioning standard assumptions of free markets, meritocracy, and equal opportunity by considering alternative models of social relations and discrimination, and evidence on systemic economic injustice that reflect power differences, the contested nature of race, and the intersection of race, class, and other marginalized identities. This course also reveals ways in which business practices reflect hidden power dynamics and stereotypes. This deeper understanding of how race, power, and justice issues are

fundamental to business and management is intended to provide students with a richer lens to more critically examine business practices while considering ways to address power hierarchies and promote social justice in the context of business. This includes a consideration of alternative business practices as well as how corporations can advance diversity, equity, and inclusion (DEI). To complete the progression from macro-level structural and historical issues and then mid-level organization practices, the course concludes with an individual-level focus that considers how individuals navigate social identity differences at work, the impact of personal bias, and how to be an ally to advance justice and DEI. The course culminates with personal development plans in which students will demonstrate their belief in their own agency by devising plans for addressing their own biases and for identifying specific actions they can use to address power hierarchies and promote social justice. By providing a common experience for all Carlson School undergraduate students, this course also provides a shared vocabulary and diversity of perspectives to facilitate a shared sense of responsibility to build and maintain community as well as fostering openness to ongoing, respectful conversations on race, identity, power, and injustice. prereq: BA 1011 recommended

BA 3033W. Business Communication. (WI; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

This course teaches strategies and skills to communicate with confidence, clarity, and impact in business settings. Students develop their abilities in critical thinking (analyzing data, audience, purpose, and context) and craft (honing skills in storytelling, persuasion, writing, diction, tone, presence, data visualization, and visual design). They learn to navigate ambiguity, evaluate the needs of internal and external stakeholders, and communicate solutions to complex business problems. The course is performance- and project-based. Students produce professional-level memos, emails, and research-based proposal decks. They deliver multiple presentations (individual and team) and learn to communicate effectively with data. Students will meet with the instructor in small groups outside of class time for one scheduled lab session. The course culminates in the Case Study Competition where student teams apply their knowledge to address a real challenge from one of our industry partners. prereq: First Year Writing, Carlson School junior or senior.

BA 3051. Data-Driven Business Decisions. (3 cr. ; A-F only; Every Fall & Spring)

This course focuses on applying statistical techniques to make evidence-based recommendations for business decisions. Topics include (but are not limited to) linear regression, logistic regression, multiple regression, A/B testing, time-series data, and optimization. Students will work with data sets and practice applying these skills to make data-based recommendations across different areas of business. This course explicitly builds on

the Business Statistics in R and the Modeling Business Decisions in Excel courses. The Data-Driven Business Decisions course uses both Excel and R. Prereqs: Modeling Business Scenarios in Excel and Business Statistics in R

BA 3062. Impact Lab Project. (2 cr. ; A-F only; Every Fall & Spring)

This research project course centers on working with an organization to solve a real business challenge with an impact. The purpose of the Impact Lab Project is to apply the skills learned in the BA 2062 Powerful Problem Solving course to a real business problem. Students will be provided with a business problem faced by an organization that is partnering with the class. Using the skills learned in the powerful problem solving course, along with the knowledge gained in the business fundamentals courses, students will define the problem, disaggregate the issues, conduct appropriate research, generate data-driven solutions, critically evaluate alternatives, and present their final recommendations to the client partner. Faculty in the class will serve as coaches as students work on the projects. Prerequisite: BA 2062

BA 3551. Business Analytics. (3 cr. ; A-F only; Every Fall & Spring)

In a world of ever growing information sources, any student of business should be equipped with the ability to prepare and analyze data to produce actionable insights. Equally important is the capacity to understand such analysis and to present it to key stakeholders. This course offers an introduction to data processing and data mining for business applications. Prereqs: Modeling Business Scenarios in Excel (BA 2051) and Business Statistics in R (BA 2551)

BA 3900. Topics. (; 1-4 cr. [max 16 cr.] ; Student Option; Periodic Fall, Spring & Summer)
Topics in business vary.

BA 3993. Directed Study. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Student-initiated project or directed study to be completed with a faculty member. prereq: Instructor consent

BA 3996. Internship Seminar. (; 1 cr. [max 6 cr.] ; S-N only; Every Fall, Spring & Summer)
This course helps students integrate internship experiences with relevant assignments to create helpful next steps toward their career learning and development. prereq: Approved internship, instructor consent

BA 4501. Carlson Growth Equity Fund. (; 2-4 cr. [max 12 cr.] ; A-F only; Every Fall & Spring)

Students integrate finance skills by managing an institutional equity portfolio. Sustainable finance, financial modeling, portfolio management, and presentations to clients / investment professionals are all critical skills developed in this course. The course meets concurrently with MBA 6501. prereq: approved application

BA 4502. Carlson Fixed Income Fund. (; 2-4 cr. [max 12 cr.] ; A-F only; Every Fall & Spring)

Students integrate finance skills by managing an institutional bond portfolio. Sustainable finance, financial modeling, portfolio management, and presentations to clients / investment professionals are all critical skills developed in this course. The course meets concurrently with MBA 6502. prereq: approved application

BA 4503. Carlson Ventures Enterprise. (; 2-4 cr. [max 12 cr.] ; Student Option No Audit; Every Fall & Spring)

Carlson Ventures Enterprise (CVE) is intended for highly-motivated entrepreneurially minded graduate and undergraduate students who seek opportunities to develop creative problem solving and critical analysis skills to aid in better identifying, creating, and evaluating any new business opportunity, whether a start-up, social venture or innovation initiative inside a Fortune 500 company. CVE?s comprehensive curriculum includes the best practices, frameworks, and tools used in entrepreneurial and innovative pursuits. In a teach-then-apply environment, students manage client based projects solving real-world problems in real time, whether helping an entrepreneur develop their new business or an established organization evaluate opportunities for growth. CVE fits with multiple degree plans, in multiple schools at the University, as either a requirement, an elective or a capstone. This course will meet with MBA 6503. Registration for this course is by permission only. prereq: approved application

BA 4504. Carlson Consulting Enterprise. (; 1-4 cr. [max 12 cr.] ; A-F only; Every Fall & Spring)

Connects cutting-edge ideas/technologies from classroom to real problems presented by clients. Students work collaboratively with clients to integrate strategy/technology. How to lead complex change initiatives. The class will meet concurrently with MBA 6504. prereq: approved application

BA 4505. Brand Enterprise. (; 2-4 cr. [max 12 cr.] ; Student Option No Audit; Every Fall & Spring)

Experiential learning program combining academic classroom sessions and "real world" projects where students assist client companies/organizations with strategic marketing/brand challenges. Projects are team based and focused on strategic and analytical components, applying theory, and industry best practices. Working collaboratively in real world environment. Critical thinking, problem solving, applied marketing skills, project management, strategic communication, and presentation skills. This course meets concurrently with MBA 6505. prereq: approved application

BA 4992V. Honors Thesis Seminar. (WI; 3 cr. ; A-F only; Every Fall)

This course provides a foundation for how to conduct individually-pursued research with a focus on writing and methods. While it is designed to support Carlson School students writing their honors thesis, students do not need to continue with a thesis to successfully complete the course. In order to both develop your individual thesis as well as learn research

methods and writing techniques over the course of a single semester, there will be parallel sets of assignments: one for your thesis (individual) and one for a practice thesis (group). During the first part of the course, your individual thesis project will be emphasized, focusing on finding a thesis topic related to the research of Carlson School faculty who will be supervisors for this academic year. Starting partway through the course, you will be paired with a group of students to work on a practice thesis in which methods, statistical analysis, and writing results are emphasized using pre-specified datasets. Writing is integrated fully into the course. You will be instructed in writing pertinent to research proposals and scholarship, including problem statements, annotated bibliographies, literature reviews, methodology, and reference lists. prereq: Senior honors student

Business Law (BLAW)

BLAW 3059. Real Estate Law. (2 cr. ; A-F only; Every Fall)

Every business owner or manager inevitably will be involved with purchasing, selling, owning, leasing, zoning, taxing, mortgaging and financing real estate. This course provides the basic tools to understand all aspects of real estate and to spot issues that require legal counsel.

BLAW 3061. Business Law Basics. (2 cr. ; A-F only; Every Fall & Spring)

This course provides a broad background in the fundamentals of many business law topics that are important to any businessperson. NOTE: This course is designed for students who do not have knowledge or experience with any aspect of business law. There is no prerequisite for this course. The goal is to provide basic concepts that can be used throughout your career to spot legal issues, identify potential concerns, and with the aid of counsel, solve or avoid problems. General topics include: various legal entities in which business can be conducted, tort law (with emphasis on negligence), real estate law, the law of agency, intellectual property (patents, copyrights, trade secrets and trademarks), warranty law, product liability, employment law, certain discrimination laws (including Minnesota?s fairly recent protections for women in the workplace), alternative dispute resolution and administrative law. Throughout the course, we will examine the impact of the Supreme Court on American business. NOTE: Students who previously took BLAW 3058 (4 credit course) should NOT take this course.

BLAW 3062. Contract Law and Corporate Regulation. (2 cr. ; A-F only; Every Fall & Spring)

This course highlights topics that are important to any business major, with particular emphasis on publicly-traded companies. NOTE: This course is designed for students who do not have knowledge or experience with any aspect of business law. There is no prerequisite for this course. General topics include: (1) the law of contracts and transactions involving the sale of goods, (2) secured transactions

(how creditors can use a debtor's assets as collateral to secure indebtedness), and (3) the basics of bankruptcy law. Public company subjects include: pros and cons of going public, the IPO process, federal securities laws and SEC regulations regarding public company reporting requirements, insider trading, the Sarbanes-Oxley Act of 2002 and its impact on corporate governance, trends in shareholder democracy rights and shareholder activism, and the role of boards and audit committees. Throughout the course, we will examine the impact of the Supreme Court on American business. NOTE: Students who previously took BLAW 3058 (4 credit course) should NOT take this course.

CAPA Barcelona Study Abroad Program (BCLA)

BCLA 1001. Beginning Spanish I. (GP; 4 cr. ; Student Option; Every Fall, Spring & Summer)

This course is designed to provide students the vocabulary and grammar necessary for basic expression in Spanish using a communicative approach. In this course, students will learn to introduce themselves, talk about daily routine and plans, discuss past events, use vocabulary related to food, family, and everyday life and activities, negate, and use other expressions necessary for basic communication such as greetings, ordering at a restaurant, or asking for directions.

BCLA 1002. Beginning Spanish II. (GP; 4 cr. ; Student Option; Every Fall, Spring & Summer)

After completing this course, the student will understand phrases and expressions of frequent use related to areas of experience that are especially relevant to him (basic information about himself and his family, purchases, places of interest, occupations, etc.). Will be able to communicate when carrying out simple and daily tasks that do not require more than simple and direct exchanges of information on issues that are known or usual. Can describe in simple terms aspects of their past and their environment as well as issues related to their immediate needs.

BCLA 1003. Intermediate Spanish I. (GP; 4 cr. ; Student Option; Every Fall, Spring & Summer)

This course is designed to improve a student's ability to communicate in Spanish. Building on knowledge from previous courses, this course will introduce students to grammatical topics such as the subjunctive mood, the imperative mood, the pluperfect of the indicative, and expressions regarding the passage of time. This class is based on the communicative approach and stresses the use of these grammatical structures in real and relevant communication.

BCLA 1004. Intermediate Spanish II. (GP; 4 cr. ; Student Option; Every Fall, Spring & Summer)

After completing this course, the student will understand extended speech and lectures (TV, movies, newspapers,...). Will be able

to communicate with a degree of fluency that will let students interact with locals with spontaneity. The information presented will be precise when talking in a field of interest and quite clear when writing or speaking in other range of subjects.

BCLA 1101. Pompeu Fabra University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Barcelona study abroad program to represent a course taken at Pompeu Fabra University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

BCLA 1102. Pompeu Fabra University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Barcelona study abroad program to represent a course taken at Pompeu Fabra University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

BCLA 1103. Pompeu Fabra University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Barcelona study abroad program to represent a course taken at Pompeu Fabra University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

BCLA 1104. Pompeu Fabra University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Barcelona study abroad program to represent a course taken at Pompeu Fabra University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

BCLA 1105. Pompeu Fabra University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Barcelona study abroad program to represent a course taken at Pompeu Fabra University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

BCLA 1501. Introduction to Photography. (AH,GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course is designed for beginning students in photography, and specifically presents digital camera techniques as a means of personal expression. Observing/capturing, digital process, printing and screen presentation will be addressed in relation to specific subjects, intentions and aesthetic judgements. The particular study abroad experience of each student will be one of the main focuses throughout the semester. Students are

expected to bring a digital camera and a laptop with some means of editing (although computers and basic Photoshop is available in the computer lab.)

BCLA 3001. Nationalism in Comparative Perspective. (CIV,SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course studies the relationship between states and nations in both a theoretical and comparative perspective with a particular focus on the Catalan, Basque and Spanish experiences. It analyzes state building processes and the development of nationalism, as well as the social, economic and technological conditions behind its emergence, transformation and contrasting discourse. The course aims at providing a solid theoretical background on the subject of nationalism as well as introducing the students into the social and political reality that permeates in Spain's daily life and shapes Spaniards' political mind-frames and identities.

BCLA 3002. Global Marketing. (GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course provides an exploration of basic knowledge of global marketing, focusing on the impact of environment on the strategies used by firms, and the understanding of consumer behavior management as it relates to the development and implementation of global marketing strategies. Worldwide business represents real opportunities for a firm but also creates difficulties, challenges and new ways of implementing marketing. Global marketing is a specific kind of marketing applied to inter-national firms in order to implement the same strategy within the entire market taking into account cultural, economic, social, political, etc., specificities for each area. This course will provide the basic knowledge of global marketing focusing on the impact of environment on the firm strategy, the development and implementation of a global marketing strategy and the understanding of consumer behavior management in a global strategy. Case studies applied to worldwide business contexts as well as more specific European contexts will provide concrete illustrations for the students.

BCLA 3003. Intercultural Management. (GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course is designed to introduce students to concepts and fundamentals of international management. The course will consider aspects of management within an international and culturally complex environment, while considering the business influences within the global workplace. Students with or without prior international management knowledge will benefit from the course. Organizational effectiveness demands that personnel do the right things efficiently. Therefore, the role of management is to strive for and maintain the goals of the organization. Being an effective manager is not just telling others what to do. It is also about effective leadership, training, and communication. Having effective managers can be a cost saving tool for all organizations of all sizes. Corporation executives, supervisors,

and managers are aware of the importance of and difficulty in finding and retaining highly skilled employees (a time-consuming role of management). Today's managers need a systems-view of the organization. This course will help you think of the organization as a system rather than as a work unit where tasks are performed. Most of you will, after graduating, become supervisors and managers and be required to provide training and leadership for your personnel. In just about any organization, you will be working with people who will have a different cultural background than your own, you may be working as an expatriate in a different country or you may experience any of a number of multicultural challenges. This course will help you prepare for these eventualities.

BCLA 3004. Advertising and Society. (CIV; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course introduces students to the linkages between advertising and society. It is premised on the belief that advertising helps shape human attitudes and behaviors, just as the latter two in turn help direct and shape advertising. However, the emphasis in this course is firmly on advertising as a shaping agent?how it influences individuals and societies, the dynamic nature of the relationship, and the impacts (both positive and negative) that advertising may have on individuals and societies. It takes a critical and dispassionate view of advertising rather than a managerial or practitioner?s view. Various criticisms of advertising are flagged, and these are used as a basis for further coverage and discussion of the criticisms and issues raised.

BCLA 3005. Analyzing and Exploring the Global City. (GP,HIS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Cities around the world are striving to be ?global,? and Barcelona, the capital of Catalunya, is one of the largest and most cosmopolitan cities in Spain. It is globally renowned for its art and architecture, possessing no fewer than nine UNESCO World Heritage sites, and has become a major destination for global tourism. This interdisciplinary course examines the emergence of this elegant, creative city as Spain?s gateway to the Mediterranean, and analyzes its history and evolution since its foundation by the Romans. Students will explore the role of population dynamics, industrial change, and globalization in shaping the city and the lives of its inhabitants, examining the ways in which the interplay of urbanism, politics, and society has addressed challenges of social, political, and technological change in the past and today. The course also traces the changing nature of Barcelona?s relationship with the rest of Spain, Europe, and the wider world. Topics will include ancient and Medieval Barcelona; nationalism and innovations in art and architecture; the role of the 1992 Olympics as a catalyst for urban regeneration; the impacts of gentrification, tourism, and the recent economic crisis on the city and its inhabitants; and future scenarios of urban change.

BCLA 3006. Architectural History of Spain. (HIS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course will look at the history of architecture and urban design in Spain. Beginning with a brief introduction to the ancient styles (from the first civilization of the Iberian Peninsula), it will focus upon developments in architecture and urban planning in Spain from the 1st Century AD to the present. Special attention will be paid to the 19th and 20th Centuries in Barcelona, and several relevant field visits will be made.

BCLA 3009. Media and Conflict. (CIV,SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

The course will provide a structured approach to address different media systems. It will explore the dynamics of news, politics, conflicts and freedom of the press. Focusing on ongoing, international crises of global importance, we will examine how various international media report on topics including armed conflicts, human rights abuses. Study the dynamics governing news media environment and structures. We will try to understand why different audiences from different cultural spheres perceive the same news in sometimes a diametrically opposed way. We will examine the rich arsenal of repression tools used by authoritarian and even democratic regimes to suppress press freedom or spin news to their advantage. We will look at the ways and means by which courageous journalists try to circumvent these obstacles.

BCLA 3011. The Birth of Modern Art: Matisse, Picasso, Dal?. (AH; 3 cr. ; Student Option; Every Fall, Spring & Summer)

The work of these three international artists with distinct cultural roots is explored on an individual basis within the wider framework of European art movements. In each case, we will study the acceptance and/or rejection of tradition, the interaction with French art and artists, and personal experience. We will also pay attention to the role of both outside stimuli (war, relationships) and inner forces (memory, imagination). The course will include course related excursions to the Picasso Museum, the MNAC (Catalan National Museum of Art) as well as a trip to the Dal? Theatre Museum in Figueres.

BCLA 3013W. Writing the City. (GP,WI,LITR; 3 cr. ; Student Option; Every Fall, Spring & Summer)

The course explores the craft of creative writing in relation to the city and investigates the particular challenges of writing about place. Students will examine different aspects of the city in relation to Barcelona narratives, including the old city, travel, urban spaces, solitude, politics, ethnicity, particular boroughs, and characters (both fictional and real), as well as making use of practical exercises and fieldwork.

BCLA 3014. Spain As Seen Through Its Movies: 1980s to Today. (AH,GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

The main goal of this course is to provide students with a general understanding of

Spain, taking into consideration its recent past, but focusing mainly on some of the most relevant and controversial issues of the current situation. The use of movies as a vehicular tool allows not only for the introduction of the cultural factor, but also the very Spanish perspective(s) that helps explain how the country sees and understands itself. The course will address the following general questions: a) what it means to speak of a "national cinema;" b) how cinema constructs and/or contests of his or her story; c) cinema's impact on shifting notions of what constitutes the human condition; d) how the formal qualities of cinematic narrative shape on-screen stories; e) where and how issues of gender, sexuality, class, and ethnicity surface in cinematic articulations of the relationship between national identity, global trends, and personal history. There are five sections or blocks to this course. The first block will cover the Spanish Civil War and the subsequent dictatorship, indispensable to understand the last 40 years of democracy in Spain. The second block is almost a monography to the figure of Pedro Almod?var, his time, and the ? Espa?a? his movies depict. The third focuses on the genre of horror, very rich in the recent Spanish production and quite ?imitated? by Hollywood. These last two blocks serve as a good opportunity to reflect about the political/national/identity aspects of the cinema industry. In an attempt to reverse the perspective, the last two blocks approach current Spanish issues with an important impact in the society as a whole and its citizens as individuals. The fourth block discusses Spanish politics and its most recent developments. And the fifth one is a gender approach to the demographics of the country.

BCLA 3015. Capturing Barcelona through Photography. (AH; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course will explore digital photography as a tool to view different aspects of Spanish society (and ourselves within that society) through various photographic exercises and assignments. Students will receive the tools to read photography and construct an idea through images. At the end of the course the students will produce a portfolio of the work done. Lectures will cover the History of Photography, with a special attention to photo-reportage, Italian photographers, technical aspects related to photography production. The course introduces technical process of digital photography, from camera operation and the essential techniques of image capture with camera, image management with imaging related software. Classroom discussions and assigned readings will help student develop the critical skills used to understand how photographs function aesthetically and conceptually as how they are used in contemporary society and culture.

BCLA 3016. Intercultural Communication. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This course allows students experiencing the challenges of cross-cultural communication in an international setting to explore intercultural

communication theory and research within both broad and interpersonal contexts. Topics include similarities and differences in values, norms, interethnic/intergroup communication, and adaptation. Students will bring these theories to bear on their experiences in the field. The study of intercultural communication is often approached from a social psychological perspective. Although that perspective has yielded many important ideas about intercultural communication, other perspectives may also contribute to our understanding of the subject, particularly in acknowledging the influence of context and power in intercultural interactions.

BCLA 3017. The Business of Social Media. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Currently the way in which people interact is changing. We live in a new digital and technological era, and an important actor in this change, without a doubt, is social networks. Social networks represent today a real revolution in the way we communicate. According to The Global State of Digital in 2019, prepared by HootSuite and We Are Social, it is estimated that 3,484 million people already use social networks regularly, 45 percent of the world's population. This data reveals the importance that these platforms already have in our lives. In different recent events, such as the so-called Arab Spring or the 2020 elections to the US presidency, the importance of social networks and how they can shape people's opinions was verified. If thanks to Facebook we can influence who will be the next president of a country or incite or promote a social revolution, how will it not be decisive to position a brand, sell a product, improve the image of a company, or launch a new service? Companies are increasingly aware of this new reality and invest more and more money in advertising on networks with different objectives: to position their brand, increase the reputation of their company, increase their sales, communicate their innovations or launch a new product. In short, in maintaining close contact with their target audience through networks. In this course, students will learn how companies use social networks as marketing and communication tools. In this course, students will appreciate the strategic importance of social networks within an organization and will also be exposed to different examples from companies adopting social media through the analysis of case studies. Additionally, students will be able to perceive and understand the possible risks that a company may face if it does not know how to manage its use, and the importance of identifying and managing the so-called "fake news" in the communication policy (and trust) of a company.

BCLA 3048. Transportation and Logistics Management. (GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

In today's global supply chains, manufactured products often travel across multiple countries and multiple states, using multiple modes of transportation, before reaching final customers. Along the way, these products are processed

at a variety of inventory transfer points, and reconfigured and combined with other products with the goal of arriving intact at the right place and right time. Effectively managing these flows requires understanding the underlying economics of weight, volume, distance, and velocity. It requires taking an end-to-end view of the logistics and transportation network to understand how changes in one link impact others. It also requires openness to change, including adopting new network designs and other innovations that promise to improve processes in fundamental ways. This course uses a combination of lectures, case discussions, interactive classroom activities, and guest speakers. Students are expected to have read any assigned readings and cases before the corresponding class session so they are prepared to actively take part in class discussion.

BCLA 3101. Pompeu Fabra University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Barcelona study abroad program to represent a course taken at Pompeu Fabra University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

BCLA 3102. Pompeu Fabra University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Barcelona study abroad program to represent a course taken at Pompeu Fabra University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

BCLA 3103. Pompeu Fabra University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Barcelona study abroad program to represent a course taken at Pompeu Fabra University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

BCLA 3104. Pompeu Fabra University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Barcelona study abroad program to represent a course taken at Pompeu Fabra University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

BCLA 3105. Pompeu Fabra University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Barcelona study abroad program to represent a course taken at Pompeu Fabra University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

BCLA 3375. Global Internship: Barcelona. (3-6 cr. ; Student Option; Every Fall, Spring & Summer)

The Global Internship Course (GIC) provides a unique and innovative opportunity for students to engage in an internship (and living abroad experience) while supported by academic in-class and online educational sessions to further develop their personal and professional skills while earning academic credit. GIC students also partake in out-of-class guided and self-guided activities and excursions that have been devised to enable them to become more comfortable with, and knowledgeable of, their internship locations/neighborhoods. Furthermore, a day-long field trip illustrates how socio-political and economic factors, such as the effects of housing costs in global cities, necessitate commuting and changing work practices, such as flexible working hours and working remotely that embody best practice in well-being. Field excursions vary depending on location and may also include a focus on, for example, corporate social responsibility and sustainability. The GIC fits in with CAPA's philosophy and practice of enabling students to learn about the social and cultural context of their internship placement and the host region and country, as well as other GIC themes, through comparative global analysis. At times, this analysis will be facilitated through a small selection of CAPA Masterclasses given by leading professionals from a diverse range of fields. The in-class active learning approach gives students the opportunity to discuss and analyze theories and models of work, organizational behavior, and management in a cross-cultural context.

BCLA 4061. Marketing and Distribution Channels. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Marketing channels are sets of interdependent organizations involved in the process of making a product or service available for use or consumption. Marketing and distribution channels management is an essential aspect of commercial activities. In today's ever-more complex and challenging competitive scenario, it is necessary for organizations to know how to effectively select and manage marketing channels so that they can create partnerships that are capable of generating value and trust and avoiding conflicts. As Peter Drucker has said, "The greatest change will be in distribution channels, not in new methods of production or consumption." Choosing the right channels, convincing them to carry your merchandise, and getting them to work as partners is a major challenge. Too many companies see themselves as selling to distributors instead of selling through them. This course will help students learn how to develop marketing channel plans, which enable an organization to increase sales, margins, and levels of collaboration with channel partners.

BCLA 4622W. International Finance. (GP,WI; 3 cr. ; Student Option; Every Fall, Spring & Summer)

The International Finance module provides an understanding of finance in the international context. In a globally integrated world, it

has become imperative to trade, invest, and conduct business operations internationally. This course exposes students to the opportunities and risks associated with international finance. As the world has become more integrated due to deregulation of financial markets, product innovation, and technology, capital markets have kept pace with this integration. Building upon the understanding of theoretical concepts of finance and their adaptation to the international context, the study of international finance has become essential. The course coverage includes historical perspectives and foundations of international finance, the foreign exchange markets and exchange rate determination, exposure management, and financial management of the multinational firm. The course also helps students examine the current economic landscape through discussions of current economic and political development and their impact on international finance.

Carlson Executive MBA (CMBA)

CMBA 5554. International Residency. (1.5 cr. ; A-F only; Every Spring)

Students travel to an international location for nine days, engage in discussions with international colleagues, to apply program concepts and develop broader sensitivity to cultural/social differences. Pre-trip preparation, on-site discussion, and trip assignment are also required. Held in late March.

CMBA 5625. Entrepreneurship and Innovation. (3 cr. ; A-F only; Every Spring)
Entrepreneurial role of employee/management in increasing organizational value through creation/formation of new businesses, products, or markets within entities ranging from early stage companies to social ventures to F500 corporations.

CMBA 5710. Leadership. (1.5 cr. ; A-F only; Every Fall)
Self-awareness/insight concerning personal leadership/core values. Increase capabilities to understand potential personal derailment patterns/create effective strategies to address challenges. Develop lifelong executive leadership practices/habits for high performance in demanding circumstances.

CMBA 5711. Negotiation. (3 cr. ; A-F only; Every Fall)
Securing agreements between two or more parties who are interdependent and are seeking to maximize their own outcomes. Negotiation in various settings. Simulations, role-playing, cases.

CMBA 5712. Information Technology. (1.5 cr. ; A-F only; Every Fall)
Course prepares you with an inside-out and an outside-in perspective of how information technology is disrupting a variety of industries, how to compete in such an environment and how to strategically manage the IT function within companies to have an efficiency-innovation duality. Key principles covered in the class are developing a state-of-the-art IT strategy, getting first-hand exposure to ERP systems and learning the organizational

changes involved in implementing such systems, applying disruptive and big-bang theories of IT enables disruption and learning the nuances of platform competition and multi-sided markets to fight such disruption.

CMBA 5713. Managerial Accounting. (3 cr. ; A-F only; Every Fall)

How to analyze accounting for management decisions. Planning/control. Transfer pricing, performance measurements, cost behavior, cost allocation, activity-based costing, standard costs.

CMBA 5714. Advanced Marketing. (3 cr. ; A-F only; Every Fall)

Product markets in which organization should compete. Sustainable competitive advantage. Matching marketing strategy with environment. Coordinating marketing/business functions. Organizing/managing marketing process. Cases.

CMBA 5715. Advanced Financial Management. (3 cr. ; A-F only; Every Fall)

Executive-level corporate financial policy. Rigorous case-oriented approach. Students apply principles of finance on their own initiative.

CMBA 5721. Advanced Management Topics. (1.5 cr. [max 3 cr.] ; A-F only; Every Spring)

Topics reflects strengths, talents, and interests of class. Topics integrate different aspects of curriculum while not being limited by specific area/paradigm.

CMBA 5722. International Business. (3 cr. ; A-F only; Every Spring)

Developing an integrative framework for international activities of firm. How international environment constrains decision-making. How currency prices are determined. Managing exchange risk.

CMBA 5723. Ethics. (1.5 cr. ; A-F only; Every Fall & Spring)

Role of ethics in corporate strategy. Stakeholder management, individual/collective responsibility, international business ethics. Business's responsibility to the environment. Truthful/tasteful advertising. Obligations to local community. Managing diverse workforce.

CMBA 5724. International Residency. (1.5 cr. ; A-F only; Every Spring)

Students travel to international location for 11 days. Discussions with international colleagues. Applying program concepts. Sensitivity to cultural/social differences. Pre-trip preparation, on-site discussion, trip assignment.

CMBA 5810. Introduction to Statistics and Business Analytics. (3 cr. ; A-F only; Every Fall)

This course focuses on the use of data to solve business problems and the development of skills necessary to (1) formulate a management problem as a statistical problem; (2) collect appropriate data and perform fundamental procedures of statistical analysis; and (3) to interpret, critically evaluate, and implement the results of the statistical analysis. In particular, the student should be able to: generate and use basic graphical and numerical descriptive methods; apply basic

estimation and testing procedures; estimate and interpret the parameters of simple and multiple regression model; to test the utility of the model and to use it for estimation and prediction; think statistically about issues facing her/his organization; recognize when statistical methods are effective, and when they are not; and to translate, communicate, and critically evaluate the results of statistical analyses.

CMBA 5811. Financial Accounting. (3 cr. ; A-F only; Every Fall)

Students learn about the accounting system used by firms to measure and report their economic performance and financial position to external parties. Students analyze corporate financial reports to discover the impact of significant economic events. Discussions and cases focus on the role of financial reporting standards in informing financial intermediaries and contributing to the efficient allocation of capital in a modern economy.

CMBA 5812. Organizational Behavior. (3 cr. ; A-F only; Every Fall)

Course's main purpose is to prepare you to successfully engage and lead people to achieve organizational goals. Effective managers must not only develop winning strategies, but they must also implement them. Doing so requires a thorough understanding of organizational behavior. Broadly speaking, organizational behavior is the systematic study of how people behave in organizational settings. This course is designed to develop your understanding of the complexity of orgs and how they affect behavior, build your self-knowledge and people-leadership skills, and help you learn and apply appropriate tactics and tools to improve organizational functioning and facilitate personal career success. Course topics include: organizational (e.g. structure and culture), interpersonal (e.g. power and influence, social networks, conflict), and individual (e.g. decision making, motivation) aspects of organizational behavior.

CMBA 5813. Competing In The Digital Age. (1.5 cr. ; A-F only; Every Fall)

This course covers the crucial and current topics of how information technology disrupts a variety of industries, how to compete in such an environment, and how to strategically manage the IT function in the companies to stay relevant in the digital age. Key principles covered in the class are developing a state-of-the-art IT disruption strategy, learning the nuances of platform competition and multi-sided markets to fight such disruption, understanding the organizational changes involved in implementing enterprise wide systems, and utilizing social and data-driven techniques to enhance marketing outcomes.

CMBA 5814. Economics. (1.5 cr. [max 3 cr.] ; A-F only; Every Fall)

The goal is to improve corporate decision-making by developing better understanding of the economic environment. Emphasis is strategic, not theoretic (this is not a standard macro course.) We shall consider two primary kinds of economic phenomena (and models): i. long-run economic growth; ii. business cycles. Also and importantly, we will learn about what

a central bank does and spend some time on the current world financial/macroeconomic mess. How could we do otherwise? Students will learn appropriate tools to analyze these phenomena and apply them to their own decision-making environs, both organizational and personal.

CMBA 5815. Marketing Management. (3 cr. ; A-F only; Every Spring)

This is a study of management of the marketing function. We strive for an understanding of foundational marketing concepts and of the skills needed for strategy development. We also consider the importance of integrating financial data, operational factors, and human resource issues along with marketing research pertaining to product offering decisions, distribution channels, pricing and communication.

CMBA 5816. Strategic Management. (3 cr. ; A-F only; Every Spring)

Course provides an integrated, top management viewpoint for business students. It frames the functional courses in the CEMBA curriculum by providing a 'total' business perspective. The course objective is to develop analytic skills and deep understandings in identifying key issues and formulating and implementing appropriate strategies for creating and sustaining a competitive edge in complex business situations. The course will familiarize students with the most current theories, concepts, and techniques of strategic management using a combination of readings, case discussions, presentations and videos. Student progress will be assessed through class participation, an in-class exam, and a group project comparing the strategies of two competing firms.

CMBA 5817. Financial Management. (3 cr. ; A-F only; Every Spring)

Students apply concepts of risk, return, and valuation to decisions that a corporate financial officer or person in small business must make about sources/uses of funds during changing financial markets.

CMBA 5818. Supply Chain and Operations. (3 cr. ; A-F only; Every Spring)

A majority of the people and physical assets of a company are involved in operations. The operations function represents the physical core of every company: The systems and processes that generate the goods and services to be sold to customers. World-class operations can lead to a significant and enduring competitive advantage. Failing operations mean low productivity and bad press at best, and company failure at worst. Understanding operations means understanding processes and supply chains. This course is designed to develop a basic framework to comprehend key design decisions and trade-offs within that context. As such, the course encompasses both manufacturing and service operations. Course also highlights why successful supply chain and operations management has to be strategic in nature, and how the operations function relates to other business functions such as marketing or product development.

CMBA 5820. Negotiation Strategies: Creative Solutions for Difficult Problems. (3 cr. ; A-F only; Every Fall)

Negotiation is the art and science of securing agreements between two or more parties who are interdependent and who are seeking to maximize their own outcomes. As such, this course deals with understanding the behavior of individuals, groups, and organizations in the context of competitive situations. We focus on understanding both the theory and process of negotiation in a variety of settings. This course is designed to be relevant to the broad spectrum of negotiation problems that are faced by managers and professionals. It is designed to complement the technical and diagnostic skills learned in other courses in the program. A basic premise of the course is that while a manager needs analytical skills to discover optimal solutions to problems, a broad array of negotiation skills are needed to get these solutions accepted and implemented. This course will allow participants the opportunity to develop these skills experientially and to understand negotiation in useful analytic frameworks. As such, considerable emphasis will be placed on simulations, role-playing, and cases.

CMBA 5821. Managerial Accounting. (3 cr. ; A-F only; Every Fall)

This course presents the topic of management accounting in depth. The purpose of management accounting is to provide information to management for costing products and decision making as well as for planning, controlling, and evaluating business activities. The student who successfully completes this class will be able to identify a managerial issue and create a solution to the problem.

CMBA 5822. Applied Leadership. (1.5 cr. ; A-F only; Every Fall)

The course objectives are to build stronger self-awareness and insight concerning personal leadership and core values, increase capabilities to understand potential personal derailment patterns and create effective strategies to address these challenges, better nurture and leverage strengths for executive leadership performance, effectively coach and motivate others as a key executive leadership attribute, and develop deeper lifelong executive leadership practices and habits for high performance in demanding circumstances. prereq: CMBA student

CMBA 5823. Competing Globally. (3 cr. ; A-F only; Every Fall)

In this course we explore the many faces of global competition. We challenge the assumptions that global strategy is a precursor to success by exploring a set of complex forces that drive firms to internationalize. The course places special emphasis on emerging markets, given that they are home to most of the global growth and population, as well as institutional voids. We focus on factors that determine strategic choices firms make as they build their international presence, by exploring how firms: build international presence by selecting countries, and modes of entry; benefit from

national competitive advantage in developed and emerging markets; diagnose and address cultural challenges of working across borders; organize to share knowledge across borders; build and sustain their multifaceted global legitimacy; collaborate across borders; prepare their managers to address cultural, personal, and career challenges in expatriate roles and on global teams.

CMBA 5824. Corporate Responsibility & Ethics. (1.5 cr. ; A-F only; Every Fall)

In this course we will explore both ethical challenges in the contemporary business environment as well as the strategic opportunities offered by corporate social responsibility. Students will conduct stakeholder analysis, apply ethical principles, consider alternatives, and recommend and defend an "ethical" final decision. We will seek to answer the question "can business do good, and also do well?"

CMBA 5825. Strategic Marketing. (3 cr. ; A-F only; Every Spring)

Marketing begins and ends with the buyer. Hence, marketing strategy is the study of delivering value to buyers in a manner that exceeds the value proposition of marketplace rivals, using both internal and external resources. From determining consumer needs to assuring customer satisfaction, a clear understanding of buyer behavior is critical to the successful formulation and implementation of marketing strategy. To that end, this course is designed to provide prospective general managers the intellectual tools necessary to design actionable marketing strategies. There will be a strong emphasis on managerial action and multiple theoretical perspectives will be discussed.

CMBA 5826. Corporate Strategy. (1.5 cr. ; A-F only; Every Spring)

This course focuses on the strategic management of firm scope (i.e., choosing what your firm does and does not do). It provides understanding about strategic choices such as outsourcing or insourcing? activates and entering or leaving lines of business. We develop and employ a set of tools that provide a disciplined way to investigate these issues. Why companies exist, notion of added value, how companies add value through resources and incentives to develop resources, why a company would participate in more than one line of business, and what considerations should guide corporate renewal.

CMBA 5827. Advanced Financial Management. (3 cr. ; A-F only; Every Spring)

Financial Management introduced the theory of corporate finance and the application of value creation principles to, mainly, business operating decisions at the level of the project or initiative. This course moves on to consider decisions at the firm level. Among the questions addressed in this course are how best to measure overall firm performance, how to best finance the company, including debt versus equity questions, when to include options in the firm's financing arrangements, when to lease resources rather than buy them, when to pay a dividend and/or repurchase

shares and whether mergers and acquisitions generate value added.

CMBA 5828. International Residency - Study Abroad. (1.5 cr. ; A-F only; Every Spring)
Students travel to an international location for 9-10 days. This provides the opportunity to engage in discussions with international colleagues, apply program concepts, and develop a broader sensitivity to cultural and social differences. Pre-trip preparation, assignments, on-site discussions and activities, and post-trip assignments are required.

CMBA 5829. International Residency ? Global Team Project. (1.5 cr. ; A-F only; Every Spring)
The Global Team Project (GTP) provides Carlson School Executive MBA students with the unique opportunity to work in a collaborative team environment across cultures, industries, and markets alongside students from our Vienna Executive MBA program and our China Executive MBA program. As participants in the GTP, students develop advanced skills in teamwork, cross-cultural collaboration, and business plan development within a dynamic environment shaped by academic rigor and the demands of real-world international business.

CMBA 5830. Advanced Management Topic Elective: Power & Influence. (; 1.5 cr. ; A-F only; Every Spring)
Elective courses are offered across cohorts on preference basis. Course topics may change from year to year and can cover a variety of areas including entrepreneurship/innovation, strategy, IT, and others.

CMBA 5831. Advanced Management Topic Elective: Entrepreneurship & Innovation. (; 1.5 cr. ; A-F only; Every Spring)
Elective courses are offered across cohorts on preference basis. Course topics may change from year to year and can cover a variety of areas from entrepreneurship/innovation, strategy, IT, and others.

CMBA 5832. Advanced Management Topic Elective: Business Analytics for Competitive Advantage. (; 1.5 cr. ; A-F only; Every Spring)
Elective courses are offered across cohorts on preference basis. Course topics may change from year to year and can cover a variety of areas from entrepreneurship/innovation, strategy, IT, and others.

CMBA 5833. Advanced Management Topics Elective - Healthcare Innovations. (; 1.5 cr. ; A-F only; Every Spring)
Elective courses are offered across cohorts on preference basis. Course topics may change from year to year and can cover a variety of areas from entrepreneurship/innovation, strategy, IT, and others.

CMBA 5838. Financial Accounting. (1.5 cr. ; A-F only; Every Fall)
Financial Accounting

CMBA 5839. Management of Teams. (1.5 cr. ; A-F only; Every Fall)
Management of Teams

CMBA 5842. Marketing Management. (3 cr. ; A-F only; Every Fall)

Marketing Management

CMBA 5843. Data Driven Decision Making. (3 cr. ; A-F only; Every Fall)
Data Driven Decision Making

CMBA 5844. Organizational Behavior. (3 cr. ; A-F only; Every Fall)
Course's main purpose is to prepare you to successfully engage and lead people to achieve organizational goals. Effective managers must not only develop winning strategies, but they must also implement them. Doing so requires a thorough understanding of organizational behavior. Broadly speaking, organizational behavior is the systematic study of how people behave in organizational settings. This course is designed to develop your understanding of the complexity of orgs and how they affect behavior, build your self-knowledge and people-leadership skills, and help you learn and apply appropriate tactics and tools to improve organizational functioning and facilitate personal career success. Course topics include: organizational (e.g. structure and culture), interpersonal (e.g. power and influence, social networks, conflict), and individual (e.g. decision making, motivation) aspects of organizational behavior.

CMBA 5845. Executive Perspectives. (0-1.5 cr. ; S-N only; Every Fall & Spring)
Top Management Perspectives

CMBA 5846. Executive Leadership Insights. (0.5-3 cr. ; A-F only; Every Fall & Spring)
Executive Leadership Insights

Cellular/Organismal Physiology (COP)

COP 4793W. Writing Intensive Directed Studies. (WI; 1-7 cr. ; S-N only; Every Fall, Spring & Summer)
Writing Intensive Directed Studies is an individual-study, literature-based investigation in which the student is mentored directly by a faculty member. One main feature of this course is that the student will receive writing instruction and the written output of the course will be revised during the semester. The project needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, how writing instruction will take place, a timeline for when student writing will be handed in and how it will be assessed, methodology to be used by the student, and how assessment of learning will be conducted by the mentor. Additional oversight is established for this course near the end of the semester the written output is submitted to the DUGS for the major. The DUGS is responsible to determine that the writing meets standards set by the CBS Education Policy Committee for quality of writing, appropriate citation of literature, well-constructed figures, tables, and legends (if present), appropriate use and interpretation of statistics (if present),

conclusions that are supported by evidence, and well-formatted references. This course is graded S/N and approval of the DUGS is required before a grade of S can be given by the faculty mentor. prereq: department consent, instructor consent, no more than 7 credits of 4793, 4794, 4993W, 4994W counts towards CBS major requirements.

COP 4794W. Writing Intensive Directed Research. (WI; 1-7 cr. ; S-N only; Every Fall, Spring & Summer)
Writing Intensive Directed Research is an individual-study, laboratory or field research experience in which the student is mentored directly by a faculty member. This course is intended for students who already have initiated a research project in the lab of the mentor and already have results. In this course the student will receive writing instruction. The written output usually is in the form of a scientific paper describing the results of the student's project. Written output of the course must be revised during the semester and a schedule for writing, assessment and revision needs to be in place at the beginning of the semester. The project needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the Director of Undergraduate Studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, how writing instruction will take place, a timeline for when student writing will be handed in and how it will be assessed, methodology to be used by the student, and how assessment of learning will be conducted by the mentor. Additional oversight is established for this course - near the end of the semester the written output is submitted to the DUGS for the major. The DUGS is responsible to determine that the writing meets standards set by the CBS Education Policy Committee for quality of writing, appropriate citation of literature, well-constructed figures, tables, and legends (if present), appropriate use and interpretation of statistics (if present), conclusions that are supported by evidence, and well-formatted references. The DUGS can call for a final revision before a grade is given. This course is graded S/N and approval of the DUGS is required before a grade of S can be given by the faculty mentor.

COP 4993. Directed Studies. (1-7 cr. ; S-N only; Every Fall, Spring & Summer)
Directed Studies is an individual-study, literature-based investigation in which the student is mentored directly by a faculty member. The topic for the course needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, methodology to be used, and how the assessment of learning will be conducted. prereq: department consent, instructor consent, no more than 7 credits of

4793, 4794, 4993W, 4994W counts towards CBS major requirements.

COP 4994. Directed Research. (1-7 cr. ; S-N only; Every Fall, Spring & Summer)

Directed Research is an individual-study, laboratory or field investigation course. The research topic needs to be agreed on by both the student and the faculty mentor and explained in a Research/Directed Studies contract. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, methodology to be used, and how the assessment of learning will be conducted. prereq: department consent, instructor consent, no more than 7 credits of 4793, 4794, 4993W, 4994W counts towards CBS major requirements.

Center for Allied Health Prog (CAHP)

CAHP 5110. Foundations of Interprofessional Communication and Collaboration. (; 1 cr. ; S-N only; Every Fall)

Interprofessional approach to health care. Directed group activities in five two-hour sessions: personal/professional image; teamwork, self/peer assessment; health professions; professional identity/integrity; relationships between professions and those they serve. Includes online modules. prereq: Enrolled CLSP or OT student

Chemical Engineering (CHEN)

CHEN 1001. Advances in Chemical Engineering and Materials Science. (; 1 cr. [max 2 cr.] ; S-N or Audit; Every Fall)

Survey of important advances in chemical engineering, materials science/engineering. Design problems, career opportunities. Lectures, demonstrations, interactive exercises. prereq: Recommended for [chemical engineering, materials science/engineering] majors

CHEN 2001. Material and Energy Balances. (4 cr. ; A-F or Audit; Every Fall)

Description/analysis of chemical engineering systems. Units/dimensions, materials balances on systems with/without chemical reactions, elementary phase equilibria/diagrams, energy balances. Elementary treatment of multistage steady-state equilibrium operations. prereq: Chem 1061 or equiv., concurrent registration is required (or allowed) in MATH 2374 or equiv., concurrent registration is required (or allowed) in PHYS 1302 or equiv., CSE student, C- or better in all pre-reqs

CHEN 2594. Directed Research Lower Division. (; 1-4 cr. [max 6 cr.] ; Student Option No Audit; Every Fall, Spring & Summer) Independent lab research under faculty supervision for students not yet taking junior level ChEn courses. prereq: instr consent, DUGS consent

CHEN 3005. Transport Phenomena: Momentum and Heat. (4 cr. ; A-F only; Every Fall)

Fluid statics/dynamics. Applications to chemical engineering systems, conduction, diffusion. Principles/applications of heat transfer in chemical engineering systems. prereq: [2001 or [transfer student, dept consent]], [Math 2373 or equiv.], upper div ChEn major, C- or better in all pre-reqs

CHEN 3006. Mass Transport and Separation Processes. (4 cr. ; A-F only; Every Spring)

Introduction to principles of mass transfer. Mass transfer operations used in separation processes, unit operations. prereq: [2001 or 4001], [3005 or 4005], [3101 or 4101], [upper div ChEn major or dept consent], C- or better in all pre-reqs

CHEN 3101. Chemical Engineering Thermodynamics. (4 cr. ; A-F only; Every Spring)

Applications of thermodynamics/chemical equilibrium to problems in chemical engineering. prereq: ChEn 2001, Chem 1062/1066 Math 2374 or equivalent, & Math 2373 or equivalent

CHEN 3102. Reaction Kinetics and Reactor Engineering. (4 cr. ; A-F only; Every Fall)

Chemical equilibrium/chemical kinetics applied to chemical engineering systems. Behavior/design of chemical reactors, interaction between chemical/physical rate processes. Mathematical modeling, design of reactors. prereq: [2001 or 4001], [3101 or 4101], [upper div ChEn major or dept consent], C- or better in all pre-reqs

CHEN 3201. Numerical methods in ChEn applications. (3 cr. ; A-F only; Every Fall) Numerical methods/applications in heat/mass transfer, advanced chemical engineering applications.

CHEN 3401W. Junior Chemical Engineering Lab. (WI; 2 cr. ; A-F only; Every Spring)

Efficient design, structure, measurement, planning, analysis, presentation of experiments/results. Energy balances, fluid flow, heat/mass transfer. Design of new systems using data obtained in lab. Oral/written presentations. prereq: ChEn 3005; upper div ChEn major

CHEN 3701. Introduction to Biomolecular Engineering. (3 cr. ; A-F or Audit; Every Spring)

Fundamentals of biological systems, from biomolecules to interplays of biomolecules that give rise to processes of life. Students apply chemical engineering principles to analysis of living systems. Prereq: Chem 2301, ChEn 3201, Math 2373 (or equivalent)

CHEN 4214. Polymers. (; 3 cr. ; A-F or Audit; Every Spring)

Polymer structure-property relations: structure/morphology of crystalline/amorphous states. Crystallization kinetics. Vitrification and the glass transition. Mechanical properties, failure, permeability, optical/electrical properties, polymer composites, effect of processing on properties. prereq: [[MATS 3011, [3101 or MATS 3001], [upper div MatS or ChEn]]] or instr consent

CHEN 4223W. Polymer Laboratory. (WI; 2 cr. ; Student Option; Every Spring)

Synthesis, characterization, and physical properties of polymers. Free radical, condensation, emulsion, anionic polymerization. Infrared spectroscopy/gel permeation chromatography. Viscoelasticity, rubber elasticity, crystallization.

CHEN 4401W. Senior Chemical Engineering Lab. (WI; 4 cr. ; A-F only; Every Fall)

Principles/techniques of efficient design, structure, measurement, planning, analysis, presentation of experiments. Energy balances, fluid flow, heat transfer, mass transfer. Design of new systems using experimental data obtained in lab. Oral/written presentations. prereq: CHEN 3006, CHEN 3401W

CHEN 4501W. Chemical Engineering Design. (WI; 4 cr. ; A-F only; Every Spring)

Engineering economics of process evaluation, including time/bases for cost estimation. Engineering design through group projects. Case studies. prereq: CHEN 3401W, ChEn 3102, ChEn 3006 (or &3006), Chem 2301

CHEN 4593. Directed study. (; 1-4 cr. [max 6 cr.] ; Student Option No Audit; Every Fall, Spring & Summer)

Directed study under faculty supervision. prereq: ChEn major upper division, instr consent

CHEN 4594. Directed Research. (; 1-4 cr. [max 6 cr.] ; Student Option No Audit; Every Fall, Spring & Summer)

Independent lab research under faculty supervision. prereq: Upper div ChEn

CHEN 4601. Process Control. (3 cr. ; A-F or Audit; Every Fall)

Analysis of dynamic behavior/design of linear control systems for chemical processes. Dynamic response/stability of linear ODE systems, tuning of PID controllers, synthesis of feedback, feedforward/feedback controller. prereq: [3102 or 4102], [upper div ChEn major or dept consent], C- or better in all pre-reqs

CHEN 4701. Applied Math. (; 3 cr. ; A-F only; Every Fall)

Integrated approach to solving linear mathematical problems (linear algebraic equations, linear ordinary/partial differential equations) using theoretical/numerical analysis based on linear operator theory. Undergraduate version of 8201. prereq: [3102 or 4102], ChEn major upper div

CHEN 4702. Introduction to Rheology. (; 2 cr. ; A-F only; Every Fall)

Deformation/flow of non-Newtonian/viscoelastic fluids, plastic materials, perfectly elastic solids. Phenomenological/molecular interpretation of rheology of elastomers, polymer melts, polymer solutions. Application of rheology to polymer processing. prereq: [3005 or 4005], instr consent

CHEN 4704. Advanced Undergraduate Physical Rate Processes I: Transport. (; 3 cr. ; A-F only; Every Fall & Spring)

Mass transfer, dilute/concentrated diffusion, Brownian motion. Diffusion coefficients in polymers, of electrolytes, at critical points. Multicomponent diffusion. Correlations/predictions. Mass transfer, chemical reaction. prereq: [3005 or 4005], ChEn major upper div

CHEM 4708. Advanced Undergraduate Chemical Rate Processes: Analysis of Chemical Reactors. (; 3 cr. ; A-F only; Every Spring)

Design of reactors for heat management, with catalytic processes. Analysis of steady state, transient behavior. Polymerization, combustion, solids processing, environmental modeling. Design of multiphase reactors. prereq: [3102 or 4102], ChEn major upper div

CHEM 5531. Electrochemical Engineering and Renewable Energy. (; 3 cr. ; A-F only; Every Fall)

Fundamentals of electrochemical engineering. Electrochemical mass transfer electrokinetics, thermodynamics of electrochemical cells, modern sensors. Formation of thin films and microstructured materials. Computer-based problems. prereq: [MATS 3011 or instr consent], [upper div CSE or grad student]

CHEM 5595. Special Topics. (; 1-4 cr. [max 12 cr.] ; A-F only; Every Fall, Spring & Summer)

New or experimental special topics. prereq: ChEn major upper div

CHEM 5751. Biochemical Engineering. (; 3 cr. ; A-F or Audit; Every Fall)

Chemical engineering principles applied to analysis/design of complex cellular/enzyme processes. Quantitative framework for design of cells for production of proteins, synthesis of antibodies with mammalian cells, or degradation of toxic compounds in contaminated soil. prereq: [3005 or 4005], [concurrent registration is required (or allowed) in 3006 or concurrent registration is required (or allowed) in 4006], [concurrent registration is required (or allowed) in 3102 or concurrent registration is required (or allowed) in 4102]

CHEM 5753. Advanced Biomedical Transport Processes. (; 3 cr. ; A-F or Audit; Every Spring)

Fluid, mass, heat transport in biological systems. Mass transfer across membranes, fluid flow in capillaries, interstitium, veins, and arteries Heat transfer in single cells/tissues. Whole organ, body heat transfer issues. Blood flow, oxygenation. Heat/mass transfer in respiratory systems. Biotransport issues in artificial organs, membrane oxygenators, drug delivery applications. prereq: 3005 or 4005 or equiv

CHEM 5771. Colloids and Dispersions. (; 3 cr. ; A-F or Audit; Every Fall)

Preparation, stability, coagulation kinetics or colloidal solutions. DLVO theory, electrokinetic phenomena. Properties of micelles, other microstructures. prereq: Physical chemistry

CHEM 5801. Optimization in Chemical and Energy Systems Engineering. (3 cr. ; A-F or Audit; Every Fall)

Mathematical optimization is a rigorous and systematic method for modeling and solving decision-making problems. It has become an indispensable tool in various disciplines, including economics, science, and engineering. In this course, students are introduced to the theory of mathematical optimization, systematic

approaches to modeling complex optimization problems, and state-of-the-art algorithms for solving them. While the presented methods are general, we focus on applications in chemical engineering, energy systems engineering, and related disciplines. Many of the applications are directly related to the efficient design and operation of sustainable industrial systems.

CHEM 5802. Applied Machine Learning in Chemical Engineering and Materials Science. (3 cr. ; A-F or Audit; Every Spring)

Machine learning is an increasingly prominent tool used by engineers to aid in the design and characterization of materials and molecules. This course will introduce advanced undergraduates and graduate students to fundamental concepts and practical skills that enable the application of machine learning to these problems. These concepts and skills will be contextualized with examples of recent advances at the intersection of chemical engineering, materials science, and machine learning.

CHEM 5803. Chemical and Materials Technology Commercialization. (3 cr. ; A-F only; Every Fall)

Introduction to chemical and materials technology commercialization including a focus on products, markets, customers, and processes for bringing innovations to market. prereq: courses: ChEn 3101 or MatS 3001

Chemistry (CHEM)**CHEM 1015. Introductory Chemistry: Lecture.** (PHYS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Matter/energy, atoms, compounds, solutions, chemical reactions, mole/chemical calculations, gases, liquids, solids, chemical bonding, atomic/molecular structure, acids, bases, equilibria. Physical/chemical properties of hydrocarbons and organic compounds. Problem solving. prereq: [High school chemistry or equiv], two yrs high school math, not passed chem placement exam, high school physics recommended; Students who will go on to take CHEM 1061/1065 should take CHEM 1015 only. Students who will NOT be continuing on to CHEM 1061/1065 and need to fulfill the Physical Science/Lab core requirement need take the 1-credit lab course CHEM 1017 either concurrently or consecutively. This course will NOT fulfill the Physical Science/Lab core requirement unless the CHEM 1017 lab course is completed either concurrently or consecutively.

CHEM 1016. Exploring Chemical Thinking. (1 cr. [max 2 cr.] ; S-N only; Every Fall & Spring)

This course is designed to help students develop and implement algebraic and chemical thinking, the ability to use symbols to represent atoms and molecules, and how these symbolic representations of microscopic particles match our macroscopic experimental observations/data. While these unique skills will be explicitly developed in this course, they will help students gain a deeper understanding of any chemical concepts to which they are applied.

CHEM 1017. Introductory Chemistry: Laboratory. (PHYS; 1 cr. ; A-F only; Every Fall, Spring & Summer)

Organic chemistry. Matter/energy, atoms, compounds, solutions, chemical reactions, mole/chemical calculations, gases, liquids, solids, chemical bonding, atomic/molecular structure, acids, bases, equilibria. Physical/chemical properties of hydrocarbons and organic compounds containing halogens, nitrogen, or oxygen. Problem solving. prereq: [1015 or concurrent registration is required (or allowed) in 1015], dept consent; credit will not be granted if credit received for: 1011; CHEM 1017 is a 1-credit lab-only course. This course is not intended for students who are planning to take CHEM 1061/1065. Intended only for students who need the course to fulfill the Physical Science/Lab requirement, and are taking CHEM 1015 either concurrently or consecutively. This course will NOT fulfill the Physical Science/Lab core requirement, unless CHEM 1015 is completed either concurrently or consecutively.; meets Lib Ed req of Physical Sciences)

CHEM 1061. Chemical Principles I. (PHYS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Atomic theory, periodic properties of elements. Thermochemistry, reaction stoichiometry. Behavior of gases, liquids, and solids. Molecular/ionic structure/bonding. Organic chemistry and polymers. energy sources, environmental issues related to energy use. Prereq-Grade of at least C- in [1011 or 1015] or [passing placement exam, concurrent registration is required (or allowed) in 1065]; intended for science or engineering majors; concurrent registration is required (or allowed) in 1065; registration for 1065 must precede registration for 1061

CHEM 1062. Chemical Principles II. (PHYS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Chemical kinetics. Radioactive decay. Chemical equilibrium. Solutions. Acids/bases. Solubility. Second law of thermodynamics. Electrochemistry/corrosion. Descriptive chemistry of elements. Coordination chemistry. Biochemistry. prereq: Grade of at least C- in 1061 or equiv, concurrent registration is required (or allowed) in 1066; registration for 1066 must precede registration for 1062

CHEM 1065. Chemical Principles I Laboratory. (PHYS; 1 cr. ; A-F only; Every Fall, Spring & Summer)

Basic laboratory skills while investigating physical and chemical phenomena closely linked to lecture material. Experimental design, data collection and treatment, discussion of errors, and proper treatment of hazardous wastes. prereq: concurrent registration is required (or allowed) in 1061

CHEM 1066. Chemical Principles II Laboratory. (PHYS; 1 cr. ; A-F only; Every Fall, Spring & Summer)

Basic laboratory skills while investigating physical and chemical phenomena closely linked to lecture material. Experimental design, data collection and treatment, discussion of

errors, and proper treatment of hazardous wastes. prereq: concurrent registration is required (or allowed) in 1062

CHEM 1071H. Honors Chemistry I. (PHYS; 3 cr. ; A-F only; Every Fall)

Advanced introduction to atomic theory. Periodic properties of elements. Behavior of gases, liquids, and solids. Molecular/ionic structure, bonding. Aspects of organic chemistry, spectroscopy, and polymers. Mathematically demanding quantitative problems. Writing for scientific journals. prereq: Honors student, permission of University Honors Program, concurrent registration is required (or allowed) in 1075H; registration for 1075H must precede registration for 1071H

CHEM 1072H. Honors Chemistry II. (PHYS; 3 cr. ; A-F only; Every Spring)

Advanced introduction. Chemical kinetics/reaction mechanisms, chemical/physical equilibria, acids/bases, entropy/second law of thermodynamics, electrochemistry/corrosion; descriptive chemistry of elements; coordination chemistry; biochemistry. prereq: 1071H, concurrent registration is required (or allowed) in 1076H, honors student, registration for 1076H must precede registration for 1072H

CHEM 1075H. Honors Chemistry I Laboratory. (PHYS; 1 cr. ; A-F only; Every Fall)

Develop laboratory skills while investigating physical and chemical phenomena closely linked to lecture material. Experimental design, data collection and treatment, discussion of errors, and the proper treatment of hazardous wastes. Prereq: &1071H, honors student, permission of University Honors Program.

CHEM 1076H. Honors Chemistry II Laboratory. (PHYS; 1 cr. ; A-F only; Every Spring)

Develop laboratory skills as experiments become increasingly complex. Data collection/treatment, discussion of errors, proper treatment of hazardous wastes, experiment design. prereq: concurrent registration is required (or allowed) in 1072H

CHEM 1081. Chemistry for the Life Sciences I. (PHYS; 3 cr. ; Student Option; Every Fall)

The topics of atomic theory, molecular structure, bonding and shape, energy and enthalpy, gases, properties of solutions, and equilibrium will be presented along with their application to biological systems. Intended to provide a strong chemistry background for students pursuing life science related majors or careers in life science related fields. prereq: grade of a C- or better in CHEM 1015 or passing chemistry placement exam. This course is recommended for CBS majors.

CHEM 1082. Chemistry for the Life Sciences II. (3 cr. ; Student Option; Every Spring)

The topics of acids, bases and equilibrium, kinetics, nucleophilic substitution and elimination reactions, free radicals, electrochemistry, and alkene addition reactions will be presented along with their application to biological systems. Intended to provide a strong chemistry background for students pursuing life science related majors or careers

in life science related fields. prereq: grade of a C- or better in CHEM 1081 (lecture) and CHEM 1065 (lab); concurrent registration is required (or allowed) in 1086; registration for 1086 must precede registration for 1082. This course is recommended for CBS majors.

CHEM 1086. Chemistry for the Life Sciences II Laboratory. (1 cr. ; Student Option; Every Spring)

Experimental techniques and instrumentation applied to the study of chemical reactions. Techniques include computational chemistry, isolation of natural products, chromatography, acid-base titrations, preparation of buffers, study of reaction kinetics, and examination of polymer degradation. Prereq: grade of a C- or better in CHEM 1081 (lecture) and CHEM 1065 (lab). Concurrent registration in CHEM 1082 is required. This course is recommended for CBS majors.

CHEM 1903. Chemistry in the Kitchen. (; 3 cr. [max 6 cr.]; Student Option; Periodic Fall & Spring)

This seminar will look at the chemistry behind cooking and baking. In this course, we'll cover topics such as coffee roasting, gluten formation, caramelization, "unscrambling" an egg, the science of ice cream, and molecular gastronomy. We will discuss some of the fundamental processes and chemical transformation that occur when we step into the kitchen. In addition to chemistry, this course will touch on interdisciplinary concepts from biochemistry, neuroscience, materials science, and physics.

CHEM 1911W. Quantum Mechanics and Popular Philosophy. (WI; 2 cr. [max 4 cr.]; Student Option; Periodic Fall & Spring)

One may argue about its causal role in these matters, but there is no doubt that the language of quantum mechanics has provided a powerful new set of metaphors with which to express our understanding of ourselves and our place in the overall scheme of things. We will begin with an introduction to some of the basic ideas of quantum mechanics, including the uncertainty principle and wave/particle duality, and discuss some of the quantum paradoxes that highlight the counter-intuitive nature of these concepts. We will then go on to discuss the reflection of these ideas in popular books, articles, and web sites concerning religion, mythology, and philosophy.

CHEM 1915. ?Seeing is Believing.? How Do We See in Science?. (; 2 cr. ; Student Option; Periodic Fall & Spring)

Science is predominantly an empirical field. At its core, the scientific method is based on the formulation and testing of hypotheses based on observations and measurements; but how do we see? in science? Cells are too small to see with the naked eye, proteins and molecules are too small to be observed even with the most powerful microscopes. So how do scientists know a process is happening and what that process is? Many powerful techniques have been developed over the years to help scientists observe the systems of interest, each type of observation providing specific data. The data, however, are often subject to

interpretation. We will discuss different imaging and characterization techniques widely used in Chemistry, Biology, Biochemistry, and Material Science. Classes will include field trips to several imaging and characterization facilities hosted by various Departments and Colleges on the Twin Cities campus and guest lectures by experts in specific techniques.

CHEM 2081. Chemistry for the Life Sciences III. (3 cr. ; Student Option; Every Fall)

The topics of spectroscopy, conjugation and aromaticity, carbonyl and their reactivity, carboxylic acid derivatives, and electrophilic aromatic substitution reactions will be presented along with their application to biological systems. Intended to provide a strong chemistry background for students pursuing life science related majors or careers in life science related fields. prereq: grade of a C- or better in CHEM 1082 (lecture) and CHEM 1086 (lab). This course is recommended for CBS majors.

CHEM 2085. Chemistry for the Life Sciences III Laboratory. (2 cr. ; Student Option; Every Fall)

Experimental techniques and instrumentation applied to the study of chemical reactions and related biological systems. Techniques include spectroscopy, isolation, kinetics and thermodynamics, green chemistry, oxidations, enzymatic reductions, drug discovery. prereq: grade of a C- or better in CHEM 1082 (lecture) and CHEM 1086 (lab). Concurrent registration in CHEM 2081 is required. This course is recommended for CBS majors.

CHEM 2094. Directed Research. (; 1-3 cr. ; Student Option; Every Fall, Spring & Summer)

The directed study experience allows a student to work directly with a faculty on a research project. Students enrolling in this directed study/research course will complete the University's common Directed Study/Research contract with the faculty mentor/evaluator. prereq: instr consent

CHEM 2301. Organic Chemistry I. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Organic compounds, constitutions, configurations, conformations, reactions. Molecular structure. Chemical reactivity/properties. Spectroscopic characterization of organic molecules. prereq: C- or better in 1062/1066 or 1072H/1076H

CHEM 2302. Organic Chemistry II. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Reactions, synthesis, and spectroscopic characterization of organic compounds, organic polymers, and biologically important classes of organic compounds such as lipids, carbohydrates, amino acids, peptides, proteins, and nucleic acids. prereq: Grade of at least C- in 2301

CHEM 2311. Organic Lab. (4 cr. ; Student Option; Every Fall, Spring & Summer)

Laboratory techniques in synthesis, purification and characterization of organic compounds with an emphasis on green chemistry methodologies. prereq: Grade of at least C- in [2302] or [concurrent registration is required (or allowed) in 2302

CHEM 2312H. Honors Organic Lab. (; 5 cr. ; A-F only; Every Fall)

Honors organic chemistry lab. prereq: [2301 or concurrent registration is required (or allowed) in 2301], [Chem or ChemE or BioC] major, instr consent

CHEM 2331H. Honors Elementary Organic Chemistry I. (; 3 cr. ; A-F only; Every Fall)

Important classes of organic compounds, their constitutions, configurations, conformations, reactions. Relationships between molecular structure/chemical properties/reactivities. Spectroscopic methods/characterization of organic molecules. prereq: At least B+ in 1072H, UHP student

CHEM 2332H. Honors Elementary Organic Chemistry II. (; 3 cr. ; A-F only; Every Spring)

Continuation of 2331H. Reactions, synthesis, and spectroscopic characterization of organic compounds, organic polymers, and their role in biologically important classes of organic molecules such as lipids, carbohydrates, amino acids, peptides, proteins, and nucleic acids. prereq: At least C- in 2331H, UHP student

CHEM 3101. Introductory Analytical

Chemistry Lecture. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Primarily for chemistry majors. Methods/concepts of measurement by chemical/instrumental analysis, including titrimetry, quantitative spectrophotometric analysis, chromatographic separations, equilibrium/rate methods. prereq: 1062/1066 or equiv

CHEM 3111. Introductory Analytical

Chemistry Lab. (; 2 cr. ; Student Option; Every Fall & Summer)

Lab for 3101. High precision methods, acidimetry and complexometry, single and multicomponent analysis by spectrophotometry, analysis of mixtures by ion exchange and gas chromatography, enzymatic and rate methods. prereq: 3101 or concurrent registration is required (or allowed) in 3101

CHEM 3121. Process Analytical Chemistry. (; 3 cr. ; A-F or Audit; Every Spring)

Strategies/techniques for analysis. Use of modern instruments, including spectrophotometry, chromatography, and electrochemistry. prereq: [2302 or concurrent registration is required (or allowed) in 2302], [4501 or concurrent registration is required (or allowed) in 4501], CSE student

CHEM 4001. Chemistry of Biomass and Biomass Conversion to Fuels and Products. (ENV; 4 cr. ; A-F or Audit; Every Fall)

Chemical principles underlying structure, properties, processing, performance of plant materials. prereq: 2301, [jr or sr or instr consent]

CHEM 4011. Mechanisms of Chemical Reactions. (; 3 cr. ; Student Option; Every Fall)

Reaction mechanisms, methods of study. Mechanistic concepts. Gas phase reactions. "Electron pushing" mechanisms in organic/enzymatic reactions. Kinetic schemes, other strategies. prereq: [2302, 4501] or equiv

CHEM 4021. Computational Chemistry. (; 3 cr. ; Student Option; Every Spring)

Theoretical methods for study of molecular structure, bonding, and reactivity. Ab initio/semi-empirical calculations. Theoretical determination of molecular electronic structure/spectra, relation to experimental techniques. Molecular mechanics. Structure determination for large systems. Molecular properties/reactivity. Computational tools. Critical assessment of methods/theoretical work in the literature. Lab. prereq: [4502 or equiv], instr consent

CHEM 4066. Chemistry of Industry. (; 3 cr. ; Student Option; Every Spring)

Industrial and polymer chemistry technology. Relation of basic properties to industrial utility. Economics, social problems, industrial environment. prereq: Chem sr or grad student or instr consent

CHEM 4094W. Directed Research. (WI; 1-5 cr. [max 30 cr.]; Student Option; Every Fall, Spring & Summer)

Learning experience in areas not covered by regular courses. Individually arranged with faculty member. prereq: Any 3xxx or 4xxx chem course, instr consent

CHEM 4101. Modern Instrumental Methods of Chemical Analysis. (; 3 cr. ; A-F or Audit; Every Spring)

Basic electronic, optical, computer technologies in design of chemical instrumentation. Advanced topics in spectroscopy (e.g., FT-NMR, FT-IR, atomic absorption/emission). Electrochemistry. Mass spectrometry. prereq: 2101, 2111

CHEM 4111W. Modern Instrumental Methods of Chemical Analysis Lab. (WI; 2 cr. ; A-F or Audit; Every Spring)

Instrumental techniques, including spectroscopic methods, electrochemical methods, and analysis based on separation. Use of computers in data collection and reduction. prereq: 4101 or concurrent registration is required (or allowed)

CHEM 4201. Materials Chemistry. (; 3 cr. ; Student Option; Every Fall)

Crystal systems/unit cells, phase diagrams, defects/interfaces, optical/dielectric properties, electrical/thermal conductivity, X-ray diffraction, thin film analysis, electronic structure, polarons/phonons, solid state chemistry, liquid/molecular crystals, polymers, magnetic/optical materials, porous materials, ceramics, piezoelectric materials, biomedical materials, catalysts. prereq: [[4502 or equiv], 4701] or instr consent

CHEM 4214. Polymers. (; 3 cr. ; A-F or Audit; Every Spring)

Structure/morphology of crystalline/amorphous states. Crystallization kinetics. Vitrification, glass transition. Mechanical properties, failure, permeability, optical/electrical properties, polymer composites, effect of processing. prereq: [MATS 3011, [CHEN 3101 or CHEN 4101 or MATS 4001], [upper div MatS or ChEn or CHEM]] or instr consent

CHEM 4221. Introduction to Polymer Chemistry. (; 3 cr. ; Student Option; Every Fall)

Condensation, radical, ionic, emulsion, ring-opening, metal-catalyzed polymerizations.

Chain conformation, solution thermodynamics, molecular weight characterization, physical properties. prereq: [2302, 4501] or instr consent

CHEM 4223W. Polymer Laboratory. (WI; 2 cr. ; Student Option; Every Spring)

Synthesis, characterization, and physical properties of polymers. Free radical, condensation, emulsion, anionic polymerization. Infrared spectroscopy/gel permeation chromatography. Viscoelasticity, rubber elasticity, crystallization. prereq: CHEM 4221 coreq CHEM 4214 or CHEN 4214 or MATS 4214 or instr consent

CHEM 4301. Applied Surface and Colloid Science. (; 3 cr. ; Student Option; Every Fall)

Introduction to surface/colloid science concepts. Surface tension, wetting, adsorption, capillarity. Formation/stability of sols, emulsions, and foams. Water solubility. Partition coefficients of organic species. Properties of both surfactants and water soluble polymers. Focuses on interdisciplinary applications. prereq: 3043 or BMEN 2101 or CHEN 3101 or CHEM 4501 or instr consent

CHEM 4311W. Advanced Organic Chemistry Lab. (WI; 4 cr. ; Student Option; Every Fall & Spring)

Reactions, techniques, and instrumental methods in synthetic organic chemistry. prereq: 2311

CHEM 4321. Organic Synthesis. (; 3 cr. ; Student Option; Every Fall)

Fundamental concepts, reactions, reagents, structural/stereochemical issues, mechanistic skills for organic chemistry. prereq: [2302 or equiv], 4501, instr consent

CHEM 4322. Advanced Organic Chemistry. (; 3 cr. ; Student Option; Every Spring)

Topics vary by instructor. Examples: natural products, heterocycles, asymmetric synthesis, organometallic chemistry, polymer chemistry. prereq: [2302 or equiv], 4501, instr consent

CHEM 4352. Physical Organic Chemistry. (; 3 cr. ; Student Option; Every Spring)

Fundamental concepts and mechanistic tools for analysis of organic reaction mechanisms. Solvation, reactive intermediates, gas phase chemistry. Photochemistry/strained-ring chemistry. prereq: 4501, [4011 or 8011]

CHEM 4361. Interpretation of Organic Spectra. (; 3 cr. ; Student Option; Every Fall)

Application of nuclear magnetic resonance, mass, ultraviolet, and infrared spectral analyses to organic structural problems. prereq: [2302 or equiv], 4501, instr consent

CHEM 4411. Introduction to Chemical Biology. (; 3 cr. ; Student Option; Every Fall)

Chemistry of amino acids, peptides, proteins, lipids, carbohydrates, and nucleic acids. Structure, nomenclature, synthesis, reactivity. Techniques to characterize biomolecules. prereq: [2302 or 2081 equiv]

CHEM 4412. Chemical Biology of Enzymes. (; 3 cr. ; Student Option; Periodic Spring)

Enzyme classification with examples from current literature. Strategies to decipher enzyme mechanisms. Chemical approaches

to control enzyme catalysis. prereq: [2302 or equiv], 4501

CHEM 4423W. Foundations of Chemical Biology Laboratory. (WI; 2 cr. ; Student Option; Every Fall & Spring)

Experimental techniques from all areas of chemistry applied to biological problems. Experiments to highlight techniques and concepts used in modern Chemical Biology research. Emphasis on connections between classroom/laboratory learning and experimental science, health, disease and medical research. prereq: [2302 or 2304], 2311, 2111

CHEM 4501. Introduction to Thermodynamics, Kinetics, and Statistical Mechanics. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Physical chemistry as it relates to macroscopic descriptions of chemical systems. Chemical thermodynamics, phase equilibria, chemical equilibria. Statistical mechanics. Phenomenological reaction kinetics. Kinetic theory of gases. Collision, statistical theories of reaction rates. prereq: [1062/1066 or 1071H/1075H], [MATH 2263 or concurrent registration is required (or allowed) in MATH 2263 or MATH 2374 or concurrent registration is required (or allowed) in MATH 2374], [PHYS 1302 or PHYS 1402V or PHYS 1502V]

CHEM 4502. Introduction to Quantum Mechanics and Spectroscopy. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Microscopic descriptions of chemical systems. Quantum theory. Applications to atomic/molecular structure. Molecular spectroscopy. Quantum statistical mechanics. Discussion of solutions to several differential equations. prereq: [1062/1066 or 1072H/1076H or 1082/1086], [MATH 2263 or concurrent registration is required (or allowed) in MATH 2263 or MATH 2374 or concurrent registration is required (or allowed) in MATH 2374 or MATH 2243 or concurrent registration is required (or allowed) in MATH 2243 or MATH 2373 or concurrent registration is required (or allowed) in MATH 2373], [PHYS 1302 or PHYS 1402V or PHYS 1502V]

CHEM 4511W. Advanced Physical Chemistry Lab. (WI; 3 cr. ; Student Option; Every Fall)

Experiments illustrating principles and methods of thermodynamics, reaction kinetics, and quantum mechanics. prereq: 4502, chemistry major

CHEM 4601. Green Chemistry. (ENV; 3 cr. ; Student Option; Every Spring)

Survey key aspects of green chemistry in modern research and development both in academia and industry, as well as relevant implications for the environment, technology, and public policy. prereq: [2302 or 2081 or equiv]

CHEM 4701. Inorganic Chemistry. (; 3 cr. ; Student Option; Every Fall & Spring)

Periodic trends. Structure/bonding in compounds where s and p electrons are important. Descriptive chemistry of solids and transition metal compounds. Transition metal chemistry. Topics in main group and materials

chemistry. prereq: [2311 or concurrent registration is required (or allowed) in 2311], [4501 or concurrent registration is required (or allowed) in 4501 or 4502 or concurrent registration is required (or allowed) in 4502]

CHEM 4701H. Honors Inorganic Chemistry. (; 3 cr. ; A-F only; Periodic Fall & Spring)

Periodic trends. Structure/bonding in compounds where s and p electrons are important. Descriptive chemistry of solids and transition metal compounds. Transition metal chemistry. Topics in main group and materials chemistry. prereq: [2311 or concurrent registration is required (or allowed) in 2311], [4501 or concurrent registration is required (or allowed) in 4501 or 4502 or concurrent registration is required (or allowed) in 4502]

CHEM 4711W. Advanced Inorganic Chemistry Lab. (WI; 3 cr. ; A-F or Audit; Every Spring)

Lab experiments in inorganic/organometallic chemistry illustrating synthetic/spectroscopic techniques. prereq: 4701, chem major

CHEM 4715. Physical Inorganic Chemistry. (; 3 cr. ; Student Option; Every Fall)

Physical methods (e.g., IR, UV-VIS, ESR, Mossbauer and mass spectroscopy, magnetic measurements, X-ray diffraction) and concepts applied to inorganic and organometallic systems. prereq: 4701 or equiv, chem major or instr consent

CHEM 4725. Organometallic Chemistry. (; 3 cr. ; Student Option; Periodic Fall)

Synthesis, reactions, structures, and other properties of main group and transition metal organometallic compounds; electronic and structural theory, emphasizing their use as stoichiometric and homogeneous catalytic reagents in organic and inorganic systems. prereq: 4701 or equiv, chem major or instr consent

CHEM 4735. Bioinorganic Chemistry. (; 3 cr. ; Student Option; Periodic Spring)

Role of metal ions in biology. Emphasizes structure, function, and spectroscopy of metalloproteins and their synthetic analogs. prereq: 4701 or equiv, chem grad or instr consent

CHEM 4745. Advanced Inorganic Chemistry. (; 3 cr. ; Student Option; Periodic Spring)

Topics in main group and transition metal chemistry. Emphasizes synthesis, structure, physical properties, and chemical reactivity. prereq: 4701, chem major, instr consent

CHEM 4894. Directed Thesis. (; 1-3 cr. [max 6 cr.]; A-F only; Every Fall, Spring & Summer) Written thesis under direction of chemistry project advisor. prereq: instr consent

CHEM 5210. Materials Characterization. (; 4 cr. ; Student Option; Every Spring)

Modern tools/techniques for both bulk- and thin-film characterization. Topics may include ion-solid interactions, Rutherford back scattering, secondary ion mass spectrometry, solid-state NMR, x-ray photoelectron spectroscopy, small-angle x-ray/neutron scattering, transmission/scanning electron/probe microscopy, near-field scanning optical microscopy, porosimetry, adsorption

techniques, and ellipsometry. prereq: grad student or instr consent

CHEM 5245. Introduction to Drug Design. (; 3 cr. ; A-F or Audit; Periodic Fall)

Concepts that govern design/discovery of drugs. Physical, bioorganic, medicinal chemical principles applied to explain rational design and mechanism of action drugs. prereq: 2302 or equiv

CHEM 5755. X-Ray Crystallography. (; 4 cr. ; A-F or Audit; Every Spring)

Essentials of crystallography as applied to modern, single crystal X-ray diffraction methods. Practical training in use of instrumentation in X-ray crystallography facility in Department of Chemistry. Data collection, correction/refinement, structure solutions, generation of publication materials, use of Cambridge Crystallographic Structure Database. prereq: Chem grad student or instr consent

Chicano Studies (CHIC)

CHIC 1102. Latinos in the United States: Culture and Citizenship. (DSJ,HIS; 3 cr. ; Student Option; Every Fall)

Historical/cultural knowledge on the complex/multi-layered relationship that Latinos have to the U.S., their country of origin. Influence of social, cultural, and political dynamics on Latino identity, politics, and sense of belonging in the U.S. Cultural citizenship.

CHIC 1102H. Honors: Latinos in the United States: Culture and Citizenship. (DSJ,HIS; 3 cr. ; A-F only; Every Fall)

Historical/cultural knowledge on the complex/multi-layered relationship that Latinos have to the U.S., their country of origin. Influence of social, cultural, and political dynamics on Latino identity, politics, and sense of belonging in the U.S. Cultural citizenship.

CHIC 1112. Paradigms in Chicana/o Studies. (DSJ; 3 cr. ; Student Option; Every Spring)

Prevailing paradigms of analysis, methodologies of research, and guiding theoretical concepts that have shaped Chicana/o studies. The paradigms introduced in this course are foundational to the study of Chicanas, Chicanos, and Chicax, and it provides the necessary tools for success in upper division courses in the department. Topics include decolonial imaginaries, indigeneity, intersectionality, experiential knowledge, hegemony and counter-hegemony, oppositional consciousness, queer theory, racialization, transnationalism, and globalization.

CHIC 3212. Chicana Feminism: La Chicana in Contemporary Society. (AH,DSJ; 3 cr. ; Student Option; Every Fall & Spring)

Scholarly/creative work of Chicanas or politically defined women of Mexican American community. Interdisciplinary. Historical context, cultural process, and autoethnography.

CHIC 3216W. Chicana and Chicano Art. (AH,WI,CIV; 3 cr. ; Student Option; Periodic Fall & Spring)

A Chicana/o has been described as a Mexican-American with a political sense of identity that emerges from a desire for social justice. One journalist bluntly stated, "A Chicano is a Mexican-American with a non-Anglo image of himself" (Ruben Salazar, Los Angeles Times, 1970). This identity emerged through the Chicano Movement, a social and political mobilization that began in the 1960s and 1970s. The Chicano Movement witnessed the rise of community-based political organizing to improve the working conditions, education, housing opportunities, health, and civil rights for Mexican-Americans. For its inception, the Chicano Movement attracted artists who created a new aesthetic and framework for producing art. A major focus of Chicana/o artists of the 1960s and 1970s was representation, the right to self-determination, and the role of art in fostering civic and public engagement. This focus continues to inform Chicana/o cultural production. Social intervention, empowerment, and institutional critique remain some of the most important innovations of American art of the last several decades, and Chicana/o artists played a significant role in this trend.

CHIC 3221. Chicana/o Cultural Studies: Barrio Culture and the Aesthetics of Everyday Life. (AH,DSJ; 3 cr. ; Student Option; Every Spring)

Cultural studies approach to investigating aesthetic dimensions of experience that inform and are informed by dynamic relationship between culture, class, ethnicity, and power.

CHIC 3223. Chicana/o and Latina/o Representation in Film. (AH,DSJ; 3 cr. ; Student Option; Every Spring)

Introduction to Chicana/o and Latina/o visual representation. Depiction of Latina/o experience, history, and culture in film. Analyzing independent/commercial films as texts that illuminate deeply held beliefs around race, class, ethnicity, gender, and national origin.

CHIC 3352. Transborder Theory: Global Views/Borderland Spaces. (; 3 cr. ; Student Option; Fall Even Year)

Demographic realities, political/economic shifts, cultural exchanges that characterize U.S.-Mexico borderland spaces in global economy. Historically contextualized, transnational approach to cultures, politics, and economics of U.S.-Mexico Borderlands. Dynamics of borderland spaces.

CHIC 3374. Migrant Farmworkers in the United States: Families, Work, and Advocacy. (CIV; 4 cr. ; Student Option; Every Spring)

Socioeconomic/political forces that impact migrant farmworkers. Effects of the laws and policies on everyday life. Theoretical assumptions/strategies of unions and advocacy groups. Role/power of consumer. How consuming cheap food occurs at expense of farmworkers.

CHIC 3375. Folklore of Greater Mexico. (DSJ; 3 cr. ; Student Option; Every Fall & Spring)

Scholarly survey and exploration of the sociocultural function of various types of folklore in Greater Mexico. Ways in which folklore constructs and maintains community, as well as resists and engenders cultural shifts.

CHIC 3412. Comparative Indigenous Feminisms. (GP; 3 cr. ; Student Option; Periodic Fall & Spring)

The course will examine the relationship between Western feminism and indigenous feminism as well as the interconnections between women of color feminism and indigenous feminism. In addition to exploring how indigenous feminists have theorized from 'the flesh' of their embodied experience of colonialism, the course will also consider how indigenous women are articulating decolonization and the embodiment of autonomy through scholarship, cultural revitalization, and activism.

CHIC 3423. Central American Revolutions. (; 3 cr. ; Student Option; Periodic Fall)

Social, political, and economic issues that have shaped Central American history for nearly two centuries. Colonial histories, capitalist development, ethnic/racial conflict, foreign intervention, Catholic Church, civil war throughout region. Readings/discussions cover events in Guatemala, Honduras, El Salvador, Nicaragua, Costa Rica, and Panama.

CHIC 3425. History of Modern Mexico. (3 cr. ; A-F or Audit; Every Fall & Summer)

Mexico from independence to the present: struggles for land, liberty, and equality; ethnicity, gender, and class; economic growth, nationalism, and globalization; urbanization, immigration, demographic transition. Issues of race, religion, and national identity; the US-Mexico War, the 1910 Mexican Revolution, urbanization, migration, free trade agreements, and the War on Drugs.

CHIC 3444. Chicana and Chicano History I. (DSJ,HIS; 3 cr. ; Student Option; Every Fall)

Experiences of people of Mexican descent in the United States. Important eras in histories of Mexico, the United States, and Mexican Americans. Central role of Chicana/os in U.S. history, culture, and politics. Topics include race, ethnicity, gender, sexuality, immigration, migration.

CHIC 3446. Chicana and Chicano History II: WWII, El Movimiento, and the New Millennium. (DSJ,HIS; 3 cr. ; Student Option; Every Spring)

Experiences of people of Mexican descent in the U.S. Notions of citizenship from WWII. Chicano civil rights movement. Impact of immigration patterns/legislation. Cultural wars, changing demographics. Social, economic, and political changes that influenced day-to-day life of Mexican Americans. Meaning of racialized "Mexican" identity. How different groups of Mexicans have understood their relationships to other Americans and other Latino groups.

CHIC 3452. Chicana/LatinX Indigeneity. (DSJ; 3 cr. ; Student Option; Every Spring)

Historical, cultural, and political processes impacting Chicanas/os and their understanding of being indigenous to the North American

continent. History, culture, and identity formation as dynamic processes intimately related to present and future constructions of Mexican American identities and sociopolitical perspectives.

CHIC 3507W. Introduction to Chicana/o Literature. (DSJ,WI,LITR; 3 cr. ; Student Option; Every Fall & Spring)

Cultural, intellectual, and sociopolitical traditions of Mexican Americans as they are represented in creative literature. Genres/forms of creative cultural expression and their significance as representations of social, cultural, and political life in the United States. Novels, short stories, creative non-fiction, drama, essay, poetry, and hybrid forms of literature.

CHIC 3672. Chicana/o Experience in the Midwest. (DSJ; 3 cr. ; Student Option; Every Spring)

Experiences of people generally defined as Chicano or Latino, living in the Midwest. Individual/group identity. Focuses on construction of Chicano-Latino experience. How identity affirmation, migration stories, immigration status, historical memory, and cultural traditions are impacted by being in the Midwest.

CHIC 3771. Latino Social Power and Social Movements in the U.S.. (; 3 cr. ; Student Option; Periodic Fall)

How Latinos have collectively resisted social domination. Theories of social power/movements. Resistance by Latinos during 60s/70s. Current organized efforts to curb immigration, establish English as official language, and limit immigrant rights.

CHIC 3852. Chicana/o Politics. (DSJ,SOCS; 3 cr. ; Student Option; Every Fall & Spring)

Theory/practice of Chicana/o politics through an analysis of Mexican American experience, social agency, and response to larger political systems and behaviors using social science methods of inquiry. Unequal power relations, social justice, and the political economy.

CHIC 3862. American Immigration History. (DSJ,HIS; 3 cr. ; A-F or Audit; Periodic Fall)

Global migrations to U.S. from Europe, Asia, Latin American, and Africa, from early 19th century to present. Causes/cultures of migration. Migrant communities, work, and families. Xenophobia, assimilation/integration, citizenship, ethnicity, race relations. Debates over immigration. Place of immigration in America's national identity.

CHIC 3888. Immigration and the U.S. Latina/o Experience: Diaspora, Identity, and Community. (DSJ,HIS; 3 cr. ; Student Option; Every Fall)

Experiences of migrants from Latin America to the United States in 20th/21st century. Migrant engagements with US society. Pre-existing Latina/o and other ethnic communities. Experiences within political, economic, and social aspects of life at local/global level.

CHIC 3896. Internship for Academic Credit. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)

An applied learning experience in an agreed-upon, short-term, supervised workplace activity, with defined goals, which may be related to a student's major field or area of interest. The work can be full or part time, paid or unpaid, primarily in off-campus environments. Internships integrate classroom knowledge and theory with practical application and skill development in professional or community settings. The skills and knowledge learned should be transferable to other employment settings and not simply to advance the operations of the employer. Typically the student's work is supervised and evaluated by a site coordinator or instructor.

CHIC 3900. Topics in Chicano Studies. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall & Spring)
Topic: Health in Indig chicx/Latinx

CHIC 3920. Topics in Spanish-American Lit. (; 3 cr. ; A-F or Audit; Periodic Fall)
n/a

CHIC 3993. Directed Studies. (; 1-9 cr. [max 16 cr.] ; Student Option; Every Fall, Spring & Summer)
Guided individual reading, research, and study. Students often do preliminary readings and research in conjunction with plans for education abroad programs. prereq: instr consent

CHIC 4231. Color of Public Policy: African Americans, American Indians, Asian Americans & Chicanos in the U.S.. (3 cr. ; Student Option; Periodic Fall)
Examination of the structural or institutional conditions through which people of color have been marginalized in public policy. Critical evaluation of social theory in addressing the problem of contemporary communities of color in the United States.

CHIC 4232. Chicana/o - Latina/o Gender and Sexuality Studies. (AH,DSJ; 3 cr. ; Student Option; Fall Odd, Spring Even Year)
Critical thinking of Chicanas/os and Latinas/os around construction of gender. Politics of sexual identity. How the self is gendered in relationship to sexual, racial, class, and national identities under different social structural conditions. Way in which the "borders" that define/confine sexual norms shift over time.

CHIC 4275. Theory in Action: Community Engagement in a Social Justice Framework. (CIV; 3 cr. ; Student Option; Every Fall)
Theoretical frameworks of social justice and community engagement for work outside classroom with/in Latina/o community. Worker issues/organizing. Placements in unions, worker organizations. Policy initiatives on labor issues. Students reflect on their own identity development, social location, and position of power/privilege.

CHIC 4401. Chicana/Latina Cultural Studies. (AH,DSJ; 3 cr. ; Student Option; Fall Even Year)
Readings in Chicana/Latina cultural studies. TV, film, art, music, dance, theatre, literature. Identity/sexuality. Production of culture/theory.

CHIC 4901W. Senior Paper. (WI; 3 cr. ; A-F only; Every Spring)

Capstone experience. Students produce original research paper or creative project on a topic determined in consultation with a faculty adviser.

CHIC 4993W. Directed Study: Senior Capstone. (WI; 1 cr. ; S-N only; Every Fall, Spring & Summer)

This course accompanies any 3xxx, 4xxx, or 5xxx level course from Chicano and Latino Studies taught by a tenure-line faculty in the department and serves as the capstone requirement in addition to the existing host course requirements. Therefore, the student is co-currently enrolled in the appropriate 3xxx, 4xxx, or 5xxx level host course that matches their research interests and this capstone writing intensive class.

CHIC 5216W. Chicana and Chicano Art. (AH,WI,CIV; 3 cr. ; Student Option; Periodic Fall & Spring)

A Chicana/o has been described as a Mexican-American with a political sense of identity that emerges from a desire for social justice. One journalist bluntly stated, "A Chicano is a Mexican-American with a non-Anglo image of himself" (Ruben Salazar, Los Angeles Times, 1970). This identity emerged through the Chicano Movement, a social and political mobilization that began in the 1960s and 1970s. The Chicano Movement witnessed the rise of community-based political organizing to improve the working conditions, education, housing opportunities, health, and civil rights for Mexican-Americans. For its inception, the Chicano Movement attracted artists who created a new aesthetic and framework for producing art. A major focus of Chicana/o artists of the 1960s and 1970s was representation, the right to self-determination, and the role of art in fostering civic and public engagement. This focus continues to inform Chicana/o cultural production. Social intervention, empowerment, and institutional critique remain some of the most important innovations of American art of the last several decades, and Chicana/o artists played a significant role in this trend.

CHIC 5374. Migrant Farmworkers in the United States: Families, Work, and Advocacy. (CIV; 4 cr. ; Student Option; Every Spring)

Socioeconomic/political forces that impact migrant farmworkers. Effects of the laws and policies on everyday life. Theoretical assumptions/strategies of unions and advocacy groups. Role/power of consumer. How consuming cheap food occurs at expense of farmworkers.

CHIC 5412. Comparative Indigenous Feminisms. (GP; 3 cr. ; Student Option; Periodic Fall & Spring)

The course will examine the relationship between Western feminism and indigenous feminism as well as the interconnections between women of color feminism and indigenous feminism. In addition to exploring how indigenous feminists have theorized from 'the flesh' of their embodied experience of colonialism, the course will also consider how indigenous women are articulating

decolonization and the embodiment of autonomy through scholarship, cultural revitalization, and activism.

CHIC 5920. Topics in Chicana(o) Studies. (; 3 cr. ; Student Option; Every Fall & Spring)
Multidisciplinary themes in Chicana(o) studies. Issues of current interest.

CHIC 5993. Directed Studies. (; 1-3 cr. [max 16 cr.] ; Student Option; Every Fall, Spring & Summer)

Guided individual reading, research, and study for completion of the requirements for a senior paper or honors thesis. prereq: instr consent

Child & Adolescent Psychiatry (CAPY)

CAPY 5672. Children's Exposure to Domestic Violence: Effects on Child Functioning, Treatment Implications. (; 1 cr. ; Student Option; Periodic Spring)
Effects of exposure to domestic violence in context of development, from infancy to late adolescence. Assessment strategies, best practices in intervention/prevention for vulnerable children and adolescents. Multidisciplinary approaches to working with children exposed to violence (e.g., judicial, medical, law enforcement partnerships).

Child Psychology (CPSY)

CPSY 1301. Nature-Based Learning in Early Childhood. (3 cr. ; A-F or Audit; Every Fall)
This course is intended for undergraduate students throughout the University of Minnesota to develop an understanding of the connection between early childhood, development, and nature-based learning and play. Students will learn, through an exploration of national standards and guidelines as well as current research, best practices for connecting children and nature.

CPSY 1334. Global Issues on Children and Youth in Society. (CIV; 3 cr. ; Student Option; Every Fall)

Study of hot topics currently faced by children and youth around the world, including focuses on homelessness, acculturation, mental health, substance abuse, war and political violence, immigration, and legal issues. Provides an introduction to science, ethics, and ramifications in civic life of current, controversial issues concerning child or youth development. Examines topics of concern and interest to parents, society, and young people and how developmental science informs these issues and policies as well as the decisions and actions of citizens. Students will also learn how research is translated and disseminated so that it can inform policy and practice.

CPSY 2301. Introduction to Developmental Psychology. (SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer)

This course will examine normative physical, social, and cognitive development from the prenatal period through adolescence. The major goals include fostering an understanding of the usefulness of a developmental approach to psychological issues, familiarizing students

with current research and methodology in developmental psychology, and engaging students in the experiences of developmental psychology through observation and analysis of child behavior. PSY majors should take the cross-listed course CPSY 3301.

CPSY 2310. Special Topics in Child Development. (; 1-4 cr. [max 12 cr.]; A-F or Audit; Periodic Fall & Spring)
Topics vary by semester.

CPSY 3301. Introduction to Developmental Psychology. (SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer)
This course will examine normative physical, social, and cognitive development from the prenatal period through adolescence. The major goals include fostering an understanding of the usefulness of a developmental approach to psychological issues, familiarizing students with current research and methodology in child psychology, and engaging students in the experiences of developmental psychology through observation and analysis of child behavior. This course is intended for non-Child Psychology/Early Childhood majors. Those majors should take the cross-listed course CPSY 2301.

CPSY 3301H. Honors Introduction to Developmental Psychology. (SOCS; 4 cr. ; A-F only; Every Spring)
This course will examine normative physical, social, and cognitive development from the prenatal period through adolescence. The major goals include fostering an understanding of the usefulness of a developmental approach to psychological issues, familiarizing students with current research and methodology in developmental psychology, and engaging students in the experiences of developmental psychology through observation and analysis of child behavior. This course is intended for University Honors Program students both within and outside of the Developmental Psych/Early Childhood programs.

CPSY 3308W. Introduction to Research Methods in Child Psychology. (WI; 4 cr. ; A-F or Audit; Every Fall & Spring)
Explore developmental research methodology by learning about observational research and experimental designs. Critically evaluate research articles, learn to report research, and understand the difference between science and pseudoscience. Gain awareness of the ethical and practical issues that developmental psychologists face when they work with children. prereq: CPSY 2301 / 3301 or equiv

CPSY 3360H. Child Psychology Honors Seminar. (; 2 cr. ; A-F or Audit; Every Fall)
Acquaints students with the various research projects and activities in the Institute for Child Development and in related departments. Faculty are invited to discuss their research projects with seminar participants. prereq: CPSy honors student

CPSY 3401. Children, Youth, and Media. (3 cr. ; Student Option; Spring Odd Year)
This course will examine a variety of questions related to children's and adolescents' use and understanding of the media, and address

the role of the media in cognitive, social, and emotional development. Pre-req: CPSY 2301 OR CPSY 3301 OR PSY 1001

CPSY 3601. Introduction to Child Life Theory and Practice. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

This course will provide an introduction to the child life profession with a strong focus on patient and family-centered care. This course will meet the required topics of study as identified by the Child Life Council. The major learning objectives include 1) gaining an understanding of the fundamental theories that support patient and family-centered care and child life practice, 2) identifying how illness, injury, and hospitalization impacts a child's development and their family, 3) gaining an understanding of the Official Documents of the Child Life Council, 4) examining the elements of therapeutic play in a clinical setting, and 5) identifying techniques to prepare a child and their family for healthcare encounters. prereq: any introductory course in the areas of Child Development, Psychology, Human Development, Family Systems (CPSY 2/3301 strongly recommended)

CPSY 3896. Internship in Child Psychology. (; 1-4 cr. [max 12 cr.]; S-N only; Every Fall, Spring & Summer)
Students secure an internship in the realm of child psychology/development. A student may only earn credit for a given internship through one course at a time. Corresponding online coursework includes written reflections, journals, and career development activities. Credits are variable based on hours at your site: - 1 credit - 45 hour minimum (average 3-4 hours per week) - 2 credit - 90 hour minimum (average 5-7 hours per week) - 3 credit - 135 hour minimum (average 8-9 hours per week) - 4 credit - 180 hour minimum (average 10-12 hours per week) Students and their supervisors must submit a completed internship contract via Goldpass in order to register. <http://goldpass.umn.edu/> Contact the CPSY advisor with any questions.

CPSY 4302. Infant Development. (; 3 cr. ; A-F or Audit; Every Fall)
Perceptual, motor, emotional, social, and cognitive development during the first two years of life; the developing infant in his or her social and physical environment. prereq: CPSY 2301 or equivalent or instructor consent

CPSY 4303. Adolescent Psychology. (; 3 cr. ; A-F or Audit; Every Fall & Spring)
Overview of development in the teenage years/second decade of life. Interactions of adolescents with family, school, and society. prereq: PSY 1001 or equivalent

CPSY 4310. Special Topics in Developmental Psychology. (; 1-4 cr. [max 12 cr.]; Student Option; Every Fall & Spring)
Description is specific to each topic's title.

CPSY 4311. Behavioral and Emotional Problems of Children. (; 3 cr. ; A-F or Audit; Every Fall)
Study abnormal psychology and atypical development in children and adolescents. Focus on behavioral and emotional problems,

disorders and diagnoses, psychopathology contrasted to normal development. Understand symptoms, causes, course, and prevention of common disorders, excluding physical and sensory handicaps. prereq: CPSY 2301 / 3301 or equiv

CPSY 4313W. Disabilities and Development. (WI; 4 cr. ; Student Option; Every Spring)
Surveys all areas of exceptionality. Mental, hearing, vision, physical, speech, language handicaps. Learning disabilities. Autism. Emotional/behavior disorders. Giftedness. Study the related legal rights, policies, and education accommodations for students with disabilities. prereq: Psy 1001

CPSY 4314. Trauma-Informed Care Practices in Early Childhood. (; 3 cr. ; Student Option; Every Spring)
The course offers a unique experience for students to dig deeply into current research about trauma, resilience, and child development. Students will also have the opportunity to explore how, as practitioners, our ideas about best practice and quality care must be shaped by and around what we are learning about the lasting impact of trauma. Throughout the course, students will explore how race, class, and gender influence and intersect with our understanding of "best practice" as we help students develop a trauma-informed approach to working with children and families. This course offers students the opportunity to learn how theory influences practice in a variety of community settings that serve diverse populations. Students taking this course also have the option to enroll concurrently in CPSY 4315. CPSY 4315 is designed as a practicum experience to be taken concurrently with CPSY 4314. Students taking the course will be able to work in a community setting with children ages 0-5. Students will collaborate with teachers who are experts in working with children and families who have experienced trauma. CPSY 4315 offers students the opportunity to put theory into practice in a community setting that serves a diverse population.

CPSY 4315. Practicum in Early Childhood Trauma-Informed Care. (; 2 cr. ; S-N only; Every Spring)
This course is designed as a field-based practicum to be taken concurrently CPSY 4314. Students may not register only for 4315. Students taking the course will be able to work in a community setting with children ages 0-5. Students will collaborate with teachers who are experts in working with children and families who have experienced trauma. The course, in conjunction with CPSY 4314, offers a unique experience for students to dig deeply into current research about trauma, resilience, and child development and put that knowledge to immediate use in a quality early childhood education environment. Students will also have the opportunity to explore how, as practitioners, our ideas about best practice and quality care must be shaped by and around what we are learning about the lasting impact of trauma. Throughout the course, students will explore how race, class, and gender influence and intersect with our understanding of ?

best practice? as we help students develop a trauma-informed approach to working with children and families. This course offers students the opportunity to put theory into practice in a community setting that serves a diverse population.

CPSY 4329. Biological Foundations of Development. (; 3 cr. ; A-F or Audit; Every Spring)

Evolutionary theory and behavioral genetics applied to understanding of development of human behavior; formation of species-typical adaptive behavior and individual differences in infancy, childhood, and adolescence. prereq: CPSY 2301 / 3301 or equiv

CPSY 4331. Social and Personality Development. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Development of social relations and personality; research, methodology, and contrasting theoretical perspectives. Survey of findings on interpersonal relationships, the concept of self, prosocial and antisocial behavior, and acquisition of social roles. prereq: CPSY 2301 / 3301 or equiv

CPSY 4336. Development and Interpersonal Relationships. (3 cr. ; A-F or Audit; Every Fall)

Processes and functions of interactions with personal relationships across the lifespan; analysis of theory and research on developmental changes and influences.

CPSY 4341. Perceptual Development. (; 3 cr. ; Student Option; Every Fall)

Study how children learn to perceive and experience the world. Explore different approaches to studying brain function and the development of the sensory and perceptual systems and processes with focus on infant perception and the neurobiology of how the senses work. Cover a variety of developmental disorders of sensation and perception: learn about normal brain function by studying abnormal brain function. prereq: CPSY 2301 / 3301 or equiv

CPSY 4343. Cognitive Development. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Introduction to the scientific study of cognitive development (children's thinking) from infancy through adolescence. Focus on research and practical applications. Specific topic areas include infant perception and cognition, attention and memory development, language and symbolic thinking, social cognition, executive function. prereq: CPSY 2301 or 3301 or equivalent

CPSY 4345. Language Development and Communication. (; 3 cr. ; A-F or Audit; Every Spring)

How do children acquire language? Learn about acquisition of phonology (the sound system of the language), semantics (the meaning of units in the language), syntax (the structure of sentences), morphology (the structure of words, phrases, and sentences), and pragmatics (language use). Study English learning along with the acquisition of other spoken and signed languages. prereq: CPSY 2301 / 3301 or equiv

CPSY 4347W. Child Psychology Capstone.

(WI; 3 cr. ; A-F or Audit; Every Fall & Spring) Synthesize important themes and concepts from the CPSY undergraduate experience. Use knowledge of developmental psychology and research methods to complete various capstone assignments throughout the course. Students may find and evaluate high-quality empirical articles; write a literature review; create a hypothesis and design a behavioral coding system; work with peer research partners to collect data in the Lab School; and/or present work to peers and instructors in a professional format. Prereq: Senior and completion of CPSY 3308W (or approved equiv)

CPSY 4994. Directed Research in Developmental Psychology. (; 1-4 cr. [max 16 cr.] ; Student Option; Every Fall, Spring & Summer)

Serve as an Research Assistant in an Institute of Child Development faculty lab. Help plan/ implement/document scientific studies and gain experience in research methodology. Duties vary based on lab and faculty projects that term, and are individually arranged with corresponding faculty and lab representatives. To register: students must first secure their own placement in a faculty research lab; see ICD website and departmental advisor for assistance. Students then submit completed contract to CPSY advisor for a permission number to register.

CPSY 4994V. Directed Research in Child Psychology (Honors Thesis). (WI; 1-6 cr. ; Student Option; Every Fall, Spring & Summer) Individual empirical investigation. Students help plan/implement scientific studies while gaining experience/expertise in research methodology. prereq: 4 cr in CPsy, CPsy honors, instr consent, dept consent

CPSY 4996. Field Study in Child Psychology. (; 1-4 cr. [max 12 cr.] ; S-N or Audit; Every Fall, Spring & Summer)

Students secure an internship / volunteer / work opportunity in the community with children. Corresponding online coursework includes written reflections, journals, and career development activities. Credits are variable based on hours at your site. Students must submit a completed field study contract to the CPSY advisor in order to register.

CPSY 5171. Field Experience: Applying Instructional Methods in the Elementary School. (2 cr. ; S-N only; Every Fall)

Field Experience: Applying Instructional Methods in Elementary School is a semester long, full day experience during which teaching candidates gradually increase teaching responsibilities through observation and guided practice in an elementary (grade K-3) classroom, in a co-teaching model. The field experience is taken in connection with the Elementary Methods Teaching Block. Methods course teaching assignments are done during the field experience.

CPSY 5181. Clinical Experience in Elementary School Teaching. (10 cr. [max 20 cr.] ; S-N or Audit; Every Fall, Spring & Summer)

Students spend full days in the elementary classroom gradually assuming responsibility for teaching the class. Students prepare a portfolio based on criteria given. One seminar per week.

CPSY 5187. Capstone Project: Improvement of Teaching in Early Childhood Education.

(2 cr. ; Student Option No Audit; Every Spring) This is the capstone for teaching candidates in the M.Ed. in Early Childhood Education. Students will complete an in-depth reflective teaching portfolio and parallel assignments. The course requires demonstration of the linking of child development theory, knowledge of developmentally appropriate teaching, and reflective practice. prereq: Completion of all requirements for Early Childhood Teacher Licensure, other than CI 5181, which is taken concurrently.

CPSY 5241. Field Experience in Early Childhood Education. (; 3 cr. ; A-F only; Every Fall & Spring)

This course offers a great introduction to the early childhood experience for those interested in working with young children. Helpful first course to explore Early Childhood major (can also count in CPSY BA). Students will review early development and learn how this knowledge is applied in educational and early care settings. Spend time observing early childhood programs through field experiences around the city.

CPSY 5251W. Social and Philosophical Foundations of Early Childhood Education.

(WI; 3 cr. ; A-F only; Every Fall) This course traces the history of early childhood education from Plato to the present, as well as explores various program models and the standards movement, including the Minnesota Early Learning Indicators. The course includes lecture, discussion, videos and vignettes, assignments, and requires students to begin developing a personal teaching philosophy. It is also a writing intensive course which incorporates writing instruction and professional writing expectations throughout all course assignments and activities.

CPSY 5252. Facilitating Social and Emotional Learning in Early Childhood Education. (3 cr. ; A-F only; Every Spring)

This course explores social and emotional development throughout the early childhood (0-8) years. Explore the variety of ways that social interactions and emotional understanding occur in young children with a special emphasis on the role of adults in facilitating these processes. Students will encounter a blend of theory and application as they learn to promote children's mental health, understand special circumstances such as trauma, and respond to challenging behaviors across early learning settings. prereq: CPSY 2301 or equiv or inst consent. For Early Childhood or ECSE students.

CPSY 5253. Facilitating Cognitive and Language Learning in Early Childhood Education. (; 3 cr. ; A-F only; Every Fall)

This is a required methods course for students in the Early Childhood Education major (Licensure and Individualized-Studies Tracks) and the Early Childhood Education Initial

Licensure Program. It is intended to prepare students to work with and teach typically and non-typically developing children from birth to age 8. Through lecture, videos, small group projects, hands-on exploration of materials and actual implementation of course principles with children, students will practice and learn to: -carefully observe children to identify their individual learning characteristics. -assess children's developmental characteristics in the cognitive and language domains. -plan relevant and appropriate curriculum to foster growth and development in the areas of cognition, language, and literacy. -write goals and lesson plans focusing on the curriculum areas of math, science, language and literacy. -document and reflect on children's learning and development. prereq: CPSY 2301 or equiv or inst consent. For Early Childhood or ECSE students.

CPSY 5254. Facilitating Creative and Motor Learning in Early Childhood Education. (2 cr. ; A-F only; Every Spring)

Learn how young children develop creativity and motor skills from birth - age 8. Engage in hands-on exploration of creative classroom materials and reflection. Complete action-oriented and applied assignments with small groups of children in early childhood education settings. prereq: CPSY 2301 or equiv or inst consent. For Early Childhood and ECSE students.

CPSY 5261. Early Learning in Infancy and Toddlerhood. (3 cr. ; Student Option; Periodic Summer)

This course provides an understanding of infant and toddler development. It offers multiple perspectives and current research related to the timetable of infant and toddler development, as well as the role of caregivers, environment, and culture in development. Special attention will be given to policies/programming that concern infants, toddlers, and their families. Students will be expected to understand the nuanced and varied ways in which development unfolds, including areas of exceptionalities, as well as explore the roles of professionals and community members in supporting infant and toddler development.

CPSY 5281. Student Teaching in Early Childhood Education. (6-8 cr. ; S-N or Audit; Every Fall & Spring)

Student teaching plus weekly seminar for students pursuing the Early Childhood teaching licensure. Application of theory/research relating to teaching preschool children. Student teach either 5 mornings per week (7:45-12:30) for 8 credits or 3 afternoons per week (11:45-4:30) for 6 credits. In addition, ALL students participate in weekly (Fridays 12:30-2) seminars. Prereq: Early Childhood or ECSE student plus successful completion of CPSY 5241, 5252, 5253, and 5254.

CPSY 5301. Advanced Developmental Psychology. (3 cr. ; A-F or Audit; Every Fall & Summer)

This course is an exploration of life span development through the lenses of social, cultural, cognitive, biological, and learning theories and research. A primary emphasis of the class is on gaining better conceptual

understanding of different perspectives on healthy development in order to support informed practical understanding of how to help children, adolescents, and adults progress through the developmental periods and to help them with the challenges they face across their lifespan. This course is intended for graduate students. Undergraduate students should take CPSY 2301 or 3301 and not also 5301.

CPSY 5302. Cognitive and Biological Development. (3 cr. ; Student Option; Every Fall)

This course concerns the development and function of thinking skills throughout the lifespan, touching upon several aspects of what makes humans unique. How are humans able to perceive, evaluate, interpret, infer, remember, symbolize, plan, evaluate, problem solve, and hypothesize? What influences the very emergence of such abilities and the nature of their function? What obstacles interfere with the development or the quality of cognitive processes? Brain development and other biological factors, and our relationships and other environmental factors influence our thinking and its development. Throughout this course, we will discuss how knowledge about cognitive development can influence our work with children, adolescents, and adults, in daily life, professional practice, and public policy. Among the many applications of our knowledge of cognitive development, in this course we will focus on select examples relevant to parenting, education, and media exposure, and on topics initiated by students. The course will address individual differences and cultural differences in cognitive development, and how knowledge about variation in 'typical' cognitive development provides an important foundation for understanding atypical cognitive development.

CPSY 5303. Social and Emotional Development. (3 cr. ; Student Option; Every Spring)

What are the roots of becoming who we are, as individuals in society? What roles do others (parents, siblings, peers, teachers, and communities) -- play in the socialization of an individual, and how stable are the forces and outcomes of these influences? This course focuses on social development throughout the human lifespan, with an emphasis on how biology, culture, and relationships influence that development. Throughout this course, we will discuss how knowledge about social development can inform our interpretation of social issues and guide our reaction to them, in terms of behaviors, practices, and public policy. Among the many possible applications of social development, we focus in particular (but not exclusively) on positive psychology, widespread social problems such as poverty and social disparities, and prevention science. We emphasize individual differences in social development, and attend to the interplay between social development and cognition, learning, and biological development.

CPSY 5304. Research Methods in Applied Child and Adolescent Development. (3 cr. ; Student Option; Every Fall)

Applied child and adolescent development research builds upon on traditions of general, clinical, developmental, and educational psychology research, while focusing on efforts to address social needs, social problems, and public policy. Knowledge of scientifically sound and effective approaches to studying social problems and solutions will support those individuals who lead, contribute to, or use research. That is, knowledge gained from this course will support your development as an investigator or research associate, and it will also empower your role as a savvy consumer of the research you intend to apply to practice or policy.

CPSY 5306. Ethics and Professionalism in Applied Child and Adolescent Development. (2 cr. ; A-F only; Every Fall)

This course concerns ethical principles, issues, and codes relevant to research and practice in applied developmental psychology. These ethical considerations pertain to the work of professionals and researchers in communities, school, medical, and social agencies that serve children, youth, families, and adults. Throughout the course, we will consider the general principles that guide ethical behaviors and decision-making across settings, unique issues that might arise in specific settings, and the roles served by formal codes of conduct. We also consider the roots of ethical thinking, behavior, and decision-making, and the social and cultural influences on individual's developing sense of ethics.

CPSY 5413. Early Childhood and Public Policy. (3 cr. ; Student Option; Every Fall)

State, federal, and international policies and legislative activity touching first five years of a child's life. Family, community, and institutional roles in promoting children's social, cognitive, and emotional development. Issues related to health, mental health, poverty, developmental delays, and special needs.

CPSY 5501. Foundations in Infant and Early Childhood Mental Health I. (3 cr. ; A-F only; Fall Odd Year)

History, theory, research, concepts, and issues in infant mental health. Issues pertinent to difficulties in development. Readings, visual material. Expert guest lectures. prereq: [Baccalaureate degree in an early-childhood-related field from an accredited U.S. institution or documented equiv], experience in early childhood [research or practice]

CPSY 5503. Development and Psychopathology in Early Childhood. (3 cr. ; Student Option; Every Spring)

History, theory, research, concepts, and issues in infant mental health. Typical development. Difficulties in development. Expert guest lectures. Readings, visual material. prereq: 5501 or enrolled in MA program or IECMH graduate minor

CPSY 5506. Infant Observation Seminar I. (1 cr. ; S-N only; Spring Odd Year)

How an infant develops in context of family relationships over a 9-12 month period. Students observe an infant for one hour a week, write a narrative, and discuss observations.

CPSY 5508. Infant Observation Seminar II.

(; 1 cr. ; S-N only; Summer Odd Year)

How an infant develops in context of family relationships over a nine- to twelve-month period. Students observe an infant for one hour a week, write a narrative, and discuss observations.

CPSY 5511. Infant Observation Seminar III.

(; 1 cr. ; S-N only; Fall Even Year)

How an infant develops in context of family relationships over 9-12 month period. Students observe an infant for one hour a week, write a narrative, and discuss observations.

CPSY 5513. Early Childhood Assessment.

(; 3 cr. ; Student Option; Every Summer)

The course introduces processes and evidence-based methods of early childhood assessment and diagnosis from a developmental, multi-disciplinary framework. prereq: CPSY 5503 or instructor permission

CPSY 5518. Prevention and Intervention in Early Childhood: Principles.

(; 3 cr. ; A-F only; Every Fall)

Students design prevention/intervention programs and apply evidence-based strategies in workplace/practicum settings. Readings, in-class reflective practice groups. prereq: CPSY 5513

CPSY 5521. Prevention and Intervention in Early Childhood: Practice.

(; 3 cr. ; A-F only; Spring Odd Year)

Students design prevention/intervention programs and apply evidence-based strategies in workplace/practicum settings. Readings, in-class reflective practice groups.

CPSY 5523. Reflective Practice I.

(; 1 cr. ; S-N only; Every Fall)

The capacity to reflect on one's own behavior, thoughts, feelings, and implicit biases, and those of others, is among the essential competencies of infant and early childhood professionals. Reflective practice is a distinctive component of professional training designed to facilitate the development of self-awareness, perspective-taking, and the ability to work effectively across disciplines, cultures, and contexts. This course offers students the opportunity to explore elements of reflective practice, experience, and build their own reflective capacity. Students will integrate these competencies and IECMH coursework with their professional experience and goals in order to provide high quality services to young children and their families and leadership in the field of infant mental health.

CPSY 5525. Reflective Supervision in Infant and Early Childhood Mental Health: Clinical.

(; 1 cr. ; S-N only; Spring Even Year)

Principles and strategies of reflective supervision/consultation. Discussion, final assignment designated by instructor.

CPSY 5601. Child Life Theory, Practice and Program Development.

(; 3 cr. ; A-F only; Every Spring)

With a strong foundation in the theory and science of child development, Child Life Specialists promote effective coping for children experiencing the stress and uncertainty of illness, injury, disability, and

hospitalization. Child Life Specialists translate the theory of developmental science into practice and advocate for patient- and family-centered care in medical settings. This course will provide an overview of history, fundamental theories, relevant research, and application of the Child Life Professional Practice. The Official Documents of the Child Life Council (2011) will be analyzed as a source of guiding principles for professional practice. An introduction to Child Life program development is also examined in this course. This course must be taken prior to a child life internship.

CPSY 5602. Developmental Perspectives on Illness and Injury in Healthcare.

(; 3 cr. ; A-F only; Every Spring)

With a strong foundation in the theory and science of child development, Child Life Specialists promote effective coping for children experiencing the stress and uncertainty of illness, injury, disability, and hospitalization. Child Life Specialists translate the theory of developmental science into practice and advocate for patient- and family-centered care in medical settings. This course will provide an overview of developmental theories as they apply to children and adolescents experiencing illness and injury in healthcare. Child Life preparation, relaxation interventions, and patient support practices for ill children will be examined.

CPSY 5603. Therapeutic Play for Child Life Practice.

(; 3 cr. ; A-F only; Every Summer)

With a strong foundation in the theory and science of child development, Child Life Specialists promote effective coping for children experiencing the stress and uncertainty of illness, injury, disability, and hospitalization. Child Life Specialists translate the theory of developmental science into practice and advocate for patient- and family-centered care in medical settings. This course will provide an overview of the theoretical framework of play across childhood development and its role within pediatric healthcare settings and Child Life practice. Students will gain a professional understanding of therapeutic play interventions essential for facilitation of children's coping and adjustment in various healthcare experiences.

CPSY 5604. Therapeutic Relationships: Supporting Children in Healthcare.

(; 3 cr. ; A-F only; Every Fall)

With a strong foundation in the theory and science of child development, Child Life Specialists promote effective coping for children experiencing the stress and uncertainty of illness, injury, disability, and hospitalization. Child Life Specialists translate the theory of developmental science into practice and advocate for patient- and family-centered care in medical settings. This course will provide an overview of the role of Child Life professionals in therapeutic relationships with patients, caregivers and families. The theoretical foundations of therapeutic relationships will be examined and students will gain a working knowledge of the philosophies and principles underpinning patient and family-centered care.

CPSY 5605. Childhood Death and Bereavement.

(; 3 cr. ; A-F only; Every Spring)

With a strong foundation in the theory and science of child development, Child Life Specialists promote effective coping for children experiencing the stress and uncertainty of illness, injury, disability, and hospitalization. Child Life Specialists translate the theory of developmental science into practice and advocate for patient- and family-centered care in medical settings. This course will provide an overview of the fundamental theories of children's concept of death and the grief process across development. Students will gain an understanding of how Child Life Specialists collaborate with multidisciplinary care teams to support and provide culturally competent care to pediatric patients and their families at end-of-life and bereavement.

CPSY 5981. Cross-Cultural Experiences in Education and English Teaching in Brazil.

(GP; 12 cr. [max 24 cr.] ; S-N only; Periodic Fall & Spring)

This course provides an experiential introduction to the process of learning and teaching a second language to young children in an international setting. Students will engage in inquiry, planning, classroom teaching and reflection as they participate on a team developing curriculum in a partial day English immersion classroom. Through readings, videos, a homestay experience, small group projects, classroom observations, and participation as part of a team of English teachers in Brazil, students will gain an introduction to Brazilian culture, learn the basics of the local education system, and experience firsthand what it is like to learn a new language. Students will next be exposed to some of the basic elements of early childhood second language teaching, will help to plan and co-deliver relevant and appropriate curriculum, write lesson plans and engage in reflective practice with their teaching team. Finally, because of the cultural immersion element of the class, students will be supported to 1) reflect on their personal cultural adjustment process, 2) develop an effective working relationship with their co-teachers, and 3) consider the ethical dilemma present in the provision of educational opportunity to Brazil's marginalized communities.

CPSY 5991. Independent Study in Child Development.

(1-12 cr. [max 24 cr.] ; Student Option No Audit; Periodic Fall & Spring)

Independent study arranged with child development faculty member.

CPSY 5996. Field Experience in Applied Child and Adolescent Development.

(1-12 cr. [max 24 cr.] ; S-N only; Periodic Fall, Spring & Summer)

Emphasizes field experiences focusing on the development of children and adolescents as individuals or members of groups; may include interactions with children and adolescents in natural settings, or research on applied topics or with atypical populations.

China Executive MBA (CHMB)

CHMB 5800. Organizational Behavior. (; 3 cr. ; A-F only; Every Fall)

Theories/frameworks for analyzing behavior of individuals, groups, and the organization itself. Emphasizes making decisions and developing action plans that enable managers to provide effective leadership. Personnel selection, reward/compensation systems, collective bargaining.

CHMB 5801. Financial Accounting. (; 3 cr. ; A-F only; Every Fall)

External accounting system used by firms to measure their economic performance and financial position. Students analyze corporate financial reports to discover impact of significant economic events. Rise of financial reporting standards and financial intermediaries in efficient allocation of capital in a modern economy. Discussions, cases.

CHMB 5802. Statistics and Decision Making. (; 3 cr. ; A-F only; Every Fall)

Exploratory data analysis, basic inferential procedures, statistical process control, regression analysis.

CHMB 5803. Operations Management. (; 3 cr. ; A-F only; Every Fall)

How to manage operations function in manufacturing/service organizations. Emphasizes strategic impact of operations decisions. Operations strategy, process design, productivity improvement, quality management, business process re-engineering, service quality, forecasting, demand management, inventory management, production planning, project management, scheduling, supply chain management, international operations management.

CHMB 5804. Managerial Accounting. (; 3 cr. ; A-F only; Every Spring)

How to analyze accounting for use in management decisions. Planning and control. Transfer pricing, performance measurements, cost behavior, cost allocation, activity based costing, standard costs.

CHMB 5805. Financial Management. (; 3 cr. ; A-F only; Every Spring)

Theory/practice of finance from analytical approach. Students apply basic financial concepts of risk, return, and valuation to decisions that a corporate financial officer or person engaged in small business must make about sources/uses of funds during changing financial markets.

CHMB 5806. Marketing Management. (; 3 cr. ; A-F only; Every Spring)

Developing/implementing most appropriate combination of variables to carry out a firm's strategy in its target markets. Applying analytic perspectives, concepts, and decision tools of marketing to decisions in product offering, distribution, pricing, and communication.

CHMB 5807. Business Strategy. (; 3 cr. ; A-F only; Every Spring)

Formulating strategy for an enterprise. Shaping mission, product-market choice, and organizational character. Shaping allocation of resources to meet organizational circumstances and conflicting stockholder interests. Situational analysis, strategy development. Written/

oral presentation of strategic analyses/recommendations.

CHMB 5808. Strategic Marketing. (; 3 cr. ; A-F only;)

Product markets in which an organization should compete. Sustainable competitive advantage that should be developed. Matching marketing strategy with the environment. Coordination between marketing and other business functions. Organization/management of marketing. Case studies.

CHMB 5809. Advanced Financial Management. (; 3 cr. ; A-F only;)

Executive level corporate financial policy. Students are challenged to apply basic principles of finance on their own initiative. Rigorous case-oriented approach.

CHMB 5810. International Environment. (; 1.5 cr. ; A-F only; Every Fall)

How to develop an integrative framework for dealing with international activities of a newly exporting company or a full-fledged multinational. How international environment constrains decision-making, how currency prices are determined, and how to manage exchange risk in coordination with strategic choices of the firm. prereq: China Executive MBA student

CHMB 5811. Information Technology Management. (; 3 cr. ; A-F only;)

Managing information resources/technology. Students gain exposure to various information technologies, examine their applications, explore competitive advantages associated with information technology, and address organizational/managerial implications.

CHMB 5813. Ethics and Leadership. (; 3 cr. ; A-F only; Every Fall & Spring)

Role that ethics can play in corporate strategy. Key concepts include stakeholder management, individual/collective responsibility, and international business ethics. Theoretical considerations applied to issues such as a business's responsibility to the environment, truthful/tasteful advertising, obligations to local community, and managing a diverse workforce.

CHMB 5815. International Human Resources Management. (; 3 cr. ; A-F only; Every Spring)

Topics reflect the strengths, talents, and interests of the class. Integrates different aspects of the curriculum while not being limited by a specific area or paradigm.

CHMB 5816. International Residency. (6 cr. ; A-F only; Every Fall & Spring)

Students travel to an international location for 11 days and engage in discussions with international colleagues, apply program concepts, and develop a broader sensitivity to cultural/social differences. Pre-trip preparation, on-site discussion, and trip assignment are required.

CHMB 5817. China's Economy. (; 1.5 cr. ; A-F or Audit; Every Spring)

Focusing on China's economy, this course is designed as a required course for all China Executive MBA students. prereq: China Executive MBA student

CHMB 5818. Law and Business. (; 3 cr. [max 6 cr.] ; A-F only; Every Spring)

Legal/regulatory environment of business operations in China.

Chinese (CHN)

CHN 1011. Beginning Modern Chinese I. (; 5 cr. [max 6 cr.] ; Student Option No Audit; Every Fall & Summer)

Speaking/reading modern standard Chinese through structured practice.

CHN 1012. Beginning Modern Chinese II. (; 5 cr. ; Student Option No Audit; Every Spring & Summer)

Speaking/reading modern standard Chinese through structured practice. prereq: 1011 or equiv or instr consent

CHN 1015. Accelerated Beginning Modern Chinese. (; 5 cr. ; Student Option No Audit; Every Fall)

Mandarin Chinese. Reading, writing, standard pronunciation. Meets with 4005. prereq: Oral/aural skills or speaker of other Chinese dialect recommended

CHN 3016. Accelerated Intermediate Modern Chinese. (; 5 cr. ; Student Option No Audit; Every Spring)

Continuation of CHN 1015. Mandarin Chinese course designed primarily for students with oral/aural skills but with little or no exposure to reading and writing. Also for speakers of other Chinese dialects and others with prior experience. Concentration on reading, writing, and standard pronunciation. Equivalent to two semesters, Chinese 3021-3022. Upon completion, student may enter Advanced Modern Chinese, Chinese 3031. prereq: 1012 or 1015; oral/aural skills or speaker of other Chinese dialect recommended

CHN 3021. Intermediate Modern Chinese I. (; 5 cr. ; Student Option No Audit; Every Fall)

Modern standard Chinese skills developed further through conversations, writing, reading. prereq: 1012 or 1015 or equiv or instr consent

CHN 3022. Intermediate Modern Chinese II. (; 5 cr. ; Student Option No Audit; Every Spring)

Modern standard Chinese skills developed further through conversation/reading. prereq: 3021

CHN 3031. Advanced Modern Chinese I. (4 cr. ; Student Option No Audit; Every Fall)

Reading/analysis of 20th-century texts. prereq: 3022 or equiv or instr consent

CHN 3032. Advanced Modern Chinese II. (4 cr. ; Student Option No Audit; Every Spring)

Reading/analysis of 20th-century texts. prereq: 3031 or equiv or instr consent

CHN 3100. Topics in Chinese. (; 1-4 cr. [max 12 cr.] ; Student Option No Audit; Periodic Fall & Spring)

Topics specified in course guide.

CHN 3161. Movies in Modern China. (; 3 cr. ; Student Option No Audit; Periodic Summer)

Taught entirely in Chinese, this course introduces students to modern Chinese cinema. Each week, students will view and discuss Chinese movies (without subtitles)

and learn the basic concepts of film studies, historical movements in Chinese cinema, key filmmakers in China, and how Chinese social issues are represented in the movies. This course is designed for students who have completed Chinese immersion school or have advanced proficiency in listening, reading, speaking, and writing in Mandarin Chinese. Not open to native Chinese speakers, except under special circumstances. prereq: CHN 3032 or permission of instructor. Lectures and assignments are primarily online with one class meeting per week on the UMN campus.

CHN 3201. Chinese Calligraphy. (; 2 cr. ; Student Option; Every Fall & Spring)
Appreciation and execution of Chinese calligraphy through guided practice.

CHN 3202. Intermediate Chinese Calligraphy. (; 2 cr. ; Student Option; Every Spring)
Advanced techniques of composing Chinese characters using regular style of Chinese calligraphy. prereq: 3201 or instr consent

CHN 3203. Advanced Chinese Handwriting. (2 cr. ; Student Option; Every Spring)
This course is designed for students participating in the Chinese Flagship program who have already completed CHN 3201 (Chinese Calligraphy). Students with a Chinese language background may also enroll with the instructor's permission. The course will be taught in Mandarin Chinese. Students will learn the proper methods of composing a Chinese character using pen/pencil. With this foundation, they will advance to writing ancient poetry, couplets, and classical and modern essays. As students learn to write beautiful characters in these texts, they will also gain a better understanding of Chinese culture and literature. Students will also have the opportunity to read and recognize characters written in the Running Script and Casual Script. A deeper understanding of the intricacies in written script allows students to better appreciate the beauty of Chinese literature and engage with its diverse philosophies.

CHN 3290. Chinese Language Teaching Tutorial. (; 1 cr. [max 2 cr.] ; S-N only; Every Fall & Spring)
Students tutor beginning students of Chinese and are part of department's Chinese language team. prereq: Grade of A in 3032

CHN 3920. Topics in Chinese Culture. (; 1-2 cr. [max 6 cr.] ; Student Option No Audit; Every Fall, Spring & Summer)
Selected topics in Chinese culture. Topics specified in the Class Schedule.

CHN 3993. Directed Studies. (1-5 cr. [max 15 cr.] ; Student Option No Audit; Periodic Fall, Spring & Summer)
Guided individual study of Chinese language or linguistics. prereq: instr consent, dept consent, college consent

CHN 4001. Beginning Modern Chinese I for Graduate Student Research. (; 5 cr. [max 6 cr.] ; Student Option No Audit; Every Fall & Summer)
Speaking/reading modern standard Chinese through structured practice. Meets with 1011.

CHN 4002. Beginning Modern Chinese II for Graduate Student Research. (; 5 cr. [max 6 cr.] ; Student Option No Audit; Every Spring & Summer)
Speaking/reading modern standard Chinese through structured practice. Meets with 1012. prereq: 4001

CHN 4003. Intermediate Modern Chinese I for Graduate Student Research. (; 5 cr. ; Student Option No Audit; Every Fall & Summer)
Modern standard Chinese skills developed through conversations, writing, reading. Meets with 3021. prereq: 4002

CHN 4004. Intermediate Modern Chinese II for Graduate Student Research. (; 5 cr. ; Student Option No Audit; Every Spring)
Modern standard Chinese skills developed through conversation/reading. Meets with 3022. prereq: 4003

CHN 4005. Accelerated Beginning Modern Chinese for Graduate Student Research. (5 cr. ; Student Option No Audit; Every Fall)
Mandarin Chinese. Reading, writing, standard pronunciation. prereq: Grad student, instr consent; oral/aural skills or other Chinese dialect recommended

CHN 4006. Accelerated Intermediate Modern Chinese for Graduate Student Research. (5 cr. ; Student Option No Audit; Every Spring)
Continuation of CHN 1015/4005. Mandarin Chinese course designed primarily for students with oral/aural skills but with little or no exposure to reading and writing. Also for speakers of other Chinese dialects and others with prior experience. Concentration on reading, writing, and standard pronunciation. Equivalent to two semesters, Chinese 3021-3022. Upon completion, student may enter Advanced Modern Chinese, Chinese 3031. prereq: 1012 or 1015; oral/aural skills or other Chinese dialect recommended

CHN 4007. Advanced Modern Chinese I for Graduate Student Research. (4 cr. ; Student Option No Audit; Every Fall)
Reading and analysis of 20th-century texts. Meets with 3031. prereq: 4004

CHN 4008. Advanced Modern Chinese II for Graduate Student Research. (4 cr. ; Student Option No Audit; Every Spring)
Reading and analysis of 20th-century texts. Meets with 3032. prereq: 4007

CHN 4021. Flagship Chinese for Academic Purposes. (2 cr. ; A-F only; Every Fall)
This content-based instruction course focuses on using the target language (standard Mandarin) properly in academic and professional social settings, and it is designed to prepare Chinese Flagship students for their direct enrollment courses during their capstone year in China. Students will apply Chinese to topics in their major, including writing academic essays and giving professional presentations on specific topics within their domain. Instructor consent required.

CHN 4022. Flagship Chinese for Professional Purposes. (2 cr. ; A-F only; Every Spring)

This course prepares Chinese Flagship students for their internship experience in China during their capstone year. Taught entirely in Mandarin Chinese, students explore various job-searching sites, create their own resume and cover letter in Chinese, and participate in mock job interviews for careers pertaining to their professional interests. Students perform basic tasks within their own work area and collaborate with peers from other Flagship universities to complete group work projects. Chinese business etiquette and culture are also embedded in the curriculum.

CHN 4040. Chinese Content-Based Instruction. (; 1-3 cr. [max 9 cr.] ; S-N or Audit; Every Fall & Spring)
This course is designed for students of advanced Chinese (CHN 4041 and above) especially students in the Chinese Flagship program. It is intended to bridge their language learning experience to the cultural studies courses on modern Chinese literature, visual culture, popular music, and contemporary Chinese society (ALL 3336, 3337, and others). Content-based instruction addresses Chinese creative and cultural production as contextualized by the Cultural Revolution, during and after the Mao era, China's "opening and reform" as well as by the commercialization and globalization of culture. Taught primarily in Mandarin Chinese, the course focuses on the discussion of materials and issues, not reading of texts. Students will be provided with bilingual materials, including vocabulary lists and original texts to aid the discussions. Not open to native Chinese speakers, except under special circumstances. Permission of Instructor.

CHN 4041. Advanced Readings in Modern Chinese I. (4 cr. ; Student Option; Every Fall)
Writings of different styles. Short stories/essays written since 1949 that reflect Chinese society. Internet writing, use of language. Writings reflection of contemporary Chinese society, its culture/philosophies. prereq: 3032 or instr consent

CHN 4042. Advanced Readings in Modern Chinese II. (4 cr. ; Student Option; Every Spring)
Writings of different styles. Short stories/essays written since 1949 that reflect Chinese society. Internet writing, use of language. Writings' reflection of contemporary Chinese society, its culture/philosophies. prereq: 3032 or instr consent

CHN 4393. Chinese Content-Based Instruction. (1-3 cr. [max 9 cr.] ; Student Option No Audit; Periodic Fall, Spring & Summer)
This course is designed for students of advanced Chinese (CHN 4041 and above) especially students in the Chinese Flagship program. It is intended to bridge their language learning experience to the cultural studies courses on modern Chinese literature, visual culture, popular music, and contemporary Chinese society (AMES 3336, 3337, and others). Content-based instruction addresses Chinese creative and cultural production as contextualized by the Cultural Revolution,

during and after the Mao era, China's "opening and reform" as well as by the commercialization and globalization of culture. Taught primarily in Mandarin Chinese, the course focuses on the discussion of materials and issues, not reading of texts. Students will be provided with bilingual materials, including vocabulary lists and original texts to aid the discussions. Not open to native Chinese speakers, except under special circumstances. Permission of Instructor. prerequisite: CHN 4041 or higher

CHN 5041. Media Chinese. (3 cr. ; A-F or Audit; Every Fall)

Conducted 100% in Mandarin Chinese, this course trains students to comprehend media Chinese by listening to and viewing Chinese television programs and online/ internet resources. Course content includes international and Chinese national news, social issues, historical events, and interpersonal relations relevant to modern Chinese society, history, and culture. Students must have taken 3-4 years of college-level Chinese or demonstrate the same level of Chinese proficiency.

CHN 5042. Contemporary Chinese Texts 1949-present. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

Advanced Chinese language course focused on contemporary Chinese short stories, novelettes, and prose written since 1949, especially from 1978 to the present. These literary works explore various aspects of contemporary Chinese society, history, and culture including: social prejudices and discrimination against the mentally and physically disadvantaged, the Anti-Rightist Movement, the Cultural Revolution, the drug problem, male-female relationships, education, parental love (and lack thereof), traditional Chinese views of life, rape and sex, influence from the West, and more. Class discussion focuses on the use of the language, the social interpretation of the texts, and the Chinese cultural and philosophical implications found in those works. prereq: CHN 4042 or instructor consent. Recommended: CHN 5041

CHN 5211. Introductory Classical Chinese I. (3 cr. ; Student Option; Periodic Fall)

Reading excerpts from canonical Chinese texts. Transnational nature of Classical Chinese/its importance in study of East Asian cultures. Taught in English. prereq: Two years of an East Asian language (Chinese, Japanese, Korean) or equivalent or instr consent

CHN 5212. Introductory Classical Chinese II. (3 cr. ; Student Option; Periodic Spring)

Reading excerpts from canonical Chinese texts. Transnational nature of Classical Chinese/its importance in study of East Asian cultures. Taught in English. prereq: 5211 and two years of an East Asian language (Chinese, Japanese, Korean) or its equivalent or instr consent

CHN 5214. Classical Chinese Language and Culture. (3 cr. ; Student Option No Audit; Periodic Fall & Spring)

Classical Chinese, or literary Chinese, was the formal written language in China until the early 20th century, and also, during various periods, in Japan, Korea, and Vietnam. It is closely related to the modern Chinese language, especially for formal writing, and its literary heritage has laid the cornerstone of Chinese cultural values and worldviews. This class guides the students to comprehend the linguistic and cultural characteristics of classical Chinese, introduces them to key aspects of the tradition, and develops skills for translating classical Chinese into modern Chinese and English texts. The prerequisite is fourth-year Chinese (CHN 4042) or above. Please note that this class is entirely taught in modern Mandarin Chinese, although English study guides will be provided throughout the course.

CHN 5393. Directed Study. (1-5 cr. [max 18 cr.] ; Student Option; Every Fall & Spring)
Guided individual reading or study. Prereq-instr consent, dept consent, college consent.

Civil, Environ, and Geo-Engin (CEGE)

CEGE 1101. Introduction to Civil, Environmental, and Geo-Engineering. (1 cr. ; S-N only; Every Fall)

CEGE 1101 introduces students to the civil, environmental, and geo-engineering practice and the vital role these fields play in society. Presentations by professionals and faculty will explore the current and future challenges of the field, research areas, and career opportunities. Small group discussions with current CEGE majors will help students foster connections with peers and learn about the experience and opportunities in the Department of Civil, Environmental, and Geo- Engineering. prereq: Lower div

CEGE 1501. Environmental Issues and Solutions. (ENV,PHYS; 4 cr. ; Student Option; Every Fall & Spring)

Open to students from all colleges. Importance of science in understanding/solving various environmental problems. Case studies. Laboratory exercises. prereq: High school chemistry or equiv, one yr high school algebra

CEGE 3101. Computer Applications I. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Computer tools and computational methods for solving civil, environmental, and geo-engineering problems. Solving systems of linear/nonlinear equations, parameter estimation and engineering model fitting, numerical differentiation/integration, numerical solution of ordinary and partial differential equations. prereq: MATH 1372, PHYS 1301, CSE or instructor consent

CEGE 3102. Uncertainty and Decision Analysis. (3 cr. ; A-F or Audit; Every Fall & Spring)

Stochastic models, their usefulness in reasoning about uncertainty in civil, environmental, and geo-engineering. Techniques for identifying, fitting, and validating models using data samples. Testing

hypotheses about, and bounding uncertainty attached to, engineering parameters. Applications to civil, environmental, and geo-engineering. prereq: MATH 1372 or equiv

CEGE 3103. Engineering Ethics and Professional Practice. (1 cr. ; A-F only; Every Fall & Spring)

Introduction to ethical thinking, legal aspects of professional practice, codes of ethics for engineers, ethical problem-solving using case studies. Prereq: Civil Eng. or Environmental Eng. or Geoengineering Upper Division

CEGE 3111. CADD for Civil Engineers. (2 cr. ; A-F only; Every Fall & Spring)

Introduction to AutoCAD and Civil 3D software. Students complete all tasks to design two-lane roadways and subdivision using civil engineering design software, including topography, plan/profile, contours, cross sections, and quantity calculations. prereq: CEGE 3201

CEGE 3190. Curricular Practical Training Internship. (1 cr. [max 2 cr.] ; S-N only; Every Fall, Spring & Summer)

Work assignment involving advanced civil engineering. Reviewed by the director of undergraduate studies. Prereq: CE, EnvE, or Geo major

CEGE 3201. Transportation Engineering. (TS; 3 cr. ; A-F or Audit; Every Fall & Spring)

Applying laws of motion to vehicle performance, determining constraints for highway designs. Traffic flow principles, their relation to capacity and level of service. Geometric design, traffic control, pavement design, transportation planning. prereq: PHYS 1301, (CEGE 3101, CEGE 3102 can be taken concurrently)

CEGE 3202. Surveying & Mapping. (; 2 cr. ; A-F or Audit; Every Fall & Summer)

Theory of precision measurements of distance, elevation, angle, and direction of points/ lines above, on, or beneath earth's surface. Establishing such points/lines. Elements of coordinate systems, datum planes, and maps. prereq: MATH 1271, MATH 1272], [CSE or Construction Mgmt]

CEGE 3301. Soil Mechanics I. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Index properties and soil classification. Effective stress. Permeability and seepage. Elasticity theory. One-dimensional compression and consolidation; settlements. Compaction; cut and fill problems. prereq: upper division CSE, AEM 3031, CEGE 3101, or instructor consent

CEGE 3401. Linear Structural Analysis. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Analysis of determinate/indeterminate trusses and frames. Application of energy methods and virtual work technique in analysis of structural deformations. Force-based and displacement-based methods in analysis of indeterminate structures. Influence lines and critical load configurations. prereq: AEM 3031, upper division CSE or instructor consent

CEGE 3402. Civil Engineering Materials. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Concepts and modeling of behavior mechanisms for civil engineering materials such as concrete, masonry, metals, asphalt, plastics, and wood. Standard specifications for material properties. Techniques for testing. prereq: AEM 3031

CEGE 3501. Introduction to Environmental Engineering. (ENV; 3 cr. ; A-F or Audit; Every Fall & Spring)

A quantitative approach to environmental problems, including the development of mass and energy balances and the application of fundamental principles of environmental chemistry and microbiology. Meets the University of Minnesota's liberal education environment theme through the incorporation of environmental function, problems, and solutions throughout the course. prereq: Chem 1062, Phys 1302, Math 1372 or equivalent

CEGE 3502. Fluid Mechanics. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

Fluid statics/dynamics. Kinematics of fluid flow, equations of motion, pressure-velocity relationships, viscous effects, boundary layers. Momentum/energy equations. Lift/drag. Flow in pipes and pipe systems. Hydraulic machinery. Fluid measurements. prereq: [AEM 2012 or AEM 3031], Math 2373, CEGE 3101

CEGE 3541. Environmental Engineering Laboratory. (3 cr. ; A-F only; Every Fall)

Laboratory-based course focused on physical, chemical, and microbiological measurements used in analysis of air, water, and solid samples. Applications include water quality, water treatment, wastewater treatment, hazardous waste treatment/remediation, air pollution, and environmental sensing. prereq: CEGE 3501

CEGE 4000H. Honors Research Seminar. (; 1 cr. [max 2 cr.]; A-F only; Every Fall & Spring)

Attend twelve (12) research seminars in civil, environmental, and geo-engineering given by faculty members and visiting scholars. Write and submit a summary of each attended seminar. Explicitly interact with four or more of the speakers. prereq: Upper div CE, EnvE, GeoE, Enrolled in the University Honors Program or instructor consent

CEGE 4101W. Project Management and Engineering Economics. (WI; 3 cr. ; A-F only; Every Fall & Spring)

Civil, Environmental, and Geo-engineering project management. Project planning, scheduling, and controlling. Project permitting. Financing, bidding, and contracts for public projects. Budgeting, staffing, task cost control. Critical path method and graphical project representations. Project management and leadership. Risk management. Engineering economics. Prerequisites: Civil Eng. or Environmental Eng. or Geoengineering upper division

CEGE 4102W. Capstone Design for Civil Engineering. (WI; 4 cr. ; A-F only; Every Fall & Spring)

Teams formulate/solve civil engineering problems. From conceptual stage through preliminary planning, public hearings, design, environmental impact statements, final plans/

specifications, and award of contracts. prereq: 4101W, 4301, 4401, 4501, 4502

CEGE 4103W. Capstone Design for Environmental Engineering. (WI; 4 cr. ; A-F only; Every Fall & Spring)

Team participation in formulation/solution of open-ended civil engineering problems, from conceptual stage through preliminary planning, public hearings, design, and environmental impact statements, to preparation of final plans/specifications and award of contracts. Prereqs: CEGE 4101W, 4501, 4502

CEGE 4104W. Capstone Design for Geoenvironmental Engineering. (WI; 4 cr. ; A-F only; Every Fall & Spring)

Team participation in formulation/solution of open-ended civil engineering problems, from conceptual stage through preliminary planning, public hearings, design, and environmental impact statements, to preparation of final plans/specifications and award of contracts. prereq: CEGE 4101W, CEGE 4121, CEGE 4311, CEGE 4351, ESCI 4501

CEGE 4121. Computer Applications II. (; 3 cr. ; A-F or Audit; Every Spring)

Advanced application of computer tools/methods in solving ordinary/partial differential equations from civil engineering problems. Spreadsheet, MatLab programming. Methods may include finite differences, boundary element, finite element, and control volume finite element. prereq: CEGE 3101, MATH 2373 or equivalent, MATH 2374 or equivalent, upper division CSE or instructor consent

CEGE 4160. Special Topics. (; 1-4 cr. [max 12 cr.]; A-F only; Periodic Fall & Spring)

Topics/credits vary. prereq: Upper div CSE

CEGE 4170. Independent Study I. (; 1-4 cr. ; Student Option; Every Fall)

Special studies in planning, designing, or analyzing civil engineering systems. Lab problems, literature studies, or reports supervised by staff. prereq: instr consent

CEGE 4180. Independent Study II. (; 1-4 cr. ; Student Option; Every Spring & Summer)

Special studies in the planning, design, or analysis of civil engineering systems. Individual lab research problems, literature studies, reports. Supervised by staff. prereq: instr consent

CEGE 4194. Directed Research. (1-4 cr. [max 16 cr.]; Student Option; Every Fall, Spring & Summer)

Special studies in planning, designing, or analyzing civil, environmental, and geo-engineering systems. Lab problems, literature studies, or reports supervised by staff. Prereq: Instructor Consent

CEGE 4201. Principles of Highway Design. (; 3 cr. ; A-F or Audit; Every Spring)

Vertical and horizontal alignment, cross-sections and earthwork computations, roadside design, highway capacity, impact of vehicle type on geometric design, intersection design, safety impacts of highway design. prereq: upper division CSE student, CEGE 3201 or instr consent

CEGE 4211. Traffic Engineering. (; 3 cr. ; A-F or Audit; Periodic Spring)

Principles of vehicle/driver performance as they apply to safe/efficient operation of highways. Design/use of traffic control devices. Capacity/level of service. Trip generation, traffic impact analysis. Safety/traffic studies. prereq: CEGE 3201, CEGE 3102 or equivalent, upper division CSE or instructor consent

CEGE 4214. Infrastructure Systems Engineering. (3 cr. ; A-F only; Every Fall)

The course introduces mathematical modeling methods such as convex or network optimization to formulate and solve civil engineering problems. Examples are motivated from emerging technologies such as sensing, shared mobility, etc. and computer tools are used to solve the problems. Prereqs: Math 2263 or equivalent, Math 2373 or equivalent, CEGE 3101 or equivalent, CEGE 3102 or equivalent

CEGE 4219. Air Transportation Systems. (3 cr. ; A-F only; Every Fall)

This course provides an overview of the civil air transportation system design and operations. After completing this course, you should be able to describe the operations of civil transport aircraft from the pilot and company, and air traffic control perspectives; conduct basic economic analysis on airline operations and demand; conduct capacity analysis for airspace and airports; and conduct basic optimization for air transportation operations. This course will prepare students for working with the civil aviation industry. Prereqs: CEGE 3101, CEGE 3102, MATH 2263, PHYS 1301

CEGE 4253. Pavement Design, Engineering, and Management. (; 4 cr. ; A-F or Audit; Every Spring)

History of road construction, pavement types, traffic, and environmental loading. Subgrade materials, aggregates, asphalt concrete, and Portland cement concrete. Flexible pavement analysis and rigid pavements analysis. Structural design of flexible pavements and structural design of rigid pavements. Flexible pavements construction and rigid pavements construction. Distresses, maintenance, and rehabilitation of pavement systems. Assessment of pavement condition. Needs analysis and rehabilitation and maintenance strategies. Time value of money and life cycle cost analysis. prereq: [3201, 3301, 3402, upper div CSE] or grad student or instr consent

CEGE 4301. Soil Mechanics II. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Traction and stress. Mohr-Coulomb failure criterion. Experiments on soil strength. Earth pressure theories, rigid/flexible retaining walls. Stability of slopes. Bearing capacity of foundations. prereq: CEGE 3301, upper div CSE, or instr consent

CEGE 4311. Rock Mechanics. (; 4 cr. ; A-F or Audit; Every Fall)

Site investigation/classification. In-situ stresses. Strength/failure criteria of rock/interfaces. Stereographic projections. Kinematic analysis of rock slopes. Block size/stability. Reinforcement. Methods of stress analysis. Pillar design, stiffness effects. Elastoplastic

analysis. Rock-support interaction. Numerical modeling of support systems. Lab testing of rock. prereq: CECE 3301 or instr consent

CECE 4351. Groundwater Mechanics. (; 3 cr. ; A-F or Audit; Every Fall)

Shallow confined, unconfined, and semi-confined flows. Flow in two coupled aquifers separated by leaky layers. Transient flow. Flow toward wells. Streamlines/pathlines in two/three dimensions. Contaminant transport. Elementary computer modeling. prereq: CECE 3101 or BBE 2003, CECE 3502 or BBE 3012, upper division

CECE 4352. Groundwater Modeling. (; 3 cr. ; A-F or Audit; Periodic Spring)

Analytic element method. Mathematical/computer modeling of single/multiple aquifer systems. Groundwater recovery. Field problems. Theory/application of simple contaminant transport models, including capture zone analysis. prereq: 4351, upper div CSE or grad student or instr consent

CECE 4401. Steel and Reinforced Concrete Design. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

Limit-states design. Steel: tension, compression, flexure, combined compression/flexure, connections. Reinforced concrete: beams (rectangular, T-sections, doubly reinforced) in flexure/shear, one-way slabs, serviceability, development length, reinforcement detailing, short columns. prereq: Grade of at least C- in 3401, concurrent registration is required (or allowed) in 3402, [upper div CSE or grad student]

CECE 4411. Matrix Structural Analysis. (; 3 cr. ; A-F or Audit; Every Spring)

Analysis of linear structural systems by matrix methods, stiffness, and flexibility methods. Introduction to computerized structural analysis of trusses/frames, including coding. prereq: CECE 3101, CECE 3401, upper div CSE or grad student or instr consent

CECE 4412. Reinforced Concrete II. (; 3 cr. ; A-F or Audit; Every Spring)

Advanced design of reinforced concrete structures: footings, retaining walls, columns with slenderness effects and biaxial loading, torsion, continuous systems, two-way floor systems. prereq: CECE 4401, upper div CSE or instr consent; 4411 recommended

CECE 4413. Steel Design II. (; 3 cr. ; A-F or Audit; Every Fall)

Design of steel and composite steel/concrete structures, including composite beams, plate girders, beam-columns, connections and multi-story frames. prereq: CECE 4401, upper div CSE or instr consent; 4411 recommended

CECE 4416. Sensors in Infrastructure. (3 cr. ; A-F only; Periodic Fall)

As sensors become part of practice in CECE fields, an understanding of instrumentation and their application to engineering problems becomes essential. This course will highlight the interdisciplinary nature of using sensors in engineering applications and how previous coursework can be applied. The sensors covered will range from mechanical measurements (e.g. strain, displacement, and

acceleration) to environmental measurements (e.g. temperature, oxygen concentration, and wind speed), and non-destructive techniques. In addition to class lectures, instruments and data acquisition will be explored in lab experiments. Prerequisites: CECE 3402, AEM 3031, CSE Upper division or instructor consent

CECE 4417. Structural Engineering Design of Wood Buildings. (3 cr. ; A-F or Audit; Every Fall)

This course provides an in-depth presentation of topics in design of wood structures. The course is intended for advanced undergraduate and entering graduate students who have completed CECE 4401 or equivalent. The course extends basic concepts of member design, which are covered in CECE 4401, to wood members and simple wood structures. Knowledge of basic concrete and steel design, construction materials and structural analysis is presumed. Topics covered in the course include: wood properties and grading; design criteria using sawn wood, glue-laminated wood, and plywood; design of beams, columns, trusses, shear diaphragms and floors; connections for wood structures; and building codes and test methods. Prereqs: CECE 4401 or equivalent

CECE 4501. Hydrologic Design. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

Hydrologic cycle: precipitation, evaporation, infiltration runoff. Flood routing through rivers and reservoirs. Statistical analysis of hydrologic data and estimation of design flows. Open channel flow, flow through conduits. Detention basin design, hydraulic structure sizing, estimation of risk of flooding. prereq: CECE 3502

CECE 4502. Water and Wastewater Treatment. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Theory and design of physical, chemical, and biological processes for the treatment of water and wastewater. prereq: CECE 3501 or ChEn 2001 or BBE 3033

CECE 4511. Hydraulic Structures. (; 3 cr. ; A-F or Audit; Periodic Fall)

Hydraulic design procedures for culverts, dams, spillways, outlet works, and river control works. Drop structures, water intakes, bridge crossings. prereq: CECE 4501, upper division CSE student, Grad student or instructor consent

CECE 4512. Open Channel Hydraulics. (; 4 cr. ; A-F or Audit; Periodic Fall & Spring)

Theories of flow in open channels, including gradually varied and rapidly varied flows, steady and unsteady flows. Computational methods for unsteady open channel flows, applications to flood routing. Introduction to moveable bed mechanics.

CECE 4513. Energy Conversion from Wind Hydro and Solar Resources. (3 cr. ; A-F only; Periodic Fall)

During this class the physical principles of energy conversion from alternative resources as wind, hydro and solar will be presented and discussed, with an emphasis on fluid mechanics and geophysical flows (atmospheric

boundary layer, rivers, tidal flows). We will start with the resource assessment devoted to quantify the available energy in the environment (wind, rivers, and sun). Each energy resource module will include basic economic principles and assumption enabling the quantification of the efficiency and the costs of energy transformation, as well as an estimate of environmental effects (when possible). We will focus on the details on wind, streams, wave and solar power using conservation equations and basic principles of thermodynamics and fluid mechanics. prereqs: CECE 3502 or equivalent

CECE 4515. Remote Sensing of Environment and Water Resources. (3 cr. ; A-F only; Every Spring)

The course presents fundamentals of probability theory, statistical learning, and physics of remotes sensing to increase understanding and technical knowledge of undergraduate and graduate students about Earth data analysis and remote sensing Prereqs: CECE 3102, Stat 3021 or equivalent, CECE 4501 recommended

CECE 4522. Review of Introductory Fluid Mechanics for Graduate Students. (3 cr. ; A-F or Audit; Every Fall & Spring)

Fluid statics/dynamics. Kinematics of fluid flow, equations of motion, pressure-velocity relationships, viscous effects, boundary layers. Momentum/energy equations. Lift/drag. Flow in pipes and pipe systems. Hydraulic machinery. Fluid measurements

CECE 4561. Solids and Hazardous Wastes. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

This course will serve as an introduction to the topics of solid and hazardous waste management. Classes will incorporate information about prevention, treatment options, and the regulations surrounding solid and hazardous waste. They will also provide an opportunity to observe different methods of waste treatment in action.

CECE 4562. Environmental Remediation Technologies. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Theory and application of current and emerging technologies used to remediate contaminated soil and groundwater. preq: CECE 3501, Upper division CSE or graduate student or instructor consent

CECE 4563. Pollutant Fate and Transport: Processes and Modeling. (3 cr. ; A-F only; Periodic Fall & Spring)

This course will focus on understanding the processes that dictate chemical fate in surface waters, including air-water transfer, adsorption, and biological and abiotic degradation. Students will evaluate the kinetics of these processes by interpreting experimental data. They will also characterize transport in surface waters by building theoretical and computational models from scratch that incorporate advection, diffusion and dispersion transport processes. Students will develop finite difference solutions to advection-diffusion-reaction equations, using ideal and non-ideal reactor theory, to describe the ultimate fate of pollutants in surface water systems such as

rivers, lakes, and estuaries. Fate and transport of organic pollutants (such as pesticides and pharmaceuticals), as well as biochemical oxygen demand and nutrient pollution, will be studied. Prerequisites: CEGE 3101, CEGE 3501, or instructor consent

CEGE 4581. Design for Sustainable Development - India. (TS,GP; 3 cr. ; A-F only; Every Summer)

In this interdisciplinary course in Bangalore (India's fast-growing mega-city and entrepreneurship hub) you will work in teams with local partners to research and design sustainable solutions to development challenges of water, energy, waste, agriculture, transportation, and health. prereq: Open to Junior/Seniors with min. 3.0 GPA.

CEGE 4582. Field Methods in Water Quality: Norway. (3 cr. ; A-F only; Periodic Summer)

This course will explore various aspects of water quality while visiting Norway. The first week will cover the water quality of streams and of stormwater. The second week will cover the water quality of lakes. The third week will cover drinking water and its treatment as well as municipal wastewater and its treatment. This course will be a combination of ?field course? and ?laboratory course? . This course is considered ?hands-on? in that the students will make water quality and other measurements in the field, collect water samples, and perform laboratory analyses on those collected samples. The location of the course will be in/near Trondheim, Norway for weeks 1 and 3 and at the Sletvik field station for week 2. Students will be required to submit three laboratory reports, one for each week of the course. Prereq: (CHEM 1061, CHEM 1065) or equivalent

CEGE 4583. Design for Life: Water in Tanzania. (GP,TS; 3 cr. ; A-F only; Every Spring)

Teams will evaluate community needs and infrastructure to design potable water-handling systems in rural Tanzania, typically off the power grid. Fluid mechanics: complex distribution networks, system losses, pump selection, borehole development; field measurements. Designs must address Tanzanian design guidelines.

CEGE 5094. Directed Research. (; 1-4 cr. ; A-F only; Every Fall, Spring & Summer)

Special studies in the planning, design, or analysis of civil, environmental, and geo-engineering systems. Individual lab research problems, literature studies, reports. Supervised by staff. prereq: instr consent

CEGE 5180. Special Topics. (; 1-4 cr. [max 12 cr.] ; A-F or Audit; Periodic Fall & Spring)

Topics vary depending on faculty and student interests. prereq: upper division undergraduate, graduate student, or instructor consent

CEGE 5211. Traffic Engineering. (; 3 cr. ; A-F or Audit; Periodic Spring)

Principles of vehicle and driver performance as they apply to the safe and efficient operation of highways. Design and use of traffic control devices. Capacity and level of service. Trip generation and traffic impact analysis. Safety

and traffic studies. prereq: CEGE 3201, CEGE 3102 or equivalent, Grad Student

CEGE 5212. Transportation Policy, Planning, and Deployment. (; 3 cr. [max 4 cr.] ; A-F or Audit; Every Fall)

Techniques of analysis and planning for transportation services. Demand-supply interactions. Evaluating transportation alternatives. Travel demand forecasting. Integrated model systems. Citizen participation in decision-making. prereq: 3201 or equiv, upper division CSE, or grad student

CEGE 5213. Transit Planning and Management. (3 cr. ; A-F only; Every Fall)

Principles/techniques related to transit systems. Historical perspective, characteristics of travel demand, demand management. Evaluating/benchmarking system performance. Transit-oriented development. Analyzing alternative transit modes. System design/finance. Case studies, field projects. prereq: Upper Division CE, EnvE, or GeoE student, CE or GeoE grad student, or instructor consent

CEGE 5214. Infrastructure Systems

Engineering. (; 3 cr. [max 4 cr.] ; A-F or Audit; Every Fall)

Systems approach, its application to transportation engineering/planning. Prediction of flows and level of service. Production functions, cost optimization, utility theory, demand modeling, transportation network analysis, equilibrium assignment, decision analysis, multidimensional evaluation of transportation projects. prereq: Math 2373 or equivalent, Math 2263 or equivalent. CEGE 3101 or equivalent, CEGE 3102 or equivalent, CEGE graduate student or instructors consent.

CEGE 5219. Air Transportation Systems. (3 cr. ; A-F or Audit; Every Fall)

This course provides an overview of the civil air transportation system design and operations. After completing this course, you should be able to describe the operations of civil transport aircraft from the pilot and company, and air traffic control perspectives; conduct basic economic analysis on airline operations and demand; conduct capacity analysis for airspace and airports; and conduct basic optimization for air transportation operations. This course will prepare students for working with the civil aviation industry.

CEGE 5341. Wave Methods for Nondestructive Testing. (; 3 cr. ; A-F or Audit; Periodic Fall)

Introduction to contemporary methods for nondestructive characterization of objects of civil infrastructure (e.g., highways, bridges, geotechnical sites). Imaging technologies based on propagation of elastic waves such as ultrasonic/resonant frequency methods, seismic surveys, and acoustic emission monitoring. Lecture prereq: [AEM 2021, AEM 3031] or instr consent

CEGE 5342. Introduction to Inverse Problems. (3 cr. ; A-F only; Every Fall)

Introduction to principles and applications of the inverse problems theory -- the underpinning of model-driven data analytics. The course covers (i) basic ideas, (ii) mathematical

foundation, (iii) discretization strategies, (iv) regularization techniques, (v) solution algorithms, and (vi) example problems. All advanced concepts, when recalled, are introduced in an intuitive engineering setting. The discussion, supported by ample numerical examples, focuses on the inversion of linear ``forward" models. Numerical solutions are implemented in the Matlab environment, and make use of the regtools package that accompanies the textbook (P.C. Hansen, Discrete Inverse Problems -- Insight and Applications, SIAM, 2010). Prereqs: MATH 2243, MATH 2263, CEGE 3101 or equivalent

CEGE 5351. Advanced Engineering Mathematics I. (; 3 cr. ; A-F or Audit; Periodic Fall)

Emphasizes skills relevant for civil, environmental, and geo-engineers. Mathematical principles explained in an engineering setting. Applications from various areas in civil, environmental, and geo-engineering. prereq: [Math 2374 or equiv], upper division CSE student or grad student] or instr consent

CEGE 5411. Applied Structural Mechanics. (; 3 cr. ; A-F or Audit; Every Fall)

Principal Stresses and strain analysis; failure criteria. Introduction to plane elasticity, energymethods, torsion of beams, and bending of unsymmetrical beams. Introduction to structural dynamics and stability. prereq: AEM 3031, Upper div CSE or grad student or instr consent

CEGE 5414. Prestressed Concrete Design. (; 3 cr. ; A-F or Audit; Every Fall)

Design of prestressed concrete structures. Time dependent effects, behavior, flexure, shear, torsion, deflections, continuous systems. prereq: CEGE 4401, upper div CSE or grad student or instr consent

CEGE 5415. Masonry Structures. (; 3 cr. ; A-F or Audit; Periodic Fall)

Masonry materials and their production. Mortars, grouts. Design of unreinforced and reinforced masonry structural systems. Walls, columns, lintels. Codes/specifications, testing. prereq: CEGE 3401, upper div CSE or grad student or instr consent; 4401 recommended

CEGE 5416. Sensors in Infrastructure. (3 cr. ; A-F or Audit; Periodic Fall)

As sensors become part of practice in CEGE fields, an understanding of instrumentation and their application to engineering problems becomes essential. This course will highlight the interdisciplinary nature of using sensors in engineering applications and how previous coursework can be applied. The sensors covered will range from mechanical measurements (e.g. strain, displacement, and acceleration) to environmental measurements (e.g. temperature, oxygen concentration, and wind speed), and non-destructive techniques. In addition to class lectures, instruments and data acquisition will be explored in lab experiments. prereq: CEGE 3402, AEM 3031

CEGE 5417. Structural Engineering Design of Wood Buildings. (3 cr. ; A-F or Audit; Every Fall)

This course provides an in-depth presentation of topics in design of wood structures. The course is intended for advanced undergraduate and entering graduate students who have completed CEGE 4401 or equivalent. The course extends basic concepts of member design, which are covered in CEGE 4401, to wood members and simple wood structures. Knowledge of basic concrete and steel design, construction materials and structural analysis is presumed. Topics covered in the course include: wood properties and grading; design criteria using sawn wood, glue-laminated wood, and plywood; design of beams, columns, trusses, shear diaphragms and floors; connections for wood structures; and building codes and test methods. Prereqs: CEGE 4401 or equivalent

CEGE 5511. Urban Hydrology and Water Quality. (4 cr. ; A-F or Audit; Every Fall)

Urban hydrology for small watersheds and the management of storm water quality and quantity. prereq: CEGE 4501 or BBE 5513, upper division CSE or grad student or instructor consent

CEGE 5512. Stochastic Ecohydrology. (3 cr. ; A-F or Audit; Every Fall)

This course will provide the theoretical and quantitative basis for understanding the interactions between the water cycle, vegetation, soil biogeochemistry, and the atmosphere. A main focus of the course will be on modeling the water and carbon dynamics across the soil-plant-atmosphere system. We will provide probabilistic descriptions of this system at the daily, seasonal, and interannual timescales by incorporating various sources of randomness and non-stationarity within the environment, particularly those from rainfall. These concepts and tools will be discussed in the context of sustainable management of water resources and terrestrial ecosystems, especially in view of the changes in the hydrological regime from climate change and societal pressures. prereq: MATH 2373, MATH 2374

CEGE 5513. Energy Conversion from Wind, Hydro and Solar Resources. (3 cr. ; A-F only; Periodic Fall)

During this class the physical principles of energy conversion from alternative resources as wind, hydro and solar will be presented and discussed, with an emphasis on fluid mechanics and geophysical flows (atmospheric boundary layer, rivers, tidal flows). We will start with the resource assessment devoted to quantify the available energy in the environment (wind, rivers, and sun). Each energy resource module will include basic economic principles and assumption enabling the quantification of the efficiency and the costs of energy transformation, as well as an estimate of environmental effects (when possible). We will focus on the details on wind, streams, wave and solar power using conservation equations and basic principles of thermodynamics and fluid mechanics. prereq: CEGE 3502 or equivalent

CEGE 5514. Granular Physics with Environmental and Engineering

Applications. (4 cr. ; A-F or Audit; Periodic Fall)

This class concerns ways in which relatively straightforward particle-scale phenomenology is directly related to larger-scale behaviors of concern to environmental and engineering processes. These larger scale behaviors include pattern formation driven by cooperative sorting and advection dynamics. They also include quasi-static and dynamic non-linear responses to stresses and other forcing. Applications we discuss include particle transport in rivers, wetlands reclamation, pavement compaction, and industrial mixing. As many large-scale and small-scale phenomenology can be counter-intuitive without experience, the in-class work is supplemented by two sets of hand-on activities. (1) students will explore these phenomenology in physical laboratories and (2) students will explore details unattainable in the physical laboratory by modifying existing computational simulations. (e.g., behavior in zero gravity, chaotic particle pathways, small-scale structures in colloidal suspensions). Minimal prior programming experience is expected. Programming assignments will be designed to be flexible for students of all levels of such experience. Prereqs: Graduate student in CSE or permission of instructor and/or CEGE 3502, MATH 2373, MATH 2374

CEGE 5515. Remote Sensing of Environment and Water Resources. (3 cr. ; A-F or Audit; Every Spring)

The course presents fundamentals of probability theory, statistical learning, and physics of remotes sensing to increase understanding and technical knowledge of undergraduate and graduate students about Earth data analysis and remote sensing. Prereqs: CEGE 4501 is recommended

CEGE 5541. Environmental Water Chemistry. (3 cr. [max 4 cr.] ; A-F or Audit; Every Fall)

Introduction to water chemistry. Physical chemical principles, geochemical processes controlling chemical composition of waters, behavior of contaminants that affect the suitability of water for beneficial uses. prereq: CEGE 3501, Chem 1061, Chem 1062 or Chem 1071H/1072H, upper division CSE or grad student or instructor consent

CEGE 5542. Experimental Methods in Environmental Engineering. (3 cr. ; A-F or Audit; Periodic Spring)

Tools necessary to conduct research in environmental engineering and chemistry. Theory of operation of analytical equipment. Sampling and data handling methods, statistical analyses, experimental design, laboratory safety. Lecture, laboratory. prereq: CEGE 3501, (CEGE 5541 recommended) Chem 1022, upper division CSE or grad student or instructor consent

CEGE 5543. Introductory Environmental Fluid Mechanics. (4 cr. ; A-F or Audit; Fall Odd Year)

Environmental fluid mechanics is the study of the interaction of fluid flows that occur in aquatic ecosystems with the growth and

behavior of living organisms. prereq: CEGE 3502 or AEM 4201 or ChEn 3005, upper division CSE or grad students or instructor consent

CEGE 5551. Environmental Microbiology. (3 cr. ; A-F or Audit; Every Fall)

Role of microorganisms in environmental bioremediation, pollution control, water/wastewater treatment, biogeochemistry, and human health. prereq: Upper div or grad student or instructor consent

CEGE 5552. Environmental Microbiology Laboratory. (1 cr. ; A-F only; Periodic Fall)

Basic microbiological techniques: isolation, identification/enumeration of bacteria, BOD, biodegradable kinetics, disinfection. Lab. prereq: CEGE 5551 or concurrent registration is required (or allowed) in CEGE 5551

CEGE 5570. Design for Sustainable Development - India. (3-9 cr. ; A-F only; Every Summer)

In this interdisciplinary course in Bangalore (India's fast-growing mega-city and entrepreneurship hub) you will work in teams with local partners to research and design sustainable solutions to development challenges of water, energy, waste, agriculture, transportation, and health. Prereqs: Open to graduate students from all majors

Classical/Near Eastern Rel/Cul (CNRC)

CNRC 1002. World of Greece. (HIS; 3 cr. ; Student Option; Every Fall & Spring)

Ancient Greek civilization, from second millennium BCE to Roman period. Art/archaeology, philosophy, science, literature, social/political institutions. Focuses on connections with contemporary cultures corresponding to Ancient Near East.

CNRC 1003. World of Rome. (HIS; 3 cr. ; Student Option; Every Spring)

In this course we will ask ourselves: why does ancient Rome refuse to go away? What is it about ancient Rome that has captured the imaginations of Shakespeare and the framers of the U.S. Constitution as well as HBO, Hollywood, and the video game industry? The course examines the world of ancient Rome from early Etruscan and eastern origins to the emergent Christian Rome of later antiquity. We will study the diverse mix of cultures in this vast multi-ethnic empire that spanned from the Near East and Africa to Europe. As we chart the rise of this ancient superpower, we will examine Roman imperialism, colonialism, and the dynamics of cultural identity. Through art, literature, and archeology we will explore politics, religions, slavery and social structures, gender and sexuality, sports and entertainment, economics and trade, as well as the rhythms of daily life.

CNRC 1042. Greek and Roman Mythology. (AH; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Introduction to stories/study of Greek/Roman mythology.

CNRC 1042H. Honors Course: Greek and Roman Mythology. (AH; 4 cr. ; A-F only; Every Fall & Spring)
Introduction to stories/study of Greek/Roman mythology.

CNRC 1082. Jesus in History, Art & Culture. (HIS; 3 cr. ; Student Option; Every Spring)
Who was Jesus? While there has been some basic consistency in the depictions of Jesus throughout history, there has also been lots of variety. We will look at the stories and writings of the New Testament. We will look at ancient and medieval art and music. We will look at modern literature, film, and music. We will learn about how cultures and social groups from around the world have portrayed Jesus in their own contexts and for their own purposes. Students will leave the course with a sense of the diversity of depictions of Jesus and how this diversity correlates with the peoples that portray him and with the cultural and historical moments in which he is portrayed. Come and grapple with the question of who Jesus really was for ancient peoples and who he is for many today. Intended as a course of interest to undergraduates in all colleges of the TC campus. Students of any, all, or no religious background are welcome.

CNRC 1201. The Bible: Context and Interpretation, World of the Hebrew Bible.. (LITR; 3 cr. ; Student Option; Every Fall)
The Hebrew Bible and Old Testament are literary collections that modern Jewish and Christian traditions maintain as important, but these collections were initially produced by ancient Israelite scribes who composed and/or compiled the biblical texts at particular time periods in the ancient Near East. This course will introduce the academic study of biblical texts, which demands critical analysis of the literature and an openness to reading the literature from the perspective of ancient Israelite writers (who lived in a world far different from today). The course will spend considerable time on the literary (and scribal) composition of biblical prose texts; time will also be spent on the historical circumstances of biblical prophets and other writers of the biblical texts. This course will only address the ancient setting of the biblical texts and not re-interpretations in Jewish or Christian traditions. Given the scope of the course, modern interpretations of the biblical literature will not be discussed; we will only focus on this literature in its ancient setting. prereq: Knowledge of Hebrew not required

CNRC 3016W. Biblical Law and Jewish Ethics. (WI; 3 cr. ; Student Option; Periodic Fall & Spring)
This course introduces students to the original meaning and significance of religious law and ethics within Judaism. Law is the single most important part of Jewish history and identity. At the same time, law is also the least understood part of Judaism and has often been the source of criticism and hatred. We shall therefore confront one of the most important parts of Jewish civilization and seek to understand it on its own terms. In demonstrating how law becomes a fundamental religious and ethical

ideal, the course will focus on the biblical and Rabbinic periods but spans the entire history of Judaism. Consistent with the First Amendment, the approach taken is secular. There are no prerequisites: the course is open to all qualified students. The course begins with ideas of law in ancient Babylon and then studies the ongoing history of those ideas. The biblical idea that a covenant binds Israel to God, along with its implications for human worth - including the view of woman as person - will be examined. Comparative cultural issues include the reinterpretations of covenant within Christianity and Islam. The course investigates the rabbinic concept of oral law, the use of law to maintain the civil and religious stability of the Jewish people, and the kabbalistic transformation of law. The course concludes with contemporary Jewish thinkers who return to the Bible while seeking to establish a modern system of universal ethics. The premise of the course is the discipline of academic religious studies. The assumptions of the course are therefore academic and secular, as required by the First Amendment. All texts and all religious traditions will be examined analytically and critically. Students are expected to understand and master this approach, which includes questioning conventional cultural assumptions about the composition and authorship of the Bible. Willingness to ask such questions and openness to new ways of thinking are essential to success in the course.

CNRC 3042. Myths, Legends, and Literature of the Ancient Near East. (AH; 3 cr. ; Student Option; Spring Even Year)
Literature begins in Sumer and Egypt, the lands where writing was first invented and where it was first used to record poems and stories. The cuneiform script was initially developed to write Sumerian, then adapted to write Akkadian, the principal Semitic language of ancient Mesopotamia, and later to write other languages, including Hurrian and Hittite. In this course we shall read legends, myths, dialogues, satires, and other literary works from the ?cuneiform world? in translation. We shall analyze these ancient works of literature on their own terms, within their cultural and historical contexts, and in light of other literary traditions.

CNRC 3054. Ancient Egypt and its Neighbors. (3 cr. ; Student Option; Fall Even Year)
Ancient Egypt exerts fascination upon modern societies, as it did upon its ancient contemporaries. The decipherment of the hieroglyphic script, in the early 19th century CE, opened the way to recovering its history all the way back to the invention of the writing system more than 5,000 years ago. Ancient Egypt has meanwhile been a special focus of racialized interpretations of civilization, from the birth of modern Egyptology onward. Europeans of the colonial age saw Egyptian civilization as an anomaly in Africa, measured excavated skulls to prove its extraneous origins, and segregated it from its geographic context.

CNRC 3061. "Bread and Circuses:" Spectacles and Mass Culture in Antiquity.

(CIV,HIS; 3 cr. ; Student Option; Fall Odd, Spring Even Year)
Development of large-scale public entertainments in ancient Mediterranean world, from athletic contests of Olympia and dramatic festivals of Athens to chariot races and gladiatorial games of Roman Empire. Wider significance of these spectacles in their impact on political, social, and economic life of the societies that supported them.

CNRC 3071. Greek and Hellenistic Religions. (HIS; 3 cr. ; Student Option; Fall Even Year)
Greek religion from the Bronze Age to Hellenistic times. Sources include literature, art, and archaeology. Homer and Olympian deities, ritual performance, prayer/sacrifice, temple architecture, death and the afterlife, mystery cults, philosophical religion. Near Eastern salvation religions.

CNRC 3072. The Birth of Christianity. (AH; 3 cr. ; Student Option; Periodic Fall & Spring)
Early Jesus movement in cultural/historical setting. Origins in Judaism. Traditions about Jesus. Apostle Paul, controversies/interpreters. Authority, religious practice, structure. Emergence of canon. Contemporary methods of New Testament study. Biblical writings as history/narrative. CNES 3072/CNES 5072/ RELS 3072/RELS 5072 meet together.

CNRC 3074. Exploring the Quran: An intellectual odyssey with Islam's holy scripture. (AH; 3 cr. ; A-F or Audit; Every Spring)
This course explores the contents of the Quran and probes its place in the history of human civilization. Students will learn about, and critically reflect on, the following subjects: 1) the Quran's core ideas, stories, laws, parables, and arguments, 2) the historical context in which the Quran was first promulgated and codified, 3) the relationship between the Quran and the preceding literary traditions of the ancient world, in particular, the Bible and post-biblical Jewish and Christian writings, 4) Muslim utilization of the Quran towards intellectual, social, religious, cultural, and political ends, and 5) the pre-modern and modern scholarly traditions of interpreting the Quran.

CNRC 3076. Apostle Paul: Life, Letters, and Legacy. (; 3 cr. ; Student Option; Fall Odd, Spring Even Year)
How/what can we know about Paul. What his message was. What he was fighting. How he was later understood by friends/foes.

CNRC 3081W. Classical Epic in Translation. (LITR,WI; 3 cr. ; Student Option; Fall Odd, Spring Even Year)
Homer's Iliad and Odyssey, Virgil's Aeneid. Cultural context of epic. Development of the hero. Epic style. Poetics of epic.

CNRC 3082W. Greek Tragedy in Translation. (LITR,WI; 3 cr. ; Student Option; Fall Even, Spring Odd Year)
Origins of tragedy. Ancient theatres. Selected plays of Aeschylus, Sophocles, Euripides.

CNRC 3092. Jesus in History. (HIS; 3 cr. ; Student Option; Every Spring)

Who was Jesus? While there has been some basic consistency in the depictions of Jesus throughout history, there has also been lots of variety. We will explore a whole host of portraits of Jesus at different points in history to demonstrate not only the varying ways that Jesus has been thought of but also to understand the relationship between these portraits and the historical and cultural contexts in which they were created. We will look at the gospels of the New Testament and some from outside the New Testament. We will look at ancient and medieval art. And we will look at modern film. Although we might not get to the bottom of who Jesus was, we might understand more fully how communities throughout history have thought about him. Intended as a course of interest to undergraduates in all colleges of the TC campus. Students of any, all, or no religious background are welcome.

CNRC 3103. Ancient Greece: Alexander and the East. (HIS; 3 cr. ; Student Option; Spring Even Year)

Achievements of Alexander the Great, their effect on Greek-speaking world. Greek colonization of Egypt. Hellenistic art, literature, philosophy.

CNRC 3105. Ancient Rome: The Age of Augustus. (; 3 cr. ; Student Option; Spring Even Year)

This course explores ancient Rome's transformation from a democratic republic to an autocratic empire and the considerable implications this crucial shift has had for world history. It examines the fall of the Roman republic and the rise of Rome's first emperor Augustus along with the vast cultural transformations in this age of revolution. Major issues include: Augustan art, architecture, and literature; political ideologies, propaganda, and resistance; gender, sexuality, and the family; Rome and Egypt, colonialism and cultural identity.

CNRC 3106. Ancient Rome: The Age of Nero. (; 3 cr. ; Student Option; Periodic Fall)

The Roman Empire. "Silver Age" of Latin literature, rise of Christianity. Art/architecture.

CNRC 3115. Midrash: Reading and Retelling the Hebrew Bible. (; 3 cr. ; Student Option; Periodic Fall & Spring)

How did the Jews of the first seven centuries of the common era read and understand the Hebrew Bible? What were the problems they faced -- interpretive, historical, theological -- in trying to apply their holy scriptures? This course explores key issues that led to the development of a new form of Judaism in late antiquity, rabbinic Judaism, and its methods of scriptural interpretation. The course's study will focus on the forms and practices of rabbinic scriptural interpretation (midrash) as it developed in Roman Palestine and Sasanian Babylonia, focusing on key narrative and legal passages in the Five Books of Moses (Torah). A main focus of the course will be on the ways the rabbis adapted the Hebrew Bible to express their own core concerns.

CNRC 3121. Gender and Body in Early Christianity. (AH; 3 cr. ; Student Option; Fall Odd Year)

Ancient Christians, like any other social group in the ancient world, represented themselves through images, stories, and discourses using the cultural tools available to them in their own contexts. In this course, we will explore two key texts of early Christianity (1 Corinthians and the Gospel of Mark) with special attention to how representations of the body and gender served to communicate the nature of what it meant to be Christian for these authors. The study of ancient material offers a space to acquire the skills of critical analysis of body and gender dynamics so that we can better understand the roles that the body and gender play in shaping our self-identity, social interaction, and societal structures.

CNRC 3152. Art and Archaeology of Ancient Greece. (HIS; 3 cr. ; Student Option; Periodic Fall & Spring)

This course will provide an introduction to the history of Greek art, architecture and archaeology from the formation of the Greek city states in the ninth century BCE, through the expansion of Greek culture across the Mediterranean and Asia in the Hellenistic period, to the coming of Rome in the first century BCE. While this survey concentrates on the main developments of Greek art, an important sub-theme of this course is the changes Classical visual culture underwent as it served non-Greek peoples, including the role it played for Alexander and his successors in forging multiethnic, globally minded empires in Western, Central and South Asia. No background in the time period or discipline is expected and therefore this class will also serve as an introduction to interdisciplinary study of art history and the classical world. A number of art historical methodologies will be introduced in order to not only give students a useful background in art history but to give them the tools to think as art historians and incorporate related visual and textual evidence meaningfully into their writing.

CNRC 3162. Roman Art and Archaeology.

(HIS; 3 cr. ; Student Option; Fall Odd Year)
Introduction to art and material culture of Roman world: origin, change, continuity. Progress/decay in later empire, its legacy to modern world.

CNRC 3182. Egypt and Western Asia: Art and Archaeology of Ancient Egypt and Western Asia. (AH,GP; 3 cr. ; Student Option; Every Fall & Spring)

This course will provide students with foundational knowledge in the art, architecture, and archaeology of Egypt, East Africa, Asia Minor, Mesopotamia, Iran and Central Asia from the Neolithic through Late Antiquity (ca. 7,000 B.C.E. - 650 C.E.). Students will gain an understanding of the relationship between the visual material and the social, intellectual, political, and religious contexts in which it developed and functioned. In this regard, students will also gain an understanding of the evolution of, and exchanges and differences among, the visual cultures of these time periods and regions. It will also expose them to the preconditions for contemporary geopolitics in the region.

CNRC 3201. The Bible: Context and Interpretation, World of the Hebrew Bible.

(LITR; 3 cr. ; Student Option; Every Fall)
The Hebrew Bible and Old Testament are literary collections that modern Jewish and Christian traditions maintain as important, but these collections were initially produced by ancient Israelite scribes who composed and/or compiled the biblical texts at particular time periods in the ancient Near East. This course will introduce the academic study of biblical texts, which demands critical analysis of the literature and an openness to reading the literature from the perspective of ancient Israelite writers (who lived in a world far different from today). The course will spend considerable time on the literary (and scribal) composition of biblical prose texts; time will also be spent on the historical circumstances of biblical prophets and other writers of the biblical texts. This course will only address the ancient setting of the biblical texts and not re-interpretations in Jewish or Christian traditions. Given the scope of the course, modern interpretations of the biblical literature will not be discussed; we will only focus on this literature in its ancient setting. prereq: Knowledge of Hebrew not required

CNRC 3202. Bible: Prophecy in Ancient Israel. (3 cr. ; Student Option; Every Spring)

Survey of Israelite prophets. Emphasizes Amos, Hosea, Isaiah, Jeremiah, Ezekiel, Second Isaiah. Prophetic contributions to Israelite religion. Personality of prophets. Politics, prophetic reaction. Textual analysis, biblical scholarship. Prophecy viewed cross-culturally. prereq: [RELS 1001] or [CNES 1201 or JWST 1201 or RELS 1201 or CNES 3201 or JWST 3201 or RELS 3201]

CNRC 3205. Women, Gender, and the Hebrew Bible. (AH; 3 cr. ; Student Option; Spring Odd Year)

How men, woman, gender, sexuality is portrayed in Hebrew Bible. Social/religious roles/status of women in ancient Israel. Reading biblical texts from academic point of view.

CNRC 3206. Sex, Murder, and Bodily Discharges: Purity and Pollution in the Ancient World. (3 cr. ; Student Option; Every Spring)

"Dirt is dangerous" wrote Mary Douglas more than 50 years ago in her groundbreaking study, *Purity and Danger: An Analysis of Concept of Pollution and Taboo*. Her work has been influential in ancient Near Eastern and Mediterranean studies when dealing with issues of sacred/profane, purity/pollution, and ritual sacrifice and purification. Douglas' work provides a framework within which to understand ancients' thinking about these concepts that range from the sacredness of space and of bodies to perceived pollutions caused by bodily leakage or liminal stages of life and death. In this course, we will examine Douglas' theory in light of ancient evidence, with special attention to ancient Israelite literature (the Tanakh or Old Testament) and ancient Jewish literature (the Dead Sea Scrolls), but we will also analyze other ancient

Near Eastern and Mediterranean examples of purity and pollution (from epigraphical and documentary evidence).

CNRC 3502W. Ancient Israel: From Conquest to Exile. (WI; 3 cr. ; Student Option; Periodic Spring)

Israel and Judah were not states of great importance in the ancient Near East. Their population and territory were small, and they could not resist conquest by larger, more powerful states like Assyria and Rome. Yet their ancient history matters greatly today, out of proportion to its insignificance during the periods in which it transpired. The historical experiences of the people of Israel and Judah were accorded religious meaning and literary articulation in the Hebrew Bible (the Old Testament), which became a foundational text for Judaism, Christianity, and Islam. Essential features of Western as well as Islamic civilization are predicated on some element of Israel's ancient past, as mediated through the Bible; therefore it behooves us to understand that past. But the Bible is a religious work, not a transcript of events, and the history of ancient Israel is not derived merely from reading the biblical accounts of it. Archaeological excavations have revealed the physical remains of the cultures of Israel and neighboring lands, as well as bringing to light inscriptions, documents, and literary works produced by those cultures. These sources, which complement and sometimes contradict the accounts conveyed in the Bible, provide the basis for reconstructing a comprehensive history of ancient Israel. This course covers the history of Israel and Judah from the Late Bronze Age (c. 1550-1200 BCE), by the end of which Israel had emerged as a distinct ethnic entity, to the period of Roman rule (63 BCE-330 CE), which saw the final extinction of ancient Israel, represented by the kingdom of Judea, as a political entity. Knowledge of this history is based on archaeological, epigraphic, and literary sources, including the Hebrew Bible. N.B.: Students should be aware that the study of history, like all the human and natural sciences, is predicated on inquiry, not a priori judgments. Accordingly, the Bible is not privileged as an intrinsically true or authoritative record. No text is presumed inerrant, and all sources are subject to scrutiny, in the context of scholarly discourse. Biblical texts are treated just like all other texts, as the products of human beings embedded in a historical context, and as the subject of analysis and interpretation. Persons of all faiths and of no faith are equally welcome to participate in such scholarly discourse. However, students who feel that their own religious beliefs require an understanding of the Bible that is antithetical to the foregoing statements are cautioned that they may find themselves uncomfortable with this course.

CNRC 3504. Apocalypticism, Cosmic Warfare, and the Maccabees: Jewish Strategies of Resistance in Antiquity. (3 cr. ; Student Option; Periodic Spring)

The rise of Hellenistic kingdoms in the ancient Mediterranean and Near East created a variety of responses from local, subjugated peoples,

and some of the most documented cases are those of Jewish populations in Koee-Syria/Palestine. The main objective of this course is to analyze Jewish responses to imperial rule and military conflict during the Hellenistic and early Roman periods (c. 300 B.C.E. ? 150 C.E.), but we will also spend time examining the broader picture of how local, ancestral groups fared under foreign rule. Along with discussing pertinent archaeological evidence, we will discuss Jewish literature and documentary material from this period, including, the sectarian documents of the Dead Sea Scrolls, the Book of Judith (a Jewish "novel"), the Books of Daniel and the Maccabees (all of which provide historical information about the Maccabean revolt and rise of the Hasmoneans), and the writings of Josephus (a Jewish writer who witnessed the Roman takeover of Palestine in the first century C.E.). This course will stay within the confines of the ancient evidence and not examine later interpretations when analyzing each historical period; it will begin with Ptolemaic control of the region and conclude with the Bar Kokhba revolt, its aftermath, and the resilience of Jewish populations in northern Palestine. Topics that will be examined in depth are messianism and apocalypticism, the Jerusalem Temple, Jewish ancestral traditions (which include biblical literature), and theoretical models used by scholars to analyze power relationships in antiquity.

CNRC 3506. The Israeli Mossad in Film and Literature: History, Narrative, and Ethics. (GP; 3 cr. ; Student Option; Periodic Spring)

This course will look at Mossad's activities and their perceptions in Israeli culture through lenses of collective memory and national identity. Students will examine primary and secondary sources to understand the historic background and the various narratives, shaping the Israeli culture. Students will conduct discussions pertaining to the place of Mossad in Israeli culture expressing opinions about the ethical component of Mossad's activities.

CNRC 3515. Multiculturalism in Modern Israel: how communities, ideologies, and identities intersect. (GP; 3 cr. ; Student Option; Periodic Spring)

This course focuses on the way various cultural groups in Israel attempt to achieve cultural recognition. Students will learn how various ethnic and religious groups shape their identities through process of acculturation and struggle. Students will learn about several Israeli cultures by reading literature, book chapters and case-studies, and watching movies, all of which center on these debates. Students will examine various case studies centered on these multicultural issues in Israel and will discuss and reflect on the implications of the issues raised by the course material for the international community, the United States, and for their own lives.

CNRC 3535. Death and the Afterlife in the Ancient World. (AH; 3 cr. ; Student Option; Fall Odd Year)

Beliefs, attitudes, and behaviors related to death and the afterlife found in the cultures

of the ancient Mediterranean and Near East. Literature, funerary art/epitaphs. Archaeological evidence for burial practices and care of dead.

CNRC 3601W. Sexuality and Gender in Ancient Greece and Rome. (AH,WI; 3 cr. ; Student Option; Fall Even Year)

Evidence for Ancient Greek and Roman ideas about sexuality and gender roles. The methodologies by which it is analyzed. Norms of writing about ancient culture, gender, and sexuality.

CNRC 3617. Pagans, Christians, Barbarians: The World of Late Antiquity. (GP,HIS; 3 cr. ; A-F or Audit; Fall Odd Year)

Between classical and medieval, pagan and Christian, Roman and barbarian, the late antique world was a dynamic age. This course will focus on the Mediterranean region from the 2nd to the mid-7th century exploring such topics as the conversion of Constantine, the fall of Rome, barbarian invasions, the spread of Christianity, and the rise of Islam.

CNRC 3896. Internship for Academic Credit. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)

An applied learning experience in an agreed-upon, short-term, supervised workplace activity, with defined goals, which may be related to a student's major field or area of interest. The work can be full or part time, paid or unpaid, primarily in off-campus environments in conjunction with museum or gallery internships; archaeological field experience; language teaching practicum, etc. Internships integrate classroom knowledge and theory with practical application and skill development in professional or community settings. The skills and knowledge learned should be transferable to other employment settings and not simply to advance the operations of the employer. Typically the student's work is supervised and evaluated by a site coordinator or instructor.

CNRC 3950. Topics in Ancient Culture. (; 3 cr. [max 9 cr.]; Student Option; Every Fall & Spring)

Selected topics in the cultural history of antiquity (e.g., women in antiquity, Roman diplomacy, slavery, education). Topics specified in Class Schedule.

CNRC 3993. Directed Studies. (; 1-4 cr. [max 16 cr.]; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study. prereq: instr consent

CNRC 3994. Directed Research: Capstone. (4 cr. ; Student Option; Every Fall & Spring)

Research project pertaining to ancient world, using documents or primary sources along with secondary sources. Students select project in consultation with faculty member. Prereq: Course is open to second semester juniors and seniors, major in CNRC, or ReIS Students enrolling in this directed research course will complete the University's common Directed Research contract with the faculty mentor/evaluator. The Faculty member will ensure academic standards are upheld, including: - the work proposed is at the appropriate level for the course, academic in nature, and the

student will be involved intellectually in the project. - the project scope is reasonable for one semester and the number of credits specified (42 hours of work per credit) - the faculty mentor is qualified to serve in this role - assessment of student learning and grading criteria are clear and appropriate - the student will be working in a respectful, inclusive environment The contract will include the learning objectives for the course, the methods that will be employed, and how assessment will be conducted by the faculty mentor. The contract must be approved by the DUGS/academic approver of the major before the student can register.

CNRC 5016W. Biblical Law and Jewish Ethics. (3 cr. ; Student Option; Periodic Fall & Spring)

This course introduces students to the original meaning and significance of religious law and ethics within Judaism. Law is the single most important part of Jewish history and identity. At the same time, law is also the least understood part of Judaism and has often been the source of criticism and hatred. We shall therefore confront one of the most important parts of Jewish civilization and seek to understand it on its own terms. In demonstrating how law becomes a fundamental religious and ethical ideal, the course will focus on the biblical and Rabbinic periods but spans the entire history of Judaism. Consistent with the First Amendment, the approach taken is secular. There are no prerequisites: the course is open to all qualified students. The course begins with ideas of law in ancient Babylon and then studies the ongoing history of those ideas. The biblical idea that a covenant binds Israel to God, along with its implications for human worth - including the view of woman as person - will be examined. Comparative cultural issues include the reinterpretations of covenant within Christianity and Islam. The course investigates the rabbinic concept of oral law, the use of law to maintain the civil and religious stability of the Jewish people, and the kabbalistic transformation of law. The course concludes with contemporary Jewish thinkers who return to the Bible while seeking to establish a modern system of universal ethics. The premise of the course is the discipline of academic religious studies. The assumptions of the course are therefore academic and secular, as required by the First Amendment. All texts and all religious traditions will be examined analytically and critically. Students are expected to understand and master this approach, which includes questioning conventional cultural assumptions about the composition and authorship of the Bible. Willingness to ask such questions and openness to new ways of thinking are essential to success in the course.

CNRC 5051. Before Herodotus: History and Historiography of Mesopotamia and the Ancient Near East. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Seminar. Historical method/sources for Ancient Near Eastern history. Historical tradition and historiographic texts of Mesopotamia and neighboring regions of Ancient Near East/their relationship to the works of classical historians

such as Herodotus. Use of these sources in modern historiography of Ancient Near East. prereq: Previous coursework in Ancient Near Eastern history recommended

CNRC 5071. Greek and Hellenistic Religions. (; 3 cr. ; Student Option; Periodic Spring)

Greek religion from Bronze Age to Hellenistic times. Literature, art, archaeology. Homer/Olympian deities. Ritual performance, prayer, sacrifice. Temple architecture. Death/afterlife. Mystery cults. Philosophical religion. Near Eastern salvation religions. Meets with 3071.

CNRC 5072. The Birth of Christianity. (AH; 3 cr. ; Student Option; Periodic Fall & Spring)

Early Jesus movement in cultural/historical setting. Origins in Judaism. Traditions about Jesus. Apostle Paul, controversies/interpreters. Authority, religious practice, structure. Emergence of canon. Contemporary methods of New Testament study. Biblical writings as history/narrative. CNES 3072/CNES 5072/RELS 3072/RELS 5072 meet together.

CNRC 5115. Midrash: Jewish Biblical Interpretation. (; 3 cr. ; Student Option; Periodic Fall & Spring)

How did the Jews of the first seven centuries of the common era read and understand the Hebrew Bible? What were the problems they faced -- interpretive, historical, theological -- in trying to apply their holy scriptures? This course explores key issues that led to the development of a new form of Judaism in late antiquity, rabbinic Judaism, and its methods of scriptural interpretation. The course's study will focus on the forms and practices of rabbinic scriptural interpretation (midrash) as it developed in Roman Palestine and Sasanian Babylonia, focusing on key narrative and legal passages in the Five Books of Moses (Torah). A main focus of the course will be on the ways the rabbis adapted the Hebrew Bible to express their own core concerns.

CNRC 5121. Gender and Body in Early Christianity. (AH; 3 cr. ; Student Option; Fall Odd Year)

Ancient Christians, like any other social group in the ancient world, represented themselves through images, stories, and discourses using the cultural tools available to them in their own contexts. In this course, we will explore two key texts of early Christianity (1 Corinthians and the Gospel of Mark) with special attention to how representations of the body and gender served to communicate the nature of what it meant to be Christian for these authors. The study of ancient material offers a space to acquire the skills of critical analysis of body and gender dynamics so that we can better understand the roles that the body and gender play in shaping our self-identity, social interaction, and societal structures.

CNRC 5204. The Dead Sea Scrolls. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Introduction to Dead Sea Scrolls and Qumran. Contents of Dead Sea Scrolls, significance for development of Bible. Background of Judaism and Christianity. Archaeological site of Qumran. Open to graduate students across the college; knowledge of classical Hebrew will not

be required. The course is open to upper level undergraduate students with permission of the instructor.

CNRC 5502W. Ancient Israel: From Conquest to Exile. (WI; 3 cr. ; Student Option; Periodic Spring)

Israel and Judah were not states of great importance in the ancient Near East. Their population and territory were small, and they could not resist conquest by larger, more powerful states like Assyria and Rome. Yet their ancient history matters greatly today, out of proportion to its insignificance during the periods in which it transpired. The historical experiences of the people of Israel and Judah were accorded religious meaning and literary articulation in the Hebrew Bible (the Old Testament), which became a foundational text for Judaism, Christianity, and Islam. Essential features of Western as well as Islamic civilization are predicated on some element of Israel's ancient past, as mediated through the Bible; therefore it behooves us to understand that past. But the Bible is a religious work, not a transcript of events, and the history of ancient Israel is not derived merely from reading the biblical accounts of it. Archaeological excavations have revealed the physical remains of the cultures of Israel and neighboring lands, as well as bringing to light inscriptions, documents, and literary works produced by those cultures. These sources, which complement and sometimes contradict the accounts conveyed in the Bible, provide the basis for reconstructing a comprehensive history of ancient Israel. This course covers the history of Israel and Judah from the Late Bronze Age (c. 1550-1200 BCE), by the end of which Israel had emerged as a distinct ethnic entity, to the period of Roman rule (63 BCE-330 CE), which saw the final extinction of ancient Israel, represented by the kingdom of Judea, as a political entity. Knowledge of this history is based on archaeological, epigraphic, and literary sources, including the Hebrew Bible. N.B.: Students should be aware that the study of history, like all the human and natural sciences, is predicated on inquiry, not a priori judgments. Accordingly, the Bible is not privileged as an intrinsically true or authoritative record. No text is presumed inerrant, and all sources are subject to scrutiny, in the context of scholarly discourse. Biblical texts are treated just like all other texts, as the products of human beings embedded in a historical context, and as the subject of analysis and interpretation. Persons of all faiths and of no faith are equally welcome to participate in such scholarly discourse. However, students who feel that their own religious beliefs require an understanding of the Bible that is antithetical to the foregoing statements are cautioned that they may find themselves uncomfortable with this course.

CNRC 5713. Introduction to Ugaritic. (; 3 cr. ; Student Option; Periodic Fall)

Ugaritic alphabetic cuneiform script, morphology, and syntax. Reading of representative samples of Ugaritic literature. Attention to linguistic and cultural issues and links to biblical and other Ancient Near Eastern

texts. prereq: Adv Hebrew, previous study of biblical texts or instr consent

CNRC 5787. Visual Cultures in Contact: Cross-Cultural Interaction in the Ancient and Early Medieval Worlds. (3 cr. ; Student Option; Fall Even Year)

Evaluate critical perspectives from variety of interdisciplinary conversations. Framework for studying cross-cultural interaction among ancient visual cultures that integrates practical, cognitive, object oriented approaches. Cross-continental movement/selective appropriation of objects/motifs.

CNRC 5993. Directed Studies. (1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study. Prereq-instr consent, dept consent, college consent.

CNRC 5994. Directed Research. (1-12 cr. ; Student Option; Every Fall & Spring)

Guided individual research. Prereq-instr consent, dept consent, college consent.

CNRC 5996. Directed Instruction. (1-12 cr. ; Student Option; Every Fall & Spring)

Guided individual research. Prereq-instr consent, dept consent, college consent.

Clinical Laboratory Science (CLS)

CLS 5090. Special Laboratory Methods. (; 1-2 cr. ; A-F or Audit; Every Fall & Spring)

Assignment on an individual basis to one of a variety of special areas of experience in the clinical lab. prereq: instr consent

CLS 5100. Virology, Mycology, and Parasitology for Medical Technologists. (; 2 cr. ; A-F or Audit; Every Spring)

Lab diagnosis of viral, fungal, and parasitic infections. Lecture. prereq: microbiology course with lab, biochem course

CLS 5120. Seminar: Clinical Laboratory Science. (; 1 cr. [max 3 cr.] ; S-N or Audit; Every Fall & Spring)

Current literature. Presentation/discussion of research. prereq: instr consent

CLS 5121. Journal Presentations. (; 1 cr. [max 2 cr.] ; S-N or Audit; Every Fall & Spring)

Critical analysis, evaluation, discussion of current journal articles in student's specialty area. prereq: 1st yr CLS grad student

CLS 5125. Practicum Teaching. (; 1-2 cr. ; A-F or Audit; Every Fall & Spring)

Supervised teaching experience, develop skills using instructional materials, tests, and measurements. prereq: instr consent

CLS 5129. Elements of Laboratory Administration. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Leadership styles, employee selection and evaluation, communications, motivation, morale, discipline, job descriptions, record keeping, budgets, cost accounting, purchasing, product evaluation, lab safety, labor relations, government regulations. prereq: instr consent

CLS 5130. Practicum in Laboratory Administration. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Supervised experience and assignment of specific problems related to lab service and

management in health care institutions. prereq: instr consent

CLS 5140. Techniques for Teaching. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Developing objectives, classroom activities, and evaluation criteria for medical technology education. prereq: instr consent

CLS 5165. Advanced Clinical Immunohematology. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Observation, study, and practice in special problems, advanced techniques, and methodology. prereq: instr consent

CLS 5402. Molecular Diagnostics. (; 1 cr. ; A-F only; Every Fall)

Basic theory/application of molecular diagnostics in clinical lab. Lecture, lab. prereq: instr consent

CLS 5768. Advanced Hematology. (; 5-10 cr. [max 30 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Practical experience collecting bone marrow from patients. Diagnosing hematological diseases by evaluating and interpreting cells from clinical specimens of bone marrow, peripheral blood, and, if applicable, lymph nodes. prereq: instr consent

CLS 5864. Research Seminar. (; 1 cr. [max 10 cr.] ; S-N or Audit; Every Fall & Spring)

Departmental research seminar series. prereq: instr consent

CLS 5865. Departmental Seminar. (; 1 cr. [max 10 cr.] ; S-N or Audit; Every Fall & Spring)

Departmental clinical lab research seminar series. prereq: instr consent

Clinical Physiol, Movement Sci (CPMS)

CPMS 5101. Introduction to Clinical Physiology and Movement Science. (; 3 cr. [max 6 cr.] ; A-F or Audit; Periodic Fall)

Overview of clinical physiology and clinical movement science. For students in such diverse fields as bioengineering, kinesiology, neuroscience, physical therapy, physiology, psychology, public health, occupational therapy.

CPMS 5201. Colloquium in Clinical Physiology and Movement Science. (; 1 cr. [max 4 cr.] ; S-N or Audit; Every Fall & Spring)

Interdisciplinary course meets 1st and 3rd week of the month. Current research areas, scientific methods, and interpretation of results in the areas of clinical movement science and clinical physiology. prereq: Undergrad level in basic anatomy and physiology is highly recommended

Cognitive Science (CGSC)

CGSC 5051. Overview of Cognitive Psychology. (3 cr. ; A-F only; Every Fall)

This course provides a comprehensive introduction to the major tools, assumptions, and theories of cognitive psychology, exploring the nature of thought processes such as attention, memory, concept, reasoning, perception, emotion, and language. This

course lays a foundation for understanding how the mind works and how the brain produces such a mind.

Col of Food, Agr & Nat Res Sci (CFAN)

CFAN 1101. Dean's Engaged Leaders Seminar. (DSJ; 3 cr. ; A-F only; Every Fall)

Students explore their role in building inclusive community spaces. Development of leadership skills in academic, social, and public service contexts. Hands-on learning/real-world applications in culturally diverse communities. Field trips, guest speakers, and discussions. prereq: Incoming 1st-yr CFANS students only

CFAN 1102. President's Emerging Scholars Seminar. (; 1 cr. ; Student Option No Audit; Every Fall)

President's Emerging Scholars (PES) is an educational opportunity program that supports high-achieving, historically underserved students in their pursuit of a bachelor's degree at the University of Minnesota Twin Cities. Participants are selected based on holistic review conducted by the Office of Admissions, and PES students demonstrate achievement in a number of ways, including strong academics, extracurricular excellence, and significant community engagement. This seminar is designed to help CFANS PES students in the transition from high school to college. Many PES students are the first in their family to attend college, be Pell Grant recipients, indigenous students, and students of color. In this course, students will explore University resources, its people, and connect students with each other. Students will learn about resources, challenges, opportunities, and their own identity development through self-reflection and engagement assignments, culminating in the creation of a Digital Story they can share with their peers. prereq: CFANS newly admitted PES students

CFAN 2096. Reflecting on Your Professional Experience. (; 1 cr. [max 2 cr.] ; A-F only; Every Fall)

This course is designed to meet the CFANS Experiential Learning requirement which defines the importance and processes of learning through experience. Students will undertake an experience in an authentic workplace setting related to agriculture, food or natural resource settings as a prerequisite to the course. The prerequisite experience will serve as a foundation for learning professional competencies including reflection, problem solving, managing interpersonal relationships, professional communication, and goal setting. Current theories of career development will be introduced to help students construct meaning from their experiences to inform future goals and strategies. prereq: Secured internship, completion of summer module, instr consent

CFAN 2333. Insects, Microbes, and Plants: Ecology of Pest Management. (TS; 3 cr. ; A-F only; Every Fall)

This course uses fundamental concepts of ecology and evolution to illuminate and solve the challenges in managing insects and microbes in today's global context of food and

fiber production. Students will learn relevant aspects of insect and microbial biology to be able to situate concrete management problems in an appropriate ecological and evolutionary conceptual framework. Students will apply these concepts and discuss ecological and management controversies, such as what can we learn from natural areas to better manage food and fiber production systems. Case studies, readings, and discussion topics will emphasize factors influencing responsible management decisions.

CFAN 3002. Transfer Student Seminar. (; 1 cr. ; A-F only; Every Fall & Spring)

This course introduces new transfer students to the College of Food, Agricultural and Natural Resource Sciences (CFANS) and to the UMN. This course will introduce students to opportunities provided to them by both CFANS and UMN. It will help connect students to faculty and staff, as well as to other transfer students. By introducing transfer student theories, diversity, & equity topics and career information, transfer students will become immersed in the CFANS environment and will be provided with a foundation of knowledge that will help students continue to be successful during their remaining time at the University of Minnesota. The course will be held once a week.

CFAN 3091V. Research Proposals: From Ideas to Strategic Plans. (WI; 3 cr. ; A-F only; Every Spring)

You have a great research idea, now what? How do you turn your idea into a proposal? It has been said, paraphrasing Edison, that innovation is one percent inspiration, 99 percent perspiration. In this course, we will start with an inspiring idea and sweat our way to develop a research proposal. The students will go through a step-by-step process that starts with choosing and defining a research idea, then proceeding to do literature reviews and to the development of a hypothesis, aims, objectives, and a research strategy. The aim of this course is to provide students with tools to understand the structure of scientific reports and proposals, literature searches, and basic data interpretation. The students will learn about different research approaches and how to achieve consistency in their research projects. We will guide students in how to begin and develop a written research proposal that will satisfy the requirements of their advisors, institution, and funding organizations. prereq: If you have less than 60 credits and are interested in this course, please contact the instructor.

CFAN 3093. Directed Studies in International Agriculture. (; 2-4 cr. [max 6 cr.] ; A-F or Audit; Periodic Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process

in order to enroll. prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

CFAN 3096. Making the Most of your Professional Experience. (; 1 cr. [max 2 cr.] ; A-F only; Every Fall, Spring & Summer)

This course is designed to meet the CFANS Experiential Learning requirement which defines the importance and processes of learning through experience. This course also is a Diversity Enriched course. Students will undertake an experience in an authentic workplace setting related to agriculture, food or natural resource settings as a prerequisite to the course. The professional/internship experience will serve as a foundation for learning professional competencies including reflection, problem solving, managing interpersonal relationships, professional communication, and goal setting. Current theories of career development and career readiness will be introduced to help students construct meaning from their experiences to inform future goals and strategies. prereq: Secured internship, instr consent

CFAN 3201. Career and Internship Preparation. (; 1 cr. ; A-F only; Every Fall & Spring)

The aim of this course is to equip you with long-term skills and knowledge that will help you manage your career within a dynamic and exciting work world of agriculture, food and the environment. The focus will be on career opportunities and resources related to CFANS majors highlighting alumni, employers and events from those majors. You will learn to tailor communication about your unique skills and interests to the needs of employers, graduate schools, and others via resumes, cover letters, online media, interviews, and individual interactions. We will explore how to attend to your authentic identity and values as you consider career alternatives and to enter a workplace culture with grace and curiosity. Finally we will introduce career competencies needed for successful career management in the workplace including strategies to function as an effective employee and team member. prereq: Soph or jr or sr or grad student

CFAN 3293. Directed Study. (1-4 cr. [max 6 cr.] ; Student Option; Periodic Fall, Spring & Summer)

This course provides a service learning component for the Native American Environmental Knowledge minor. Through directed study students are expected to become familiar with community interests and needs under the direction of a faculty member through journaling, discussion, writing assignments, community presentations, and storytelling. Students enrolling in this directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

CFAN 3334. Parasites and Pestilence. (GP; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

This course is designed to provide students with a basic understanding of protozoan and metazoan parasites, focusing on the biology and epidemiology of parasitic diseases and on the parasite-host association. Parasites are explored in the context of transmission, associated disease, diagnosis and treatment options; and environmental, cultural, and socioeconomic drivers of disease epidemiology. The intent of this course is for students to see science as a tool for understanding the world and solving problems. Importantly, the course is not designed to promote skills to become a practicing parasitologist but rather aims to facilitate broad exposure to infectious disease dynamics to foster more informed global citizens?using parasitic diseases as examples. A key tenet of liberal education is that it does not ignore the sciences, as such topics are explored in a way that intertwines science, history, and politics. Liberal education also teaches students how to speak their mind, how to write, and how to learn. As a result, this course will teach students how to use fundamental biological principles to think critically about challenges facing their society and the world.

CFAN 3422. Introduction to Sustainable Akumal. (1 cr. ; A-F only; Fall Even Year)

This is the on-campus background prerequisite for CFAN 3522 Sustainable Akumal. We introduce Akumal and the history of coastal development in the Mexican Caribe along with coastal ecology and important biota from the area. We consider the cultural context, from ancient Maya to the recent development of a tourism economy and its effects on local communities. We cover required gear and have a pool snorkel session. prereq: Instructor approval, LAC admission to Sustainable Akumal study abroad course.

CFAN 3480. Topics in CFANS. (; 1-4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Lectures by visiting scholar or regular staff member. Topics specified in Class Schedule.

CFAN 3500. International Field Studies Seminar. (; 1-3 cr. [max 6 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Interface of agriculture with various natural resource, environmental, economic, food safety, public policy, ethical issues transcending national borders. Seminars take place in other countries or regions of world, providing global perspective. Active learning, lectures, discussion tutorials, field trips, reports, exams. prereq: instr consent

CFAN 3502. Bahamas--Tropical Marine Biology and Shark Ecology. (; 2 cr. ; A-F or Audit; Every Spring & Summer)

Ecology of sharks and natural history of South Bimini Island. Marine ecosystems. Local flora and fauna. Local culture and development policy on the ecosystems. prereq: instr consent

CFAN 3504. Vertebrate Research Design and Field Survey Techniques. (GP,ENV; 3 cr. ; A-F or Audit; Every Spring)

Thai culture and conservation challenges. Two-day barge trip learning culture before traveling to Thailand's premier conservation

research site. Camera-trapping techniques, prey assessment methods, and radio telemetry approaches to the study of large mammals. prereq: instr consent

CFAN 3505. French Language and Culture. (1 cr. [max 3 cr.]; A-F or Audit; Every Spring & Summer)

French language/way of life. Heritage of French culture. prereq: instr consent

CFAN 3512. Sustainable Food Chains. (GP; 3 cr. ; A-F or Audit; Every Spring & Summer) Concentrated study in agriculture/agribusiness. Horticulture. Viticulture/wine making. Rural tourism. Gastronomy. prereq: instr consent

CFAN 3513. The Natural History of Norway. (ENV,GP; 3 cr. ; A-F only; Spring & Summer Odd Year)

The program will be based in the Nord Trøndelag region of central Norway where students will learn about Norway's physical geography, ecology, and management of natural resources, including its flora, fauna, and agricultural systems. Students will also gain an understanding of the region's rich culture, history, and close ties to Minnesota. prereq: instructor consent

CFAN 3514. Machu Picchu: Biodiversity & Climate Change in Peru. (ENV,GP; 3 cr. ; A-F only; Every Summer)

Southeastern Peruvian Andes. Inca civilizations. Biodiversity assessment in headwaters of Amazon. What it means to be World Heritage Site. Experience the magic of the Andes. Watch the sunrise over the mountains surrounding Machu Picchu. Climb steep trails deep in the forest to check cameras capturing Peccaries, Jaguars and Jaguarundis. Eat dinner with Macaws. Ask a question about the ecology of the forest ? and answer it. Have a unique experience in South America, and share a story about that experience back at home. Posing your own question about biodiversity, landscapes, specific plants or animals, or culture is an intensely rewarding experience. Learning about the ecology of a subset of the Amazon, framing questions and collecting information to address those questions helps us refine our creative and analytical abilities.

CFAN 3516. Sustainable Food Systems of Italy. (ENV,GP; 3 cr. ; A-F only; Every Spring & Summer)

This course examines the concepts of sustainability in relation to food production and culture in a country and place where food is a fundamental component of the regional and national culture. The course incorporates intercultural development concepts to introduce students to past and present Italian culture through the cultural importance of food systems, the ethics of food consumption and production and the concepts of sustainability.

CFAN 3517. Shires, Shorthorns and Sheep: Exploring Livestock Systems in England. (GP; 3 cr. ; A-F only; Spring & Summer Even Year)

This embedded study abroad course will directly examine the similarities and differences of livestock production practices, regulatory

policies, consumer (and export) demands and the ethics of animal agriculture in England and Minnesota while allowing students to explore the rich history and culture of England.

CFAN 3520. Germany: Leading the Renewables Revolution. (GP,ENV; 3 cr. ; A-F or Audit; Every Fall)

A bilateral agreement between Minnesota and Germany to pursue best practices in clean energy offers a unique opportunity for students to participate in an international delegation. Students meet government, business, academia and civil society leaders and see Germany's integrated approach to energy transition up close. Embedded fall semester with winter study abroad travel to Germany. CFAN 5520 is the graduate offering of this course. prereq: instructor consent

CFAN 3521. Borneo Global Seminar: Tropical Wildlife Conservation & Climate Change. (ENV,GP; 3 cr. ; A-F only; Summer Odd Year)

This seminar explores tropical conservation by focusing on three main themes in Borneo: climate change, rehabilitation and release of charismatic rare and endangered species, and remote camera surveys for environmental education. Each theme is supported with in-country lectures, exploration activities, and a student product. We explore and learn about marine, montane, and tropical forest ecosystems. Threats to ecosystem health in Borneo are multi-faceted. Habitat loss and fragmentation, due to logging a few decades ago and primarily now oil-palm agriculture, mean that wildlife populations are smaller and increasingly isolated. This class engages students in global issues of climate change and habitat loss, helping them explore and analyze their observations critically. It also brings students face-to-face with rehabilitation and reintroduction of the species that suffer most as forests are felled for logging followed by oil palm agriculture. Species we investigate most closely are orangutans and sun bears. We explore riparian habitat, discuss issues of fragmentation, and pressures on protected areas at the Danau Girang Field Centre (DGFC). DGFC is located in high-quality riparian habitat in the Kinabatangan Reserve, in patches of forest nestled in a matrix of oil-palm agriculture. This area is host to a truly incredible suite of wild species. The Kinabatangan River is home to clouded leopards, sun bears, orangutans, otters, proboscis monkeys, and crocodiles. At the field station, wild orangutans forage in the canopy overhead. If you follow the noise of rustling leaves, you will likely observe troops of long-tailed macaques moving in the canopy and hornbills feeding on forest fruits. Students learn wildlife monitoring techniques and design their own environmental education lesson. Students also connect issues of climate change and conservation in a range of ecosystems in Sabah, Borneo, and design enrichment projects for captive sun bears and orangutans.

CFAN 3522. Sustainable Akumal: Turtles, tourists, cenotes and coral reefs. (ENV,GP; 3 cr. ; A-F only; Fall Even, Spring Odd Year)

This Global Campus Partner seminar addresses coastal and marine ecology as affected by tourism and development and how these affect local communities. We will explore these issues in Akumal (Mayan: place of the turtle), Mexico on the Riviera Maya. Tourism and associated development have expanded exponentially in the past decade with subsequent effects on waste management and water quality in the local cenotes, groundwater, lagoons and reefs. In addition to the water quality effects, increased use by tourist is also directly affecting sea grass, turtles and coral reefs. We will explore the ecology of these systems, methods to assess their status and impacts, and strategies to reduce or mitigate the effects in a sustainable manner that involves local populations. Prereq: CFAN 3422

CFAN 3523. Greek Agriculture and Gastronomy: A Taste of the Mediterranean. (GP; 3 cr. ; A-F only; Every Spring & Summer)

This embedded course will be based in Thessaloniki, Greece and will examine Greek agriculture, food, and culture. Students will have hands-on experiences learning about the impact that Greek cuisine has on the rural development of the country, and how Greeks work to conserve many of their cultural traditions.

CFAN 3526. Two to Tango: Agricultural Marketing & Communication in Argentina. (GP; 3 cr. ; A-F only; Spring Odd Year)

Agricultural marketing and farming are global industries and communicators and marketers need to be able to understand how events on other continents can impact decisions made at the firm-level; even in a different hemisphere. This course will study the farming and ranching industries in Argentina that provide the technology, production, expertise, processing, and transformation of farm products into foods that are in global demand. Additionally, this course will explore how Argentinian culture shapes marketing and communication efforts in Argentina. This course will spend two weeks in Argentina to meet with international agricultural firms and farmers to learn how Argentina continues to be a global competitor in agricultural commodities. Students will also learn about the challenges limiting South American agricultural production and how this relates to U.S. agriculture.

CFAN 3527. Chile: Natural History of Patagonia. (ENV,GP; 3 cr. ; Student Option; Every Spring)

Co-production of sustainable knowledge: An exploration of human-wildlife conflict and a community artistic expression in southern Chile Conservation biology addresses the tradeoffs inherent in balancing human needs for extractable ecosystem goods and services with our need for biodiversity and natural conditions. Our discussions always include the biophysical science of ecosystems and the human resource science of decisions. This class engages you directly in understanding and communicating about sustainable resource management in Patagonia, the fabulously beautiful, highly diverse, end-of-the-world in South America. You will explore mountainous

and marine landscapes, places where you will (at least hope to see) Elephant seals, Mountain Lions, Emperor Penguins, Guanacos, and Patagonian Foxes. You also will encounter invasive rabbits and beavers, gigantic salmon aquaculture opens and an open pit mine. You will work with local community members to develop a permanent mural depicting all that. And you will work with peers to develop a video documenting your experience. Humans have inhabited Patagonia for at least 14,000 years. For thousands of years, the nomadic A?nikenk people were the principal humans in the landscape. The technologically superior Mapuche people were predominant during the 1500s; Europeans (primarily Spanish and English) colonized the area from the mid-1500s; Chile has been an independent country since 1826. The economy of the area has been dominated by mining and agriculture. Mining extracts minerals and low quality coal. Agriculture includes sheep ranching as well as large scale marine salmon aquaculture. Sheep ranching resulted in thousands of miles of barbed wire fence, and millions of hectares of degraded grasslands, with associated negative impacts on wildlife. Wool prices were strong from the late 1800s through the mid 1950s, then dropped precipitously. As a result, many sheep estnacias were abandoned or turned into tourist lodges. Patagonia today is a land of expansive landscapes of mountains, grasslands, glaciers and high altitude lakes. The wildlife characteristic of the area include all Guanacos (a South American camel), the Huemel deer, Patagonian fox, hog nosed skunk and Andean Condor. Native marine life include penguins, elephant seals, leopard seals, and the Patagonian skate.

CFAN 3528. Exploring The New Nordic: Food Seasonality and Sustainability in Denmark and Sweden. (GP; 3 cr. ; A-F only; Periodic Spring)

This embedded study abroad course will explore aspects of agriculture, food, and culture in Scandinavia in comparison to each student?s experience in the United States. This course will first meet on-campus, before our departure for a two-week experience in May. In English usage, Scandinavia can refer to Denmark, Norway, and Sweden, and sometimes used more broadly to include the Aland Islands, the Faroe Islands, Finland, and Iceland. The use of the term Nordic can also include the aforementioned countries along with Finland and Greenland. Throughout this course, we will embark on an experience through hands-on learning in Denmark and Sweden. Students will learn about, and reflect on, available food resources in Scandinavia, including how Scandinavian cuisine is intertwined with Scandinavian culture. CFANS has partnered with DIS for this course. DIS is a non-profit study abroad foundation established in Denmark in 1959, with locations in Copenhagen and Stockholm. DIS provides semester, academic year, and summer programs taught in English, and offers high-impact learning experiences for upper-division undergraduate students from distinguished North American colleges and universities. The intellectually challenging

curriculum is broad, cutting edge, and enriched by experiential learning components, including faculty-led study tours across Europe. It provides students with opportunities for meaningful cultural engagement and personal growth, which is further enriched through housing and extracurricular offerings. Activities and learning will take place at numerous locations throughout Scandinavia. Students will attend lectures and presentations taught by faculty who are experts in the field, and will have the opportunity to learn about the culture and cuisine in Scandinavia. In their exploration of Scandinavia, students will be exposed to a breadth of diverse cultural experiences in which they will be challenged to reflect on their emotional responses and active participation within Scandinavian culture and integrate these into their personal and professional worldview. Students will also visit important archaeological, sacred, and natural sites throughout Scandinavia to better understand the history of the region and the culture of its people. Students will be encouraged early on to identify a particular interest they want to learn more about in Scandinavia (e.g. precision agriculture, dairy production, sustainability, agro-tourism, etc.) and find opportunities to integrate this interest into the questions they ask in their blog posts, their final project, and at site visits.

CFAN 3529. From Rainforest to Reef: Wildlife Medicine and Conservation in Belize. (ENV,GP; 3 cr. ; A-F only; Every Spring)

Introduction to key topics in wildlife medicine. Students will learn medical issues and approaches, the role of the veterinarian in wildlife conservation, zoo medicine, and wildlife rescue & rehabilitation. This program is held at the Belize Wildlife & Referral Clinic????s (BWRC) teaching facility with BWRC????s founder and wildlife veterinarian, Dr. Isabelle Paquet-Durand. Labs include distance immobilization, suture, spay & neuter, necropsy, comparative anatomy, radiography, parasitology and blood analysis. Field visits are conducted with Dr. Isabelle to the Belize Zoo and to avian, reptile, primate, and manatee centers. Students are introduced to preventative medicine and common diseases for many of these species. A spay & neuter lab reviews theory and suture practice, this is followed by a spay & neuter clinic organized in the field or at BWRC. Students also have the opportunity to observe, and when possible, assist the BWRC veterinary staff during their daily operations.

CFAN 5480. Topics in CFANS. (; 1-4 cr. [max 8 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Lectures by visiting scholar(s) or regular faculty member. Topics specified in Class Schedule. prereq: Grad student

CFAN 5500. International Field Studies Seminar. (; 1-3 cr. [max 6 cr.] ; A-F or Audit; Every Fall & Spring)

Interface of agriculture with natural resource, environmental, economic, food safety, public policy, ethical issues transcending national borders. Seminars take place in various

countries/regions. Active learning, lectures, discussion tutorials, field trips, reports, exams. prereq: instr consent

CFAN 5501. Costa Rica--Sustainable Development. (; 3 cr. ; A-F only; Every Spring)

Costa Rica's development strategy. Agriculture, tourism, energy, urbanization. Synergies/tension between economic, social, environmental impacts. How organizations maximize benefits associated with sustainable development. prereq: grad student, instr consent

CFAN 5518. Environmental Issues in New Zealand. (GP; 3 cr. ; A-F only; Every Spring)

This Global Seminar, Environmental Issues in New Zealand, is open to any undergraduate or graduate students regardless of major. Priority for enrollment is given to University of Minnesota students, but students from other institutions may attend if space is available. There are no course prerequisites and all instruction is in English. New Zealand is a modern country with friendly people and awesome scenery. Our daily news is filled with reports on climate change, water scarcity and pollution, soaring energy costs, and food shortages. Solutions must consider environmental, economic, and social implications of our management strategies. Frequently there are tradeoffs between benefits and costs. University students as future leaders of business, government, and social programs should understand how to analyze environmental issues. What are the issues? Who is affected? What alternatives exist to solve them? What are the environmental, economic, and social tradeoffs between these alternatives? What are reliable sources of information? How can each of us contribute to solutions? New Zealand has undergone significant changes in its plant and animal composition following the invasion of humans and the exotic species they introduced. Alarmed by these changes, New Zealanders recently have made significant strides in recognizing environmental issues and seeking sustainable solutions. They offer valuable lessons for U.S. students to bring home and apply to our own environmental issues.

CFAN 5520. Germany: Leading the Renewables Revolution. (; 1-3 cr. ; A-F only; Every Fall)

A bilateral agreement between Minnesota and Germany to pursue best practices in clean energy offers a unique opportunity for students to participate in an international delegation. Students meet government, business, academia and civil society leaders and see Germany's integrated approach to energy transition up close. Embedded fall semester with winter study abroad travel to Germany. CFAN 5520 is the graduate offering of this course. prereq: instructor consent

Coll of Science, Engineering (CSE)

CSE 1001. First Year Experience. (; 1 cr. ; A-F only; Every Fall)

Resources and strategies for college success. Majors and career opportunities offered

in the physical sciences, mathematics, and engineering. Personal responsibility, academic integrity, and level of academic rigor required for success. Personal action plan for achievement in CSE. prereq: CSE, fr

CSE 1002. CSE First Year Global Seminar - Taking CSE 1001 International!. (1-2 cr. ; A-F only; Every Spring & Summer)

The program will take place over 10 days in designated locations abroad. Daily activities will include site visits to relevant commercial and academic institutions. Significant cultural elements and activities will be a key component of this program as well. The specifics of each seminar will depend on the location and travel dates. Freshman global seminars are a chance for students to learn abroad during their first year in the College of Science and Engineering. These freshman Global Seminars are popular short-term study abroad programs customized for CSE students, tailored for their first year of study in CSE. Students get to know a faculty member and other students, earn one credit, and learn about a technical topic. Preparation begins prior to departure. Registration and billing during spring semester. Led by a faculty expert and a CSE professional staff member. There are no language prerequisites. prereq: CSE 1001 First Year Experience

CSE 1012. Project-based Inquiry. (2 cr. ; A-F only; Every Spring)

This experiential learning class introduces CSE freshmen to new skills that will be helpful in their coursework, extracurricular activities and internships, and develops those skills through a team project. Different sections of the course are devoted to different skill-based themes (e.g., 3D printing; 3D Printing and Microcontrollers). All sections follow the same format. In the first several weeks of the semester, students learn new skills by completing exercises and activities. Then, team projects begin. Student teams are given project constraints or specifications (i.e., size limitations, features) and then follow a series of design steps to create their projects. First, they define a problem or goal for their projects based on their interests and the skills they are learning. Next, they brainstorm possible ways to solve the problem or meet the goal and select one to pursue. Then, they create a prototype and test it. Based on the results, they redesign and refine their project as time allows, ultimately creating a final project. At key points along this sequence, the teams document their work with project memos, a presentation about their prototype, and a final project report.

CSE 4896. Cooperative Industrial Assignment I. (; 2 cr. ; A-F or Audit; Every Spring & Summer)

This course accompanies an industrial work assignment in engineering and applied science. It includes analysis of technical problems that require developing criteria, evaluating alternatives, and completing a final analysis. A final technical design report emphasizes design communication and describes the technical decision process, analysis, and final recommendations. This course is intended

for any College of Science and Engineering student who has been admitted to their major and is participating in the co-op program. There are no specific prerequisites for this course, though it is expected that students taking this course have a background in science or engineering appropriate for their industrial co-op position. Registration is by permission only. Please submit your application to the Co-op Program via Handshake to initiate the course access process. Detailed instructions can be found on the co-op website (<https://cse.umn.edu/coop/application-process>). This is the first course in a two-semester sequence. CSE 4896 is offered in the summer and spring semesters. CSE 4996 is offered in the Summer and fall semesters. It is expected that students complete a co-op experience back-to-back (i.e. summer/fall or spring/summer). If your co-op plan differs from that, please email co-op@umn.edu to receive permission to take the courses in reverse order.

CSE 4996. Cooperative Industrial Assignment II. (; 2 cr. ; A-F only; Every Fall & Summer)

This course accompanies an industrial work assignment in engineering and applied science. The course includes generation of a novel idea requiring developing criteria, evaluating alternatives, and completing a final analysis. A final invention disclosure report emphasizes innovation and communication and includes the technical creation process, hypothesis testing, analysis, and final recommendations. This is the second course in a two course series. While some content is similar between the courses, the first course focuses more on the design and problem solving in an industrial context, this course focuses on the idea creation process and intellectual property protection. This course also includes a section on diversity, equity and inclusion in corporate settings. This course is intended for any College of Science and Engineering student who has been admitted to their major and is participating in the CSE Co-op Program. There are no specific prerequisites for this course, though it is expected that students taking this course have a background in science or engineering appropriate for their industrial co-op position. Registration is by permission only. Please submit your application to the Co-op Program via Handshake to initiate the course access process. Detailed instructions can be found on the co-op website (<https://cse.umn.edu/coop/application-process>). This is the second course in a two semester sequence. CSE 4896 is offered in the summer and spring semesters. CSE 4996 is offered in the summer and fall semesters. It is expected that students complete a co-op experience back-to-back (ie. summer/fall or spring/summer). If your co-op plan differs from that, please email co-op@umn.edu to receive permission to take the courses in reverse order.

College of Liberal Arts (CLA)

CLA 1001. CLA First-Year Experience I. (; 1 cr. ; S-N only; Every Fall)

This course is designed to help students transition into the University of Minnesota and the College of Liberal Arts. The course will include various opportunities to engage, create, and reflect on your own unique experiences and identify effective strategies, skills, and tools to be successful in your first year and beyond.

CLA 1002. CLA First-Year Experience II. (; 1 cr. ; S-N only; Every Spring)

This course is designed to help each student achieve their individual goals by promoting proactive educational and career planning, introducing CLA's Core Career Competencies, and encouraging students to reflect on how they are developing them in their first year.

CLA 1005. Introduction to Liberal Arts Learning. (1 cr. [max 3 cr.] ; S-N only; Every Fall)

This course is about you: your identity, your dreams, your goals, your values, your strengths, and your first year university experience. This course is also about you? in the plural sense. More specifically, through a shared experience that includes dialogue, readings, videos, and a group project. We will explore how diverse US college students understand their college education, what they want from it, and how they negotiate and give meaning to their university experience. This course is designed to help you navigate the challenges of college, the workplace, and society and propel you towards personal excellence, fulfillment, and wellness. As active partners in the quest for educational and personal success, our teaching team will work with you to develop the knowledge and understanding of self, society, and the university required to successfully navigate college life in an increasingly diverse and interconnected world. prereq: CLA Presidents Emerging Scholars, freshman

CLA 1007. CLA First-Year Experience: Independent Study. (1 cr. [max 2 cr.] ; S-N only; Every Fall, Spring & Summer)
Independent study version of CLA 1001/1002. By permission number only.

CLA 1052. Dean's First-Year Research and Creative Scholars Program. (; 2-3 cr. ; Student Option; Every Spring)

Freshman research or creative opportunity with faculty. Prereq-Only available to CLA freshmen receiving a CLA Research Opportunity.

CLA 1053. Continuation of Dean's First-Year Research and Creative Scholars Program. (2-3 cr. [max 6 cr.] ; Student Option No Audit; Every Fall)

Continued work with matched faculty as part of their First Year Research or Creative opportunity with faculty. Prereq-Only available to CLA freshmen or transfer students who have completed CLA 1052.

CLA 1200. Topics. (; 1-5 cr. [max 20 cr.] ; Student Option; Periodic Fall & Spring)
Topics specified in Class Schedule.

CLA 1201. BA MD Medical Education Seminar I. (1 cr. ; Student Option No Audit; Every Fall)

This is the first course in a series of 4 required courses for students enrolled in the BA/MD

Joint Admissions Scholars Program. Students in the course will have the opportunity to be mentored and coached by Medical School faculty as they prepare for medical education.

CLA 1202. BA MD Medical Education Seminar II. (1 cr. ; Student Option No Audit; Every Spring)

This is the second course in a series of 4 required courses for students enrolled in the BA/MD Joint Admissions Scholars Program. Students in the course will have the opportunity to be mentored and coached by Medical School faculty as they prepare for medical education.

CLA 2005. Introduction to Liberal Education and Responsible Citizenship. (1 cr. [max 3 cr.]; S-N only; Every Spring)

This course will focus on the themes of identity, community and civic engagement. We will focus on developing dimensions of personal and social responsibility to include contributing to a larger community and taking seriously the perspectives of others. This course will take on big questions such as: What does it mean to contribute to a larger community? What does a college education prepare you for? How can critical thinking skills be applied to real life case studies? How do you navigate your identity in the workplace, academic, and service-learning settings? What is responsible citizenships and engage in diverse and competing perspectives? In this course, we will turn to real-world stories and voices to explore our potential for greater understanding, compassion, empathy, resilience, democratic imagination, and critical citizenship prereq: [CLA 1005], CLA Presidents Emerging Scholars, freshman

CLA 2200. Topics. (; 1-5 cr. ; Student Option; Periodic Fall & Spring)
Topics specified in Class Schedule.

CLA 2201. BA/MD Medical Education Seminar III. (1 cr. ; Student Option No Audit; Every Fall)

Students will identify important character qualities that enhance a person's capacity to be an effective physician and will solidify personal values associated with a passion for medicine. Students will further develop their communication skills by facilitating a seminar where they reflect upon their structured clinical or research experience.

CLA 2202. BA/MD Medical Education Seminar IV. (1 cr. ; Student Option No Audit; Every Spring)

Students will explore healthcare policy and the effect the policies have on health disparities and healthcare in Minnesota. Students will reflect upon their experiential development, enhance skills to facilitate lifelong personal introspection and identify strengths and challenges of their interpersonal attributes.

CLA 3001. CLA Transfer Semester Experience. (; 1 cr. ; S-N only; Every Fall & Spring)

This course will support first-semester College of Liberal Arts transfer students in making a smooth transition and connect them with campus resources. Although online, some in-

person assignments are required (available at various times) to help students benefit from resources, meet people, and develop a sense of belonging on campus. Time will also be dedicated to major exploration and career/post-graduation planning, so that students are well-prepared to meet their individual goals. Some weekly lessons will carefully relate to CLA's Career Readiness themes, and involve taking a personal assessment and finalizing a new resume. Prereq: Must be a new CLA transfer student in their first semester on the UMTC campus.

CLA 3002. Career Kickstarter: Finding Internships and Other Career-Related Experiences. (; 1 cr. ; Student Option No Audit; Every Fall & Spring)

For sophomores and juniors. This course helps you explore and apply for internships or other career-related opportunities for undergraduate students (e.g., undergraduate research, leadership, etc.). You'll have opportunities to begin learning and gaining experience through employer engagement within the class. Assignments include researching internship options, writing cover letters, and learning how to network as a student.

CLA 3101. Career Exploration for Transfer Students. (; 2 cr. ; Student Option; Every Fall & Spring)

For CLA transfer students or students considering transferring to CLA. This course helps you learn about campus career resources and your CLA core career competencies, write cover letters, and connect career fields and CLA majors with careers. Assignments include learning about and using campus career resources, writing cover letters, and exploring career fields common to CLA students.

CLA 3201. Career Planning: Preparing for Your Post-Graduation Plans. (; 1 cr. [max 2 cr.]; Student Option No Audit; Every Fall, Spring & Summer)

For juniors and seniors. This course helps you plan and prepare for your post-graduation plans, such as finding a job or applying for graduate school. Assignments include preparing for interviews, conducting informational interviews, and crafting your personal brand and online presence.

CLA 3500. Topics. (; 1-4 cr. [max 8 cr.]; Student Option; Every Fall & Spring)
Topics specified in Class Schedule.

CLA 3501. Spanish History on the Camino de Santiago: A Hiking Adventure. (GP; 3 cr. ; A-F only; Periodic Summer)

This seminar will combine the history of Spain, the history of the Camino de Santiago, art history, and architectural history with the practice of travel for transformation. While we will travel together, each of us will have the opportunity to experience something that holds unique and individual meaning. It may be a spiritual awakening, an educational epiphany, or a transformative personal moment. There will be ample time for personal reflection and contemplation as well as group experiences. You will be encouraged to use your time on the camino to discover something that holds

special meaning for you whether it is spiritual, a rite of passage, personal transformation or just openness to new experiences. We will all engage in reverent travel which is a practice that spans traditions and religions.

CLA 3890. Internship Reflection: Building on your Summer Internship Experience. (; 1 cr. [max 2 cr.]; Student Option; Every Fall)

In this 7 week, online fall course, students reflect on their summer internship experience to analyze and identify which components from their internship work, environment, and professional relationships energized them, and which core career competencies they developed. Students will intentionally examine multiple perspectives to crystallize their values, interests, and strengths, and create next steps for their career and life. Through this process, students will practice leveraging their internship experience for upcoming professional opportunities, as well as gain the tools for creating an authentic professional identity, grounded in their liberal arts education, in an evolving job market and world.

CLA 3896. Internship Reflection: Making Meaning of Your Experience. (; 1 cr. [max 4 cr.]; Student Option; Periodic Fall & Spring)

For any student with an internship. Allows students to examine, reflect on, and construct meaning from their internship experience through self assessment of personal and career needs and goals, examination of what it means to be a "professional" and operate within professional environments, evaluation of performance and accomplishments, and articulation of knowledge and skills via effective resume writing. prereq: dept consent

Commun Engage Scholars Program (CESP)

CESP 3901. Community Engagement Scholars Program Integrative Capstone Seminar. (1 cr. ; A-F only; Every Fall & Spring)

This one-credit seminar is designed to complement the Integrative Community Engagement Project (ICEP) as a capstone experience for you as a Community Engagement Scholar. The seminar will provide tools, guidance, support, and structure to help you successfully complete your ICEP. It will also provide opportunities for you to reflect on how your previous academic and community work have informed your ICEP, and how your experiences will inform and help prepare you for the next, post-graduation phase of your life. The first half of the semester will be focused primarily on project support, and the final half of the semester will be focused on reflection. Throughout the semester we are going to be preparing you to do a digital story as your Integration and Contextualization capstone reflection on your participation in the Community Engagement Scholars Program. During our seminar meetings, we will use a variety of teaching and learning strategies to achieve the course objectives, including: workshop space to discuss projects with your small group of peers, interactive reflection activities, and short readings. A number of our class periods will be spent using a learning

method called learning circles. Learning circles are a form of democratic education in which participants share stories about their experiences around a common theme to identify connections and insights about our work. As part of our digital storytelling process we will be doing several activities throughout the semester that will lead to a story circle, a part of the creative process that takes place during digital storytelling workshops. prereq: Departmental Consent based on program requirements completed or plan for completion determined with program staff.

CESP 3993. Directed Study for Community Engagement. (1-4 cr. ; A-F only; Every Fall, Spring & Summer)

Guided individual reading or study. prereq: instr consent, dept consent, college consent.

Communication Studies (COMM)

COMM 1101. Introduction to Public Speaking. (CIV; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Public communication processes, elements, and ethics. Criticism of and response to public discourse. Practice in individual speaking designed to encourage civic participation.

COMM 1101H. Honors: Introduction to Public Speaking. (CIV; 3 cr. ; A-F only; Every Fall & Spring)

Public communication processes, elements, and ethics. Criticism of and response to public discourse. Practice in individual speaking designed to encourage civic participation. prereq: Honors

COMM 1313W. Analysis of Argument. (WI; 3 cr. ; Student Option; Every Fall & Spring)

Strategies for analyzing, evaluating, generating arguments. Problems in listening/responding to argument.

COMM 1919. Communication & Migration. (; 3 cr. ; A-F only; Periodic Fall)

Humans have long been on the move. The motives, circumstances, and practices of migration, however, have changed over time. This course will introduce students to various ways in which communication can facilitate or hinder migration. It will examine how stories by migrants and about migrants interlock to shape the historical and current frameworks that make immigration an enduring social and political issue.

COMM 3110. Topics in Communication Studies. (; 3 cr. [max 15 cr.]; Student Option; Periodic Fall & Summer)

Cases illustrating communication studies, theory, underlying issues.

COMM 3190H. Honors Course: Research Seminar in Communication. (; 3 cr. [max 6 cr.]; A-F only; Every Fall & Spring)

Students conduct original research in rhetoric, communication theory, or media for honors thesis. Theory, methods, research writing. prereq: Honors candidate in comm, instr consent, dept consent

COMM 3201. Introduction to Electronic Media Production. (; 4 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Students work as a team to plan, script, and shoot video productions in a hands-on multi-camera television studio. By creating their own productions and reviewing the productions of others, students learn how media aesthetics shape the presentation of themes and messages.

Students work as a team to plan, script, and shoot video productions in a hands-on multi-camera television studio. By creating their own productions and reviewing the productions of others, students learn how media aesthetics shape the presentation of themes and messages.

COMM 3202. Audio Production and Media Literacy. (; 3 cr. ; Student Option; Every Fall)

Introductory experience with sound design and production in podcasting, soundscape composition, music, and film. How sound advances media narratives and communicates emotion. The role sound plays in the producer's and audience's construction of worlds. Field recording, Foley work, vocal recording, music, and team production of longform nonfiction narrative podcast.

COMM 3204. Advanced Electronic Media Production. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

Video as communicative medium integrating visual/aural aesthetics. Creation of broadcast-quality production integrating message creation, audience analysis, argument development, and visual/audio scripting. Utilization of media aesthetics to develop/shape production content. prereq: 3201 or instr consent

COMM 3211. Introduction to Media Studies. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Historical development and current issues in electronic media technologies and programming. Effects of governmental, industrial, and public organizations on message content. Problem areas of electronic media.

COMM 3221. Musical Communication. (; 3 cr. ; Student Option; Periodic Fall)

A critical media studies perspective on the production, distribution, consumption, circulation, and regulation of popular music.

COMM 3231. Reality TV: History, Culture, and Economics. (; 3 cr. ; Student Option; Every Spring)

Social, visual, cultural, economic, historical, and ethical dimensions of reality television.

COMM 3263W. Media Literacy: Decoding Media Images and Messages. (WI; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Analysis of media images/messages. Principles of literacy. Media content/industries. Media and identity. Media effects. Textbook/packet readings, videos, small groups of peer writing workshops, media analyses.

COMM 3341. Asian American Images. (AH,DSJ; 3 cr. ; Student Option; Periodic Fall & Spring)

From 19th-century anti-Chinese political cartoons to Harold and Kumar, visual representations of Asians in the United States have long influenced how Asian Americans are seen and treated. What are some of the ways that photography, graphic arts, and digital culture have pictured Asian Americans as aliens, citizens, immigrants, workers, family and community members, entertainers, and artists? Course topics will relate visual images

to particular historical moments, including the early exclusion period and the "yellow peril" stereotype; WWII Japanese American incarceration and the drawings of Min? Okubo, and photo-journalism documenting U.S. military involvement in Southeast Asia and its aftermath. How do photographic and other images work to counter historical amnesia, heal traumatic loss, and document social injustice? Other weeks of the class will explore the ways that individuals, families, and communities use photographs, video, and other visual media to preserve a sense of connection and belonging. We will also look at how contemporary Asian American photographers such as Tseng Kwong Chi, Nikki Lee, and Wing Young Huie experiment with visual images to raise questions of racial and national identity, social inequality, gender, sexuality, and political agency. The course also includes a digital storytelling project that encourages students to create video images and sound reflecting Asian American immigration stories from local communities.

COMM 3351. Asian Americans and Popular Culture. (AH,DSJ; 3 cr. ; Student Option; Periodic Fall & Spring)

Over the past few decades, Asian Americans have become increasingly visible both as the subjects and producers of popular culture in the United States. This course will explore how this new recognition of Asian Americans in popular literature, cinema, television, and entertainment is related both to longer histories of Asian immigration and racial exclusion and to post-1960s efforts to forward racial awareness, community activism, and social justice. Our first unit will look at how particular stereotypes such as the yellow peril or the wartime enemy encouraged anti-Asian feeling and violence and legal restrictions on immigration and naturalization. We will then examine how throughout history, Asian immigrants and their descendants used song, dance, theater, writing, and other forms of popular culture to express personal desires and foster collective ties. Our final unit concentrates on contemporary popular culture and its relationship to the changing identities of Asian Americans. How do Asian Americans influence the current essays, films, and videos that are consumed by millions today? How are increasingly pan-ethnic, interracial, multiracial, transnational, and global experiences reflected in popular culture?

COMM 3401. Introduction to Communication Theory. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Social scientific theory in human communication. Logic of scientific communication theories in interpersonal, small group, organizational, intercultural, and mediated communication.

COMM 3402. Introduction to Interpersonal Communication. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Nature and function of communication between individuals in formal and informal relationships. Communicative interactions from theoretical and practical viewpoints.

COMM 3405. Language and Gender. (; 3 cr. ; Student Option; Periodic Spring)

Gender/communication. Interdisciplinary theory. Role of communication in creating, maintaining, reinforcing, and changing gender relations in society.

COMM 3409. Nonverbal Communication. (SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Nonverbal communication in interpersonal communication process. Nonverbal codes (touch, space, smell, eye contact) and their communicative functions (impression management, flirting, persuading, lying) in relational contexts (intimate relationships, friendships, work relationship). Theories, practices.

COMM 3411. Introduction to Small Group Communication. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Cooperative thinking in task-oriented groups. Planning, preparing for, and participating in small groups in private and public contexts.

COMM 3422. Interviewing and Communication. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Application of communication concepts in information interview. Planning, conducting, and evaluating informational, journalistic/elite, helping, persuasive, appraisal, and employment interviews. Class training, field experience.

COMM 3431. Persuasion Theories. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Sociological, psychological, and communication perspectives. Theoretical knowledge applied to persuasion problems. prereq: Soph recommended

COMM 3441. Introduction to Organizational Communication. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Functions of communication in work groups, in organizational hierarchies, and between organizations.

COMM 3451. Intercultural Communication - Theory & Practice: Business & Organizational Communication in Germany. (3 cr. ; A-F only; Periodic Summer)

A Global Seminar course in which you will learn how to communicate effectively interculturally generally and in German business settings specifically. The course combines theoretical knowledge about how culture affects communication with the lived experience of being in a foreign country and culture.

COMM 3451W. Intercultural Communication: Theory and Practice. (WI; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Theories of and factors influencing intercultural communication. Development of effective intercultural communication skills. prereq: Planning an intercultural experience

COMM 3601. Introduction to Rhetorical Theory. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Theoretical systems to explain/direct creation of public discourse. Traditional rhetoric to

contemporary perspectives. Using theory to explain practice of public discourse.

COMM 3605W. Persuasive Speaking and Speech Writing. (WI; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Performance/composition with critical inquiry into rhetoric theories. Writing, thinking, and speaking skills. prereq: 1101, soph

COMM 3614. Advanced Public Policy and Debate. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall & Spring)

Instruction in advanced theories and practices of both public and NDT/CEDA policy debate.

COMM 3615W. Argumentation. (WI; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course explores how arguments help us manage uncertainties in various contexts, straddling the space between inquiry (knowledge making), and advocacy (change making). By combining theory and practice, the class provides students with strategies for thoughtfully analyzing and producing critical judgments. It cultivates their ability to read critically and charitably, to write and argue creatively, cogently and appropriately, and to participate ethically and constructively in various deliberative environments.

COMM 3625W. Communication Ethics. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)

Applying concepts/theories from philosophy and social science to ethical issues in interpersonal, group, organizational, intercultural, and media communication.

COMM 3631. Freedom of Speech. (CIV; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Communication theories and principles that underlie the concept of freedom of speech in the United States. A variety of contexts and practices are examined in order to understand how communicative interaction should be described and, when necessary, appropriately regulated.

COMM 3635W. Famous Speeches. (WI; 3 cr. ; A-F only; Every Fall)

Speeches that became famous because of the occasion, issue, or speaker. Students analyze texts, research the issue's history and the speaker's biography/opposition, and evaluate the speech's artistry, ethical principles, effects on society, and contribution to history of ideas.

COMM 3645W. How Pictures Persuade. (WI; 3 cr. ; A-F only; Every Fall)

How words/pictures interact in graphic memoirs, political cartoons, and science to create/communicate meaning. How this interaction bears on public advocacy. Reading examples of comprehensive cognitive model of visual communication.

COMM 3666. Greek Intellectual Revolution. (3 cr. ; Student Option; Periodic Spring)

This course is a three-week study abroad experience in Greece with the objective to examine how this ancient culture revolutionized its self-understanding of certain eternal human questions. Students will first acquire a degree of cultural competence in understanding the ancient culture, secondly understand how that revolution shaped our own western cultural

foundations, and thirdly to use the ancient answers to provoke a critical assessment our answers to those same human questions.

COMM 3676W. Communicating Terrorism. (GP,WI; 3 cr. ; Student Option; Every Fall)

Terrorism as an ethical and international problem. Different cultures' historical trajectories for terrorism. Contrasts between Algerian, Irish, and Arab terrorism.

COMM 3681W. Rhetorical Fictions and 20th Century Conflicts. (GP,WI,LITR; 4 cr. ; Student Option; Every Fall & Spring)

Analysis of selected 20th-century documentary novels. Nature of artistic truth in relation to historical truth. Cross-cultural comparisons of responses to impact of Anglo-American policies.

COMM 3682W. Communicating War. (AH,WI,CIV; 3 cr. ; Student Option; Every Spring)

Claim: if ethics (right/wrong) exists in war, then right/wrong exist everywhere. Students experience this claim through its expression in various arts/humanities media of history, memoir, philosophical meditation, and film.

COMM 3896. Internship for Academic Credit. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)

An applied learning experience in an agreed-upon, short-term, supervised workplace activity, with defined goals, which may be related to a student's major field or area of interest. The work can be full or part time, paid or unpaid, primarily in off-campus environments. Internships integrate classroom knowledge and theory with practical application and skill development in professional or community settings. The skills and knowledge learned should be transferable to other employment settings and not simply to advance the operations of the employer. Typically the student's work is supervised and evaluated by a site coordinator or instructor.

COMM 3993. Directed Study. (1-3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study. An opportunity in which a student completes a reading project, and/or designs and carries out a research project under the direction of a faculty member.

COMM 3994. Directed Research. (; 1-3 cr. [max 6 cr.] ; Student Option; Every Fall & Spring)

How communication research is designed, implemented, and published. Focus is on working with senior faculty on their current research projects.

COMM 3996. Directed Instruction. (; 3 cr. ; S-N or Audit; Every Fall, Spring & Summer)

Supervised planning/teaching of undergraduate courses.

COMM 3999W. Capstone Project. (WI; 1 cr. ; S-N only; Every Fall & Spring)

The Capstone is fulfilled by completing a 10-20 page capstone paper. Students seeking honors in communication studies may fulfill the capstone requirement with the honors thesis. The honors thesis is completed by taking 6

credits of COMM 3190H, which counts towards the Additional Electives requirement. Students who double major and choose to complete the capstone requirement in their other major may waive the communication studies BA capstone, and they do not need to replace the 1 credit. Take COMM 3999W concurrently with any COMM 4xxx or 5xxx course. COMM 3999W is taken S-N only and must be taken during the same semester in which the capstone paper is written. The instructor sets the criteria for standards of quality and conceptual/theoretical content. Prerequisites: COMM major; instructor consent

COMM 4204. Producing for Television: Theory and Practice. (; 4 cr. ; Student Option; Every Fall)

Producing media content based on audience, design, and story. Developing a thematic design. Evaluating and choosing a projected audience based on story concept and program bible. Each student completes a television program, including writing a script, preproduction planning, and considering crew and talent needs. Media producer responsibilities. prereq: 3201, 3204

COMM 4235. Electronic Media and Ethnic Minorities--A World View. (; 3 cr. ; Student Option; Periodic Fall, Spring & Summer) Representation and involvement of various ethnic groups (e.g., African-Americans, Native Americans in United States and Canada, Maori, Turks in Europe) in radio, TV, cable, Internet. Roles of government, industry, public organizations, and minority groups in regulating, managing, and financing ethnic media activities.

COMM 4251. Environmental Communication. (ENV; 3 cr. ; A-F only; Every Spring)

Historical, cultural, material contexts within which environmental communication takes place. Understand environmental communication as well as develop communication strategies that lead to more sustainable social practices, institutions, and systems.

COMM 4263. Feminist Media Studies. (DSJ; 3 cr. ; A-F only; Every Spring)

Issues, controversies, and practices of gender and their relationship to U.S. media. Ways in which gender is represented in and comes into play with media texts/institutions. Histories of feminism, theories/methods/political economy, case studies. prereq: 3211 or instr consent

COMM 4291. New Telecommunication Media. (; 3 cr. ; A-F or Audit; Periodic Fall) Development and current status of new telecommunication media such as cable TV, satellites, DBS, MDS, and video disk/cassettes. Technology, historical development, regulation, and programming of these media and their influence on individuals, organizations, and society. prereq: 3211 or instr consent

COMM 4404W. Language Borderlands. (WI; 3 cr. ; Student Option; Every Fall)

Effect of multilingualism on self identity/sense of community. Subjective/social dimensions of being multilingual. Experience of language loss.

COMM 4407. Communication and Conflict. (; 3 cr. ; A-F or Audit; Every Fall)

Aspects of conflict common across types of relationships. Theories as alternative lenses to illuminate aspects of conflict. Communication strategies to manage or resolve conflict. prereq: 3401 or instr consent

COMM 4461. Prosocial Communication and Health. (3 cr. ; A-F or Audit; Periodic Spring)

There has been a shift in how we think about and study human health and well-being. This shift also emphasizes the cultivation of positive emotions, behaviors, and practices into our daily lives so that we may improve our relationships with others and ultimately our well-being. In this senior-level undergraduate seminar we will examine a) the meaning and importance of prosocial communication in our lives; b) the communicative and relational contributions of prosociality to our health and well-being; and c) how the popular press presents happiness research.

COMM 4471. Communication in Marriage and Family. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Contemporary theories of marriage/family communication using life-cycle approach. Role/function of communication in changing relational contexts. Ways of improving marriage/family relationships. prereq: 3401 or 3402 or instr consent

COMM 4602W. Contemporary Political Persuasion. (WI; 3 cr. ; Student Option; Periodic Fall)

Contemporary political speech. Ideologies in political persuasion. prereq: 1101, 3431 or instr consent

COMM 4616. African American Civil Rights Rhetoric. (; 3 cr. ; Student Option; Every Spring)

Uses the struggle of African Americans to explore and analyze philosophical concepts, political issues, moral complexities, and discursive characteristics of civil rights rhetoric. prereq: Jr

COMM 4621W. Rhetoric of Feminism.

(DSJ,WI; 3 cr. ; Student Option; Every Fall) History/criticism of rhetoric of feminism from 19th century to present.

COMM 5110. Special Topics in Communication Theory. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Summer) Advanced theoretical problems. See department office for current offering.

COMM 5211. Critical Media Studies: Theory and Methods. (; 3 cr. ; A-F only; Every Spring)

Survey of theories, research methods, and scholars dominating critical media studies since late 1920s. prereq: Graduate students or undergraduates who have completed COMM 3211 (Introduction to Media Studies) or its equivalent

COMM 5221. Media, Race, and Identity. (3 cr. ; Student Option; Periodic Fall)

Critical media studies perspective on cultural politics of race and ethnicity. Social construction of race, politics of racism, media representations of race. prereq: 3211 or instr consent

COMM 5231. Media Outlaws. (; 3 cr. ; Student Option; Fall Even Year)

People working outside of mainstream media institutions who find creative/provocative ways to use media as space for cultural, political, or economic critique/resistance.

COMM 5261. Political Economy of Media Culture. (; 3 cr. ; Student Option; Every Fall & Spring)

Organizational practices of media communicators. Media content as link between communicators and audiences. How viewers use/process media content. prereq: 3211 or instr consent

COMM 5411. Small Group Communication Research. (; 3 cr. ; A-F or Audit; Every Spring)

Survey of small group communication research; theory and practice. Group decision-making and leadership. prereq: 3411 or instr consent

COMM 5431. The Process of Persuasion. (; 3 cr. ; Student Option; Every Fall & Spring)

Communication campaigns (e.g., advertising, political) illustrating persuasive processes and theories. Research paper required. prereq: 3431

COMM 5441. Communication in Human Organizations. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Communication in organizational settings. Organizational structure and dynamics and their effect upon the communication process. Individual projects.

COMM 5451W. Intercultural Communication Processes. (WI; 3 cr. ; Student Option; Periodic Fall)

Theory and research on cultural differences in values, norms, behaviors, and perceptions that affect communication across cultures internationally and domestically.

COMM 5611. Survey of Rhetorical Theory.

(3 cr. ; Student Option; Periodic Fall) Rhetorical theory, from ancient to contemporary period. Application to public discourse.

COMM 5615W. Introduction to Rhetorical Criticism. (WI; 3 cr. ; Student Option; Every Spring)

Analysis of public discourse using various theoretical perspectives. prereq: 1101; 3601 recommended

COMM 5617. History and Criticism of U.S. Public Discourse: 1630-1865. (; 3 cr. ; Student Option; Periodic Fall)

How discourse has been used to establish or maintain power. Speeches and public debates used to examine American public address from 17th century (e.g., Puritan sermons) to the Civil War. prereq: Jr

COMM 5970. Directed Study. (1-3 cr. [max 18 cr.] ; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study. Instructor and department consent is required.

COMM 5994. Communication Research Practicum. (; 1-3 cr. [max 9 cr.] ; S-N or Audit; Every Fall, Spring & Summer)

Students participate in research group. prereq: instr consent

Compar Study in Discourse/Soc (CSDS)

CSDS 5302. Aesthetics and the Valuation of Art. (3 cr. ; Student Option; Periodic Fall & Spring)

Society, ideology, aesthetic value in light of recent critical theories of visual art, music, literature. Mediations of place, social class, gender, ideology on aesthetic judgment in post-renaissance Western culture.

Comparative & Molecular Biosci (CMB)

CMB 5200. Statistical Genetics and Genomics. (4 cr. ; A-F or Audit; Fall Even Year)

Statistical issues in genomics. Gene detection, including statistical analysis/designs for linkage study and for mapping quantitative trait loci. Linkage analysis using pedigree data for codominant/dominant markers. Using radiation hybrid mapping and single cell typing. Design issues in linkage analysis, parentage testing, and marker polymorphism.

CMB 5201. Stopping the next pandemic: vaccines and drugs for battling viral infections. (2 cr. ; A-F only; Every Spring)

The COVID-19 pandemic underscores the importance of understanding viruses and developing vaccines and drugs to battle them. This course presents basic mechanisms of viruses including the COVID-19 virus, covers principles and applications of viral vaccines and antiviral drugs, and introduces methods for developing viral vaccines and antiviral drugs. This course also highlights scientific advances on viral vaccines and antiviral drugs. The overall goal of the course is to foster students' interest in virology, help students understand viruses in life situations, and prepare interested students for potential virology-related careers. Targeted students: graduate students, professional students and senior undergraduate students who are interested in clinical and basic medicine, veterinary medicine, microbiology, virology, biological scientific research, and vaccine and pharmaceutical industries.

CMB 5303. Comparative Models of Disease. (2 cr. ; A-F only; Every Spring)

Disease processes in organ systems. Examples of animal models. Comparative medicine. Clinical relevance of problem/disease. Animal models used to study disease process/problem. Lectures.

CMB 5340. Structural Biology in Biomedical Research. (2 cr. ; A-F only; Every Spring)

Structural biology plays a central role in biomedical research, but it is a challenging field to learn. This course teaches basic structural biology and its applications to biomedical research in an accessible and practical fashion. We will cover the principles and procedures of structural biology as well as structural biology databases and software. Students will also

learn how structural biology is used to solve scientific problems (e.g., elucidating molecular mechanisms and designing drugs and vaccines) and acquire skills that may facilitate their own research (e.g., reading structural biology literature and designing mutations). Student learning is achieved through classroom lectures, computer labs, written critique and oral presentation of research literature, and participation in discussion. The overall goal of this course is to help students understand structural biology and use it in their own research.

CMB 5571. Pathogenomics and Molecular Epidemiology - Learning to Fly. (3 cr. ; A-F only; Every Spring)

This course is designed provide an introduction to the use of molecular methods in our understanding of the pathogenesis, etiology, and transmission of infectious diseases that are important to both animals and public health. This is intended as a hands-on course for the student to learn techniques related to genome sequencing, pangenome analysis, phylogenetic analysis, and metagenomic analysis, and then apply these techniques towards their own research.

CMB 5594. Directed Research in Comparative and Molecular Biosciences. (1-4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Independent study as determined by instructor. Usual activity includes conducting research in instructor's lab. prereq: Jr, instr consent

CMB 5910. Grantwriting: What Makes a Winning Proposal?. (2 cr. ; Student Option; Every Spring)

Components of a strong proposal. Grant submission process. What reviewers look for. How to locate grant announcements that match reserach interests.

CMB 5912. Creativity. (1 cr. ; Student Option; Every Spring)

Creativity will be explored and used to provide new perspectives on a variety of professional goals, activities and challenges. Lectures will be followed by a mixture of individual and group activities to provide a guided exploration of how these creative approaches can be applied to many situations. Students will learn skills to expand their vision, become more adept at problem solving, design more innovative research, inspire themselves and others and become more fascinating communicators.

CMB 5915. Essential Statistics for Life Sciences. (3 cr. ; A-F or Audit; Every Fall)

This course is a broad overview of the principles and methods of statistical analysis used in life sciences research, including biological, veterinary, and translational research, and provides the background a new researcher needs to understand and apply commonly used statistical methods and the preparation needed for more advanced coursework. Classes will include general instruction and background information, detailed examples of how to perform the analyses, with actual data sets, and discussion

on how the topic has been applied in biological research, including reading and assessing papers in the field. Computing will be performed using the R software environment, though students may use alternate software with permission. Topics will include: ? Descriptive statistics and exploratory graphics ? Understanding statistical inference and interpreting P-values and confidence intervals. ? One and two sample inference, including t-tests, proportion tests, and non-parametric alternatives ? Linear regression, including the effects of confounders ? ANOVA methods, including pairwise comparisons and multiple comparisons

Comparative Literature (CL)

CL 5992. Directed Reading in Comparative Literature. (1-3 cr. [max 9 cr.] ; Student Option; Every Fall & Spring)
Guided individual reading and study. prereq: instr consent

Computer Science (CSCI)

CSCI 1001. Overview of Computer Science. (MATH,TS; 4 cr. ; Student Option; Every Spring)

Foundations/limits of today's computing/information technology. How to reason about applications/technological advances. Policy issues. Algorithms for automating solutions. Abstraction in design/problem solving. Concepts of computer databases, networks, expert systems human-computer interaction, Internet, Web, desktop software, personal computers. prereq: Non-CSci major, non-CompE major, non-EE major

CSCI 1103. Introduction to Computer Programming in Java. (4 cr. ; Student Option; Every Fall)

Fundamental programming concepts/software development using Java language. Problem solving skills. Algorithm development techniques. Use of abstractions/modularity. Data structures/abstract data types. Substantial programming projects. Weekly lab.

CSCI 1113. Introduction to C/C++ Programming for Scientists and Engineers. (4 cr. ; Student Option; Every Fall, Spring & Summer)

Programming for scientists/engineers. C/C++ programming constructs, object-oriented programming, software development, fundamental numerical techniques. Exercises/examples from various scientific fields. prereq: Math 1271 or Math 1371 or Math 1571H or instr consent

CSCI 1115. Exploring Computer Science Exercises in C++. (1 cr. ; S-N only; Every Fall & Spring)

This course is designed as a complement to CSCI 1113 for students who elect to devote additional time to get a broader exposure to concepts and practice of computer science. Students will work in small groups to sharpen their problem solving and computational skills, and be exposed to a variety of applications of computing.

CSCI 1133. Introduction to Computing and Programming Concepts.

(4 cr. ; Student Option; Every Fall, Spring & Summer)
Fundamental programming concepts using Python language. Problem solving skills, recursion, object-oriented programming. Algorithm development techniques. Use of abstractions/modularity. Data structures/abstract data types. Develop programs to solve real-world problems. prereq: concurrent registration is required (or allowed) in MATH 1271 or concurrent registration is required (or allowed) in MATH 1371 or concurrent registration is required (or allowed) in MATH 1571H or instr consent

CSCI 1133H. Honors Introduction to Computing and Programming Concepts.

(; 4 cr. ; A-F only; Every Fall)
Programming concepts using Python language. Real world problem solving, recursion, object-oriented programming. Algorithm development techniques. Abstractions/modularity. Optional honors topics: programming robots, programming paradigms, artificial intelligence. prereq: [concurrent registration is required (or allowed) in MATH 1271 or concurrent registration is required (or allowed) in MATH 1371 or concurrent registration is required (or allowed) in MATH 1571H], CSci majors, pre-majors in CSE/CLA, honors student

CSCI 1135. Exploring Computer Science Exercises in Python.

(1 cr. ; S-N only; Every Fall & Spring)
This course is designed as a complement to CSCI 1133 for students who elect to devote additional time to get a broader exposure to concepts and practice of computer science. Students will work in small groups to sharpen their problem solving and computational skills, and be exposed to a variety of applications of computing.

CSCI 1913. Introduction to Algorithms, Data Structures, and Program Development.

(4 cr. ; Student Option; Every Fall, Spring & Summer)
Advanced object oriented programming to implement abstract data types(stacks, queues, linked lists, hash tables, binary trees) using Java language. Searching/sorting algorithms. Basic algorithmic analysis. Scripting languages using Python language. Substantial programming projects. Weekly lab. prereq: (EE major and EE 1301) or (CmpE major and EE 1301) or 1103 or 1113 or instr consent

CSCI 1923. Python as a Second Programming Language.

(1 cr. ; Student Option; Every Fall & Spring)
Fundamental programming concepts and scripting using the Python language for students already familiar with programming concepts and syntax in C, C++, or Java. File IO and the use of libraries. Develop programs to solve real-world problems. This course is not intended for students who have taken CSCI 1133. Prereq: CSci 1103 or CSci 1113

CSCI 1933. Introduction to Algorithms and Data Structures.

(; 4 cr. ; Student Option; Every Fall, Spring & Summer)
Advanced object oriented programming to implement abstract data types (stacks, queues,

linked lists, hash tables, binary trees) using Java language. Inheritance. Searching/sorting algorithms. Basic algorithmic analysis. Use of software development tools. Weekly lab. prereq: 1133 or instr consent

CSCI 1933H. Honors Introduction to Algorithms and Data Structures.

(; 4 cr. ; A-F only; Every Spring)
Advanced object oriented programming to implement abstract data types (stacks, queues, linked lists, hash tables, binary trees) using Java language. Inheritance. Searching/sorting algorithms. Basic algorithmic analysis. Use of software development tools. Weekly lab. Optional honors topics: Advanced Java topics, GUI programming, CS research examples. prereq: [1133 or 1133H] and honors student, or inst consent

CSCI 2011. Discrete Structures of Computer Science.

(; 4 cr. ; Student Option; Every Fall & Spring)
Foundations of discrete mathematics. Sets, sequences, functions, big-O, propositional/predicate logic, proof methods, counting methods, recursion/recurrences, relations, trees/graph fundamentals. prereq: MATH 1271 or MATH 1371 or instr consent

CSCI 2011H. Honors Discrete Structures of Computer Science.

(; 4 cr. ; A-F only; Every Spring)
Foundations of discrete mathematics. Sets, sequences, functions, big-O, propositional/predicate logic, proof methods, counting methods, recursion/recurrences, relations, trees/graph fundamentals. Advanced topics in discrete structures as time permits. prereq: [MATH 1271 or MATH 1371 or MATH 1571H], honors student.

CSCI 2021. Machine Architecture and Organization.

(4 cr. ; Student Option; Every Fall & Spring)
Introduction to hardware/software components of computer system. Data representation, boolean algebra, machine-level programs, instruction set architecture, processor organization, memory hierarchy, virtual memory, compiling, linking. Programming in C. prereq: 1913 or 1933 or instr consent

CSCI 2033. Elementary Computational Linear Algebra.

(4 cr. ; Student Option; Every Fall & Spring)
Matrices/linear transformations, basic theory. Linear vector spaces. Inner product spaces. Systems of linear equations, Eigenvalues, singular values. Algorithms/computational matrix methods using MATLAB. Use of matrix methods to solve variety of computer science problems. prereq: [MATH 1271 or MATH 1371], [1113 or 1133 or knowledge of programming concepts]

CSCI 2041. Advanced Programming Principles.

(4 cr. ; Student Option; Every Fall & Spring)
Principles/techniques for creating correct, robust, modular programs. Computing with symbolic data, recursion/induction, functional programming, impact of evaluation strategies, parallelism. Organizing data/computations around types. Search-based programming,

concurrency, modularity. prereq: [1913 or 1933], 2011

CSCI 2081. Introduction to Software Development.

(4 cr. ; Student Option; Every Fall & Spring)
techniques for design and development of software using Java. Introduction to object-oriented programming and design, integrated development environments, inheritance, and polymorphism. Software design principles, testing and debugging, and use of project management tools. Implementation of a software project using data structures, files, and I/O. This course is intended for non-CS Majors. prereq: CSCI 1133 or CSCI 1133H

CSCI 2915. Teaching Methods in Computer Science.

(1 cr. ; S-N only; Every Spring)
This is a seminar on teaching and learning for undergraduate teaching assistants (TAs) of CSci classes. Enrollment is by instructor or department permission. The course's main goal is to help TAs improve their knowledge of teaching and learning in computer science so they can be effective TAs. Topics covered include educational issues in computer science, TA professionalism, best practices in giving effective feedback, inclusive teaching, online teaching and learning, and how to communicate well with students and other course staff. Its secondary goals are to help TAs improve their own communication skills, leadership skills, and knowledge of computer science as a field.

CSCI 2980. Special Topics in Computer Science.

(; 1-4 cr. [max 8 cr.]; A-F or Audit; Periodic Fall & Spring)

Special topics. Lectures, informal discussions.

CSCI 2999. Special Exam.

(4 cr. ; Student Option;)
CSCI 3003. Introduction to Computing in Biology. (; 3 cr. ; Student Option; Every Spring)
This course builds computational skills needed to carry out basic data analysis tasks common in modern biology. Students will learn computing concepts (algorithm development, data structures, complexity analysis) along with practical programming skills in Python and R. No previous programming knowledge assumed. Prereq: introductory biology course.

CSCI 3041. Introduction to Discrete Structures and Algorithms.

(4 cr. ; Student Option; Every Fall & Spring)
Overview of strategies and techniques for the design and analysis of algorithms. Logic and proof techniques, asymptotic notation, recurrences, graphs and relations. Algorithm design strategies and examples from graph algorithms, greedy, divide-and-conquer, and dynamic programming. This course is intended for non-CS Majors. prerequisite: CSci 2081, concurrent registration with CSci 2081 and upper class standing, or instructor permission.

CSCI 3061. Introduction to Computer Systems.

(4 cr. ; Student Option; Every Fall & Spring)
Overview of the organization and interfaces of computing systems. Basics of machine organization, data representation, memory

hierarchy and assembly language/ISA. Systems programming in C/C++, including memory management, files, processes and interprocess communication. This course is intended for non-CS Majors. prereq: CSci 2081 or instructor permission

CSCI 3081W. Program Design and Development. (WI; 4 cr. ; Student Option; Every Fall & Spring)

Principles of programming design/analysis. Concepts in software development. Uses a programming project to illustrate key ideas in program design/development, data structures, debugging, files, I/O, testing, and coding standards. prereq: [2021, 2041]; CS upper div, CS grad, or dept. permission

CSCI 3921W. Social, Legal, and Ethical Issues in Computing. (CIV,WI; 3 cr. ; Student Option; Every Fall)

Impact of computers on society. Computer science perspective of ethical, legal, social, philosophical, political, and economic aspects of computing. prereq: At least soph or instr consent

CSCI 3970. Industrial Student Co-op Assignment. (; 2 cr. [max 4 cr.]; S-N or Audit; Every Fall & Spring)

Industrial work assignment in a co-op program involving advanced computer technology. Reviewed by a faculty member. Grade based on final written report. prereq: CSci, in co-op program, instr consent

CSCI 4011. Formal Languages and Automata Theory. (4 cr. ; Student Option; Every Fall & Spring)

Logical/mathematical foundations of computer science. Formal languages, their correspondence to machine models. Lexical analysis, string matching, parsing. Decidability, undecidability, limits of computability. Computational complexity. prereq: 2041 or instr consent

CSCI 4041. Algorithms and Data Structures. (4 cr. ; Student Option; Every Fall & Spring)

Rigorous analysis of algorithms/implementation. Algorithm analysis, sorting algorithms, binary trees, heaps, priority queues, heapsort, balanced binary search trees, AVL trees, hash tables and hashing, graphs, graph traversal, single source shortest path, minimum cost spanning trees. prereq: [(1913 or 1933) and 2011] or instr consent; cannot be taken for grad CSci cr

CSCI 4061. Introduction to Operating Systems. (; 4 cr. ; Student Option; Every Fall & Spring)

Processes/threads, process coordination, interprocess communication, asynchronous events, memory management/file systems. Systems programming projects using operating system interfaces and program development tools. prereq: 2021 or EE 2361; CS upper div, CS minor, CompE upper div., EE upper div., EE grad, ITI upper div., Univ. honors student, or dept. permission; no cr for grads in CSci.

CSCI 4131. Internet Programming. (; 3 cr. ; Student Option; Every Fall & Spring)

Issues in internet programming. Internet history, architecture/protocols, network

programming, Web architecture. Client-server architectures and protocols. Client-side programming, server-side programming, dynamic HTML, Java programming, object-oriented architecture/design, distributed object computing, Web applications. prereq: 4061, 4211 recommended, cannot be taken for grad CSci cr

CSCI 4203. Computer Architecture. (; 4 cr. ; Student Option; Every Fall & Spring)

Introduction to computer architecture. Aspects of computer systems, such as pipelining, memory hierarchy, and input/output systems. Performance metrics. Examines each component of a complicated computer system. prereq: 2021 or instr consent

CSCI 4211. Introduction to Computer Networks. (; 3 cr. ; Student Option; Every Fall & Spring)

Concepts, principles, protocols, and applications of computer networks. Layered network architectures, data link protocols, local area networks, routing, transport, network programming interfaces, networked applications. Examples from Ethernet, Token Ring, TCP/IP, HTTP, WWW. prereq: 4061 or instr consent; basic knowledge of [computer architecture, operating systems] recommended, cannot be taken for grad CSci cr

CSCI 4271W. Development of Secure Software Systems. (WI; 4 cr. ; A-F or Audit; Every Spring)

Overview of threat modeling and security assessment in the design and development of software systems. Techniques to identify, exploit, detect, mitigate and prevent software vulnerabilities at the design, coding, application, compiler, operating system, and networking layers. Methods for effectively communicating system designs and vulnerabilities. Prerequisites: 3081W

CSCI 4511W. Introduction to Artificial Intelligence. (WI; 4 cr. ; Student Option; Every Fall & Spring)

Problem solving, search, inference techniques. Knowledge representation. Planning. Machine learning. Robotics. Lisp programming language. Cannot be taken for grad CSci credit. prereq: 2041 or instr consent

CSCI 4611. Programming Interactive Computer Graphics and Games. (3 cr. ; Student Option; Every Spring)

Tools/techniques for programming games/interactive computer graphics. Event loops, rendering/animation, polygonal models, texturing, physical simulation. Modern graphics toolkits. History/future of computer games technology. Social impact of interactive computer graphics. prereq: 2021 or instr consent

CSCI 4707. Practice of Database Systems. (; 3 cr. ; Student Option; Every Fall & Spring)

Concepts, conceptual data models, case studies, common data manipulation languages, logical data models, database design, facilities for database security/integrity, applications. prereq: 4041 or instr consent

CSCI 4921. History of Computing. (HIS,TS; 3 cr. ; Student Option; Fall Even Year)

Developments in last 150 years; evolution of hardware and software; growth of computer and semiconductor industries and their relation to other businesses; changing relationships resulting from new data-gathering and analysis techniques; automation; social and ethical issues.

CSCI 4950. Senior Software Project. (; 3 cr. [max 6 cr.]; A-F only; Every Fall & Spring)

Student teams develop a software system, distribute system to users, and extend/maintain it in response to their needs. Software engineering techniques. Software development, team participation, leadership. prereq: Upper div CSci, instr consent

CSCI 4970W. Advanced Project Laboratory. (WI; 3 cr. [max 9 cr.]; Student Option; Every Fall & Spring)

Formulate and solve open-ended project: design, implement, interface, document, test. Team work strongly encouraged. Arranged with CSci faculty. prereq: Upper div CSci, 4061, instr consent; cannot be taken for grad cr

CSCI 4980. Special Topics in Computer Science for Undergraduates. (; 1-3 cr. [max 9 cr.]; A-F or Audit; Periodic Fall & Spring)

Lectures and informal discussions on current topics in computer science. prereq: Undergrad, instr consent; no cr for grads in [CSci or CompE]

CSCI 4994H. Honors Thesis. (; 1-3 cr. [max 6 cr.]; A-F only; Every Fall, Spring & Summer)

Research work for an honors thesis arranged with a CS faculty member who is the adviser or coadviser. prereq: Honors student, instr consent

CSCI 5103. Operating Systems. (; 3 cr. ; Student Option; Every Fall)

Conceptual foundation of operating system designs and implementations. Relationships between operating system structures and machine architectures. UNIX implementation mechanisms as examples. prereq: 4061 or instr consent

CSCI 5105. Introduction to Distributed Systems. (; 3 cr. ; Student Option; Periodic Spring)

Distributed system design and implementation. Distributed communication and synchronization, data replication and consistency, distributed file systems, fault tolerance, and distributed scheduling. prereq: [5103 or equiv] or instr consent

CSCI 5106. Programming Languages. (; 3 cr. ; Student Option; Every Fall)

Design and implementation of high-level languages. Course has two parts: (1) language design principles, concepts, constructs; (2) language paradigms, applications. Note: course does not teach how to program in specific languages. prereq: 4011 or instr consent

CSCI 5115. User Interface Design, Implementation and Evaluation. (; 3 cr. ; Student Option; Every Fall)

Theory, design, programming, and evaluation of interactive application interfaces. Human

capabilities and limitations, interface design and engineering, prototyping and interface construction, interface evaluation, and topics such as data visualization and World Wide Web. Course is built around a group project. prereq: 4041 or instr consent

CSCI 5117. Developing the Interactive Web. (; 3 cr. ; Student Option; Spring Even Year) Hands-on design experience using modern web development tools. Students work in teams to develop software programs using each of four toolkits. Analyze developments in forum posts and classroom discussions. prereq: 4131 or 5131 or instr consent; upper div or grad in CSci recommended

CSCI 5123. Recommender Systems. (3 cr. ; Student Option; Fall Odd Year) An overview of recommender systems, including content-based and collaborative algorithms for recommendation, programming of recommender systems, and evaluation and metrics for recommender systems. prereq: Java programming and 2033 and 3081, or instructor consent.

CSCI 5125. Collaborative and Social Computing. (; 3 cr. ; Student Option; Spring Even Year) Introduction to computer-supported cooperative work, social computing. Technology, research methods, theory, case studies of group computing systems. Readings, hands-on experience. prereq: 5115 or instr consent

CSCI 5127W. Embodied Computing: Design & Prototyping. (WI; 3 cr. ; Student Option; Fall Even Year) In this course, you will learn and apply the principles of embodied computing to human-centered challenges. Through a semester-long team project, you will learn and demonstrate mastery of human-centered embodied computing through two phases: (1) investigating human needs and current embodied practices and (2) rapidly prototyping and iterating embodied computing solutions. One of the ways you will demonstrate this mastery is through the collaborative creation of a written document and project capstone video describing your process and prototype. prereq: CSci 4041, upper division or graduate student, or instructor permission; CSci 5115 or equivalent recommended.

CSCI 5143. Real-Time and Embedded Systems. (; 3 cr. ; A-F only; Periodic Spring) Real-time systems that require timely response by computer to external stimulus. Embedded systems in which computer is part of machine. Increasing importance of these systems in commercial products. How to control robots and video game consoles. Lecture, informal lab. prereq: [4061 or instr consent], experience with C language

CSCI 5161. Introduction to Compilers. (3 cr. ; Student Option; Every Spring) Techniques for translating modern programming languages to intermediate forms or machine-executable instructions/their organization into compiler. Lexical analysis, syntax analysis, semantic analysis, data flow analysis, code generation. Compiler project for

prototypical language. prereq: [2021, 5106] or instr consent

CSCI 5204. Advanced Computer Architecture. (; 3 cr. ; Student Option; Every Fall) Instruction set architecture, processor microarchitecture, memory, I/O systems. Interactions between computer software and hardware. Methodologies of computer design. prereq: 4203 or EE 4363

CSCI 5211. Data Communications and Computer Networks. (; 3 cr. ; Student Option; Every Fall) Concepts, principles, protocols, and applications of computer networks. Layered network architectures, data link protocols, local area networks, network layer/routing protocols, transport, congestion/flow control, emerging high-speed networks, network programming interfaces, networked applications. Case studies using Ethernet, Token Ring, FDDI, TCP/IP, ATM, Email, HTTP, and WWW. prereq: [4061 or instr consent], basic knowledge of [computer architecture, operating systems, probability], grad student

CSCI 5221. Foundations of Advanced Networking. (; 3 cr. ; Student Option; Spring Even Year) Design principles, protocol mechanisms. Network algorithmics, implementation techniques. Advanced network architectures, state-of-art/emerging networking technologies/applications, network modeling. Simulation, experiments. prereq: 4211 or 5211 or equiv; intro course in computer networks recommended

CSCI 5271. Introduction to Computer Security. (; 3 cr. ; Student Option; Every Fall) Concepts of computer, network, and information security. Risk analysis, authentication, access control, security evaluation, audit trails, cryptography, network/database/application security, viruses, firewalls. prereq: 4061 or 5103 or equiv or instr consent

CSCI 5302. Analysis of Numerical Algorithms. (; 3 cr. ; Student Option; Every Spring) Additional topics in numerical analysis. Interpolation, approximation, extrapolation, numerical integration/differentiation, numerical solutions of ordinary differential equations. Introduction to optimization techniques. prereq: 2031 or 2033 or instr consent

CSCI 5304. Computational Aspects of Matrix Theory. (; 3 cr. ; Student Option; Every Fall) Perturbation theory for linear systems and eigenvalue problems. Direct/iterative solution of large linear systems. Matrix factorizations. Computation of eigenvalues/eigenvectors. Singular value decomposition. LAPACK/other software packages. Introduction to sparse matrix methods. prereq: 2031 or 2033 or instr consent

CSCI 5421. Advanced Algorithms and Data Structures. (; 3 cr. ; Student Option; Every Fall & Spring) Fundamental paradigms of algorithm and data structure design. Divide-and-conquer, dynamic programming, greedy method, graph

algorithms, amortization, priority queues and variants, search structures, disjoint-set structures. Theoretical underpinnings. Examples from various problem domains. prereq: 4041 or instr consent

CSCI 5451. Introduction to Parallel Computing: Architectures, Algorithms, and Programming. (; 3 cr. ; Student Option; Every Spring) Parallel architectures design, embeddings, routing. Examples of parallel computers. Fundamental communication operations. Performance metrics. Parallel algorithms for sorting. Matrix problems, graph problems, dynamic load balancing, types of parallelisms. Parallel programming paradigms. Message passing programming in MPI. Shared-address space programming in openMP or threads. prereq: 4041 or instr consent

CSCI 5461. Functional Genomics, Systems Biology, and Bioinformatics. (; 3 cr. ; Student Option; Every Spring) Computational methods for analyzing, integrating, and deriving predictions from genomic/proteomic data. Analyzing gene expression, proteomic data, and protein-protein interaction networks. Protein/gene function prediction, Integrating diverse data, visualizing genomic datasets. prereq: 3003 or 4041 or instr consent

CSCI 5465. Introduction to Computing for Biologists. (3 cr. ; Student Option; Fall Odd Year) This course is designed for graduate students in biology or other related sciences that wish to learn fundamental computing skills that will enable them to develop their own computational approaches for meaningful interpretation of scientific data. Students will complete programming assignments in Python and R. No previous programming knowledge assumed. Prereq: Introductory biology course; non-CSE students only.

CSCI 5471. Modern Cryptography. (; 3 cr. ; Student Option; Periodic Fall & Spring) Introduction to cryptography. Theoretical foundations, practical applications. Threats, attacks, and countermeasures, including cryptosystems and cryptographic protocols. Secure systems/networks. History of cryptography, encryption (conventional, public key), digital signatures, hash functions, message authentication codes, identification, authentication, applications. prereq: [2011, 4041, [familiarity with number theory or finite fields]] or instr consent

CSCI 5481. Computational Techniques for Genomics. (; 3 cr. ; Student Option; Every Fall) Techniques to analyze biological data generated by genome sequencing, proteomics, cell-wide measurements of gene expression changes. Algorithms for single/multiple sequence alignments/assembly. Search algorithms for sequence databases, phylogenetic tree construction algorithms. Algorithms for gene/promoter and protein structure prediction. Data mining for micro array expression analysis. Reverse engineering

of regulatory networks. prereq: 4041 or instr consent

CSCI 5511. Artificial Intelligence I. (3 cr. ; Student Option; Every Fall)
Introduction to AI. Problem solving, search, inference techniques. Logic/theorem proving. Knowledge representation, rules, frames, semantic networks. Planning/scheduling. Lisp programming language. prereq: [2041 or instr consent], grad student

CSCI 5512. Artificial Intelligence II. (; 3 cr. ; Student Option; Every Spring)
Uncertainty in artificial intelligence. Probability as a model of uncertainty, methods for reasoning/learning under uncertainty, utility theory, decision-theoretic methods. prereq: [STAT 3021, 4041] or instr consent

CSCI 5521. Machine Learning Fundamentals. (; 3 cr. ; Student Option; Periodic Fall)
Problems of pattern recognition, feature selection, measurement techniques. Statistical decision theory, nonstatistical techniques. Automatic feature selection/data clustering. Syntactic pattern recognition. Mathematical pattern recognition/artificial intelligence. Prereq: [2031 or 2033], STAT 3021, and knowledge of partial derivatives

CSCI 5523. Introduction to Data Mining. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Data pre-processing techniques, data types, similarity measures, data visualization/exploration. Predictive models (e.g., decision trees, SVM, Bayes, K-nearest neighbors, bagging, boosting). Model evaluation techniques, Clustering (hierarchical, partitional, density-based), association analysis, anomaly detection. Case studies from areas such as earth science, the Web, network intrusion, and genomics. Hands-on projects. prereq: 4041 or equiv or instr consent

CSCI 5525. Machine Learning: Analysis and Methods. (; 3 cr. ; Student Option; Fall Even Year)
Models of learning. Supervised algorithms such as perceptrons, logistic regression, and large margin methods (SVMs, boosting). Hypothesis evaluation. Learning theory. Online algorithms such as winnow and weighted majority. Unsupervised algorithms, dimensionality reduction, spectral methods. Graphical models. prereq: Grad student or instr consent

CSCI 5527. Deep Learning: Models, Computation, and Applications. (3 cr. ; Student Option; Every Fall)
This course introduces the basic ingredients of deep learning, describes effective models and computational principles, and samples important applications. Topics include universal approximation theorems, basics of numerical optimization, auto-differentiation, convolution neural networks, recurrent neural networks, generative neural networks, representation learning, and deep reinforcement learning. Prerequisite: CSCI 5521 or equivalent
Maturity in linear algebra, calculus, and basic probability is assumed. Familiarity with Python is necessary to complete the homework assignments and final project.

CSCI 5541. Natural Language Processing. (; 3 cr. ; Student Option; Periodic Spring)
Computers are poor conversationalists, despite decades of attempts to change that fact. This course will provide an overview of the computational techniques developed in the attempt to enable computers to interpret and respond appropriately to ideas expressed using natural languages (such as English or French) as opposed to formal languages (such as C++ or Python). Topics in this course will include parsing, semantic analysis, machine translation, dialogue systems, and statistical methods in speech recognition. Suggested prerequisite: CSCI 2041

CSCI 5551. Introduction to Intelligent Robotic Systems. (; 3 cr. ; Student Option; Periodic Fall)
Transformations, kinematics/inverse kinematics, dynamics, control. Sensing (robot vision, force control, tactile sensing), applications of sensor-based robot control, robot programming, mobile robotics, microrobotics. prereq: 2031 or 2033 or instr consent

CSCI 5552. Sensing and Estimation in Robotics. (; 3 cr. ; Student Option; Periodic Spring)
Bayesian estimation, maximum likelihood estimation, Kalman filtering, particle filtering. Sensor modeling and fusion. Mobile robot motion estimation (odometry, inertial, laser scan matching, vision-based) and path planning. Map representations, landmark-based localization, Markov localization, simultaneous localization/mapping (SLAM), multi-robot localization/mapping. prereq: [5551, Stat 3021] or instr consent

CSCI 5561. Computer Vision. (; 3 cr. ; Student Option; Every Spring)
Issues in perspective transformations, edge detection, image filtering, image segmentation, and feature tracking. Complex problems in shape recovery, stereo, active vision, autonomous navigation, shadows, and physics-based vision. Applications. prereq: CSci 5511, 5521, or instructor consent.

CSCI 5563. Multiview 3D Geometry in Computer Vision. (3 cr. ; A-F or Audit; Every Spring)
The 3D spatial relationship between cameras and scenes in computer vision. Application to tasks such as planning robots, reconstructing scenes from photos, and understanding human behaviors from body-worn cameras data. Multiview theory fundamentals, structure-from-motion, state-of-the-art approaches, and current research integration. Prereq: Students enrolling in this course must have completed CSCI 5561 or have instructor consent.

CSCI 5607. Fundamentals of Computer Graphics 1. (3 cr. ; Student Option; Every Fall)
Fundamental algorithms in computer graphics. Emphasizes programming projects in C/C+++. Scan conversion, hidden surface removal, geometrical transformations, projection, illumination/shading, parametric cubic curves, texture mapping, antialiasing, ray tracing.

Developing graphics software, graphics research. prereq: concurrent registration is required (or allowed) in 2033, concurrent registration is required (or allowed) in 3081

CSCI 5608. Fundamentals of Computer Graphics II. (3 cr. ; Student Option; Periodic Spring)
Advanced topics in image synthesis, modeling, rendering. Image processing, image warping, global illumination, non-photorealistic rendering, texture synthesis. Parametric cubic surfaces, subdivision surfaces, acceleration techniques, advanced texture mapping. Programming in C/C++. prereq: 5607 or instr consent

CSCI 5609. Visualization. (3 cr. ; Student Option; Fall Even Year)
Fundamental theory/practice in data visualization. Programming applications. Perceptual issues in effective data representation, multivariate visualization, information visualization, vector field/volume visualization. prereq: [1913, 4041] or equiv or instr consent

CSCI 5611. Animation & Planning in Games. (3 cr. ; Student Option; Fall Odd Year)
Theory behind algorithms used to bring virtual worlds to life. Computer animation topics. Real-time, interactive techniques used in modern games. Physically-based animation, motion planning, character animation, simulation in virtual worlds. prereq: 4041 or 4611 or instr consent

CSCI 5619. Virtual Reality and 3D Interaction. (3 cr. ; Student Option; Spring Odd Year)
Introduction to software, technology/applications in virtual/augmented reality, 3D user interaction. Overview of current research. Hands-on projects. prereq: 4611 or 5607 or 5115 or equiv or instr consent

CSCI 5707. Principles of Database Systems. (; 3 cr. ; Student Option; Every Fall)
Concepts, database architecture, alternative conceptual data models, foundations of data manipulation/analysis, logical data models, database designs, models of database security/integrity, current trends. prereq: [4041 or instr consent], grad student

CSCI 5708. Architecture and Implementation of Database Management Systems. (; 3 cr. ; Student Option; Every Spring)
Techniques in commercial/research-oriented database systems. Catalogs. Physical storage techniques. Query processing/optimization. Transaction management. Mechanisms for concurrency control, disaster recovery, distribution, security, integrity, extended data types, triggers, and rules. prereq: 4707 or 5707 or instr consent

CSCI 5715. From GPS, Google Maps, and Uber to Spatial Data Science. (3 cr. ; Student Option; Spring Even Year)
Spatial databases and querying, spatial big data mining, spatial data-structures and algorithms, positioning, earth observation, cartography, and geo-visualization. Trends such as spatio-temporal, and geospatial cloud

analytics, etc. prereq: Familiarity with Java, C++ or Python

CSCI 5751. Big Data Engineering and Architecture. (3 cr. ; Student Option; Every Fall)

Big data and data-intensive application management, design and processing concepts. Data modeling on different NoSQL databases: key/value, column-family, document, graph-based stores. Stream and real-time processing. Big data architectures. Distributed computing using Spark, Hadoop or other distributed systems. Big data projects. prereq: 4041, 5707, or instructor consent.

CSCI 5801. Software Engineering I. (3 cr. ; Student Option; Every Fall)

Advanced introduction to software engineering. Software life cycle, development models, software requirements analysis, software design, coding, maintenance. prereq: 2041 or instr consent

CSCI 5802. Software Engineering II. (3 cr. ; Student Option; Periodic Spring)

Introduction to software testing, software maturity models, cost specification models, bug estimation, software reliability models, software complexity, quality control, and experience report. Student groups specify, design, implement, and test partial software systems. Application of general software development methods and principles from 5801. prereq: 5801 or instr consent

CSCI 5980. Special Topics in Computer Science. (1-3 cr. [max 27 cr.] ; Student Option; Periodic Fall & Spring)

Lectures and informal discussions on current topics in computer science. prereq: instr consent; may be repeated for cr

CSCI 5991. Independent Study. (1-3 cr. [max 9 cr.] ; Student Option; Every Fall, Spring & Summer)

Independent study arranged with CS faculty member. prereq: instr consent; may be repeated for cr

CSCI 5994. Directed Research. (1-3 cr. [max 9 cr.] ; Student Option; Every Fall, Spring & Summer)

Directed research arranged with faculty member. prereq: instr consent; may be repeated for cr

CSCI 5996. Curricular Practical Training. (1 cr. [max 3 cr.] ; S-N or Audit; Every Fall, Spring & Summer)

Industrial work assignment involving advanced computer technology. Reviewed by faculty member. Grade based on final report covering work assignment. prereq: [CSci or CompE] major, instr consent

CSCI 5997. Curricular Practical Training Extension. (1 cr. [max 3 cr.] ; S-N only; Every Fall, Spring & Summer)

Extension of an industrial work assignment involving advanced computer technology. Grade based on final report covering work assignment. prereq: [CSci or CompE] major, instr consent

CMGT 2019. AutoCAD for Construction Managers. (2 cr. ; Student Option; Every Fall & Spring)

Most current version of AutoCAD software skills and construction concepts. 2-D techniques and business applications of computer-aided drafting (CAD) at job entry level. prereq: 30 sem cr

CMGT 3001W. Introduction to Construction. (WI; 3 cr. ; Student Option; Every Fall, Spring & Summer)

A wide range of construction-related topics and an overview of the industry itself are presented: type and size of projects, where the industry has come from and where it appears to be heading, and roles and responsibilities of participants. Through assignments and projects, the course defines project and construction sequences, materials and building systems, and project scheduling and delivery methods. Students will conduct research into construction materials, sustainability, and self-selected topics. As a writing intensive course focused on developing skills crucial to professionals, it requires the production and revision of a variety of construction documents, including drawings and specifications.

CMGT 3011. Construction Plan Reading. (2 cr. ; Student Option; Every Fall, Spring & Summer)

Intro to construction plan reading and construction documents (using architectural, civil, mechanical, electrical drawings and project manual). Read, understand, and interpret commercial construction plans and project manuals, including notes, symbols, and plan layout.

CMGT 3024W. Facility Programming and Design. (WI; 2 cr. ; A-F or Audit; Every Fall)

Facility Programming and Design moves through the process of defining a building-related need, evaluating the existing facility, exploring design solutions, and presenting a business case for the final project. This course is constructed from the viewpoint of the facility manager, and each step of the instruction and each assignment builds to the final project and presentation. It is a requirement for Construction Management degree and certificate students. It can also be used as an elective for undergraduate or graduate students pursuing degrees in architecture, civil engineering, facility management, interior design, housing studies, and other related majors. There are no formal prerequisites, but it is recommended that students have completed at least one of the following: 1. CMgt 3011 (Construction Plan Reading) or CMgt 3001/3001W (Introduction to Construction) taken before or simultaneously with this course; 2. completion of a first or second year architecture or interior design studio; 3. relevant prior experience in the facility management industry; 4. approval of the instructor.

CMGT 4000. The Construction Industry through Time and Tomorrow. (2 cr. ; A-F or Audit; Every Fall)

This course centers on the construction industry in all its facets. The intention is to

ensure that students taking it are provided with an in-depth understanding of how the industry evolved from early times to the present day and where the industry may be heading in the future. Equipped with this knowledge, graduates will be in a better position to understand their role in whichever sector of the industry they choose to build their careers and to contribute to positive change and improvement in how the industry serves its clients. It should be emphasized that this course is neither a history of architectural or engineering design, nor of construction technology, but concentrates rather on industry structure, organization, and the way it delivers its products.

CMGT 4001. Innovative Contracting. (1 cr. ; A-F or Audit; Fall Odd Year)

The triple constraint of time/cost/quality has often been challenged by traditional design/bid/build delivery methods. The private sector has had a unique advantage in its ability to negotiate contracts in the absence of firm bidding rules, including the extensive use of design/build delivery methods, while the public sector has been required by statute to bid to the lowest responsible bidder using design/bid/build. In an attempt to find the right balance that respects the competitive public bidding process while taking advantage of alternative project delivery strategies, the public sector has used enabling legislation to aggressively find new ways to contract project delivery, improving quality, speed of delivery, and cost management while reducing risk. This course will explore the methods of innovative contracting used by MnDOT and their underlying strategies, techniques, metrics, and outcomes, using a case study approach.

CMGT 4002. Lean Construction. (1 cr. ; A-F or Audit; Spring Odd Year)

An introduction to lean principles and how they can be applied to the design and construction industries. Prerequisites: None, although planning/scheduling coursework or experience is recommended.

CMGT 4003. Managing with Building Information Modeling. (2 cr. ; A-F or Audit; Every Fall & Spring)

For 5,000 years we have used hand drawings to communicate ideas and methodologies, from Egyptian hieroglyphs to computer technology. Building information modeling (BIM) computer models act as simulators, analyzing architectural programs, materials, energy usage, constructability, construction sequencing, and more, down to tens of micrometers. Today, building systems such as sheet metal and steel are fabricated directly from 3D models; material quantities are extracted from modeled objects and tied to cost early in the design process; coordinated models are visualized by project teams, clarifying scope, and providing a vehicle for communication. This course combines high-level technical training in BIM software with theoretical processes for managing a construction project using BIM techniques and tools. Prereqs: None. However, if you have no prior experience with construction, we

Construction Management (CMGT)

recommend CMgt 3001 - Intro to Construction and CMgt 4021 - Construction Planning and Scheduling for knowledge of industry project delivery. Basic computer skills are required.

CMGT 4011. Construction Documents and Contracts. (; 3 cr. ; Student Option; Every Fall & Spring)

Definition, interpretation, and utilization of drawings. Specifications, agreements, bidding forms, general conditions. Bonds, contracts, subcontracts, and related documents. Appropriate provisions for minority business participation, such as tax exempt status and wage rates. prereq: 3001, 45 sem cr

CMGT 4021. Construction Planning and Scheduling. (; 3 cr. ; Student Option; Every Fall & Spring)

Project planning, scheduling, and control. Considering/understanding alternatives. Industry techniques. Introduction to critical path method. Using commercial software on personal computers. Updating/analyzing project schedules. prereq: 3001, 3011, 45 sem cr

CMGT 4022. Construction Estimating. (; 3 cr. ; Student Option; Every Fall & Spring)

Purposes/uses of various estimates. Performing quantity take-off, organizing bidding process. Requesting/analyzing subcontractor proposals. Unit pricing. Using published resources. Preparing systems-based estimates. Related software, spreadsheets, custom applications. Linkages among estimates, budgets, cost control systems, and cost records. prereq: 3001, 3011, 45 sem cr

CMGT 4031. Construction Safety and Loss Control. (; 3 cr. ; Student Option; Every Fall & Spring)

Introduction to construction safety, health, and loss control. Hazard recognition. Control procedures. Management systems for measuring/evaluating loss-control performances in construction industry. prereq: 3001, 45 sem cr

CMGT 4041W. Specifications and Technical Writing for Construction Professionals. (WI; 3 cr. ; Student Option; Every Spring)

Develop/enhance appropriate oral/written communication necessary for use in the construction process from planning phase through contract closeout. Develop construction-specific practical applications to facilitate the process and avoid common pitfalls. prereq: 4011 or concurrent registration is required (or allowed) in 4011

CMGT 4073. Building Codes for Construction Managers. (; 1 cr. ; Student Option; Every Spring)

Building codes history, foundation, structure, and organization. Importance to the built environment throughout building life cycle: design, construction, occupancy, demolition. Code compliance and role of building code official. Interpretation and application to specific scenarios. Recognizing and correcting code deficiencies. prereq: 45 cr or instr consent

CMGT 4081. Managing Erosion and Sediment Control on Construction Sites. (; 1 cr. ; A-F or Audit; Every Fall & Spring)

Designed for those who will supervise, run, or direct construction site operations, grading, culvert replacement, and bridge construction. Best management practices to reduce or control erosion and sedimentation. Topics include permit requirements, stakeholder roles and responsibilities, sample specifications, and using the Storm Water Pollution Prevention Plan (SWPPP). Soil erodibility, turf establishment techniques, grading techniques to minimize erosion, timing of installations, and proper application of best management practices are also covered. Students will learn how to implement an erosion and sediment control plan, the requirements of various regulatory agencies, and consequences of permit violations. Can be used to achieve the Erosion and Stormwater Construction Site Management Certification, which is required by the Minnesota Department of Transportation Standard Specifications on construction sites. prereq: CMGT 3001- Introduction to the Built Environment OR relevant experience

CMGT 4193. Directed Study. (1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Independent project. Topic arranged with/supervised by construction management faculty. prereq: Admitted to CMgt major or minor or certificate

CMGT 4196. Construction Management Internship. (; 1 cr. [max 3 cr.] ; S-N only; Every Fall, Spring & Summer)

Hands-on work experience within a construction company, applying previous coursework in the workplace, contributing knowledge of best practices, and participating in career and business development exercises. prereq: [[CMgt] major or minor or certificate student], [jr or sr], dept consent

CMGT 4201. Construction Accounting. (; 2 cr. ; A-F or Audit; Every Fall)

Unique characteristics and dissimilarities crucial for all parties involved to understand/manage the construction process. Unique aspects of construction financial accounting, managerial accounting, tax planning, and auditing. prereq: 3001, Acct 2050, ABus 4101

CMGT 4215. Facility Quality Assessment and Commissioning. (; 2 cr. ; A-F or Audit; Every Spring)

How to assess condition/quality of building site, exterior/interior of facility, and building equipment. Evaluating effectiveness/efficiency of facility operations/maintenance program. What to look for during building audits. How to write professional assessment reports. How to make useful recommendations for improvements. Value/purpose of building commissioning/ re-commissioning. prereq: 3001, [4213 or concurrent registration is required (or allowed) in 4213], 4542, 4562

CMGT 4301. Occupational Health and Safety Principles. (; 3 cr. ; A-F or Audit; Every Fall)

While OSHA (Occupational Safety and Health Administration) remains the governmental regulatory agency, the responsibility for occupational safety and health of employees has evolved into an integral part of a variety of industries, including construction, health

care, oil and gas extraction, and many more. The course provides a comprehensive understanding of environmental health and safety standards and their application to the management of workplace injury prevention and health promotion. prereq: 45 credits

CMGT 4302. Environmental Health Principles. (; 3 cr. ; A-F or Audit; Every Spring)

The construction industry has one of the highest morbidity and mortality rates among professions, and there is also an economic implication. Companies can reduce the risk of injuries, diseases, and death due to environmental hazards by implementing an appropriate health and safety plan. Plans must be continually reviewed to ensure they are current with new products, scientific evidence, legal parameters, and cultural changes. This course will review requirements and provide direction in controlling regulations related to environmental and occupational health, chemical and biological safety, hazardous materials, and other health hazards. prereqs: 45 credits completed. Some knowledge of construction management principles is strongly recommended.

CMGT 4303. Industrial Hygiene Principles. (; 3 cr. ; A-F or Audit; Every Spring)

Overview of the practice of industrial hygiene: the science of anticipating, recognizing, evaluating, and controlling workplace conditions that may cause workers' injury or illness. Presents critical topics to enhance technical skills, deepen understanding, and gain the necessary knowledge and tools to apply the principles of Industrial hygiene effectively, efficiently, and reasonably, including hazard types, routes of exposure, and determination of exposure levels. Also explores the industrial hygiene hazard evaluation process and how it applies to the goal of workplace safety, as well as related federal and state regulations. Students will examine specific workplace problems related to worker health and safety. Prerequisites: None

CMGT 4304. Fire and Life Safety Principles. (; 3 cr. ; A-F or Audit; Every Fall)

Provides an overview of the fire and life safety requirements for new and existing buildings, as indicated in the National Fire Protection Association (NFPA) Life Safety Code. The Code addresses life safety for fire emergencies, but also other types of emergencies, such as bomb threats. The purpose of the Code is to establish minimum requirements that will provide a reasonable degree of safety during emergencies in any structure. To apply the Code effectively, one must understand its legal authority in various jurisdictions, Code navigation, and the ways proper application of the Code can minimize the effects of a devastating fire or other emergency. Specific topics include building classification, types of construction, fire protection, means of egress, and occupancy features. The course will enhance technical skills and provide knowledge and tools to apply the Code effectively, efficiently, and reasonably. Students will prepare a facility compliance checklist that can be used in

everyday execution of the principles learned in this course. Prerequisites: None

CMGT 4305. Health and Safety Planning and Management. (; 3 cr. ; A-F or Audit; Every Fall)

Companies can reduce the risk of injury, disease, and death due to environmental hazards by implementing an appropriate health and safety plan. Each plan must be continually reviewed to ensure it is current with new products, scientific evidence, legal parameters, and cultural changes. This course is a comprehensive study of the essential components of an effective safety planning and management system. It also examines the cultural aspects of integrating total safety planning and management into all levels of an operation. Prerequisites: None

CMGT 4422. Advanced Construction Cost Estimating. (; 2 cr. ; Student Option; Every Spring)

Advanced estimating concepts, including procurement, productivity, and value engineering. Working in teams, students develop and deliver a competitive bid for a real project and examine strategies to meet the owner's budget and expectations through value engineering approaches. prereq: CMGT 4022 or instr consent

CMGT 4471. Sustainability for Construction Managers. (; 2 cr. ; A-F or Audit; Every Spring)

Building industry's impact on the environment; sustainable building initiatives; environmental principles and practices in pre-con, construction, close-out and operations; impact on construction manager role, procurement methods, contracts, estimating and scheduling, and team structure; green adoption issues; current technologies; future trends.

CMGT 4542. Building Energy Systems. (; 3 cr. ; A-F or Audit; Every Spring)

Functions of building mechanical systems, their integration with other building components. Residential/commercial HVAC systems, alternative energy sources, energy efficiency, structural implications of mechanical systems, indoor air quality, environmental strategies. Case studies. prereq: [3001, [jr or sr]] or instr consent

CMGT 4544. Materials and Structures I. (4 cr. ; A-F or Audit; Every Fall)

First part of the two-semester statics/materials/structures sequence. Introduces basic statics as it relates to structural analysis, including a fundamental understanding of forces, loads, shears, and moments applied to structural elements. These principles will be applied through the development of beam diagrams using load path analysis. Provides an introduction to building structural systems and their design and construction process, and covers building loads and the methods of analyzing and designing structural elements such as beams and columns. Discusses the path of loads applied to a building and the structural materials specifically, wood and steel that are commonly used to support these loads in building construction. Finally, the course provides an overview of the tools and

techniques used by the structural engineer in the course of building design, as well as basic procedures for choosing materials and member sizes for use in a building system.

CMGT 4545. Materials and Structures II. (4 cr. ; A-F or Audit; Every Spring)

Building on the engineering, materials, and structural concepts of Materials and Structures I, this course explores concrete as a material (components, manufacture, installation, and mix design), and in terms of its structural uses. Soils and aggregates (origin, analysis, and classification) and earthwork/compaction concepts are also surveyed. Laboratory testing of these materials is included. These two broad topics are then combined with masonry concepts to discuss foundations, retaining walls, slabs, and footings. Finally, lateral systems within a structure are discussed. An overall curriculum project (which will refer back to M&S I) will examine a real-world structural system, including loading, engineering, materials, and construction aspects. prereq: CMGT 4544

CMGT 4550. Topics in Construction Management. (; 1-2 cr. [max 12 cr.] ; A-F or Audit; Periodic Fall & Spring)

Seminar. Timely issues/themes in construction management.

CMGT 4562. Building Envelope Design and Construction. (2 cr. ; A-F or Audit; Every Fall)

Science behind design of a weather-tight building envelope. Construction principles for foundations, exterior walls, windows, opening, roofs. Consequences of poor design/construction. Component review of building envelope (shell) elements. Testing/quality control strategies. Construction issues/envelope sequencing. prereq: None, but 4542 or 4572 or professional experience recommended

CMGT 4861. Construction Management Capstone. (; 3 cr. ; A-F or Audit; Every Spring)

Using a case study approach, explores concepts of project management, decision theory, and leadership needed to solve critical, complex, and even routine problems within construction businesses and their projects. Students will be required to think critically and creatively about the possible solutions and be able to effectively articulate those solutions. It will apply all prior construction management-related coursework into a comprehensive construction and facility project management capstone intended to demonstrate mastery of the construction and facility management body of knowledge prior to graduation. prereqs: CMGT 4011, 4021, 4022, and 4031 (which may be taken concurrently with instructor permission).

Coptic (COPT)

COPT 5001. Elementary Coptic. (; 3 cr. ; Student Option;)

Introduction to Coptic grammar and vocabulary, chiefly in the Sahidic dialect.

Ctr for Spirituality/Healing (CSPH)

CSPH 1000. Topics in Whole Life Wellbeing. (; 1-4 cr. [max 16 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Special topics offerings in Integrative Health/Wellbeing. Contact department for semester offerings.

CSPH 1001. Principles of Health and Wellbeing. (; 2 cr. ; Student Option; Every Fall & Spring)

This course explores models of health and wellbeing, investigating the interconnection of our body, mind, and spirit, as well as our connections with other people and the environment. Students will read popular and scholarly articles and watch videos on aspects of health and wellbeing. Students will also practice short weekly wellbeing activities and apply learnings to their own and societal health and wellbeing.

CSPH 1101. Self, Society, and Environment: An Integral Systems Approach to Personal Wellbeing and Engagement. (; 3 cr. ; Student Option; Every Fall & Spring)

Complexity theory approach to internal/external systems that influence lives/health. Interrelated workings of mind, psyche, and body. Means of bringing these into dynamic balance. Environmental/social systems.

CSPH 1202. Music for Wellbeing in Times of Stress and Anxiety. (; 1 cr. ; Student Option; Every Fall)

In this course, we will explore music's tremendous potential to influence our moods and overall wellbeing. Specifically, we will examine (a) the ways in which music profoundly affects the brain and body, (b) how people around the world have used music to support emotional healing, throughout history, (c) current research on music for the reduction of anxiety and distress, and (d) specific ways for using music to promote your own calmness and equilibrium, even in times of high stress.

CSPH 3001. Introduction to Integrative Healing. (; 3 cr. ; Student Option; Every Fall & Spring)

This course provides an overview of the current US healthcare system and US cultural views of health and wellness. Within this context it also provides students with an introduction to various complementary and alternative medical systems (also known as complementary and integrative approaches) that might be integrated into the current way of thinking about health and wellness and treatment of illness/disease. Examples include: whole systems of thinking about health such as traditional Chinese medicine or Native American healing; manual therapies like spinal manipulation and massage therapy; energy therapies like reiki and qigong; mind body therapies like yoga and meditation; and biologically based therapies like botanicals and aromatherapy. prereq: Junior or senior undergraduates (60+ credits), or instructor consent.

CSPH 3101. Creating Ecosystems of Well-Being. (; 2 cr. ; Student Option; Every Fall & Spring)

This course focuses on information, practices, and tools that enable individuals and communities to build capacity for wellbeing.

Students will examine factors and ecosystems that contribute to health, happiness, and wellbeing and will develop a personal plan for health and wellbeing, a critique of an existing ecosystem and ideas for a community yet to be developed. prereq: sophomore, junior or senior undergraduates (30+ credits) or instructor consent

CSPH 3201. Introduction to Mindfulness-Based Stress Reduction. (; 2 cr. ; Student Option; Every Fall & Spring)

The class will introduce students to a variety of techniques by which the stress endemic in a fast-paced competitive culture can be both reduced and worked with constructively. Students will practice and apply experiential techniques of stress-reduction through ? mindfulness? ? the steady, intentional gathering of a non-judgmental awareness into the present moment in various activities ? and examine medical / scientific literature on physiological and psychological elements in the stress response.

CSPH 3211. Living on Purpose: An Exploration of Self, Purpose, and Community. (; 2 cr. ; Student Option; Every Fall & Spring)

Exploring our purpose in life means asking and answering the essential question, ? What makes me want to get out of bed in the morning?? Purpose is that deepest belief within us where we have a strong sense of who we are, where we came from, and where we're going. It is the ability to know yourself, know what you know, to reflect on it, and base your judgments, choices and actions on it. Living on Purpose is a course designed to help students explore questions of meaning and purpose in college and in their lives. In this class, students will examine the context and meaning of their own lives, explore other people's ways of living on purpose, and consider the big questions that shape their present and future. Through three retreats, readings, reflections, experiential exercises, and assignments, the course will offer students time to define their own purpose at this time in their lives and to help build a framework to lead a purposeful life now and into the future. prereq sophomore, junior or senior undergraduates (30+ credits) or instructor consent

CSPH 3301. Food Choices: Healing the Earth, Healing Ourselves. (; 3 cr. ; Student Option; Every Fall & Spring)

Food production in our current industrial system feeds the world, but at a cost to the environment. In nutrition, we often talk about a healthy diet, but only occasionally do we link our food and diet choices to agricultural practices and the health of the planet. This class will link the concepts of human health and planetary health in terms of food. Starting with the framework of complexity theory and gentle action, we will cover human food/nutrition needs and food security, how food is produced from farm to fork, labor, equity and race issues within agriculture and the food system, food choices and the earth's biodiversity, land and water use, climate change, organic and sustainable agriculture, marketing,

processing and distribution, fair trade, and economic policies. prereq: junior or senior undergraduates (60+ credits) or instructor consent

CSPH 4311. Foundations of Hatha Yoga: Alignment & Movement Principles. (; 3 cr. ; Student Option; Every Fall & Spring)

This course is the first course in a sequence of three (3) courses in the University of Minnesota Yoga Teachers? Education & Training Sequence. Students who complete the three courses A-F or S/N may be qualified to register with Yoga Alliance (YA) as a 200 hour Registered Yoga Teacher (RYT). Students who audit the course cannot use the course to be registered with Yoga Alliance. This course will introduce students to the anatomical considerations and understanding critical to executing safe and effective Hatha Yoga instruction. This course includes, as essential to Hatha Yoga, an overview of human gross anatomy and bodily systems (specifically neuro-musculoskeletal and respiratory systems). Students will learn and practice foundational concepts of Hatha Yoga and movement, as related to Yoga Asana. Additionally, students will be introduced to methods of effectively communicating these principles as a Hatha Yoga instructor. prereq: KIN 3027 Human Anatomy for Kinesiology Students (or equivalent, with instructor permission). Recommended: DNCE 1331 for students with no prior yoga experience. These courses can be taken concurrently.

CSPH 4312. Hatha Yoga Philosophy, Lifestyle, & Ethics. (; 3 cr. ; Student Option; Every Fall & Spring)

This course is the second course in a sequence of three (3) courses in the University of Minnesota Yoga Teachers? Education & Training Sequence. Students who complete the three courses A-F or S/N may be qualified to register with Yoga Alliance (YA) as a 200 hour Registered Yoga Teacher (RYT). Students who audit the course may not use the course to be registered with Yoga Alliance. This course will introduce students to the history, tradition, and philosophy of Hatha Yoga with an emphasis on the ethical practice of Hatha Yoga. Through study of classical and modern text alike, students will learn foundational concepts of how to use this knowledge to facilitate a strong Yoga Asana, Pranayama, and meditation practice as well as how to apply these principles in everyday life. Additionally, students learn and practice methods of effectively introducing these principles as a Hatha Yoga teacher. prereq: CSPH 4311 Foundations of Hatha Yoga: Alignment & Movement Principles. These courses can be taken concurrently.

CSPH 4313. Hatha Yoga Teaching Principles & Methodology. (; 2 cr. ; Student Option; Every Fall & Spring)

This course is the third course in a sequence of three (3) courses in the University of Minnesota Yoga Teachers? Education & Training Sequence. Students who complete the three courses A-F or S/N may be qualified to register with Yoga Alliance (YA) as a 200 hour

Registered Yoga Teacher (RYT). Students who audit the course cannot use the course to be registered with Yoga Alliance. This course will provide students the opportunity to study communication and sequencing principles necessary for teaching effective, safe Hatha Yoga classes. Using knowledge and skills gained during the first two Hatha Yoga courses, students will develop skills to design and facilitate Hatha Yoga Asana, Pranayama, and meditation techniques. Students will have the opportunity to practice their learned skills through participation in Service Learning. prereq: CSPH 4311 Foundations of Hatha Yoga: Alignment & Movement Principles and CSPH 4312 Hatha Yoga Philosophy, Lifestyle, & Ethics

CSPH 5000. Explorations in Integrative Therapies and Healing Practices. (; 1-4 cr. [max 16 cr.] ; Student Option; Every Fall & Spring)

Research and practice on therapies, delivery of complementary therapies, and regulatory issues. prereq: Jr or sr or grad student or instr consent

CSPH 5101. Introduction to Integrative Healing Practices. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

By the end of the course, students will demonstrate an understanding of the overall field of integrative healing practices, which includes both integrative and alternative (CAM) therapies. The course will cover theoretical framework, safety, efficacy, and evidence for various therapies and practices. The online version of this course is an approved 1Health Interprofessional Education (IPE) activity. prereq: Jr or sr or grad student; or instructor consent

CSPH 5102. Art of Healing: Self as Healer. (; 1 cr. ; Student Option; Every Fall & Spring)

The initiation of a healer in ancient cultures was a rigorous process that included a personal journey of inner development and transformation that paralleled the learning of the cognitive and physical healing techniques. This course will introduce the student to the concept of the individual transformational journey. The science of mind-body-spirit approaches will be explored through a variety of methods including lecture, scientific literature review, meditation, imagery, journal writing and social support through group interaction. The students will have an opportunity to explore various aspects of self-knowledge, self-awareness, transpersonal (non-local) experiences, and the paradoxical mysteries that will prepare them for their student and personal lives. prereq: Jr or sr or grad student or instr consent

CSPH 5111. Ways of Thinking about Health. (; 2 cr. ; S-N or Audit; Every Fall)

This course is your opportunity to examine, challenge and critically reflect upon your thinking about health. The class meets in a hybrid model that includes in-person, field-trip ?micro-immersion experience? to explore different understandings of health through visits to cultural communities. We include with field trips virtual experiential glimpses into

fundamentally different systems of knowledge often conflicting with the scientific/professional models emphasized in many professional fields on campus. Frameworks for critical thinking, critical self-reflection, cultural self-study, intellectual virtues and supplemental readings are offered to support your effort to step into culturally different knowledge systems and mental models of health and well-being. These frames and approaches offer you a mirror through which your own perspective, thinking and background assumptions of health become more visible and explicit. I ask you to challenge your own thinking and better recognize the culture you carry in your thinking as you attempt to inhabit different cognitive worlds. You will also apply this examination to the professional fields of your interest, sharing your insights with learners in other professions. In this way, we bring together interdisciplinary and intercultural learning. On the dates that we meet virtually, our goal is to create a space that encourages us to share with sincerity our thoughts and emerging insights with one another in Zoom conversations. The synchronous Zoom sessions allow you to benefit from each other's personal and professional take on the immersion experiences as you develop your philosophy, narrative and understanding of health. prereq: jr, sr, grad, or instr consent

CSPH 5115. Cultural Awareness, Knowledge and Health. (3 cr. ; Student Option; Every Spring)

How knowledge can become resource for individual, family, community health. Interactive glimpse of wisdom of cultural communities. Develop capacity to see culture within professional education/practice. Cultural constructs underpinning medical system, role of culture in interaction between practitioner/patient, role of reconnection to cultural heritage in healing. prereq: Jr or sr or grad student or instr consent

CSPH 5118. Whole Person, Whole Community: The Reciprocity of Wellbeing. (3 cr. ; Student Option No Audit; Every Fall & Spring)

This course explores the symbiotic and reciprocal relationship between individual and community health and wellbeing, as well as the many factors/forces which influence that relationship. Drawing upon recent studies in the area of reciprocal/symbiotic effects between individual wellbeing and community wellbeing, this course will include the following core topics: definitions of community and related dimensions of wellbeing, importance of Individual/Community reciprocity (Social Justice, Equity, Safety, and Trust), historical trauma and healing, and individual action and personal empowerment in community transformation. Utilizing elements of the Center for Spirituality & Healing's Wellbeing model and modes of contemplative practice, this course will ultimately assist learners through phases of individual reflection and mindfulness for the purpose of creating more open and reciprocal relationships with entities they describe as their communities. An extension of recent studies in the area of the reciprocal (or rippling) effect

between individual wellbeing and community wellbeing this course will guide individuals in identifying the various communities in which they live or participate, the roles they "play" within those communities and why/ how this knowledge can help prepare them for action and leadership. Main themes of the course will include: - Mindfulness, Reflection and Healing: Historical Trauma and Marginalization. - Roles and Reciprocity: Justice, Equity, Security and Trust between individuals and their communities. - Transformation: Individual Action/Leadership as Bridge between Personal and Community Wellbeing.

CSPH 5121. Planetary Health & Global Climate Change: A Whole Systems Healing Approach. (2 cr. ; Student Option; Every Fall)

Our personal health, along with the health of the human social systems we inhabit, are inextricably entwined with the wellbeing of local and global environmental systems. Living systems (including social, biological, and environmental) are complex adaptive systems that are self-organizing and give rise to emergent properties within a wider ? ecosystemic? context. To effect beneficial and sustainable changes within such systems, leaders must apply (and embody) ecosystemic principles. This course will help students learn how to understand?and to effect sustainable change in?the complex systems in their lives: personal, social, and environmental. Students will explore and develop leadership strategies and skills, using complexity theory as a theoretical framework. We are facing a multifaceted global/planetary crisis. The evidence is clear that Global Climate Change is primarily driven by human behaviors. Drawing upon the new science of Complex Systems, it is also evident that human social systems (economic, political, and cultural) are impelling us towards a planetary ?bifurcation point.? Our only hope to avoid multiple systems collapse is to make deep changes in these systems. Rigid, top-down approaches based on linear and mechanistic paradigms are ill-suited to transformative leadership, which facilitates an open-ended process of organic change. This course helps students develop transformative leadership capacities that are applicable within all types of organizations, within a wide variety of roles and positions. prereq: Jr or sr or grad student, or instructor consent

CSPH 5201. Spirituality and Resilience. (2 cr. ; Student Option; Every Spring)

In-depth exploration of resilience, spirituality, and the link between them. Specific applications of resilience and health realization principles applied to students' personal and professional lives. Relevant literature, theory and research will be explored. This class examines natural resilience and our inner landscape. Discussions are reflective, instructive, and thought provoking. We explore life experiences, examine relevant resilience and spiritual literature, and discover how we operate from the inside out in ordinary life. We learn, live, and share basic principles behind resilience. The study is applicable in a wide variety of disciplines from helping professions,

scientific endeavors, education, to business and more. These lessons are applicable in both personal and professional life. prereq: Jr or Sr or Grad, or instructor consent

CSPH 5212. Peacebuilding Through Mindfulness: Transformative Dialogue in the Global Community. (3 cr. ; Student Option; Every Spring & Summer)

This course is designed to provide a basic understanding of the core principles and practices of peacebuilding through restorative dialogue, using a mindfulness-based approach, in the context of multiple interpersonal, community, national, and international settings. prereq: Jr or Sr or Grad, or instructor consent.

CSPH 5215. Forgiveness and Healing: A Journey Toward Wholeness. (3 cr. ; Student Option; Every Fall)

This course will examine the impact of forgiveness on the process of interpersonal and intrapersonal healing, as well as healing of conflict and trauma at the intergroup level. Forgiveness and healing will be examined in the context of intense interpersonal and intrapersonal conflicts in multiple health care and social work settings, including in families, between physicians and nurses, between patients/clients and nurses/social workers, within communities, among friends, between co-workers, or within ourselves. Forgiveness will also be examined in the larger global context and how principles and practices of forgiveness are being applied in some of the most entrenched political and violent conflicts, such as in Northern Ireland, South Africa, Liberia, Rwanda, and Israel/Palestine. This course is designed to provide a basic understanding of the central elements of forgiveness and healing in the context of multiple micro and macro life settings. The concepts of forgiveness and healing will be examined from multiple spiritual and secular traditions. The underlying philosophical elements of forgiveness and healing will be critically assessed and beliefs and rituals from numerous indigenous and European traditions will be presented and examined. The focus will be upon gaining a more grounded understanding of the process of forgiveness and its potential impact upon emotional and relational healing. The concepts of forgiveness and healing will be addressed in a very broad and inclusive manner, with no assumptions made related to their specific cultural context or meaning. Empirical studies that have examined the impact of forgiveness upon emotional and physical healing will be reviewed. Concepts such as forgiveness and healing are inseparable from the concept of spirituality. For the purposes of the course, spirituality is not synonymous with the dogma and creeds of the major religious traditions in the world, even though religion for many may serve as a pathway to spirituality. Practices within the major religions of the world that foster forgiveness and healing, however, will be explored, along with practices within Native American, Canadian Aboriginal, Native Hawaiian, African, New Zealand Maori, and Eastern cultural traditions. prereq: Jr or sr or grad student or instr consent

CSPH 5225. Meditation: Integrating Body and Mind. (; 2 cr. ; Student Option; Every Fall)
The class approaches meditation as a physical, emotional, intellectual, and spiritual inquiry. Students read selections in a variety of relevant texts and develop the ability to enter a state of calm, meditative awareness. prereq: Jr or sr or grad student or instr consent

CSPH 5226. Advanced Meditation: Body, Brain, Mind, and Universe. (; 1 cr. ; Student Option; Periodic Fall, Spring & Summer)
Students will work to integrate meditation practice into daily life, cultivating awareness of the fundamental oneness of body, brain, mind, and universe. Attention will be given to mind-body synergy in health, the "hard problem" of consciousness in neuroscience, and the emergence of compassion, wisdom, and healing in non-discursive awareness. prereq: CSPH 5225, jr or sr or grad student, or instr consent

CSPH 5303. Pain Management and Evidence Based Complementary Health Approaches. (; 3 cr. ; A-F only; Every Fall & Spring)
This course will cover the evidence regarding effectiveness and safety of CIH practices, and the relationship of CIH to contemporary views of pain, health, and healing. There is a growing evidence base to support some complementary and integrative healing (CIH) approaches for pain management including yoga, mindfulness meditation, chiropractic, and others. In the US, chronic pain impacts over one third of the population and affects more individuals than heart disease, diabetes, and cancer combined. While there is a wide range of conventional medical treatments available to manage pain, many are only marginally effective and are associated with troublesome side effects. Of growing concern is the endemic problem of opioids associated with misuse, addiction, and fatal overdose. Pain sufferers and health providers need effective and safe options for pain management. Some complementary and integrative healing (CIH) approaches have a growing evidence base to support their use, particularly for pain management. This course will introduce students to the theories, mechanisms, use, effectiveness, and safety of commonly used complementary and integrative healing practices. The relationship of CIH approaches to contemporary views and research regarding pain, health and healing, and placebo effects will also be explored. Through reading, reflection, discussion, and critical appraisal, students will develop the necessary skills to synthesize different forms of information, including research, to reach evidence-informed and balanced conclusions regarding CIH for managing pain, restoring function, and enhancing overall health and wellbeing. CIH approaches covered will include: whole systems (Traditional Chinese Medicine, osteopathy, chiropractic, Ayurvedic Medicine, etc.); mind-body practices (contemplative and meditative practices; yoga, tai chi, Qigong, etc.); manipulative and body-based approaches (massage therapy, acupuncture, manipulation); and energy-based approaches (energy medicine, Reiki, therapeutic touch, healing touch). Upon

completion of the course, students will have a foundational knowledge of CIH for pain management and the skills to critically appraise and determine the trustworthiness of different information sources. Prerequisite: Graduate or Professional program student.

CSPH 5305. Introduction to Integrative Mental Health. (; 2 cr. ; Student Option; Every Spring)
Prerequisite: Graduate or Professional student. This course focuses on introducing students to the concept of integrative mental health (IMH). Definitions of IMH, the history and background of the concept, and how it relates to psychiatric care and health care in general will be explored. Students will explore and practice risk-benefit profiles of different modalities in the context of evidence-based mental health care. An emphasis will be placed on the connection between physical and mental health and how that can be approached from an integrative perspective. Topics such as mindfulness and mental health, nutrition and mental health, herbs and supplements in psychiatric care, and the role of functional medicine in IMH will be covered, as well as how psychotherapy and psychotropic medications fit in the IMH framework. Students will review the current diagnostic system for mental health disorders and that can both help and hinder an integrative approach to mental health care. Integrative approaches for assessing mental health concerns will be reviewed, and how to use these approaches alongside a traditional medical approach for maximum benefit will be explored. Students will further review specific modalities for mental health and wellbeing that are less focused on specific systems and more focused on holism and the interplay of systems. Students will also identify and explore different ways of viewing mental health and wellbeing based on cultural and geographical issues, and how these may impact the approaches.

CSPH 5307. Integrative Nursing: Application across Settings and Populations. (; 1 cr. ; Student Option; Every Fall & Spring)
Prerequisites: registered nurse, graduate level registration only. Principles and application of integrative nursing will provide learners with skills that can be immediately applied to nursing practice, advanced nursing practice, and nurse leadership. Clinical case studies and interactive discussion will be used for students to learn how to practice integratively in their current healthcare role or to develop into a new role or paradigm. Case studies will be individualized to fit the needs of all learners for applicable skill building.

CSPH 5313. Acupressure. (; 1 cr. ; Student Option No Audit; Every Spring & Summer)
Open to health professional graduate students or practicing healthcare professionals. Undergraduate students with specific prior coursework may be admitted with instructor approval. By the end of the course students will be able to demonstrate an understanding of the basic principles and applications of Acupressure as a component within the theory of East Asian Medicine. Students will learn the location, indications for use and techniques of

stimulation of acupressure points in sequences specific to common physical, mental, and emotional symptoms. Methods for both self-care and the care of others will be the primary focus of learning. Special focus will be given to the treatment of pain conditions, chronic health conditions, palliative care, oncology, women's health care, and mental-emotional wellbeing. Current literature and research findings will also be discussed.

CSPH 5315. Traditional Tibetan Medicine: Ethics, Spirituality, and Healing. (; 2 cr. ; Student Option; Every Fall & Spring)
This course will introduce students to ethics, spirituality, and healing from the perspective of traditional Tibetan medicine. Traditional Tibetan doctors believe that illness results from imbalance and that treating illness requires correcting the underlying imbalance. Students will learn how to apply these principles personally, integrate them into clinical practice, and consult with a traditional Tibetan doctor. prereq: Jr or sr or grad student or instr consent

CSPH 5317. Yoga: Ethics, Spirituality, and Healing. (; 2 cr. ; Student Option; Every Fall, Spring & Summer)
This course will introduce students to ethics, spirituality, and healing from the perspective of Yoga, an ancient Indian discipline. Students will examine the claim that systematic Yoga practice leads to optimal health. Using critical thinking, students will evaluate philosophical knowledge, scientific evidence, and practical application, and propose research-based programs for integrating Yoga into personal and professional life. Prereq jr or sr or grad; or instructor consent

CSPH 5318. Tibetan Medicine, Ayurveda, and Yoga in India. (; 4 cr. [max 12 cr.] ; Student Option No Audit; Periodic Summer)
Tibetan Medicine, Ayurveda, and Yoga are interrelated, ancient, holistic, Tibetan and Indian traditions that integrate ethics, spirituality, and healing. While studying with expert practitioners in India, students will examine the claim that systematic practice of these traditions promotes optimal health. Using critical thinking, students will evaluate philosophical knowledge, cultural practices, and scientific evidence, and propose research-based programs for integrating these traditions into personal and professional life. prereq: CSPH 5315, jr or sr or grad, or instr consent

CSPH 5319. Yoga and Ayurveda in India. (4 cr. ; Student Option No Audit; Every Spring)
Yoga and Ayurveda are interrelated, ancient, holistic Indian traditions that integrate ethics, spirituality, and healing. While studying with expert practitioners at the University of Minnesota and in India, students will examine the claim that the systematic practice of these traditions promotes healing and optimal health. prereq: CSPH 4311 (and instructor approval), CSPH 5317 or CSPH 5318 or instructor consent.

CSPH 5331. Foundations of Shamanism and Shamanic Healing. (; 2 cr. ; S-N or Audit; Periodic Fall)
In this fundamentals course, students will learn essential elements of the non-biomedical

shamanic ?life-way? at the foundation of all shamanism. Participants will study shamanic beliefs about the individual?s role in life, community, and the universe, and how these ideas are at the core of all shamanic healing practices. They will study cross-cultural healing beliefs and practices, the unique psychology necessary to understand them, and how these approaches may be used with contemporary healing practices and for personal growth. This course provides a core understanding of shamanic philosophies and ritual etiquette, properly preparing students to continue in deeper personal study and/or to more optimally participate in an experiential cultural immersion (e.g. via a Global Healing Traditions course.) Prereq: Jr or sr or grad student, or instr consent

CSPH 5341. Overview of Indigenous Hawaiian Healing. (; 2 cr. ; Student Option; Every Fall)

This course focuses on an introduction to traditional Hawaiian healing including ho?olomilomi (massage), la?au lapa?au (herbal medicine), and ho?oponopono (conflict resolution). Cultural traditions such as oral history and the hula are examined in the context of their contribution to overall wellbeing and sustainability. Hawaiian cultural values are compared and contrasted with western values. Students will have the opportunity to meet with Hawaiian healers, visit culturally relevant sites and reflect on ways that indigenous and conventional practices contribute to health, healing and wellbeing. Prereq: Graduate students in health sciences programs, or instructor consent.

CSPH 5343. Ayurveda Medicine: The Science of Self-healing. (; 2 cr. ; Student Option; Every Fall, Spring & Summer)

This course will introduce students to the basic principles of Ayurveda, the Science of self-healing. It will also cover evidence-based information available on Ayurvedic Medicine. Ayurveda emphasizes the balance of body, mind, and spirit to achieve the optimum health through natural means. Course content will include Ayurvedic constitutional types and practices including food, herbal medicine, detoxification, and massage. Students will examine how Ayurvedic principles and practices can be integrated into personal plans for health and well-being and how Ayurveda is being integrated into healthcare settings.

CSPH 5401. People, Plants, and Drugs: Introduction to Ethnopharmacology. (; 3 cr. ; Student Option; Every Spring)

Ethnopharmacology is the interdisciplinary science of medicinal plants or natural products utilized by humans. These people-plant (typically) relationships have historically and imminently have produced important medicines integral to modern medicine. Ethnopharmacology integrates aspects of botany, natural products chemistry, pharmacology, pharmacognosy, anthropology, medicine, psychology, and comparative religious study. The discipline researches human interactions with biologically active plants (and other living things) as medicines, poisons, and intoxicants with a primary focus on indigenous and non-?Western cultures.

Ethnopharmacology seeks to document plants and animals used by various cultures, and describe their use and preparation. These plants and their preparations are then studied to identify, isolate, and characterize the active compounds responsible for the plants actions on people. This introductory ethnopharmacology course will cover both the ethnographic and scientific aspects critical to the process of drug discovery and the evolution of modern medicine. Students will compare cross-cultural perspectives on human interactions with drugs and examine the variety of human interaction with biologically active organisms in their environment. prereq: Jr or Sr or Grad, or instructor consent. Courses in Botany, Chemistry and Pharmacology are useful but not required.

CSPH 5421. Botanical Medicines in Integrative Healthcare. (; 3 cr. ; Student Option; Every Fall)

Botanical medicines have been used since ancient times in many cultures yet it is still not a significant part of what is considered ? traditional? medicine in our current healthcare model in the United States. Yet there is a growing interest among people in the U.S. looking for alternative treatments for a variety of common illnesses due to concerns of safety, efficacy, and a desire for more ? natural? products than more conventional pharmaceuticals. However, despite this growing interest, healthcare providers may have little to no knowledge regarding botanical medicines in regards to their therapeutic properties, efficacy (or lack thereof), and/or adverse effects. This is further compounded by a wealth of information on botanical medicines in the media and internet, much of which may be misleading and can lead to confusion regarding botanical medicines. The goal of this course is to learn basic properties and preparations of the most common botanical medicines in addition to their therapeutic effects for common disease states. Students will also learn about regulations, quality control, and safety concerns regarding use of botanical medicines. Included in this course is a discussion on the frequently overlooked botanical medicine we use everyday: our food! Relevant plant-based foods will be discussed periodically throughout the course to provide a practical application of the material learned in this course. prereq: Jr or sr or grad student, or instructor consent

CSPH 5423. Botanical Medicines: Foundations and Practical Applications. (; 1 cr. ; Student Option; Periodic Spring & Summer)

There is an accumulating body of scientific evidence supporting the use of some botanicals for preventive or therapeutic purposes. This experiential course offers health professional students and others an integrative and practical approach to medicinal plants that includes theoretical underpinnings and obtaining the skills to gather, process, and apply selected local plants and herbs. Methods are multi-sensory, following an eclectic tradition practiced by many modern herbalists. Review of empirical scientific evidence is included for

key plants. Prereq: Jr or sr or grad in the health professions or instructor permission.

CSPH 5431. Functional Nutrition: An Expanded View of Nutrition, Chronic Disease, and Optimal Health. (; 2 cr. ; Student Option; Every Fall, Spring & Summer)

This course will present a novel approach to the principles of nutrition as they relate to optimal health and the prevention, control or intervention in a disease process. This is a model of nutrition application that complements and expands beyond normal growth and development, an approach that attempts to reduce chronic disease by looking for underlying factors or triggers of disease. This model of nutrition considers system dysfunction a pre-disease state and looks for ways to apply nutrition and restore function. The purpose of the course is to provide an overview of this novel application of nutrition. The course will emphasize the importance of nutrition as a component of self-care. prereq: [Jr or sr or grad student] in Health Sciences or instr consent

CSPH 5503. Aromatherapy Fundamentals. (; 1 cr. ; Student Option; Every Spring & Summer)

This course will provide an overview of essential oil therapy and current aromatherapy practices in clinical settings. Students will examine key safety and toxicity issues with the use of essential oils, and they will critique the scientific and historical evidence about the therapeutic qualities of six essential oils in common use by the public and in clinical settings. prereq: Jr or Sr or Grad, or Inst consent

CSPH 5521. Therapeutic Landscapes. (; 3 cr. ; Student Option; Periodic Fall)

This course will introduce students to the theoretical foundations of healing environments and their application based on the six dimensions of wellbeing. It is a unique course offered only through the Bakken Center for Spirituality & Healing? but carries a wide interdisciplinary application ? such as with the department of horticulture, landscape architecture, therapeutic recreation, botany, public health and other health science. During the past six decades, the field of therapeutic landscapes has grown extensively in multiple settings throughout North American, Europe, Asia, and Africa. The theory and practice focus upon the application of environments and landscapes to benefit the individual or group. Therapeutic Landscapes are a plant-dominated environment (indoor or outdoor) designed to provide numerous and varied therapeutic interactions and purposeful outcomes. It fosters wellbeing through designed and prescribed encounters with plants that stimulate the senses and engage the understanding of the people who visit it. This course is designed to provide a basic understanding of the central elements of therapeutic landscapes in the context of the latest scientific evidence using the Bakken Center for Spirituality & Healing model of wellbeing as a guide. Prereq jr or sr or grad student or instr consent

CSPH 5522. Therapeutic Horticulture. (; 3 cr. ; Student Option; Periodic Summer)

An introduction into the purposeful delivery of plants and plant related activities for therapeutic benefits. This course is designed to provide a basic understanding of the central elements of therapeutic horticulture in the context of multiple health care settings. Students will learn the evidence-based history, principles, precepts, and practical application of therapeutic horticulture. A variety of plant and plant related modalities from current research findings will be discussed related to various populations using therapeutic horticulture as a treatment intervention. Prereq junior, senior, or graduate student or instructor consent

CSPH 5535. Reiki Healing. (; 1 cr. ; S-N only; Periodic Fall, Spring & Summer)

Students will learn the history, principles, education, and practical application of Reiki energy healing. Alternative energy healing modalities and current research findings will be discussed. Following activation of the Reiki energy, participants will learn the hand positions used to perform a self, seated, and full session. A portion of each class meeting will be used to perform Reiki sessions and to discuss experiences. prereq: Jr or sr or grad student or instr consent

CSPH 5536. Advanced Reiki Healing: Level II. (; 1 cr. ; S-N only; Periodic Fall, Spring & Summer)

Students will learn advanced principles and application of Reiki energy healing. The four levels of healing will be further explored, with emphasis on healing at the spiritual level. Following activation of the Reiki energy, participants will learn the energy symbols that allow for energy transfer through space and time. Students will learn to use second level Reiki energy for both distance healing and the standard Reiki session. A portion of each class meeting will be used to provide Reiki sessions and to discuss findings. Current literature and research findings will also be discussed. prereq: CSPH 5535 or instr consent. Students must wait 4-6 months after taking CSPH 5535 before taking CSPH 5536.

CSPH 5541. Emotional Healing and Happiness: Eastern and Western Approaches to Transforming the Mind. (; 2 cr. ; Student Option; Every Fall)

This course will provide in-depth, experiential training in the cultivation of happiness, emotional health and healing for multi-disciplinary professions. Students will learn highly effective, ancient, and contemporary methods for the transformation of afflictive emotions, unhealthy patterns, and behaviors. Students will learn how to increase positive emotions and mind states including: compassion, joy, and equanimity. They will explore meditation and other integrative approaches that bring balance and wellbeing to the mind. Students will practice and explore the applications of these modalities. Students will learn how to creatively apply and integrate them into their lives, relationships, and work with a wide range of patient /client populations and settings. The class content draws on eastern and western approaches to emotional health and healing in a mindfulness-

based, integrative model including: Buddhist and Transpersonal Psychology, meditation practices, spirituality, expressive, creative, & ritual arts. Case examples and neuroscience research on emotions will also be included in the course. Prereq: Jr, Sr or grad student, or instructor consent

CSPH 5555. Introduction to Body and Movement-based Therapies. (; 2 cr. ; Student Option; Every Spring)

This course will cover basic theories and approaches of selected Somatic Therapies and Somatic Psychotherapy (Dance/Movement and body-based therapies). It will include 1) western historic and theoretical perspectives on the use of movement, dance and somatic re-patterning for well-being, 2) introductions and demonstrations of specific somatic approaches, and 3) brief introduction of the application of these techniques to specific populations and settings. The experiential part of the course will include individual, partner and group exercises intended to embody and deepen the topics covered in the class. Prereq: jr or sr or grad student; or instructor consent

CSPH 5561. Overview of the Creative Arts in Health and Healing. (; 2 cr. ; Student Option; Every Fall)

In this course we will explore how professionals in music therapy, art therapy, dance and movement therapy, and poetry/spoken word therapy work in healthcare and community settings to promote healing and well-being. Artist-therapists representing each of these fields, and/or related fields in creative arts in healing, will present their work in synchronous sessions, and guide you in experiential exercises to give you firsthand experience of each modality. You will also read in depth about each of the healing arts modalities in our textbook and research articles, participate in online discussions, and document your experiences with the modalities through journaling and a final paper. prereq: Jr or sr or grad student

CSPH 5601. Music, Health and Healing. (; 2 cr. ; Student Option; Every Spring)

For centuries, people in virtually every known culture in the world have recognized the tremendous potential of music to promote health and healing. In this course, we will explore music's power to heal body, mind, and spirit through examining the main music healing disciplines used today: music therapy, music medicine, clinical musicianship, medical musicianship, music-thanatology, vibroacoustic harp therapy, sound healing, and community music. You will also learn some easy music healing techniques you can use for yourself. prereq: Jr or sr or grad student or instr consent

CSPH 5631. Healing Imagery I. (; 2 cr. ; Student Option; Every Spring & Summer)

In this course you will learn how imagery and imagery interventions are implemented for healing and to promote optimal health and wellbeing. You will experience a wide variety of imagery interventions in class and work on creating your own imagery intervention. The primary instructional strategies that will be utilized for this course include: experiential,

online discussions, readings, lectures, and individual learning interventions. prereq: Jr or Sr or Grad, or instructor consent

CSPH 5641. Animals in Health Care: The Healing Dimensions of Human/Animal Relationships. (; 3 cr. ; Student Option; Periodic Spring)

This online course is designed to introduce students to the core principles of Animal-Assisted Interventions (AAI) in the context of multiple healthcare and social service related settings. Students will learn the history, identify safety guidelines, apply best practices to a variety of species, and evaluate peer-reviewed literature. prereq: jr or sr or grad student, or instructor consent

CSPH 5642. Nature Heals: An Introduction to Nature-Based Therapeutics. (; 3 cr. ; Student Option; Every Fall & Spring)

This graduate level course will cover the basic theories and approaches of Nature-Based Therapeutics including restorative environments, therapeutic horticulture, animal assisted interactions, therapeutic landscapes, forest bathing, green care farming, facilitated green exercise, wilderness therapy, and ecopsychology. The course includes: 1. historic and theoretical perspectives 2. research into specific techniques 3. application of techniques to specific population and setting prereq: Jr, Sr or Grad, or instructor consent

CSPH 5643. Horse as Teacher: Introduction to Equine-Assisted Services (EAS). (; 3 cr. ; Student Option; Periodic Fall & Spring)

This course is designed to introduce students to the field of Equine-Assisted Services (EAS) and to the range of therapeutic and learning opportunities found within equine interactions. The course presents historical and theoretical concepts which helped develop various types of EAS, and how the growth of EAS nationally and internationally has continued to mold the profession. Students will learn to describe safety guidelines, best practices as they are currently known, and precautions and contraindications in EAS sessions. During a one-day face-to-face class, students will observe demonstrations with horses and apply course concepts and topics during this intensive. Students will evaluate peer-reviewed literature in EAS research to identify the strengths and weaknesses of such published material. Students will synthesize reading, lecture and experiential learning to develop an EAS plan for an assigned target group population. prereq: jr or sr or grad or instr consent

CSPH 5701. Fundamentals of Health Coaching I. (; 4 cr. ; A-F only; Every Fall)

This course provides a foundation of Health Coaching theory and practice. We will explore basic tenets of the health coaching model (a 4-pillared construct), including deep listening, effective and empathic communication, and tools for self-development. We examine the core building blocks for optimal health from a holistic perspective. In Health Coaching, each person is recognized as an intrinsically healthy, whole, and wise being, who is the ultimate expert in his or her healing journey.

As a student and coach in training, your own self-development becomes an organic part of your professional evolution, and you will receive support in this. It is the role of the Health Coach to provide a safe environment and professional expertise to support this journey. In this course you will learn how to facilitate the client's process by identifying and benchmarking stages and patterns of change, effectively interfacing with a wide range of interdisciplinary health care providers, and educating clients on a variety of self-care practices. Prereq admitted to Master of Arts in Integrative Health and Wellbeing Coaching; or, Integrative Therapies and Healing Practices Certificate-Health Coaching track; or, Doctor of Nursing Practice; or, non-degree seeking graduate students or students from other graduate degree programs may enroll with permission of the course instructors.

CSPH 5702. Fundamentals of Health Coaching II. (; 4 cr. ; A-F or Audit; Every Spring)

Basic tenets of health coaching model. Tools for self development, deep listening, and effective communication. Core building blocks for optimal health from a holistic perspective. Identifying/benchmarking stages/patterns of change, interfacing with interdisciplinary health care providers, locating resources to assist clients in decision making, and educating clients on self-care practices. prereq: CSPH 5701; admitted to Integrative Health and Wellbeing Coaching MA program; or, Integrative Therapies and Healing Practices Certificate-Health Coaching track; or, instr consent.

CSPH 5703. Advanced Health Coaching Practicum. (; 3 cr. ; A-F only; Every Fall)

This course is designed to provide additional case-based learning in Health Coaching as a means to deepen and mature the process skills that were introduced in Fundamentals of Health Coaching I and II. Increasing confidence in the application of theory and process from earlier courses will be emphasized. Additionally, students will have the opportunity to hone their abilities to identify and utilize broad-based resources in guiding and supporting individual clients. Students are given the opportunity to integrate and apply all previous areas of learning and to explore their resistance, learning edges, and competencies in a supportive supervisory environment. Students will be encouraged to deepen their own style of health coaching as well as their own growth processes. Ethical issues, professional boundaries, and awareness of additional community and professional resources will be introduced here and furthered in internships. Over the course of the semester, students will be coaching 3 community volunteer clients for 5 sessions each. One client for each student will be coached during the weekend classes. prereq: Admission to the Post-Baccalaureate Certificate in Integrative Therapies and Healing Practices--Health Coaching track; or, Masters of Arts in Integrative Health and Wellbeing Coaching. CSPH 5701, 5702, 5706, 5707.

CSPH 5704. Business of Health Coaching. (; 2 cr. ; A-F only; Every Fall)

This course is designed to enable and empower students to apply health coaching skills in structures such as a private coaching business or an existing organization through discussion, reflection and writing. We will explore legal, ethical, and financial issues through visioning, marketing, strategic planning, and energetic intending necessary to start and sustain a Health Coaching practice. prereq: Admission to the Post-Baccalaureate Certificate in Integrative Therapies and Healing Practices-Health Coaching track; or, Masters of Arts in Integrated Health and Wellbeing Coaching program or instructor permission; CSPH 5701, 5702, 5706, 5707

CSPH 5705. Health Coaching Professional Internship. (; 2 cr. ; S-N only; Every Spring)

This course will be for those students actively enrolled in the Health Coaching Track of the post-baccalaureate Certificate in Integrative Therapies and Healing Practices or in the MA program in Integrative Health and Wellbeing Coaching through the Bakken Center for Spirituality and Healing. This internship will be 108 hours of health coaching practice in the field, with 12 hours of supervision. The internship experience offers students the creative opportunity to apply and integrate coaching skills and knowledge gained in the preceding semesters of the program. All encounters will require students to integrate previous experience and knowledge to recruit, schedule, coach and educate individual clients. All students will do 2 group educational sessions to promote health coaching in the organization. Prereq: CSPH 5101, 5701, 5702, 5703, 5706, 5707 (MA only); admitted to Integrative Health and Wellbeing Coaching MA; or, Integrative Therapies and Healing Practices Certificate-Health Coaching track.

CSPH 5706. Lifestyle Medicine. (; 2 cr. ; Student Option; Every Fall & Summer)

This course provides a foundation in the theory and clinical application of lifestyle medicine. Lifestyle medicine aims to address the behavioral and lifestyle bases of common illnesses through health promoting activities and reducing harmful behaviors. In this course, we will explore optimal nutrition, lifestyle, physical activity, and attitude. We will examine the emerging evidence base of lifestyle medicine and how it relates to health promotion and disease prevention. Participants will be introduced to common laboratory and imaging findings, and how they relate to optimal health. prereq: jr or sr or grad, or instr consent

CSPH 5707. Coaching People with Clinical Conditions. (; 2 cr. ; Student Option; Every Summer)

This course provides students with a basic awareness and expanded perception of prevalent clinical conditions, and supports the development of empathy related to these conditions. It continues to build coaching skills specific to coaching clients with clinical conditions. Also supports the development of professional oral and written communication skills. Prereq CSPH 5701, 5702 and 5706; Admitted to one of the following programs: Master of Arts in Integrative Health and Wellbeing Coaching, Integrative Therapies and

Healing Practices Certificate-Health Coaching track, or instructor consent.

CSPH 5708. Mind-Body Science and the Art of Transformation. (; 1 cr. ; Student Option; Every Spring & Summer)

Modern technology has provided deeper insight into how our minds and bodies change based on our focus, intentions, cell environment, habits, stress, and behaviors. We will investigate these new perspectives and how to apply them through transformative practices to change our thoughts, beliefs, bodies, emotions, and paradigms to create sustainable shifts towards optimal health, wellness, and living. Prereq: Jr or Sr or Grad; or instructor consent

CSPH 5709. Health and Wellbeing Group Coaching. (; 2 cr. ; Student Option No Audit; Every Spring)

The Health and Wellbeing Group Coaching Practicum enables the student to learn and apply the theory and practice of group health and wellbeing coaching in a community site-based practicum setting, and to communicate their learning in a professional manner. Upon successful completion of this course, students will be able to: ? Explore and demonstrate how to apply the four pillars into the structure of group coaching. ? Identify and practice skills and tools of group facilitation and coaching. ? Demonstrate the art of managing group dynamics successfully. Prereq: - Admission to the Master of Arts in Integrative Health and Wellbeing Coaching program; or - Admission to or graduation from the Integrative Therapies and Healing Practice Certificate program Health Coaching track; or - Special permission by the Instructors - Satisfactory completion of each of the following courses with a 3.0 or better: CSPH 5701, CSPH 5702, CSPH 5703, CSPH 5705, CSPH 5706, CSPH 5707.

CSPH 5711. Optimal Healing Environments. (; 3 cr. ; Student Option; Every Fall)

This course focuses on the development and implementation of optimal healing environments (OHE) as a healthcare innovation. You will examine the evidence base supporting design, human and care processes and begin to explore how OHE are created. An emphasis will be placed on identifying models of optimal healing environments and leadership strategies that support the diffusion of innovation. prereq: Jr or sr or grad student or instr consent

CSPH 5712. Supervised Health Coaching Skills Advancement. (; 1 cr. [max 3 cr.]; S-N only; Periodic Summer)

This course will provide a health-coaching student the opportunity to advance coaching skills/strategies through individual client practice with the supervision of an experienced health-coaching instructor. The student health coach will engage in recorded in-person and/or telephonic coaching sessions, and receive live feedback from the instructor. The student will assess their own integration of coaching skills through completion of self-skills assessment (level appropriate) that includes self-reflection. A final skills assessment (level appropriate) will be completed utilizing the standardized

tool developed for the UMN Health Coaching program (developed in alignment with guidelines the International Consortium for Health and Wellness Coaching). Prereq CSPH 5701, CSPH 5702; Admitted to Integrative Health and Wellbeing Coaching Master of Arts, Integrative Therapies and Healing Practices Certificate-Health Coaching Track; or instructor consent.

CSPH 5713. Health Coaching for Health Professionals. (; 2 cr. ; A-F only; Every Summer)

This course will explore the basic tenets of 4 Pillars of Health Coaching model--self-awareness, mindful presence, authentic communication, and safe/sacred space. Students will learn to identify/benchmark stages/patterns of change, respectfully collaborate with interdisciplinary health care providers and facilitate clients' ability to achieve sustainable lifestyle changes. Consistent, nonjudgmental application of a holistic perspective of optimal health and wellbeing in patient encounters will be discussed and demonstrated. Students will have the opportunity to see demonstrated and to practice applying tools and practices from motivational interviewing, appreciative inquiry, non-violent communication, and other authentic communication tools. Interprofessional dialogues and exercises will be guaranteed through targeted participation of second year Health Coaching students, who are not taking this course for credit but are volunteering to increase the interprofessional understanding of coaching and team work. This course is not considered preparatory for becoming a professional health coach and does not meet educational hour requirements toward eligibility for the National Board of Health and Wellness Coaching exam, or for Continuing Education hours for NBHWC recertification. Prereq: Admitted to the Doctor of Nursing Practice-Integrative Health and Healing specialty; Admitted to other Doctor of Nursing Practice specialties; Graduate or professional students in health sciences programs; Practicing health professionals; or instructor consent.

CSPH 5805. Wellbeing in the Workplace. (; 3 cr. ; Student Option No Audit; Every Fall) Work and experiences in the workplace have a profound impact on many dimensions of individual and collective wellbeing, including a sense of purpose and meaning, financial and emotional security, quality of relationships and community, physical and emotional health, and the local and global environments. In this course, students will learn multi-disciplinary perspectives on key challenges in creating workplaces that contribute to greater wellbeing. Students will also reflect on their own personal experiences with wellbeing in their current and past work environments and examine strategies for enhancing wellbeing based on interdisciplinary theory and research. Specific topics include the importance of purpose and meaning at work, challenges in achieving work-life integration, the impact of technology on work expectations, and organizational change. This course is based on a whole-life, integrative model of wellbeing and draws from research

and theory across the social, behavior, and health sciences. prereq: jr or sr or grad, or instructor consent

CSPH 5806. Wellbeing and Resiliency for Health Professionals. (; 1 cr. ; Student Option; Every Fall & Spring)

This course will teach health professional students and health professionals self-care strategies that will improve their individual wellbeing and reduce the stress and burnout often experienced in these professions. Improving individual wellbeing will also contribute to greater wellbeing in the teams and systems in which these professionals work prereq: jr or sr or grad, or instructor consent

CSPH 5807. Mindfulness in the Workplace: Pause, Practice, Perform. (; 2 cr. ; Student Option; Every Fall & Spring)

Mindfulness in the Workplace is an experiential course designed to teach core mindfulness skills while also exploring specific applications to the workplace setting. The course explores key mindfulness traits and how they relate to essential workplace skills, such as resilience, task execution, critical analysis, intra/interpersonal growth, leadership, and other related topics. In addition, the course explores how corporate culture can be a barrier or a catalyst for adoption of mindfulness principles. By exploring the above topics from the perspective of the workplace and academic literature, students will gain an understanding of how to apply evidence-informed techniques to help them on the job. prereq jr or sr or grad, or instructor consent

CSPH 5905. Food Matters: Cook Like Your Life Depends On It. (; 1 cr. ; Student Option; Every Fall & Spring)

Food Matters is an experiential-learning, applied nutrition & culinary skills course for health professional students. The course addresses the role of food in specific health conditions and its function in health promotion and disease prevention. The course guides future health professionals in the procurement, preparation, and consumption of sustainably raised whole foods for self care and how this translates to patient care. prereq: Graduate student in a health professions field, or instructor consent

Cultural Study/Comparative Lit (CSCL)

CSCL 1001W. Introduction to Cultural Studies. (AH,WI,DSJ; 3 cr. ; Student Option; Every Fall & Spring)

Culture is a site of struggle, over meanings, values, history, and reality. This course introduces students to cultural studies as a conceptual, interpretive, and interdisciplinary approach to the role that culture plays in defining reality and to the possibilities for contesting those definitions. Through exploring the rituals and practices of culture that shape our perceptions of the world, often in ways we take for granted, the course seeks to develop a critical understanding of the relationships between individual and society, representation and reality, as well as theory and practice

CSCL 1101W. Literature. (LITR,WI; 3 cr. ; Student Option; Every Fall & Spring)

What is literature? Today the term literature embraces all things printed, from fiction to nonfiction to advertising (yes, even your junk mail), from highbrow to low. This course will take a comparative view of the term literature as well as its ideas, practices, and forms. Given that literature historically has been tied to writing, to print, or to the book, what does it mean to study literature today? in an age when the book (and possibly print itself) may be vanishing?

CSCL 1201V. Honors Course: Cinema. (AH,WI; 4 cr. ; Student Option; Every Fall & Spring)

Introduction to the critical study of the visual in modernity, presented through sustained analysis of the cinema and cinematic codes. Emphases on formal film analysis and major film movements and conventions in the international history of cinema. Students develop a vocabulary for formal visual analysis and explore major theories of the cinema. *Students will not receive credit for CSCL 1201V if they have already taken CSCLW, SCMC 1201W, ARTH 1921W, CSCL 1921W, CSCL 1201 or SCMC 1201

CSCL 1201W. Cinema. (AH,WI; 4 cr. ; Student Option; Every Fall & Spring)

Introduction to the critical study of the visual in modernity, presented through sustained analysis of the cinema and cinematic codes. Emphases on formal film analysis and major film movements and conventions in the international history of cinema. Students develop a vocabulary for formal visual analysis and explore major theories of the cinema. *Students will not receive credit for CSCL 1201W if they have already taken SCMC 1201W, CSCL 1201V, SCMC 1201V, ARTH 1921W, CSCL 1921W, CSCL 1201 or SCMC 1201

CSCL 1202W. Media: Word, Image, Sound. (AH,WI,TS; 4 cr. ; Student Option; Every Fall & Spring)

Introduction to the critical and theoretical study of media and technology from Aristotle to the modern world. The first half of the course emphasizes theoretical readings in dialogue with historical apparatuses (printing press, photography, radio, cinema, television) and various expressive objects (the bible, early film, ethnographic sound recordings). The second half turns to the modern culture industry since World War II, and introduces students to the critical study of mass culture, the concept of ideology, and of the relationship between corporate power and media conglomerates.

CSCL 1301W. Reading Culture: Theory and Practice. (AH,WI; 3 cr. ; Student Option; Every Fall & Spring)

Culture and cultural conflict. Reading cultural theory/texts such as film, literature, music, fashion, commercial art, and built environment.

CSCL 1401W. Reading Literature: Theory and Practice. (LITR,WI; 3 cr. ; Student Option; Every Fall & Spring)

How can we read/understand different ways that literature is meaningful? Emphasizes

practice in reading a broad spectrum of world literature, literary theory.

CSCL 1501W. Reading History: Theory and Practice. (HIS,WI; 3 cr. ; Student Option; Every Fall & Spring)

What is history? How can we understand its meanings/uses? Emphasizes practice in reading cultural texts from various historical perspectives.

CSCL 1914W. What is a Poem?. (WI; 3 cr. ; A-F only; Periodic Fall)

This is a course for people who love reading poetry as well as for people who would love to learn how to love reading poetry?and it should be much fun for both! We will examine some of the basic issues in the study of poetry, such as the changing meanings of the term ? poetry,? the distinction between epic poetry and lyric poetry, the importance of the question of love for poetry, and so on. We will study a great variety of poems from different historical periods, literary traditions, and cultural contexts across the globe (including pop songs and music videos by contemporary singers and bands, some of which will be selected by the students). Above all, this is a course in close reading: we will study in detail how poems work, what it is that they do, and why. Ultimately, the question we will attempt to answer is why it is that poetry always has been and still continues to be one of the fundamental forms of human expression. To this purpose, we will discuss how to conduct literary analysis and students will have the opportunity to try their hand at literary criticism, i.e., by writing essays focused on one single poem. (This course fulfills the Writing Intensive requirement).

CSCL 1918. The Hollywood Musical, in one term. (; 3 cr. ; A-F only; Periodic Fall)

Musicals, in theatrical form, span the globe and in cinema, date from the inception of recorded and projected sound. This course limits itself to the Hollywood Musical from 1927 onward, while staying in discussion with Bollywood musicals, Jacques Demy?s French musical masterpieces, the musicals of sub-Saharan Africa (Come Back Africa, Sanknofa, etc.) as well as examples including Carlos Saura?s Carmen. Because of its clear stages, i.e. early/pre-code, classical, punk, and DV, Hollywood musicals map a clear line that is crucial to know, to understand, to criticize and to deviate from in order to understand the genre?s discrete characteristics and how they interact world-wide.. We will study these stages and their filmic examples, with attention to how music has come to specifically affect the film industry in regard to politics, economics, gender, sexual orientation, age, class, and race.

CSCL 3005. Seminar in Critical Thought. (3 cr. ; A-F only; Every Fall)

Exploration of concepts and problems foundational to the practice of critique. Focus on paradigmatic concerns and shifts underpinning humanistic inquiry, from the past to the present, such as representation, narrative, ideology, subjectivity, power and violence, and transformation. Groundwork for

understanding the European critical tradition and key challenges from non-European sources.

CSCL 3111W. Close Reading. (LITR,WI; 3 cr. ; Student Option; Every Fall & Spring)
History/theory of 'close reading' (i.e., the most intense encounter between reader and text) exemplified through critical texts. Students perform close readings of various texts.

CSCL 3117. Concepts of Literary Study. (LITR; 3 cr. ; Student Option; Every Fall & Spring)

This course begins by asking what this strange thing we call literature is, this six-thousand year old form of writing that brings into existence, each time a work is read, a world that did not previously exist. Sometimes that world is one in which we long to live, sometimes it is dark and foreboding, all death and despair; sometimes we seek it out as an escape from our daily lives, sometimes we enter it to be able to better understand those same lives, to come back to them refreshed, not just emotionally but intellectually -- for if literature does involve an immersion in the not-actually-existent, a departure from the everyday world, it does so by engaging us from within the world and in such a way that it is able to recast our everyday world and make us think it in new ways. And literature does all this with that most everyday of things, language. By attending to the ways authors and scholars mobilise language?s expressive, analytic and conceptual resources, with this course we shall learn various methods of critically appreciating and engaging complex literature, while gaining insight into how the practices of literary criticism and theory relate to, and help us understand, the world in which we live, how language shapes and forms that world and literature?s unique place and role in that world and its forming.

CSCL 3120. Poetry as Cultural Critique. (; 3 cr. ; Student Option; Periodic Spring)

Examines the status of "poetry" in several cultures of the Americas bringing together techniques of close reading and broad cultural inquiry.

CSCL 3122. Movements and Manifestos. (LITR; 3 cr. ; Student Option; Every Fall & Spring)

Movements that emerge when a group of writers, filmmakers, artists, composers, or musicians puts forth a new definition of literature, film, art, or music?and sets in motion new relations (aesthetic and social) of word, image, sound. Manifestos?statements of position?that articulate or counter such definitions. Movements created by scholars or critics after the fact. Focuses on one or two related movements (e.g., romanticism and realism, surrealism and negritude, new wave and third cinema).

CSCL 3123. Jewish and German Writing at the Margins: Multilingualism, Race, Memory. (; 3 cr. ; Student Option; Periodic Fall)

How are minority stories, novels, and poems constructed at the margins of a majority culture's language? This course addresses

this question by exploring the complexity of Jewish culture in modernity, with a focus on 20th and 21st century German and American literature. We will first tackle the open-ended and endlessly productive question of what is meant by Jewish culture. What is a Jewish writer and is there such a thing as Jewish writing? What makes a text ? How do Jewish authors challenge the assumptions of majority culture in their work? What role do multilingualism and translation play in the formation of Jewish cultures at the margins? We will trace the lines of affinity between the U.S. and Europe to explore the entangled histories of Germans and Jews, and between German Jews and Turkish Germans, as we look at works that challenge and expand the definition of Jewishness in the 20th century. Additional topics to be considered include how the legacies of American slavery and European colonialism shape our understandings of the Nazi genocide of the Jews, and whether Jewish writing should be understood under the rubric of whiteness? Moving beyond the approach to German Jewish literary studies anchored in Weimar Germany, we will explore the circulation of Jewish memory between Europe and the U.S. in the aftermath of the Holocaust. We will read works by, among others, Franz Kafka, Paul Celan, Gershon Scholem, Hannah Arendt, Benjamin Stein, Walter Benjamin, Barbara Honigmann, H??ne Cixous, Raymond Federman, W.G. Sebald, Allen Ginsberg, Adeena Karasick, Alfred Kazin, Saul Bellow, Philip Roth, Bernard Malamud, Avram Sutzkever, Zafer Senocak. prereq: No knowledge of German required; some work in German must be done in order to count this course toward a German minor or a German, Scandinavian, Dutch major.

CSCL 3130W. Colonial and Postcolonial Literatures and Theory: 1700 to the Present. (GP,WI,LITR; 3 cr. ; Student Option; Fall Odd, Spring Even Year)

Readings in colonial/postcolonial literatures/theory from at least two world regions: Africa, the Americas, the Arab world, Asia, Europe, and the Pacific. Cultural/psychological dynamics and political economy of world under empire, decolonization, pre- vs. post-coloniality, globalization.

CSCL 3141. Classics of World Literature. (LITR; 3 cr. ; A-F only; Every Fall)

This will be an introduction to the concept of world literature ? that is, literature from the Arab, Asian, African, Latin American and Oceanic worlds, not only the English-speaking countries of England and its former colonies. And it will introduce students to some of the basic methods of comparative literary study such as close reading, genre analysis, etymology, stylistics, and translation. We will discuss classic problems confronted within comparative literature such as collective authorship, the spirit of a people, the historical reconstruction of the past through the study of language, comparative cultural value, and the effects on language and learning prompted by technology (in the form, for example, of the ?digital humanities?). We will ask how comparative literature differs from other forms

of literary study, but most of all concentrate on the low-tech (but not anti-technological) reading of literary texts – the student alone with a book in their hand – while mastering as one's own a handful of the enduring classics of world literature – books that have influenced many generations of thinkers and writers but that, oddly, are not typically covered in any college curriculum: not in English classes, humanities introductions, or general knowledge courses. Our focus will be on books that happen both to be central to Western and world culture as part of the inheritance of its educated citizens, but also that happen to be lost at the same time, known about rather than known, invoked but not studied, quoted from but not generally understood. We will be addressing books, in other words, that deeply inspired, but also shaped the thinking of many of the scientists, artists, and scholars of the past, and which were once common knowledge – the expected points of departure for all educated men and women. In our own day, their influence has hardly waned – although not in their original form. Modern film and television industries, for instance, rely heavily on their stories, even as philosophers and theologians cannot express themselves without drawing on their characters, languages, and plots. Even the basic elements of advertising would be unthinkable without being able to draw on their repertoire of common stories, mythological settings, and cast of heroes. In an age of radical departures and brave new worlds, we are interested here in invaluable traditions, which have not lost their relevance.

CSCL 3210. Cinema and Ideology. (AH; 4 cr. ; Student Option; Every Fall & Spring)
The cinema as a social institution with emphasis on the complex relations it maintains with the ideological practices that define both the form and the content of its products. Specific films used to study how mass culture contributes to the process of shaping beliefs and identities of citizens.

CSCL 3211. Global & Transnational Cinemas. (GP; 4 cr. ; Student Option; Every Fall & Spring)
This course explores Global and Transnational Cinemas as alternative traditions to the dominant Hollywood-centered accounts of film history. Students will grapple with the historical, social, and political motivations of cinematic projects that critique traditions of national cinema, or that resist the hegemonic force of neocolonial cultural centers. Italian Neo-realism and the French New Wave will be examined as movements that challenge politics and mass culture. Third Cinema in Latin America and pan-African cinematic movements will be examined through their struggles with both colonialism and the rise of post-colonial dictatorships. Indian and Japanese cinemas of the 50s & 60s will mark out new possibilities of filmmaking and distribution. Finally, counter-hegemonic and experimental movements in U.S.-based film, such as the L.A. Rebellion and Fluxus, will allow students to understand how opposition to Hollywood style could exist within the very centers of cultural power while also reaching out to larger global communities.

CSCL 3212W. Documentary Cinema: History and Politics. (AH,WI,CIV; 4 cr. ; Student Option; Periodic Fall & Spring)
This course explores the ethics and aesthetics of documentary cinema, arguably the very first genre of film. We will track the history of documentary from largely instructional and experimental uses early in its history to become a distinct genre among today's familiar feature films. We will screen early documentaries, which may include shocking ethnographies (Nanook of the North, The Mad Masters). Over the course of the term, the syllabus makes its way to recent exemplars of the genre (films may include: Amy, American Teen, I Am Not Your Negro, A Jihad for Love, Generation Wealth, Fetish, Blackfish and so on). One of our aims will be to explore students' relations as viewers and documentarians themselves (via smartphones, Instagram, etc.) to this participatory, revelatory, and always controversial, politically fraught film practice. Documentary Cinema includes both full class lectures and discussions as well as small group discussion of films and readings, and may include the opportunity for students to create their own personal documentary. Intellectually, the course balances out a study of the grammar of documentary as an artistic practice with explorations of the ways the genre reflects broader currents of cinematic and cultural history. By the end of the semester, students should have a stronger understanding of the ways documentary cinema opens our senses to the world around us.

CSCL 3220W. Screen Cultures. (AH,WI,TS; 3 cr. ; Student Option; Every Spring)
Screens increasingly define the ways that we communicate with one another and how we encounter the world. This course will offer a critical, historical approach to the emergence of 'screen cultures' from the beginning of photography and cinema to our own age of ubiquitous touch screen displays. We will pay a great deal of attention to the ways that such technologies drive our patterns of consumption and production as well as how they create and define our social environments.

CSCL 3221. On Television. (CIV; 3 cr. ; Student Option; Every Fall & Spring)
We will study writings on television and specific TV shows from a variety of angles to understand the rise of American broadcast technologies, how race and class are crafted on TV, representations of gender and the home, postmodernity and late capitalism, the rise and demise and of taste, global television and the public sphere, the production of 'reality' in our present historical moment, and changes in televisual technologies. Throughout the course, we will also consider what constitutes television?the technology, the form, and the content?and learn to read these three facets of it concurrently.

CSCL 3231. Comedy: Media, Politics & Society. (AH; 3 cr. ; Student Option; Every Fall & Spring)
What makes some jokes so funny? And why do we laugh? In this course, we will approach the topic of comedy from every angle. We will study theories and philosophies of humor,

and will survey many different forms of the genre?film, television, viral web videos, internet memes, stand-up, improv, sketch comedy, absurdist theater, and political satire. And, of course, we will write and perform our own comedy in the classroom. By studying the history and formations of comedy, we will think about how jokes can help us change the rules of everyday life and imagine a new way forward.

CSCL 3251. Popular Music and Mass Culture. (AH; 3 cr. ; Student Option; Every Fall & Spring)

This course investigates the ways popular music is imbricated with the our identities, social affiliations and attitudes towards others on the scale of millions of people?what we might call 'mass culture.'? We will explore how popular music produces emotion, a sense of intoxication, and erotic desire; how it can be linked with self-discipline, bodily exercise, state security, sovereign authority, patriotism, courage, punishment, and violence; and how music might be heard related to labor and work, consumerism and consumption, and capitalism more broadly. We will puzzle over the ways music can give coherence to a cultural group, accompany moral education and action, challenge or reinforce gender conventions, mobilize and disperse political resistance, or lead one into a trance of spiritual and religious ecstasy. While we will still attend to a variety of 'purely?' musical elements both large and small (chords, verses, choruses, singing styles, lyrics, etc.), our central focus will be on forming a more philosophical view of its functions within popular culture. Genres to be discussed include rock, pop, hip-hop, R&B, electronic dance music, performances of the national anthem, and experimental music.

CSCL 3282. European Intellectual History: The Modern Period, 1750-Present. (3 cr. ; Student Option; Spring Even Year)
Second of a two-semester course. European thought in its historical/cultural context. Emphasizes development of philosophical/scientific thought, its relation to thinking about the individual and the community. Readings are from original sources.

CSCL 3310W. The Rhetoric of Everyday Life. (CIV,WI; 3 cr. ; Student Option; Every Fall & Spring)
How discourse reproduces consciousness and persuades us to accept that consciousness and the power supporting it. Literary language, advertising, electronic media; film, visual and musical arts, built environment, and performance. Techniques for analyzing language, material culture, and performance. (previously 3173W)

CSCL 3322. Visions of Nature: The Natural World and Political Thought. (ENV; 3 cr. ; Student Option; Every Spring)
Scientific and cultural theory concerning the organization of nature, human nature, and their significance for development of ethics, religion, political/economic philosophy, civics, and environmentalism in Western/other civilizations.

CSCL 3323. Science and Culture. (AH; 3 cr. ; Student Option; Every Spring)

Science and technology engaged through historical and cultural manifestations from film, literature, and YouTube to scientific and philosophical essays. Relations among humanities, science, economics, politics, philosophy and history. Psychiatry and drugs, food and agriculture, sexuality, religion and science, climate change.

CSCL 3334. Monsters, Robots, Cyborgs. (LITR; 3 cr. ; Student Option; Every Fall & Spring)

Historical/critical reading of figures (e.g., uncanny double, monstrous aberration, technological hybrid) in mythology, literature, and film, from classical epic to sci-fi, cyberpunk, and Web. (previously 3461)

CSCL 3335. Aliens: Science Fiction to Social Theory. (DSJ; 3 cr. ; Student Option; Every Fall & Spring)

In English, the word "alien" designates both immigrants from other countries and beings from other worlds. Aliens of all sorts are everywhere; they tend to provoke fascination, fantasy, and for many, fear and anxiety. But the deeper philosophical significance of aliens says as much about us as it does about them. In this course, we will explore these questions through a range of novels, films, and artworks from the 1890s to the present day, with an emphasis on science fiction and American popular culture.

CSCL 3350W. Sexuality and Culture. (DSJ,WI; 3 cr. ; Student Option; Periodic Fall & Spring)

Historical/critical study of forms of modern sexuality (heterosexuality, homosexuality, romance, erotic domination, lynching). How discourses constitute/regulate sexuality. Scientific/scholarly literature, religious documents, fiction, personal narratives, films, advertisements.

CSCL 3351W. The Body and the Politics of Representation. (HIS,WI; 3 cr. ; Student Option; Every Fall & Spring)

Western representation of the human body, 1500 to present. Body's appearance as a site and sight for production of social and cultural difference (race, ethnicity, class, gender). Visual arts, literature, music, medical treatises, courtesy literature, erotica. (previously 3458W)

CSCL 3352W. Queer Aesthetics & Queer Critique. (DSJ,WI,LITR; 3 cr. ; Student Option; Periodic Fall & Spring)

Is there such a thing as global queer aesthetic? If so, how do various modes of representation and expression (novels, poetry, and sophisticated uses of language across film, television and video, digital media, pop music and punk) elaborate and enact queerness in particular material ways while also helping to create a larger, intermedial queer culture?

CSCL 3405. Marx for Today. (AH,DSJ; 3 cr. ; Student Option; Every Spring)

A century and a half after the publication of Karl Marx's *Capital*, Vol. 1 (1867), this course will reflect on the political urgency of our current moment in order to understand the relevance and complexity of Marx and the Marxist tradition. We will pursue an intensive study of primary readings written by Karl Marx himself,

exploring the social, philosophical, and political history of Marxist thought and familiarizing ourselves with key concepts such as labor-power, primitive accumulation, the commodity, use value, exchange-value, surplus-value, crisis, money, and capital. As we study Marx as a theoretician, we will also examine his work as a political revolutionary, writer, and correspondent with many of the most important revolutionary figures of his day. Here we will foreground his analysis of the labor of enslaved Black persons in the plantation economies of the Southern United States—which he ties to the labor markets of capitalism in Europe—as well as his more explicit critiques of slavery and colonialism. Following this close reading of Marx and the Marxist tradition, we will consider the ways that critical thinkers and political activists, both in the United States and globally, continue to resist, create, and dream under the banner of Marxism throughout the twentieth century and into our own new century. We will center questions of racial justice through the writings of W. E. B. Du Bois and contemporary Marxist scholars of race, indigeneity, and diaspora, focusing on Du Bois's attention to the links between race and social class in America. Alongside critical reappraisals of Marx's thought, we shall think about the influence of Marx's writings on political activists in the Black Panther Party and the American Indian Movement, and on American labor, as well as on South American revolutionaries like Carlos Marighella. We will then move to a study of Marxist feminism, linking race and gender in U.S. and global Marxisms through readings by Black Panther activist and intellectual Angela Davis, the social historian Nancy Fraser, and Italian Marxist feminist Silvia Federici. We will revisit the question of gender oppression and feminist resistance through a Marxist frame, with reference to the revival of socialist prospects in the work of Jodi Dean and Mackenzie Wark. Finally, we will examine the contemporary fight over reproductive rights and the history of the "Wages for Housework" movement. From these readings and conversations we will think about how Marx's ideas and their larger legacy can help us to understand our current moment and our political, social, and ecological futures. In as much as this is a course on theoretical perspectives, it will also be one that seeks to use Marx, and the Marxist tradition, to develop critical perspectives and solutions to pressing issues of racial injustice, social inequality, and environmental devastation.

CSCL 3412W. Psychoanalysis. (WI; 3 cr. ; Student Option; Every Fall)

The work of Sigmund Freud has withstood years of controversy to install itself as foundational to the way we understand the relationship between individual desires, social structures, and cultural practices. This is in part because Freud's writings were not restricted to the domain of psychology. His writings also renewed grand philosophical questions in ways that dramatically transformed them. He asked: What is a human subject? What are the causes of her actions? What are the nature and motivations of her engagement with others? In the many decades since his early

publications, Freud's key concepts like the ego, the superego, the id, the unconscious, and the significance of dreams and jokes have had an enduring influence in Western culture. This course introduces students to a range of psychoanalytic writings from Freud's early theories of mental structure and human development to contemporary applications, re-workings, and critiques of psychoanalysis. We will discuss concepts like the unconscious, sexuality, disavowal, repression, neurosis, melancholia, the pleasure principle and the death drive. By the end of the course, we will have developed a sense of the uses and limitations of psychoanalysis for understanding pressing global issues such as sexual identification and its formation, racism, neo-fascism, extreme political division, war and nationalism, climate change, and the destruction of democratic ideals. Authors read may include Melanie Klein, Franz Fanon, Jacques Lacan, Julia Kristeva, David Eng, Slavoj Žižek, Henry Stack Sullivan, Kalpana Sheshadri-Crooks and Margaret Mahler. Readings will be complemented with short stories, literary excerpts, film clips, as well as discussion of current political issues.

CSCL 3425W. Critical Theory and Social Change. (AH,WI,DSJ; 3 cr. ; Student Option; Every Fall & Spring)

This course introduces influential thinkers in the field of Critical Theory who wield theory to document and drive social change. As philosopher James Bohman notes, critical theory "has a narrow and a broad meaning." Narrowly, the term designates twentieth-century German theorists "in the Western European Marxist tradition known as the Frankfurt School," who define "a critical theory [as] critical to the extent that it seeks human emancipation from slavery, acts as a liberating influence, and works to create a world which satisfies the needs and powers of human beings." So conceived, critical theory is intimately entwined with an anti-slavery, emancipatory politics. This twinning anticipates a second, broader compass of critical theory, as Mark Christian Thompson and others argue, in which U.S. and global Black, Indigenous, and other thinkers of color marshal theory to decode and dismantle power and to articulate anti-racist visions of social justice and social change. This course braids these strands of twentieth- and twenty-first-century critical theory to examine the ways in which our lives are conditioned by systems, ideologies, and histories of power relations that reflective critique can illuminate. We begin by reading pivotal theorizations of culture (Georg Simmel), critical theory (Max Horkheimer), and intersectionality (Patricia Hill Collins): the notion that race, class, gender, sexuality, and other social determinants are mutually constitutive and thus produce ever-shifting dynamics of power and oppression. Unit 1, "Symptom and Structure," draws on the work of Jackie Wang, Angela Y. Davis, Malcolm X, Sheldon George, Alfredo Carrasquillo, and Joshua Javier Guzman to look under the hood of the carceral and mental health systems and see how the structural logics of these institutions engender racial disparities and psychic trauma. With the

psychoanalytic theory of Sigmund Freud, we explore?via Willy Apollon, Jean Rouch, and Michael Taussig?how spirit-possession as anti-slavery and anti-colonial resistance may imagine race and consciousness differently. In Unit 2, ?Poetics and Practice,? we turn to the making of history in two sites of knowledge production?the archive and the university?and reimaginings of the past as a revolutionary force in the present and for the future. Bridging Frankfurt School (e.g., Walter Benjamin and Theodor Adorno) and contemporary theorists (e.g., Michel-Rolph Trouillot, Saidiya Hartman, bell hooks, ?douard Glissant, Aurora Levins Morales, Michael Rothberg), we listen for the ways in which Black, Latinx, and other marginalized histories in the United States and the Americas (e.g., Haiti and Puerto Rico) speak through and against the silences of dominant archives, turning history into poetry that repairs and reclaims the past. Our final unit, ?Language and Liberation,? studies how language defines race and culture in the shadow of coloniality and decolonization. In dialogue with key thinkers of the past century (W. E. B. Du Bois, Frantz Fanon, Herbert Marcuse), we bring contemporary scholars Nelson Maldonado-Torres, Christopher Pexa, and Yuichiro Onishi?who theorize the work of language in Black being, Indigenous peoplehood, and Black-Asian solidarity? and Kwame Anthony Appiah, Lewis Gordon, and Barbara Christian, who problematize ? culture? and probe the potentials and the limits theory poses for liberation. Throughout, we tie our discussions to local context: the police murder of George Floyd in Minneapolis and the Movement for Black Lives, the Ojibwe and Dak?ta struggle for self-determination, the fight for Black studies and the redress of histories of racism and anti-Semitism at the University of Minnesota. We probe our roles in the cultures of the United States, the Twin Cities, and the University?as theorists and actors?and consider how we can motivate social change for justice.

CSCL 3896. Internship for Academic Credit. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)

CSCL students who would like to pursue paid or unpaid internships can also earn credit toward their degree. This course includes a series of reflective assignments on the internship experience that help students develop their career goals, aspirations, and plans. CSCL students often find internships at media companies, advertising agencies, film festivals, arts institutions and galleries, publishing houses, non-profits, and community organizations. Typically a student?s work is supervised and evaluated by a site coordinator and the instructor works with a student on readings and assignments. Credits taken are determined by the number of weekly or total hours for onsite internship work, course readings, assignments, and meetings. The following are minimum hours and weekly averages based on a 16 week semester: 1 credit - 45-hour minimum (average 3-4 hours per week) 2 credit - 90-hour minimum (average 5-7 hours per week) 3 credit - 135-hour minimum (average 8-9 hours per week)

4 credit - 180-hour minimum (average 10-12 hours per week) There is also a deferred enrollment section of the course that allows students to take a summer internship followed by fall enrollment for credit. Students interested or registered in this section must contact the instructor at the start of their internship or during registration for more information. Students are also encouraged to apply for CLA Internship and Leadership Scholarships. For more information on this course or internship possibilities, please contact the Film Studies Coordinator (stou0046@umn.edu). Students can also use Goldpass to search for internship possibilities.

CSCL 3910. Topics in Cultural Studies and Comparative Literature. (; 3 cr. [max 24 cr.] ; Student Option; Periodic Fall & Spring) Topics vary by instructor and semester

CSCL 3993. Directed Study. (1-3 cr. ; Student Option; Every Fall & Spring) Guided individual reading or study. Prereq-instr consent, dept consent, college consent.

CSCL 4993. Directed Study. (1-3 cr. [max 6 cr.] ; A-F or Audit; Every Fall, Spring & Summer) Guided individual study.

CSCL 5302. Aesthetics and the Valuation of Art. (3 cr. ; Student Option; Periodic Fall & Spring)

Society, ideology, and aesthetic value considered in light of recent critical theories of visual art, music, and literature. Meditations of place, social class, gender and ideology on aesthetic judgment in post-Renaissance Western culture.

CSCL 5303. Sound Studies. (; 3 cr. ; A-F or Audit; Fall Odd Year)

What is sound? Among the various ways of absorbing the world through the senses (looking, reading, watching, touching, tasting), what is unique to the actions of listening and hearing? And over the course of human history, how has sound been variously deployed, framed, and constructed? This course covers a diverse range of topics in the fast-developing interdisciplinary field of Sound Studies from the philosophy of sound to psychoanalytic theories of the voice, the gendered histories of telephones, accounts of radio and decolonization, film sound, sonic expressions of race, the politics of global popular music, mobile media technologies, and cutting-edge approaches to sound art.

CSCL 5305. Vision and Visuality: An Intellectual History. (; 3 cr. ; A-F only; Periodic Fall & Spring)

Central role of vision/visuality in modernity. Modern age as scopic regime. Ways that ideas/ideologies of perception have shaped aesthetic experience within social existence.

CSCL 5331. Discourse of the Novel. (; 3 cr. ; Student Option; Periodic Fall)

Comparative study of the novel, 18th century to present. Its relations to ordinary language practices, emergent reading publics, technologies of cultural dissemination, problems of subjectivity, and its role in articulating international cultural relations.

CSCL 5401. Origins of Cultural Studies. (; 3 cr. ; Student Option; Periodic Fall & Spring) Intellectual map of the creation of cultural studies as a unique approach to studying social meanings. Key figures and concepts, including nineteenth- and early twentieth century precursors.

CSCL 5411. Avant-Garde Cinema. (; 4 cr. ; A-F or Audit; Every Fall)

In 1939, the art critic Clement Greenberg defined avant-garde art in opposition to the ? kitsch? of mass-produced culture. To what extent does this conception of the avant-garde apply to the cinema?an institution and art form that supposedly requires machines and industrial modes of production? This course introduces students to key works of avant-garde and experimental film made by artists working on the margins of commercial film and mainstream art institutions. From the first half of the twentieth century, we will consider influential films made under the banners of Futurism, Constructivism, Surrealism, and Dada, and discuss their complex relation to Hollywood commodities. In the postwar period, we will explore a range of increasingly global experimental film practices, from the queer underground cinema in Latin America to the use of film projection in avant-garde performance. We will examine these practices in light of larger debates about medium specificity as well as the aesthetics and politics of the personal vs. the structural. In the final unit, we will reflect on the way contemporary artists, scholars, and curators have assembled a tradition of avant-garde cinema in the age of new media, and contemplate new directions we want it to take.

CSCL 5555. Introduction to Semiotics. (; 3 cr. ; Student Option; Periodic Spring)

Problems of the nature of the sign; sign function; sign production; signifying systems as articulated in philosophy, linguistics, anthropology, psychoanalysis, and art theory. Application of semiotics to various signifying practices (literature, cinema, daily life).

CSCL 5666. Film Music: Theory, History, Practice. (4 cr. ; A-F only; Periodic Fall & Spring)

Role of music in American/European film from early 20th century silent cinema to near present. Narrative features, shorts, documentary, horror, thriller, science fiction, comedy, cartoon. Film music as social/cultural practice and as part of political economy within culture industry.

CSCL 5833. Marx, Freud, Nietzsche: Intellectual Foundations. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Three thinkers who defined modernity: Marx, Freud, and Nietzsche. Central tenets of their thought/terms associated with their theories. Their careers portrayed against the background of their times; their place in intellectual history.

CSCL 5910. Topics in Cultural Studies and Comparative Literature. (; 3-4 cr. [max 32 cr.] ; Student Option; Every Fall, Spring & Summer)

Topics specified in Class Schedule.

CSCL 5993. Directed Study. (1-3 cr. [max 9 cr.] ; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study. Prereq-instr consent, dept consent, college consent.

Curriculum and Instruction (CI)

CI 1001. Introduction to the Elementary School. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Three modules focus on important aspects of contemporary urban elementary school teaching: the principal's role, the teacher's role, and the students. Central to each module are school-based visits, observations, and interviews.

CI 1032. Creating Identities: Learning In and Through the Arts. (AH; 4 cr. ; Student Option; Every Fall & Spring)

?Creating Identities: Learning In and Through the Arts? gives you opportunities to create art in different mediums including storytelling, photomontage, movement, as well as a creative medium of your choice in order to reflect your understanding of a social justice issue. In CI 1032 you join a learning community for discussing, analyzing, and making meaning of this artistic production. No prior experience is needed; come with an open mind and imagination as well as a willingness to experiment. An important emphasis in the class will be on finding your own ways to transform ordinary materials. We will introduce you to specific artistic techniques and in turn you will learn to take creative risks, think metaphorically, explore the unknown, improvise, brainstorm, and invent your own methods of working. Each of you bring to the class different kinds of knowledge and abilities. To be successful in this course you need to be willing to work hard, to explore territory that may not be familiar to you, to be reflective about what you are doing, and to learn from your diverse classmates and in turn help them achieve the same goals. The instructors of ?Creating Identities: Learning In and Through the Arts? shape the course with the assumption that identity is at the heart of educational experiences and that the habits of mind associated with the artistic production are primary vehicles for multimodal learning. We will experience how arts-based learning engenders higher order thinking, the creative process, reflection and perseverance. This course gives you the opportunity to both produce as well as analyze art in order to experience how creative expressions reveal aspects of our personal and social identities that have an impact on how we learn. Through mediums including photography, film, performance, music, painting and sculpture, we will explore how artists are influenced by cultural elements such as the built and natural environments, gender, religion, nationality, and socioeconomic status, and how artists, in turn, shape our perceptions of culture and identity. Through writing and discussion, we will consider how the arts can both reflect and impact our perceptions of identity and our reflections of ourselves

as learners. As you move further into your academic studies and your career, you will intersect with people from differing cultures and places. The work in this class will help you become more comfortable with and welcome the benefits that come with intercultural learning. Interactions with classmates and cultural production of indigenous, immigrant, international and Western artists, allows you to have a greater understanding of, appreciation for and acceptance of the ways of knowing a variety of cultures can provide, and the confidence that you can reciprocate in kind.

CI 1121. Educational Movements Past and Present: Multicultural Perspectives. (DSJ,HIS; 4 cr. ; Student Option; Every Fall & Spring)

Students will explore diverse historical perspectives regarding educational movements in the U.S. since the Civil War. Through challenging questions and problems in educational history, students will develop critical frameworks necessary for interpreting America's educational past and how it is tied to culture, politics, privilege, and power.

CI 1124. Global Stories of Education: Literature for Young Adults. (GP,LITR; 3 cr. ; Student Option; Every Fall & Summer)

Using young adult novels, short stories, nonfiction, and poems by immigrant, indigenous, minority, and refugee authors, students explore learning experiences of youth. Through immersion in the global lives and identities of characters who cross geographic and cultural borders, students consider what stories teach and how young people learn.

CI 1150. Special Topics History. (GP,HIS; 4 cr. ; Student Option; Every Fall & Spring)

History topics in education.

CI 1512. Nature in the City. (BIOL,ENV; 4 cr. ; Student Option; Every Fall & Summer)

Science and conservation of biodiversity in the Twin Cities. Ecology and evolution of species and communities adapted to urban environments. Socially responsible and culturally sensitive interventions to environmental problems.

CI 1563. Physics by Inquiry. (PHYS; 4 cr. ; Student Option; Every Fall & Spring)

Laboratory-based introductory class where students learn by experimenting and model building and testing. Topics include electric circuits, light and color, and observational astronomy. Emphases include the nature of science and science learning, effective strategies for team-based learning, and logical reasoning skills.

CI 1806. College Algebra through Modeling. (MATH; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Math modeling, including linear, polynomial, rational, exponential, logarithmic functions, counting/probability. Excel or calculators used to develop equations/graphs from theoretical/real interdisciplinary data. Projects enable students to use models to examine trends, make predictions. prereq: Three yrs high school math or grade of at least C+ in PsTL 0731 or PsTL 0732 or CI 0832 or placement test score or instr consent

CI 1826. Social Change, Social Justice: An Introduction to Applied Calculus. (MATH; 3 cr. ; Student Option; Every Fall & Spring)

This class is an introduction to differential calculus: instantaneous rates of change, derivative graphs and formulas, multivariate scenarios, partial derivatives and integration. Applications focus on analyzing change in social science scenarios such as gentrification and racial disparities in housing using authentic Minnesota data. Prerequisites: four years high school math OR grade of at least B+ in CI 0832 or PSTL 0732 OR placement test score OR instructor consent.

CI 1871. Computer Literacy and Problem Solving. (; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Competencies in computer applications used in the social sciences and business to solve problems. Using advanced word processing techniques to create complex documents, electronic spreadsheets to analyze data and present it graphically, database management programs to store, organize, and query data, and presentation software to communicate ideas.

CI 1908W. Children and Other Talking Animals: Animal Tales in (Mostly) Children's Literature. (CIV,WI; 3 cr. ; Student Option; Every Fall)

Humans and animals coexisted for millennia until humanity exiled itself from nature in order to rule it. In this course we look at the tradition of animal tales as the never-entirely-suppressed memory of this kinship and a hope for our future. We explore how animal tales have been used through the ages to reflect diverse ethical conceptualizations of the human relationship with animals and the natural world. We study the connections between children and/as talking animals. We read a range of animal tales and consider their meanings for the environmentally threatened global world.

CI 2311W. Introduction to Technology and Ethics in Society. (CIV,WI; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Values and ethical issues related to technology use in education, workplace, and family/community life.

CI 2312. Sex, Drugs, and the Internet: Educational Perspectives. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Immersive exploration/critique of advantages/risks associated with society's pervasive use of the Internet. Dangers and strategies to combat them. The Internet's potential for teaching/learning.

CI 3001. Engaged Arts Learning in Elementary Classrooms. (; 2 cr. ; A-F or Audit; Periodic Fall & Spring)

Introduction to pictorial expression, design, and the function of art in the social environment.

CI 3101. Issues in Urban Education. (3 cr. ; Student Option; Every Fall & Spring)

Issues in urban education examines and critiques contemporary commentary on urban education through texts, social media, case studies, and service-learning in schools. Through examination of socio-cultural and

socio-political contexts of urban education, this course considers the role of teachers, curriculum, and community in urban schooling.

CI 3150. Special Topics: Education and Society. (; 1-6 cr. ; Student Option; Periodic Spring & Summer)
Special topics, current trends regarding education and society.

CI 3211. Introduction to Elementary Teaching. (; 3 cr. ; A-F only; Every Fall & Spring)
Classroom management, instructional planning, working with families in elementary classroom. Assigned readings, lectures, classroom activities, assignments. prereq: [Elementary ed or early childhood ed foundations major], concurrent practicum experience

CI 3212. Field Experience: Elementary Teaching. (; 2 cr. ; S-N only; Every Fall & Spring)
Field-based experience. Students apply learning from their University courses to elementary school setting, connecting theory, research, and practice. prereq: concurrent registration is required (or allowed) in 5111, [elementary education foundations or early childhood foundations] major

CI 3283. Field Experience in Special Education. (; 2 cr. ; S-N only; Every Fall & Spring)
Field-based experience. Students apply learning from their university course in elementary school setting, linking theory, research, and practice. prereq: concurrent registration is required (or allowed) in EDPSY 5613, concurrent registration is required (or allowed) in EDPSY 5616, elementary education: foundations major

CI 3342. Social Media & Connected Learning. (; 3 cr. ; A-F or Audit; Every Fall & Spring)
This course investigates current and potential future impacts of social media using connected learning (Ito) and participatory culture (Jenkins) as a theoretical lens to understand the ways in which it can be used for education. Connected learning focuses on learning "pathways" that move across formal and informal settings to transform the very nature of learning - what it means, how it occurs, and where it takes place. In addition to gaining a philosophical understanding of participatory practices in spaces of connected learning, students will develop conceptual and practical expertise in using social media applications and social networking platforms for learning, creative expression, forming connections, and interacting as global citizens. The overarching aim of this course is to help students become critical consumers and ethical producers of new media in various forms for learning purposes. A balanced analysis and critique of both the affordances and the challenges associated with social media use as a tool for learning will be an essential component of the course and will frame each social media application and network that is explored and authentically integrated into the course. An examination of social media practices and influences will

include their use in both formal education as well as informal learning contexts.

CI 3401W. Diversity in Children's Literature. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)
Classic/contemporary books for children in all genres, created by authors/illustrators. Research in transactional theory. Cultural authenticity. Reading, discussion, group activities, interactive lectures, projects.

CI 3421W. Writing on Education: Pivotal Experiences of Teaching and Learning. (WI; 4 cr. [max 8 cr.] ; Student Option; Every Fall & Spring)

Reflection and narrative play important roles in developing deep understanding of teaching and learning. In this course students will read and write texts about critical moments of education, and through this work develop reflective, analytic, and writing skills that will enable them to become more thoughtful and effective citizens in the world of education. Whether students hope to become teachers, youth workers, community organizers, curriculum designers or administrators in educational settings, this course invites students to consider how writers represent experiences of teaching and learning and how these reflective narratives can inform our own work and worlds. Students will explore the ways that writers of creative nonfiction use language to examine pivotal experiences of teaching and learning in diverse contexts, and add their own voices to this rich body of work by producing their own texts. Through study of writing, students will develop familiarity with writing choices and practice employing these techniques and processes in their own writing. Students will read personal essays written by writers in the US who reflect on their own experiences and interrogate how aspects of their identities (including race, ethnicity, gender, family history and language) inform pivotal experiences of teaching and learning. Students will compose texts that explore their own experiences within a constellation of formal and informal educational settings and the questions raised and arguments made through these representations. We will use a workshop-based format that supports transformational learning, helping writers see themselves and their worlds in new ways. Course reading will introduce a range of issues raised by experiences in and outside of the classroom.

CI 3610. Linguistics for Teachers. (SOCS; 3 cr. ; A-F only; Every Fall & Spring)
For pre K-6 pre-service teachers. Introduction to linguistics. Linguistic terminology and how to apply methods of linguistic analysis to English, focusing on educational settings and classroom instruction.

CI 3611W. Basics in Teaching English as a Second Language. (WI; 4 cr. ; Student Option No Audit; Every Fall & Spring)
Writing intensive course that combines service learning internship with classroom lectures, discussions, group work, experiential activities. In this course, service learning requires students to act as teachers and professional leaders with students for 30 hours a semester.

Prepares students for teaching ESL to adults in community programs. prereq: Have studied another language.

CI 3612. Introduction to Pronunciation and Grammar for ESL Teachers. (4 cr. ; Student Option No Audit; Every Fall & Spring)
Introduces English language analysis with key concepts/theories in English pronunciation system/grammar. Issues within each/explore way ESL textbooks/instructors can advance ESL learners' language proficiency in these areas. prereq: An Introduction to Linguistics course, e.g., CI 3610 or LING 3001

CI 3613. Intercultural Communication and English Language Teaching. (3 cr. ; Student Option No Audit; Every Fall & Spring)
Foundations of international/cross-cultural communication. Increased understanding of personal preferences/experiences in learning languages/using them in international communication. How these skills vary across individuals/context.

CI 3901. Exploring the Teaching Profession I. (; 2 cr. ; A-F only; Every Fall)

This course provides an avenue for participation in the College of Education and Human Development for undergraduate students who have identified teaching as a possible career choice and are accepted into the College's DirecTrack to Teaching program. This course enables students to explore the history and culture of teaching, student learning, community contexts for learning, and sociocultural, historical, and political influences on teaching, learning, and schools. Students will participate in service learning experiences in area schools. They will attend class, make presentations, engage in online and in person analytical and reflective discussions, collaborate with peers and begin their journey towards becoming teachers. prereq: DirecTrack to Teaching program or department consent

CI 3902. Exploring the Teaching Profession II. (; 2 cr. ; A-F only; Every Spring)

Diversity in schools, strategies for increasing cultural competence. Parents, communities, professional development. Students reflect on themselves as future teachers and complete 50 hours in educational settings. prereq: CI 3901, admission to DirecTrack to Teaching or department consent

CI 3993. Directed Study: Curriculum and Instruction. (1-6 cr. ; Student Option No Audit; Every Fall, Spring & Summer)

Opportunity for students to pursue study not available through regular coursework. This is a student-initiated project created in consultation with a faculty monitor. In consultation with instructor, the student determines topic, sets goals, and develops a proposed project or plan for completing the course. Prereq instr consent.

CI 4121. Culture Power and Education. (DSJ; 3 cr. ; A-F only; Every Fall & Spring)
Manifestations of culture/power in education. How culture is mediating factor in educational achievement of students of color. Relationship between home/community, school cultures. Theories/research that show importance of

integrating students' interests, knowledge, experience for increasing student engagement/achievement.

CI 4122. Social Class Education and Pedagogy. (3 cr. ; A-F only; Every Fall & Spring)

Social, psychological, economic, political aspects of social class/poverty. Implications for education as social institution/classroom pedagogy. Social class in U.S., working-class literature for adults/children, labor histories, economic systems.

CI 4311W. Technology and Ethics in Society. (CIV,WI; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Critique of values and ethical issues related to technology use in education, the workplace, and family and community life.

CI 4312. Sex, Drugs, and the Internet: Educational Perspectives. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Immersive exploration/critique of advantages/risks associated with society's pervasive use of the Internet. Dangers and strategies to combat them. The Internet's potential for teaching/learning.

CI 4602. English Learners and Academic Language. (1 cr. ; A-F only; Every Spring)

The course prepares teacher candidates to work effectively with English Learners (ELs) and other linguistically diverse students in their subject areas of music and agricultural education and to develop their students' academic language proficiency as needed for school success.

CI 5008. Theory and Practice of Arts Teaching. (; 1-2 cr. [max 3 cr.]; A-F or Audit; Every Fall & Spring)

Designed for students pursuing visual or performing arts education licensure, the course explores: 1) Arts concepts, skills, and processes appropriate for elementary school; 2) methods of teaching arts for social justice; and 3) an overview of children's production of and responses to visual and performing art.

CI 5018. Teaching Dance. (; 1 cr. ; A-F only; Every Fall, Spring & Summer)

Teaching Dance considers the theoretical and curricular applications of dance pedagogy and assessment in PK-12 dance learning contexts. Students will connect theory to practice by developing curriculum and instructional material from the field of dance education and professional teaching standards in dance education. prereq: Education graduate student or instructor consent

CI 5049. Digital Media & Technology Integration: Arts Education Theory & Practice. (; 3 cr. ; A-F or Audit; Every Summer)

This course explores issues in the visual and performing arts regarding the current and potential use of technology and digital media in P-12 arts classrooms. Through readings, discussions, artistic production, academic writing, and collaboration, you will understand the use and integration of technology in P-12 arts classrooms as pedagogical tools; the function of scaffolding students' use of digital

media as part of 21st century arts teaching and learning; various technological supports for student learning and artistic production; specific digital media theories, pedagogies, and content knowledge; the use of technology in designing, sharing, and conducting lessons; issues concerning the assessment and exhibition of student works; and practical issues of using technology for teaching in and through the arts.

CI 5050. Issues in Art Education. (; 1-4 cr. [max 8 cr.]; Student Option; Every Fall & Summer)

Issues/trends, current practices, recent research.

CI 5065. Improving Arts Programs in the Schools. (; 3 cr. ; A-F or Audit; Every Fall)

This course provides students with an exploration of issues in visual and performing art instruction, including teaching methods and evaluation, philosophical frameworks of pedagogy, and institutional issues concerning arts programs in middle and high schools; social and cultural structures of schooling, practical issues, and teaching arts.

CI 5069. Curriculum Innovations in Arts Education. (; 3 cr. ; A-F or Audit; Every Fall)

This course provides students with an examination of traditions in American schooling related to visual and performing arts education curricula.

CI 5075. The Social, Historical and Cultural Foundations of Arts Education. (; 3 cr. ; A-F or Audit; Periodic Fall)

The Social, Historical and Cultural Foundations of Arts Education will examine the arts in public education since the 1800s.

CI 5078. Application of Aesthetic Theory in Education. (; 2 cr. ; A-F or Audit; Every Spring & Summer)

The course explores: ?contemporary theories of arts ?psychological and philosophical foundations ?an overview of children's production of and responses to visual and performing arts

CI 5096. Arts Education Experience. (; 1-6 cr. ; A-F or Audit; Every Fall)

In this course, students complete field experience observations in designated K-12 visual art or performing art, special education, and kindergarten classrooms.

CI 5097. Student Teaching in Arts Education. (; 8 cr. ; S-N or Audit; Every Spring & Summer)

Teacher candidates spend 16 weeks student teaching in visual art, dance, or theatre. Eight weeks occur in an elementary setting and eight weeks occur in a secondary setting including, but not limited to, middle school.

CI 5102. Culture, Schools, & Communities: Human Relations I. (3 cr. ; A-F only; Every Summer)

This course provides teacher candidates with the knowledge and skills to address social and cultural dimensions of education. Students explore a wide range of challenges and dilemmas facing contemporary educators in the U.S. and in other global locations. They examine original research and theory from the

social sciences, and learn how research and theories have informed various educational policies and actual approaches to teaching. The course begins with a focused study of how U.S. educational history has been shaped by competing norms and purposes. It then moves into the role of philosophy in defining those purposes, and shaping actual approaches to teaching. The course then shifts to examine multiple dimensions of humanity including race, culture, gender, gender orientation, class, worldview, perception, and language in and out of school. These concepts lay the foundation for study of cultural transmission and acquisition, the learning preferences of diverse students, and ultimately, culturally relevant pedagogy, cultural competence, and cultural intelligence. Throughout the course, teacher candidates will consider their own positionality and what that means for their practice. Learning experiences are made up of class meetings involving speakers, simulations, and multi-media presentations; readings; small group discussions, activities, exercises and projects.

CI 5103. Culture, Schools, & Communities: Human Relations II. (1 cr. ; S-N only; Every Fall)

This course provides teacher candidates with the knowledge and skills to address social and cultural dimensions of education. The course then explores community partnerships that support student learning, and how teachers may navigate the social and political environment of schools and school districts to be effective advocates for their students. The course examines three themes that are interwoven throughout: professionalism, teacher leadership, and adaptive expertise. In sum, the course encourages teacher candidates to imagine both the realities and possibilities of schooling in the contemporary world. Learning experiences are made up of class meetings involving speakers, simulations, and multi-media presentations; readings; small group discussions, activities, exercises and projects. Prerequisites: Enrolled in initial teacher licensure program and successful completion of CI 5102.

CI 5106. Multicultural Teaching and Learning in Diverse College Contexts. (; 3 cr. ; A-F only; Every Fall)

Theory/pedagogy for culturally responsive teaching from perspectives of teachers/learners in postsecondary settings. Critical multicultural education, universal instructional design, integrated multicultural instructional design.

CI 5111. Introduction to Elementary School Teaching. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Curriculum organization, instruction, management, assessment, professional decision making. prereq: Foundations of ed major or elem ed initial lic

CI 5116. Action Research in Educational Settings. (; 3 cr. ; Student Option; Every Spring)

Action research as method of improving teaching/learning in educational settings. Experience doing research in classrooms.

Relative strengths/challenges of different approaches to classroom research. Ethical issues.

CI 5121. Culture Power and Education. (3 cr. ; A-F only; Every Fall & Spring)

In this course we will explore the manifestations of culture and power in education. We will examine the ways in which culture is a mediating factor in the educational achievement of underrepresented students. We will explicate the relationship between home/community and school cultures; and illuminate the detrimental impact of subtractive schooling practices. We then explore the theories and research that have shown the importance of integrating students' interests, knowledges, and experiences-cultures-for increasing student engagement and achievement. Our examination of culturally relevant pedagogy we will move beyond an understanding of "culture" within education as the "celebration" of ethnic food, songs and customs. Instead, we shift toward a more complex understanding of "culture" that takes into account the influences of ethnic culture, youth culture, and popular culture.

CI 5122. Social Class, Education and Pedagogy. (3 cr. ; A-F only; Every Fall & Spring)

This course will immerse students in social, psychological, economic, and political aspects of social class and poverty, and the implications for education as a social institution and classroom pedagogy. Students will engage in inquiries around social class in the U.S.; working-class literature for adults and children; labor histories; and economic systems' and will learn to design social class-sensitive teaching practices guided by five principles for social class-sensitive change.

CI 5145. Critical Pedagogy. (; 3 cr. ; A-F or Audit; Every Spring)

Examination of critical pedagogy; critique of power relations regarding race, culture, class, gender, and age in various educational settings; consideration of improved practice in education for children, youth, and adults.

CI 5150. Curriculum Topics. (; 1-4 cr. [max 8 cr.] ; S-N only; Every Fall, Spring & Summer)

Special topics, current trends in curriculum. Subject integration, curriculum contexts, development, implementation, evaluation.

CI 5155. Contemporary Approaches to Curriculum: Instruction and Assessment. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Current research/issues that cross disciplinary boundaries in curriculum development, instructional practices, and assessment methods. Interrelations among curriculum, instruction, and assessment within framework of constructivist learning theory. Individual classroom practices/theories. prereq: Grad students only

CI 5156. Popular Culture, Teaching, and Learning. (; 3 cr. ; A-F only; Every Fall)

Approaches to the study of popular culture and education. Intersection between everyday life and broader historical contexts. Sporting

events, toys, clothing, shopping malls, vampire mania, music festivals, video, and comics are the kinds of popular forms of culture we will engage as we develop teaching/learning strategies. prereq: Grad student or sr in a program that values teaching as a component of the discipline

CI 5163. Child and Adolescent Development for Teaching and Learning I. (1 cr. ; A-F only; Every Fall & Summer)

Attending to constant transitions/development in which children and adolescents negotiate their road to adulthood. How to foster learning/positive development. prereq: Enrolled in teacher initial licensure program

CI 5164. Child and Adolescent Development for Teaching and Learning II. (2 cr. ; A-F only; Every Fall & Spring)

Transitions/development in which children/adolescents negotiate road to adulthood. How to foster learning/positive development. prereq: Enrolled in teacher initial licensure program

CI 5177. Practical Research. (; 1-3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Preparation for identifying a research and development topic, reviewing the existing knowledge on the topic, planning and carrying out a project, further investigating the topic, and writing a report on the project. prereq: CI MEd student, or CI or EdPA Teacher Leadership MEd student

CI 5186. School-Related Projects. (; 1-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Research or evaluation project related to teaching, curriculum, or other aspect of schooling. Approved and supervised by faculty advisor. prereq: MEd student

CI 5190. Directed Individual Study in Curriculum and Instruction. (; 1-6 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Producing/evaluating curriculum materials. Literature review of issues/problems. Assessing curriculum processes. prereq: Grad student, instr consent

CI 5211. Elementary Education Content and Pedagogy I. (; 4 cr. ; A-F only; Every Fall, Spring & Summer)

Teacher Candidates will complete eight modules on elementary content/pedagogy instruction across disciplines. Introduce various concepts/practices that will be spiraled in each subject area.

CI 5212. Elementary Education Content and Pedagogy II. (3 cr. ; A-F only; Every Fall, Spring & Summer)

Teacher Candidates will complete five modules on elementary content/pedagogy instruction across disciplines. Builds on various concepts/practices from introductory course. Introduces content that will be spiraled in each subject area.

CI 5213. Elementary Education Content and Pedagogy III. (3 cr. ; A-F only; Every Fall, Spring & Summer)

Teacher Candidates will complete six modules on elementary content/pedagogy instruction across disciplines. Builds on various concepts/

practices from two previous introductory courses. Introduces content that will be spiraled in each subject area.

CI 5214. Elementary Education Content and Pedagogy IV. (3 cr. ; A-F only; Every Fall, Spring & Summer)

Teacher Candidates will complete five modules on elementary content/pedagogy instruction across disciplines. Builds on various concepts/practices from previous three courses. Introduces content that will be spiraled in each subject area.

CI 5215. Elementary Education Content and Pedagogy V. (2 cr. ; A-F only; Every Fall, Spring & Summer)

Teacher Candidates will complete five modules on elementary content/pedagogy instruction across disciplines. Builds on various concepts/practices from introductory courses. Introduces content in each subject area. Serves as conclusion to elementary ed content/pedagogy courses.

CI 5283. Field Experience: Applying Instructional Methods in the Elementary Classroom. (; 3 cr. [max 6 cr.] ; S-N only; Every Fall & Spring)

Field-based experiences in elementary school settings. In-class discussions about application of classroom learning to school setting. Previously CI 5183. prereq: M.Ed./Elementary education initial licensure student, enrolled in elementary education methods course

CI 5285. Clinical Experience in Elementary School Teaching. (; 12 cr. [max 24 cr.] ; S-N only; Every Fall, Spring & Summer)

Students spend full days in elementary classroom, gradually assuming responsibility for teaching, and prepare portfolio based on criteria given. One seminar per week. prereq: M.Ed./Elementary education initial licensure students

CI 5286. Student Teaching Seminar: Elementary Education. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall & Spring)

Weekly seminar supplementing student teaching experience. Class discussions, sharing of artifacts from the classroom, reflections, and readings. prereq: M.Ed./Elementary education initial licensure only

CI 5287. Capstone Project: Improvement of Teaching in Elementary and Pre-Kindergarten Schools. (3 cr. ; A-F only; Every Fall, Spring & Summer)

Elementary school classroom teaching project to improve specific teaching skills. Approved/directed by adviser. prereq: M.Ed./elementary education initial licensure student

CI 5301. Foundations of Computer Applications for Business and Education. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Instructional uses of computers/representative business, education, marketing applications. Word processing, databases, spreadsheets, graphic design. Expectations are for demonstrations of skills on apps/understanding of concepts that go beyond basic.

CI 5307. Technology for Teaching and Learning. (1.5 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Diverse educational technology in K-12 classrooms. Effective use of technology. Computer technologies used to stimulate personal productivity/communication and to enhance teaching/learning processes. prereq: [MEd/initial licensure or CLA music ed major or preteaching major or instr consent], basic computer skills

CI 5321. Foundations of Distance Education. (; 3 cr. ; A-F or Audit; Every Summer)

History, philosophies, technologies, and best practices related to distance learning environments. Distance education theories. Issues in distance education.

CI 5323. Online Learning Communities. (; 3 cr. ; A-F or Audit; Every Spring)

Students design/research an online learning environment that promotes community. What community is, how it fosters learning in educational learning environments. Theories of distance learning instruction. Community models. technological tools to develop online communities.

CI 5325. Designing and Developing Online Distance Learning. (; 3 cr. ; A-F or Audit; Every Fall)

Students research, use, and evaluate technologies for distance learning and design their own learning environments. prereq: 5351 or 5362 recommended

CI 5330. Special Topics in Learning Technologies. (; 3 cr. [max 9 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Topics related to the field of learning technologies.

CI 5331. Introduction to Learning Technologies. (3 cr. ; A-F or Audit; Every Fall)

An exciting look at the field of learning technologies (LT), examining the numerous opportunities this area of study brings to individuals who decide to pursue a LT degree. Students engage in numerous real-world projects as they come to understand both the past and future of technology in education, business, and society as a whole.

CI 5336. Planning for Multimedia Design and Development. (3 cr. ; A-F or Audit; Every Spring)

Theory, research, practice in instructional design. Generic components of instructional design process. Applying principles to design/development of computer-based instructional materials.

CI 5351. Technology Tools for Educators. (3 cr. ; A-F or Audit; Every Fall)

Develop skills in using technology applications to support teaching and learning. Internet applications, presentation software, Web 2.0 technologies, and Web site development.

CI 5361. Teaching and Learning with the Internet. (; 2-3 cr. ; Student Option; Every Spring)

Implications/challenges in using Internet-based technologies in classroom. Pedagogical models.

CI 5362. Foundations of Interactive Design for Web-based Learning. (3 cr. ; A-F or Audit; Every Fall)

Processes of designing/developing interactive learning media and online applications from ground up. Focuses on usability/aesthetics in online learning.

CI 5365. Contemporary Software Development Issues and Tools. (3 cr. ; A-F or Audit; Every Summer)

Software used in multimedia design/development. Uses of the software, intricacies of interface, relevant programming principles. Introduction to developing multimedia applications. prereq: Familiar with standard computer/Internet operations

CI 5371. Learning Analytics: Theory and Practice. (; 3 cr. ; Student Option; Every Fall)

Learning analytics as a nascent field is broadly defined as the "measurement, collection, analysis and reporting of data about learners and their contexts, for purposes of understanding and optimizing learning and the environments in which it occurs." This course aims to provide a general, non-technical survey of learning analytics, as well as its application in various educational contexts. In particular, we will discuss foundations of learning analytics, survey pertinent education theories, discuss new forms of assessment, explore popular data mining techniques, review learning analytical tools and case studies, and design analytics for our own interested contexts. Given the breadth of this field, additional support is provided for deep dives in special interest areas. Overall, this course provides a comprehensive, theory-driven overview of learning analytics to orient students to this nascent field and prepare them for advanced research/practice in learning analytics.

CI 5392. Learning Technologies M.Ed. Capstone Project. (; 3 cr. ; A-F only; Every Spring)

In this course Learning Technologies M.Ed. students develop their final capstone project that signals the completion of their degree program. Students will identify a need or gap related to Learning Technologies in an area of interest to them and conduct preliminary research on that topic. Based on their research, students develop a proposal and turn the proposal into reality by building the project. Students will participate in a variety of discussions and scholarly readings, both instructor selected and those selected by students in support of their identified topics of research. A mini-cohort model of 2-4 students is used throughout the course for peer review and feedback. Peers become mini-experts in their partners' projects as they follow along in the design and development process and ask questions and offer feedback along with the instructor. Students will develop a completed project or prototype (e.g. course curriculum, training materials, website, software, mobile app, etc.) and a paper defending their project by discussing the research that informed their decisions, how those decisions were implemented, and how they expect the project to impact their work and/or field. The course culminates in a public presentation of their project via live or video conferencing with

a Q&A session following. prereq: Learning Technologies M.Ed. students

CI 5404. Multicultural Literature for Children and Adolescents. (; 3 cr. ; A-F or Audit; Spring Odd Year)

Course explores multicultural literature for children and adolescents as a site where difference can be emphasized and appreciated rather than downplayed and muted. We study award-winning works of fiction and arrive at a definition of multicultural literature for the modern classroom.

CI 5413. Foundations of Reading. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

Reading processes, development of readers. Assessment and tutoring of individual children in reading and other literacy practices. prereq: CI 3610 and concurrent registration with CI 5414

CI 5414. Field Experience: Working with Developing Readers. (2 cr. ; S-N only; Every Fall & Spring)

Field-based experiences. Students apply learning from their University course to working with developing readers. Instructor provides specific assignments.

CI 5417. Elementary literacy Instruction for ESL Students. (; 3 cr. ; A-F or Audit; Fall Odd Year)

Teaching reading/writing in elementary grades to students from diverse languages. Second-language literacy development. Phonemic awareness, phonics, fluency, vocabulary, comprehension. Ways to connect students' background knowledge to literacy curriculum. prereq: Bachelor's degree completed

CI 5419. The American Middle School. (; 3 cr. ; Student Option; Every Fall & Summer)

Focus on the uniqueness of the early adolescent and appropriate learning situations. For educators working with middle-level students.

CI 5421. Writing on Education: Pivotal Experiences of Teaching and Learning. (4 cr. ; Student Option; Every Fall & Spring)

Reflection and narrative play important roles in developing deep understanding of teaching and learning. In this course students will read and write texts about critical moments of education, and through this work develop reflective, analytic, and writing skills that will enable them to become more thoughtful and effective citizens in the world of education. Whether students hope to become teachers, youth workers, community organizers, curriculum designers or administrators in educational settings, this course invites students to consider how writers represent experiences of teaching and learning and how these reflective narratives can inform our own work and worlds. Students will explore the ways that writers of creative nonfiction use language to examine pivotal experiences of teaching and learning in diverse contexts, and add their own voices to this rich body of work by producing their own texts. Through study of writing, students will develop familiarity with writing choices and practice employing these techniques and processes in their own writing.

Students will read personal essays written by writers in the US who reflect on their own experiences and interrogate how aspects of their identities (including race, ethnicity, gender, family history and language) inform pivotal experiences of teaching and learning. Students will compose texts that explore their own experiences within a constellation of formal and informal educational settings and the questions raised and arguments made through these representations. We will use a workshop-based format that supports transformational learning, helping writers see themselves and their worlds in new ways. Course reading will introduce a range of issues raised by experiences in and outside of the classroom.

CI 5422. Teaching Writing in Schools. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)
Theory/practice of teaching writing in schools. How race, gender, and social class impact teaching/learning.

CI 5425. Reading Instruction in the Elementary Grades. (; 3 cr. ; A-F only; Every Fall & Spring)
Curricular/methodological issues in teaching of reading. Reading/orthographic processes, strategy instruction for word recognition/comprehension, authentic assessment strategies, and teaching diverse students. prereq: [Elementary or early childhood] licensure student

CI 5426. Language Arts Instruction in the Elementary Grades. (; 3 cr. ; A-F only; Every Fall & Spring)
Curricular/methodological issues of language arts. Oral language development, response to literature, writing processes, authentic assessment strategies. Teaching diverse students. prereq: Elementary or early childhood licensure student

CI 5431. Introduction to Instructional Leadership in K-12 Reading. (; 3 cr. ; A-F or Audit; Every Summer)
K-12 curriculum in reading, major theories/research that motivate curriculum. Major instructional principles, alignments needed, resources available. prereq: Minnesota license valid for classroom teaching in pre-kindergarten, [adult basic education or grades kindergarten through 6 or 1 through 6 or 5 through 8 or 9 through 12 or kindergarten through 12]

CI 5432. Instructional Leadership in Reading in Kindergarten and the Elementary Grades. (; 3 cr. ; A-F or Audit; Every Fall)
Research-based reading instruction for elementary grades. How to help other teachers improve practice. Characteristics of effective schools within context of improving students. reading achievement. prereq: 5431

CI 5433. Instructional Leadership in Reading for the Middle and Secondary Grades. (; 3 cr. ; A-F or Audit; Every Spring)
Curriculum/instruction for middle/secondary school students. prereq: 5432

CI 5434. Professional Development and Evolving Practice in K-12 Reading. (; 3 cr. ; A-F or Audit; Every Summer)

Developing e-portfolio to assess competence in standards for teaching K-12 reading. Evolving teaching practices. Applications of current technologies. prereq: 5433

CI 5435. Instructional Leadership in Preventing Reading Difficulties. (; 3 cr. ; A-F or Audit; Every Fall)
Research-based reading interventions for struggling readers. How to help other teachers improve their practice. Theory/research behind preventing reading difficulties. Principles/techniques for assessing reading difficulties and students? progress. prereq: 5434

CI 5441. Teaching Literature in the Secondary School. (; 2-3 cr. ; A-F or Audit; Periodic Fall & Spring)
Current theories. Analyzing literature. Response to literature. Adolescent literature/reading interests. Devising response activities/units. Multicultural literature. Relating media and literature. Linking writing to understanding literature. Designing curriculum. Evaluating/assessing students. Growth in literary response.

CI 5442. Adolescent Literature, Youth Activism and Climate Change Literacy. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)
This course explores how contemporary adolescent literature engages with the developmental and identity challenges faced by a generation whose lives are framed by anthropogenic climate change, biodiversity loss, mass migrations, and other forms of slow violence inherent in the unsustainable carbon-intensive civilization. Given that climate change is primarily a challenge to our story systems and that adolescents constitute the most invested audience for sustainability education, adolescent literature has become a site of rebellion against the unjust and ecocidal status quo; a site where adolescents can articulate, debate, and creatively respond to visions of sustainable futures. In this course we will study award-winning works of fiction and nonfiction across genres to understand how adolescent literature inspires activist positions vis a vis petronormative ideologies of power that are devastating the planet. Our focus on the intersection of storytelling, activism, and climate change literacy will help us grasp the key role adolescent literature plays in empowering today?s youths to become agents of change. We will discuss how adolescent literature can stoke young people?s transformative anger, inspire them to address the climate crisis, and stand up for their right to have a future. We will consider how educators can support this fight through activism and engaged discussions of adolescent literature. We will read award-winning picturebooks, novels, and graphic novels that challenge us to reinvent ourselves as a biocentric global civilization. The goal is to transform you into an informed advocate of adolescent literature as a tool for developing climate change literacy and empowering your students to imagine post-carbon futures.

CI 5451. Teaching Reading in Middle and Secondary Grades. (; 3 cr. ; A-F or Audit; Every Fall)

Methods of accommodating to students' abilities and facilitating reading in regular content classes.

CI 5452. Reading in the Content Areas for Initial Licensure Candidates. (; 1-2 cr. ; A-F only; Periodic Fall & Spring)
Web-based course. Fostering students' reading related to learning from text. prereq: Concurrent enrollment in licensure area methods course(s), enrolled in Initial Licensure Program, Internet access, basic understanding of [computer use, Web browsers, email, word processing software]

CI 5461. Teaching Composition in the Secondary School. (3 cr. ; A-F or Audit; Periodic Spring)
Theories of composition instruction. Teaching composing within social contexts. Informal writing. Linking reading/writing. Describing/evaluating student writing. Using/modeling conference strategies. Computer-mediated software. Grammar and writing. Editing instruction. Writing assessment. Uses of portfolios.

CI 5463. Minnesota Writing Project Annual Invitational Summer Institute. (; 3 cr. ; A-F only; Every Summer)
Workshop. Participants reflect on their own literacy processes, participate in a writing group, discuss current reading texts, and demonstrate best practices in classroom. prereq: Licensed teacher or administrator or [space available, faculty letter of recommendation]

CI 5464. The Politics of Literacy and Race in Schools. (3 cr. ; A-F or Audit; Every Fall)
Literacy and race in schools examined, especially how power plays out, and what are the possibilities for creating radical democratic forms of life. Conceptions of language, literacy, whiteness, and racial identities are explored. Topics include educators? talk and silence about race, Ebonics, and youth?s racial identities in global times.

CI 5465. Writing and Social Justice: A Minnesota Writing Project Open Institute. (3 cr. ; Student Option; Every Summer)
This course focuses on practices within literacy instruction as related to the current educational landscape and a theme of social justice. In this course, participants will focus on three areas: writing, teaching, and learning. Participants will reflect on their own writing processes as they write, share, and participate in a community of writers. Writing groups will meet several times during the course. Participants will also consider the theory and practice of writing instruction that helps students achieve their potential as writers and change agents. In addition, participants will investigate a literacy issue relevant to the course theme, social justice, and will present it as a research project or lesson. This course is offered for practicing teachers at all levels and across disciplines.

CI 5471. Clinical Experience in Teaching Secondary English. (3 cr. ; A-F only; Every Fall)
Initial licensure candidates in English Education will observe the teaching and learning

experience in a school and classroom context; implement approaches, assessments, and philosophies learned about in corresponding methods courses; reflect upon the complexities of classroom life in a seminar format; and co-plan and co-teach a five-day unit. prereq: Must register same semester as CI 5441 and CI 5451.

CI 5472. Teaching Critical Media Analysis in Schools. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

"Critical" media literacy means that we focus on, among other things, analyzing the intersection between media and issues of identity -- like gender, race, class and sexuality. We also focus on how to teach critical media analysis to students and others.

CI 5474. New Literacies Frameworks and Instruction: Digital Texts and Digital Reading. (3 cr. ; A-F only; Every Fall)

Read digital texts against backdrop of traditional print-based notions of reading, literacy, school curricula/instruction. Assists education professionals in making school/district-wide decisions based on sound research on digital reading/new literacies.

CI 5475. Teaching Digital Writing. (; 3 cr. ; A-F or Audit; Every Fall)

Blogs, wikis, online discussion. Database searches. Integration of images, audio, video, text. Digital note-taking, mapping, storytelling. Online discussions, collaborative writing. Audio production. Formatting/design techniques. Online evaluation. E-portfolios.

CI 5481. Developments in Teaching English and Speech. (; 3 cr. ; A-F or Audit; Every Spring)

Current theories of English/speech curriculum. Teaching oral language. Organizing curriculum. Linking components of English/speech curriculum. Reflecting on pre-student-teaching experience.

CI 5483. Critical Literacy, Storytelling, and Creative Drama. (3 cr. ; Student Option; Every Summer)

This course examines and embodies how storytelling and creative drama can be used as tools to help develop students' critical literacy and to assist them in becoming more fluent readers and writers. Critical literacy is the focus; theater and storytelling are the vehicles. Key topics to be covered include: 1) A historical background on fairy and folk tales, legends, fables, myths, and the different oral traditions; 2) Tools for developing a critical view of diverse tales; 3) Practical instruction on how to use storytelling and story genres in the classroom to develop critical literacy; 4) Assessing storytelling work in the classroom. Students will meet in the first week at the University to learn tools of the Neighborhood Bridges program and in the second week will practice and observe each other's teaching with local school classrooms. In the past we have worked with 4th graders and 6th graders, though we will also discuss how course content applies to high school students. The class meets for two intensive weeks in person, however, we additionally assign pre-readings and post-class reflections and papers.

CI 5484. Improving Secondary English Language Arts Instruction: Part I. (; 1.5 cr. ; A-F only; Every Fall)

This online course is designed for secondary literacy teachers, including those in communication arts and literature. The purpose of this course is for secondary English Language Arts (ELA) teachers to examine their practice in a collaborative community and to improve teacher effectiveness through ongoing feedback from the instructor and other participants. The course will provide support through small group discussions and peer and instructor response. Key topics to be covered include: 1) frameworks for understanding teacher growth in ELA contexts; 2) developing an ELA classroom ecology; and 3) supporting and assessing student learning in the ELA Common Core Standards. This 1.5-credit course was designed in a sequence with CI 5485: Improving Secondary English Language Arts Instruction: Part II.

CI 5485. Improving Secondary English Language Arts Instruction: Part II. (; 1.5 cr. ; A-F only; Every Spring)

This online course is designed for secondary literacy teachers, including those in communication arts and literature. The purpose of this course is for secondary English Language Arts (ELA) teachers to examine their practice in a collaborative community and to improve teacher effectiveness through ongoing feedback from the instructor and other participants. The course will provide support through small group discussions and peer and instructor response. This 1.5-credit course was designed in a sequence with CI 5484: Improving Secondary English Language Arts Instruction: Part I. This second course in the sequence will focus on teacher-driven professional inquiry that participants began developing in CI 5484. prereq: Successful completion of CI 5484.

CI 5496. Directed Experiences in Teaching English. (4-8 cr. ; S-N or Audit; Every Fall & Spring)

Student teaching/clinical experience for English Education (Comm Arts & Lit) initial licensure and middle level endorsement students. Credits vary depending on length of field experience and should be determined with your academic adviser. prereq: MEd/initial licensure students in English ed only

CI 5502. Science Instruction in the Elementary Grades. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Methods/materials for teaching science/health at elementary school level. prereq: Early Childhood or Elementary Education ILP

CI 5511. Introduction to Secondary Science: Laboratory-based Instruction. (; 4 cr. ; A-F only; Every Fall, Spring & Summer)

Inquiry about teaching/learning, observing/analyzing instruction, reflecting on own/each other's science teaching. How to use various instructional techniques/methods.

CI 5512. Secondary Science Methods: Understanding the Nature of Science. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Inquiry about teaching/learning, observing/analyzing instruction, reflecting on own/each other's science teaching. How to use various instructional techniques/reflect upon teaching. Develops understanding of research-based instructional methods in secondary science classrooms.

CI 5513. Secondary Science Methods: Equity in Science Teaching. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Inquiry about teaching/learning, observing/analyzing instruction, reflecting on own/each other's science teaching. How to use various instructional techniques/reflect upon teaching. Develops understanding of equitable science teaching practices/safe student-centered classroom culture.

CI 5514. Secondary Science Methods: The Science Learning Environment. (; 2 cr. ; A-F only; Every Fall, Spring & Summer)

Inquiry about teaching/learning, observing/analyzing instruction, reflecting on science teaching. How to use various instructional techniques, reflect upon professional growth using evidence from teaching. Identify goals/instruction plans for professional practice.

CI 5515. Secondary Science Methods: Developing Adaptive Expertise. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Inquiry about teaching/learning, observing/analyzing instruction, reflecting on science teaching. How to use various instructional techniques, reflect upon professional growth using evidence from teaching. Identify goals/instruction plans for professional practice.

CI 5530. Secondary Science Methods I. (; 3 cr. ; A-F only; Every Summer)

Lab-based science teaching in secondary school setting. Research-based teaching strategies are modeled that address national-/state-level standards. How to use various inquiry-based instructional techniques/methods.

CI 5531. Secondary Science Methods II. (; 3 cr. ; A-F or Audit; Every Fall)

Methods of planning/teaching science to middle school students. prereq: Initial licensure student in science ed and CI 5530 Secondary Science Methods 1

CI 5532. Secondary Science Methods III. (; 3 cr. ; A-F or Audit; Every Spring)

Methods of planning/teaching science for secondary school students. prereq: Admission to initial licensure program in science and CI 5531 Secondary Science Methods II

CI 5533. Current Developments in Science Teaching. (; 3 cr. ; A-F or Audit; Every Summer)

Using curriculum standards to design science courses. prereq: MEd, initial licensure, grad student, or instr consent

CI 5535. Foundations of Science Education. (; 3 cr. ; A-F or Audit; Every Spring)

Analysis of present science teaching practices in light of historical and philosophical foundations of science education. prereq: M.Ed., grad student, or instr consent

CI 5536. Equity, Policy, and Assessment in Science Education. (; 3 cr. ; A-F only; Every Fall)

Nature of equity, diversity, and policy matters that influence schools/teachers involved in science teaching and scientific literacy. Classroom presentations, discussions, readings in current research. prereq: Med, or grad student, or instr consent

CI 5540. Special Topics: Science Education. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Detailed examination and practice of the teaching of one area of science (e.g. geology, health, physical science) or one method of instruction (e.g. laboratories, demonstrations, Internet, simulations).

CI 5541. Teaching History and Nature of Science. (3 cr. ; A-F or Audit; Every Fall)

Understanding nature of science(NOS). Integrate/reflect on NOS in secondary science classroom. Historical cases/integrating NOS with science content/scientific inquiry. prereq: MEEd ILP or professional studies student in science education or instr consent

CI 5551. Reflecting on Science Classroom Practices I. (1.5 cr. ; A-F only; Every Fall)

Students reflect on their instruction and student learning during first years of teaching. Monthly meetings, observations, online discussion. Classroom management, planning, inquiry-based teaching, assessment, equity in the classroom.

CI 5552. Reflecting on Science Classroom Practices II. (1.5 cr. ; A-F only; Every Spring)

Students reflect on their instruction and student learning during first years of teaching. Monthly meetings, observations, online discussion. Classroom management, planning, inquiry-based teaching, assessment, equity in the classroom.

CI 5596. Clinical Experience in Middle School Science. (; 4 cr. ; A-F or Audit; Every Fall)

Supervised clinical experience in middle school science teaching.

CI 5597. Clinical Experience in Secondary School Science Teaching. (; 4-8 cr. ; S-N or Audit; Every Spring)

Supervised clinical experience in secondary school science teaching. prereq: initial licensure or instr consent

CI 5608. CARLA Summer Institute Seminar. (; 1-4 cr. [max 16 cr.] ; Student Option No Audit; Every Summer)

The Center for Advanced Research on Language Acquisition (CARLA) offers a series of intensive summer institutes to provide timely professional development for foreign language and ESL educators throughout the country. The special topics offered under CI 5608 are designed to provide language teachers with the latest research-based information and best practices skill development as the field of language instruction evolves. Each institute is highly interactive and includes discussion, theory-building, hands-on activities, and plenty of networking opportunities with colleagues from around the world.

CI 5611. Principles of Linguistics. (; 2 cr. ; A-F only; Every Fall, Spring & Summer)

Introduction to linguistics for ESL teachers. Linguistic terminology/analysis. Theories/research about first/other language learning. Analyze educational implications of language use, learning, policy.

CI 5612. ESL Methods for Multilingual Development. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Introduction to methods of developing reading, writing, speaking, listening skills among English learners in K-12. Reflect on beliefs/ideas, cultivate orientation towards reflective teaching/life-long learning.

CI 5613. Testing and Assessment for English Learners. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Develop awareness of/familiarity with policies, procedures, practices in use in attempting to determine academic readiness of students learning English as secondary language in American public schools.

CI 5614. Curriculum and Materials Development for English Learners. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Explore role ESL teachers play in curriculum/materials development. Historical overview of curriculum development in second language education, factors that influence curriculum development, range of models for curriculum development tailored to English learners.

CI 5615. Academic English for English Learners: Planning, Assessment,**Instruction.** (; 2 cr. ; A-F only; Every Fall, Spring & Summer)

Prepares ESL teacher candidates to develop academic English skills of English learners of various proficiencies through bilingual teaching strategies. Prepares students to offer leadership with colleagues from content areas to integrate language/content. Includes focused study of advanced-level syntactic structures/completion of edTPA.

CI 5617. Academic Language and English Learners I. (; 1 cr. ; A-F only; Every Summer)

Working with English learners and other linguistically diverse students across content areas to develop academic language proficiency. prereq: Enrolled in teacher initial licensure program

CI 5618. Academic Language and English Learners II. (; 1 cr. ; A-F only; Every Spring)

Working with English learners and linguistically diverse students across all content areas to develop academic language proficiency. prereq: Enrolled in teacher initial licensure program

CI 5619. Teaching World Languages and Cultures in Elementary Settings. (; 2 cr. [max 3 cr.] ; Student Option; Every Summer)

Methods/materials for elementary world language instruction; development of oral communication/literacy in world languages; world language program design; global awareness/cross-cultural experience; children's language; children's literature, games, and songs; planning/development of units and lessons.

CI 5620. Introduction to Second Language Acquisition for Language Teachers. (; 3 cr. [max 6 cr.] ; Student Option; Every Summer)

Current research and theory in the area of second language acquisition (SLA). Topics include the similarities and differences across first and second language acquisition; the role of individual differences in language learning (including age, first language, aptitude among others). Implications for sociolinguistic diversity in the United States.

CI 5621. Culture as the Core in the Second Language Classroom. (2 cr. ; Student Option No Audit; Every Summer)

How language teachers foster development of intercultural communicative competence through a pedagogical approach that addresses the nature of culture and culture learning, and the interrelatedness of language and culture learning.

CI 5622. Exploring Learner Language: Puzzles and Tools for the Classroom. (; 2 cr. ; Student Option No Audit; Every Summer)

The focus of this institute is on the growth and development of learners? language, and how that growth may be enhanced by ongoing pedagogical innovation. The institute uses Exploratory Practice to promote a culture of instructor initiative in identifying and seeking to solve puzzles related to learner language development in the classroom. Participants begin with an introduction to Exploratory Practice as a framework for instructors to use in identifying and wrestling with their own puzzles about learners? language and its development in their classrooms. Participants then work together to reflect on videos of learner language as it is produced by different kinds of learners. They review theories of second language acquisition, and apply their insights to their own classrooms by learning how to set up engaging puzzle-solving activities that stimulate growth in learner language. Finally, participants learn how to design pre- and post-course measures that demonstrate the impact of their innovations in instruction on the growth of specific features and dimensions of learner language in their own classrooms.

CI 5624. Content-based Language Instruction and Curriculum Development. (; 2 cr. ; Student Option No Audit; Every Summer)

Intensive professional development to help foreign language teachers learn to implement the CBI curricular approach in the language classroom. Introduces all phases of CBI curricular development and provides resources necessary to ensure successful implementation.

CI 5625. Assessing Language Learners? Communication Skills via Authentic Communicative Performance Tasks. (; 2 cr. ; Student Option No Audit; Every Summer)

This institute opens with a discussion of the phrase ?performance towards proficiency? to highlight how classroom performance influences proficiency in real world contexts. Working together, participants will create a list of characteristics of classroom activities and tasks that build learners? proficiency in the target language and will use the list to identify

the purpose, effectiveness, and practicality of a variety of model activities and tasks. With this background, participants will design receptive and productive communicative tasks for beginning, intermediate, and advanced levels of proficiency. The institute will then focus on the evaluation of the learners' performance on these tasks. Using the performance descriptors identified by the American Council on the Teaching of Foreign Languages (ACTFL), the Common European Framework of Reference (CEFR), and the World-Class Instructional Design and Assessment (WIDA), participants will identify the domains (vocabulary, language control, text type, etc.) to evaluate learner performance on various tasks. With model rubric scales, they will evaluate examples of learner performances on various tasks, comparing their individual ratings to underline the importance of establishing inter-rater reliability. Participants will then create rubrics for the tasks they designed earlier in the institute. The role and choice of formative assessments used in daily lessons to monitor learner progress towards achievement of the communication goals of an instructional unit will also be considered. As a capstone to the week, participants will apply their learning about task design and evaluation in the development of a standards-based Integrated Performance Assessment (IPA) to share with colleagues within this institute and also with a broader audience via the CARLA Assessment website.

CI 5627. Creativity in the Second Language Classroom. (2 cr. ; Student Option; Every Summer)

This institute will examine the connection between multilingualism and creativity, and explore strategies to increase engagement in the classroom. This institute is designed for foreign language, ESL, and immersion teachers who want to promote creativity in their classroom while simultaneously improving learner's target language proficiency.

CI 5628. Analyzing Learner Language in Second Language Acquisition. (3 cr. ; Student Option No Audit; Every Fall & Spring)
Review broad findings in second language acquisition (SLA) research. Cognitive/social process of becoming multilingual. How to carry out classroom-based research projects focused on learner language development. prereq: 5646, 5649 [or other course on the grammar of a language]

CI 5629. Teaching Language through the Lens of Social Justice. (; 2 cr. ; Student Option; Every Summer)

Teaching for and about social justice positively influences all students, yet social justice education can be challenging to integrate into the language classroom. In the first part of this institute, participants will examine the principles of social justice education and identify ways that these principles can support standards, objectives, and targeted skills in contemporary world language education. This discussion and reflection will help teachers to identify their own interests and strengths in becoming language educators for social justice. In the second part of the institute, the participants will build on this foundation to adapt, develop, and

create learning opportunities for their foreign language students. A collaborative, creative set of experiences will help participants go from big ideas to activities and assessments for their classroom, all while teaching for and about social justice.

CI 5631. Second Language Curriculum Development and Assessment. (; 1-3 cr. [max 6 cr.] ; A-F or Audit; Every Fall & Summer)

Instruction/assessment of ESL and World Languages in the modalities of speaking, listening, reading, and writing. Backwards design, proficiency-oriented approach, use of content-based instruction. Planning for the integration of instruction and assessment. prereq: SLE initial licensure only

CI 5632. Literacy and Language Development in Second Language Classrooms. (; 3 cr. ; A-F or Audit; Every Fall)

Processes/instructional approaches in developing second language proficiency in the modalities of reading, writing, speaking, and listening and communicative modes (interpretive, presentational, interpersonal); development of literacy in a second language; planning L2 literacy instruction based on research on L1 and L2 literacy development; integration of instruction/assessment in language teaching. prereq: SLE initial licensure only

CI 5634. Content-Based Instruction in Second Language Settings. (; 3 cr. ; A-F or Audit; Every Spring)

Building on foundation from other courses in the sequence. Instruction/assessment of ESL and World Languages at the secondary level. Prepares students to connect language teaching with other content areas, analyze/address the academic language needs of English learners, and advocate for second language programs and students. prereq: SLE initial licensure only

CI 5635. Culture and Diversity in Second Language Classrooms. (; 3 cr. ; Student Option; Every Spring)

Teaching culture as content and including students' home cultures in the curriculum and diverse student needs. Needs of students of various educational, social, and cultural backgrounds/ways to develop academic success through instruction in learning strategies and other approaches to differentiation. prereq: Initial licensure program only

CI 5636. Problems of Practice in Second Language Education: Seminar for Early Career Language Teachers Part 1. (1.5 cr. ; A-F only; Fall Odd Year)

This course provides recently licensed practicing teachers an opportunity to continue to develop their skills as reflective practitioners within the context of World Languages and ESL with a focus on their own teaching practices and student learning. Participants engage in online discussions, read, reflect, and create professional growth plans.

CI 5637. Problems of Practice in Second Language Education: Seminar for Early

Career Language Teachers Part 2. (1.5 cr. ; A-F only; Spring Even Year)

In this course, recently licensed practicing teachers continue to develop their skills as reflective practitioners within the context of World Languages and ESL with a focus on their own teaching practices and student learning. Participants engage in online discussions, read, reflect, and implement and report on professional growth plans. Prerequisite: Completion of CI 5636 or instructor consent.

CI 5638. Critical Approaches to Heritage Language Education. (2 cr. ; Student Option; Every Summer)

Teaching heritage learners is not the same as teaching learners of a foreign language. Heritage languages are languages other than English that are spoken in homes, communities, and extended families. Although many of our students come from vibrant multilingual contexts, unless bilingual options are available, youth seldom have access to expanding their home/community languages (and literacy in them) in schools, which are predominantly English environments. When students are given the opportunity to use, learn, and expand on their heritage languages, they are able to tap into an abundance of resources and knowledge. Participants in this workshop will examine social justice topics, community-based learning for growing heritage language (literacy), and authentic assessments for heritage language development. Participants will collaborate; connect experiences of heritage teachers and learners to research on multilingual development; and learn how to bring communities, classrooms, and digital storytelling together to create powerful heritage language learning environments.

CI 5641. Language, Culture, and Education. (; 3 cr. ; A-F or Audit; Periodic Spring & Summer)

Applies current sociolinguistic and discourse theory/research to study of relationships between language and culture in educational settings: language curriculum and instruction; classroom language use; borders between school and home/community language use; and educational policies on literacy/second-language instruction.

CI 5642. Assessing English Learners. (; 3 cr. ; A-F or Audit; Spring Odd Year)

Current practices concerning language and academic content assessment of English learners (ELs) at the school site, state, and national level; factors affecting academic learning needs of ELs/where assessment fits into that picture.

CI 5645. Teaching English Learners in English-medium classrooms. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

The course is designed to give teaching licensure candidates grounding in theory and practice for teaching linguistically and culturally diverse students. This course provides an overview of the benefits and challenges of working with English learners (ELs) and linguistically and culturally diverse

students in a variety of settings. Central topics include instructional practices and strategies for teaching English learners; second language literacy and biliteracy development; language learning and bilingualism; and culturally responsive pedagogy. The course is designed to help teacher candidates to develop an understanding of the language-specific challenges that accompany subject matter learning and to demonstrate the ability to apply a range of instructional strategies to help English learners succeed academically. prereq: Early Childhood or Elementary Education ILP or Special Education Major or Special Education M.Ed./M.A candidates

CI 5646. English Grammar for ESL Teachers. (; 3 cr. ; Student Option; Every Fall) English syntax from pedagogical perspective. Grammatical structures that challenge ESL learners. Analyzing learner errors. Issues/activities related to teaching grammar in ESL contexts. prereq: LING 5001 or instr consent

CI 5648. Advanced Practices in Teaching Academic Language. (; 3 cr. ; A-F only; Every Spring) Prepares K-12 teachers for student development of academic language proficiency. Read/discuss current research. Implement innovative teaching practices. prereq: Grad student, instr consent

CI 5649. Language Analysis for ESL Teaching in Higher Ed. (3 cr. [max 4 cr.] ; Student Option No Audit; Every Spring) Overview of complex aspects of English grammar not covered in 5646. Academic uses of passives, indirect objects, conditionals, relative clauses, complementation, reported speech, deixis/reference, articles, prepositions, phrasal verbs, pragmatics. prereq: 5646

CI 5651. Foundations of Second Languages and Cultures Education. (; 3 cr. ; A-F or Audit; Every Fall) Historical overview of second language teaching/learning in U.S. introduction to second language acquisition. Second language instructional concepts across elementary, secondary/university options for foreign language, bilingual education, immersion language programs, and English as a second language programs. Theoretical frameworks for language instruction are tied to practice.

CI 5653. Methods in Teaching English as a Second Language (ESL) in Higher Education. (3 cr. ; Student Option No Audit; Every Fall & Spring) Theory/practice teaching academic English as second or foreign language in contexts of higher education. History of field/varied methods in language teaching. Current best practices in teaching academic English pronunciation, listening, speaking, reading, writing skills. prereq: An intro to linguistics course

CI 5654. Practicum in Language Teaching: ESL and World Languages. (1-6 cr. ; S-N only; Every Spring) Practical, hands-on training in teaching of English as Second Language. Applying theoretical/descriptive material studied in

prior course work. Discuss readings/research articles on SLA, applying theoretical/practical principles to specific critical classroom incidents.

CI 5656. Teaching Literacy in Second Language Classrooms. (; 3 cr. ; Student Option No Audit; Every Fall) Reading comprehension/composing processes in a second language; relationship between first and second literacy development; relationship between reading and writing; relationship of culture to reading comprehension and writing; politics of literacy; assessment of second language literacy; using technology to enhance literacy instruction.

CI 5657. Teaching Speaking and Listening in Second Language Classrooms. (; 3 cr. ; A-F or Audit; Spring Even Year) Theories/methods in teaching language as communication in oral/aural modes; planning student interaction; classroom organization for oral language learning/acquisition; using technology to enhance interaction; assessment of listening comprehension and oral communication.

CI 5658. Language Testing and Assessment. (; 3 cr. ; A-F or Audit; Spring Odd Year) For language teachers. Aligning language classroom instruction/assessment; language testing/assessment; classroom-based and large-scale proficiency testing/assessment; assessing proficiency in speaking, listening, reading, writing and communicative modes (interpretive, presentational, interpersonal); creation of formative/summative assessments; critique of contemporary assessment instruments.

CI 5660. Special Topics in the Teaching of Second Languages and Cultures. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Spring & Summer) Topics related specifically to the needs of the in-service teacher. Topics, location, credits, and duration are flexible.

CI 5662. Second Language Curriculum Design. (; 3 cr. ; A-F or Audit; Every Spring) Historical overview of curriculum development in second language education; contexts that influence curriculum development; models for curriculum development in second language settings; politics of curricular reform; national/state standards and implications for curriculum development; effects of technology on second language curriculum.

CI 5667. Foreign Language Literacies: Using Target Language Texts to Improve Communication. (2 cr. ; Student Option; Every Summer) Preparing students to participate in multilingual and multicultural communities entails shifting the way we approach language instruction. How do we move beyond teaching students to order coffee or talk about weekend activities, and instead encourage them to think critically and reflectively about language, culture, and communication? To answer this question, this institute focuses on how to develop students' foreign language literacies? or the

ability to interpret and create different kinds of discourse?through engagement with target language texts such as movies, infographics, poetry, music videos, magazine articles, podcasts, and the like. Using conceptual and pedagogical understandings gained during the institute, participants will examine and assess target language texts for use in their classrooms and create text-based instructional materials that develop students' communicative abilities, critical thinking, intercultural competence, and language awareness.

CI 5668. Transforming the Teaching of Language Online (TTLO). (; 3 cr. ; Student Option; Every Summer) Transforming the Teaching of Language Online (TTLO) is for experienced classroom language teachers who want to transition to teaching their language class online. Offered completely online, TTLO will give teachers the first-hand experience of being an online learner while focusing on the important elements of a successful online language class such as online course design guidelines, best practices for online teaching, comparing online to traditional language teaching, and incorporating appropriate technology tools for communicative-based online activities. In addition to delving into these aspects of online teaching, participants will see them in action by taking part in model online language activities as language learners. By the end of the program, participants will have a portfolio of activities ready to be incorporated in an online language course.

CI 5670. Foundations of Dual Language and Immersion Education. (; 3 cr. ; Student Option; Every Fall) Research foundations and program principles for dual language/immersion. Second language acquisition; critical features of program design/implementation; benefits/challenges of dual language/immersion; program assessment; advocacy. Theory/research for dual language/immersion tied to practical application. prereq: Enrollment in certificate program in dual language/immersion educ or instr consent

CI 5671. Curriculum Development and Assessment in Dual Language/Immersion Classrooms. (; 3 cr. ; Student Option; Fall Odd Year) Content-based language instruction and curriculum development for dual language, bilingual, and immersion contexts; balancing content/language goals/objectives in curriculum and instruction; integration of language, literacy content, and culture in curriculum; standards-based instruction; backwards design; assessment that aligns with content-based curriculum and instruction. prereq: instr consent

CI 5672. Language-Focused Instructional Practices and Strategies for Dual Language/Immersion Classrooms. (; 3 cr. ; Student Option; Every Spring) Counterbalancing content with integrated focus on language and literacy development for dual language, bilingual, and immersion classrooms. Materials development; proactive/

reactive instructional techniques; noticing and awareness-raising strategies; structuring student language production; differentiating for content, ability, and language. prereq: instr consent

CI 5676. Bilingual Development in Dual Language/Immersion Classrooms. (; 3 cr. ; Student Option; Periodic Fall & Spring)

This course aims to provide dual language, bilingual and language immersion educators with an understanding of the complex phenomena of literacy and biliteracy and with a range of instructional strategies for fostering literacy and biliteracy development in dual language/immersion classrooms.

CI 5693. Directed Study in Second Language Education. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)

Individual or group work on curricular, instructional, or assessment problems. prereq: instr consent

CI 5696. Initial Licensure Field experience: Teaching ESL and World Languages. (; 2-6 cr. ; Student Option; Every Fall, Spring & Summer)

Teaching and learning experiences in Second Language Education across the scope of the license (Elementary, Middle & High School). Requires students to work in a public school setting. prereq: adviser approval; credits cannot be counted on a graduate degree program.

CI 5697. Additional Licensure Field experience: Teaching ESL and World Languages. (; 2-6 cr. ; Student Option; Every Fall, Spring & Summer)

Teaching and learning experiences in Second Language Education as needed to complete the scope of the license (Elementary, Middle or High School). Requires students to work in a public school setting. prereq: Adviser approval; credits cannot be counted on a graduate degree program.

CI 5698. Student Teaching in Second Languages and Cultures. (; 2-6 cr. [max 14 cr.] ; Student Option; Every Fall, Spring & Summer)

Student teaching/Practicum for initial and additional licensure in Second Language Education. Requires students to work in a public school setting. prereq: Adviser approval; credits cannot be counted on a graduate degree program.

CI 5699. Clinical Experiences in Second Languages. (; 3-12 cr. [max 16 cr.] ; A-F or Audit; Every Fall & Spring)

Teaching and learning experiences in elementary and secondary second language instructional settings. Includes a seminar held concurrently to support the student teaching experience. prereq: SLC initial licensure program only

CI 5702. Social Studies Instruction in the Elementary Grades. (; 3 cr. ; A-F only; Every Fall & Spring)

Content/organization of elementary social studies programs. Programs of understanding. Improving learning situation. prereq: Early Childhood or Elementary Education ILP

CI 5741. Introduction to Social Studies Education. (; 3 cr. ; A-F only; Every Summer)

Broad issues and themes related to social studies education, including societal context, rationale, and scope and sequence. Analysis and evaluation of selected teaching strategies, methods, and resources.

CI 5742. Advanced Methods of Teaching the Social Studies. (; 3 cr. ; A-F only; Every Fall)

Focus on developing a repertoire of instructional methods that support authentic pedagogy and assessment. Enhancing reading comprehension and writing skills in the social studies. prereq: Secondary social studies initial licensure student

CI 5743. The Social Sciences and the Social Studies. (; 3 cr. ; A-F only; Every Fall)

Development of instructional strategies and contexts for exploring the social sciences as disciplines at the secondary level; central concepts and generalizations; tools of inquiry; competing structures and theories; and the relative impact of multicultural and gender-fair perspectives on the nature of history and the social sciences. prereq: Secondary social studies initial licensure student

CI 5744. Seminar: Reflecting on Professional Development in Social Studies Education. (; 3 cr. ; A-F only; Every Spring)

Reflecting on teaching experience, examining social/cultural context of teaching/learning, developing a professional identity. Refining teaching and teacher research skills. prereq: Secondary social studies initial licensure student

CI 5745. Engaging Youth With Social Studies Texts. (; 3 cr. ; A-F only; Every Spring)

Ways to engage students (grades 5-12) in social studies (textbooks, literature, speeches, editorials, political cartoons, tables, graphs, maps, film.). Developing middle/high school students' disciplinary literacy.

CI 5746. Global and Multicultural Education in the Secondary Classroom. (; 3 cr. ; A-F only; Every Spring)

Issues, classroom practices, and controversies surrounding global/multicultural perspective-taking in social studies education. Strategies for helping secondary social studies students develop global/multicultural worldviews.

CI 5762. Developing Civic Discourse in the Social Studies. (; 3 cr. ; A-F or Audit; Periodic Spring & Summer)

Philosophies, strategies, and research on developing civic discourse in secondary social studies classroom. Selecting issues. Democratic classroom climate. Relating to social/cultural contexts.

CI 5782. Clinical Experiences in Teaching Social Studies. (; 1-8 cr. [max 16 cr.] ; S-N or Audit; Every Fall & Spring)

Student teaching experiences for students preparing to become secondary social studies teachers. Teacher candidates work closely with social studies teachers in grades 5-12 to plan and implement engaging and meaningful learning experiences for middle and high

school students. prereq: MEd/initial licensure student

CI 5822. Mathematics Instruction in the Elementary Grades. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Principles of learning mathematics in elementary grades. Objectives, content, philosophy, instructional materials, methods of instruction/evaluation. prereq: Early Childhood or Elementary Education ILP

CI 5980. Clinical Experiences for K-12 Teaching. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)

Practical teaching/learning experiences in school setting. Includes co-teaching during student teaching and coaching/assessment by a university supervisor.

CI 5981. Introduction to Equity-Based Pedagogy. (; 1 cr. ; A-F only; Every Fall, Spring & Summer)

Introduces aspects of inequities in U.S. society/school. Examines how social class/poverty permeated education as social institution/classroom pedagogy. Covers five principles for social class-sensitive change/intersections between social class/other markers of difference.

CI 5982. Enacting Equity-Based Pedagogy. (2 cr. ; A-F only; Every Fall, Spring & Summer)

Extended study of inequities. Examines working-class literature for adults/children. Labor histories, economic systems, hierarchies of class, race, gender, sexuality, language in schools/communities.

CI 5983. Equity-Based Pedagogy/Advocacy. (1 cr. ; A-F only; Every Fall, Spring & Summer)

Extends study of inequities in society. Five principles for social class-sensitive change. Intersections between social class/other markers of difference such as race, gender, sexuality, language.

CI 5984. Planning Design and Management. (; 1 cr. ; A-F only; Every Fall, Spring & Summer)

Foundational understanding of being teacher, developing culturally responsive classroom, designing learning experiences. Conceptualization of teacher nationally/locally, language in classroom. Foundational concepts/tools used when facilitating learning.

CI 5985. Academic Language and English Learners in the Content Areas. (; 1 cr. ; A-F only; Every Fall, Spring & Summer)

Prepares teacher candidates to work effectively with English learners/other linguistically diverse students across all content areas. Develop students' academic language proficiency as needed for school success.

CI 5986. Foundations of Special Education. (; 1 cr. ; A-F only; Every Fall, Spring & Summer)

Skills to promote learning/success for all students, including those at risk for school failure/with special needs. Introduces research/issues emphasizing collaborative problem solving approach that facilitates effective family-professional partnerships/educational programming for individuals with disabilities.

CI 5987. Child and Adolescent Development for Teaching, Learning, and Assessment. (1 cr. ; A-F only; Every Fall, Spring & Summer) Cognitive, social, emotional development of childhood/adolescence. Ecological influences in development. Theories of learning/cognition, cognitive/social development, motivation, individual/group differences, testing/assessment, teaching methodologies, pragmatic issues.

CI 5988. Clinical Experience: Improvement of Teaching. (; 2 cr. ; A-F only; Every Fall, Spring & Summer) Capstone project. Link theory/practice, integrate coursework with experiences in classroom.

Dakota (DAKO)

DAKO 1121. Beginning Dakota I. (; 5 cr. ; Student Option; Every Fall) Listening, speaking, reading, writing. Oral drills, in-class participation focused on questions/answers.

DAKO 1122. Beginning Dakota II. (; 5 cr. ; Student Option; Every Spring) Further development of language acquisition skills. Oral drills, in-class participation focused on questions/answers. prereq: 1121

DAKO 3123. Intermediate Dakota I. (; 5 cr. ; Student Option; Every Fall) Listening, speaking, reading, writing. Oral drills, in-class participation focused on questions/answers. prereq: 1122

DAKO 3124. Intermediate Dakota II. (; 5 cr. ; Student Option; Every Spring) Listening, speaking, reading, writing. Oral drills, in-class participation focused on questions/answers. prereq: 1121, 1122, 3123

DAKO 3125. Introduction to Dakota Linguistics. (; 3 cr. ; Student Option; Every Fall) Structure of Dakota, including phonology, morphology, syntax, and semantics. prereq: 3124

DAKO 3127. Dakota Language for Teachers. (; 3 cr. ; A-F only; Every Fall) Dakota language for teachers. Methods of teaching Dakota language in the classroom. prereq: 1121

DAKO 4121. Beginning Dakota I. (; 3 cr. ; Student Option; Every Fall) Language acquisitions skills, oral drills. In-class participation focuses on questions/answers. prereq: [1122, 1004] in another language or passing score on LPE or grad student

DAKO 4122. Beginning Dakota II. (; 3 cr. ; Student Option; Every Spring) Further development of language acquisition skills. Oral drills, in-class participation focused on questions and answers. prereq: [1121, 1004 in another language] or passing score on LPE or grad student

DAKO 4123. Intermediate Dakota I. (; 3 cr. ; Student Option; Every Fall) Listening, speaking, reading, writing. Oral drills. In-class participation focuses on questions/answers. prereq: 1121, 3123, 5126

DAKO 4124. Intermediate Dakota II. (; 3 cr. ; Student Option; Every Spring) Listening, speaking, reading, writing. Oral drills. In-class participation focuses on questions/answers. prereq: 1121, 1122, 3123

DAKO 5126. Advanced Dakota Language I. (; 3 cr. [max 12 cr.] ; A-F or Audit; Every Fall) Focuses on immersion method.

DAKO 5129. Advanced Dakota Language II. (; 3 cr. [max 12 cr.] ; A-F or Audit; Every Spring) Focuses on immersion method.

DAKO 5226. Dakota Mastery I. (3 cr. [max 6 cr.] ; Student Option; Every Fall) This content-based Dakota language class will focus on Dakota culture and history. Students will learn through both oral and written texts. Both traditional and contemporary stories will be discussed and utilized to give students a better view of Dakota ontology and epistemology. The effects of colonization and the need for decolonization will be also be discussed through the lens of Dakota stories and culture.

DAKO 5229. Dakota Mastery II. (3 cr. [max 6 cr.] ; Student Option; Every Spring) This content-based Dakota language class will focus on Dakota culture and history. Students will learn through both oral and written texts. Both traditional and contemporary stories will be discussed and utilized to give students a better view of Dakota ontology and epistemology. The effects of colonization and the need for decolonization will be also be discussed through the lens of Dakota stories and culture.

Dance (DNCE)

DNCE 1001. Modern/Contemporary Dance Technique 1. (1 cr. ; Student Option; Every Fall & Spring) First course in ten-section sequence of modern dance technique. Introductory modern dance technique training. Dance form varies according to instructor.

DNCE 1010. Modern/Contemporary Dance Technique 3. (; 1-2 cr. [max 4 cr.] ; Student Option; Every Fall) Third course in ten-section sequence of modern dance technique. Beginning modern dance technique training. Dance form varies by instructor. prereq: dept consent, audition

DNCE 1020. Modern/Contemporary Dance Technique 4. (1-2 cr. [max 4 cr.] ; Student Option; Every Spring) Fourth course in ten-section sequence of modern dance technique. Beginning modern dance technique training. Dance form varies by instructor. prereq: 1010, dept consent, audition

DNCE 1040. Modern Dance Partnering Technique. (; 1 cr. [max 2 cr.] ; A-F only; Every Spring) Technical demands, approaches, and skills needed for partnering in modern dance. prereq: Dance major or instr consent

DNCE 1101. Ballet Technique 1. (; 1 cr. ; Student Option; Every Fall & Summer)

Principles, basic technique, and vocabulary of ballet; barre, center, and allegro.

DNCE 1102. Ballet Technique 2. (1 cr. ; Student Option; Every Spring) Second of two-semester sequence of fundamental Classical Ballet Technique. Principles of Classical Ballet technique. Each principle introduced separately/in progression. Barre/center work with emphasis on simplicity, repetition, creativity. prereq: 1101, or audition, or instr consent

DNCE 1110. Ballet Technique 3. (2 cr. [max 4 cr.] ; Student Option; Every Fall) First of two-semester sequence of beginning ballet technique. Level 3 in eight-level sequence of ballet technique. Practical application of ballet principles. Barre work needed for center work. Center work will consist of adagio, basic turns, petit, grand allegro. prereq: dept consent, audition

DNCE 1120. Ballet Technique 4. (2 cr. [max 4 cr.] ; Student Option; Every Spring) Second of two-semester sequence in beginning ballet. Practical application of ballet principles. Barre/center work. Ever-changing combinations/steps learned in previous level. prereq: 1110, dept consent, audition

DNCE 1201. Jazz Technique 1. (1 cr. ; Student Option; Every Fall & Summer) First of six-semester sequence of jazz dance. Fundamental jazz vocabulary/movement. Basic understanding of proper body placement, clear articulation, basic mechanics of jazz movement, rhythmic footwork. Improvisation will be introduced. Overview of history of jazz music/dance styles.

DNCE 1202. Jazz Technique 2. (1 cr. ; Student Option; Every Spring) Second of six-semester sequence in jazz dance. Fundamental jazz vocabulary/movement. Clear articulation of movement, use of space, weight, dynamics, focus, style, musicality. Improvisation. Overview of history of jazz music/dance styles. prereq: 1201 or audition or instr consent

DNCE 1210. Jazz Technique 3. (1 cr. [max 2 cr.] ; Student Option; Every Fall) Third of six-semester sequence of jazz dance. Vocabulary. Technical skills using variety of jazz dance styles while increasing flexibility, groundedness, strength. Increase understanding of musicality, dynamics, style, improvisation. prereq: dept consent, audition

DNCE 1220. Jazz Technique 4. (1 cr. [max 2 cr.] ; Student Option; Every Spring) Fourth of six-semester sequence of jazz dance. Expand vocabulary/develop skills, technique, style. Increase flexibility, strength. Use of space, clear articulation of movement, rhythmic footwork, grounding movement, dynamics, musicality. prereq: 1210, dept consent, audition

DNCE 1301. Tap Technique 1. (; 1 cr. ; Student Option; Every Fall & Summer) Learning fundamental terms, basic rhythm structures, stock steps, and standard time steps.

DNCE 1302. Tap Technique 2. (; 1 cr. ; Student Option; Every Spring)

Fundamental terms, basic rhythms and syncopation, stock steps, and standard time steps; clarity of sound and rhythm. prereq: 1301 or instr consent

DNCE 1313. African Based Movement. (; 1 cr. ; Student Option; Every Fall & Spring)
Varied movement of African diaspora, primarily but not limited to West African region and continent of Africa. Traditional movement. Movement inspired by Africa, the Caribbean, and African diaspora at large. In-class movement participation, one movement midterm, one two-page paper.

DNCE 1327. Argentine Tango. (; 1 cr. ; Student Option; Every Fall)
Basic rhythms emphasizing posture, axis, walking, lead/follow techniques, footwork patterns. Students listen to music to identify rhythm, communicate.

DNCE 1331. Yoga. (; 1 cr. ; Student Option; Every Fall, Spring & Summer)
Theory/practice of Yoga. Standing postures, forward bends, twists, balancing, seated postures, inversions, back bends, guided relaxation/meditation. Proper alignment, weight placement, body awareness, relaxation, breathing techniques. Midterm paper, movement demonstration final.

DNCE 1332. Yoga for Dancers. (; 1 cr. ; Student Option; Periodic Fall & Spring)
Physical experience and related aesthetic topics. Historical aspects. Philosophical ideas of yoga. Improving body mechanics through alignment, flexibility, and strength. Developing mental focus/control. Reinforcing positive body language.

DNCE 1335. T'ai Chi Ch'uan. (; 1 cr. ; Student Option; Every Spring & Summer)
Ancient Chinese slow-motion exercise. Helping body/mind to become relaxed/centered. Natural movement patterns, deep breathing, tranquil stress-free mind. Self-defense applications of movements. Non-competitive, non-aggressive.

DNCE 1343. Urban & Street Dance Forms 1: Introduction. (; 1 cr. ; Student Option No Audit; Periodic Fall)
We study the origins of Hip Hop dance and how it has evolved to the current incarnations of the form. There is also a focus on Hip Hop culture as a whole and we have many discussions about issues of identity, relation to power, appropriation, and youth culture. The specific forms of movement in this course are toprocking, rocking, breakdancing (breaking), New Jack Swing, and house dance. Some questions to focus on: What is Hip Hop dance? Where does it originate? Who created Hip Hop artistic expressions? What voices/bodies are heard/seen or not heard/not seen in the films assigned?

DNCE 1344. Urban & Street Dance Forms 2: Advanced Foundation and Histories. (1 cr. [max 2 cr.]; A-F only; Every Fall & Spring)
In this second course in the dance program's 4-semester Urban and Street Dance sequence, students further investigate the technical foundations and histories of rocking, breaking, funk styles, krump, house, and specific techniques that mix these forms together.

These further explorations focus on more advanced techniques, aesthetic approaches, and complex issues within these forms. Students are assigned readings and writing assignments that critically examine each issue. Students will participate in an informal showing at the end of the semester. Prerequisite: completion of DNCE 1343 or audition.

DNCE 1345. Alexander Technique for Movement Artists. (2 cr. ; Student Option No Audit; Every Spring)
Increased kinesthetic awareness of habitual movement patterns in order to improve dance/movement technique and prevent related injuries.

DNCE 1349. Contact Improvisation. (; 1 cr. ; Student Option; Every Fall, Spring & Summer)
Safe, clear introduction to principles of contact improvisation. Rolling point of contact, supporting/being supported, falling/recovering, connecting with center as source/support for movement. Classes include warm-up.

DNCE 1351. African Diasporic Movement 1. (; 1 cr. ; Student Option No Audit; Every Fall)
First of six-course sequence. Introduction to traditional West African dance technique as a foundational base to begin learning technique, body placement, movement, space, time, energy, isolations, patterns, etiquette, community building, group work and presentation.

DNCE 1353. African Diasporic Movement 3. (; 1 cr. ; Student Option No Audit; Every Fall)
Third of six-course sequence. Afro-Brazilian dance, including jumps, turns, floor work, and rhythmicity to develop flexibility, strength, and vocabulary in polycentric movement, moving toward body-sound harmony, illuminating dynamics of coordination, relaxation, breathing, undulation.

DNCE 1354. African Diasporic Movement 4. (; 1 cr. ; Student Option No Audit; Every Spring)
Fourth of six-course sequence. Builds on level 3 by exploring movement from mythology of Afro-Brazilian belief systems orix??? and Candombl????. How corporal knowledge and technique fluency through the course sequence support different dance techniques. prereq: 1353 or audition or instr consent

DNCE 1401. Introduction to Dance. (AH; 3 cr. ; Student Option No Audit; Every Fall & Spring)
What is dance? How does movement create meaning? Dance as action and framework for analysis of moving bodies. Movement politics of race, class, gender, sexuality, and nation through reading, writing, moving, and watching dance performances. Discussion. Dance experience not required.

DNCE 1601. Dance Improvisation. (; 1 cr. ; A-F or Audit; Every Fall)
Individual ways of moving linked to fundamental elements of dance: time, space, and energy. Metered time, musical phrasing. Movement speed, shape, and quality. Creative process, individual movement vocabulary, structural devices in dance. prereq: Concurrent registration in a modern dance technique course, dept consent

DNCE 1626. Music for Dance. (AH; 3 cr. ; Student Option; Every Fall)
Cultural gravity of the Western perspective. Ways global regions express natural laws of acoustics through music while considering historical, political, and ethical issues around the relationship between music and dance. Workshops, practice, and exercises. prereq: dept consent

DNCE 1701. Freshman/Sophomore Repertory. (1 cr. ; A-F only; Every Fall, Spring & Summer)
Immersed in a professional dance company environment, this repertory class will help students develop the necessary skills to effectively navigate the complexities inherent to professional repertory dance companies. Through learning the unique and varied styles of multiple choreographers, the course examines distinguishing factors of these various choreographic works, illuminating for the student, their responsibilities as dance artists and further developing their abilities to maintain the integrity of preexisting works.

DNCE 3010. Modern/Contemporary Dance Technique 5. (; 2 cr. [max 4 cr.]; Student Option; Every Fall)
Fifth course in ten-section sequence of modern dance technique. Application of principles of space, time, energy. Alignment, power from pelvic center, rotation/turnout, muscular tonality, joint articulation, clarity of intent, stretch, strength, stamina. prereq: dept consent, audition

DNCE 3020. Modern/Contemporary Dance Technique 6. (; 2 cr. [max 4 cr.]; Student Option; Every Spring)
Sixth course in ten-section sequence of modern dance technique. Application of principles of space, time, energy. Alignment, power from pelvic center, rotation/turnout, muscular tonality, joint articulation, clarity of intent, stretch, strength, stamina. prereq: 3010, dept consent, audition

DNCE 3110. Ballet Technique 5. (; 2 cr. [max 4 cr.]; Student Option; Every Fall)
Stretch, strength, balance, musicality. Longer phrases in adagio/allegro work. More complex elevations in petit allegro. Practical work conducted in context of study of technical development of ballet. prereq: dept consent, audition

DNCE 3120. Ballet Technique 6. (; 2 cr. [max 4 cr.]; Student Option; Every Spring)
Continuation of 3110. Ballet technique. Stretch, strength, balance, musicality. Longer phrases in adagio/allegro work. More complex elevations in petit allegro. prereq: 3110, dept consent, audition

DNCE 3210. Jazz Technique 5. (; 1 cr. [max 2 cr.]; Student Option; Every Fall)
Continuation of jazz technique. Rhythm structures, longer phrases, greater physical speed, attack/control. prereq: dept consent, audition

DNCE 3220. Jazz Technique 6. (; 1 cr. [max 2 cr.]; Student Option; Every Spring)
Continuation of 3210. Jazz technique. Rhythm structures, longer phrases, greater physical

speed, attack/control. prereq: 3210, dept consent, audition

DNCE 3301. Tap Technique 3. (; 1 cr. ; Student Option; Every Fall & Summer)

Tap techniques and creative development through improvisational studies. prereq: 1302 or instr consent

DNCE 3302. Tap Technique 4. (; 1 cr. ; Student Option; Every Spring)

Tap techniques and rhythm structures. prereq: 3301 or instr consent

DNCE 3334. Introduction to Dance/ Movement Therapy. (2 cr. ; Student Option; Every Fall & Spring)

Historical/theoretical perspectives on use of movement/dance in relationship to psychology/healing. D/MT pioneers/techniques. Applications of D/MT with various populations/ settings. Experiential course. prereq: dept consent

DNCE 3337. Body Mind Centering. (; 2 cr. ; Student Option; Every Fall, Spring & Summer)

Improvisational movement explorations, hands-on re-patterning work. Direct experience of the way mind (desire, attention, intention) is expressed through various body systems. Students use imagery, touch, and anatomical information to access a range of inner sensations and movement experiences. Emphasizes each individual's unique experience of the body.

DNCE 3341. Urban & Street Dance Forms 3: Emerging Scholar. (1 cr. [max 2 cr.] ; A-F or Audit; Every Fall & Spring)

This is the third course in the dance program's 4-semester Urban and Street Dance sequence. It focuses on intermediate/advanced techniques in rocking, breaking, funk styles, krump, house, and specific techniques that mix these forms together. These further explorations focus on more advanced techniques, aesthetics, and complex issues within forms practiced by instructors. Students are assigned readings, videos, and writing assignments to think critically about each issue. There is an informal showing at the end of the semester. prereq: Completion of DNCE 2341 or audition.

DNCE 3342. Urban & Street Dance Forms 4: Scholar. (1 cr. [max 2 cr.] ; A-F or Audit; Every Fall & Spring)

This is the final course in the Dance Program's 4-semester Urban and Street Styles sequence. It focuses on advanced techniques in rocking, breaking, funk styles, krump, house, and specific techniques that mix these forms together. These further explorations focus on advanced techniques, aesthetics, and complex issues within forms practiced by instructors. Students are assigned readings, videos, and writing assignments to think critically about each issue. There is an informal showing at the end of the semester. Prerequisite: Completion of DNCE 3341 or audition

DNCE 3351. African Diasporic Movement 5. (; 1 cr. [max 2 cr.] ; Student Option No Audit; Every Fall)

Rigorous practice. West African techniques. Cardiovascular endurance of students will

improve as a result. Live drummers, students can expect to learn drum parts to enhance the understanding of the rhythms. prereq: 1354 or audition or instr consent

DNCE 3352. African Diasporic Movement 6. (; 1 cr. [max 2 cr.] ; Student Option No Audit; Every Spring)

Dances performed by dance companies of Guinea through the use of more complex and deep rhythms such as Yamama, Doundounba, Baho and Tiribah. Rigorous practice. West African techniques. Live drummers. prereq: DNCE 3351 African Diasporic Movement 5 or audition or instructor consent

DNCE 3401W. Dance History 1. (GP,WI; 3 cr. ; Student Option; Every Fall)

Historiography of dance, 20th century through present. Reconstruction/incorporation of dance practice in context of globalization. Artistic choices as influenced by complex history of performing arts and terrain of body/politics.

DNCE 3402W. Dance History 2. (WI; 3 cr. ; Student Option; Every Spring)

History/theory of dance in varied forms/ aspects. From development of ballet through 20th century modern dance. Second half of year-long survey. prereq: 3401W

DNCE 3411. Dance and Popular Culture: Choreographing Race, Class, and Gender. (DSJ; 3 cr. ; Student Option; Periodic Fall & Spring)

How race, class, and gender become aestheticized and are put into motion as popular culture. Choreographic analysis of moving bodies. How "popular" affects understanding of culture. Exoticism, binary structures of stereotypes, identity, hegemony.

DNCE 3433. Articulate Body. (; 3 cr. ; Student Option; Every Spring)

Lectures and movement sessions in biodynamic considerations for optimal dance performance and metabolic demands of dance. prereq: Dnce major, dept consent

DNCE 3434. Nutrition and Body Maintenance for Movement Artists. (; 2 cr. ; Student Option No Audit; Every Spring)

Students learn and research ways to improve nutrition and remain injury-free throughout career and beyond. Discuss nutrition principles and apply to unique challenges, needs, interests of movement artists. Examine anatomy of movement to develop constructive injury prevention and management strategies. Stress reduction.

DNCE 3487W. Dance and Citizenship: Land, Migration, and Diaspora. (WI; 3 cr. ; Student Option; Every Fall)

Dance/performance as practiced/transformed by minority groups in the United States. Migration as a global phenomenon, particularly pertaining to land disputes, labor distribution, political asylum, refugee, and dislocation.

DNCE 3500. Topics in Dance. (; 1-3 cr. [max 6 cr.] ; A-F or Audit; Periodic Fall, Spring & Summer)

Topics specified in Class Schedule.

DNCE 3601. Dance Composition 1. (; 3 cr. ; Student Option; Periodic Spring)

Movement, vocabulary in relation to theme, space, time, energy, and body parts; solo, duet, and trio forms. prereq: 1020, 1601, concurrent regis in a modern dance technique course, dept consent

DNCE 3602. Dance Composition 2. (; 3 cr. ; Student Option; Every Fall)

Movement, vocabulary in relation to theme, space, time, energy, and body parts. Solo, duet, and trio forms. prereq: 3601, dept consent, concurrent regis in a modern dance technique course

DNCE 3621. Dance Production I. (; 2 cr. ; A-F or Audit; Every Fall)

Technical/administrative aspects of dance production. Lighting, costumes, sound, marketing, stage management, fundraising, publicity. Emphasizes practical project management and personal management skills. prereq: Dance major, dept consent

DNCE 3622. Dance Production II. (; 2 cr. ; A-F or Audit; Every Spring)

Continuation of 3621. Students produce the spring Student Dance Concert. prereq: 3621, dance major, dept consent

DNCE 3700. Performance. (; 1 cr. [max 4 cr.] ; Student Option; Every Fall & Spring)

Creation or reconstruction of a dance theatre work under the direction of a guest artist or faculty member. Work is performed at the end of the rehearsal period. prereq: Concurrent enrollment in a technique course, audition, dept consent

DNCE 3701. Summer Dance Intensive. (; 1-3 cr. [max 6 cr.] ; Student Option No Audit; Every Summer)

Real-world experience with a professional dance company. Students participate in daily technique and repertory classes culminating in an informal performance. Artists are arranged year-by-year.

DNCE 3901. Career Readiness in Dance. (; 1-3 cr. ; A-F or Audit; Periodic Spring & Summer)

Strategies fundamental to a dancer's survival. Injury prevention/care. Development of healthy dietary and muscular/skeletal habits. Career tracks. prereq: Dance major, dept consent

DNCE 4443. Theorizing Dancing Bodies. (; 3 cr. ; Student Option; Every Fall)

Major developments in Western philosophic thought on dance and dance theory, from its beginnings to present. prereq: 3402W or instr consent

DNCE 4601. Dance Composition 3. (; 3 cr. ; Student Option; Periodic Spring)

Continuation of movement vocabulary through improvisation, analysis of form and structure, experimentation with tone and performance persona. Effects of lights/costumes/text/props/music; development of larger ensemble works. prereq: 3602, concurrent regis in a modern dance technique course, dept consent

DNCE 4602. Dance Composition 4. (; 3 cr. ; Student Option; Every Fall)

Continuation of 4601. Movement vocabulary through improvisation, analysis of form and structure, experimentation with performance

persona, and the effects of technical elements. Development of larger ensemble works. prereq: 4601, concurrent registration is required (or allowed) in modern dance technique course, dept consent

DNCE 4901. Capstone Seminar for Dance. (; 1-2 cr. ; S-N or Audit; Every Fall)

Development of senior project, alone or in groups, under guidance of faculty members. prereq: Sr, [Dnce or Th major]

DNCE 5010. Modern/Contemporary Dance Technique 7. (; 2 cr. [max 4 cr.]; Student Option; Every Fall)

Seventh course in ten-section sequence of modern dance technique. Continuation of technical development. Performance range/style. Students study with various guest artists. prereq: dept consent, audition

DNCE 5020. Modern/Contemporary Dance Technique 8. (; 2 cr. [max 4 cr.]; Student Option; Every Spring)

Eighth course in ten-section sequence of modern dance technique. Performance range/style. Students study with various guest artists. prereq: 5010, dept consent, audition

DNCE 5030. Modern/Contemporary Dance Technique 9. (2 cr. [max 6 cr.]; A-F or Audit; Every Fall)

Ninth course in ten-section sequence of modern dance technique. It focuses on pre-professional technique training for students prepared for that level of technical achievement and readying themselves for a potential career as contemporary dance professionals. All Dance Program Modern Dance Technique courses examine the practical application and understanding of principles of space, time, and energy focusing on alignment, weight, momentum, power for the body's core, joint and skeletal articulation, clarity of focus and intent, flexibility, strength, stamina and energy flow and lines through the use of breath appropriate to the technical level of the course. The course also explores a range of performance strategies that students may encounter for future performance experiences within the dance program and beyond.

DNCE 5040. Modern/Contemporary Dance Technique 10. (2 cr. [max 6 cr.]; Student Option; Every Spring)

Tenth course in ten-section sequence of modern dance technique. It focuses on pre-professional technique training for students prepared for that level of technical achievement and readying themselves for a potential career as contemporary dance professionals. All dance program modern dance technique courses examine the practical application and understanding of principles of space, time, and energy focusing on alignment, weight, momentum, power for the body's core, joint and skeletal articulation, clarity of focus and intent, flexibility, strength, stamina and energy flow and lines through the use of breath appropriate to the technical level of the course. The course also explores a range of performance strategies that students may encounter for future performance experiences within the dance program and beyond.

DNCE 5110. Ballet Technique 7. (; 1 cr. [max 2 cr.] ; Student Option; Every Fall)

Continuation of ballet technique. Musicality, performance, stylistic differences. Practical work conducted within context of choreographic/aesthetic development of ballet. prereq: dept consent, audition

DNCE 5120. Ballet Technique 8. (; 1 cr. [max 2 cr.] ; Student Option; Every Spring)

Continuation of 5110. Musicality, performance, stylistic differences. Practical work conducted within context of choreographic/aesthetic development of ballet. prereq: 5110, dept consent, audition

DNCE 5334. Introduction to Dance/ Movement Therapy. (2 cr. ; Student Option; Every Spring)

Historical/theoretical perspectives on use of movement/dance in relationship to psychology/healing. D/MT pioneers/techniques. Applications of D/MT with various populations/settings. Experiential course. prereq: dept consent

DNCE 5443. Theorizing Dancing Bodies. (; 3 cr. ; Student Option; Every Fall)

Major developments in Western philosophic thought on dance and dance theory, from its beginnings to present. prereq: instr consent

DNCE 5493. Choreographing Social Justice: Staging "Equitable" Choreographies. (; 3 cr. ; A-F only; Every Spring)

Possibilities and implications of artistic work. Metaphoric bodily practices and intersections of performance and social justice practices. Theories and histories of intersections within communities of color across global North and South. Group project. prereq: 4443 recommended

DNCE 5500. Topics in Dance. (; 1-3 cr. [max 30 cr.]; Student Option; Periodic Fall, Spring & Summer)

Topics specified in Class Schedule.

DNCE 5601. Dance Composition 5. (; 1-2 cr. ; Student Option; Every Spring)

Final part of six-semester sequence in dance composition. Exploration of movement through independently scheduled rehearsals. Choreographic concepts. Tools in dance creation, development/refinement of movement, structure of group choreography. prereq: 4601, 4602, dept consent

DNCE 5700. Performance. (; 1-2 cr. [max 8 cr.]; Student Option; Every Fall & Spring)

Technique, improvisation, choreography, music, design, and technical production as they relate to dance performance. prereq: concurrent registration is required (or allowed) in technique course, dept consent, audition based Students cast in more than one choreographic piece should register for section 002 for 2 credits

DNCE 5858. Dance Pedagogy. (; 3-4 cr. ; Student Option; Every Fall)

Teaching dance provides the foundational pedagogy and methods for artful and responsible teaching and learning in dance. Students will examine key dance education theories and quality teaching practices, and

then apply the theories by developing and teaching dance lessons. The course introduces tools that assist in the planning, teaching, assessing, and sharing of dance experiences with children, adolescent, and adult learners in a variety of settings. Specific learning opportunities include: readings, investigation and discussion of dance pedagogy; the creation of lesson plans; teaching labs (in-class and off-site supervised practice teaching); and clinical observations where students can observe the theory in practice.

DNCE 5993. Directed Studies. (1-4 cr. [max 10 cr.]; Student Option; Every Fall & Spring) Guided individual study. Prereq-instr consent, dept consent, college consent.

Data Science (DSCI)

DSCI 4093. Data Science Senior Project Directed Study. (4 cr. ; A-F only; Every Fall & Spring)

Project in data science arranged between student and faculty.

DSCI 5994. Directed Research. (1-3 cr. [max 9 cr.]; Student Option; Every Fall, Spring & Summer)

Directed Research

Dental Hygiene (DH)

DH 1101. Introduction to Dental Hygiene. (1 cr. ; A-F only; Every Fall)

An introduction to the profession of dental hygiene through active learning, lectures, and discussions. The goal of this course is for students to explore the dental hygiene profession in order to assess their interest in pursuing a career in dental hygiene. Additionally, the course will provide an overview of the dental hygienist's role in the treatment and prevention of oral diseases.

DH 2111. Dental Anatomy, Embryology & Histology. (; 3 cr. ; A-F or Audit; Every Fall)

Structural microscopic anatomy of oral hard/soft tissues. All deciduous/permanent teeth, including tooth form, function, and relationship to oral health. Tooth development, calcification, eruption, and exfoliation patterns. Ideal static occlusion, dental terminology, tooth annotation systems. Learning activity includes identification/annotation of teeth, dental histology, embryology, and anatomy.

DH 2121. Process of Care in Allied Dental Health: Clinical Application I. (; 5 cr. ; A-F or Audit; Every Fall)

Dental hygiene/Dental Therapy care process, assessment principles related to medical and oral health status, dental hygiene clinical procedures, and development of instrumentation skills.

DH 2132. Head and Neck Anatomy. (; 2 cr. ; A-F or Audit; Every Fall)

The anatomical structures of head and neck as they relate to the practice of dental hygiene and dental therapy.

DH 2212. Communication for Oral Health Providers. (2 cr. ; A-F only; Every Spring)

This course introduces the study of effective communication strategies within the health care team and during patient-provider relationships. There is an emphasis on public speaking basic principles, effective strategies, and ethical approaches. The application of health literacy concepts and behavior change theory as components of evidence-based decision making in a variety of practice settings will be taught.

DH 2221W. Periodontology. (WI; 3 cr. ; A-F only; Every Spring)

This course introduces periodontal diseases; etiology, assessment, and treatment options. It includes clinical experience in debridement, root planing with ultrasonic and hand instruments. (3 credits) prereq: DH student

DH 2222. Process of Care in Allied Dental Health: Clinical Application II. (; 4 cr. ; A-F or Audit; Every Spring)

In this class, you will begin to apply your knowledge of the various preventive products, patient education, assessment data, and medical histories to clinical practice. You will develop application skills in fluoride treatments and pit and fissure sealants as well as the evaluation of products used in the treatment of dental caries and periodontal diseases. This class will also give you an introduction to the School of Dentistry's clinical systems, various medical and emergency conditions affecting patient care, and preventive strategies for oral diseases.

DH 2225. Microbiology, Immunology, and Oral Health. (3 cr. ; A-F only; Every Fall, Spring & Summer)

Encounters with microorganisms are part of everyday life for humans, both as pathogenic and non-pathogenic entities. During this microbiology course students will learn characteristics of microbial life for bacteria, viruses, parasites, and fungi. An emphasis will be placed on microorganisms that are commonly found in the oral cavity. An introduction to the human immune system and its function in regulating infections will be presented. Students will gain an understanding of both commensal microbiota and pathogenic microorganisms, and how their impact on human health. Additionally, students will begin to convey scientific data and research results to non-scientists as a basis for discussing disease prevention, infection management, and treatment plans in a clinical setting. prereq: dental hygiene student

DH 2231. Cariology and Applied Nutrition in Allied Dental Health. (; 3 cr. ; A-F or Audit; Every Fall)

The study of dental caries etiology, pathology, and prevention, and the applied principles of diet and nutrition to dental hygiene/dental therapy patient care with skills in dental dietary counseling. Course content also includes a comprehensive review of CAMBRA. Cariology and Applied Nutrition in Allied Dental Health is designed to provide the beginner level dental hygiene student with a knowledge base in cariology and nutrition as it applies to the oral cavity. The implementation of this knowledge is Dental Dietary Counseling with a dental

hygiene patient. DH 2231/DT 2231 relies on the communication skills developed in DH 2212/DT 2212.

DH 3121. Local Anesthesia and Pain Management. (2 cr. ; A-F only; Every Summer)

Concepts in the administration of local anesthesia, nitrous oxide-oxygen sedation, and other methods of pain management. Anatomy, physiology, pharmacology, patient assessment, indications and contraindications, selection of agents, injection techniques, complications, emergency management, and legal/ethical considerations. Lecture, lab, clinic. Clinical sessions include actual experience in administering local anesthesia and other methods of pain management. The administration of local anesthesia will be taught to clinical competency. The didactic component of nitrous oxide-oxygen sedation will be completed in this course with clinical experiences occurring in the Faculty Practice Clinic and in subsequent clinical rotations leading to clinical competency in this method of pain management.

DH 3123. Process of Care in Allied Dental Health: Clinical Application III. (4 cr. ; A-F only; Every Summer)

Dental hygiene/Dental Therapy planning for caries prevention and control, non-surgical periodontal therapy, and tobacco cessation. Case presentation, ergonomic, and clinical experience in dental hygiene/dental therapy patient care.

DH 3125. General and Oral Pathology. (; 2 cr. ; A-F or Audit; Every Spring)

This course covers topics in pathology related to dentistry and the oral cavity. Oral benign/malignant tumors, infectious, inflammatory, and immunologically mediated lesions/diseases are covered.

DH 3133. Pharmacology. (; 2 cr. ; A-F or Audit; Every Summer)

Principles of pharmacology, physical/chemical properties of drugs, modes of administration, therapeutic/adverse effects, drug actions/interactions.

DH 3134. Pediatric Dentistry. (; 1 cr. ; A-F or Audit; Every Summer)

Knowledge, skills, and attitudes required for providing dental hygiene care for pediatric patients. prereq: DH student

DH 3151. Oral and Maxillofacial Radiology. (; 2 cr. ; A-F or Audit; Every Spring)

General principles of radiology, radiation physics, dosimetry, biology, radiation protection, regulations, recent concepts of imaging, and radiographic anatomy.

DH 3211. Biomaterials and Principles of Restorative Techniques I. (; 4 cr. ; A-F only; Every Summer)

This course is for dental hygiene students to learn theory and "hands on" practice of dental restorative materials. Students will practice the manipulation and placement of various dental materials in permanent and primary typodont prepared teeth, and they will also learn and practice the selection process and placement

of stainless steel crowns on primary typodont teeth. prereq: DH student

DH 3224W. Process of Care in Allied Dental Health: Clinical Application IV. (WI; 6 cr. ; A-F or Audit; Every Fall)

Knowledge, skills, and attitudes required for providing dental hygiene care for the medically compromised patient, gerodontic patient, and patient with a disability. prereq: Dental hygiene student

DH 3228. Ethics and Jurisprudence in Allied Dental Health. (1 cr. ; A-F only; Every Fall)

Studying dental hygiene/dental ethics is intended to provide the tools and skills required for ethical analysis and reflection ? critical thinking. The healthcare professional-patient relationship provides a complex array of problems and dental hygiene is, as are practicing dental hygienists, faced with making important decisions about right and wrong and balancing harm and benefits in the clinical setting. Therefore, the primary goal of this course is to help the student dental hygienist understand how to make critical decisions and how to take appropriate actions when dealing with patients, peers, the institution, and society.

DH 3234. Oral and Maxillofacial Radiology: Theory, Principles, and Radiographic Analysis. (1 cr. ; A-F only; Every Fall)

Intraoral and extraoral radiographic anatomy. Principles of radiographic interpretation, evaluation of radiographs to identify variation of normal, and dental and maxillofacial diseases.

DH 3238. Dental Public Health and Academic Service Learning I. (; 3 cr. ; A-F only; Every Fall)

This course provides an overview of the discipline of public health including epidemiological methods of investigation with an emphasis on patterns of oral diseases. Course content emphasizes designing, implementing, and evaluating oral health promotion and health education programs. Students prepare for community service learning programs.

DH 4105. Dental Professional Development. (1 cr. [max 2 cr.] ; A-F only; Every Spring)

Dental Hygiene Course Description Skills to effective practice management and strategic decision-making, promoting mutual trust and respect in all interpersonal interactions, with an emphasis on the roles of a collaborative dental team. Dental Therapy Course Description Interprofessional course. Organizational, managerial, and financial systems that affect successful dental practice.

DH 4125W. Process of Care in Allied Dental Health: Clinical Application V. (DSJ,WI; 6 cr. ; A-F only; Every Spring)

Social justice of health/oral health care in U.S. How race/class/gender impact resources. Dental hygiene/dental therapy treatment in diverse patient population.

DH 4135W. Research Methods in Allied Dental Health. (WI; 3 cr. ; A-F only; Every Spring)

Develop skills in the scientific method and critiquing scientific literature. Emphasis is place

on evidence-based decision-making, types of research and research design, problem identification and hypothesis development, analyzing individual components of journal articles in relation to research principles, and writing the literature review. Fulfills writing intensive requirement.

DH 4136. Periodontology III Lecture. (; 1 cr. ; A-F or Audit; Every Spring)

This course will provide information regarding the surgical phase of periodontal therapy, including select topics in implantology. The course also emphasizes the evaluation of periodontal treatment, periodontal maintenance care, and the relationship between periodontics and other disciplines in dentistry. Use of pharmacological agents, periodontal medicine, clinical research and integrating periodontics into the general practice also are covered.

DH 4139. Dental Public Health and Academic Service Learning II. (; 2 cr. ; A-F only; Every Spring)

Academic service learning in various community healthcare settings. The student will apply information from Dental Public Health & Service Learning I and II to assess, plan, implement, and evaluate a dental public health program designed to meet the oral health needs of a priority population.

DH 4226. Process of Care in Allied Dental Health: Clinical Application VI. (6 cr. ; A-F only; Every Summer)

Advanced dental hygiene/dental therapy care process in Comprehensive Care Clinics and Service Learning Outreach sites. Development and presentation of the Senior Capstone experiences. The Capstone is a comprehensive oral case presentation and written case report based on a unique patient experience and treatment.

DH 4234. Leadership and Professional Development. (; 2 cr. ; A-F only; Every Summer)

Explore the dental hygienist/dental therapist as leader and manager in healthcare delivery organizations or public health organizations and programs. A study of current issues that influence the practice of dental hygiene/therapy including healthcare delivery systems, workforce needs, practice models, regulation, professional associations, state practice acts, and the legislation process. Emphasis on leadership and professional development.

DH 5201. Management Internship. (; 5 cr. ; S-N only; Every Fall, Spring & Summer)

Supervised experience in oral health care industry. Experience in corporations, health care management organizations, long-term care facilities, publishing firms, or professional organizations. An internship is required (minimum 14 weeks). prereq: Dental hygiene grad student

DH 5203. Capstone Project. (3 cr. ; S-N only; Every Fall, Spring & Summer)

Formulation of extensive business plan/project related to area of interest based on coursework taken or internship experience. prereq: Dental hygiene grad student

DH 5401. Research Methods in Health Sciences. (3 cr. ; A-F only; Every Summer)

Developing skills in scientific method. Analyzing research findings. Types of research, problem selection, hypothesis writing, research planning/design, data collection/measuring techniques, analysis/interpretation of data. Ethics. prereq: Dental hygiene grad student

DH 5403. The Discipline of Dental Hygiene.

(; 2 cr. ; A-F only; Every Fall, Spring & Summer)

Dental hygiene practice grounded in science and guided by research evidence. Etiology, prevention, and treatment of dental caries, periodontal diseases, oral cancer, and other conditions. Advances in technology. prereq: Dental hygiene grad student

DH 5405. Curriculum and Course Development.

(; 2 cr. [max 4 cr.] ; A-F only; Every Fall)

Curriculum/course development/management, competency-based education/outcomes assessment. Role of accreditation in dental hygiene education. Students develop competency-based dental hygiene curriculum/course. prereq: Dental Hygiene grad student

DH 5407. Instructional Strategies for Effective Teaching. (; 2 cr. ; A-F only; Every Fall)

Application of principles of learning. Learning/teaching styles, student-centered teaching, instructional strategies. Microteaching selected strategies. prereq: Dental hygiene grad student

DH 5409. Dental Hygiene Clinic Administration.

(; 2 cr. ; A-F only; Every Spring)

Theory/practice of dental hygiene preclinic/clinic instruction. Administration of clinic. Developing protocols, calibrating faculty, monitoring student progress. Central Regional Dental Testing Service exam, clinic evaluation mechanisms, quality assurance. prereq: Dental hygiene grad student

DH 5411. Administrative Leadership and Professional Development. (2 cr. ; A-F only; Every Spring)

Application of leadership theory. Models of administrative roles in education, health care, research, and corporate health care settings. Education/organization culture, strategic planning, human resource management/budgeting. Professional development/advancement. prereq: Dental hygiene grad student

DH 5413. Dental Hygiene Supervised Clinic Student Teaching. (; 4 cr. ; A-F only; Every Fall, Spring & Summer)

Observation/participation in supervised clinical teaching experiences in dental hygiene education. Psychomotor skill acquisition. Process of care. Feedback. Question asking. Evaluation of clinical skills. Ethical/legal issues.

DH 5415. Dental Hygiene Supervised Didactic Course Student Teaching. (2 cr. [max 4 cr.] ; A-F only; Every Fall, Spring & Summer)

Observation/participation in supervised teaching experience in dental hygiene education under faculty mentorship.

DH 5421. Oral Health Care Policy and Funding Strategies. (; 2 cr. ; A-F only; Every Fall, Spring & Summer)

An introduction to oral health care policy, advocacy and program funding through grant writing. Evaluate current health care policy, propose improved health care delivery systems, and grant writing fundamentals for evidence-based program implementation. prereq: Enrolled in Dental Hygiene grad program

DH 5425. Oral Health Educator Clinical Teaching. (; 3 cr. ; A-F only; Every Fall)

Application of the principles of clinical instruction in a dental setting. Emphasis is placed on the various roles of the clinical instructor, effective strategies to foster critical thinking, provide effective feedback and assessment, and ethical/legal issues. Strategies to address challenges and practical teaching tips in the clinical environment.

DH 5426. Oral Health Educator Didactic Teaching. (; 3 cr. ; A-F only; Every Fall)

The overall goal of the course is to prepare individuals for effective teaching in the classroom setting. Learning theory will lay the foundation for the course design process and provide a framework for the application of competency-based education in dental school curricula. Participants will learn a step-by-step approach to integrated course design culminating in the development of a course syllabus for a predoctoral dental course.

Dental Therapy (DT)

DT 2121. Process of Care in Allied Dental Health: Clinical Application I. (; 5 cr. ; A-F or Audit; Every Fall)

Dental hygiene/Dental Therapy care process, assessment principles related to medical and oral health status, dental hygiene clinical procedures, and development of instrumentation skills.

DT 2132. Head and Neck Anatomy. (2 cr. ; A-F or Audit; Every Fall)

The anatomical structures of head and neck as they relate to the practice of dental hygiene and dental therapy.

DT 2212. Communications for Oral Health Providers. (2 cr. ; A-F only; Every Spring)

This course introduces the study of effective communication strategies within the health care team and during patient-provider relationships. There is an emphasis on public speaking basic principles, effective strategies, and ethical approaches. The application of health literacy concepts and behavior change theory as components of evidence-based decision making in a variety of practice settings will be taught.

DT 2221W. Periodontology. (WI; 3 cr. ; A-F only; Every Spring)

This course introduces periodontal diseases; etiology, assessment, and treatment options. It includes clinical experience in debridement, root planning with ultrasonic and hand instruments. (3 credits)

DT 2222. Process of Care in Allied Dental Health: Clinical Application II. (4 cr. ; A-F or Audit; Every Spring)

In this class, you will begin to apply your knowledge of the various preventive products, patient education, assessment data, and medical histories to clinical practice. You will develop application skills in fluoride treatments and pit and fissure sealants as well as the evaluation of products used in the treatment of dental caries and periodontal diseases. This class will also give you an introduction to the School of Dentistry's clinical systems, various medical and emergency conditions affecting patient care, and preventive strategies for oral diseases.

DT 2225. Microbiology, Immunology, and Oral Health. (3 cr. ; A-F only; Every Spring)

Encounters with microorganisms are part of everyday life for humans, both as pathogenic and non-pathogenic entities. During this microbiology course students will learn characteristics of microbial life for bacteria, viruses, parasites, and fungi. An emphasis will be placed on microorganisms that are commonly found in the oral cavity. An introduction to the human immune system and its function in regulating infections will be presented. Students will gain an understanding of both commensal microbiota and pathogenic microorganisms, and their impact on human health. Additionally, students will begin to convey scientific data and research results to non-scientists as a basis for discussing disease prevention, infection management, and treatment plans in a clinical setting.

DT 2231. Cariology and Applied Nutrition in Allied Dental Health. (3 cr. ; A-F or Audit; Every Fall)

The study of dental caries etiology, pathology and prevention, and the applied principles of diet and nutrition to dental hygiene/dental therapy patient care with skills in dental dietary counseling. Course content also includes a comprehensive review of CAMBRA. Cariology and Applied Nutrition in Allied Dental Health is designed to provide the beginner level dental hygiene student with a knowledge base in cariology and nutrition as it applies to the oral cavity. The implementation of this knowledge is Dental Dietary Counseling with a dental hygiene patient. DH 2231/DT 2231 relies on the communication skills developed in DH 2212/DT 2212.

DT 3121. Local Anesthesia and Pain Management. (2 cr. ; A-F only; Every Summer)

Concepts in the administration of local anesthesia, nitrous oxide-oxygen sedation, and other methods of pain management. Anatomy, physiology, pharmacology, patient assessment, indications and contraindications, selection of agents, injection techniques, complications, emergency management, and legal/ethical considerations. Lecture, lab, clinic. Clinical sessions include actual experience in administering local anesthesia and other methods of pain management. The administration of local anesthesia will be taught to clinical competency. The didactic

component of nitrous oxide-oxygen sedation will be completed in this course with clinical experiences occurring in the Faculty Practice Clinic and in subsequent clinical rotations leading to clinical competency in this method of pain management.

DT 3123. Process of Care in Allied Dental Health: Clinical Application III. (4 cr. ; A-F only; Every Summer)

Dental hygiene/Dental Therapy planning for caries prevention and control, non-surgical periodontal therapy and tobacco cessation. Case presentation, ergonomic, and clinical experience in dental hygiene/dental therapy patient care.

DT 3125. General and Oral Pathology. (2 cr. ; A-F or Audit; Every Spring)

This course covers topics in pathology related to dentistry and the oral cavity. Oral benign/malignant tumors, infectious, inflammatory, and immunologically mediated lesions/diseases are covered.

DT 3133. Pharmacology. (2 cr. ; A-F or Audit; Every Summer)

Principles of pharmacology, physical/chemical properties of drugs, modes of administration, therapeutic/adverse effects, drug actions/interactions.

DT 3151. Oral and Maxillofacial Radiology.

(; 2 cr. ; A-F or Audit; Every Spring)
General principles of radiology, radiation physics, dosimetry, biology, radiation protection, regulations, recent concepts of imaging, and radiographic anatomy.

DT 3224W. Process of Care in Allied Dental Health: Clinical Application IV. (WI; 6 cr. ; A-F or Audit; Every Fall)

Knowledge, skills, and attitudes required for providing dental hygiene care for the medically compromised patient, gerodontic patient, and patient with a disability.

DT 3228. Ethics and Jurisprudence in Allied Dental Health. (1 cr. ; A-F only; Every Fall)

Studying dental hygiene/dental ethics is intended to provide the tools and skills required for ethical analysis and reflection ? critical thinking. The healthcare professional-patient relationship provides a complex array of problems and dental hygiene is, as are practicing dental hygienists, faced with making important decisions about right and wrong and balancing harm and benefits in the clinical setting. Therefore, the primary goal of this course is to help the student dental hygienist understand how to make critical decisions and how to take appropriate actions when dealing with patients, peers, the institution, and society.

DT 3234. Oral and Maxillofacial Radiology: Theory, Principles, and Radiographic Analysis. (1 cr. ; A-F only; Every Fall)

Intraoral and extraoral radiographic anatomy. Principles of radiographic interpretation, evaluation of radiographs to identify variation of normal, and dental and maxillofacial diseases.

DT 3238. Dental Public Health and Academic Service Learning I. (; 3 cr. ; A-F only; Every Fall)

This course provides an overview of the discipline of public health including epidemiological methods of investigation with an emphasis on patterns of oral diseases. Course content emphasizes designing, implementing, and evaluating oral health promotion and health education programs. Students prepare for community service learning programs.

DT 4105. Dental Professional Development. (1 cr. ; A-F only; Every Spring)

Dental Hygiene Course Description Skills to effective practice management and strategic decision-making, promoting mutual trust and respect in all interpersonal interactions, with an emphasis on the roles of a collaborative dental team. Dental Therapy Course Description Interprofessional course. Organizational, managerial, and financial systems that affect successful dental practice.

DT 4125W. Process of Care in Allied Dental Health: Clinical Application V. (DSJ,WI; 6 cr. ; A-F only; Every Spring)

Social justice of health/oral health care in U.S. How race/class/gender impact resources. Dental hygiene/dental therapy treatment in diverse patient population.

DT 4135W. Research Methods in Allied Dental Health. (WI; 3 cr. ; A-F only; Every Spring)

Develop skills in the scientific method and critiquing scientific literature. Emphasis is placed on evidence-based decision-making, types of research and research design, problem identification and hypothesis development, analyzing individual components of journal articles in relation to research principles, and writing the literature review. Fulfills writing intensive requirement.

DT 4139. Dental Public Health and Academic Service Learning II. (; 2 cr. ; A-F only; Every Spring)

Academic service learning in various community healthcare settings. The student will apply information from Dental Public Health & Service Learning I and II to assess, plan, implement, and evaluate a dental public health program designed to meet the oral health needs of a priority population.

DT 4226. Process of Care in Allied Dental Health: Clinical Application VI. (6 cr. ; A-F only; Every Summer)

Advanced dental hygiene/dental therapy care process in Comprehensive Care Clinics and Service Learning Outreach sites. Development and presentation of the Senior Capstone experiences. The Capstone is a comprehensive oral case presentation and written case report based on a unique patient experience and treatment.

DT 4234. Leadership and Professional Development. (2 cr. ; A-F only; Every Summer)

Explore the dental hygienist/dental therapist as leader and manager in healthcare delivery organizations or public health organizations and programs. A study of current issues that influence the practice of dental hygiene/

therapy including healthcare delivery systems, workforce needs, practice models, regulation, professional associations, state practice acts, and the legislation process. Emphasis on leadership and professional development.

DT 4345. Dental Service-Learning. (; 1 cr. ; S-N only; Every Fall)

This course is designed to enable students to experience providing oral health care to patient populations who do not have regular access to such care. Clinical experiences in restorative dentistry, emergency dental care, and oral and maxillofacial surgery will be provided under the supervision of University of Minnesota School of Dentistry Faculty.

DT 4346. Dental Service-Learning. (; 1 cr. ; S-N only; Every Spring)

This course is designed to enable students to experience providing oral health care to patient populations who do not have regular access to such care. Clinical experiences in restorative dentistry, emergency dental care and oral and maxillofacial surgery will be provided under the supervision of University of Minnesota School of Dentistry Faculty.

DT 4347. Dental Service-Learning. (; 1 cr. ; S-N only; Every Summer)

This course is designed to enable students to experience providing oral health care to patient populations who do not have regular access to such care. Clinical experiences in restorative dentistry, emergency dental care, and oral and maxillofacial surgery will be provided under the supervision of University of Minnesota School of Dentistry Faculty.

DT 4415. Essentials of Clinical Care I:

Introduction. (; 1 cr. ; S-N only; Every Fall)

This course will introduce DT4 dental therapy students to the dental therapy clinically related scope of patient care under the direction and supervision of experienced clinical faculty. This course will monitor and grade progression in clinics each semester. Evaluation will be based on feedback from dental therapy faculty, group leaders and the Competency Review Board.

DT 4465. Essentials of Clinical Care for the Dental Therapist II. (3 cr. ; S-N only; Every Spring)

This course will begin to prepare DT4 dental therapy students in the dental therapy clinically related scope of patient care under the direction and supervision of experienced clinical faculty. This course will monitor and grade progression in clinics each semester. Evaluation will be based on feedback from dental therapy faculty, group leaders, and the Competency Review Board.

DT 4965. Essentials of Clinical Care for the Dental Therapist III. (4 cr. ; S-N only; Every Summer)

This course will continue to prepare DT4 dental therapy students in the dental therapy clinically related scope of patient care under the direction and supervision of experienced clinical faculty. This course will monitor and grade progression in clinics each semester. Evaluation will be based on feedback from dental therapy faculty, group leaders, and the Competency Review Board.

DT 4994. Dental Therapy Directed Research.

(1-7 cr. [max 35 cr.] ; S-N only; Every Fall, Spring & Summer)

Field investigation of selected areas of research.

DT 5005. Dental Therapy Capstone Project I. (1 cr. [max 2 cr.] ; S-N only; Every Fall)

The main purpose of the Capstone courses is to provide a culminating, integrative scholarly experience for students enrolled in the Dual Degree BSDH/MDT program. As such, in addition to utilizing knowledge gained throughout the 8-semester program, the course draws specifically on students' prior training in Research and Dental Public Health. The course allows students to pursue an independent, project-based topic from one of their interests in the field of oral health. The course is intended to be an intensive, active-learning project, requiring significant effort in the planning and implementation, as well as preparation of a substantial final written product and oral presentation. A Capstone is a systematic investigation of a subject including library and/or original research. Projects are intended to assimilate knowledge gained in courses in order to create a comprehensive, original project. While Capstone projects provide invaluable preparation for professional careers, students report that the primary rewards are intrinsic: the opportunity to follow one's curiosity, to take ownership of a project and see it through to a successful conclusion, the intellectual and creative pleasure of independent learning, and the mentorship by one's advisor. Because the written portion of the project is generally quite long, it is essential to devote substantial time to the research and writing of the paper. However, learning to be concise is a valuable skill to master.

DT 5105. Dental Therapy Capstone Project II. (1 cr. ; A-F only; Every Spring)

The main purpose of the Capstone courses is to provide a culminating, integrative scholarly experience for students enrolled in the Dual Degree BSDH/MDT program. As such, in addition to utilizing knowledge gained throughout the 8-semester program, the course draws specifically on students' prior training in Research and Dental Public Health. The course allows students to pursue an independent, project-based topic from one of their in the field of oral health. The course is intended to be an intensive, active-learning project, requiring significant effort in the planning and implementation, as well as preparation of a substantial final written product and oral presentation. A Capstone is a systematic investigation of a subject including library and/or original research. Projects are intended to assimilate knowledge gained in courses in order to create a comprehensive, original project. While Capstone projects provide invaluable preparation for professional careers, students report that the primary rewards are intrinsic: the opportunity to follow one's curiosity, to take ownership of a project and see it through to a successful conclusion, the intellectual and creative pleasure of independent learning, and the mentorship by one's advisor. Because the written portion of

the project is generally quite long, it is essential to devote substantial time to the research and writing of the paper. However, learning to be concise is a valuable skill to master.

DT 5135. Preclinical Pediatric Dentistry. (2 cr. ; A-F only; Every Spring)

Childhood development and care of children. Restorative dentistry for children/adolescents. Behavior management techniques. Issues that arise in dental health care setting. Lab. Prereq: DT grad program.

DT 5140. Preventive Pediatric Dental Clinic. (1 cr. ; A-F only; Every Fall)

Oral health promotion of pediatric patients. Brushing techniques, fluoride application, dietary analysis/counseling. Students interact with parents of pediatric patients.

DT 5141. Clinical Pediatric Dentistry III. (; 2 cr. ; A-F only; Every Spring)

Early childhood development, dental care for children. prereq: Must be in the dental therapy program, passed basic foundation competencies

DT 5162. Principles of Exodontia and Minor Oral Surgery. (1 cr. ; A-F only; Every Fall & Spring)

Develop knowledge/skill for exodontia/minor oral surgery.

DT 5205. MDT Clinical Correlations. (; 1 cr. ; S-N only; Periodic Summer)

Provide MDT students with clinically-based educational opportunities during the mandated clinic closure due to the COVID-19 pandemic.

DT 5241. Oral Radiology Clinic II. (; 1 cr. ; A-F only; Every Fall)

Clinical instruction in oral radiography. Intraoral/extraoral radiographic procedures, evaluations. prereq: Must be in dental therapy masters program

DT 5320. Comprehensive Care Clinic. (; 4 cr. ; S-N only; Every Spring)

Assessment, treatment, and management of patients. Concepts/principles of evidence-based dentistry as applied to clinical practice.

DT 5321. Treatment Planning for the Dental Therapist. (1 cr. ; S-N only; Every Fall, Spring & Summer)

Formal lecture presentations regarding fundamentals of assessment/treatment planning of dental cases. Prepare student to understand University of Minnesota School of Dentistry protocol in development of optimal, alternative, emergency treatment plans.

DT 5348. Dental Service-Learning. (; 1 cr. ; S-N only; Every Fall)

This course is designed to enable students to experience providing oral health care to patient populations who do not have regular access to such care. Clinical experiences in restorative dentistry, emergency dental care, and oral and maxillofacial surgery will be provided under the supervision of University of Minnesota School of Dentistry Faculty.

DT 5349. Dental Service-Learning. (; 1 cr. ; S-N only; Every Spring)

This course is designed to enable students to experience providing oral health care to patient

populations who do not have regular access to such care. Clinical experiences in restorative dentistry, emergency dental care, and oral and maxillofacial surgery will be provided under the supervision of University of Minnesota School of Dentistry Faculty.

DT 5360. Outreach Experiences DT Fall. (1 cr. ; S-N only; Every Fall)

Students work in clinics outside of U of M with underserved patients.

DT 5361. Outreach Experiences DT Spring. (2 cr. ; S-N only; Every Spring)

Experiences that reinforce principles of delivering dental health care/services to patients, including underserved patient populations, in contemporary off-site clinical settings.

DT 5410. Biomaterials Science. (1 cr. ; A-F only; Every Spring)

Application of scientific principles to selection/utilization of dental materials. Prereq-2nd yr DT student.

DT 5429. Introduction to Psychomotor Skill Development. (1 cr. ; S-N only; Every Fall)

Virtual reality based training for psychomotor skills required in prosthodontic/operative courses. Eye-hand/mirror skills, ergonomics used while preparing teeth for restoration. Prereq-In dental therapy program.

DT 5430. Oral Anatomy. (; 2 cr. ; A-F only; Every Fall)

Morphological characteristics of human dentition, associated contiguous structures. Foundational knowledge applied to situations encountered in general dental clinical practice. prereq: Accepted into dental therapy masters program

DT 5431. Oral Anatomy Laboratory. (; 3 cr. ; A-F only; Every Fall)

Manual dexterity skills, anatomy of human dentition. prereq: Accepted into masters in dental therapy program

DT 5432. Operative Dentistry I. (; 2 cr. ; A-F only; Every Fall, Spring & Summer)

How to treat dental caries. Therapeutic treatment of underlying pathology. Surgical treatment of early caries lesion.

DT 5433. Operative Dentistry I Pre-Clinic Laboratory. (; 2 cr. ; A-F only; Every Fall, Spring & Summer)

How to treat dental caries. Therapeutic treatment of underlying pathology. Surgical treatment of early caries lesion. Hands-on projects working with models simulating teeth and surrounding structures. prereq: 2nd yr masters in dental therapy student

DT 5434. Operative Dentistry II Lecture. (; 2 cr. ; A-F only; Every Summer)

How to surgically manage more advanced caries lesions. Transition from pre-clinic lab to clinic setting. prereq: Enrolled in master's in dental therapy program

DT 5435. Operative Dentistry II for the Dental Therapist, Lab. (3 cr. ; A-F only; Every Fall, Spring & Summer)

More advanced caries lesions: diagnosis, structural preparation, decay removal and restoration.

DT 5443. Operative Clinic III. (4 cr. ; A-F only; Every Spring)

How to place restorations. Students place single-tooth restorations on patients.

DT 5465. Essentials of Clinical Care for the Dental Therapist IV. (10 cr. [max 12 cr.] ; S-N only; Every Fall)

This course will continue to prepare MDT dental therapy students in the dental therapy clinically related scope of patient care under the direction and supervision of experienced clinical faculty. This course will monitor and grade progression in clinics each semester. Evaluation will be based on feedback from dental therapy faculty, group leaders, and the Competency Review Board.

DT 5471. Prosthodontic Topics for Dental Therapy. (2 cr. ; A-F only; Every Summer)

Lectures, lab projects of selected prosthodontic techniques to enable the dental therapist to provide/cement quality pre-fabricated metal or resin provisional crowns and other prosthodontic procedures in the scope of DT practice.

DT 5960. Essentials of Clinical Care II for the Dental Therapist. (5-10 cr. [max 20 cr.] ; S-N only; Every Summer)

Students provide comprehensive care under direction of clinical faculty. May include periodontics, operative, pediatric care, and health promotion. Limited care may be given on rotations to oral surgery clinics.

Design (DES)

DES 1000. D@MN: Design@Minnesota. (AH; 3 cr. ; A-F only; Every Fall & Spring)

In DES 1000, students learn to use an iterative design process to define real-world challenges, and propose innovative solutions for social impact. Building soft-skills such as collaboration, visual and verbal communication, and empathy is a critical outcome of the course.

DES 1001. Introducing the College of Design. (1 cr. ; A-F only; Every Fall & Spring)

DES 1001 is a 1 cr. topics course. This course provides a set of experiences that help to explain the concepts of design through the lenses of different fields of design, both traditional and emerging, within the College of Design. Students from various design disciplines will engage in design experiences that teach them how designers from different fields identify, define and solve problems. They will be introduced to the resources offered to designers in the College of Design through hands-on experiences. Students will reflect upon their experiences by participating in a series of experiences, by submitting a series of reflection pieces, and completing a culminating project that will be shared with class members and invited stakeholders. Through this engagement, students will learn about each other and their motivations for being in the College of Design, as well as gain an understanding of the breadth of the college and its resources as they begin their design education.

DES 1002. Improvisation for Design. (3 cr. ; A-F only; Every Spring)

This course explores how the art of improvisation can build collaboration, communication, and creativity skills. In this class we will focus on how improvisation is applied to fields of design, however these skills may be applicable to other disciplines. Through both readings and an interactive curriculum of improv exercises, students will learn specific tools to facilitate idea generation, collaborative team processes, idea selection, sketching and critique.

DES 1101V. Honors: Introduction to Design Thinking. (AH,WI; 4 cr. ; A-F only; Every Fall)

Theories/processes that underpin design thinking. Interactions between humans and their natural, social, and designed environments where purposeful design helps determine quality of interaction. Design professions. prereq: Honors student

DES 1101W. Introduction to Design Thinking. (AH,WI; 4 cr. ; A-F only; Every Fall & Spring)

Theories/processes that underpin design thinking. Interactions between humans and their natural, social, and designed environments where purposeful design helps determine quality of interaction. Design professions.

DES 1111. Creative Problem Solving. (; 3 cr. ; A-F only; Every Fall & Spring)

Development of creative capability applicable to all fields of study. Problem solving techniques. Theory of creativity/innovation.

DES 1111H. Honors: Creative Problem Solving. (; 3 cr. ; A-F only; Every Fall)

Development of creative capability applicable to all fields of study. Problem solving techniques. Theory of creativity/innovation. prereq: Honors

DES 1412. i House : i Home. (; 3 cr. ; A-F only; Periodic Fall & Spring)

Leonard E Reads 1958 essay entitled ?I, Pencil; My Family Tree as Told to Leonard E. Read? sketches a remarkable tale of how the unique interests, talents, and motivations of countless individuals from around the world converge to produce pencils. This seminar follows a similar contour to discover the acts of countless individuals from around the world and then outline a story, a kind of family tree, of the individual efforts to create the materials and products that converge to make a house. Matthew Barzun in his book *The Power of Giving Power Way* describes the coming together of diverse interests, talents, and motivations as constellations of stars. Each star bright and unique and its own system. When we gaze into the sky, we can see each individual star. We also see stars together and patterns emerge creating constellations. Each constellation having its own story and stories reflecting a meaning beyond their pattern. In a similar way using Barzun's constellation analogy we will also explore and express how the disparate physical objects each with their own story come together in a pattern we call house but also creates an idea of home that has the possibility of becoming meaningful

for the people who inhabit it. This seminar will be a combination of readings, research, and critical discussions punctuated with field trips and conversations with fabricators, showroom personnel, and contractors to guide us through the journey. A series of short individual assignments in various digital visual and physical media will converge in the collaborative design of a house and an idea about home created by all the students of the class. A design that tells one story of the one hundred thousand and one million hands that build a house and create the possibility of a home.

DES 1904. Fashion and Music. (; 3 cr. [max 6 cr.]; A-F only; Periodic Fall & Spring)

This course will explore the relationship between music, dance and fashion, looking specifically at the 20th century. It will begin with an introduction to the impact of music and dance on fashion and dress and then delve into the changes in popular music and dance throughout the 20th century which result in changes in fashionable dress. The subcultural groups known as flappers, zoot-suiters, Bobby soxers, beats, punks, and goths will be studied to understand the importance of music on each group's dress and identity. Class sessions will include short lectures, video clips, class discussions, student presentations, and the examination of garments and objects from the Goldstein Museum of Design collections. After taking this course, students will have an understanding of the significance of dress as marker of the identities of individual wearers within their historic context.

DES 1905. Visual Literacy. (; 3 cr. ; A-F only; Every Fall & Spring)

In the 21st Century, Visual Literacy is as vital for success as verbal literacy. The course will involve making, writing, and viewing in the pursuit of visual literacy, with expeditions to museums as well as discussion of the concepts of visual literacy. Through a combination of collaborative, hands on, and design activities, we will critically view, use, and produce visual content. The course will examine and apply the definitions and concepts of visual literacy, the impact of visual images on our culture, the creation and use of communication visuals, and developing critical viewing skills.

DES 2101. Design and Visual Presentation. (; 2 cr. ; A-F only; Every Fall & Spring)

Introduction to visual design. Development of visual design skills. Visual presentation methods. Lectures, design exercises, discussion.

DES 3131. User Experience in Design. (4 cr. ; A-F only; Every Fall)

Introduction to theories/principles of human interaction with designed objects. Focuses on affect/emotional quality of designs. Objects, interfaces, environments. Digitally mediated experiences.

DES 3132. Service Design Studio. (3 cr. ; A-F or Audit; Every Fall)

Systems-based approach towards service design. Course emphasis placed on the articulation of a service through concept mapping, blueprints, and user touch points.

DES 3133. Capturing Greece: Color, Light, and Form. (AH; 3 cr. [max 18 cr.]; A-F only; Every Summer)

Greece provides a unique cultural environment in which to explore color, light, and form. Students will immerse themselves in a climate of light and form by observing and experiencing water, stone, and structure in a fresh way. Students will explore ancient architectural forms, uniquely evolved historic villages, and references to mythological and symbolic imagery. This course will provide students with an opportunity to develop creative thinking and practice as well as build visual acuity. Students will examine color theory and the history of BLUE while studying creative thought processes. Drawing and Watercolor are the vehicles through which the majority of this learning occurs.

DES 3141. Technology, Design, and Society. (TS; 3 cr. ; A-F only; Every Spring)

Explore/evaluate impact of technology/design on humans, societies. How design innovation shapes cultures. How people use technology to shape design, adoption, use of designed products/environments through consumerism/ethical values.

DES 3151. Italian Design Studio: Blending Tradition and Innovation. (GP; 3 cr. ; A-F only; Every Summer)

DES 3151 Italian Design Studio: Blending Tradition and Innovation exposes students to the productive intersection of ideas using the city of Rome and its makers as inspiration and context for interdisciplinary design work. The study abroad studio course is submitted to the Council on Liberal Education for approval for a Global Perspectives Theme. Italian Design Studio meets general Core course requirements in the following ways: ENHANCING A LIBERAL EDUCATION Students in this course exercise design as a mode of thinking and practice in an interdisciplinary context. Design thinking is, at its essence, critical thinking for the material world. Design is a process of analyzing, interpreting and evaluating information from multiple viewpoints, and iteratively developing a response that synthesizes this information into a cohesive solution. Design projects never have a "right answer." Instead, students come to learn that "good design" emerges from a rigorous, creative and critical process of seeing design problems as design opportunities. In this way, design studio and design thinking have an intriguing synergy with the values of a liberal education. A liberal education prepares students to engage a complex, diverse and changing world by seeing problems from multiple viewpoints. Design problems are complex by nature and require expansive thinking. Students who think like designers actively seek a variety of perspectives and intentionally zoom in and out to see a problem at a range of scales and in a shifting context. Students who think like designers are naturally curious about almost everything, and see inspiration and opportunity everywhere. Immersion in another culture naturally piques curiosity and presents an immediate challenge to practice seeing (things

and processes big and small) from other perspectives. A liberal education prepares students to critically evaluate information and integrate knowledge. From a liberal investigation, students who think like designers begin to discern what is important, relevant and interesting from what is less important, less relevant and less interesting. Designers understand where conditions are fixed and where they have agency to make design decisions. Because the design process is both generative and iterative, integrating new knowledge and reevaluating what is valuable in the investigation is ongoing. While the design process is not a linear one, students in this course do learn that it is nonetheless rigorous, involving the art of opening up a problem, synthesizing a multitude of forces, and working within constraints. A liberal education prepares students to engage the world as informed, ethical citizens. Design and making are deeply human endeavors that addresses who we are as physical, psychological, social, political and spiritual beings in relationship with the constant, changing and limited resources of our planet. Students in this course learn how the particular circumstances of time and place can have dramatic implications for our designed environment, from the scale of objects to the scale of cities. A liberal education prepares students to value diverse ways of knowing and modes of inquiry. Designing the material world?whether apparel, graphic, landscape architecture, architecture or interior design?invites a fusion of art and science. As a mode of inquiry, students in this course pursue design thinking as a rigorous and analytical process with a role for intuition and creativity. Designed objects and places express cultural aspirations and makes our experiences with the physical world poetic. In this way, de is allied with other arts and humanities disciplines. Yet, all designed things are beholden to a host of constraints or forces that lie beyond the control of the designer. Architecture, for example, must accommodate human behavior and needs, must shelter in a particular climate, and must respond to the laws of materials and gravit

DES 3160. Topics in Design. (; 1-4 cr. [max 24 cr.]; A-F only; Every Fall, Spring & Summer)

Topics in Design.

DES 3196. Field Study: National or International. (; 1-10 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Faculty-directed field study in national or international setting.

DES 3201. Career and Internship Preparation for Design. (; 1 cr. ; A-F only; Every Fall & Spring)

Research career opportunities and organizations related to industry. Set career goals based on skills and interests. Identify job search skills to secure internships, implement transition from college to employment. prereq: Pre-graphic design or graphic design or pre-interior design or interior design or pre-apparel design or apparel design or environmental design or architecture or product design

DES 3309. Storytelling and Design. (3 cr. ; A-F only; Every Fall & Spring)

Students will uncover elements of storytelling within the design process and investigate different modes of shaping narrative. We will be experimenting with various media, including 2D design and mapping, audio, video, social platforms, augmented reality, and online environments.

DES 3311. Travels in Typography. (3 cr. ; A-F only; Every Fall & Spring)

Using collection in James Ford Bell Library, students study rare book/map collections and undertake hands-on exercises on history of type, including developments in typesetting, calligraphy, and letterpress printing.

DES 3321. Furniture Design: Exploration. (3 cr. ; A-F only; Every Fall)

Furniture design as discipline, not as method. Material. Objects that mediate our environment. History, design criteria, technology, craft. Group case study, research presentation, individual making/presenting of concept-prototype.

DES 3322. Furniture Design, Practice. (4 cr. ; A-F only; Every Fall & Spring)

The hardest things about the creative act is learning how to start something before you know what it is. The simplest objects are always more formally complex than the mind can accurately imagine. This course teaches design thinking through furniture constructed using a fast, loose & ad-hoc "children-club-fort-building" method of discovering & visualizing while making. Direct-construction design is tangibly satisfying and will provide powerful context for all other scales of creative, design and planning methods. Your results will not be conventionally good-looking, but you will make real & functioning cultural things. All exercises will be dependent on connecting to ideas beyond commonly recognized boundaries of the furniture. Think "Chair-ness, not Chair." You will be taught basic welding and wood joinery to provide fast & viable structural frames, "surfacing" methods in wood, foam and fabric composites, and an introduction to mold making and material casting. You do not need to be good at making, but you must be game to try. Craft is important so far as basic structural usability is attained. Ideas will always trump material "correctness."

DES 3331. Street Life Urban Design Seminar. (3 cr. ; A-F only; Every Spring)

The street as part of network of urban systems/fragments: sidewalks, private interiors, curbs, terraces, boulevards, parking lots, bus stops, public institutions, urban architectures, utility lines, storm/sewer systems, groundwater, satellite communication systems, gardens, and lighting. Readings in urban studies, geography, design, economics and art history. Students review case studies, envision possible transformations of streets/street life.

DES 3351. Phenomenon of Everyday Design. (3 cr. ; A-F only; Every Spring)

Examines the growing fascination with design in everyday life. From Target to IKEA, from TIME magazine to the New York Times

Sunday supplement, interest in the designer and designed object are permeating popular culture. Implications of this phenomenon in the present and historical precedents for the "design in everyday life" concept.

DES 3406. Iceland: Nature, Culture, Arts & Design. (3 cr. ; A-F only; Periodic Spring)

This course aims to offer a structured experience to learn about the Icelandic culture from afar through presentations, readings and digital media sources followed by direct experience through travel and a short immersion in the culture. Through interactions with people from the Icelandic culture while in Minnesota & then in Iceland the course will involve rapid learning, reflection and creative making, culminating in completion of academic work and a final presentation of the work to a cross-cultural audience.

DES 4160. Topics in Design. (; 1-4 cr.

[max 24 cr.] ; A-F only; Every Fall, Spring & Summer)

In-depth investigation of single specific topic announced in advance.

DES 4165. Design and Globalization. (DSJ; 3 cr. ; A-F or Audit; Every Fall)

The course explores how culture, identity, and difference are defined and produced and the role that design plays in the production of difference, inequality, and marginalization. prereq: Jr or sr

DES 4193. Directed Study in Design. (; 1-6 cr. [max 36 cr.] ; A-F only; Every Fall, Spring & Summer)

Directed Study in Design prereq: dept consent

DES 4401V. Honors: Racism Untaught.

(DSJ,WI; 3 cr. ; Student Option; Every Fall) Revealing and unlearning racialized design through the use of the Racism Untaught framework.

DES 4401W. Racism Untaught. (DSJ,WI; 3 cr. ; Student Option; Every Fall)

Revealing and unlearning racialized design through the use of the Racism Untaught framework.

DES 5130. Visual Literacy. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Understanding concept of visual literacy; analysis of visual communication and design elements; review of visual learning research; application of visual literacy into practice. University credit earned through completion of the UX Design MasterTrack? Certificate. For more information, visit: <https://design.umn.edu/academics/explore-all-certificates/ux-design-mastertracktm-certificate>

DES 5131. User Research for User Experience Design. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Qualitative research skills specific to the field of user experience; understanding of qualitative research methods; development and critique of a product proposal with data reasoning. University credit earned through completion of the UX Design MasterTrack? Certificate. For more information, visit: <https://design.umn.edu/academics/explore-all-certificates/ux-design-mastertracktm-certificate>

DES 5132. User Testing for User Experience Design. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Further developed qualitative research skills using empathy mapping, user journeys, and usability tests; understanding of UX toolkit; ability to evaluate service BluePrints/Wireframes/Task flows; prototypes design; understanding of UI design analysis and critical evaluation. University credit earned through completion of the UX Design MasterTrack? Certificate. For more information, visit: <https://design.umn.edu/academics/explore-all-certificates/ux-design-mastertracktm-certificate>

DES 5160. Topics in Design. (; 1-4 cr.

[max 24 cr.] ; A-F only; Every Fall, Spring & Summer)

Topics in design

DES 5165. Design and Globalization. (; 3 cr. ; A-F or Audit; Every Fall)

Design and Globalization is designed as a course for students of diverse disciplines as well as both graduate and undergraduate students. The course is also part of the Interior Environments Minor as well as meets the Lib Ed theme of "Diversity and Social Justice in the US." Offering it on-line, benefits and increases access to students beyond the St. Paul campus, enabling us to increase enrollment as well as reach a broader range of students and disciplines. Interior Design is already switching the two history classes on-line as a way to increase enrollment and add flexibility in the curriculum.

DES 5168. Evidence-Based Design. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Origins of evidence-based design/possible benefits and detractors. Students learn various components as a process/ explore methods of integrating process via application to a design project in their area of expertise. Process, impact, influences, and anticipated outcomes are documented/ analyzed as compared to a typical design process approach. prereq: CDes grad student or instr consent

DES 5170. Topics in Design. (; 3 cr. [max 24 cr.] ; A-F or Audit; Periodic Fall, Spring & Summer)

In-depth investigation of single specific topic, announced in advance.

DES 5185. Human Factors in Design. (; 3 cr. ; A-F or Audit; Periodic Fall)

Theories/methods that influence the assessment of physical, social, and psychological human factors. Development of user needs with application to designed products that interact with human body. prereq: Grad student or sr or instr consent

DES 5188. Anthropometrics, Sizing & Fit. (4 cr. ; A-F only; Periodic Fall & Spring)

Comprehensive attention to ergonomics and anthropometric variance across populations is crucial to the advancement of wearable products and apparel. This course will examine the relationship between body size, body shape, product design, sizing systems, and fit. Students will examine existing sizing systems and develop new sizing systems using

anthropometric data, body scan technology, and OptiTex 3D patternmaking software. A special focus will be given to examining innovative tools that encourage the merging of anthropometrics and design throughout the design process. This class is suitable for students across a variety of disciplines.

DES 5193. Directed Study in Design. (; 1-6 cr. [max 36 cr.]; A-F only; Every Fall, Spring & Summer)

Directed Study in Design prereq: dept consent

DES 5196. Field Study: National/International. (; 1-10 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Faculty-directed field study in a national or international setting.

DES 5901. Principles of Wearable Technology. (; 2 cr. ; A-F or Audit; Every Spring)

Exploration of technologies, theories, and best practices for designing and developing systems incorporating wearable technology. This lecture-based class will introduce students to the physical principles that underlie many wearable technology subsystems, will discuss design approaches that conscientiously consider user experience and wearability in systems design. This course is an introductory course that focuses on wearable technology concepts blending User-Centered Design with Engineering Systems development. It is intended to be approachable for students with a wide variety of interests and backgrounds. Course material is explored through readings, lectures, discussions, and course projects. Optional laboratory course (DES.5902) provides hands-on opportunities to put these principles into practice.

DES 5902. Wearable Technology Laboratory Practicum. (2 cr. ; A-F or Audit; Every Spring)

Laboratory session to develop skills in building and testing wearable technology systems. The student must be enrolled concurrently with DES 5901 (Principles of Wearable Technology). Students will be provided opportunities for hands-on prototyping to gain a practical appreciation for the challenges related to wearable systems development. Course material is explored through laboratory sessions and course projects.

Dutch (DTCH)

DTCH 1001. Beginning Dutch. (; 5 cr. ; Student Option; Every Fall & Summer) Emphasis on working toward novice-intermediate low proficiency in all four language modalities (listening, reading, speaking, writing). Topics include everyday subjects (shopping, directions, family, food, housing, etc.).

DTCH 1002. Beginning Dutch. (; 5 cr. ; Student Option; Every Spring & Summer) Continues the presentation of all four language modalities (listening, reading, speaking, writing), with a proficiency emphasis. Topics include free-time activities, careers, and Dutch culture. prereq: 1001

DTCH 1003. Intermediate Dutch. (; 5 cr. ; Student Option; Every Fall)

Emphasis on intermediate proficiency in listening, reading, speaking, and writing. Contextualized work on grammar and vocabulary is combined with authentic readings and essay assignments. prereq: 1002

DTCH 1004. Intermediate Dutch. (; 5 cr. ; Student Option; Every Spring)

Emphasis on developing intermediate mid-high proficiency in listening, reading, speaking, and writing. Contextualized work on grammar and vocabulary is supported by work with authentic readings and essay assignments. prereq: 1003

DTCH 3011W. Conversation and Composition. (WI; 3 cr. ; Student Option; Every Fall)

Practice/refinement of spoken/written Dutch. Composition, vocabulary. Reading, viewing, and discussion of Dutch/Flemish media reports. Grammar review, critical corrective grammatical skills. prereq: 1004 or 4004 or instr consent

DTCH 3012. Conversation and Composition. (; 3 cr. ; Student Option; Periodic Spring)

Practice and refinement of spoken and written Dutch. Compositional skills, vocabulary. Reading, viewing, and discussion of Dutch and Flemish media reports. Grammar review. Development of critical corrective grammatical skills. prereq: 3011 or 4011

DTCH 3610. Dutch Literature in Translation. (; 3 cr. [max 9 cr.]; Student Option; Periodic Spring)

In-depth study of authors or topics from various periods in Dutch literature. All primary/secondary literature is read in English translation.

DTCH 3993. Directed Studies. (1-5 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer)

Guided reading in or study of Dutch literature, culture, or advanced language skills. Prereq-instr consent, dept consent, college consent.

DTCH 4001. Beginning Dutch for Graduate Research. (; 5 cr. ; Student Option; Every Fall & Summer)

Emphasis on working toward novice-intermediate low proficiency in all four language modalities (listening, reading, speaking, writing). Topics include everyday subjects (shopping, directions, family, food, housing, etc.). Meets concurrently with 1001.

DTCH 4002. Beginning Dutch for Graduate Research. (; 5 cr. ; Student Option; Every Spring & Summer)

Continues the presentation of all four language modalities (listening, reading, speaking, writing), with a proficiency emphasis. Topics include free-time activities, careers, and Dutch culture. Meets concurrently with 1002.

DTCH 4003. Intermediate Dutch for Graduate Research. (; 5 cr. ; Student Option; Every Fall)

Emphasis on intermediate proficiency in listening, reading, speaking, and writing. Contextualized work on grammar and vocabulary is combined with authentic readings

and essay assignments. Meets concurrently with 1003.

DTCH 4004. Intermediate Dutch for Graduate Research. (; 5 cr. ; Student Option; Every Spring)

Emphasis on developing intermediate mid-high proficiency in listening, reading, speaking, and writing. Contextualized work on grammar and vocabulary is supported by work with authentic readings and essay assignments. Meets concurrently with 1004.

DTCH 4011. Conversation and Composition for Graduate Research. (; 3 cr. ; Student Option; Every Fall)

Practice/refinement of spoken/written Dutch. Composition, vocabulary. Reading, viewing, and discussion of Dutch/Flemish media reports. Grammar review, critical corrective grammatical skills. Meets with 3011W.

DTCH 4012. Conversation and Composition for Graduate Research. (; 3 cr. ; Student Option; Periodic Spring)

Practice/refinement of spoken/written Dutch. Compositional skills, vocabulary. Reading, viewing, and discussion of Dutch/Flemish media reports. Grammar review. development of critical corrective grammatical skills. Meets with 3012. prereq: 3011 or 4011

DTCH 5490. Topics in Dutch Literature. (; 3 cr. [max 9 cr.]; Student Option; Periodic Fall)

Topic may focus on a specific author, group of authors, genre, period, or subject matter. Topics specified in Class Schedule.

DTCH 5993. Directed Studies. (1-4 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study. Prereq-instr consent, dept consent, college consent.

Early Modern Studies (EMS)

EMS 5500. Topics in Early Modern Studies. (; 3 cr. [max 6 cr.]; Student Option; Every Fall & Spring)

Selected topics in early modern studies from various disciplinary perspectives/world regions. prereq: Grad student

Earth Sciences (ESCI)

ESCI 1001. Earth and Its Environments. (ENV,PHYS; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Physical processes that shape the Earth: volcanoes, earthquakes, plate tectonics, glaciers, rivers. Current environmental issues/global change. Lecture/lab. Optional field experience.

ESCI 1003. Dinosaurs and Our World. (BIOL,ENV; 4 cr. ; Student Option; Every Spring)

Dinosaur evolution, ecology, and extinction. Evolution of modern ecosystems from the Mesozoic Era to the Anthropocene (and dinosaurs roles in that evolution). Human interactions with our environment and our roles as historic agents. Structure and function of biological forms, interpreting past life, and the social history of scientific inquiry.

ESCI 1004. Music of the Earth. (MATH; 3 cr. ; Student Option; Every Spring)

The purpose of this class is to introduce some core mathematical concepts to students that may not be mathematically inclined. To do so, we will begin by exploring the mathematical expression of familiar concepts in sound and music. Examples include relating the pitch and volume of a pure tone to the frequency and amplitude of a sinusoidal function. We will build on the complexity of the concepts to include Fourier spectra and how they relate, for example, to the timbre of an instrument. The other key component of the class is exploring how these same concepts are used in understanding our planet, from its internal structure to variations in its climate.

ESCI 1005. Geology and Cinema.

(ENV,PHYS; 4 cr. ; Student Option; Every Spring)

Physical processes shaping the Earth, materials it comprises, its nearly five billion year history as told spectacularly, but often wrongly, by Hollywood movies.

ESCI 1006. Oceanography. (ENV,PHYS; 4 cr. ; Student Option; Every Fall)

How various processes in the ocean interact. Marine biology, waves, tides, chemical oceanography, marine geology, and human interaction with the sea. Labs include study of live marine invertebrates, manipulation of oceanographic data, and discussion using videos showing unique aspects of ocean research.

ESCI 1007. From Microbes to Mammoths:

History of Life on Earth. (BIOL; 4 cr. ; Student Option; Every Fall)

Scientific evidence from biology, paleontology, and geology for origin/evolution of life over 4.5 billion years of Earth's history. Biochemical basis of life, biogeochemical cycles, natural selection, origin of species, genetics, phylogeny reconstruction, timescales for evolution.

ESCI 1012. Natural Disasters. (TS; 3 cr. ; Student Option; Every Fall & Spring)

Geological processes that give rise to natural hazards and the emerging technologies that allow societies to mitigate their effects.

ESCI 1101. Introduction to Geology (lecture only). (ENV; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Physical processes that shape the Earth: volcanoes, earthquakes, plate tectonics, glaciers, rivers. Current environmental issues and global change. Lecture.

ESCI 1105. Geology and Cinema (lecture only). (ENV; 3 cr. ; Student Option; Every Spring)

Physical processes shaping the Earth, materials it comprises, its nearly five billion year history as told spectacularly, but often wrongly, by Hollywood movies.

ESCI 1106. Oceanography. (ENV; 3 cr. ; Student Option; Every Fall)

How various processes in the ocean interact. Marine biology, waves, tides, chemical oceanography, marine geology, human interaction with sea.

ESCI 1201. Into Earth Sciences Lab. (PHYS; 1 cr. ; Student Option No Audit; Every Fall, Spring & Summer)

ESCI 1201 is simply the same suite of laboratory explorations that comprise the lab component of ESCI 1001. ESCI 1201's only purpose is to allow students who have previously taken ESCI 1101 (the lecture-only equivalent of ESCI 1001) to combine ESCI 1101 and ESCI 1201 to complete the standard ESCI 1001 class in order to satisfy LE requirements as a Physical Science (students who completed ESCI 1101 have already fulfilled the requirements for the Environment theme). ESCI 1201 is only available to students who have previously taken ESCI 1101, it cannot be taken as a stand-alone course. Please refer to ESCI 1001 for an equivalent description of the combined ESCI 1101/1201 program.

ESCI 1205. Geology and Cinema Lab.

(PHYS; 1 cr. ; Student Option No Audit; Every Spring)

ESCI 1205 is simply the same suite of laboratory explorations that comprise the lab component of ESCI 1005. ESCI 1205's only purpose is to allow students who have previously taken ESCI 1105 (the lecture-only equivalent of ESCI 1005) to combine ESCI 1105 and ESCI 1205 to complete the standard ESCI 1005 class in order to satisfy LE requirements as a Physical Science (students who completed ESCI 1105 have already fulfilled the requirements for the Environment theme). ESCI 1205 is only available to students who have previously taken ESCI 1105, it cannot be taken as a stand-alone course. Please refer to ESCI 1005 for an equivalent description of the combined ESCI 1105/1205 program.

ESCI 1206. Oceanography Lab. (PHYS; 1 cr. ; Student Option No Audit; Every Fall)

ESCI 1206 is simply the same suite of laboratory explorations that comprise the lab component of ESCI 1006. ESCI 1206's only purpose is to allow students who have previously taken ESCI 1106 (the lecture-only equivalent of ESCI 1006) to combine ESCI 1106 and ESCI 1206 to complete the standard ESCI 1006 class in order to satisfy LE requirements as a Physical Science (students who completed ESCI 1106 have already fulfilled the requirements for the Environment theme). ESCI 1206 is only available to students who have previously taken ESCI 1106, it cannot be taken as a stand-alone course. Please refer to ESCI 1006 for an equivalent description of the combined ESCI 1106/1206 program.

ESCI 1902. Geology of Minnesota. (ENV; 3 cr. ; Student Option; Every Fall)

This course addresses important societal questions, such as "Where does my drinking water come from? Do I really need to buy bottled water? What should my stand be regarding major water-related environmental issues in Minnesota?" In this course, we will explore the world around us, and apply what we learn to better contribute to the solutions we will need as a society to deal with impacts

on water quality and quantity due to factors such as agriculture, flood control, groundwater pumping, hydroelectric power, integrity of surface water features, interbasin transfers, invasive biota, mining, and shipping. In doing so, we will explore ways for everyone to better take responsibility for their role in optimizing public health, maximizing economic benefits, maintaining biodiversity, and protecting the integrity of surface water features on our landscape. Emphasis will be placed on how our choices and solutions will in the long term affect our principal drinking water source--the groundwater that is hosted in ancient rocks in the north and in the deep subsurface, younger limestone and sandstone in the south, and the sediments of the most recent Ice Age from which our soils have formed. A full-day field trip planned for a Saturday in September will examine how societal choices affect our use of and protection of water resources in our rivers and lakes, and a second full-day trip on a Saturday in October will address the same issues in relation to our largest source of drinking water--our wells. Those unable to attend a field trip may instead prepare a paper.

ESCI 1908. Sea Change: Geological Perspective. (; 2 cr. ; A-F only; Periodic Spring)

Paleoceanography is the study of the environmental history of the planet from records of ancient oceans. This seminar course is intended for first-year students who are interested in understanding how and why the planet has changed in the geologic past and learning how scientists gather evidence of environmental change from marine sediments. We will examine how to use fossils and other evidence for reconstructing sea-level, ancient ocean currents, and abrupt paleoclimatic events and their impacts on marine life, and we will discuss major ideas about the driving forces of these past changes. Understanding the geologic past is highly relevant to understanding current and future environmental change.

ESCI 2001. Intro to Problems in Earth System Sci -with lab. (ENV,PHYS; 4 cr. ; A-F or Audit; Every Spring)

In this course, we study Earth as an integrated system of many interacting components. Examples of these components include the atmosphere, the ocean, continents, rivers and lakes, plants and animals, and humans. Changes within and among these components are shaping our planet and environment. Many grand challenges facing our society today, ranging from climate change to natural hazards, cannot be fully understood without a better understanding of these interactions. This course introduces some key concepts and principles of Earth System Science through a collection of recent scientific discoveries and outstanding problems in the field. The class touches on a wide range of fascinating topics related to the Earth's deep interior, surface environments, life, and its 4.5 billion-year history, highlighting the interdisciplinary nature of the subject. Meanwhile, all the topics are centered around introducing basic physical and chemical processes that regulate the

operation of the Earth as a system. This course gives students an excellent opportunity to explore a broad spectrum of active research in the Earth and Environmental Sciences, state-of-the-art research techniques, and potential career options in this field. Students are expected to develop quantitative skills in addressing questions in Earth System Science through lectures, in-class discussions, and assignments.

ESCI 2101. Intro to Problems in Earth System Science - lecture only. (ENV; 3 cr. ; A-F or Audit; Every Spring)

In this course, we study Earth as an integrated system of many interacting components. Examples of these components include the atmosphere, the ocean, continents, rivers and lakes, plants and animals, and humans. Changes within and among these components are shaping our planet and environment. Many grand challenges facing our society today, ranging from climate change to natural hazards, cannot be fully understood without a better understanding of these interactions. This course introduces some key concepts and principles of Earth System Science through a collection of recent scientific discoveries and outstanding problems in the field. The class touches on a wide range of fascinating topics related to the Earth's deep interior, surface environments, life, and its 4.5 billion-year history, highlighting the interdisciplinary nature of the subject. Meanwhile, all the topics are centered around introducing basic physical and chemical processes that regulate the operation of the Earth as a system. This course gives students an excellent opportunity to explore a broad spectrum of active research in the Earth and Environmental Sciences, state-of-the-art research techniques, and potential career options in this field. Students are expected to develop quantitative skills in addressing questions in Earth System Science through lectures, in-class discussions, and assignments.

ESCI 2201. Solid Earth Dynamics. (; 4 cr. ; A-F or Audit; Every Fall)

Dynamics of solid Earth, particularly tectonic system. Seismology, internal structure of Earth. Earth's gravity, magnetic fields. Paleomagnetism, global plate tectonics, tectonic systems. Field trip. prereq: concurrent registration is required (or allowed) in PHYS 1301 or instr consent

ESCI 2202. Earth History. (; 4 cr. ; A-F only; Every Spring)

Big Bang cosmology, plate tectonics, evolution. Formation of Earth. Chemical evolution of Earth, atmosphere, and ocean. Origin/tectonic evolution of continents. Origin of life, its patterns/processes. Long-term interactions between geosphere, atmosphere, and biosphere. prereq: [2201, 2301] or instr consent

ESCI 2203. Earth Surface Dynamics. (; 4 cr. ; A-F or Audit; Every Spring)

Earth's surface processes, drivers, and implications. Interactions between atmosphere, lithosphere, hydrosphere, and biosphere.

ESCI 2301. Mineralogy. (; 3 cr. ; Student Option; Every Fall)

Crystallography, crystal chemistry, physics. Physical/chemical properties, crystal structures, chemical equilibria of major mineral groups. Lab includes crystallographic, polarizing microscope, X-ray powder diffraction exercises, hand-specimen mineral identification. prereq: [concurrent registration is required (or allowed) in CHEM 1061, concurrent registration is required (or allowed) in CHEM 1065, concurrent registration is required (or allowed) in MATH 1271] or instr consent

ESCI 2302. Petrology. (; 3 cr. ; Student Option; Every Spring)

Magmatic and metamorphic processes, with an emphasis on plate tectonic interpretation of rock sequences. prereq: 2301 or instr consent

ESCI 3002. Climate Change and Human History. (ENV; 3 cr. ; A-F or Audit; Spring Even Year)

Causes of long-/short-term climate change. Frequency/magnitude of past climate changes; their geologic records. Relationship of past climate changes to development of agrarian societies and to shifts in power among kingdoms/city-states. Emphasizes last 10,000 years.

ESCI 3004. Water and Society. (ENV; 3 cr. ; Student Option; Periodic Fall)

For non-science majors. Study of (1) the role of humans as agents influencing the composition (quality) of water resources through domestic, agricultural, industrial, and other land-use practices; (2) the role of water in various ecosystem services which may be at odds with the anthropocentric view of water as a resource; (3) how population increase and climate change, coupled with human actions, is affecting the quality and quantity of available water, leading to lack of access to clean water and decent sanitation, and to severe water shortages (e.g., for irrigation) in some areas, especially in developing nations and politically unstable regions; and (4) how the availability of water shapes a society's view of water as a resource and its view of the non-human demands for water (which is not uniform across the globe).

ESCI 3005. Earth Resources. (; 3 cr. ; Student Option; Fall Odd Year)

Geologic aspects of energy/material resources. Resource size/life-times. Environmental consequences of resource use. Issues of international/public ethics associated with resource production, distribution, and use.

ESCI 3006. Rocks and Stars: Introduction to Planetary Science. (; 3 cr. ; Student Option; Spring Even Year)

ESCI 3006 is designed for students without strong backgrounds in math or physical sciences that are interested in an introductory level survey of planetary science. Students with stronger backgrounds in earth or other physical sciences may also find much of interest, although the approach will be largely non-quantitative. The course will introduce undergraduate students to the dazzling variety of worlds in our solar system and illustrate how many of the planetary scale systems of the Earth compare and contrast to those of other planets. The course will also consider

the dynamical and chemical processes that lead to the origin of our solar system and Earth. Additionally, we will also survey recent exciting observations and discoveries of exoplanets, including consideration of how the diversity of other solar systems aids understanding of our own. The physical and chemical principles underlying planetary processes will be a unifying theme of the course. The course will take advantage of the many resources made available by planetary exploration missions, including those producing the most recent new observations. Owing to the fast-moving pace of discovery in planetary science the curricular content will be and updated each time the course is taught. prereq: An interest in the solar system and planets.

ESCI 3093. Directed Studies in Earth & Environmental Sciences: Junior. (; 1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Directed studies in earth & environmental sciences under the direction of a faculty member. Prereq: instr consent

ESCI 3190. Curricular Practical Training. (1 cr. [max 2 cr.] ; S-N only; Every Fall, Spring & Summer)

Work assignments involving advanced earth science training. Reviewed by the Director of Undergraduate Studies.

ESCI 3202. Fluid Earth Dynamics. (; 4 cr. ; Student Option; Every Fall)

Dynamics of fluid Earth, mainly surface processes and convection. prereq: concurrent registration is required (or allowed) in 2201

ESCI 3303W. Geochemical Principles. (WI; 4 cr. ; Student Option; Every Fall)

Origin of elements (nucleosynthesis, elemental abundances). Geochemical classifications. Isotopes (radioactive, stable). Phase equilibria. Models of Earth's geochemical evolution. Basic geochemical processes that produced Earth's lithosphere, hydrosphere, atmosphere. prereq: [concurrent registration is required (or allowed) in CHEM 1061, concurrent registration is required (or allowed) in CHEM 1065] or instr consent

ESCI 3402. Science and Politics of Global Warming. (ENV; 3 cr. ; Student Option; Spring Odd Year)

Detection/attribution of global warming using concepts of radiation, climate system, and carbon cycle. Effects on society/biodiversity. National/global efforts/controversy over responses/consequences.

ESCI 3403. Computer Applications in Earth & Environmental Sciences. (3 cr. ; Student Option No Audit; Every Spring)

This class is meant to provide students with skills in scientific computer programming, specifically with a special focus on the Earth & environmental sciences and other disciplines where spatial data are important. The course assumes no previous knowledge of computer programming. Although the class will use MATLAB, topics covered in the course include concepts common to all programming languages including functions, logic, formatting, loops, data types, binary code, data branching

for input/output, among others. Additionally, students will develop problem-solving skills in learning how to design algorithms to achieve a task and in learning how to troubleshoot and debug their code. Students taking the class at the 5xxx level will be required to complete a programming project related to their own research. This course will be different from other introductory-level programming courses in that it will have a spatial emphasis and focus on examples and datasets related to the Earth and environmental sciences. Students will learn how to access a variety of Earth and environmental science data repositories and work with data in standard formats (i.e. NetCDF). Working with geographically referenced data in different projections will be explored using different toolboxes available for that purpose. Plotting of data will also be extensively covered including the production of publication-quality figures and animations. Prereq: upper division or instructor consent.

ESCI 3890. Field Workshop. (; 1 cr. [max 2 cr.]; Student Option; Every Fall & Spring) Earth sciences field workshop where students learn about the geological aspects of specific area(s) and culminates in a field trip to that area(s) to see the geology first-hand.

ESCI 3891. Field Methods. (2 cr. ; A-F only; Every Spring) Methods in geologic field mapping.

ESCI 3896. Internship in Earth and Environmental Sciences. (; 1-4 cr. ; Student Option No Audit; Every Fall, Spring & Summer) This course is meant for students who are in the process of doing an internship related earth and environmental sciences at a firm, nonprofit organization, or public agency (at the federal, state, county, or municipal level) that is off-site from the University. The course is designed to help you analyze, reflect on, and construct meaning from your internship experience through the following: 1) self-assessment of personal and career needs and goals, 2) examination of what it means to be a "professional" and operate within professional environments, 3) evaluation of performance & accomplishments, 4) articulation of knowledge and skills via effective resume writing and/or interviewing. You will accomplish this through processing/discussing your internship experience through academic assignments and interaction with fellow classmates and departmental staff. It's important to work with your internship supervisor to create a learning contract that outlines what you plan to learn and accomplish during your internship and how you plan to contribute and add value to the organization. You will complete various additional assignments including blogs, readings, and a resume that will allow you to gain knowledge and insight from your experience. What you gain from this class will be the direct result of the effort you put into it!

ESCI 3911. Introductory Field Geology. (; 4 cr. ; A-F or Audit; Every Summer) Geologic mapping on topographic maps and aerial photos. Field identification of igneous, sedimentary, and metamorphic rocks. Measurement of stratigraphic sections.

Structural/geomorphic features. prereq: ESCI 3891 or instr consent

ESCI 3980. Seminar: Current Topics in Earth & Environmental Sciences. (; 1-4 cr. [max 12 cr.]; S-N or Audit; Periodic Fall & Spring) Topics in Earth sciences investigated in a seminar format, for undergraduate students.

ESCI 4010. Undergraduate Seminar: Current Topics in Earth & Environmental Sciences. (; 1-4 cr. [max 12 cr.]; Student Option; Every Fall & Spring) Topics in earth sciences investigated in a seminar format. prereq: instr consent

ESCI 4093. Directed Studies in Earth & Environmental Sciences: Senior. (; 1-4 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer) Directed studies in earth & environmental sciences under the direction of a faculty member. prereq: instr consent

ESCI 4094. Senior Thesis. (; 2 cr. [max 4 cr.]; Student Option; Every Fall, Spring & Summer) Senior-level majors engage in independent research under faculty supervision. Select problems according to individual interests and in consultation with faculty committee. Thesis and oral defense. prereq: Sr, Geo or ESCI major, instr consent

ESCI 4102W. Vertebrate Paleontology: Evolutionary History and Fossil Records of Vertebrates. (WI; 3 cr. ; A-F or Audit; Spring Even Year) Vertebrate evolution (exclusive of mammals) in phylogenetic, temporal, functional, and paleoecological contexts. Vertebrate anatomy. Methods in reconstructing phylogenetic relationships and origin/history of major vertebrate groups, from Cambrian Explosion to modern diversity of vertebrate animals. prereq: 1001 or 1002 or Biol 1001 or Biol 1002 or Biol 1009 or instr consent

ESCI 4103W. Fossil Record of Mammals. (WI; 3 cr. ; A-F or Audit; Spring Odd Year) Evolutionary history of mammals and their extinct relatives. Methods in reconstructing phylogeny. Place of mammals in evolutionary history of vertebrate animals. Major morphological/ecological transitions. Origins of modern groups of mammals. Continuing controversies in studying fossil mammals.

ESCI 4104. Evolution and Paleobiology of Fossil Reptiles. (3 cr. ; A-F or Audit; Spring Odd Year) Reptiles first appear in the fossil record about 315 million years ago as small lizard-like carnivores and diversified greatly into a wide range of ecological roles during the Mesozoic. This radiation includes multiple invasions of the aquatic realm by groups as diverse as turtles, ichthyosaurs, plesiosaurs, and mosasaurs, and also encompasses two of the three groups of vertebrates to evolve active flight, namely birds and pterosaurs. Dinosaurs, most famous among the reptilian clades, dominated terrestrial ecosystems for over 100 million years and evolved large body sizes unsurpassed by any other terrestrial group. This course will cover the fossil record,

evolution and paleobiology of reptiles (including birds) from the Carboniferous to the Present. Using both literature and demonstrations on skeletons/casts, students will learn the basics of reptilian anatomy and biology, and how those are used to infer evolutionary relationships and ecology of the diverse extinct reptilian clades listed above. Methods for inferring phylogenetic relationships, measuring biodiversity in the fossil record, and reconstructing the physiology and life history strategies of extinct reptiles will also be covered. The relationship between major geological events, such as changing climate and continental drift, and the origination, diversification, and extinction of reptilian groups through more than 300 million years of in Earth history will be explored. Prerequisites: ESCI 1001 or ESCI 1002 or Biol 1001 or Biol 1002 or Biol 1009 or instructor consent.

ESCI 4203. Environmental Geophysics. (; 3 cr. ; Student Option; Every Fall) Seismic exploration (reflection and refraction); potential techniques (gravity and magnetics) and electrical techniques of geophysical exploration. prereq: Phys 1301

ESCI 4204. Geomagnetism and Paleomagnetism. (; 3 cr. ; Student Option; Periodic Fall) Present geomagnetic field at the Earth's surface, secular variation, geomagnetic field reversals. Physical and chemical basis of paleomagnetism: origin of natural remanent magnetization, mineralogy of magnetic minerals, magnetic polarity stratigraphy, apparent polar wander, and environmental magnetism. prereq: 2201, Phys 1302, Math 1272 or instr consent

ESCI 4212. Geodynamics. (; 3 cr. ; Student Option; Spring Odd Year) This course focuses on the dynamics of the solid Earth, particularly that of the lithosphere and the asthenosphere, probing further into the geodynamic problems that are introduced in ESCI 2201 through applications of continuum mechanics. Key continuum mechanics concepts to be examined include constitutive relations for different rheological classes (elastic, plastic, viscous, visco-elastic, visco-elasto-plastic), conservation laws (conservation of mass, momentum, and energy; continuity, force balance, and heat transfer), and simplifications and assumptions involved in their applications. Geodynamic problems to be discussed include plate cooling, lithospheric deformation, mantle convection, shear (viscous and frictional) heating, subduction, faulting, and their effects on the Earth's thermochemical structures, geoid and topography, and the distributions of earthquakes and volcanism. Analytical solutions and numerical models of simple geodynamic problems are introduced, and recent applications of complex geodynamic models to explain geological, geophysical, and geochemical observations are discussed based on selected scientific journal articles. Graduate students are expected to present and lead paper discussions, and their performance will be graded and counted towards their participation. Instructor's consent will be

required if the following prerequisites are not met: ESCI 2201, MATH 1371 and 1372 (or equivalent), and PHYS 1301 and 1302 (or equivalent).

ESCI 4401. Aqueous Environmental Geochemistry. (3 cr. ; Student Option; Periodic Spring)

General principles of solution chemistry applied to geology. Solution-mineral equilibria. Redox processes in natural waters. Geochemistry of hydrothermal fluids. Environmental geochemistry.

ESCI 4402. Biogeochemical Cycles in the Ocean. (3 cr. ; Student Option; Spring Even Year)

Marine biogeochemistry and chemical oceanography. Processes controlling chemical composition of oceans past/present. Cycles of major/minor constituents, including carbon, nitrogen, phosphorus, silicon, and oxygen and their isotopes. Role of these cycles in climate system. prereq: [CHEM 1021, CHEM 1022] or instr consent

ESCI 4404. Analytical geochemistry for aqueous solutions and geological materials. (3 cr. ; A-F only; Every Fall)

Chemical analysis of natural samples is essential not only in geochemical research but nearly all other subfields of Earth and Environmental Science research today. Some analytical capability routine to geochemists, such as high precision isotope analysis, has also found potential applications in many other disciplines. Outside academia, chemical analysis is fundamental to many activities directly relevant to our everyday life, ranging from pollution monitoring to soil testing. With the explosion of analytical capability and increasing applications of geochemical analysis, there is greater need for students in Earth and Environmental Sciences to get familiarized with some common analytical instruments and to grasp some fundamental principles of analytical chemistry. This course will introduce several modern analytical equipment with a particular focus on plasma source mass spectrometers, as well as important techniques developed for precise and accurate analysis of geological and environmental samples. During this course, students will have access to some of the most advanced analytical equipment in geochemical research and gain hands-on experience during in-class lab practice. The lab practice is primarily designed to illustrate some key concepts covered in lectures, rather than a comprehensive training on instrument operation. At the end of this course, students are expected to be capable of critically evaluating geochemical data and master a set of analytical skills that can serve their future careers in research or other chemical analysis related professions. This course is designed to be accessible to students with limited prior analytical experiences. Prerequisites recommended to attend this course are PHYS 1301 (or equivalency) and CHEM 1061 (or equivalency).

ESCI 4501. Structural Geology. (3 cr. ; Student Option; Every Fall)

Fundamental concepts related to deformation of Earth's crust. Processes associated with deformation, faulting, folding, fabric development. Lab/recitation include solving problems, conducting physical/numerical experiments. Field trips.

ESCI 4502. Tectonic Styles. (3 cr. ; Student Option; Periodic Fall)

Origin and nature of major types of tectonic disturbances affecting the crust and lithosphere, including analysis of the form and development of individual structural components and relationship to plate tectonics. Changes over geologic time in the nature of orogenic processes. prereq: 4501 or instr consent

ESCI 4602. Sedimentology and Stratigraphy. (3 cr. ; Student Option; Every Spring)

Interpretation of origin of sedimentary rocks through application of basic physical/chemical principles. Modern depositional environments, petrographic microscopy, basin dynamics, stratigraphy. prereq: ESCI 2301 or instr consent

ESCI 4701. Geomorphology. (4 cr. ; Student Option; Every Fall)

Origin, development, and continuing evolution of landforms in various environments. Environmental implications. Weathering, slope and shore processes, fluvial erosion and deposition, arid region processes, glacial processes. This course includes lecture and laboratory components, including field trips. Prereqs: MATH 1271 (Calculus I) or equivalent; PHYS 1301 (Physics I: Classical Mechanics) or equivalent. Instructor consent is required to take this course without the prerequisite courses or their equivalents, and it is recommended to take these classes at least concurrently (as co-requisites) with geomorphology. No help will be given on material covered in prerequisite courses.

ESCI 4702. General Hydrogeology. (4 cr. ; Student Option; Every Spring)

Theory of groundwater geology, hydrologic cycle, watershed hydrology, Darcy's law, governing equations of groundwater motion, flow net analysis, analog models, groundwater resource evaluation/development. Applied analysis of steady and transient equations of groundwater motion and chemical transport. Chemistry of natural waters. prereq: [concurrent registration is required (or allowed) in CHEM 1062, concurrent registration is required (or allowed) in CHEM 1066, MATH 1271, PHYS 1201] or instr consent

ESCI 4703. Glacial Geology. (4 cr. ; Student Option; Fall Odd Year)

Formation and characteristics of modern glaciers; erosional and depositional features of Pleistocene glaciers; history of quaternary environmental changes in glaciated and nonglaciated areas. Field trips and labs. prereq: 1001 or instr consent

ESCI 4801. Geomicrobiology. (3 cr. ; Student Option; Every Spring)

Geosphere/biosphere interactions over temporal/spatial scales. Global biogeochemical cycling, microbe-metal interactions, microbial paleobiology, environmental geomicrobiology,

life detection, habitability of planets. prereq: One semester college level biology

ESCI 4911. Advanced Field Geology. (4 cr. ; A-F or Audit; Every Summer)

Geologic mapping; study of igneous, metamorphic, and sedimentary rocks; structures and surficial features; problem solving. Paper required. prereq: 3911, instr consent

ESCI 4971W. Field Hydrogeology. (WI; 4 cr. ; Student Option; Every Summer)

Aquifer, vadoze zone, and surface water hydrology field techniques. Shallow soil boring, sampling. Well installation. Single/multiple well aquifer testing. Ground water sampling for chemical analysis. Weather data collection, hydrogeologic mapping, water balance calculation. prereq: instr consent

ESCI 5102. Climate Change and Human History. (3 cr. ; Student Option; Spring Even Year)

Causes of long-/short-term climate change. Frequency/magnitude of past climate changes, their geologic records. Relationship of past climate changes to development of agrarian societies and to shifts in power among kingdoms/city-states. Emphasizes last 10,000 years. prereq: 1001 or equiv or instr consent

ESCI 5201. Time-Series Analysis of Geological Phenomena. (3 cr. ; A-F or Audit; Periodic Fall)

Time-series analysis of linear and nonlinear geological and geophysical phenomena. Examples drawn from ice age cycles, earthquakes, climatic fluctuations, volcanic eruptions, atmospheric phenomena, thermal convection and other time-dependent natural phenomena. Modern concepts of nonlinear dynamics and complexity theory applied to geological phenomena. prereq: Math 2263 or instr consent

ESCI 5203. Mineral and Rock Physics. (3 cr. ; Student Option; Periodic Spring)

Physical properties of minerals and rocks as related to the composition and dynamics of the Earth's crust, mantle, and core. prereq: 2201, Phys 1302

ESCI 5204. Geostatistics and Inverse Theory. (3 cr. ; Student Option; Fall Odd Year)

Statistical treatment of geological and geophysical data. Statistical estimation. Stochastic processes/fields. Non-linear/non-assumptive error analysis. Cluster analysis. Eigenvalue-eigenvector methods. Regional variables. Correlograms and kriging. Theoretical framework of linear geostatistics and geophysical inverse theory. prereq: Stat 3011 or instr consent

ESCI 5302. Isotope Geology. (3 cr. ; A-F or Audit; Every Fall)

Theory and uses of radioactive, radiogenic, and stable isotopes in geology. Radioactive dating, geothermometry, and tracer techniques in geologic processes. prereq: 3303W or instr consent

ESCI 5331. Hydrologic Modeling. (3 cr. ; Student Option; Spring Even Year)

Models are indispensable tools in hydrology that come in many shapes, forms, and sizes. The hydrological knowledge and computational skills needed for each can thus greatly vary. Students will be introduced to different hydrologic modeling approaches through hands-on examples (running simulations) and through "looking under the hood" (exposure to numerical methods and coding techniques). The goal is not to become an expert in every type of hydrological model, but it is to gain familiarity with the range of models in the hydrologic toolkit and how they work; be equipped to choose, implement, and interpret models effectively; and know how to critically assess model assumptions, sensitivities, and limitations. Students will learn common techniques for generating and calibrating model inputs, compiling and/or executing models, and plotting results. Prerequisites: Introductory level hydrology / hydrogeology, Calculus, Some previous exposure to Matlab or Python (or another programming language). Students without these prerequisites may contact the instructor to seek consent to register.

ESCI 5341. Numerical Geodynamic Modeling. (3 cr. ; Student Option; Spring Even Year)

The objective of this course is for students to gain a basic understanding of numerical geodynamic modeling. The course consists of a lecture component and in-class modeling exercise component. The lecture component will cover general concepts of continuum mechanics/fluid dynamics, classical geodynamic problems, such as heat transfer and mantle flow, and numerical approaches to solving these problems using the finite difference and finite element methods. Through the in-class modeling exercises and homework assignments, students will learn to write numerical codes to solve simple problems, such as 2-D heat conduction and Stokes flow. prereq: Instructor's consent is required if the following prerequisites are not met: Introductory/first-year Calculus (MATH 1371 and 1372 or equivalent), Linear Algebra and Differential Equations (MATH 2373 or equivalent), Multivariable Calculus and Vector Analysis (MATH 2374 or equivalent), and Introductory/first-year physics (PHYS 1301 and 1302 or equivalent).

ESCI 5353. Electron Microprobe Theory and Practice. (3 cr. ; Student Option; Periodic Fall)

Characterizing solid materials with electron beam instrumentation, including reduction of X-ray data to chemical compositions. prereq: [One yr chem, one yr physics] or instr consent

ESCI 5402. Science and Politics of Global Warming. (3 cr. ; Student Option; Spring Odd Year)

Detection/attribution of global warming using radiation, climate system, and carbon cycle. Effects on society/biodiversity. National/global efforts. Controversy over responses/consequences.

ESCI 5403. Computer Applications in Earth & Environmental Sciences. (3 cr. ; Student Option No Audit; Every Spring)

This class is meant to provide students with skills in scientific computer programming, with a special focus on the Earth & environmental sciences and other disciplines where spatial data are important. The course assumes no previous knowledge of computer programming. Although the class will use MATLAB, topics covered in the course include concepts common to all programming languages including functions, logic, branching, loops, data types, binary code, data formatting for input/output, among others. Additionally, students will develop problem-solving skills in learning how to design algorithms to achieve a task and in learning how to troubleshoot and debug their code. Students taking the class at the 5xxx level will be required to complete a programming project related to their own research. This course will be different from other introductory-level programming courses in that it will have a spatial emphasis and focus on examples and datasets related to the Earth and environmental sciences. Students will learn how to access a variety of Earth and environmental science data repositories and work with data in standard formats (i.e. NetCDF). Working with geographically referenced data in different projections will be explored using different toolboxes available for that purpose. Plotting of data will also be extensively covered including the production of publication-quality figures and animations.

ESCI 5503. Advanced Petrology. (3 cr. ; Student Option; Fall Odd Year)

Quantitative approach to modern igneous/metamorphic petrology. Emphasizes thermodynamics of minerals/melts and with applications to phase diagrams, thermobarometry, melting relationships, and energetics of petrologic mass transfer. prereq: 2302, CHEM 1061, CHEM 1065, [MATH 1372 or MATH 1272 or MATH 1572]

ESCI 5705. Limnogeology and Paleoenvironment. (3 cr. ; Student Option; Periodic Fall)

Within-lake, hydrogeologic, and landscape (geological/biological) processes that lead to formation of various proxy records of paleoenvironment. Systems approach to physical, geochemical, biogeochemical, and biotic proxies. Basic principles, case studies. Emphasizes how proxy records relate to paleoclimate. prereq: instr consent

ESCI 5805. Standards and Practices for Professional Geoscientists. (3 cr. ; Student Option; Every Spring)

This course is meant to provide students with a clear understanding of the standards and practices regularly used by Geoscience professionals in industry and agency. The course builds on the foundational knowledge offered through the core curriculum of the Earth Sciences undergraduate major, and fills a critical gap in showing how this knowledge is translated into common standards and practices, regulations, funding mechanisms, and even professional expectations within a variety of geoscience disciplines. In short, this course aims to smooth a student's transition from University to an entry-level position

from which they can build a successful and sustainable career. This course is targeted for both upper level undergraduates and graduate students. Aspects of the course include: - Detailed discussion of regional stratigraphy, bedrock and glacial geology and how they relate to various industrial applications and environmental issues. - Examination of state and federal environmental regulations, as well as the phases of environmental impact statements. - Survey of fundamental investigation techniques (GeoProbe drilling, hollow-stem auger drilling, well installation, analytical testing of soil, groundwater, air). - Introduction to environmental clean-up grants and their management. - Assessment of topics covered in the National Association of State Boards of Geology (ASBOG) Fundamentals of Geology (FG) exam. This exam is a required step on the way to becoming a registered geologist. The exam is offered in mid-March, and the expectation is that students participating in the class will take it. - Coordination and completion of the 40 hour HAZWOPER training through UMN. - Invited lectures from select representatives of various subfields and professional organizations (groundwater & contaminant hydrogeology, mining & geophysical exploration, environmental engineering, petroleum) to give students a jumpstart in their professional networking.

ESCI 5971. Field Hydrogeology. (2 cr. ; Student Option; Every Summer)

Aquifer, vadoze zone, and surface water hydrology field techniques. Shallow soil boring and sampling. Well installation. Single/multiple well aquifer testing. Ground water sampling for chemical analysis. Weather data collection, hydrogeologic mapping, water balance calculation. prereq: instr consent

ESCI 5980. Seminar: Current Topics in Earth Sciences. (1-4 cr. [max 12 cr.] ; S-N or Audit; Periodic Fall & Spring)

Topics in earth sciences investigated in a seminar format.

East Asian Studies (EAS)

EAS 3461. Introduction to East Asia I: The Imperial Age. (3-4 cr. ; Student Option; Every Fall & Spring)

Comparative survey of early history of China, Japan, Korea, and Vietnam; early Chinese thought; diffusion of Confucianism, Buddhism, and other values throughout East Asia; political and social history of region to 1600.

EAS 3462. From Subjects to Citizens: The History of East Asia From 1500 to the Present. (GP,HIS; 3-4 cr. ; Student Option; Every Spring)

How Asian states, societies, economies, and cultures linked with one another and with European powers. How period's historical effects still resonate. Covers India, China, Japan, Korea, and Indochina.

EAS 3462H. Honors: From Subjects to Citizens: The History of East Asia from 1500 to the Present. (GP,HIS; 3-4 cr. ; A-F only; Every Spring)

How Asian states, societies, economies, cultures linked with one another/European powers. Historical effects. Covers India, China, Japan, Korea, Indochina.

EAS 3468. Social Change in Modern China. (; 3 cr. ; Student Option; Every Fall)

Opium War and opening of Treaty Ports in 19th century; missionary activity and cultural influence; changes in education system; women's movement; early industrialization; socialism and collectivization after 1949; industrialization of Taiwan; PRC's entry into the world trading system.

EAS 3471. Modern Japan, Meiji to the Present (1868-2000). (HIS; 3 cr. ; Student Option; Every Fall & Spring)

Japan's early development as industrial/imperial power after Meiji Restoration of 1868. Political developments in Taisho years: social, cultural, economic trends that supported them. Militarization/mobilization for war in 1930s. Japan's war with China, Pacific War with the United States. American occupation. Postwar economic recovery, high growth. Changing political/popular culture of 1980s, '90s.

Ecology, Evolution, and Behav (EEB)

EEB 3001. Ecology and Society. (ENV; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer) Basic concepts in ecology. Organization, development, function of ecosystem. Population growth/regulation. Human effect on ecosystems. prereq: [Jr or sr] recommended; biological sciences students may not apply cr toward major

EEB 3002. Sex, Evolution, and Behavior: Examining Human Evolutionary Biology. (; 4 cr. ; A-F or Audit; Every Spring)

Methods/theories to understand humans in evolutionary framework. What can be known only/primarily from evolutionary perspective. How evolutionary biology of humans might lead to better evolutionary theory. How physiology, development, behavior, and ecology coordinate/coevolve in humans.

EEB 3407. Ecology. (3 cr. ; Student Option; Every Fall & Summer)

Principles of ecology from populations to ecosystems. Applications to human populations, disease, exotic organisms, habitat fragmentation, biodiversity and global dynamics of the earth.

EEB 3408W. Ecology. (WI; 4 cr. ; Student Option; Every Spring)

Principles of population growth/interactions, communities and ecosystem function applied to ecological issues. Regulation of populations, dynamics/impacts of disease, invasions by exotic organisms, biodiversity, global change. Lab. Scientific writing. Quantitative skill development (mathematical models, data analysis, statistics and some coding in R). prereq: [One semester college biology or instr consent], [MATH 1142 or MATH 1271 or Math 1272 or Math 1241 or Math 1242 or MATH 1281 or Math 1282 or equiv]

EEB 3409. Evolution. (3 cr. ; Student Option; Every Fall & Spring)

Diversity of forms in fossil record and in presently existing biology. Genetic mechanisms of evolution, including natural selection, sexual selection, genetic drift. Examples of ongoing evolution in wild/domesticated populations and in disease-causing organisms. Lab. prereq: One semester college biology

EEB 3411. Introduction to Animal Behavior. (3 cr. ; Student Option; Every Fall)

This course provides a broad introduction to animal behavior. As one of the most interdisciplinary fields in all of biology, understanding animal behavior requires an understanding of cell biology, physiology, genetics, development, ecology, endocrinology, evolution, learning theory, and even physics and economics! This course will draw on questions and methods from each of these disciplines to answer what on the surface appears to be a very simple question: ?Why is that animal doing that?? The course will review such key topics as feeding behavior, reproductive behavior, perception, learning, animal conflict, social behavior, parental care, and communication. The lecture parallels a required laboratory. prereq: Undergrad biology course Credit granted for only one of the following: EEB 3411, EEB 3412W, EEB 3811W, EEB 5412

EEB 3412W. Introduction to Animal Behavior, Writing Intensive. (WI; 4 cr. ; Student Option No Audit; Every Spring)

EEB 3412W is a lecture/lab writing-intensive course. Why do animals behave the way they do? This question is relevant to conservation, agriculture, human health, veterinary medicine, developing artificial intelligence, and understanding the origins of human behavior. This writing intensive course provides a broad introduction to animal behavior. As one of the most interdisciplinary fields in all of biology, understanding animal behavior requires an understanding of cell biology, physiology, genetics, development, ecology, endocrinology, evolution, learning theory, and even physics and economics! This course will draw on questions and methods from each of these disciplines to answer what on the surface appears to be a very simple question: Why is that animal doing that? The course will review such key topics as feeding behavior, reproductive behavior, perception, learning, animal conflict, social behavior, parental care, and communication. Throughout the course, students will be immersed in the scientific process, reading scientific literature, thinking critically, formulating their own research questions and answering them in an independent project. This is a writing intensive course that covers scientific process and how to formulate research questions. prereq: Undergrad biology course Credit granted for only one of the following: EEB 3411, EEB 3412W, EEB 3811W, EEB 5412

EEB 3500. Special Topics in Ecology, Evolution and Behavior. (; 1-3 cr. [max 4 cr.] ; S-N only; Every Fall & Spring) Special Topics in Ecology, Evolution and Behavior

EEB 3603. Science, Protection, and Management of Aquatic Environments. (; 3 cr. ; Student Option; Every Spring)

Fundamentals of aquatic ecology. Case study approach to water problems faced by society (e.g., eutrophication, climate change, invasive species, acid rain, wetland protection, biodiversity preservation). Science used to diagnose/remediate or remove problems. prereq: One semester college biology

EEB 3701. EEB Seminar. (; 1 cr. ; S-N only; Every Fall & Spring)

Learn about recent developments in cutting-edge topics in the area of Ecology, Education and Behavior and engage with the EEB community of faculty, graduate students and post docs and observe professional norms in the field. Engage directly with practicing scientists and the primary literature from their work and learn how to give a scientific talk by observing and critically evaluating and discussing seminars.

EEB 3807. Ecology. (4 cr. ; A-F or Audit; Every Summer)

Population growth/interactions. Ecosystem function applied to ecological issues. Regulation of human populations, dynamics/impacts of disease, invasions by exotic organisms, habitat fragmentation, biodiversity. Lab, field work. prereq: [One semester college biology], [MATH 1142 or MATH 1271 or MATH 1281 or equiv]

EEB 3811W. Animal Behavior in the Field. (WI; 4 cr. ; A-F or Audit; Every Summer)

In this course we will learn general principles governing the evolution of animal behavior. Being conducted at a field station, the approach is hands-on experiential learning through the application of the scientific method to the study of animal behavior. Thus, we will learn animal behavior by becoming animal behaviorists. Animal behaviorists communicate to one another through written reports in peer-reviewed literature and through oral talks at meetings. We will do both of these. All of these experiences culminate in the design, execution and presentation (written and oral) of an independent research project. Therefore, it is appropriate that this course is designated as writing-intensive. Writing comprises 90 points out of the course total of 140 points, representing 64% of the course grade. This is course meets two days per week from 8AM to 12N and from 1PM to 5PM over a 5-week period in May/June at the Itasca Biological Station and Labs. prereq: Undergrad biology course Credit granted for only one of the following: EEB 3411, EEB 3412W, EEB 3811W, EEB 5412

EEB 3851W. Health and Biodiversity. (ENV,WI; 3 cr. ; A-F only; Every Spring)

Basics of biodiversity, human/animal health, interdependence. Strategies for sustainable health. prereq: At least one year of college Biology or equivalent

EEB 4068. Plant Physiological Ecology. (; 3 cr. ; Student Option No Audit; Spring Even Year)

Plant function, its plasticity/diversity in an ecological context. Impact of environmental

stresses on major physiological processes of plants, including photosynthesis, respiration, water uptake/transport, and nutrient uptake/assimilation. Lab, field trip to Cedar Creek.

EEB 4129. Mammalogy. (; 4 cr. ; A-F or Audit; Every Fall)

Evolutionary and biogeographic history of mammalia. Recognize, identify, and study natural history of mammals at the ordinal level, North American mammals at familial level, and mammals north of Mexico at generic level. Minnesota mammals at specific level. Includes lab. prereq: Biol 1001 or Biol 2012

EEB 4134. Introduction to Ornithology. (; 4 cr. ; Student Option; Every Spring)

Structure, evolution, classification, distribution, migration, ecology, habitats, identification of birds. Lecture, lab, weekly field walks. One weekend field trip. prereq: Biol 1001 or Biol 2012

EEB 4329. Primate Ecology and Social Behavior. (; 3 cr. ; A-F or Audit; Periodic Fall)

Primates as model system to explore animal/human behavior. Factors influencing sociality/group composition. Mating systems. Prevalence of altruistic, cooperative, and aggressive behavior. Strength of social bonds in different species. Evolution of intelligence/culture. prereq: BIOL 1009 or BIOL 1951 or BIOL 3411 or ANTH 1001 or instr consent

EEB 4330W. Animal Communication. (WI; 3 cr. ; A-F or Audit; Fall Odd Year)

Mechanisms of signal production/perception, signal propagation. How signals can convey information. How signalers, signals, receivers are adapted for communication by natural/sexual selection. prereq: (Biol 1951 or Biol 1951H or Biol 1009) and (EEB 3412W or EEB 3411 or EEB 3811W)

EEB 4332W. The Biology of Politics. (WI; 3 cr. ; A-F only; Every Fall)

Survey of primary literature exploring the potential biological underpinnings of individual differences in political ideology. Students will critically examine peer-reviewed studies of behavioral genetics, physiology, neuroscience, animal behavior, and evolution to evaluate evidence for and against the claims that one's political ideology is shaped by biology and that people holding conservative and liberal views may be biologically predisposed to experience and interact with the world differently. Students will examine how biological influences on cognition, social and moral attitudes, and behaviors relate to individual differences in political ideology, with the ultimate goal of assessing whether an understanding of the biology of politics is required to fully contextualize political discourse in a democracy.

EEB 4609W. Ecosystem Ecology. (ENV,WI; 3 cr. ; Student Option; Every Fall)

Regulation of energy and elements cycling through ecosystems. Dependence of cycles on kinds/numbers of species within ecosystems. Effects of human-induced global changes on functioning of ecosystems.

EEB 4611. Biogeochemical Processes. (3 cr. ; Student Option; Periodic Spring)

Application of biochemistry, ecology, chemistry, and physics to environmental issues. Issues in biogeochemistry. Impact of humans on biogeochemical processes in soils, lakes, oceans, estuaries, forests, urban/managed ecosystems, and extreme environments (e.g., early Earth, deep sea vents, thermal springs). prereq: [BIOL 1009 or 2003] AND [CHEM 1081 or 1061 or 1071H] or instr consent

EEB 4793W. Directed Studies: Writing Intensive. (WI; 1-7 cr. ; S-N only; Every Fall, Spring & Summer)

Writing Intensive Directed Studies is an individual-study, literature-based investigation in which the student is mentored directly by a faculty member. One main feature of this course is that the student will receive writing instruction and the written output of the course will be revised during the semester. The project needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, how writing instruction will take place, a timeline for when student writing will be handed in and how it will be assessed, methodology to be used by the student, and how assessment of learning will be conducted by the mentor. Additional oversight is established for this course near the end of the semester the written output is submitted to the DUGS for the major. The DUGS is responsible to determine that the writing meets standards set by the CBS Education Policy Committee for quality of writing, appropriate citation of literature, well-constructed figures, tables, and legends (if present), appropriate use and interpretation of statistics (if present), conclusions that are supported by evidence, and well-formatted references. This course is graded S/N and approval of the DUGS is required before a grade of S can be given by the faculty mentor. prereq: department consent, instructor consent, no more than 7 credits of 4793W, 4794W, 4993, 4994 counts towards CBS major requirements.

EEB 4794W. Directed Research: Writing Intensive. (WI; 1-7 cr. ; S-N only; Every Fall, Spring & Summer)

Writing Intensive Directed Research is an individual-study, laboratory or field research experience in which the student is mentored directly by a faculty member. This course is intended for students who already have initiated a research project in the lab of the mentor and already have results. In this course the student will receive writing instruction. The written output usually is in the form of a scientific paper describing the results of the student's project. Written output of the course must be revised during the semester and a schedule for writing, assessment and revision needs to be in place at the beginning of the semester. The project needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the Director of Undergraduate Studies (DUGS)

for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, how writing instruction will take place, a timeline for when student writing will be handed in and how it will be assessed, methodology to be used by the student, and how assessment of learning will be conducted by the mentor. Additional oversight is established for this course - near the end of the semester the written output is submitted to the DUGS for the major. The DUGS is responsible to determine that the writing meets standards set by the CBS Education Policy Committee for quality of writing, appropriate citation of literature, well-constructed figures, tables, and legends (if present), appropriate use and interpretation of statistics (if present), conclusions that are supported by evidence, and well-formatted references. The DUGS can call for a final revision before a grade is given. This course is graded S/N and approval of the DUGS is required before a grade of S can be given by the faculty mentor. prereq: department consent, instructor consent, no more than 7 credits of 4793, 4794, 4993W, 4994W counts towards CBS major requirements.

EEB 4839. Field Studies in Mammalogy. (4 cr. ; A-F or Audit; Every Summer)

Techniques for studying small mammals. Lectures/field projects emphasize identification, distributions, community interactions, ecophysiology, population ecology. prereq: College-level biology course that includes study of animals or instr consent

EEB 4844. Field Ornithology. (3 cr. [max 4 cr.]; A-F or Audit; Every Summer)

Biology of breeding birds through use of field techniques at Itasca Biological Station/Laboratories. Daily fieldwork emphasizes identification, behavioral observations, netting/censusing. prereq: One semester college biology or instr consent

EEB 4993. Directed Studies. (; 1-7 cr. ; S-N only; Every Fall, Spring & Summer)

Directed Studies is an individual-study, literature-based investigation in which the student is mentored directly by a faculty member. The topic for the course needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, methodology to be used, and how the assessment of learning will be conducted. prereq: department consent, instructor consent, no more than 7 credits of 4793W, 4794W, 4993, 4994 counts towards CBS major requirements.

EEB 4994. Directed Research. (; 1-6 cr. [max 42 cr.]; S-N only; Every Fall, Spring & Summer)

Directed Research is an individual-study, laboratory or field investigation course. The research topic needs to be agreed on by both the student and the faculty mentor and explained in a Research/Directed Studies

contract. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, methodology to be used, and how the assessment of learning will be conducted. prereq: department consent, instructor consent, no more than 7 credits of 4793W, 4794W, 4993, 4994 counts towards CBS major requirements.

EEB 5042. Quantitative Genetics. (; 3 cr. ; A-F only; Every Fall)

Fundamentals of quantitative genetics. Genetic/environmental influences on expression of quantitative traits. Approaches to characterizing genetic basis of trait variation. Processes that lead to change in quantitative traits. Applied/evolutionary aspects of quantitative genetic variation. prereq: [BIOL 4003 or GCD 3022] or instr consent; a course in statistics is recommended

EEB 5053. Ecology: Theory and Concepts. (; 4 cr. ; Student Option; Fall Odd Year)

Classical and modern mathematical theories of population growth, interspecific interactions, ecosystem dynamics and functioning, with emphasis on underlying assumptions and on effects of added biological reality on robustness of predictions, stability, interspecific interactions, ecosystem structure and functioning. prereq: Biol 3407 or instr consent

EEB 5068. Plant Physiological Ecology. (; 3 cr. ; Student Option No Audit; Spring Even Year)

Plant function, its plasticity/diversity in ecological context. Impact of environmental stresses on major physiological processes of plants, including photosynthesis, respiration, water uptake/transport, and nutrient uptake/assimilation. Lab, field trip to Cedar Creek. prereq: BIOL 2022 or BIOL 3002 or BIOL 3407 or BIOL 3408W or instr consent

EEB 5371. Principles of Systematics. (; 3 cr. ; Student Option; Fall Odd Year)

Theoretical/practical procedures of biological systematics. Phylogeny reconstruction. Computer-assisted analyses, morphological and molecular approaches, species concepts/speciation, comparative methods, classification, historical biogeography, nomenclature, use/value of museums. prereq: Grad student or instr consent

EEB 5381. Sustainability Science: Interactions Between Human and Environmental Systems. (3 cr. ; Student Option No Audit; Spring Odd Year)

This course addresses core ideas in sustainability science -- an emerging field of problem-driven research dealing with the interactions between human and environmental systems. The problem that motivates the course, and the field, is the challenge of sustainability: improving the well-being of present and future generations in ways that conserve the planet's life support systems over the long term. The goal of the course is to introduce students interested in sustainability science to the field's principle themes, cutting-edge findings, active debates, and unresolved

research questions. To this end, participants will critically discuss a set of presentations and papers covering the field in a systematic way, drawing on and integrating contemporary research from earth systems science, resource economics, institutional analysis, ecology, geography, development studies, health sciences, engineering, and other disciplines.

EEB 5407. Ecology. (3 cr. ; Student Option; Every Fall)

Principles of ecology from populations to ecosystems. Applications to human populations, disease, exotic organisms, habitat fragmentation, biodiversity, and global dynamics of the earth.

EEB 5409. Evolution. (3 cr. ; Student Option; Every Fall & Spring)

Diversity of forms in fossil record and in presently existing biology. Genetic mechanisms of evolution, including natural selection, sexual selection, genetic drift. Examples of ongoing evolution in wild/domesticated populations and in disease-causing organisms. Lab. prereq: One semester college biology

EEB 5412. Introduction to Animal Behavior. (3 cr. ; Student Option No Audit; Every Fall & Spring)

EEB 5412 is a lecture-only course for graduate students. Why do animals behave the way they do? This question is relevant to conservation, agriculture, human health, veterinary medicine, developing artificial intelligence and understanding the origins of human behavior. This writing intensive course provides a broad introduction to animal behavior. As one of the most interdisciplinary fields in all of biology, understanding animal behavior requires an understanding of cell biology, physiology, genetics, development, ecology, endocrinology, evolution, learning theory, and even physics and economics! This course will draw on questions and methods from each of these disciplines to answer what on the surface appears to be a very simple question: Why is that animal doing that? The course will review such key topics as feeding behavior, reproductive behavior, perception, learning, animal conflict, social behavior, parental care, and communication. Throughout the course, students will be immersed in the scientific process, reading scientific literature, thinking critically, formulating their own research questions, and answering them in an independent project. This is a writing intensive course that covers scientific process and how to formulate research questions. prereq: Undergrad biology course Credit granted for only one of the following: EEB 3411, EEB 3412W, EEB 3811W, EEB 5412

EEB 5534. Biodiversity Sci: The origins, maintenance, consequences, detection and assessment of biodiversity. (ENV; 3 cr. ; Student Option; Every Fall & Spring)

Biodiversity science is a rapidly expanding field of enquiry with increasing digital resources and global monitoring capabilities precisely at the moment in history that scientists recognize as the Sixth Extinction. In other words, we are currently facing a biodiversity crisis with threats to the Earth's biota not seen since

the dinosaurs perished 65 million years ago. "Biodiversity" was coined by W.G. Rosen and E.O Wilson in the 1980s to describe the variation in all of life on Earth. The term is now widely used in both the scientific and popular literature and is at the center of scientific enquiry, conservation efforts, large-scale collaborative pursuits of technological advances to allow monitoring from space, and global assessments that interface with international policy. Biodiversity requires integration across multiple disciplines from evolution, to ecology, remote sensing, conservation biology, economics and the social sciences, including the environmental policy. Biodiversity science is thus inherently interdisciplinary. As a consequence, rarely does a single course provide students the opportunity to focus on this critical topic from multiple perspectives and dimensions. This new course seeks to provide students intensive study of biodiversity from six perspectives: 1) the origins of biodiversity, including the processes of speciation and extinction over macroevolutionary timescales and those involved in generating biological variation at microevolutionary scales; 2) the ecological problem of species coexistence, given the nature of competitive interactions and biological filters with a focus on the interactions of individual species and major threats to biodiversity; 3) the consequences of biodiversity and biodiversity loss for ecosystem functions, focusing on ecosystem scale processes; 4) the services or benefits to humans attributed to biodiversity, including cultural benefits of biodiversity; here we discuss both practical and ethical arguments for sustaining biodiversity; 5) methods of detecting biodiversity including classic field biodiversity observations and taxonomic collections and emerging remote sensing methods that harness hyperspectral data and satellite imagery; and 6) scientific assessments of biodiversity that communicate the science of biodiversity to policymakers, particularly the Intergovernmental Platform on Biodiversity and Ecosystem Services (IPBES). The IPBES involves scientists from around the world and integrates indigenous and local knowledge (ILK). The United Nations and governments around the globe are sponsoring the IPBES, building on earlier assessments such as a prominent one in the UK. Several guest lecturers from across the University will participate in discussions and aid in development of computer labs (including Sharon Jansa (CBS), Keith Barker (CBS), Joe Knight (CFANS), and others).

EEB 5601. Limnology. (; 3 cr. ; Student Option; Every Fall)

Advanced introduction to description/analysis of interaction of physical, chemical, and biological factors that control functioning of life in lakes and other freshwater aquatic environments. prereq: Grad student or instr consent

EEB 5609. Ecosystem Ecology. (; 3 cr. ; Student Option; Every Fall)

Regulation of energy and elements cycling through ecosystems. Dependence of cycles on

kinds/numbers of species within ecosystems. Effects of human-induced global changes on functioning of ecosystems.

EEB 5611. Biogeochemical Processes. (3 cr. ; Student Option; Periodic Spring)
Application of biochemistry, ecology, chemistry, and physics to environmental issues. Issues in biogeochemistry. Impact of humans on biogeochemical processes in soils, lakes, oceans, estuaries, forests, urban/managed ecosystems, and extreme environments (e.g., early Earth, deep sea vents, thermal springs). prereq: [BIOC 2331, CHEM 2301] or instr consent

EEB 5851. Health and Biodiversity. (ENV; 3 cr. ; A-F only; Every Spring)
Basics of biodiversity, human/animal health, interdependence. Strategies for sustainable health. prereq: At least one year of college Biology or equivalent

Economics (ECON)

ECON 1101. Principles of Microeconomics. (GP,SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer)
Microeconomic behavior of consumers, firms, and markets in domestic and world economy. Demand and supply. Competition and monopoly. Distribution of income. Economic interdependencies in the global economy. Effects of global linkages on individual decisions. prereq: knowledge of plane geometry and advanced algebra

ECON 1102. Principles of Macroeconomics. (; 4 cr. ; Student Option; Every Fall, Spring & Summer)
Aggregate consumption, saving, investment, and national income. Role of money, banking, and business cycles in domestic and world economy. International trade, growth, and development. U.S. economy and its role in the world economy. International interdependencies among nations. prereq: [1101 or equiv], knowledge of plane geometry and advanced algebra

ECON 1165. Business Economics. (SOCS; 4 cr. ; A-F only; Every Fall & Spring)
This course introduces the fundamentals of microeconomics and macroeconomics to business/other students who desire a primer on the working of an economy in a mutually dependent world. It includes the microeconomic interaction of businesses and consumers in markets and the determination of prices and quantities under conditions of competition and monopoly. Economic interdependencies in the global economy are analyzed to obtain the effects of economic changes on the country itself and on the world. The macroeconomics of aggregate consumption, saving, investment, and national income are also examined, as well as the role played by money, banking, and business cycles in the domestic and world economy. This course is only for CSOM undergraduate students.

ECON 2020. The Economics of COVID-19. (; 1 cr. ; Student Option; Periodic Summer)

This course explores incorporating the standard epidemiology models of disease into economic modeling. The student will gain an understanding of how these epidemiology models work, and how they can be extended to allow the careful consideration of the tradeoffs inherent in choosing safety vs. economic well being. Topics will include SIR models from epidemiology, how contagious disease relates to standard economic concepts such as externalities, calculations of the Statistical Value of Life from economics, and the uses and pitfalls of mathematical modeling.

ECON 3101. Intermediate Microeconomics. (; 4 cr. ; A-F only; Every Fall, Spring & Summer)
Behavior of households, firms, and industries under competitive/monopolistic conditions. Factors influencing production, price, and other decisions. Applications of theory. Economic efficiency. Distribution of well-being. prereq: [[1101, 1102] or equiv], [MATH 1271 or equiv]

ECON 3102. Intermediate Macroeconomics. (; 4 cr. ; A-F only; Every Fall, Spring & Summer)
Determinants of national income, employment, and price level; effects of monetary and fiscal policies; emphasis on a general equilibrium approach. Applications of the theory, especially to current modern macroeconomic policy issues. ApEc 3006 cannot be substituted for Econ 3102. prereq: 3101 or equiv

ECON 3896. Internship for Academic Credit. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)
An applied learning experience in an agreed-upon, short-term, supervised workplace activity, with defined goals, which may be related to a student's major field or area of interest. The work can be full or part time, paid or unpaid, primarily in off-campus environments. Internships integrate classroom knowledge and theory with practical application and skill development in professional or community settings. The skills and knowledge learned should be transferable to other employment settings and not simply to advance the operations of the employer. The student's work is supervised and evaluated by a site coordinator or instructor.

ECON 3951. Economics Capstone. (; 2 cr. ; A-F only; Every Fall, Spring & Summer)
Students produce a significant written work in economics. Projects demonstrate critical thinking, collection/analysis of data, problem solving, interpretation of findings. Modes of inquiry in economics. prereq: 3101, 3102, [STAT 3011 or equiv], [STAT 3022 or equiv], two [3xxx or 4xxx] ECON courses, at least one 4xxx ECON writing intensive course, freshman writing requirement satisfied

ECON 3960. Topics in Economics: Area Studies. (; 3 cr. [max 6 cr.]; A-F only; Every Fall & Spring)
Topics specified in class schedule. prereq: [1101, 1102] or equiv

ECON 3970. Topics in Economics. (; 3 cr. [max 6 cr.]; A-F only; Periodic Fall & Spring)

Topics specified in class schedule. prereq: ECON 3101 and 3102 or equivalents

ECON 3991. Independent Study. (; 1-3 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Students confirm topic of study with faculty supervisor or with director of undergraduate studies before beginning (otherwise no credit). prereq: 3101, 3102, dept consent

ECON 3993. Directed Studies. (; 1-3 cr. ; Student Option; Every Fall, Spring & Summer)
Guided individual reading or study in areas not available in regular course offerings. prereq: 3101, 3102, 4261, two semesters of statistics

ECON 4108. Advanced Game Theory and Applications. (4 cr. ; A-F only; Every Fall)
For Econ B.S. students only. Games. Normal form, extensive form. Wars of attrition. Games of timing. Bargaining applications in industrial organization, macroeconomics, international economics. prereq: ECON 3101, 3102, MATH 1271, MATH 1272 [or equiv courses]; and two 4xxx level ECON electives.

ECON 4113. Introduction to Mathematical Economics. (; 4 cr. ; A-F only; Periodic Fall & Spring)
Development of selected models of economic behavior in mathematical terms. Topics selected to illustrate advantages of mathematical formulation. prereq: [[3101, 3102] or equiv], [MATH 1271, MATH 1272, MATH 2243] or equiv]

ECON 4115. Uncertainty and Information. (4 cr. ; A-F only; Every Fall & Spring)
For Econ B.S. students only. This Microeconomic theory course focuses on economies under uncertainty with possibly asymmetric information. Individual behavior of consumers and that of markets are studied under uncertainty with incomplete information. Related topics in technology and innovation. the information economy, and networks will be examined. prereq: [[3101, 3102]] or equiv, [[MATH 1271, MATH 1272, and Math 2243] or equiv]; strongly suggest students complete Stat 4101 before taking this course; students should have successfully completed two 4xxx level UMNTC economics courses.

ECON 4118. Advanced Mathematical Economics. (4 cr. ; A-F only; Periodic Fall & Spring)
Development of selected models of economic behavior in mathematical terms. Topics selected to illustrate advantages of mathematical formulation. prereq: ECON 3101, 3102, MATH 1271, MATH 1272, MATH 2243 or equivalent courses; and at least two 4xxx level economics electives.

ECON 4161. Microeconomic Analysis I. (; 2 cr. ; A-F only; Every Fall)
Theories of consumer demand, producer supply, and market equilibrium. General equilibrium and welfare. May include topics such as externalities, economics of information/uncertainty. Seven-week course. prereq: 3101, 3102, MATH 2243, MATH 2263, [[STAT 4101, STAT 4102] or equiv]

ECON 4162. Microeconomic Analysis II. (; 2 cr. ; A-F or Audit; Every Fall)

Theories of consumer, producer, and market equilibrium. Includes general equilibrium, welfare, externalities, topics in information and uncertainty, and game theory. Seven-week course. prereq: 3101, 3102, 4161, MATH 2243, MATH 2263, [[STAT 4101, STAT 4102] or equiv]

ECON 4163. Microeconomic Analysis III. (; 2 cr. ; A-F only; Every Spring)

The course is an introduction to basic concepts of stochastic calculus and application in economic analysis and finance. The aim of the course is to provide a treatment of the prerequisites. The requirements are basic probability and real analysis concepts; these will be reviewed in the first lectures. prereq: 3101, 3102, 4162, MATH 2243, MATH 2263, dept consent

ECON 4164. Microeconomic Analysis IV. (; 2 cr. ; A-F only; Every Spring)

Theory and applications of dynamic optimal control to economic environments. Analysis of barrier problems, where a single decision must be made at some point in time; analysis of optimal control problems where multiple, continuous decisions are made over time. May include investment decisions, regulated decision-making and elements of dynamic contracting. prereq: 3101, 3102, 4163, MATH 2243, MATH 2263, [[STAT 4101, STAT 4102] or equiv], dept consent

ECON 4165. Macroeconomic Theory. (; 2 cr. ; Student Option; Every Fall)

Dynamic general equilibrium models: solving for paths of interest rates, consumption, investment, and prices. Seven-week course. Meets with 8105. prereq: 3101, 3102, MATH 2243, MATH 2263, [[STAT 4101, STAT 4102] or equiv], dept consent

ECON 4166. Macroeconomic Theory. (; 2 cr. ; Student Option; Every Fall)

Dynamic general equilibrium models: solving for paths of interest rates, consumption, investment, and prices. Seven-week course. Meets with 8106. prereq: 3101, 3102, 4165, MATH 2243, MATH 2263, [[STAT 4101, STAT 4102] or equiv], dept consent

ECON 4167. Macroeconomic Theory. (; 2 cr. ; Student Option; Every Spring)

General equilibrium models with uncertainty, search, matching, indivisibilities, private information. Implications of theory for measurement and data reporting. Overlapping generations, dynasty models with money/government. Variational/recursive methods. Seven-week course. Meets with 8107. prereq: 3101, 3102, 4166, MATH 2243, MATH 2263, [[STAT 4101, STAT 4102] or equiv], dept consent

ECON 4168. Macroeconomic Theory. (; 2 cr. ; Student Option; Every Spring)

General equilibrium models with uncertainty, search, matching, indivisibilities, private information. Implications of theory for measurement and data reporting. Overlapping generations, dynasty models with money/government. Variational/recursive methods. Seven-week course. Meets with 8108. prereq: 3101, 3102, 4167, MATH 2243, MATH 2263,

[[STAT 4101, STAT 4102] or equiv], dept consent

ECON 4211. Principles of Econometrics. (4 cr. ; Student Option; Every Fall)

Data analysis/quantitative methods in economics. Violation of classical regression model assumptions, modified estimation procedures that retain desirable properties. Multi-equation models. Computer applications/interpretation of empirical results. prereq: [3101 or equiv], [Stat 3011 or equivalent, Stat 3022 or equivalent] or higher level Stat courses]

ECON 4261. Introduction to Econometrics. (; 4 cr. ; A-F or Audit; Every Fall, Spring & Summer)

For Econ B.S. majors only. Review of basic linear regression model, its variants. Time series/simultaneous equation models. Material may include panel data, censored/truncated regressions, discrete choice models. prereq: [3101 or equiv], [[Math 1271, Math 1272] or equiv], Math 2243, Math 2263, [[Stat 4101, Stat 4102] or [Stat 5101, Stat 5102]]; Math 4242 strongly recommended

ECON 4311. Economy of Latin America. (; 3 cr. ; Student Option; Every Fall & Spring)

Economic evolution in Latin America since 1950. Trade liberalization, poverty, inflation, development strategies in selected Latin American countries. Theory/applications of important issues. prereq: [1101, 1102] or equiv

ECON 4317. The Chinese Economy. (3 cr. ; A-F only; Every Fall, Spring & Summer)

Overview of the Chinese Economy; transition from command economy to a market-based one and effects on economic indicators; current economic issues and concerns of the Chinese economy; role of China in today's world economy.

ECON 4331W. Economic Development. (WI; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Economic growth in low income countries. Theory of aggregate and per capita income growth. Population growth, productivity increases, and capital formation. Allocation of resources between consumption and investment and among sectors. International assistance/trade. prereq: [[3101, 3102] or equiv], completion of freshman writing practice

ECON 4337. Comparative Economic Systems. (; 3 cr. ; Student Option; Every Fall & Spring)

Functions of economic systems; market economy versus centrally planned economy. Comparison of different economic systems. Post socialist transitions in Eastern Europe, Russia, and China. Initial conditions and strategies for reforms; results of reforms in terms of key economic indicators. prereq: 3101, 3102 or equiv

ECON 4341. Economics of Poverty and Income Inequality. (3 cr. ; A-F only; Every Fall)

This course focuses on the economic aspects of poverty and inequality in the United States. The course utilizes economic theory and empirical research to analyze the determinants of, and potential strategies to overcome poverty

and inequality. Topics include measurement and trends of poverty and income inequality, labor markets, education, discrimination, residential segregation, immigration, hunger and nutrition, US farm policy, food distribution, food security, food aid, the connection between food production and health outcomes, as well as other related themes. prereq: include Econ 3101 or equiv; Econ majors.

ECON 4401. International Economics. (GP; 3 cr. ; Student Option; Every Fall & Spring)

International trade flows. Commercial policy and welfare implications, protection. Global trade organizations. International factor mobility. Balance of payments analysis and open-economy macroeconomics. Foreign exchange markets and exchange rate determination. International monetary system. Regional integration. Case studies. prereq: [[1101, 1102] or equiv], not open to econ majors

ECON 4425. London: Trade and Brexit. (GP; 3 cr. ; A-F only; Periodic Summer)

The seminar includes a history of trade and culture in UK and London since the 1500s up until the formation of the EU. It also includes UK plans for Brexit, and will discuss economic outcomes of it on London and international trade.

ECON 4428. London's Economy, International Trade, and BREXIT. (GP; 3 cr. ; S-N only; Every Summer)

London is a "global city" and has evolved from being a city of merchandise trade to being one of the premier financial services centers and cultural melting-pot in the world. The course explores the role of financial services, merchandise trade, trade policy, immigrant populations and cultures, and current race relations in the evolution of modern London. Globalization, the interactions and interdependencies between the city of London and the rest of the world, are researched and explored through class work and daily site visits to major economic and cultural locales.

ECON 4431W. International Trade. (GP,WI; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Theories of trade/trade patterns. Trade restrictions/commercial policy. International factor movements. Economic growth/development. Multinational corporations. Regional integration. prereq: [3101, 3102] or equiv, freshman writing practice

ECON 4432W. International Finance. (WI; 3 cr. ; A-F only; Every Spring & Summer)

Balance of payments; international financial markets; exchange rate determination; international monetary system; international investment and capital flows; financial management of the multinational firm; open economy macroeconomic policy. prereq: 3101, 3102 or equiv;

ECON 4438W. Advanced International Trade. (GP,WI; 4 cr. ; A-F only; Every Spring)

Theories of trade/explanations of trade patterns. Trade restrictions. Commercial policy. International factor movements.

Economic growth/development. Multinational corporations. Regional integration. prereq: [3101, 3102] or equiv, Math 1271, completion of freshman writing practice, [Math 1272 or equiv]

ECON 4531. Labor Economics. (3 cr. ; Student Option; Every Fall & Spring)
Economic analysis of labor markets and their operations; population and labor force; labor market institutions; wage and employment theories; unions and collective bargaining; public policy. prereq: 3101, 3102 or equiv

ECON 4538. Advanced Labor Economics. (4 cr. ; A-F only; Every Fall & Spring)
For B.S. Econ majors only. Economic analysis of domestic and global labor markets; population and labor force; labor market institutions; wage and employment theories; unions and collective bargaining; public policy including immigration, outsourcing, living wages, earnings mobility, downsizing; special topics. prereq: 3101, 3102 or equiv; Calc 1 or equivalent

ECON 4631. Industrial Organization and Antitrust Policy. (3 cr. ; Student Option; Every Fall, Spring & Summer)
Relations between market structure, economic efficiency and welfare. Economic origins of monopoly and other restraints on competition. Purposes and effects of antitrust and related legislation. Industrial policy. prereq: 3101 or equiv

ECON 4721. Money and Banking. (3 cr. ; A-F only; Every Fall, Spring & Summer)
Theories of money demand and money supply. Financial intermediation and banking, banking practices and regulation, role of the Federal Reserve system. Monetary theory and policy. prereq: [3101, 3102] or equiv

ECON 4731. Macroeconomic Policy. (3 cr. ; Student Option; Every Fall & Spring)
Monetary vs. fiscal policy debate in the context of the underlying macroeconomic theory controversy. Comparison of Keynesian, Monetarist, and Classical theories; rational expectations; policy ineffectiveness; time inconsistency; rules vs. discretion; budget deficits; unemployment and inflation. prereq: 3101, 3102 or equiv

ECON 4751. Financial Economics. (3 cr. ; Student Option; Every Fall, Spring & Summer)
Financial decisions of firms/investors. Determination of interest rates and asset prices. Role of risk/uncertainty. Emphasizes economic models. prereq: [3101 or equiv], [MATH 1271 or equiv], one sem statistics

ECON 4758. Advanced Financial Economics. (4 cr. ; A-F only; Every Spring)
Efficiency/role of financial markets. Theoretical concepts, empirical evidence. Price of financial assets, value of investment projects, risk management trading strategies. prereq: 3101, [3102 or equiv], [Math 1271 or equiv], [Stat 3011 or equiv], [Math 1272 or equiv]

ECON 4821. Public Economics. (3 cr. ; A-F only; Every Fall & Spring)
Competing views on proper role of government in economy. Effects of tax/spending policies,

taking into account private agents' response to government actions/ways government officials may use powers. Optimal policies. Applications primarily to U.S. government. prereq: [3101, 3102] or equiv

ECON 4831. Cost-Benefit Analysis. (3 cr. ; A-F only; Every Fall, Spring & Summer)
Evaluation of benefits and costs of public projects and programs. Issues connected with definition and measurement of benefits and costs. Rate of return and discount. Market imperfections, risk, uncertainty. Case studies. prereq: ECON 3101

ECON 4960. Topics in Economics. (4 cr. [max 8 cr.] ; A-F only; Periodic Fall & Spring)
Topics specified in Class Schedule. prereq: [3101 or 3102 or equiv], MATH 1271

ECON 4968. Advanced Topics in Economics. (4 cr. [max 8 cr.] ; A-F only; Every Fall & Spring)
Topics specified in Class Schedule. prereq: [[3101, 3102] or equiv], MATH 1271, [Stat 3011 or equiv], successfully complete at least two 4xxx level UMNTC economics courses.

ECON 4970. Advanced Topics: Economics. (4 cr. [max 8 cr.] ; A-F only; Every Fall & Spring)
Topics specified in Class Schedule. prereq: [[3101, 3102] or equiv], MATH 1271, [Stat 3011 or equiv], successfully complete at least two 4xxx level UMNTC economics courses.

ECON 4993. Directed Study. (1-4 cr. ; Student Option; Every Fall, Spring & Summer)
Guided individual reading or study in areas not available in regular course offerings. prereq: dept consent

ECON 5890. Economics of the Health-Care System. (3 cr. ; A-F or Audit; Every Fall)
Economic analysis of U.S. health-care sector. Emphasizes problems of pricing, production, distribution. Health-care services as one factor contributing to nation's health. prereq: 3101 or instr consent

Ecuador (ECDR)

ECDR 1004. Intermediate Spanish IV. (4 cr. [max 10 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

ECDR 3011W. Spanish Grammar and Composition Workshop. (WI; 4 cr. ; Student Option; Every Fall, Spring & Summer)
ECDR 3011W Spanish Grammar and Writing Workshop is an intensive writing course designed to develop and strengthen the understanding and management of language skills acquired in previous courses and to develop knowledge about various cultures in Latin America and Ecuador. This course seeks to integrate the skills of speaking, writing, reading and understanding the real world of Ecuadorian and Latin American culture through the analysis of texts of varied socio-cultural, economic, political and other learning resources. The reading and writing tasks of this course will allow students through the reading and analysis of different texts an approach to

the reality of Ecuadorian and Latin American culture. Students will be exposed to learning in real contexts and to the appropriate use of vocabulary. During the course, each student will produce a series of original compositions with the objective of learning to write texts in a clear, precise and formal in Spanish using various rhetorical strategies. It is a course that will give students the possibility of acquiring basic guidelines to improve their style and composition.

ECDR 3015W. Spanish Composition and Communication. (WI; 4 cr. ; Student Option; Every Fall, Spring & Summer)

ECDR Spanish 3015W is a Spanish course with an emphasis on Spanish Composition and Communication designed to develop and strengthen oral and written language and communication skills acquired in courses 1001 - 1004. This course seeks to integrate in real contexts the skills of speaking, writing, reading, listening and understanding of Spanish at a higher level. This course will systematically expose students to a variety of texts within the context of Ecuador and Latin America that will enable them to improve their level of comprehension, analysis, discussion, reflection, enrich their vocabulary and accelerate their reading rhythm and comprehension. The development of language skills will allow students to gain a better understanding of Ecuador: their culture, history, economy and politics.

ECDR 3021. Advanced Spanish. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

ECDR 3030W. Introduction to Latin American Cultures. (WI; 4 cr. ; Student Option; Every Fall, Spring & Summer)
ECDR 3030W, Introduction to Latin American Cultures, is an intensive writing course designed to develop and strengthen the understanding and management of language skills acquired in previous courses and to develop knowledge about various cultures in Latin America and Ecuador. This course seeks to integrate the skills of speaking, writing, reading and understanding the real world of Ecuadorian and Latin American culture through the analysis of texts and other learning resources. Course 3030W will evaluate the concept of "culture" from an intercultural perspective taking into account the cultural diversity of Ecuador and Latin America. 3030W introduces students to key writing and cultural analysis skills. The writing tasks of this course will allow students to approach the reality of Ecuadorian and Latin American culture through the reading and analysis of different texts. Students will be exposed to learning in real contexts and to the appropriate use of vocabulary. At the end of the program students must demonstrate competence in the handling of components of cultural analysis and familiarity with research components in cultural topics. This course offers students a panoramic view of the Latin American and Ecuadorian narrative, placing it in their historical and cultural contexts so as to allow an analysis

of the styles of the mixture of our peoples. It is a course that will provide students with the possibility of acquiring basic guidelines to identify literary styles and narrative strategies.

ECDR 4001. International Development: Human Rights: Policy & Practice.

(GP,SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Students will critically analyze theories of development and the impact of development models throughout the world, but specifically Latin America and Ecuador. They will address development theories, assumptions of development, and alternatives to development through the lens of social services. This course starts by investigating the concept of globalization within international development and its prevalence in Latin America, and in particular Ecuador. There is an emphasis throughout the course on contrasting Western thinking with Andean thought processes and connecting the global to the local. The course will have a multidisciplinary approach, and will focus on how individuals, institutions, events, and ideas are connected. This course will focus on the critical analysis of social problems and will address the issue of social services as instruments for social inclusion through the restitution of rights and empowerment. The concept of social exclusion (discrimination, inequality, inequity, poverty) will be discussed, as well as how development has led to social inclusion or exclusion, and how social services have contributed. The course will focus on the priority care groups?children and adolescents, women, older adults, and people with disabilities?and the policies, programs, and services for them in Ecuador today.

ECDR 4002. International Development: Social Entrepreneurship & Microfinance.

(GP,SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Students will critically analyze theories of development, and the impact of development models throughout the world, but specifically Latin America and Ecuador. They will address development theories, assumptions of development, and alternatives to development through the lens of social entrepreneurship. This course starts by investigating the concept of globalization within international development and its prevalence in Latin America, and in particular Ecuador. There is an emphasis throughout the course on contrasting Western thinking with Andean thought processes and connecting the global to the local. The course will have a multidisciplinary approach, and will focus on how individuals, institutions, events, and ideas are connected. Students will identify the impacts of development on the Ecuadorian economy, specifically focusing on the concept of social entrepreneurship, which is recognized in the Ecuadorian constitution. They will study the history of this specific form of entrepreneurship, its relationship with local development, and as an alternate form of distribution and production of goods and services. Students will also analyze the economic impacts generated by these practices and how public, private, and

community actors interface with this type of economy.

ECDR 4003. International Development: Public Health & Traditional Andean Medicine.

(GP,SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Students will critically analyze theories of development, and the impact of development models throughout the world, but specifically Latin America and Ecuador. They will address development theories, assumptions of development, and alternatives to development through the lens of social entrepreneurship. This course starts by investigating the concept of globalization within international development and its prevalence in Latin America, and in particular Ecuador. There is an emphasis throughout the course on contrasting Western thinking with Andean thought processes and connecting the global to the local. The course will have a multidisciplinary approach, and will focus on how individuals, institutions, events, and ideas are connected. Students will begin to address social, economic, cultural, and environmental determinants of health as a mechanism for understanding the main health problems in Ecuador. There is an emphasis throughout the course on contrasting Western thinking and medicine with Andean worldviews and ancestral medicine. The course will discuss intercultural health processes to improve the health conditions of diverse cultural groups. The course will focus on the indigenous movement in Ecuador and the recovery of the Andean culture as it relates to health and traditional health practices. Understanding the new Ecuadorian constitution, which includes the right to health, will lead into discussions of the complex political and social dimensions of health. A comparative analysis of health reform processes in Ecuador and the United States will allow the students to identify the contrasting dimensions in the search to improve the collective health in both countries.

ECDR 4004. International Development: Environmental Challenges from the Andes to the Amazon.

(ENV,SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Students will critically analyze theories of development and the impact of development models throughout the world, but specifically Latin America and Ecuador. They will address development theories, assumptions of development, and alternatives to development through the lens of the environment and sustainability. This course starts by investigating the concept of globalization within international development and its prevalence in Latin America, and in particular Ecuador. There is an emphasis throughout the course on contrasting Western thinking with Andean thought processes and connecting the global to the local. The course will have a multidisciplinary approach, and will focus on how individuals, institutions, events, and ideas are connected. Students will identify the impacts of development on environmental challenges in Ecuador, and the relationship between environment, use and management of natural resources, and

local communities. Examination of cases that involve people?s rights over the environment, food sovereignty, water management, climate change, sustainable development, and local alternatives for natural resource management and conservation will be studied.

ECDR 4101. Historical & Political Context of Ecuador.

(4 cr. ; Student Option; Every Fall, Spring & Summer)

This course will begin with a historical review from the European conquest, moving to independence and the construction of a nation state, and finally the republican era until today. Main events and characteristics from each timeframe will be highlighted. Students will discuss the ?discovery of America? from the Ecuadorian and South American context, as well as the process and impact of conquering this continent. History and politics will come together when discussing the 20th Century. Topics such as liberal revolution, plutocracy, the uprising known as the Juliana Revolution, the populist velasquista phenomenon, dictatorships, and the return to democracy will all be examined. Additionally, the central elements of the so-called Citizen Revolution will be addressed. Current events such as the government of Moreno and his turn to the right will be discussed as well as political opposition, main actors in the political sphere, etc. The current state will be analyzed based on identifying the main elements that shape the country?s cultural diversity, its nationalities, and peoples. A comparative analysis between the western culture and the Andean culture will be carried out.

ECDR 4201. Research in Ecuador.

(4 cr. ; Student Option; Every Fall, Spring & Summer)

The goal of this course is to introduce the MSID student to various research concepts and practices, helping them select their study topic and title for their study, develop statements of problems and choose research questions and appropriate research design, study issues related to research ethics, develop their skills in choosing data collection instruments, and analyze the data they collect for their research. The course introduces various topics in the research cycle and provides a forum in which students can share with one another their research experience at each stage of the process. Research projects in this course are ideally projects that fit with the development agency?s goals and activities; therefore, the student?s research interests are expected to blend with what is realistically happening at the development agency. Students must have approved proposals before proceeding on to their research sites. They will then collect necessary data and complete data analysis before heading back to Quito at the end of the six-week field period. It is likely that students will participate in field activities, meetings, and other forms of engagement that will be indirectly related to and could inform their research projects. Through hands-on experiences as well as readings, discussions, and written assignments, students will deepen their understanding of the host-country cultural context and development work from an international perspective, as well as

critically examine their own worldview in order to develop, defend, and challenge their own values and beliefs.

ECDR 4896. Internship in Ecuador. (4 cr. ; Student Option; Every Fall, Spring & Summer) This course provides a cross-cultural experience of working on various development issues with a regional nonprofit organization. The course focuses on guiding students to understand their own identity as they integrate theory with reality by participation in local development sites. Students are prepared for entering into their community work through discussions on stakeholder and agency analysis, ethical considerations, culture specific gender and diversity context, and power and privilege. The mentoring continues while students are at their internship placement as they come in contact with social actors, community organizations, and local and national authorities, in various regions of Quito at the marginal urban and rural levels. The students are urged to play an active role in their internships by providing suggestions and solutions, discussing alternatives, and investigating all areas of their internship placement to garner a holistic experience on the realities of development work. Through practical internship experiences as well as readings, discussions, and written assignments, students will deepen their understanding of the host-country cultural context and development work from an international perspective, as well as critically examine their own worldview in order to develop, defend, and challenge their own values and beliefs.

Educational Psychology (EPSY)

EPSY 1261. Understanding Data Stories through Visualization & Computing. (MATH; 3 cr. ; Student Option; Every Fall & Spring) Academics and researchers have long used data & visualization to support and illuminate particular narratives in their scholarship. Today, data visualizations are found not only in the pages of academic journals; many non-academics, including journalists and activists, use increasingly complex data visualizations and statistical summaries to convey salient information and storylines. This course will help students build on their statistical thinking and understanding learned in high school to think critically about the use of summaries and visualization and their role in the data narrative. It will also cover the use of computational tools and methods for creating data summaries and visualization that facilitate seeing patterns and relationships in data, and producing better narrative through communicating with data. Students will learn course material through in-class activities and projects conducted in cooperative learning groups and through assignments requiring the application of concepts and technology presented in class to additional real-world examples of data visualization.

EPSY 1281. Psychological Science Applied. (SOCS; 4 cr. ; A-F only; Every Fall & Spring)

The course introduces students to applied psychology as a discipline and reviews fundamental principles of psychology through the lenses of applied and professional areas that are the foci of CEHD majors. Specifically, through the lenses of education, we review principles of learning, memory, development, intelligence, and interventions; through the lenses of health and wellness, we review personality, biological, social, and cognitive bases of normal and abnormal behavior, as well as treatments; and, through the lenses of business and organizations, we review principles of motivation, sensation perception, and social behavior. Thus, these psychological principles are considered theoretically, empirically, and through examples for application, with lab discussions and projects emphasizing education, business, health and wellness. The course serves as a foundation for future coursework in education, health sciences, and psychology, and is consistent with the APA's public education effort to demonstrate how the science and application of psychology benefits society and improves lives.

EPSY 1905. Beginners' Chess and 21st Century Skills. (; 3 cr. ; Student Option; Periodic Fall)

Examination of the basic components of chess, computer-based chess, how chess players think, including visual-spatial thinking and critical thinking, the psychology of critical thinking and other 21st Century reasoning skills, research on chess cognition, and the international chess community.

EPSY 2201. Basics of Research Methods. (2 cr. ; A-F only; Every Spring)

As part of a society that is saturated with "research," we have all at some point encountered at least one form of research--whether it is via election polls, market surveys, investigative findings reported on the 10pm news, or academic research for your papers. There is sometimes too much research to make sense of it all. As an undergraduate student, you have likely found many examples of research, and it will only become more important in your own academic career, and if you choose to pursue an academic route, in your own development as a scholar. Therefore, learning the basics of research--how it is conducted, how it can be used to answer everyday questions, and what makes it good quality--will make you not only a better researcher, but also a better consumer of academic and popular research.

EPSY 2201H. Basics of Research Methods for Honors Students. (; 2 cr. ; A-F only; Every Spring)

As part of a society that is saturated with "research," we have all at some point encountered at least one form of research--whether it is via election polls, market surveys, investigative findings reported on the 10pm news, or academic research for your papers. There is sometimes too much research to make sense of it all. As an undergraduate student, you have likely found many examples of research, and it will only become more important in your own academic career,

and if you choose to pursue an academic route, in your own development as a scholar. Therefore, learning the basics of research--how it is conducted, how it can be used to answer everyday questions, and what makes it good quality--will make you not only a better researcher, but also a better consumer of academic and popular research. This course aims to introduce you, as an honors student, to these topics.

EPSY 2601. Understanding Differences, Disabilities, and the Career of Special Education. (DSJ; 4 cr. ; A-F only; Every Fall & Spring)

Impact of disabilities on individual/family. Support systems for persons with disabilities, approaches for advocacy. Employ reflective practices when considering concept of disability. This course has an imbedded school-based practicum.

EPSY 3101. Creativity and Intelligence: an Introduction. (; 3 cr. ; Student Option No Audit; Every Fall & Spring)

Classic/contemporary theories of creativity/intelligence, their development, implications for behavioral/social sciences and psychological/educational practices.

EPSY 3105. Community Engaged Research Experiences in K-12 Contexts. (DSJ; 3 cr. ; A-F only; Every Spring)

This course is designed as an introduction to community-engaged, educational research. Students will learn about educational research methodology that includes descriptive, experimental, and applied methods. We will highlight the ways that data is collected and analyzed to answer various types of research questions. By participating in the course activities, students will learn skills to develop a research question and design and conduct their own study. The course activities will build on existing research partnerships in Minneapolis and St. Paul Public Schools. Students enrolled in the course will be able to work with teachers, students, and families as a part of their experience. The course instructor(s) have large-scale, existing research projects that explore various mechanisms (technology, parent involvement, culturally responsive pedagogy) to support middle school students' science learning. We will create a community of undergraduate scholars that is simultaneously social and intellectual. The course lectures, activities, and research experiences are designed to create an environment that respects and values the students' diverse cultural backgrounds.

EPSY 3119. Learning, Cognition, and Assessment. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Principles of learning, cognition, cognitive development, classroom management, motivation, instruction, and assessment. Topics: behaviorism, cognitive and social constructivism, human information processing theory, intelligence, knowledge acquisition, reasoning skills, scholastic achievement, standardized testing, reliability, validity, student evaluation, performance assessment, and portfolios.

EPSY 3132. Psychology of Multiculturalism in Education. (DSJ; 3 cr. ; A-F or Audit; Every Spring)

Course critically examines social and cultural diversity in the United States, confronting social issues of poverty, handicappism, homophobia, racism, sexism, victim-blaming, violence, and so on, and presenting models for change. Students examine how and why prejudices develop.

EPSY 3264. Basic and Applied Statistics.

(MATH; 3 cr. ; Student Option; Every Fall, Spring & Summer)
Introductory statistics. Emphasizes understanding/applying statistical concepts/procedures. Visual/quantitative methods for presenting/analyzing data, common descriptive indices for univariate/bivariate data. Inferential techniques.

EPSY 3301. Introduction to Educational Psychology. (SOCS; 3 cr. ; Student Option No Audit; Every Fall)

History, current work. Future promise of educational psychology. Major topics in educational psychology. Focuses on interplay between theory, empirical research, and practical applications.

EPSY 3302. Introduction to Communication Skills for Educational and Community Settings. (3 cr. ; Student Option No Audit; Every Fall)

Working with diverse individuals/groups in educational/community settings. Communication skills/concepts. Self-reflection on communication style.

EPSY 3303. Educational Psychology Undergraduate Practicum. (; 3 cr. [max 6 cr.] ; A-F or Audit; Every Spring)

This culminating course familiarizes students with the principles and practice of applied psychology in educational and community settings. Through supervised fieldwork experiences in either research or practice settings, students will develop an understanding of ethical considerations in educational psychology and explore how psychological research can be used to advance the practice of psychology in applied settings. This course is designed for undergraduate students completing an Educational Psychology undergraduate minor or the Special Education major. The course meets for 120 minutes weekly, and students complete 90 hours of fieldwork (approximately 8-10 hours/week). This is a community-engaged learning course. Fieldwork experiences can include: * A research experience conducted with an approved Educational Psychology faculty member. * A practical experience in an approved community engaged service-learning setting. Note: students in the special education major must complete fieldwork related to disabilities and/or special education.

EPSY 3303H. Honors Educational Psychology Undergraduate Practicum. (; 3 cr. [max 6 cr.] ; A-F or Audit; Every Spring)

This culminating course familiarizes students with the principles and practice of applied psychology in educational and

community settings. Through supervised fieldwork experiences in either research or practice settings, students will develop an understanding of ethical considerations in educational psychology and explore how psychological research can be used to advance the practice of psychology in applied settings. This course is designed for undergraduate students completing an Educational Psychology undergraduate minor or the Special Education major. The course meets for 120 minutes weekly, and students complete 90 hours of fieldwork (approximately 8-10 hours/week). Honors students will be involved in Directed Faculty Research conducted with an approved Educational Psychology faculty member. The research project will be used to direct the honors thesis. In addition, honors students will present their research at the Undergraduate Research Symposium Note: students in the special education major must complete fieldwork related to disabilities and/or special education.

EPSY 3613. Foundations of Special Education I. (DSJ; 3 cr. ; A-F or Audit; Every Fall & Spring)

To review the foundations of special education, culminating in an understanding of the application of the IDEAL Problem Solving Model. The course will address concepts related to exceptionality; historical and legal foundations; problem solving and tools of inquiry; collaborative relationships with families, educational, and community professionals; support of students with disabilities in general education; characteristics of students with high and low incidence disabilities, and ethics. Teacher candidates will learn methods of formative assessment using curriculum-based measures (CBM) and practice analyzing data to make instructional decisions and inform early intervention for struggling students.

EPSY 3701. Practicum: Field Experience in General Education - Inclusive Classrooms. (; 1-2 cr. ; S-N only; Every Fall & Spring)

Field-Based Practicum. Observe and actively participate in an inclusive (with and without disabilities) general education classroom. An emphasis is placed on communication skills and reflective practice.

EPSY 3801. The Science of Human Resilience and Wellbeing: Foundational Knowledge for Career and Life Success. (SOCS; 3 cr. ; A-F or Audit; Every Spring)

This course is for any undergraduate student interested in learning about and applying the theory and practice as it relates to resilience and wellbeing. This course integrates key cross-cutting, scientific findings from a range of psychological disciplines, including positive psychology, clinical psychology, developmental psychology, neuropsychology, and social psychology. Stated simply, resilience refers to the human capacity and ability to both survive and thrive in the face of life circumstances. Students will develop a deep understanding of the theoretical concepts of stress, resilience, and wellbeing, as well as specific resilience practices scientific research has shown enable people to better manage and bounce back from stressful situations and enhance their social,

emotional, and behavioral functioning in career and personal aspects of life.

EPSY 3802. Contemporary Issues in School Psychology. (3 cr. ; A-F only; Periodic Fall & Spring)

This survey-level course is designed to facilitate understanding of the intersections of psychological processes with current issues facing the U.S. schools and is targeted toward students interested in working with children and adolescents in school settings. Students will develop basic understanding of scholarship and professional opportunities in school psychology and related fields. The course is designed to overview how psychological processes impact students, teachers, educational staff, families, and school communities through use of data and research to inform school practices that promote safe and healthy school environments, support students' mental health, and meet the needs of unique learners. Lectures, discussions, and interactive activities will be used to facilitate learning.

EPSY 4001. Teaching Students with Special Needs in Inclusive Settings. (1 cr. ; A-F only; Every Spring)

Historical perspectives, definitions/professional language, characteristics, needs, service delivery systems for each area of exceptionality. prereq: Must be enrolled in either the initial teaching licensure program for music education or agricultural education students. All other initial teaching licensure candidates should enroll in 5015 and 5016.

EPSY 4994. Faculty Directed Research in Educational Psychology. (1-6 cr. [max 20 cr.] ; A-F only; Periodic Fall, Spring & Summer)
Arranged independently with individual faculty members. prereq: instr consent**EPSY 5001. Learning, Cognition, and Assessment.** (3 cr. ; Student Option; Every Fall, Spring & Summer)

Principles of learning, cognition, cognitive development, classroom management, motivation, instruction, assessment. Behaviorism, cognitive/social constructivism, human information processing theory. Intelligence, knowledge acquisition, reasoning skills, scholastic achievement, standardized testing, reliability/validity, student evaluation, performance assessment, portfolios, demonstrations. Applications to instruction/organization of curricular materials. prereq: MED/initial licensure student or CLA music ed or preteaching major or instr consent; psych course recommended

EPSY 5015. Teaching Students with Special Needs in Inclusive Settings. (1 cr. ; A-F only; Every Summer)

Areas of exceptionality defined in federal/state regulations. Historical perspectives, definitions, etiology, characteristics, needs, and service delivery systems. Collaborating with special education personnel. prereq: Enrolled in a teacher initial licensure program

EPSY 5016. Teaching Students with Special Needs in Inclusive Settings. (1 cr. ; A-F only; Every Fall & Spring)

Attending to constant transitions/development in which children/adolescents negotiate their road to adulthood. How to foster learning/positive development. prereq: Enrolled in teacher initial licensure program

EPSY 5017. Teaching Exceptional Students in General Education Classrooms. (2 cr. ; A-F or Audit; Every Summer)

This course will provide an overview of the areas of exceptionality defined in federal and state regulations. The focus of this course will be on historical perspectives, definitions, etiology, characteristics, needs, and service delivery systems for each area of exceptionality as well as the general educator's role in collaborating with special education personnel in order to meet the needs of students with special needs.

EPSY 5101. Intelligence and Creativity. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Contemporary theories of intelligence and intellectual development and contemporary theories of creativity and their implications for educational practices and psychological research.

EPSY 5114. Psychology of Student Learning. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

This course is an introduction to the theories, data, and methods of Educational Psychology most relevant to understanding student thinking and learning. The first third of the course reviews those aspects of cognitive development that are foundational for education. The second third considers how cognitive psychology informs questions of learning, memory, knowledge, and transfer. With this background in place, the final third of the course will focus on the classroom: on instruction, motivation, individual differences, and group differences. The course concludes by considering the neural correlates of classroom learning.

EPSY 5116. Education of the Gifted and Talented. (; 3 cr. ; Student Option No Audit; Every Spring)

Theories of giftedness, talent development, instructional strategies, diversity and technological issues, implications for educational practices and psychological inquiry, and international considerations.

EPSY 5119. Mind, Brain, and Education. (; 3 cr. ; Student Option No Audit; Periodic Spring)
How educationally relevant skills/concepts develop in both typical/atypical children. prereq: 3301 or equiv

EPSY 5121. Debugging Failure in Learning.

(3 cr. ; Student Option; Fall Odd Year)
This course investigates the double-edge potential of failure to catalyze and thwart learning. The goal is to develop a multi-dimensional framework drawing on psychological, cognitive, interpersonal, and systemic perspectives that can be used in research to document, understand, problematize, and ultimately support students experiences with failure during learning. Central topics include causal attributions, play-based failures, counter storytelling,

inequities, framing, and motivation. Course activities include reviews of experimental and observational research; reflections on video of students and instructors navigating moments of failure; and opportunities to develop research designs and/or analyze new data attending to failure.

EPSY 5122. Programming Fundamentals for Social Science Research. (3 cr. ; Student Option; Every Fall)

What is computer programming, and how can it be used to improve your research? This course teaches the fundamental concepts and techniques of programming using the open-source Python 3 language, while emphasizing a variety of applications to social science research, including data analysis, visualization, task automation, and retrieving data from the internet through APIs and scraping. The course covers fundamental programming concepts, as well as software engineering topics such as writing robust code, testing, debugging, collaboration, version control, and working with file systems. The course is taught with an active, hands-on approach to programming, including class discussions and group work. It is designed to be accessible to students without any prior programming experience.

EPSY 5123. Programming Workflows for Psychological Research. (3 cr. ; Student Option; Every Spring)

How can researchers use open-source programming to create a reproducible and flexible workflow? This course teaches programming and computer-based skills that are increasingly important methods in psychological research, like fundamental programming concepts, data wrangling in R, online experiments and surveys with JavaScript, version control with git, using the Open Science Framework, and writing reproducible reports with R Markdown. It emphasizes open science practices and readily implementable skills for a more streamlined and automated research workflow. The course is taught with an active, hands-on approach to programming, including class discussions and group work. It is designed to be accessible to students without any prior programming experience. prereq: Students should have taken an undergraduate- or graduate-level statistics course.

EPSY 5135. Human Relations Workshop. (; 4 cr. ; Student Option; Every Fall & Summer)

Experiential course addressing issues of prejudice and discrimination in terms of history, power, and social perception. Includes knowledge and skills acquisition in cooperative learning, multicultural education, group dynamics, social influence, effective leadership, judgment and decision-making, prejudice reduction, conflict resolution.

EPSY 5151. Cooperative Learning. (; 3 cr. ; Student Option; Every Spring)

Participants learn how to use cooperative learning in their setting. Topics include theory and research, teacher's role, essential components that make cooperation work, teaching social skills, assessment procedures, and collegial teaching teams.

EPSY 5157. Social & Developmental Psychology of Education. (; 3 cr. ; A-F or Audit; Every Fall)

Social and developmental psychology provide underpinnings for a range of methods for conducting research in real-world settings. They also lay conceptual foundations for understanding a range of social and developmental processes. The course will cover a full range of topics within social and developmental psychology, plus selected topics in personality psychology, and examine their implications for understanding and structuring educational and other professional settings. Discussions will include a strong focus on educator and practitioner applications of the research.

EPSY 5200. Special Topics: Psychological Foundations. (; 1-4 cr. [max 12 cr.] ; Student Option; Periodic Fall & Spring)

Focus on special topics in psychological and methodological concepts relevant to advanced educational theory, research, and practice not covered in other courses.

EPSY 5216. Introduction to Research in Educational Psychology and Human Development. (3 cr. ; A-F or Audit; Every Fall)

Designing/conducting a research study. Reviewing literature, formulating research problem, using different approaches to gather data, managing/analyzing data, reporting results. prereq: 5261 or intro statistics course

EPSY 5220. Special Topics: Quantitative Methods. (; 1-4 cr. [max 30 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Focus on special topics in methodological concepts involving theory, research, and practice in statistics, measurement, evaluation, and statistics education not covered in other courses.

EPSY 5221. Principles of Educational and Psychological Measurement. (; 3 cr. ; Student Option; Every Fall & Spring)

Concepts, principles, and methods in educational/psychological measurement. Reliability, validity, item analysis, scores, score reports (e.g., grades). Modern measurement theories, including item response theory and generalizability theory. Emphasizes construction, interpretation, use, and evaluation of assessments regarding achievement, aptitude, interests, attitudes, personality, and exceptionality.

EPSY 5243. Principles and Methods of Evaluation. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Introductory course in program evaluation; planning an evaluation study, collecting and analyzing information, reporting results; overview of the field of program evaluation.

EPSY 5244. Survey Design, Sampling, and Implementation. (; 3 cr. ; Student Option; Every Fall)

Survey methods, including mail, phone, and Web-based/e-mail surveys. Principles of measurement, constructing questions/forms, pilot testing, sampling, data analysis, reporting. Students develop a survey proposal and a draft

survey, pilot the survey, and develop sampling/data analysis plans. prereq: [5221 or 5231 or 5261 or equiv], [CEHD grad student or MEd student]

EPSY 5245. Advanced Survey Data Analysis for Categorical and Rating Scale Data. (; 1 cr. ; Student Option; Periodic Spring)
Practical course. Specific nature of survey data (typically categorical or ordinal). Appropriate data analytic methods. prereq: 5244, 5261

EPSY 5247. Qualitative Methods in Educational Psychology. (; 3 cr. ; Student Option; Every Fall)
Introduction to qualitative methods of inquiry. Contrasting different research traditions (e.g., case study, phenomenology, ethnography, social interactionism, critical theory). Practice with field notes, observations, and interviewing. Use of NVIVO to track/code data. prereq: Graduate student or Applied Psychology in Educational and Community Settings Minor

EPSY 5261. Introductory Statistical Methods. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

EPSY 5261 is designed to engage students in statistics as a principled approach to data collection, prediction, and scientific inference. Students first learn about data collection (e.g., random sampling, random assignment) and examine data descriptively using graphs and numerical summaries. Students build conceptual understanding of statistical inference through the use of simulation-based methods (bootstrapping and randomization) before going on to learn parametric methods, such as t-tests (one-sample and two-sample means), z-tests (one-sample and two-sample proportions), chi-square tests, and regression. This course uses pedagogical methods grounded in research, such as small group activities and discussion. Attention undergraduates: As this is a graduate level course, it does not fulfill the Mathematical Thinking Liberal Education requirement. If you would like to take a statistics course in our department that fulfills that requirement, please consider EPSY 3264.

EPSY 5262. Intermediate Statistical Methods. (; 3 cr. ; Student Option; Every Fall & Spring)

Application of statistical concepts/procedures. Analysis of variance, covariance, multiple regression. Experimental design: completely randomized, block, split plot/repeated measures. prereq: 3264 or 5261 or equiv

EPSY 5271. Becoming a Teacher of Statistics. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Current methods of teaching first courses in statistics. Innovative teaching methods, materials, and technological tools. Types of first courses, reform recommendations, goals for student learning, recommended content, teaching methods, technology, student assessment. prereq: 5261 or equiv

EPSY 5272. Statistics Teaching Internship. (; 1-3 cr. ; S-N only; Every Fall & Spring)
Supervised teaching experience. prereq: Grad student, instr consent

EPSY 5400. Special Topics in Counseling Psychology. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
Theory, research, and practice in counseling and student personnel psychology. Topics vary.

EPSY 5401. Counseling Procedures. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)
Emphasis on the counseling relationship and principles of interviewing. Case studies, role playing, and demonstration. For individuals whose professional work includes counseling and interviewing. prereq: Upper div student

EPSY 5402. Counseling History and Theories. (; 3 cr. [max 4 cr.] ; A-F only; Every Fall)

This course provides a broad introduction to professional counseling. Students will explore the major historical and contextual factors that have influenced the counseling field, with particular focus on theories and models of counseling practice. Roles and responsibilities of the professional counselor will also be discussed. Coursework will emphasize professional development via self-reflection, awareness of context and culture, and cultivation of counselor identity.

EPSY 5403. Counseling Diverse Populations. (; 3 cr. ; A-F or Audit; Every Spring)

This course addresses counseling implications for diverse individuals and families. Students will understand the impact of worldview and other factors such as ethnicity, culture, religious preference, socioeconomic status, gender identity, sexual orientation, and disabilities in community, higher education, and school settings. Students will examine their own worldviews as it relates to the topics discussed. Advocacy and social justice practices for working with diverse populations will also be addressed.

EPSY 5404. Group Counseling. (; 3 cr. ; A-F or Audit; Every Spring)

This course addresses foundations of group counseling that can be applied to multiple settings with a variety of diverse populations and age groups. Essential group leadership skills, types of groups, stages, planning, and evaluating groups will be covered. Additional topics include legal and ethical issues involved in group counseling, group dynamics, and therapeutic factors.

EPSY 5405. Career Counseling. (; 3 cr. ; A-F or Audit; Every Fall)

This course covers career development theories, career counseling procedures and techniques, career assessment/interpretation, and career development programming across the lifespan. Career interventions and resources will be discussed that relate to diverse populations within school, community, and higher education settings.

EPSY 5406. Ethics in Counseling. (; 3 cr. ; A-F only; Every Fall)

This course will help students deeply explore the ethical standards and legal principles that

must be referenced when making decisions in the practice of counseling. Students will learn how to apply the ethical standards and federal/state legal statutes to complex counseling cases. Ethical standards related to assessment, diagnosis, and practice are discussed in relation to counseling diverse populations in school, community, and higher education settings.

EPSY 5407. Diagnosis and Treatment in Counseling. (; 3 cr. [max 4 cr.] ; A-F only; Every Spring)

Etiology, symptom patterns, and assessment/treatment for various psychological disorders. Models of diagnosis. Empirically validated psychological assessment and counseling methods. Attention to cultural competency in assessment, diagnosis, and treatment.

EPSY 5408. Evidence-Based Counseling Relationships. (3 cr. ; A-F only; Every Fall)

This course introduces students to fundamental techniques and skills of professional counseling. Students will practice basic interviewing skills, with a focus on rapport-building and evidence-based counseling relationships. Specific techniques for facilitating exploration, insight, and change will also be covered. Finally, students will integrate the knowledge of counseling models and basic skills through a series of videotaped counseling practice and self-reflection assignments.

EPSY 5409. Trauma and Crisis Counseling. (3 cr. ; A-F only; Every Spring)

This course provides an overview of theories and skills commonly used by counselors working with clients in crisis. The first half of the course will cover assessment, impacts, and treatment of psychological trauma, including trauma-informed approaches to crisis situations. The second half of the course will cover specific types of crises commonly seen by counselors in a range of community and educational settings, with a focus on ethical and multicultural-competent practice. There will be an emphasis on resiliency and self-care throughout the course.

EPSY 5414. School Counselor Accountability, Advocacy, and Leadership. (3 cr. ; A-F only; Every Fall)

This course will equip school counselors-in-training with the knowledge and skills to develop intentional, data-driven school counseling programs. Focus will be given to evidence-based counseling interventions. Students will learn how to use data both in the development and evaluation of their school counseling program. Students will practice using data to advocate while also developing their leadership skills.

EPSY 5415. Counseling Children and Adolescents. (; 3 cr. [max 4 cr.] ; A-F or Audit; Every Fall & Summer)

Development, issues, and needs of children, kindergarten through high school ages. Counseling/developmental theory/strategies. Cultural diversity, legal/ethical issues in counseling children/adolescents. prereq: Grad student or MEd student or K-12 [counseling endorsement or licensure] student

EPSY 5416. Introduction to Clinical Mental Health Counseling. (3 cr. ; A-F only; Every Fall)

This course will help students understand the foundations of the clinical mental health counseling profession. The major focus will be on developing a counselor identity and learning about the history and evolution of mental health counseling as a field.

EPSY 5417. Counseling Research Practicum. (; 1-2 cr. [max 3 cr.] ; Student Option; Every Fall & Spring)

The purpose of this course is to enable students to develop applied research expertise consistent with their responsibilities as licensed professional counselors, licensed professional clinical counselors, higher education counselors, school counselors, career counselors, and professionals in other counseling-related fields. This is the first course in the 2-course Counseling Research Practicum sequence.

EPSY 5427. Advanced Counseling Research Practicum. (; 2 cr. [max 6 cr.] ; Student Option; Every Fall & Spring)

The purpose of this course is to enable students to gain further skills in developing applied research expertise consistent with their responsibilities as licensed professional counselors, licensed professional clinical counselors, higher education, school, and career counselors, and professionals in other counseling-related fields. This is the second of a 2-course Counseling Research Practicum sequence. prereq: Completion of EPSY 5417 for 2 credit hours

EPSY 5429. Advanced Concepts in Community Counseling. (3 cr. ; A-F only; Every Fall)

This course provides advanced counseling students a deeper opportunity to research and discuss recent trends and new ideas in community counseling. Current research and practice around addiction and co-occurring disorders, alternative health treatments, neurocounseling, and genetics will be covered. Students will also become familiar with the history and current role of psychopharmacology in counseling, including current treatment guidelines for common psychotropic medications. Finally, students will investigate and discuss "big ideas," such as the use of technology, for the future of counseling practice in both community mental health settings.

EPSY 5435. Introduction to School Counseling. (3 cr. [max 6 cr.] ; A-F only; Every Fall)

History/evolution of school counselor role in schools. Duties/demands of school counselor. Examine comprehensive guidance programming in K-12 schools. Issues in school counseling profession. prereq: Ed Psych Counselor Ed grad student in school counselor prog or instr consent

EPSY 5436. Crisis Management and Consulting in Schools. (3 cr. ; A-F or Audit; Every Fall)

Issues, topics, problems. Diversity in school counseling. Review, discussion, analysis of

current literature. Students develop prevention, intervention, guidance programs for K-12 schools. prereq: CSPP grad student in school counselor program or instr consent

EPSY 5437. Counseling Research Design & Evidence-Based Practices. (; 3 cr. ; A-F only; Every Spring)

This capstone course is an integration of science and practice. Students will learn research design techniques that are relevant and accessible to counselors in full-time practice, counselor educators, counseling consultants, and others in the counseling professions. Students will develop knowledge and skills related to identifying evidence-based counseling practices, developing and measuring client outcomes, analyzing and using data in counseling, and understanding how to implement ethical and culturally relevant research, data interpretation, and reporting strategies. The bulk of coursework will be the development, presentation, and defense of a research proposal in students' areas of interest. Students will learn the importance of research in advancing the counseling profession, and will practice using multiple data sources to inform programs and services in schools, counseling agencies, and higher education settings.

EPSY 5439. Case Conceptualization and Treatment Planning. (3 cr. ; A-F only; Every Spring)

This course introduces students to fundamental assessment, interviewing, case conceptualization, and treatment planning skills used by counselors in community and higher education settings. Students will have the opportunity to observe and practice intake interviews, to conceptualize clients from a culturally-informed, biopsychosocial perspective, and identify and communicate measurable treatment goals and effective interventions. Students will also work in groups to more deeply investigate and apply various approaches to case conceptualization and receive feedback from peers.

EPSY 5461. Cross-Cultural Counseling. (; 3 cr. ; A-F or Audit; Every Fall)

Effect of cross-cultural/cross-national psychological differences in human traits/characteristics. Framework for development/implementation of counseling interventions.

EPSY 5481. Practicum in School Counseling. (; 3 cr. ; A-F only; Every Spring)

This course is designed to support student growth in their development as a school counselor and to add to the training that they receive at their on-site placements. While enrolled in this course, students will be counseling clients in schools for the first time since entering this program. This class is designed to provide group supervision and support during their time on site. It is also designed to provide classroom instruction in areas that are relevant to the practice of school counseling. The course content will be delivered via class discussion, case presentations, tape review and online discussions. During the practicum, students will accrue a minimum of 100 hours, but will

not exceed 200 hours at their practicum site. Faculty will collaborate biweekly with site supervisors to ensure that their needs are met and to provide support for the individual supervision that takes place on site.

EPSY 5482. Practicum in Community and Higher Education Counseling. (; 3 cr. ; A-F only; Every Summer)

This course is designed to support student growth in their development as a counselor and to add to the training that they receive at their on-site placements. While enrolled in this course, students will be counseling clients in various settings for the first time since entering this program. This class is designed to provide group supervision and support during their time on site. It is also designed to provide classroom instruction in areas that are relevant to the practice of counseling. The course content will be delivered via class discussion, case presentations, tape review and online discussions.

EPSY 5483. Internship I. (; 3 cr. [max 4 cr.] ; A-F or Audit; Every Fall)

Supervised practice in counseling with individuals and groups; emphasizes systematic evaluation of student's counseling practice through direct observations, video, and audio tapes.

EPSY 5484. Internship II. (; 3 cr. [max 4 cr.] ; A-F or Audit; Every Spring)

Intermediate supervised practice in counseling with individuals and groups; emphasizes ethical issues with systematic evaluation of student's practice through direct observations, video, and audio tapes.

EPSY 5604. Transition From School to Work and Community Living for Persons With Special Needs. (3 cr. ; Student Option; Every Spring & Summer)

Use of strategies/models for improving transition of youth from school to work and community living. Course content that specifically addresses all phases of student assessment, individualized transition planning. Parent, family, and student involvement in designing post school options. Community-based services (employment, residential living, social and recreational services, etc). Comprehensive interagency approaches.

EPSY 5605W. Collaborative Practices for the Special Educator. (WI; 3 cr. ; A-F only; Every Spring)

Skills/knowledge required to consult/collaborate with school personnel, families, other professionals to maintain effective educational support.

EPSY 5609. Infants and Toddlers with Delays/Disabilities: Family-Centered Approaches to Early Intervention. (; 3 cr. ; A-F or Audit; Every Fall)

This course was designed to provide pre-service and current teachers as well as related service providers with the knowledge and skills needed to understand the dynamic ecosystems of families with a child with disabilities. Students will be introduced to the major methods, philosophies, and current research that emphasize effective family-professional collaboration in planning and

service delivery for infants and young children with disabilities. The focus is on a family-centered approach to assess and design educational plans and interventions, with a specific emphasis on relationship building and understanding the diverse perspectives on family life and developmental expectations.

EPSY 5613. Foundations of Special Education I. (DSJ; 3 cr. ; A-F or Audit; Every Fall & Spring)

To review the foundations of special education, culminating in an understanding of the application of the IDEAL Problem Solving Model. The course will address concepts related to exceptionality; historical and legal foundations; problem solving and tools of inquiry; collaborative relationships with families, educational, and community professionals; support of students with disabilities in general education; characteristics of students with high and low incidence disabilities, and ethics. Teacher candidates will learn methods of formative assessment using curriculum-based measures (CBM) and practice analyzing data to make instructional decisions and inform early intervention for struggling students.

EPSY 5614W. Assessment and Due Process in Special Education. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)

Participants will learn basic standardized assessment and how it directly relates to special education. In addition, students will use the assessment as part of an ongoing process for making instructional programming decisions. Students will apply skills in designing and evaluating assessment plans and in making eligibility decisions.

EPSY 5616W. Classroom Management and Behavior Analytic Problem Solving. (WI; 3 cr. ; Student Option; Every Fall & Spring)

Focuses on principles of behavior analysis and procedures used in the assessment and management of classroom behavior. Although the application of behavioral principles in educational settings is the central purpose of this course, complementary issues related to general classroom management will also be addressed. Consistent with the mission of the College of Education and Human Development, this course aims to strengthen effective educational practice, promote inquiry, and build leadership skills for regular and special educators and professionals in allied fields. prereq: For online sections, students must be an ASD certificate candidate or a Special Education Major or Special Education M.Ed./M.A.

EPSY 5617. Academic and Social Interventions for Students with Mild to Moderate Disabilities. (3 cr. ; A-F only; Every Spring)

Use problem solving model to make data-based decisions regarding implementation and evaluation of instruction for students with academic and behavioral difficulties. prereq: instr consent

EPSY 5618. Specialized Interventions for Students With Mild/Moderate Disabilities in Reading & Written Language. (; 3 cr. ; A-F or Audit; Every Fall)

The purpose of this course is to prepare teachers of students at risk and with academic disabilities to address their specific learning needs in the area of reading and written language, using a data-based decision-making approach. Through course readings, lectures, discussions, cooperative group work, microteaching, and field experiences, students will gain knowledge and skills to address the needs of children with difficulties or disabilities that affect reading and writing, including children with dyslexia and dysgraphia.

EPSY 5622. Programs and Curricula for Students with Developmental Disabilities. (; 3 cr. ; Student Option; Every Summer)

Developing programs/curricula for students with moderate, severe, profound developmental delays, as well as severe multihandicapping conditions. Special consideration given to preparing children/youth for integrated community environments. prereq: 5621 or [5661 and 5662]

EPSY 5623. Ethics in Applied Behavior Analysis. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

This course explores ethical and professional considerations that pertain to the practice of applied behavior analysis as well as ethical and disciplinary standards of the profession. Specifically, this course examines the Professional and Ethical Compliance Code for Behavior Analysts. Emphasis will be placed upon ethical and professional conduct and legal issues relevant to BCBA level practitioners. Topics such as informed consent, due process, protection of confidentiality, and selection of least intrusive, least restrictive behavior change procedures will be discussed. This course will focus on ethical decision-making processes. Issues related to cultural and ethnic diversity and ethics in applied behavior analysis will also be explored.

EPSY 5625. Education of Infants, Toddlers, and Preschool Children with Disabilities: Introduction. (; 2 cr. ; A-F or Audit; Every Fall)

Examination of key issues and practices related to early intervention and early childhood special education, with an emphasis on family-focused and inclusive services for children birth to age six. Students enrolled in this course will be provided with a background in historical and philosophical issues relating to special education, components of due process and data privacy, the IEP/IFSP process, an overview of various disabilities and disorders, and information regarding how disabilities may affect individuals and families.

EPSY 5629. Strategic Instructional Methods for Students Academically At-Risk. (3 cr. ; A-F only; Every Fall & Summer)

Knowledge/skills needed to teach KU-CRL research-based learning strategies for students considered academically at-risk. Content relevant to basic skills/content instruction for students in K-12 settings will be included. prereq: Special Education graduate or licensure student or instr consent

EPSY 5631. Module 1: Introduction to Augmentative and Alternative

Communication. (; 1 cr. ; A-F only; Every Fall, Spring & Summer)

Terms/concepts related to augmentative/alternative communication. Myths/facts regarding AAC.

EPSY 5632. Module 2: Evidence-based Methods for AAC Assessment and Intervention. (; 2 cr. ; A-F only; Every Fall & Summer)

Evidence-based tools to conduct augmentative/alternative communication (AAC) assessments. AAC intervention plans. Data-driven strategies to evaluate progress.

EPSY 5637. Core Practices in Special Education: Foundations of Special Education. (; 1 cr. ; S-N only; Every Fall)

This course is an online module designed to be taken the first semester of a 4-semester sequence in the Clinical EBD Licensure Program. All materials necessary for proficient completion of the course will be delivered via on-line course. There will be no additional readings associated with this online module. prereq: Enrolled in Special Ed MEd or Special Ed ILP MEd program with EBD Residency-Based subplan

EPSY 5638. Core Practices in Special Education: IEP Writing. (; 1 cr. ; S-N only; Every Spring)

This course is an online module designed to be taken the second semester, in conjunction with the IEP Process course, of a 4-semester sequence in the Clinical EBD Licensure Program. All materials necessary for proficient completion of the course will be delivered via on-line course. There will be no additional readings associated with this online module.

EPSY 5641. Foundations of Deaf Education. (; 3 cr. ; A-F only; Every Fall)

Philosophical foundations of deaf and hard of hearing (DHH) education. Engage in discussion, debates, and processes that have influenced deaf education, communication methodologies, and placement options in the US. Considered from the perspective of deaf and hard of hearing children, adults, and their families.

EPSY 5642. Early Intervention for Infants, Toddlers and Families: Deaf and Hard of Hearing. (; 3 cr. ; A-F only; Every Summer)

Early identification and intervention with deaf and hard of hearing children including the development of ASL and English, Emergent Literacy in the homes and the role of Deaf Mentors. Emphasis on the importance of early exposure to fully accessible language and addressing the issue of language deprivation. prereq: Preservice teacher in deaf education licensing program or instr consent.

EPSY 5643. Seminar: Identity, Culture and Diversity in Deaf Education. (; 2 cr. ; A-F only; Every Fall)

Reflecting on your own identity as a future teacher of the deaf and how to facilitate the identity development of your students. Having a deep understanding of the diversity of students and their families and how best to foster these relationships and communication. Synthesis of previously learned material into practice.

EPSY 5644. Early Childhood Language and Literacy Development and Best Practices: Deaf and Hard of Hearing. (; 3 cr. ; A-F only; Every Fall)

Perspectives and best practices related to the development of early language and literacy skills in ASL and English for deaf and hard of hearing children. prereq: Preservice teacher in deaf education licensing program or instr consent

EPSY 5645. Deaf Plus: Educating and Understanding Deaf Students with Disabilities. (; 2 cr. ; A-F only; Every Spring)

Building an understanding of the complex issues and best practices involved in educating deaf learners with disabilities. Working with families and service providers, identifying resources, understanding identification, placement, assessment and intervention strategies to modify curriculum to work with deaf students with varying disabilities.

EPSY 5646. Best Practices Teaching Reading and Writing for School Age: Deaf and Hard of Hearing. (; 3 cr. ; A-F only; Every Spring)

Understanding and application of best practices for teaching reading/writing with DHH students in school age settings including incorporating bilingual strategies (making connections between ASL and English).

EPSY 5647. Spoken Language Practices and Assistive Technology: Deaf and Hard of Hearing. (; 2 cr. ; A-F only; Every Summer)

Study of the role and function of spoken English and Assistive technology in classrooms with students who are deaf or hard of hearing. Including understanding of speech and hearing mechanisms. Emphasis on application of spoken language practices in bimodal settings. prereq: EPSY 5642, 5644

EPSY 5651. Best Practices Teaching Content Areas: Deaf Education. (; 3 cr. ; A-F only; Every Spring)

The purpose of this course is to prepare future teachers of the deaf to understand and apply best practices for teaching students who are deaf and hard of hearing across curricular subject areas and emphasizes infusion of language and literacy into all content areas. This course is designed to be a highly practical ?how to? course that will prepare students to go into classrooms with an understanding of how to integrate content across curricula using bilingual strategies and how to adapt materials to meet the needs of deaf and hard of hearing students at various reading levels.

EPSY 5652. Incorporating Academic ASL in the Classroom: Deaf and Hard of Hearing. (; 3 cr. ; A-F only; Every Fall)

Understanding/application of best practices incorporating Academic ASL in classrooms for students who are deaf or hard of hearing. Practice their own academic ASL skills while learning to facilitate their future students academic language. Demonstrating complex ASL across all subject areas using bilingual strategies and conceptually accurate signs.

EPSY 5653. ASL/English Structure and Application. (; 3 cr. ; A-F only; Every Fall)

Understanding the structure and assessment of ASL and English in deaf and hard of hearing children and how to analyze each language. Students gain knowledge of the parts of each language, various assessments prepare future teachers to evaluate and facilitate the development of ASL and English. Readings drawn from both bilingual and Deaf education.

EPSY 5654. Current Research, Issues Trends in Deaf Education. (; 1 cr. ; A-F only; Every Spring)

Examining current research, issue trends in Deaf Education to help prepare future teachers to develop an understanding of research and apply critical thinking to analyze new issues, problem solve, and consider participating in research to practice opportunities that may arise during their career in Deaf Education.

EPSY 5657. Interventions for Behavioral Problems in School Settings. (3 cr. ; A-F or Audit; Every Fall)

Comprehensive behavioral programs for students with social and or emotional disabilities. Instructing students with social and or emotional disabilities.

EPSY 5659. Foundations of Behavior Analysis. (3 cr. ; A-F only; Every Fall)

Behavior analysis is the science of behavior along a continuum of basic to applied learning processes, both operant and respondent. Applied behavior analysis (ABA) is concerned with the improvement and understanding of human behavior. It is the science in which strategies derived from the principals of basic behavior analysis are applied systematically to improve socially significant behavior and experimentation is used to identify the variables responsible for change (Cooper, Heron, & Heward, 2007). This course focuses on basic concepts and methodologies involved in behavior analysis, and their relation to other theories of learning and behavior. This course is designed for individuals interested in learning from the perspective of behavior analysis and individuals who are interested in learning theory as it applies to individuals with significant cognitive and language impairments. This course is also designed to prepare students for the Behavior Analyst Certification Board (BACB) exam.

EPSY 5661. Introduction to Autism Spectrum Disorder. (; 3 cr. ; A-F only; Every Fall)

Knowledge/skills needed to promote learning/success for school age children with Autism Spectrum Disorder. Definition, etiology, and characteristics of ASD. Current research/issues. Collaborative problem solving, family-professional partnerships, educational programming.

EPSY 5663. Assessment and Intervention for Individuals with Autism Spectrum Disorder. (; 3 cr. ; A-F only; Every Spring)

Selection/use of range of procedures, including non-biased, specific assessments to screen/identify children with autism spectrum disorder. Specific intervention strategies designed to teach beginning communication/social skills to children with Autism Spectrum Disorder (ASD). prereq: 5661, Special Ed grad, licensure

student, ASD Certificate student, IDP major or instr consent

EPSY 5681. Educating Preschoolers with Disabilities: Specialized Approaches and Interventions. (; 3 cr. ; A-F only; Every Spring)

This course provides an opportunity to engage in in-depth learning related to a variety of specialized approaches and interventions designed to maximize developmental and educational outcomes for young children, birth to age 6, with disabilities and their families in home, community, and school-based settings. Early educators and early childhood special educators play a major role in the development, implementation, and evaluation of individualized programming and are called upon to provide services that are interdisciplinary, multicultural, family-centered, inclusive, developmentally appropriate, and effective. Thus, early childhood professionals must be knowledgeable of and proficient in their application of curricular adaptations and instructional strategies that address the needs of young children with a broad range of disabilities in a broad range of preschool settings. prereq: [5616, 5625] or instr consent

EPSY 5699. Experimental Teaching Seminar. (2 cr. ; A-F only; Every Fall & Spring)

EPsy 5699 will be taken concurrently with the student teaching experience. Coursework will center around experimental teaching utilizing data-based instruction for affecting student growth academically. Students will demonstrate this understanding by planning and conducting a 3-to-5 lesson instructional sequence for a selected focus learner during their student teaching year. In addition, students will record their instruction and reflect on the effectiveness of their academic instruction. Prereq: instr consent

EPSY 5701. Practicum: Field Experience in General Education - Inclusive Classrooms. (; 1-2 cr. ; S-N only; Every Fall & Spring)

Field-Based Practicum. Observe and actively participate in an inclusive (with and without disabilities) general education classroom. An emphasis is placed on communication skills and reflective practice.

EPSY 5702. Applied Behavior Analysis: Supervision Seminar I. (; 1 cr. [max 3 cr.] ; A-F only; Every Fall)

This course is designed to provide didactic instruction in supervision. Class meets weekly for one hour.

EPSY 5703. Applied Behavior Analysis: Supervision Seminar II. (; 1 cr. ; A-F only; Every Spring)

This course is designed to provide didactic instruction in supervision. Class meets weekly for one hour.

EPSY 5704. Clinical: Field Experiences in Middle and Secondary (HS/T) Special Education Classrooms. (; 1-2 cr. ; S-N only; Every Fall & Spring)

Field experiences (prior to student teaching) meet the requirements set by Minnesota's Professional Educator Licensing and Standards Board (PELSB). The focus of this course is

for initial licensure teacher candidates in the field of special education in preparation for practicing principles required for successful inclusion of students in their least restrictive environment (LRE). Teacher candidates will observe and interact with students with disabilities (license specific) teachers in middle and secondary (high school or transition) school settings. Consistent with the mission of the College of Education and Human Development and the Special Education Programs, this field experience strengthens effective educational practices, promotes inquiry and problem solving skills, and builds leadership skills for special educators who work with students with disabilities specific to the licensure area. All placements are requested and confirmed by the Field Placement Coordinator in the Special Education Program. Placements are based on licensure program requirements and information (e.g., availability) teacher candidates provide on the Field Experience Placement Questionnaire. Field experiences occur during the regular school day; scheduled between the hours of 7:30 a.m. and 4:00 p.m. Schedules vary by school and cooperating teacher. You will receive an email with all placement details once finalized.

EPSY 5705. Clinical: Field Experiences in ECSE or Elementary Special Education Classrooms. (; 1-2 cr. ; S-N only; Every Fall & Spring)

Field experiences (prior to student teaching) meet the requirements set by Minnesota's Professional Educator Licensing and Standards Board (PELSB). The focus of this course is for initial licensure teacher candidates in the field of special education in preparation for practicing principles required for successful inclusion of students in their least restrictive environment (LRE). Teacher candidates will observe and interact with students with disabilities (license specific) teachers in ECSE and elementary school settings. Consistent with the mission of the College of Education and Human Development and the Special Education Programs, this field experience strengthens effective educational practices, promotes inquiry and problem solving skills, and builds leadership skills for special educators who work with students with disabilities specific to the licensure area. All placements are requested and confirmed by the Field Placement Coordinator in the Special Education Program. Placements are based on licensure program requirements and information (e.g., availability) teacher candidates provide on the Field Experience Placement Questionnaire. Field experiences occur during the regular school day; scheduled between the hours of 7:30 a.m. and 4:00 p.m. Schedules vary by school and cooperating teacher. You will receive an email with all placement details once finalized.

EPSY 5706. Practicum in Moderate to Severe Developmental Disabilities. (2 cr. ; S-N only; Every Fall & Spring)
Practicing principles required for successful inclusion. Address model for best practices/requirements specified by Minnesota Board of Teaching.

EPSY 5707. Practicum in Moderate to Severe Learning Disabilities. (3 cr. ; S-N only; Every Fall & Spring)

Moderate/severe learning disabilities. Transfer of theoretical knowledge to practical application. Role of LD teacher in variety of settings.

EPSY 5708. Practicum in Moderate to Severe Emotional/Behavioral Disorders. (2 cr. [max 3 cr.] ; S-N only; Every Fall & Spring)

Moderate/severe emotional behavior disorders. Transfer of theoretical knowledge to practical application. Role of EBD teacher in variety of settings.

EPSY 5741. Student Teaching: Academic and Behavioral Strategist. (3-6 cr. ; S-N only; Every Fall & Spring)

Transfer of theoretical knowledge to practical application. Responsibilities of special education teacher in variety of settings. prereq: Special education licensure program or instr consent

EPSY 5742. Student Teaching: Autism Spectrum Disorders. (6 cr. ; S-N only; Every Fall & Spring)

Transfer of theoretical knowledge to practical application. Role/responsibilities of special education teacher in settings of elementary/secondary age.

EPSY 5751. Student Teaching for Deaf Education. (; 1-6 cr. [max 60 cr.] ; A-F only; Every Spring)

Students participate in educational programming for infants, children, and youth who are deaf or hard of hearing. On-site, directed experiences under supervision of master teachers of deaf/hard of hearing students.

EPSY 5755. Student Teaching: Developmental Disabilities, Mild/Moderate. (; 1-6 cr. ; A-F or Audit; Every Fall & Spring)

Supervised student teaching, or special practicum project, in schools or other agencies serving students at elementary/secondary levels who have mild to moderate developmental disabilities. prereq: Completion of all licensure coursework, instr consent

EPSY 5756. Student Teaching: Developmental Disabilities, Moderate/Severe. (; 1-6 cr. ; A-F or Audit; Every Fall & Spring)

Supervised student teaching, or special practicum projects, in schools or other agencies serving students at elementary/secondary levels who have moderate to severe developmental disabilities. prereq: Completion of all licensure coursework, instr consent

EPSY 5761. Student Teaching in Early Childhood Special Education Settings for Children Aged Three to Five Years. (; 3 cr. [max 6 cr.] ; S-N only; Every Fall & Spring)

Student teachers work closely with their cooperating teacher and University supervisor to design/implement programming for children in classrooms. Course includes a seminar with discussion, cooperative learning experiences, and some lectures. prereq: Licensure candidate in Early Childhood/Early Childhood Licensure Program, completion of all other

licensure requirements for ECSE, instr consent; completion of Birth-3 student teaching should be completed after age 3-5 student teaching when possible

EPSY 5762. Student Teaching in Early Childhood Special Education for Children Aged Birth to Three Years. (; 3 cr. [max 6 cr.] ; S-N only; Every Fall & Spring)

Student teachers work closely with cooperating teacher and University supervisor to design/implement programming for families with children aged birth-to-three in their homes. Course includes seminar with discussion, cooperative learning experiences, and some lectures. prereq: Licensure candidate in Early Childhood/Early Childhood Licensure Program, completion of all other licensure requirements for ECSE, instr consent; completion of Birth-3 student teaching should be completed after age 3-5 student teaching when possible

EPSY 5763. Practicum in Special Education: Behavior Intervention Planning and Implementation. (2 cr. ; S-N only; Every Fall)

This course will be delivered within a clinical model of instruction where the instructor serves as a coaching guide and the candidates participate in a community of practice with their peers. It is expected that given the instructor's coaching and the interactions within the community of practice, that the candidate will complete the portfolio associated with this course and, as part of that completion, demonstrate proficiency in all competencies associated with this course in order to earn a passing grade. As such, there is not a didactic instruction component or assigned readings for this clinical model of instruction-based course.

EPSY 5765. Practicum in Special Education: Instructional Planning and Delivery. (2 cr. ; S-N only; Every Fall)

This course will be delivered within a clinical model of instruction where the instructor serves as a coaching guide and the candidates participate in a community of practice with their peers. It is expected that given the instructor's coaching and the interactions within the community of practice, that the candidate will complete the portfolio associated with this course and, as part of that completion, demonstrate proficiency in all competencies associated with this course in order to earn a passing grade. As such, there is not a didactic instruction component or assigned readings for this clinical model of instruction-based course.

EPSY 5802. History & Scientific Bases of Psychology. (3 cr. ; A-F only; Every Fall)

The course is designed to provide discipline-specific knowledge comprising the core of psychology. Accordingly, students will attain substantial knowledge in (1) history and systems of psychology, (2) affective, (3) biological, (4) cognitive, (5) developmental, and (6) social aspects of behavior.

EPSY 5849. Multi-tiered Systems of Support in Early Childhood Education. (; 3 cr. ; A-F only; Spring Even Year)

This course explores how multi-tiered systems of support (MTSS) are applied in early childhood settings. The course features

content on early childhood assessment, intervention, data-based decision making, treatment integrity and information on how to apply MTSS models with unique early childhood populations. This course focuses on educational settings for children ages birth to 5 and is intended primarily for educational psychology students (or students from related disciplines) interested in basic and applied information regarding evidence-based service delivery for young children. The course will explore the three primary components of MTSS frameworks: assessment, intervention and data-based decision making including review of assessments and intervention techniques for infants and preschoolers in various developmental domains. Enrolled students will engage in a variety of instructional strategies to learn the noted content including large and small group discussion, lectures, active learning opportunities to practice and build capacity for specified interventions, technology-based interactions to support intervention, assessment and databased decision making and cooperative learning opportunities to engage content using dynamic methods.

EPSY 5851. Engaging Diverse Students and Families. (; 3 cr. ; Student Option; Every Fall & Spring)

Theoretical, practical, scientific issues involved in school psychological practice/training/research. Theoretical/empirical bases for developing appropriate dispositions, practices, strategies. Illustrative lectures, discussions, group activities, case studies, presentations. prereq: Honors senior or grad student

EPSY 5991. Independent Study in Educational Psychology. (; 1-8 cr. [max 20 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Self-directed study in areas not covered by regular courses. Specific program of study is jointly determined by student and advising faculty member. prereq: instr consent

Educational/Human Development (EDHD)

EDHD 1051. Editing for Writers. (; 2 cr. ; Student Option; Every Fall, Spring & Summer) Editing one's own writing. Linguistic features of standard written English. Styles/language utilized in academic writing. Small-group activities, individual/peer conferencing.

EDHD 1525V. CEHD First Year Experience. (WI; 4 cr. ; A-F only; Every Fall) Writing intensive multidisciplinary approach to addressing the common question, "How can one person make a difference?" Students read a common book/work collaboratively to produce a final project. Active learning strategies to develop students' skills in critical reading, thinking, and writing. prereq: CEHD student, honors, 1st-term fr

EDHD 1525W. CEHD First Year Experience. (WI; 4 cr. ; A-F only; Every Fall & Spring) Writing intensive multidisciplinary approach to addressing the common question, "How

can one person make a difference?" Students read a common book/work collaboratively to produce a final project. Active learning strategies to develop students' skills in critical reading, thinking, and writing.

EDHD 1620. Current Topics: Strategies for Student Success. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring) For topics see Class Schedule.

EDHD 1701. Identity, Culture, and College Success. (; 1 cr. ; A-F only; Every Fall) How culture/identity play role in educational experience. Self-authorship skills to create educational/personal path that aligns with values/beliefs. Lecture, discussion, readings, activities. prereq: TRIO or PES student

EDHD 1904. Globalizing your Undergraduate Curriculum. (GP,IP; 3 cr. [max 6 cr.] ; A-F only; Periodic Fall & Spring) EDHD 1904 is designed to engage domestic and international students in the multiple ways of thinking and doing for the expressed purpose of infusing a global perspective in their undergraduate education. Students will virtually engage with undergraduate students in Russia and China exploring what it means to be a student and adult participant on the world stage. Student will have exposure and experiences with international students, international student organizations, service learning, Collaborative Online International Learning (COIL), Massive Open Online Courses (MOOCs), Internationalization at Home (IaH), Study Abroad, and other international-based research, learning, or extracurricular processes and opportunities. This course will prepare students to embrace intercultural competency and its impact on self-awareness, social settings, course work, research projects, and career choices.

EDHD 2701. Your Future: Identity, Culture & Career Success. (2 cr. ; Student Option No Audit; Every Spring)

One of the biggest challenges for any college student is choosing a major and career! Making decisions about your major and future career can be overwhelming, confusing, and intimidating. Students often wonder, "What is the right major/career for me? How do I know my options? What steps do I need to take to reach my career goals? Who can I go to for help?" In this course you'll develop a clearer sense of self and create greater awareness of your multiple identities and how they influence your career decision-making and future success. You'll also learn the importance of social and cultural capital and how to build the capital needed to move forward in your career journey. Through community building, storytelling, reflection, readings, lecture, discussion, in-class activities and projects, you'll be empowered to define career success through your own lived experiences and cultural lenses, gain confidence in your career decision-making abilities, and author your own career journey.

EDHD 3100. International Topics for Undergraduates. (; 1-12 cr. ; Student Option; Every Fall, Spring & Summer)

Off-campus course. Topics from research exploration to academic/engagement activities. Delivered in international setting. Course requirements are determined by instructor(s) and reflect advanced undergraduate rigor. prereq: instr consent

EDHD 3161. Great Minds of the Renaissance. (GP,HIS; 4 cr. ; A-F only; Every Spring)

The Great Minds of the Renaissance course focuses on the development of scientific thought and the great minds behind those ideas; it delves into the intersection of scientific ideas with art, culture, religion, politics, etc. In doing so, it also covers a wide range of general or liberal education objectives.

EDHD 3300. Special Topics in Education and Human Development. (; 1-6 cr. [max 12 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Special topics in education/human development.

EDHD 3302. Demystifying and Engaging the Research Process. (3 cr. ; Student Option; Every Spring & Summer)

Have you ever considered participating in academic research but felt intimidated or uncertain about what the process includes? If so, this course is for you. The University of Minnesota is one of the largest research universities in the world and provides ample opportunity to get involved with world-class faculty and cutting-edge research. The primary goal of the class is to simultaneously introduce and engage students in demystifying the research process. The course includes guest lecturers and draws upon the expertise of nationally recognized faculty and professional staff from across campus representing a broad range of disciplines.

EDHD 5100. International Topics for Graduate Students. (; 1-12 cr. ; Student Option; Every Fall, Spring & Summer)

Off-campus course. Topics from research exploration to academic/engagement activities. Delivered in international setting. Course requirements are determined by instructor(s) and reflect graduate-level rigor.

EDHD 5300. Special Topics: Ed & Human Dev. (; 1-6 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer) Special topics in education and human development.

Electrical & Computer Eng (EE)

EE 1001. Introduction to Electrical and Computer Engineering. (; 1 cr. ; S-N or Audit; Every Spring) Introduction to engineering/computer engineering. Techniques and technologies developed by electrical and computer engineers.

EE 1301. Introduction to Computing Systems. (; 4 cr. ; Student Option; Every Fall & Spring) C/C++ programming constructs, binary arithmetic and bit manipulation, data representation and abstraction, data types/

structures, arrays, pointer addressing, control flow, iteration, recursion, file I/O, basics of object-oriented programming. An Internet-of-Things lab is integral to the course.

EE 1701. Climate Crisis: Implementing Solutions. (TS; 3 cr. ; Student Option; Every Fall & Summer)

Energy from renewables such as solar and wind to combat potentially catastrophic climate change resulting from our use of fossil fuels; electrifying our transportation; ways to increase energy efficiency and energy conservation; need for energy storage to increase the penetration of renewables; role of technology, societal benefits and the ethics. Note: EE 1701 and EE 1703 (the lab) need to both be taken to fulfill the Physical Science Core requirement. EE 1701 alone fulfills the Technology and Society theme requirement.

EE 1703. Laboratory for Climate Crisis: Implementing Solutions. (PHYS; 1 cr. ; Student Option; Every Fall & Spring)

Laboratory to complement and accompany EE 1701. Experiments to include among: 1) Demonstration of Global Warming by CO₂, 2) characteristics of Light for Power Generation through PVs, Lighting through LEDs, and Growing Plants in Greenhouses, 3) Energy Generation Using PV Panels and the Maximum Power Point, 4) PV Panels in Series and Parallel combinations, 5) Wind Turbine Characteristics and the Maximum Coefficient of Performance, 6) Wind Turbine Characteristics for varying wind speeds and Pitch Control of Blades, 7) Battery Characteristics, 8) AC Electric Systems: Real and Reactive Power, 1-Phase, 9) Three-Phase Systems, Motors and Generators, 10) LEDs compared to Incandescent Lamps and CFLs, 11) Growing Plants using LEDs and batteries in Greenhouses, 12) Air Conditioning and Heat Pumps, 13) Simulation of various energy resources to meet the load demand on the electric grid, 14) Economic Calculations of using an Electric Vehicle and Participating in Community SolarGardens. EE 1701 and EE 1703 (the lab) need to both be taken to fulfill the Physical Science Core requirement. EE 1701 alone fulfills the Technology and Society theme requirement. prereq: EE 1701 or concurrent registration is required (or allowed) in EE 1701

EE 2015. Signals, Circuits and Electronics. (4 cr. ; Student Option; Every Fall, Spring & Summer)

Introduction to analog electrical systems with particular emphasis on audio circuits and signals. Time and frequency domain representations. Kirchhoff's laws. Power. Inductance and Capacitance. Introduction to op-amp circuits and their audio applications. Complex numbers and phasors. Introduction to Fourier Series. RLC circuits and basic filter networks. Laboratory experiments on audio amplifiers, distortion, intermodulation products, low-level differential amplifiers, bass/treble filters. prereq: concurrent registration is required (or allowed) in PHYS 1302, concurrent registration is required (or allowed) in (MATH 2243 or MATH 2373 or MATH 2573)

EE 2115. Analog and Digital Electronics.

(4 cr. ; Student Option; Every Fall, Spring & Summer)

An introduction to electronic circuits with emphasis on switching speed and analog mixed signal models. Transient analysis of RC, RL and RLC circuits. Gate delays and limitations on CMOS digital circuit switching. Transient response of lumped 1st and 2nd order ladder networks. Laplace transform and applications. Introduction to analog filters. Elementary sampled data filters. A/D and D/A circuit technologies. Laboratory experiments on AM modulation and superheterodyne receivers with focus on electronic implementation. prereq: 2015

EE 2301. Introduction to Digital System Design. (; 4 cr. ; Student Option; Every Fall & Spring)

Boolean algebra, logic gates, combinational logic, logic simplification, sequential logic, design of synchronous sequential logic, Verilog modeling, design of logic circuits. Integral lab. Prereq: [EE 1301 (preferred) or CSCI 1113 or CSCI 1103 or CSci 1133]

EE 2361. Introduction to Microcontrollers.

(; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Basic computer organization, opcodes, assembly language programming, logical operations and bit manipulation in C, stack structure, timers, parallel/serial input/output, buffers, input pulse-width and period measurements, PWM output, interrupts and multi-tasking, using special-purpose features such as A/D converters. Integral lab. prereq: EE 2301

EE 2701. Sustainable Electricity Supply: Renewables and Conservation. (TS; 3 cr. ; Student Option; Every Spring)

This course is on the very timely topic of combating climate change by looking closely at electricity generation, delivery, and its use for a sustainable future. Generating electricity from renewables and conservation in all forms, including improving energy efficiency, are the most important tools we have for combating climate change. This course will help you understand the historical development of energy production, the economic impacts of energy sources, the political implications, and primarily the technical understanding of solar power, wind power, electric vehicles, battery storage, fuel cells, energy distribution, and conservation. It will help you consider the potential societal benefits such as reduced energy bills, cleaner air and water, increased economic opportunities, and prepare you for exciting and meaningful careers in renewable energy and sustainability. Prerequisite: Physics 1302W (or equivalent)

EE 2703. Sustainable Electricity Supply: Renewables and Conservation Lab. (; 1 cr. ; Student Option; Every Spring)

This online lab is to complement what students are learning in the associated three-credit course EE2701. Students will conduct experiments related to Wind Turbines, Electronic Converters, Photovoltaics, LEDs, and the Smart Grid. Since all the experiments

are digitally controlled, they can easily be performed online. Co-requisite: EE2701

EE 3005. Fundamentals of Electrical Engineering. (; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Fundamentals of analog electronics, digital electronics, and power systems. Circuit analysis, electronic devices and applications, digital circuits, microprocessor systems, operational amplifiers, transistor amplifiers, frequency response, magnetically coupled circuits, transformers, steady state power analysis. prereq: Math 2243, Phys 1302; not for EE majors

EE 3006. Fundamentals of Electrical Engineering Laboratory. (; 1 cr. ; Student Option; Every Fall, Spring & Summer)

Lab to accompany 3005. prereq: Concurrent enrollment in 3005 is allowed but not required

EE 3015. Signals and Systems. (; 3 cr. ; Student Option; Every Fall & Spring)

Basic techniques for analysis/design of signal processing, communications, and control systems. Time/frequency models, Fourier-domain representations, modulation. Discrete-time/digital signal/system analysis. Z transform. State models, stability, feedback. Suggest taking EE 3101 concurrently. prereq: [2115, CSE Upper Division] or dept consent

EE 3025. Statistical Methods in Electrical and Computer Engineering. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Notions of probability. Elementary statistical data analysis. Random variables, densities, expectation, correlation. Random processes, linear system response to random waveforms. Spectral analysis. Computer experiments for analysis and design in random environment. prereq: [3015, CSE upper division] or instr approval

EE 3101. Signals, Circuits and Electronics Laboratory. (; 1 cr. ; A-F only; Every Fall & Spring)

Experiments in electronic systems for information processing; modulation, demodulation, and filtering using analog and digital electronics; sampling, quantization and digital filtering; feedback and phase lock loops. prereq: [2115, &3015, &3115, CSE Upper Division] or dept consent

EE 3102. Circuits and Electronics Laboratory II. (; 2 cr. ; Student Option; Every Fall, Spring & Summer)

Experiments in circuits/electronics. Team design project. prereq: [3101 or CSE or dept consent], attendance first day of class.

EE 3115. Analog Electronics. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Basic differential amplifiers using FETs and BJTs. Current sources for differential amplifiers. Op- amp-based differential amplifiers. IC op amps as multi-stage amplifiers. Ideal (dc) feedback. Stability and compensation of negative feedback amplifiers. Sinusoidal oscillators. Waveshaping circuits. Power amplifiers. Use of circuit simulators. EE 3015 and EE 3101 should be taken before or concurrently with EE 3115. prereq: [EE 2115, &EE 3015, CSE upper division] or dept consent

EE 3161. Semiconductor Devices. (; 3 cr. ; Student Option; Every Fall & Spring)
Elementary semiconductor physics; physical description of pn junction diodes, bipolar junction transistors, field-effect transistors. prereq: Upper div CSE, 2115, Phys 1302, Phys 2303 or Chem 1022

EE 3601. Transmission Lines, Fields, and Waves. (; 3 cr. ; Student Option; Every Fall & Spring)
Properties of transmission lines, electrostatics, magnetostatics, and electromagnetic waves in unbounded space. Guides, cavities, radiation theory, antennas. prereq: [2015, [Math 2374 or Math 2263 or Math 2574H or Math 3584H], [Phys 1302 or Phys 1402], CSE] or dept consen

EE 3940. Special Topics in Electrical and Computer Engineering. (; 1-4 cr. [max 8 cr.] ; Student Option; Every Summer)
Topics that are not available in regular courses. Topics vary. prereq: instr consent

EE 3951W. Junior Design Project. (WI; 2 cr. ; Student Option; Every Fall & Spring)
Prereq - EE 3101. Team participation in formulating/solving a structured common design problem emphasizing instrumentation systems. Oral/written presentations.

EE 3990. Curricular Practical Training. (1-2 cr. [max 12 cr.] ; S-N only; Every Fall, Spring & Summer)
Industrial work assignment involving advanced electrical engineering technology. Reviewed by faculty member. Final report covering work assignment prereq: instr consent, undergrad EE or CompE major

EE 4043W. Industrial Assignment II. (WI; 4 cr. ; A-F only; Every Fall, Spring & Summer)
Solution of system design problems that require developing criteria, evaluating alternatives, and generating a preliminary design. Final report emphasizes design communication and describes design decision process, analysis, and final recommendations. prereq: 3041

EE 4044. Industrial Assignment III. (; 2 cr. ; A-F only; Every Fall, Spring & Summer)
Industrial work assignment in engineering co-op program. Evaluation based on student's formal written report covering semester work assignment. prereq: 4043W

EE 4111. Advanced Analog Electronics Design. (; 4 cr. ; Student Option; Every Spring)
Basic integrated circuit building blocks of differential amplifiers, high bandwidth, instrumentation amplifiers. Current/voltage references. Feedback, stability, and noise in electronic circuits. Integral lab. prereq: 3015, 3115

EE 4161W. Energy Conversion and Storage. (WI; 3 cr. ; Student Option; Every Spring)
Fundamental physics/chemistry of selected energy conversion and energy storage devices. Connections with their electric power applications. Role of grid, application to electric vehicles. Lectures, lab, student presentations. prereq: 3161 or instr consent

EE 4163. Energy Conversion and Storage Laboratory. (; 1 cr. ; Student Option; Every Spring)
Provides laboratory experiences with the topics of 4161W, including the fundamental physics and chemistry of selected energy conversion and energy storage devices, their application, and their connection strategies in electric power applications. prereq: concurrent registration is required (or allowed) in 4161W

EE 4231. Linear Control Systems: Designed by Input/Output Methods. (3 cr. ; Student Option; Every Fall)
Modeling, characteristics, performance of feedback control systems. Stability, root locus, frequency response methods. Digital implementation, hardware considerations. prereq: [3015, [upper div CSE or grad student in CSE major]] or instr consent

EE 4233. State Space Control System Design. (; 3 cr. ; Student Option; Every Spring)
State space models, performance evaluation, numerical issues for feedback control. Stability, state estimation, quadratic performance. Implementation, computational issues. prereq: [3015, upper div CSE] or instr consent

EE 4235. Linear Control Systems Laboratory. (; 1 cr. ; Student Option; Every Fall)
Lab to accompany 4231. prereq: 4231 or concurrent registration is required (or allowed) in 4231

EE 4237. State Space Control Laboratory. (; 1 cr. ; Student Option; Every Spring)
Lab to accompany 4233. prereq: 4233 or concurrent registration is required (or allowed) in 4233; no cr for [EE or CompE] grad students

EE 4301. Digital Design With Programmable Logic. (; 4 cr. ; Student Option; Every Fall & Summer)
Introduction to system design/simulation. Design using Verilog code/synthesis. Emulation using Verilog code. prereq: 2301, [1301 or CSCI 1113 or CSCI 1901]

EE 4303. Introduction to Programmable Devices Laboratory. (; 1 cr. ; Student Option; Periodic Spring)
Verilog Language. Combinatorial and sequential logic synthesis with Verilog. Implementation in Field Programmable Gate Arrays (FPGAs). prereq: 2301, 2361; cannot receive cr for 4303 if cr granted for EE 4301

EE 4341. Embedded System Design. (; 4 cr. ; Student Option; Every Spring)
Microcontroller interfacing for embedded system design. Exception handling/interrupts. Memory Interfacing. Parallel/serial input/output methods. System Buses and protocols. Serial Buses and component interfaces. Microcontroller Networks. Real-Time Operating Systems. Integral lab. prereq: 2301, 2361, upper div CSE

EE 4363. Computer Architecture and Machine Organization. (; 4 cr. ; Student Option; Every Fall & Spring)
Introduction to computer architecture. Aspects of computer systems, such as pipelining,

memory hierarchy, and input/output systems. Performance metrics. Examines each component of a complicated computer system. prereq: 2361

EE 4389W. Introduction to Predictive Learning. (WI; 3 cr. ; Student Option; Fall Odd Year)
Empirical inference and statistical learning. Classical statistical framework, model complexity control, Vapnik-Chervonenkis (VC) theoretical framework, philosophical perspective. Nonlinear methods. New types of inference. Application studies. prereq: [3025, ECE student] or STAT 3022; computer programming or MATLAB or similar environment is recommended for ECE students

EE 4501. Communications Systems. (; 3 cr. ; Student Option; Every Fall)
Systems for transmission/reception of digital/analog information. Characteristics/design of wired/wireless communication systems. Baseband, digital, and carrier-based techniques. Modulation. Coding. Electronic noise and its effects on design/performance. prereq: 3025

EE 4505. Communications Systems Laboratory. (; 1 cr. ; Student Option; Every Fall)
Experiments in analysis/design of wired/wireless communication systems. Lab to accompany 4501. prereq: 4501 or concurrent registration is required (or allowed) in 4501

EE 4521. Introduction to Machine Learning and Data Science for Electrical and Computer Engineers. (3 cr. ; Student Option; Every Fall)
Computational techniques for analysis and inference from data. Python language programming. Elementary numerical optimization and statistical data analysis. Computational methods for clustering, dimensionality reduction, classification, regression, and time series analysis. Construction, training, and utilization of deep neural networks. Application case studies using datasets arising in Electrical and Computer Engineering. [Prereq: EE3025; MATH 2263 or 2374; MATH 2142, 2243, 2373 or CSCI 2033]

EE 4541. Digital Signal Processing. (; 3 cr. ; Student Option; Every Fall & Summer)
Review of linear discrete time systems and sampled/digital signals. Fourier analysis, discrete/fast Fourier transforms. Interpolation/decimation. Design of analog, infinite-impulse response, and finite impulse response filters. Quantization effects. prereq: [3015, 3025] or instr consent prereq: [3015, 3025] or instr consent

EE 4607. Wireless Hardware System Design. (; 3 cr. ; Student Option; Every Spring)
Random processes, noise, modulation, error probabilities. Antenna operation, power transfer between antennas, rf propagation phenomena, transmitters/receivers, transmission lines, effect of antenna performance on system performance, rf/microwave device technologies, small-signal amplifiers, mixers, power amplifiers, rf oscillators. prereq: [3015, 3115, 3601, CSE student] or dept consent

EE 4616. Antennas: Theory, Analysis, and Design. (3 cr. ; Student Option; Every Fall)

With the widespread use of cell phones autonomous vehicles, and the coming of the Internet of Things, there is an increasing need to understand wireless communications and radar sensors. A key component of these systems is the antenna. The purpose of this course is to help the student develop knowledge in the area of antennas. This involves understanding the parameters that are used to characterize antennas and how these effect system performance. An important aspect of the course is to provide the student with an understanding of the operating principles behind the most commonly used antennas. This is followed with exposure to basic design principles. These can be used to perform antenna design or can be used as starting points for design using an electromagnetic simulator. As part of the course, students will be exposed to simulator use through homework assignments and course project work. [EE 3601 or equivalent]

EE 4623. Introduction to Modern Optics. (3 cr. ; Student Option; Every Fall)

Modern optics broadly defined as geometrical, physical, and quantum optics, including interference and diffraction, optical polarization, Fourier optics, cavity optics, optical propagation, optical coherence, lasers, optical detection, and optical instruments. prereq: [Phys 2503 or Phys 2303] and [Math 2374 or MATH 2263 or MATH 2573H]; instr consent.

EE 4701. Electric Drives. (3 cr. ; Student Option; Every Spring)

AC/DC electric-machine drives for speed/position control. Integrated discussion of electric machines, power electronics, and control systems. Computer simulations. Applications in electric transportation, robotics, process control, and energy conservation. prereq: 3015

EE 4703. Electric Drives Laboratory. (1 cr. ; Student Option; Every Spring)

Laboratory to accompany 4701. Simulink-based simulations of electric machines/drives in applications such as energy conservation and motion control in robotics. prereq: 4701 or concurrent registration is required (or allowed) in 4701

EE 4721. Introduction to Power System Analysis. (3 cr. ; Student Option; Every Fall)

AC power systems. Large power system networks. Mathematics/techniques of power flow analysis. Short-circuit analysis, transient stability analysis. Use of power system simulation program for design. prereq: 2011

EE 4722. Power System Analysis Laboratory. (1 cr. ; Student Option; Every Fall)

Lab analysis of AC power systems, power system networks, power flow, short circuit, transient stability. prereq: 4721 or concurrent registration is required (or allowed) in 4721

EE 4741. Power Electronics. (3 cr. [max 4 cr.] ; Student Option; Every Fall)

Switch-mode power electronics. Switch-mode DC power supplies. Switch-mode

converters for DC and AC motor drives, wind/photovoltaic inverters, interfacing power electronics equipment with utility system. Power semiconductor devices, magnetic design, electro-magnetic interference (EMI). prereq: 3015, 3115

EE 4743. Switch-Mode Power Electronics Laboratory. (1 cr. ; Student Option; Every Fall)

Laboratory to accompany 4741. PSpice/Simulink-based simulations of converters, topologies, and control in switch-mode dc power supplies, motor drives for motion control, and inverters for interfacing renewable energy sources to utility grid. prereq: 4741 or concurrent registration is required (or allowed) in 4741

EE 4893. Directed Study. (1-3 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Studies of approved projects, either theoretical or experimental. prereq: dept consent

EE 4894. Honors Directed Research I.

(2 cr. ; Student Option; Every Fall, Spring & Summer)

Experience in research/design for electrical/computer engineering. Oral/written reports. This courses is part 1 of a two-part course that spans one year of research/design for electrical or computer engineering students. Students must apply and qualify for the course and obtain a faculty sponsor. Prereq: Departmental Consent

EE 4930. Special Topics in Electrical and Computer Engineering Laboratory. (1-2 cr. [max 6 cr.] ; A-F only; Periodic Fall, Spring & Summer)

Lab work not available in regular courses. Topics vary. prereq: CSE sr or grad student or instr consent

EE 4940. Special Topics in Electrical and Computer Engineering. (1-4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Topics that are not available in regular courses. Topics vary. prereq: CSE or instr consent

EE 4951W. Senior Design Project. (WI; 4 cr. ; Student Option; Every Fall & Spring)

Team participation in formulating/solving open-ended design problems. Oral/written presentations. prereq: 3015, 3115, 3102, attendance first day of class

EE 4981H. Senior Honors Project I. (2 cr. ; Student Option; Every Fall)

Experience in research/design for electrical/computer engineering. Oral/written reports. prereq: ECE honors, sr, instr consent

EE 4982V. Senior Honors Project II. (WI; 2 cr. ; Student Option; Every Spring)

Experience in research/design for electrical/computer engineering. Oral/written reports. prereq: 4981

EE 4994. Honors Directed Research II. (2 cr. ; Student Option; Every Fall, Spring & Summer)

Experience in research/design for electrical/computer engineering. Oral/written reports. This courses is part 2 of a two-part course that spans one year of research/design for

electrical or computer engineering students. Students must apply and qualify for the course and obtain a faculty sponsor.

EE 4999. Special Exam. (2 cr. ; Student Option;)**EE 5041. Industrial Assignment for Graduate Students.** (1 cr. ; S-N only; Every Fall, Spring & Summer)

Optional industrial work assignment. Evaluation based on student's formal written report covering semester's work assignment. This course counts for 6 credits of Academic Progress for the semester in which it is taken. prereq: Consent of Advisor and Office of the DGS

EE 5121. Transistor Device Modeling for Circuit Simulation. (3 cr. ; Student Option; Periodic Fall & Spring)

Basics of MOS, bipolar theory. Evolution of popular device models from early SPICE models to current industry standards. prereq: [3115, 3161, CSE grad student] or dept consent

EE 5141. Introduction to Microsystem Technology. (4 cr. ; Student Option; Every Spring)

Microelectromechanical systems composed of microsensors, microactuators, and electronics integrated onto common substrate. Design, fabrication, and operation principles. Labs on micromachining, photolithography, etching, thin film deposition, metallization, packaging, and device characterization. prereq: [3161, 3601, CSE grad student] or dept consent

EE 5163. Semiconductor Properties and Devices I. (3 cr. ; Student Option; Every Fall)

Principles/properties of semiconductor devices. Selected topics in semiconductor materials, statistics, and transport. Aspects of transport in p-n junctions, heterojunctions. prereq: [3161, 3601, CSE grad student] or dept consent

EE 5164. Semiconductor Properties and Devices II. (3 cr. ; Student Option; Every Spring)

Principles/properties of semiconductor devices. Charge control in different FETs, transport, modeling. Bipolar transistor models (Ebers-Moll, Gummel-Poon), heterostructure bipolar transistors. Special devices. prereq: 5163 or instr consent

EE 5171. Microelectronic Fabrication. (3 cr. [max 4 cr.] ; Student Option; Every Fall)

Fabrication of microelectronic devices. Silicon integrated circuits, GaAs devices. Lithography, oxidation, diffusion. Process integration of various technologies, including CMOS, double poly bipolar, and GaAs MESFET. prereq: CSE grad student or dept consent

EE 5173. Basic Microelectronics Laboratory. (1 cr. ; Student Option; Every Fall)

Students fabricate a polysilicon gate, single-layer metal, NMOS chip, performing 80 percent of processing, including photolithography, diffusion, oxidation, and etching. In-process measurement results are compared with final electrical test results. Simple circuits are used to estimate technology performance. prereq: [[5171 or concurrent registration is required (or

allowed) in 5171], CSE grad student] or dept consent

EE 5181. Micro and Nanotechnology by Self Assembly. (; 3 cr. ; Student Option; Spring Odd Year)

Self-assembly process of micro and nano structures for realization of 1-, 2-, 3-dimensional micro- and nano-devices. Micro and nanoscale fabrication by electrostatic, magnetic, surface tension, Capillary, intrinsic and extrinsic forces. Nanoscale lithographic patterning. Devices packaging, Self-healing process. prereq: EE 3161, Phys 1302

EE 5231. Linear Systems and Optimal Control. (; 3 cr. ; Student Option; Every Fall)

Properties and modeling of linear systems. Linear quadratic and linear-quadratic-Gaussian regulators. Maximum principle. prereq: [3015, CSE grad student] or instr consent

EE 5235. Robust Control System Design. (; 3 cr. ; Student Option; Every Spring)

Development of control system design ideas; frequency response techniques in design of single-input/single-output (and MI/MO) systems. Robust control concepts. CAD tools. prereq: CSE grad, 3015, 5231 or instr consent

EE 5239. Introduction to Nonlinear Optimization. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Nonlinear optimization. Analytical/computational methods. Constrained optimization methods. Convex analysis, Lagrangian relaxation, non-differentiable optimization, applications in integer programming. Optimality conditions, Lagrange multiplier theory, duality theory. Control, communications, management science applications. prereq: [3025, Math 2373, Math 2374, CSE grad student] or dept consent

EE 5241. Optimal Control and Reinforcement Learning. (3 cr. ; Student Option; Every Fall)

(Prereq-CSE grad student or instructor consent) A wide variety of control problems such as "walk from home to school via the shortest path" or "maintain a constant temperature" can be modeled using optimization. This course will survey a variety of methods for modeling and solving optimal control problems. In particular, we will cover numerical optimal control, model predictive control, system identification, dynamic programming, and reinforcement learning. Examples from robotics and aerospace systems will be given.

EE 5251. Optimal Filtering and Estimation. (; 3 cr. ; Student Option; Every Fall)

Basic probability theory, stochastic processes. Gauss-Markov model. Batch/recursive least squares estimation. Filtering of linear/nonlinear systems. Continuous-time Kalman-Bucy filter. Unscented Kalman filter, particle filters. Applications. prereq: [[[MATH 2243, STAT 3021] or equiv], CSE grad student] or dept consent; 3025, 4231 recommended

EE 5271. Robot Vision. (3 cr. ; Student Option; Every Fall)

Modern visual perception for robotics that includes position and orientation, camera

model and calibration, feature detection, multiple images, pose estimation, vision-based control, convolutional neural networks, reinforcement learning, deep Q-network, and visuomotor policy learning. [Math 2373 or equivalent; EE 1301 or equivalent basic programming course]

EE 5301. VLSI Design Automation I. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Basic graph/numerical algorithms. Algorithms for logic/high-level synthesis. Simulation algorithms at logic/circuit level. Physical-design algorithms. prereq: [2301, CSE grad student] or dept consent

EE 5302. VLSI Design Automation II. (; 3 cr. ; Student Option; Every Spring)

Basic algorithms, computational complexity. High-level synthesis. Test generation. Power estimation. Timing optimization. Current topics. prereq: [5301, CSE grad student] or dept consent

EE 5323. VLSI Design I. (; 3 cr. ; Student Option; Every Fall)

Combinational static CMOS circuits. Transmission gate networks. Clocking strategies, sequential circuits. CMOS process flows, design rules, structured layout techniques. Dynamic circuits, including Domino CMOS and DCVS. Performance analysis, design optimization, device sizing. prereq: [2301, 3115, CSE grad student] or dept consent

EE 5324. VLSI Design II. (; 3 cr. ; Student Option; Every Spring)

CMOS arithmetic logic units, high-speed carry chains, fast CMOS multipliers. High-speed performance parallel shifters. CMOS memory cells, array structures, read/write circuits. Design for testability, including scan design and built-in self test. VLSI case studies. prereq: [5323, CSE grad student] or dept consent

EE 5327. VLSI Design Laboratory. (; 3 cr. ; Student Option; Every Spring)

Complete design of an integrated circuit. Designs evaluated by computer simulation. prereq: [4301, [5323 or concurrent registration is required (or allowed) in 5323], CSE grad student] or dept consent

EE 5329. VLSI Digital Signal Processing Systems. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Programmable architectures for signal/media processing. Data-flow representation. Architecture transformations. Low-power design. Architectures for two's complement/redundant representation, carry-save, and canonic signed digit. Scheduling/allocation for high-level synthesis. prereq: [[5323 or concurrent registration is required (or allowed) in 5323], CSE grad student] or dept consent

EE 5333. Analog Integrated Circuit Design. (; 3 cr. ; Student Option; Every Fall)

Fundamental circuits for analog signal processing. Design issues associated with MOS/BJT devices. Design/testing of circuits. Selected topics (e.g., modeling of basic IC components, design of operational amplifier or comparator or analog sampled-data circuit

filter). prereq: [3115, CSE grad student] or dept consent

EE 5334. CMOS VLSI Data Converter Design. (3 cr. ; Student Option; Spring Odd Year)

This course covers the design of modern CMOS VLSI data converters. After a brief introduction to sampling theory and quantization noise the course will focus on various Nyquist rate and oversampled converters. In particular, we will discuss flash, pipelined, successive approximation and sigma-delta converters. The course will involve a design project that will require the use of the Cadence design tools or equivalent analog/digital VLSI design software.

EE 5340. Introduction to Quantum Computing and Physical Basics of Computing. (3 cr. ; Student Option; Every Spring)

Physics of computation will explore how physical principles and limits have been shaping paradigms of computing. A key goal of this course is to understand how (and to what extent) a paradigm shift in computing can help with emerging energy problems. Topics include physical limits of computing, coding and information theoretical foundations, computing with beyond-CMOS devices, reversible computing, quantum computing, stochastic computing. A previous course in computer architecture is suggested but not required.

EE 5351. Applied Parallel Programming. (3 cr. ; Student Option; Every Fall)

Parallel programming/architecture. Application development for many-core processors. Computational thinking, types of parallelism, programming models, mapping computations effectively to parallel hardware, efficient data structures, paradigms for efficient parallel algorithms, application case studies. prereq: [4363 or equivalent], programming experience (C/C++ preferred)

EE 5355. Algorithmic Techniques for Scalable Many-core Computing. (3 cr. ; Student Option; Spring Odd Year)

Algorithm techniques for enhancing the scalability of parallel software: scatter-to-gather, problem decomposition, binning, privatization, tiling, regularization, compaction, double-buffering, and data layout. These techniques address the most challenging problems in building scalable parallel software: limited parallelism, data contention, insufficient memory bandwidth, load balance, and communication latency. Programming assignments will be given to reinforce the understanding of the techniques. prereq: basic knowledge of CUDA, experience working in a Unix environment, and experience developing and running scientific codes written in C or C++. Completion of EE 5351 is not required but highly recommended.

EE 5364. Advanced Computer Architecture. (; 3 cr. ; Student Option; Every Fall)

Instruction set architecture, processor microarchitecture. Memory and I/O systems. Interactions between computer software and hardware. Methodologies of computer

design. prereq: [[4363 or CSci 4203], CSE grad student] or dept consent

EE 5371. Computer Systems Performance Measurement and Evaluation. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Tools/techniques for analyzing computer hardware, software, system performance. Benchmark programs, measurement tools, performance metrics. Deterministic/probabilistic simulation techniques, random number generation/testing. Bottleneck analysis. prereq: [4363 or 5361 or CSci 4203 or 5201], [CSE grad student] or dept consent

EE 5373. Data Modeling Using R. (1 cr. ; A-F only; Periodic Fall & Spring)
Introduction to data modeling and the R language programming. Multi-factor linear regression modeling. Residual analysis and model quality evaluation. Response prediction. Training and testing. Integral lab. An introductory course in probability and statistics is suggested but not required; basic programming skills in some high-level programming language, such as C/C++, Java, Fortran, etc also suggested.

EE 5389. Introduction to Predictive Learning. (3 cr. ; Student Option; Fall Even Year)
Empirical inference and statistical learning. Classical statistical framework, model complexity control, Vapnik-Chervonenkis (VC) theoretical framework, philosophical perspective. Nonlinear methods. New types of inference. Application studies. prereq: EE 3025, STAT 3022 or equivalent; computer programming or MATLAB or similar environment is recommended.

EE 5393. Circuits, Computation, and Biology. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Connections between digital circuit design and synthetic/computational biology. Probabilistic, discrete-event simulation. Timing analysis. Information-Theoretic Analysis. Feedback in digital circuits/genetic regulatory systems. Synthesizing stochastic logic and probabilistic biochemistry.

EE 5501. Digital Communication. (; 3 cr. ; Student Option; Every Fall)
Theory/techniques of modern digital communications. Communication limits. Modulation/detection. Data transmission over channels with intersymbol interference. Optimal/suboptimal sequence detection. Equalization. Error correction coding. Trellis-coded modulation. Multiple access. prereq: [3025, 4501, CSE grad student] or dept consent

EE 5505. Wireless Communication. (; 3 cr. ; Student Option; Every Spring)
Introduction to wireless communication systems. Propagation modeling, digital communication over fading channels, diversity and spread spectrum techniques, radio mobile cellular systems design, performance evaluation. Current European, North American, and Japanese wireless networks. prereq: [4501, CSE grad student] or dept consent; 5501 recommended

EE 5531. Probability and Stochastic Processes. (; 3 cr. ; Student Option; Every Fall)
Probability, random variables and random processes. System response to random inputs. Gaussian, Markov and other processes for modeling and engineering applications. Correlation and spectral analysis. Estimation principles. Examples from digital communications and computer networks. prereq: [3025, CSE grad student] or dept consent

EE 5542. Adaptive Digital Signal Processing. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Design, application, and implementation of optimum/adaptive discrete-time FIR/IIR filters. Wiener, Kalman, and Least-Squares. Linear prediction. Lattice structure. LMS, RLS, and Levinson-Durbin algorithms. Channel equalization, system identification, biomedical/sensor array processing, spectrum estimation. Noise cancellation applications. prereq: [4541, 5531, CSE grad student] or dept consent

EE 5545. Digital Signal Processing Design. (; 3 cr. ; Student Option; Every Spring)
Real-time implementation of digital signal processing (DSP) algorithms, including filtering, sample-rate conversion, and FFT-based spectral analysis. Implementation on a modern DSP Platform. Processor architecture. Arithmetic operations. Real-time processing issues. Processor limitations. Integral laboratory. prereq: [4541, CSE grad student] or dept consent

EE 5549. Digital Signal Processing Structures for VLSI. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Pipelining. Parallel processing. Fast convolution. FIR, rank-order, IIR, lattice, adaptive digital filters. Scaling and roundoff noise. DCT. Viterbi coders. Lossless coders, video compression. prereq: [4541, CSE grad student] or dept consent

EE 5561. Image Processing and Applications: From linear filters to artificial intelligence. (; 3 cr. ; Student Option; Every Spring)
Image enhancement, denoising, segmentation, registration, and computational imaging. Sampling, quantization, morphological processing, 2D image transforms, linear filtering, sparsity and compression, statistical modeling, optimization methods, multiresolution techniques, artificial intelligence concepts, neural networks and their applications in classification and regression tasks in image processing. Emphasis is on the principles of image processing. Implementation of algorithms in Matlab/Python and using deep learning frameworks. prereq: [4541, 5581, CSE grad student] or instr consent

EE 5581. Information Theory and Coding. (; 3 cr. ; Student Option; Fall Even Year)
Source/channel models, codes for sources/channels. Entropy, mutual information, capacity, rate-distortion functions. Coding theorems. prereq: [5531, CSE grad student] or dept consent

EE 5583. Error Control Coding. (; 3 cr. ; Student Option; Periodic Spring)
Error-correcting codes. Concepts, properties, polynomial representation. BCH, Golay, Reed-Muller/Reed-Solomon codes. Convolutional codes. Iterative codes. prereq: [[3025, Math 2373] or equiv], [CSE grad student or dept consent]

EE 5585. Data Compression. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Source coding in digital communications and recording. Codes for lossless compression. Universal lossless codes. Lossless image compression. Scalar and vector quantizer design. Loss source coding theory. Differential coding, trellis codes, transform/subband coding. Analysis/synthesis schemes. prereq: CSE grad student or dept consent

EE 5601. Introduction to RF/Microwave Engineering. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Fundamentals of EM theory and transmission lines concepts. Transmission lines and network analysis. CAD tool. Lumped circuit component designs. Passive circuit components. Connectivity to central communication theme. prereq: [3601, CSE grad student] or dept consent

EE 5602. RF/Microwave Circuit Design. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Transmission lines, network analysis concepts. CAD tools for passive/active designs. Diode based circuit designs (detectors, frequency multipliers, mixers). Transistor based circuit design (amplifiers, oscillators, mixer/doubler). prereq: [5601 or equiv], [CSE grad student or instr consent]

EE 5607. Wireless Hardware System Design. (; 3 cr. ; Student Option; Every Spring)
Review of random processes, noise, modulation, and error probabilities. Basis antenna operation, power transfer between antennas, rf propagation phenomena, transmitters/receivers, transmission lines, effect of antenna performance on system performance, rf/microwave device technologies, small-signal amplifiers, mixers, power amplifiers, rf oscillators.

EE 5611. Plasma-Aided Manufacturing. (; 4 cr. ; A-F or Audit; Periodic Fall & Spring)
Manufacturing using plasma processes. Plasma properties as a processing medium. Plasma spraying, welding and microelectronics processing. Process control and system design; industrial speakers. Cross-disciplinary experience between heat transfer design issues and manufacturing technology. prereq: [[ME 3321, ME 3322] or equiv], [upper div CSE or grad student] or dept consent

EE 5613. RF/Microwave Circuit Design Laboratory. (; 2 cr. ; A-F only; Every Spring)
Scattering parameters, planar lumped circuits, transmission lines, RF/microwave substrate materials, matching networks/tuning elements, resonators, filters, combiners/dividers, couplers. Integral lab. prereq: [[5601 or concurrent registration is required (or allowed) in 5601], CSE grad student] or dept consent

EE 5616. Antenna Theory and Design. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Antenna performance parameters, vector potential/radiation integral, wire antenna structures, broadband antenna structures, microstrips/aperture theory, antenna measurements. prereq: [[5601 or concurrent registration is required (or allowed) in 5601], CSE grad student] or dept consent

EE 5621. Physical Optics. (; 3 cr. ; Student Option; Every Spring)
Physical optics principles, including Fourier analysis of optical systems/images, scalar diffraction theory, interferometry, and coherence theory. Diffractive optical elements, holography, astronomical imaging, optical information processing, microoptics. prereq: [3015, CSE grad student] or dept consent

EE 5622. Physical Optics Laboratory. (; 1 cr. ; Student Option; Every Spring)
Fundamental optical techniques. Diffraction and optical pattern recognition. Spatial/temporal coherence. Interferometry. Speckle. Coherent/incoherent imaging. Coherent image processing. Fiber Optics. prereq: [[5621 or concurrent registration is required (or allowed) in 5621], CSE grad student] or dept consent

EE 5624. Optical Electronics. (; 4 cr. ; Student Option; Every Fall)
Fundamentals of lasers, including propagation of Gaussian beams, optical resonators, and theory of laser oscillation. Polarization optics, electro-optic, acousto-optic modulation, nonlinear optics, phase conjugation. prereq: [[3601 or Phys 3002], CSE grad student] or dept consent

EE 5627. Optical Fiber Communication. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Components/systems aspects of optical fiber communication. Modes of optical fibers. Signal degradation/dispersion. Optical sources/detectors. Digital/analog transmissions systems. Direct/coherent detection. Optical amplifiers. Optical soliton propagation. prereq: [3015, 3601, CSE grad student] or dept consent

EE 5640. Introduction to Nano-Optics. (3 cr. ; Student Option; Every Fall)
This course will cover the physics and technology of nano-optics and plasmonics and their potential applications in biochemical sensing, super-resolution imaging, optical trapping, light emission, and spectroscopy. The following topics will be covered: - Maxwell's equations, E&M of metals - Fresnel's equations, light propagation in periodic media - Physics of surface plasmon waves - Metallic waveguides: metal-insulator-metal vs. insulator-metal-insulator - Optical antennas - Noble metal nanoparticles: Synthesis, optical properties, and applications - Optical biosensors based on surface plasmon resonance (SPR) - Surface enhanced Raman scattering (SERS) - Surface enhanced Infrared Absorption (SEIRA) - Super-resolution imaging and near-field optical microscopy - Light transmission through nano-apertures (extraordinary optical transmission) - Plasmonics at long wavelengths (infrared and terahertz) - Plasmonics in atomically thick

materials Knowledge of Maxwell's equations, Matlab, or Mathematica coding is suggested but not required.

EE 5649. Infrared Devices and Technology. (3 cr. ; Student Option; Periodic Fall)
One of the most economically and scientifically important but relatively unknown device technologies is infrared detection, sensing and imaging. Today the application space is much larger than traditional military applications and includes weather and climate satellites, industrial process control, petrochemical analysis, pollution sensing, astronomy, and biomedical clinical diagnostics. This class covers the basic physics of infrared emission and absorption in solid-state materials, molecules, and the atmosphere. It also discusses detector technology (with particular emphasis on types of semiconductor and quantum-dot photon detectors, microbolometers, and thermoelectric detectors) and the infrared spectroscopy of molecules to show why the infrared is so important in the study of chemical, biological, and atmospheric systems. The class will also examine types of commonly used spectrometers: cavity, dispersive, and FTIR and sampling of important applications: passive and active standoff detection, satellite climate and atmospheric monitoring, industrial and petrochemical analysis, and LIDAR. Other topics will be introduced as time allows.

EE 5653. Physical Principles of Magnetic Materials. (; 3 cr. ; Student Option; Every Fall)
Physics of diamagnetism, paramagnetism, ferromagnetism, antiferromagnetism, ferrimagnetism. Ferromagnetic phenomena. Static/dynamic theory of micromagnetics, magneto-optics, and magnetization dynamics. Magnetic material applications. prereq: CSE grad student or dept consent

EE 5655. Magnetic Recording. (; 3 cr. ; Student Option; Periodic Spring)
Magnetic fundamentals, recording materials, idealized models of magnetic records/reproduction, analytic models of magnetic record heads, sinusoidal magnetic recording, digital magnetic recording, magnetic recording heads/media, digital recording systems. prereq: CSE grad student or dept consent

EE 5657. Physical Principles of Thin Film Technology. (; 4 cr. ; Student Option; Every Fall)
Fabrication, characterization, and application of thin film and nanostructured materials and devices. Focuses on vacuum deposition. Materials science. Hands-on, team-based labs.

EE 5670. Spintronic Devices. (3 cr. ; Student Option; Spring Odd Year)
Basic concepts and physical principles underlying spintronic devices; engineering designs and basic features of matured spintronic devices: GMR and MTJ sensor, MRAM, etc; new opportunities and engineering designs and challenges of spintronic devices: STT-RAM, spin torque oscillator and all spin logic, etc.

EE 5705. Electric Drives in Sustainable Energy Systems. (; 3 cr. ; Student Option; Periodic Spring)

Role of electric drives in wind-electric systems, inertial storage, elec/hybrid vehicles. AC machines for energy-efficient operation using d-q axis modeling. Vector-/direct-torque-controlled induction motor drives. Permanent-magnet and interior-permanent magnet ac motor drives. Sensorless drives. Voltage space-vector modulation technology. prereq: [4701, CSE grad student] or dept consent

EE 5707. Electric Drives in Sustainable Energy Systems Laboratory. (; 1 cr. ; Student Option; Periodic Spring)
Lab to accompany 5705. prereq: 5705 or concurrent registration is required (or allowed) in 5705

EE 5721. Power Generation Operation and Control. (; 3 cr. ; Student Option; Spring Odd Year)
Engineering aspects of power system operation. Economic analysis of generation plants & scheduling to minimize total cost of operation. Scheduling of hydro resources and thermal plants with limited fuel supplies. Loss analysis, secure operation. State estimation, optimal power flow. Power system organizations. prereq: [4721, CSE grad student] or dept consent

EE 5741. Advanced Power Electronics. (; 3 cr. ; Student Option; Periodic Spring)
Physics of solid-state power devices, passive components, magnetic optimization, advanced topologies. Unity power factor correction circuits, EMI issues, snubbers, soft switching in dc/ac converters. Practical considerations. Very low voltage output converters. Integrated computer simulations. prereq: CSE grad student] or dept consent

EE 5745. Wind Energy Essentials. (2 cr. ; Student Option; Every Fall)
Design, planning, development/operation of wind energy facilities. Wind turbine generator types, wind forecasting/assessment, wind farm project development, grid integration, wind turbine controls, blade aerodynamics/acoustics, mechanical/hydrostatic transmissions, materials/structural reliability, wind turbine foundations, radar interference, role of public policy in wind energy. prereq: CSE grad student or dept consent

EE 5811. Biological Instrumentation. (; 3 cr. ; Student Option; Spring Odd Year)
This course will cover the physics and technology of biological instruments. The operating principles of optical, electrical, and mechanical biosensors will be discussed, followed by transport and delivery of biomolecules to the sensors. Techniques to manufacture these sensing devices, along with microfluidic packaging, will be covered. Lectures will be complemented by lab demo sessions to give students hands-on experiences in microfluidic chip fabrication, microscopy, and particle trapping experiments.

EE 5940. Special Topics in Electrical Engineering I. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
Special topics in electrical and computer engineering. Topics vary.

EE 5960. Special Topics in Electrical Engineering III. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)
Special topics in electrical and computer engineering. Topics vary.

EE 5980. Teaching, Grading, and Lab Instruction Seminar. (1 cr. ; No Grade Associated; Every Fall)

The purpose of this course is to provide guidance and instruction in teaching, grading, and laboratory procedures. In addition, you will be provided with structured links to self-help resources, support from faculty, peers, and staff that will improve your effectiveness and efficiency while teaching and grading. The course is broken out into four components:
- A pre-semester orientation and series of three workshops (4 hours) - A series of bi-weekly seminars spaced throughout the semester (approx. 4 hours) - A private teaching consultation by CEI (3 hours, lab TAs only) - A wrap-up discussion session (2 hours)

EE 5990. Curricular Practical Training. (; 1-2 cr. [max 6 cr.] ; S-N or Audit; Every Fall, Spring & Summer)

Industrial work assignment involving advanced electrical engineering technology. Review by faculty member. Final report covering work assignment. prereq: Grad student, instr consent

Endodontics (ENDO)

ENDO 5300. Endodontics Orientation. (; 2 cr. ; A-F or Audit; Every Summer)

Clinic policies/procedures. Anatomy, access, evaluation, diagnosis. Pulp biology/microbiology. Etiology/cracks. Instrumentation. Obturation. Management of pain. Lab.

ENDO 5304. Advanced Clinical

Endodontics. (; 1-6 cr. ; A-F or Audit; Every Fall & Summer)

Diagnosis/treatment of clinical cases. Complex cases, new/unique techniques.

ENDO 5305. Advanced Clinical

Endodontics. (; 1-6 cr. ; A-F or Audit; Every Fall)

Diagnosis/treatment of clinical cases. Complex cases, new techniques. prereq: 5304

ENDO 5306. Advanced Clinical

Endodontics. (; 1-6 cr. ; A-F or Audit; Every Spring)

Diagnosis/treatment of clinical cases. Complex cases, new techniques.

ENDO 5307. Advanced Clinical

Endodontics. (; 1-6 cr. ; A-F or Audit; Every Summer)

Diagnosis/treatment of clinical cases. Complex cases, new techniques. prereq: 5306

ENDO 5308. Advanced Clinical

Endodontics. (; 1-6 cr. ; A-F or Audit; Every Fall)

Diagnosis/treatment of clinical cases. Complex cases, new techniques. prereq: 5307, dept consent

ENDO 5309. Advanced Clinical

Endodontics. (; 1-6 cr. ; A-F or Audit; Every Spring)

Diagnosis/treatment of clinical cases. Complex cases, new techniques. prereq: 5308

ENDO 5310. Advanced Clinical

Endodontics. (; 1-6 cr. ; A-F or Audit; Every Summer)

Diagnosis/treatment of clinical cases. Complex cases, new techniques. prereq: 5309

ENDO 5311. Advanced Endodontic

Emergency. (; 1 cr. ; S-N or Audit; Every Summer)

Each student is assigned weekly periods (8 hours/week) and is responsible for all emergencies in the endodontic clinic during this time. prereq: dept consent

ENDO 5312. Advanced Endodontic

Emergency. (; 1 cr. ; S-N or Audit; Every Fall)
Students assigned 8 hrs/wk, are responsible for emergencies in clinic. prereq: 5311

ENDO 5313. Advanced Endodontic

Emergency. (; 1 cr. [max 2 cr.] ; S-N or Audit; Every Spring)

Students assigned 8 hrs/wk, are responsible for emergencies in clinic. prereq: 5312

ENDO 5314. Advanced Endodontic

Emergency. (; 1 cr. ; S-N or Audit; Every Summer)

Students assigned 8 hrs/wk, are responsible for emergencies in clinic. prereq: 5313

ENDO 5315. Advanced Endodontic

Emergency. (; 1 cr. ; S-N or Audit; Every Fall)
Students assigned 8 hrs/wk, are responsible for emergencies in clinic. prereq: 5314, dept consent

ENDO 5316. Advanced Endodontic

Emergency. (; 1 cr. ; S-N or Audit; Every Spring)

Students assigned 8 hrs/wk, are responsible for emergencies in clinic. prereq: 5315

ENDO 5317. Advanced Endodontic

Emergency. (; 1 cr. ; S-N or Audit; Every Summer)

Students assigned 8 hrs/wk, are responsible for emergencies in clinic. prereq: 5316

ENDO 5329. Clinical Seminar I. (; 1 cr. ; A-F or Audit; Every Fall)

Oral/visual presentation of endodontic cases with follow up. Presentation of surgery cases before surgery. prereq: dept consent

ENDO 5330. Review of Cases. (; 1-2 cr. ; A-F or Audit; Every Spring & Summer)

Oral/visual presentation of endodontic cases with follow up. Presentation of cases before surgery. prereq: 5329

ENDO 5331. Review of Cases. (; 1 cr. ; A-F or Audit; Every Fall)

Oral/visual presentation of endodontic cases with follow up. Presentation of cases before surgery. prereq: 5330

ENDO 5332. Review of cases. (; 1 cr. ; A-F or Audit; Every Spring)

Oral and visual presentation of endodontic cases with follow up. Presentations of surgery cases before surgeries. prereq: dept consent

ENDO 5400. Advanced Endodontics for

the General Dentist. (; 1 cr. ; S-N or Audit; Periodic Fall & Spring)

Advanced diagnosis/treatment of endodontics in clinic/office setting. Internship. prereq: dept consent

ENDO 5600. Endodontic Histopathology. (; 1 cr. [max 2 cr.] ; S-N or Audit; Periodic Spring & Summer)

Physiology of pulpal/periapical diseases. Normal histology of pulpal/periapical tissues. Histopathology of abnormal pulpal/periapical tissues. Differential diagnosis of periapical radiolucencies.

English as a Second Language (ESL)

ESL 3001. Integrated Skills for Academic English. (; 2 cr. [max 4 cr.] ; Student Option; Every Fall & Spring)

This course focuses on the academic and language skills necessary to thrive in a U.S. university setting. Students will strengthen English language communication skills, both written and oral, that will help them succeed in their other content area courses at the University. Focus is on setting and achieving goals for academic success, understanding and using academic resources for the U.S. university, and building strategies and language for more effective communication with instructors and peers in academic writing, presentations, discussions, and group projects. Prerequisite: non-native speaker of English

ESL 3006. English for Business

Interactions. (2 cr. [max 4 cr.] ; Student Option; Every Fall & Spring)

This 2-credit course is designed for high-intermediate to advanced non-native speakers of English who are currently business majors or in a closely related major. The goal of this course is to help students polish their English skills for effective and culturally appropriate communication in the world of business. The course covers topics such as email for business communication, successful group work, cultural values, communication styles, interviewing, networking, and delivering effective presentations. This course has two major objectives: 1) to help students improve their English skills for internship- or job-seeking purposes, and 2) to help students improve their language, communication, and teamwork skills for use in a professional context in the U.S. prereq: non-native speaker of English

ESL 3007. English for Physics. (1 cr. [max 2 cr.] ; Student Option; Every Fall & Spring)

This course is designed for non-native speakers of English who have high-intermediate to advanced English skills and are currently enrolled in Physics 1301W. The goal of this course is to help students further develop the English and academic skills needed to be successful in their physics class. Students taking this course will gain more support and practice with the conventions of writing scientific lab reports, applying the concepts of academic integrity, interacting and participating in lab-type discussions and small group projects, using academic listening and note-taking strategies, and identifying campus resources for additional academic/social support. This course also

equips students with techniques to aid in their continual improvement of English skills for science and engineering contexts beyond the class. Prerequisite: non-native speaker of English

ESL 3008. English for Chemistry. (1 cr. ; Student Option; Every Fall & Spring)
This course is designed for non-native speakers of English who are currently enrolled in an introductory chemistry course (CHEM 1061 or 1065). Students taking this course will gain more support and practice with the conventions of writing scientific lab reports, interacting and participating in classroom and lab discussions, interpreting authentic texts (both written and aural), applying the concepts of academic integrity, and understanding the cultural expectations for seeking additional academic/social support. One of the goals of this course is to equip participants with techniques to aid in continual improvement of English skills for science contexts beyond the class.

ESL 3102. English Grammar for Academic Purposes. (; 4 cr. [max 8 cr.] ; Student Option; Every Fall & Spring)

In this course, students work on increasing their accuracy and range in English grammar. Topics that are especially relevant to academic writing, such as conciseness and smooth connections between sentences, are emphasized. Among the traditional topics of grammar, these are likely to be included: subordination, coordination, and transition expressions; tense, aspect, and associated adverbials; gerunds, infinitives, and other types of complementation; and lexical grammar--the grammar associated with individual words. Activities and regular assignments improve students' ability to analyze grammar, including their own mistakes, and to use English grammar more effectively. Prerequisite: a first language other than English

ESL 3202W. Academic Reading and Composition. (WI; 5 cr. ; Student Option; Every Fall & Spring)

This course is designed for students who are enrolled in degree programs at the University of Minnesota. In this course students will build and refine advanced-level skills and strategies, including audience awareness and incorporating sources, for reading authentic college-level texts and writing multi-draft papers in English. Students will read essays and articles on a variety of topics from multiple sources. Students will improve their ability to identify main ideas and details, analyze and critique support, and respond with their own ideas in writing and discussion. Students will plan and develop multi-draft papers to practice applying persuasive and expository modes of writing to accomplish specific purposes as writers and also develop informal writing skills. Prerequisite: a first language other than English. prereq: non-native speaker of English.

ESL 3402. Research Writing for the American University. (; 4 cr. [max 8 cr.] ; Student Option; Every Fall & Spring)

This course enables students to develop the methods of citation, conventions of style

and organization, and critical reading and thinking skills necessary for writing college-level research papers in English. Students apply a process approach to produce an academic research paper on a topic of interest. Structure and vocabulary usage are addressed individually. In addition, students learn how to use library resources effectively and become familiar with writing resources on campus. Prerequisite: a first language other than English

ESL 3502. Academic Listening and Speaking. (; 5 cr. [max 10 cr.] ; Student Option; Every Fall & Spring)

In this course students will develop skills and strategies for listening to authentic academic content and for speaking in discussions and presentations on academic topics in English. Students will listen to academic lectures, develop note-taking skills, and synthesize and respond to content. This course will help students further develop both their fluency and accuracy through work on pronunciation, spoken grammar, and academic vocabulary. Students will develop skills for making effective academic presentations in English. prereq: a first language other than English

ESL 3550. Pronunciation Improvement. (; 2 cr. [max 4 cr.] ; Student Option; Every Summer)

This course provides an overview of pronunciation in English. Pronunciation Improvement is designed for advanced students who want to polish their pronunciation skills in English. In order to improve awareness and production of sounds in spoken English, a variety of areas of pronunciation are covered while paying special attention to individual needs. Students will also be equipped with techniques for independent pronunciation practice. Topics covered include word stress, sentence stress, rhythm, intonation, and linking. prereq: a first language other than English

ESL 3551. English Pronunciation. (; 4 cr. [max 8 cr.] ; Student Option; Every Fall & Spring)

This course is designed for students who want to polish their pronunciation skills in English and become more aware of the sounds of the English language. In order to improve students' ability to understand and pronounce English, a variety of areas of pronunciation will be covered while paying special attention to individual difficulties. Students will also be equipped with techniques to practice pronunciation improvement on their own. Topics covered include English sounds (individually and in combination with other sounds), word stress, sentence stress, rhythm, intonation, linking, understanding fast speech, pronunciation, and spelling connections. Open to students, visiting scholars, and members of the community with advanced English skills. Prerequisite: a first language other than English

ESL 3602. Speaking for Academic Purposes. (; 4 cr. [max 8 cr.] ; Student Option; Periodic Fall & Spring)

The goal of this course is to help advanced English speakers develop the skills needed to participate in academic interactions at the American university. The course covers

presentations, group presentations, seminar-style discussions, and informal exchanges. In this class, students learn to present themselves professionally and socially in academic settings in English with accuracy, variety, and flexibility. They learn to organize and outline academic presentations, present information clearly and effectively, explain concepts and processes from their academic field, involve audience members and respond to questions, and monitor and improve their spoken fluency, grammar, and pronunciation. Prerequisite: a first language other than English

ESL 3900. Special Topics in ESL. (; 1-5 cr. [max 10 cr.] ; Student Option; Every Fall & Spring)

Topics vary. prereq: Non-native speaker of English

ESL 5006. English for Business Interactions. (2 cr. [max 4 cr.] ; Student Option; Every Fall & Spring)

This course is designed for students who are currently in a graduate program in business or in a closely related graduate program. The goal of this course is to help students polish their English skills for effective and culturally appropriate communication in the world of business. The course covers topics such as email for business communication, successful group work, cultural values, communication styles, interviewing, networking, and delivering effective presentations. This course has two major objectives: 1) to help students improve their English skills for internship- or job-seeking purposes, and 2) to help students improve their language, communication, and teamwork skills for use in a professional context in the U.S. Prerequisites: Graduate student, a first language other than English

ESL 5008. Speaking for Professional Settings. (2 cr. ; Student Option; Every Fall & Spring)

This course is designed for graduate students who speak a first language other than English and are seeking to improve their English speaking skills for professional contexts. The goal of this course is to help students refine their English skills for effective and culturally appropriate communication in specific professional situations. The course covers topics such as small talk, networking, interviewing, and presentation skills. Students will increase their confidence to communicate in a variety of settings including informal exchanges, career fairs, conference presentations, and job interviews. Prerequisite: Graduate student, a first language other than English

ESL 5009. Advanced English Conversation Skills for Professionals. (2 cr. ; Student Option; Periodic Fall & Spring)

This hybrid course is designed for graduate students who speak a first language other than English and are seeking to improve their English conversation skills for informal, professional settings. The goal of this course is to build fluency and apply culturally appropriate strategies to be effective communicators in English with peers, professors, and colleagues in graduate and post-graduate

work. Participants will increase their fluency and confidence to communicate in a variety of situations, and on a range of topics, by engaging in speaking practice outside of class such as informational interviews, peer networking, professional development events, and co-curricular activities. Prerequisites: Graduate student, a first language other than English

ESL 5302. Academic Writing. (; 4 cr. [max 8 cr.] ; Student Option; Every Fall & Spring) This course is designed for graduate students who speak a first language other than English. The course focuses on foundational writing skills and emphasizes the writing process - developing ideas, drafting, revising, and editing. Guided textual analyses of discipline-specific readings are used to develop writing skills through the close examination of strategies employed by accomplished writers. Through ongoing, active participation, students learn to (1) match writing to audience and purpose, (2) produce different genres of academic writing, (3) incorporate discipline-specific source material into writing, and (4) critique their writing and that of others. Gains in writing skills culminate in students' ability to transfer acquired skills into discipline-specific writing. Through development of personal voice and an appreciation for the importance of the credibility of the writer, students also learn to recognize and avoid plagiarism. Problems with sentence structure, lexical grammar, and diction are addressed individually. Prerequisites: Graduate student, a first language other than English

ESL 5900. Special Topics in English Language. (; 1-5 cr. [max 15 cr.] ; Student Option; Periodic Fall, Spring & Summer) Topics vary. prereq: Non-native speaker of English

English: Literature (ENGL)

ENGL 1001W. Introduction to Literature: Poetry, Drama, Narrative. (LITR,WI; 4 cr. ; Student Option; Every Fall, Spring & Summer) This is a writing-intensive course that also meets the Literature Core requirement. From epic battles against monsters in legendary kingdoms to stories about characters in worlds similar to our own, literature engages us with the diverse perspectives and experiences that make up our communities and world. ENGL 1001W introduces students to ways of understanding and appreciating literature in English across cultures and historical periods. Throughout this course, we will develop skills to help us understand literature, especially the ability to read language closely (a skill valuable in many disciplines beyond literature). We will explore how writers use language and literary aspects, such as genre, voice, tone, symbol, motif, theme, imagery, narrative, and form. We also will learn how to write about literature, sharing our interpretations of how and why literary works have meaning for ourselves and others, while viewing them through critical cultural lenses, including ways to understand how gender, race, ethnicity, religion, and class can function in literary texts.

ENGL 1003W. Women Write the World. (GP,WI,LITR; 3 cr. ; Student Option; Every Fall) Concepts in literary studies. Poems, plays, short stories, novels, essays, letters by women from different parts of world. Focuses on lives, experiences, and literary expression of women, including basic concepts of women's studies.

ENGL 1011. Laughter and Literature Through the Ages. (CIV,LITR; 3 cr. ; Student Option; Every Spring) Explaining how comedy differs from tragedy, Aristotle observed that "Man is the only animal who laughs and cries." Like our other emotions, laughter and grief are not rational (a purely reasonable animal would not be swayed by feelings), and that's why any attempt to rationalize either of these paradoxical emotions is likely to fail. Traditionally, grief is separated from laughter by using the twin categories of comic and tragic. But even in drama or literature, grief is not utterly desperate and laughter is not always funny. This last paradox -that laughter need not be comic- serves as a basic axiom for our course, which will study not just the laughter presented in literature but historical (e.g., classical and medieval) examples. Instead of focusing on contradictory generic theories, this course examines laughter in specific dramatic, narrative and historical works from ancient Greece and Rome down through the medieval and modern eras. This course will show students how to bring a historical perspective to bear on the philosophical question, "What is laughter?" As modern readers, they will learn that the best way for us to study a past culture is to start with critical thinking about our own.

ENGL 1031. Introduction to the Short Story. (LITR; 3 cr. ; Student Option; Every Fall) English literature boasts some of the most powerful, beautifully crafted short stories in world literature. In this class, we will use the short story as a path for understanding the craft of writing: how writers use language to present a vividly imagined world in a short number of pages. We will also examine the importance of genre: how, for example, a detective short story differs from a slice of life story. This is a lecture course, but will involve substantial student discussion.

ENGL 1041. Adaptation: Literature into Film. (AH; 3 cr. ; Student Option; Every Fall & Spring) Do you refuse to see a film until you've first read the book on which it is based, so it doesn't affect how you imagine the characters? Or does a film inspire you to go back and read the original book, to see what the filmmakers changed or left out? Either way, if you love book covers that say "Now a major motion picture," this is the class for you. "Adaptation: Literature to Film" explores the historical, cultural, and aesthetic contexts in which both literary and cinematic texts are produced and received. We will ask such questions as: When we read a book or a play and then watch an adaptation of it, are we in any sense encountering the "same" text? Does the intention of the author necessarily define the meaning of a text, as readers see it? What

other elements enter into the formulation of meaning(s)? How are elements of an inter-textual system always, in some sense, "in dialogue" with each other, and how do different media affect us differently -- whether emotionally, aesthetically, or intellectually? In this class you will learn skills related to interpreting and writing about both literature and moving image media (i.e., film, television, animation, etc.), including concepts and vocabulary specific to each, and your written assignments will include close readings of both books and films.

ENGL 1051. Progress & Madness: Literature, Science & Technology. (LITR; 3 cr. ; Student Option; Every Fall) This introductory, Liberal Education course explores the conflicts and conversations that occur at the frontiers of scientific thinking and technological innovation by examining select literary and cinematic texts from a variety of historical moments and points of view. We will consider the ambivalence and anxiety that attend progress via topics such as electricity, telegraphy, photography, the railroad, the cinema, Fordism, the atomic bomb, genetic engineering, and the Internet. We will also track the archetype of the mad scientist, whose dangerous knowledge and often-fatal hubris typically turn a tale "cautionary." Students engage in detailed analysis of and reflection on works of literature and film that address both historical and contemporary developments in science and technology. The course introduces students to a range of technologies that have had a measurable impact on contemporary society. Class discussion uses the representation of these innovations as case studies in how technologies develop through the application of individual and collective effort, as well as how society adopts or rejects these technologies. By considering a variety of points of view on these developments, students are exposed to multiple perspectives through which a technology can be understood, and they develop skills in evaluating conflicting views that provide a framework with which to evaluate new technology in the future.

ENGL 1172. The Story of King Arthur. (LITR; 3 cr. ; Student Option; Every Spring) Of all the stories familiar to the western world, few have exerted a greater influence on literary, pictorial, and musical productions than the legend of King Arthur and his Round Table. Although thousands of years have passed since the earliest versions of the story appeared, creative artists and their audiences continue to be fascinated by stories about Arthur, Merlin, Lancelot, Guinevere, Gawain, and Tristan. In this course, we will study adaptations of the legend in order to understand how literary writers and their readers remade the story to fit specific, historical circumstances. The course will pay particular attention to two related aspects of the legend. The first is the way that stories about Arthur emphasize the importance of personal integrity as a shaping force of history. The second is the relationship between personal responsibility and communal or civic order. We will see how these ideas are reshaped by

writers in various times and places (ranging from early medieval Wales and England to twenty-first-century America). We will think comparatively about these times and places by paying close attention to the literary traditions and forms that are employed by writers who remake the story of Arthur.

ENGL 1181W. Introduction to Shakespeare. (LITR,WI; 4 cr. ; Student Option; Every Fall & Spring)

This course explores the richness and variety of the playwright William Shakespeare through intensive study of representative plays and poems. Although Shakespeare died over 400 years ago, he is now more popular than ever. In his own day, Shakespeare was able to entertain, shock, amuse, and inform his audiences. Today, his work continues to have a global influence in nearly every corner of the world. Through class lectures, discussions and written work, students will be challenged and inspired by the many complexities and connections that we still have with the world's greatest playwright.

ENGL 1201W. Contemporary American Literature. (LITR,WI; 4 cr. ; Student Option; Every Spring & Summer)

In this course, we will focus on the analysis of literature, specifically novels and short stories published since 1960 by American authors. We will emphasize close reading, consistently and specifically addressing issues of language and meaning. Our books will also fuel an ongoing discussion of the formal aspects of literature, including style, characterization, plot, theme, tone, and symbolism, and their capacity to evoke a powerful response from readers. This four-credit writing intensive class requires attendance at a twice-weekly lecture and once-weekly discussion section.

ENGL 1301W. Introduction to Multicultural Literatures of the United States. (DSJ,WI,LITR; 4 cr. ; Student Option; Every Fall & Summer)

This course will include representative works by American Indian, African American, Asian American, Chicano/Chicana writers, and/or Jewish American writers, ranging from Nobel and Pulitzer prize-winning masters to upcoming genre authors and debut authors. In reading these works, we will discuss social and cultural factors informing America's literary past and present. As these authors honor identity, celebrate community, and deal with the complexities of the modern age, they also explore America's shared and problematic past. Because this course is Writing Intensive, we will spend considerable time drafting, discussing, and revising papers. Techniques for writing a paper, close reading strategies, and relevant critical approaches will be discussed. As we tease out the meanings and methods of our texts, we'll also identify and analyze key literary devices.

ENGL 1401W. Introduction to World Literatures in English. (GP,WI,LITR; 4 cr. ; Student Option; Every Fall & Spring)

This writing-intensive course will introduce you to texts from geographical locations such as Africa, Asia, and the Caribbean with the aim of

examining the impact that colonialism has had on previously colonized nations, as well as the world as a whole. Through close readings of these texts, we will examine questions related to concepts such as "third world," nationalism, difference, representation, and displacement.

ENGL 1501W. Literature and Public Life. (WI,LITR,CIV; 4 cr. ; A-F only; Every Fall & Spring)

This course explores how literary language builds the collective knowledge, shared reality, and civic relationships that make up public life. Literature's power in the public sphere goes far beyond the quiet, solitary experience of reading. We will investigate how telling stories, documenting events, imagining possibilities, communicating ideals, representing conflict, and even creating fictional characters contribute to public life. Through a wide variety of texts, we will reflect on the nature of public life and on how reading and writing build civic relationships and democratic potential. This course will also offer you two tracks for actively engaging in public life. A service-learning option will give you the experience of building literacy, developing skills in communication and public media, and strengthening roles in work and family. This recommended learning framework can engage your role as a citizen, broaden the impact of your education, and help you explore potential professional interests. Alternatively, an individually designed public project will prompt you to consider the links between literary/media culture, personal action, and public life, and to make your own intervention in these fields. To succeed in all areas of this class you must display active engagement, independent thinking and motivation, and organization.

ENGL 1701. Modern Fiction. (LITR; 3 cr. ; Student Option; Every Fall, Spring & Summer)

In Modern Fiction, we will study a selection of novels and short stories by some of the most compelling and original writers of our time. We will read work by contemporary authors and classic modernists whose stylistic innovations influenced a generation. Because literature is a continuum in which the present responds to the past, we'll note evolutions and developments in the genre over time. We will identify and analyze such elements of fiction as theme, genre, structure, form, language, and context.

ENGL 1701H. Honors: Modern Fiction. (LITR; 3 cr. ; A-F only; Every Fall & Spring)

In Modern Fiction, we will study a selection of novels and short stories by some of the most compelling and original writers of our time. We will read work by contemporary authors and classic modernists whose stylistic innovations influenced a generation. Because literature is a continuum in which the present responds to the past, we'll note evolutions and developments in the genre over time. We will identify and analyze such elements of fiction as theme, genre, structure, form, language, and context. prereq: Honors or instr consent

ENGL 1914. The Immigrant and the Refugee. (DSJ; 3 cr. ; A-F only; Periodic Fall)

This course will examine several case studies in the literature of immigration in the United

States: the Declaration of Independence, our founding text, which stages the country as a "nation of immigrants"; Ocean Vuong's *On Earth We're Briefly Gorgeous*, a queer Asian-American novel by a second generation immigrant; and the story of Ilhan Omar, Minneapolis's congressional representative, who is a Muslim woman, Somali-American, and both immigrant and refugee. Omar's story also serves as transition to the problem of the refugee, which we will address in two instances: the Jew in mid-twentieth century Europe, as staged in Hannah Arendt's *Who Are the Refugees?* and today's Palestinian, in Edward Said's *After the Last Sky*. As we read, we will consider how the figures of the immigrant and the refugee can signal both dispossession (the loss of home, nation, and community) and disruption (the troubling of these same notions of home, nation, and community that we so often take for granted).

ENGL 1923. Very Short Poems. (; 3 cr. ; A-F only; Periodic Fall)

Poetry has such a fiercely loyal subculture of readers that in 2017, Amanda Gorman was named the first National Youth Poet Laureate. *Very Short Poems* will introduce you to an adaptive art form that is ideal for our online world; every poem in the syllabus is found online. Featuring work ranging from Amanda Gorman (1998-) to Thomas Wyatt (1503-1542), but with a focus on the contemporary as well as the timeless, this seminar will be a literary "lab" class for reading short poems: identifying their effects, understanding how poets achieve those effects, and engaging the ways poets use non-narrative language and space to set a scene, convey an emotion, make an argument, and get us to inhabit a point of view. Class discussions will focus on the poems that most fascinate class members. What bothered or thrilled you? How did the poet make you feel this way with that phrase? Expect to learn why you love some poems and dislike others? a debate all fans of this art form enjoy.

ENGL 3001V. Honors: Textual Analysis: Methods. (WI; 4 cr. ; A-F only; Every Fall & Spring)

This course is designed for English majors and minors, as well as students interested in and attracted to literature and reading. Our concern will be to develop the intellectual foundations to move past our base, instinctive reactions to literature to deeper modes of reading, interpretation, and written analysis/argument. Our goal will be to develop the skills of slow-motion, skeptical reading: to savor the crafting of literary form and to explore how literary rhetoric engages our intellect and emotions; to read not simply for superficial content, but to engage and question the multi-faceted operation of literary texts. In terms of foundational writing skills for the English major, we will work on the development of compelling written literary arguments by breaking the writing process down into various phases. We will work with the basics of argumentation: developing a strong, coherent thesis, drafting, the logic of argument, revision, proper citation and effective use of primary and secondary sources, and more. prereq: Honors, [English

major or minor or approved BIS or IDIM program with English area]

ENGL 3001W. Textual Analysis: Methods.

(WI; 4 cr. ; A-F only; Every Fall & Spring)
This course is designed for English majors and minors, as well as any students interested in and attracted to literature and reading. Our concern will be to develop the intellectual foundations to move past our base, instinctive reactions to literature to deeper modes of reading, interpretation, and written analysis/argument. Our goal will be to develop the skills of slow-motion, skeptical reading: to savor the crafting of literary form and to explore how literary rhetoric engages our intellect and emotions; to read not simply for superficial content, but to engage and question the multi-faceted operation of literary texts. In terms of foundational writing skills for the English major, we will work on the development of compelling written literary arguments by breaking the writing process down into various phases. We will work with the basics of argumentation: developing a strong, coherent thesis, drafting, the logic of argument, revision, proper citation and effective use of primary and secondary sources, and more. prereq: [English major or minor or approved BIS or IDIM program with English area]

ENGL 3002. Modern Literary Criticism and Theory. (; 3 cr. ; Student Option; Every Fall & Spring)

This course is an introduction to contemporary literary criticism and theory. The goal is to provide you with a foundation in theory's terminologies, the different methodologies used in literary and cultural analysis, and a sense of the various schools of criticism that have developed in the postwar period. We will look at the ways that various texts perform as texts; they are not transparent or one dimensional, but rather open themselves to many different readings and styles of engagement.

ENGL 3003W. Historical Survey of British Literatures I. (HIS,WI; 4 cr. ; Student Option; Every Fall, Spring & Summer)

This course will provide a historical survey of British literature from the Middle Ages to the end of the eighteenth century. Our focus will be on tracing the interactions between literature and wider British culture as well as on tracing the development of literary form during this period. You should leave this course being able to identify major literary trends and authors and link them to corresponding formal techniques and innovations. You should also have a sense of the major historical and political events, rulers, and social conditions in Britain at this time. Additionally, because this is a writing intensive course, you will leave this class familiar with the process of writing a research paper with a literary focus, which includes finding and successfully incorporating contemporary scholarly research about your topic into your paper, crafting an original argument, utilizing textual evidence, and evaluating existing scholarship.

ENGL 3004W. Historical Survey of British Literatures II. (HIS,WI; 4 cr. ; Student Option; Every Fall, Spring & Summer)

In this wide-ranging survey of British and post-colonial literature from the late eighteenth century to the present, we will explore representative literary texts and genres from British Romanticism, the Victorian period, Modernism, and the postwar era. Besides analyzing the language, aesthetic features, and technical construction of these literary artifacts, we will examine our readings as reflections of and reactions to social upheavals like the Industrial Revolution, challenges to the traditional role of women, scientific discoveries that sparked religious doubt, and the First World War. Additionally, because this is a writing intensive course, you will familiarize yourself with the process of writing a research paper with a literary focus, which includes finding and successfully incorporating contemporary scholarly research about your topic into your paper, crafting an original argument, utilizing textual evidence, and evaluating existing scholarship.

ENGL 3005W. Survey of American Literatures and Cultures I. (DSJ,WI,LITR; 4 cr. ; Student Option; Every Fall, Spring & Summer)

This writing-intensive course will survey the Anglophone literature of what would become the United States from the arrival of English settlers to the Civil War. We will define "literature" broadly to not only include fiction and poetry but also the sermon, the letter, the essay, the autobiography, and other non-fictional forms. Course topics will include the Puritan theology that cast such a long shadow over the American cultural imagination; the fraught literary construction in the Revolutionary era of a national identity under the influence of such Enlightenment ideals as reason, civility, cosmopolitanism, and sympathy; the Gothic doubts about democracy that attended the literature of the early republic; the rise in the mid-nineteenth century of a radical intellectual and social movement in Transcendentalism; the antebellum ideological struggles over such political issues as slavery, industrialism, women's rights, and Native American rights; and the self-conscious cultivation of a national literary aesthetic in the Romantic prose and poetry of the period later critics would come (controversially) to call "the American Renaissance."

ENGL 3006V. Honors: Survey of American Literatures and Cultures II. (DSJ,WI,LITR; 4 cr. ; A-F only; Periodic Fall & Spring)

This course will survey some of the major literary figures, aesthetic movements, and thematic concerns of US literature from the Civil War to the present. Our investigation will identify common traits in the literature that causes it to fit within three very broad literary historical categories: realism, modernism, and postmodernism. We will explore what makes literature created by the people of the United States distinctly "American" during a period that extends from the Civil War and the outlawing of slavery to women's suffrage, workers' movements, the Great Depression, the First and Second World Wars, and the civil rights movement. In addition to reading and analyzing the literature itself in terms of

style, form, genre, and language, we will study it in historical context: the complex interplay between the political, the social, the cultural, and the literary in the United States. This approach rests upon the notion that literature is not created in a vacuum; it is influenced by and influences the world in which it is created.

ENGL 3006W. Survey of American Literatures and Cultures II. (DSJ,WI,LITR; 4 cr. ; Student Option; Every Fall, Spring & Summer)

This course will survey some of the major literary figures, aesthetic movements, and thematic concerns of US literature from the Civil War to the present. Our investigation will identify common traits in the literature that causes it to fit within three very broad literary historical categories: realism, modernism, and postmodernism. We will explore what makes literature created by the people of the United States distinctly "American" during a period that extends from the Civil War and the outlawing of slavery to women's suffrage, workers' movements, the Great Depression, the First and Second World Wars, and the civil rights movement. In addition to reading and analyzing the literature itself in terms of style, form, genre, and language, we will study it in historical context: the complex interplay between the political, the social, the cultural, and the literary in the United States. This approach rests upon the notion that literature is not created in a vacuum; it is influenced by and influences the world in which it is created.

ENGL 3007. Shakespeare. (LITR; 3 cr. ; Student Option; Every Fall, Spring & Summer)

For over four hundred years, William Shakespeare has remained the most quoted poet and the most regularly produced playwright in the world. From Nelson Mandela to Toni Morrison, from South African playwright Welcome Msomi to Kuwaiti playwright Sulayman Al-Bassam, Shakespeare's works have continued to influence and inspire authors and audiences everywhere. This course examines representative works of Shakespeare from a variety of critical perspectives, as cultural artifacts of their day, but also as texts that have had a long and enduring vitality. This is a required course for English majors and minors, but it should also interest any student who wants to understand why and how Shakespeare continues to be one of the most important literary figures in the English language. English majors/minors must take this course A-F only grading basis.

ENGL 3007H. Honors: Shakespeare. (LITR; 3 cr. ; Student Option; Every Fall & Spring)

This course is a sampling of Shakespeare's corpus designed for English majors and minors and for other students who wish to study his works in depth. Our goal will be to view these works simultaneously as cultural artifacts of sixteenth and seventeenth-century England and as enduring classics of world literature that seem to transcend their cultural moment. To this end, we will apply various biographical, social, linguistic, generic, theatrical, political, and intellectual contexts to the plays. We will attempt to understand how these documents

from early modern England have spoken so profoundly about the enduring mysteries of human experience from the moment of their inceptive genesis to the present day. English majors/minors must take this course A-F only grading basis.

ENGL 3011. Jewish American Literature: Religion, Culture, and the Immigrant Experience. (DSJ,HIS; 3 cr. ; Student Option; Every Spring)

Immigrant? Jewish? American? What do these labels mean, why are they applied, and do they ever cease to be applicable? Can we distinguish religion from culture, and what are the implications when we try? Why is it frequently asked whether Saul Bellow was "really" a Jewish writer, but it is impossible to read Philip Roth as anything other than that? How does Grace Paley's "Jewishness" come through even when she is writing about non-Jewish characters? We will address these issues and others as we explore the literature growing out of the Jewish immigrant experience in America, as well as the literature by Jewish writers more firmly, though still sometimes anxiously, rooted in American soil. In this course we will engage in a highly contextualized and historicized study of Jewish American literature from the 19th century to today. We will discover in these texts how inherited Jewish culture and literary imaginings, developed over centuries of interaction between Jewish communities and the "outside world," get reexamined, questioned, rejected, reimagined, reintegrated, and transformed within the crucible of American experience. The discussions that ensue will also provide a framework for engaging with the creative energies and cultural productivity of more recent immigrant communities in the United States and beyond. Immigration and the experience of immigrant communities continues to be at the forefront of American consciousness, as immigrants work to create new meanings and new narratives for their lives, and as those who immigrated before them provide contested meanings for the impact of immigration on their own narratives. This course, though grounded in Jewish narratives, will therefore provide students with an expanded vocabulary and perspective for engaging in this central and very current debate within the American experience.

ENGL 3013. The City in Literature. (LITR; 3 cr. ; Student Option; Every Fall)

City life has always inspired great writing, and *The City in Literature* provides students with an opportunity to read and respond to a selection of works that are, in one way or another, about cities. The primary emphasis of the course is on texts written in English during the 19th, 20th, and 21st centuries, but some writing in translation and from other periods may also be assigned. Possible authors include but are not limited to the following: Guillaume Apollinaire, Charles Baudelaire, Kamau Brathwaite, Gwendolyn Brooks, Sterling Brown, Anna Burns, Charles Dickens, T.S. Eliot, Elena Ferrante, Allen Ginsberg, James Joyce, Juvenal, Federico Garcia Lorca, Amy Levy, Mina Loy, Claude McKay, Frank O?

Hara, Derek Walcott, Walt Whitman, Patricia Williams, Virginia Woolf, William Wordsworth, William Butler Yeats.

ENGL 3020. Studies in Narrative. (; 3 cr. [max 6 cr.] ; Student Option; Periodic Fall & Spring)

Examine issues related to reading and understanding narrative in a variety of interpretive contexts. Topics may include "The 19th-century English (American, Anglophone) Novel," "Introduction to Narrative," or "Techniques of the Novel." Topics specified in the Class Schedule

ENGL 3022. Science Fiction and Fantasy. (; 3 cr. ; Student Option; Every Fall & Spring)

Science Fiction and Fantasy will introduce students to the study of classic and contemporary science fiction and fantasy literature. Using literary techniques, students will explore the alternate realities, characters, cultures, genders, races, ecologies, politics, settings, and technologies of science fiction and fantasy primarily through reading novels and stories. Questions may include: What does speculation about the future tell us about our present and past? What does the unreal reveal about our real lives? To what extent does science fiction function as both escapist fantasy and prophetic reality?

ENGL 3023. Children's Literature. (; 3 cr. ; Student Option; Every Fall & Spring)

This course provides an overview of the traditions of children's and young adult literature. The course will address the following questions among others: What is "children's literature"? What are some of its persistent themes and stylistic traits? In what ways may we say it has changed over time? What distinguishes children's literature, from, say, "grown-up" literature? Our readings will include classic and contemporary works with a focus on diversity regarding the authors, themes, and readership. In addition to becoming familiar with this body of knowledge, we will be developing critical reading skills within a "literary" context. We will also look into how, when, and where literature (specifically children's and young adult literature) and our everyday lives intersect, impact, and interact with each other.

ENGL 3024. The Graphic Novel. (; 3 cr. ; Student Option; Every Fall & Spring)

This course aims to read and study a specific kind of narrative we call "graphic novel." The term itself is often a point of contention, but the purpose of this course is not to defend the validity of the term or the medium. "Comic books" and "graphic novels" are not endangered animals. Rather, we will use this example of "sequential art" to think through the ways this genre intersects, uses, and informs various other narrative and artistic forms as well as the way the genre may be unique with its own way of producing meaning. Comics involve a hybrid strategy of image and text, so we will attempt to keep both aspects in mind throughout the semester, never forgetting that comics are neither purely "visual" nor purely "textual." Since comics are often wedded-in mainstream culture-with certain kinds

of content (e.g. superheroes), we will also investigate the characteristics of different "genres" within comics, as well as various questions about literariness.

ENGL 3025. The End of the World in Literature and History. (HIS; 3 cr. ; Student Option; Periodic Fall & Spring)

For at least two and a half millennia, prophets, politicians, and poets have crafted terrifying accounts about the end of the world. This comparatist seminar examines the way different cultures have imagined a final apocalypse with particular attention to the political and social consequences of their visions. Students will read texts that focus on pandemic, extraterrestrial attack, nuclear holocaust, prophecy, cybernetic revolt, divine judgment, resource depletion, meteoric impact, or one of the many other ways in which humans write of their demise. They will use literary analysis to explore the many historical and contemporary wastelands they will encounter. They will write short papers and give in-class presentations on different kinds of apocalypse.

ENGL 3026. Mediterranean Wanderings: Literature and History on the Borders of Three Continents. (GP; 3 cr. ; Student Option; Every Spring)

Situated between three continents and at the intersection of numerous ethnic and national cultures, the Mediterranean is like no other place on earth. A place of diverse languages, religions, economies, governments, and ways of daily life, it serves as a microcosm for the world itself imagined as an integrated global system. This course explores the history of the Mediterranean with particular emphasis on the literatures it has produced over the last three millennia. As the protagonists of these epic poems, religious texts, and novels travel from one shore to another, they experience the Mediterranean as a place of violence, cultural accommodation, hope, ethnic and linguistic bewilderment, and endless moral challenge. This course will place as much emphasis on the region's history as its cultural productions. With that in mind, reading may include David Abulafia's *The Great Sea* in addition to *The Odyssey*, *The Aeneid*, the biblical books of *Joshua* and *Acts*, Tasso's *Gerusalemme Liberata* (an epic set during the first crusade), Shakespeare's *The Merchant of Venice* and *Antony and Cleopatra*, Flaubert's *Salammbô*, Akli Tadjer's *Les ANI du Tassali*, A.b. Yehoshua's *Mr. Mani*, and Pamuk's *The White Castle*.

ENGL 3027W. The Essay. (WI; 4 cr. ; Student Option; Every Fall & Spring)

This is a course for students ready to face more challenging assignments and deepen their comfort and skill with writing. The instructor helps the student develop more sophisticated research strategies and experiment with more creative stylistic choices. Assignments might include autobiographies, critical comparisons, reviews of articles or books, cultural analyses, persuasive essays, and annotated bibliographies. Students in this course learn to 1) generate topics and develop

essays with greater independence than they exercised in freshman composition, 2) write for multiple audiences?academic and non-academic?making appropriate decisions about content, rhetoric, structure, vocabulary, style, and format, 3) write creative non-fiction and other genres incorporating complex description and analysis, 4) analyze the conventions and styles of writing in their major field, and 5) experiment with new and more sophisticated writing strategies and styles.

ENGL 3028. Paranoia and Pleasure:

Contemporary American Spy Novels. (LITR; 3 cr. ; Student Option; Periodic Fall & Spring) Spy fiction emerged in Britain and the United States during the early 20th century. Since then, it proliferated thematic sub-genres such as Tom Clancy?s techno-thrillers, Vince Flynn?s CIA-trained assassin, James Rollins?s science disaster group, David Baldacci?s eccentric Camel Club, and Daniel Silva?s globe-trotting Israeli spy Gabriel Allon. Spy Fi is concerned with threats to the state--Nazis, Russians, rogue states, terrorist masterminds, and moles here at home. In contrast to British Spy Fi, famously represented by James Bond, the MI6 agent who plied his trade in sophisticated or exotic settings, American novels tend to feature cowboy protagonists with military or sports backgrounds and a penchant for spectacular violence. In this course, we will read novels and analyze the development of sub-genres, protagonists, plots, settings, and language; the shifting roles of female characters; the paranoid ideologies that hover beneath the narratives or pop to the surface; and the target audiences and sales.

ENGL 3032. Shakespeare in London. (; 3 cr. ; Student Option; Summer Odd Year) How are different interpretations of Shakespeare?s works embodied in the theater? How are they transformed by location/context? Students attend/discuss theatrical productions.

ENGL 3040. Studies in Film. (; 3 cr. [max 9 cr.] ; Student Option; Every Fall, Spring & Summer)

Topics regarding film in variety of interpretive contexts, from range/historic development of American, English, Anglophone film.

ENGL 3045. Cinematic Seductions: Sex, Gender, Desire. (; 3 cr. [max 4 cr.] ; Student Option; Spring Odd Year)

Gender/sexuality in cinema. Sexuality/identity. Historical contexts of films. Theoretical debates regarding gender/sexuality.

ENGL 3061. Literature and Music. (LITR; 3 cr. ; Student Option; Every Spring)

In this course, we will explore the connections and parallels between music and literature, assessing both form and content and drawing upon various genres from both arts. We will examine some of the ways that musical and literary texts can change, subvert, or augment each other by applying critical and literary theories to intertextual readings. Among the subjects we may discuss are how authors use music in their work, both structurally and topically; how musicians use literature, both as lyric and as subject matter; and how members

of each group engage the artistic assumptions of the other. Students will gain a greater appreciation of the varied forms of creative expression and an increased understanding of how they influence each other through close reading and listening, discussions, reflective writing, and presentations.

ENGL 3070. Studies in Literary and Cultural Modes. (; 3 cr. [max 9 cr.] ; Student Option; Fall Odd Year)

Modes of literary expression/representation that transcend conventional demarcations of genre and historical periods. Topics may include horror, romance, mystery, comedy, and satire.

ENGL 3071. The American Food Revolution in Literature and Television. (CIV; 3 cr. ; Student Option; Every Fall)

America's relationship with food and eating has changed profoundly over the last fifty years. At the heart of this revolution was a group of charismatic personalities who through writing and television brought first European and then global sensibilities to the American table. They persuaded Americans that food and cooking were not just about nutrition but also forms of pleasure, entertainment, and art; ways of exploring other cultures; and means of declaring, discovering, or creating identity. Their work would eventually transform the American landscape, helping give rise to the organic movement, farmers markets, locavorism, and American cuisine, as well as celebrity chefs, the Food Network, and restaurant reality television. In the meantime, the environmental movement was sending its own shockwaves through American consciousness of food production and consumption. The joining together of these movements--culinary and environmental--has brought a new ethical dimension to the subject that is now at the forefront of current concerns about American food. Insofar as we eat, we necessarily make choices that have profound implications for our health, our communities, the environment, and those who work in the food industry, broadly defined. This class will trace the American food revolution with the intent of understanding how our current system came to be and thinking through the ethical implications of our daily actions. We will read classic literature from the rise of the movement, in varying degrees instructional, personal and documentary, while viewing some seminal television moments for the food culture we now know. We will give particular attention to recent work that focuses on the personal and environmental ethics of food.

ENGL 3072. Witchcraft, Possession, Magic: Concepts in the Atlantic Supernatural, 1500-1800. (LITR; 3 cr. ; Student Option; Every Spring)

Salem is what typically comes to mind when we think of witchcraft, and our class will indeed focus on the 1692 trials and their aftermath. But we will also range more broadly, exploring witchcraft in the early Atlantic world by paying special attention to the roles played by magic and possession. A fundamental aspect of this course, moreover, is its distinction as a literary one. This is not a class about how witchcraft,

possession, and magic ?change over time? but a class about their representations. From the beginning, we will be deeply attentive to the fact that each and every ?evidence? of witchcraft, possession, or magic is an act of representation in the first place. As literary historians, we will move from Europe to the Americas, looking at how invocations and accusations of witchcraft traveled between the 16th and late-18th centuries. More importantly, as literary critics we will trace and examine depictions of witchcraft and the idea of the witch across four interrelated socio-historical contexts: the Protestant Reformation in 16th-century Europe; slave medicine and obeah in the Caribbean; possession and the ?invisible world? in Puritan Massachusetts; and revivalism in 18th-century New England. By the end of this course, you will be able to: interpret literary texts and understand the literary aspects of historical documents; place literature in relation to its historical and cultural contexts; locate and evaluate relevant scholarship and cultural commentary; and formulate and communicate a focused and stylistically appropriate that supports its claims with textual evidence, especially through close and critical reading.

ENGL 3090. General Topics. (; 3 cr. [max 9 cr.] ; Student Option; Every Fall, Spring & Summer)

Topics specified in Class Schedule.

ENGL 3091. The Literature and Film of Baseball. (LITR; 3 cr. ; Student Option; Every Spring)

Baseball is the national pastime, often evoked with Mom and apple pie in a trinity of American-ness. How do Americans represent something they see as so quintessentially themselves? In this class, we will look at the variety and complexity of answers given to that question, from sunny nostalgia, to valorization of the individual, valorization of the team, depictions of the dark side of the American dream, critiques of racial relations, and an approach that strives to eliminate both the poetry and the hand-wringing with a long hard look at numbers and facts. In this journey, we will study and participate in a number of ways that literature teaches us to understand society and ourselves. We will examine the idea of American pastoral and anti-pastoral. We will use the great variety of ways to write about baseball as a platform to consider how we come to know and believe. Throughout the course, we will examine the way baseball writing treats race and gender. We will also look at excerpts of films made from some of the texts. Comparing the films to the literature allows us to discuss what representations of America seem more palatable to producers aiming for a larger audience than literature usually reaches and to highlight ways writing makes arguments that films cannot.

ENGL 3092. The Original Walking Dead: Misbehaving Dead Bodies in the 19th Century. (LITR; 3 cr. ; Student Option; Every Fall)

Examination and analysis of 19th-century British literature about dead bodies, the science of death, burial practices and anxieties, and

theories of the supernatural. This course includes fiction and poetry but also non-fiction, historical documents, and sensationalist media.

ENGL 3093. Law and Literature. (DSJ,LITR; 3 cr. ; Student Option; Every Spring)

ENGL 3093 Law & Literature examines how law and literature render diversity and social justice. The law is generally defined as a country's (or community's) system of rules that regulate people's actions and administer justice to them. Literature is generally defined as an assortment of oral and written texts regarded as having intellectual, aesthetic, and moral value. This course puts legal and literary texts into conversation to answer questions about how they render the equality of and the justice for diverse peoples.

ENGL 3101. Knights and Pilgrims in Medieval Literature. (LITR; 3 cr. ; A-F or Audit; Fall Odd Year)

Medieval writers and readers were fascinated by stories about knights and about pilgrims. In this course, we study some of the best-known and most compelling narratives and poems from the Middle Ages. Although written hundreds of years ago, these literary works speak to us of the human desire to strive for meaning and excellence, to work toward shared ideas of community, and to explore worlds beyond the sometimes narrow confines of home. Knights and pilgrims appear as central figures in a wide range of literary works. Some of the texts are humorous, like Chaucer's *Canterbury Tales* in which pilgrims, from social classes ranging from knights to tradespeople, travel together and tell stories. Some are exciting and emotional, like Malory's retelling of stories about King Arthur and his knights. Others provide us with explorations of longing for change: in these works people search for new kinds of social and spiritual life such as Margery Kempe's autobiographical account of her experiences as a pilgrim to Rome and the Holy Land. Still others, such as Langland's *Piers Plowman*, which incorporates pilgrimage and chivalric quest, critique and explode static ideas about social problems such as poverty and hunger. Some draw our attention to the dangers and turmoil involved in love and relationships, such as Marie de France's courtly, aristocratic lays: Marie's knights and ladies take up the search for love and meaning. Some, finally, invite us to imagine ourselves in mysterious otherworlds, such as Mandeville's *Travels* and Sir Orfeo, both of which focus on travel and self knowledge. These exciting and challenging works continue to speak to us about the quest to pursue ideals and to change the world and ourselves.

ENGL 3102. Chaucer. (3 cr. ; A-F or Audit; Every Fall & Spring)

Major/representative works written by Chaucer, including *The Canterbury Tales*, *Troilus and Criseyde*, and the dream visions. Historical, intellectual, and cultural background of the poems. Language, poetic theory, form.

ENGL 3114. Dreams and Dream Visions. (3 cr. ; Student Option; Fall Even Year)

Introduction to the literary genre known as the medieval English "dream vision" and to the

historical and theoretical discussion of dreams. We concentrate on four late medieval dream visions: Langland's *Piers Plowman*; Chaucer's *Book of Duchess* and *House of Fame*; and the *Gawain-Poet's Pearl*.

ENGL 3132. The King James Bible as Literature. (; 3 cr. ; Student Option; Fall Odd Year)

Literature of Jewish Bible ("Old Testament"). Narratives (Torah through Kings), prophets (including Isaiah), writings (including Psalms, Job, Ecclesiastes). God's words/deeds as reported by editors/translators.

ENGL 3134. Milton and Rebellion. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Milton's three great Restoration poems? *Paradise Lost*, *Paradise Regained*, and *Samson Agonistes*? are the focus of this course. We'll approach them by tracing Milton's growth as poet: first, by familiarizing ourselves with the religious and social ideas found in his writings down to the *Poems of 1645*; and second, by studying the political ideas Milton initially set forth in *The Tenure of Kings and Magistrates* (1649). Concurrently with our study of these earlier works, you'll be reading *Paradise Lost*, which you should complete by the end of the spring break. At that point, you'll be in a position to interpret Milton's three Restoration masterpieces in the light of his grand?and rebellious?aim of reforming England's civil and religious community, an aim Milton boldly reaffirms in 1660 in defiance of the Restoration of monarchy.

ENGL 3141. The Restoration and the Eighteenth Century: Sex, Satire, and Sentiment. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

This course will introduce you to some of the best literature of the Restoration and eighteenth century in England. Think of this course as a challenge: how can you, as someone who will spend most of your life in the 21st century, learn to appreciate and learn from literature written in far different times and places? A lot depends on your willingness to empathize with ways of thinking and being that are quite different from your own and your comfort with believing that other ages were just as complicated and as interesting as the one you live in. Typical authors include Dryden, Behn, Swift, Pope, Fielding, and Burney.

ENGL 3151. British Romantic Literature and Culture. (LITR; 3 cr. ; Student Option; Fall Odd Year)

In *British Romantic Literature and Culture*, students read poetry and prose written during the Romantic Period (1780-1832). Romantic authors permanently changed the way literature treats numerous subjects: nature, the imagination, revolution, war and politics, the role of the poet, the depiction of common life and language, and the representation of personal experience, to name a few. This was a period of great stylistic innovation, as authors experimented with the use of symbolism and the adaptation of classical mythology and explored medieval/gothic images and themes. Possible authors to be studied in this course include Jane Austen, Anna Letitia Barbauld,

William Blake, Lord Byron, Samuel Taylor Coleridge, Felicia Hemans, John Keats, Mary Shelley, Percy Shelley, Charlotte Smith, Mary Wollstonecraft, William Wordsworth.

ENGL 3161. Victorian Literatures and Cultures. (LITR; 3 cr. ; Student Option; Periodic Fall & Spring)

Why is the twenty-first century so obsessed with the nineteenth? From steampunk to political rhetoric, from movies to sex, writers and artists look back to the Victorian era for inspiration and challenge. One reason might be that Britain was the first country to experience the full effects of industrialized capitalism, with the opportunities and misery that it created. It also developed one of the largest empires in history, an empire whose legacy continues to shape global politics in good and bad ways. For all these reasons, understanding the Victorians is key to understanding ourselves. Women writers like Charlotte Bronte and George Eliot have always been at the center of Victorian studies, so the history and politics of gender are vital to Victorian literature. Class likewise remains inescapable in Victorian fiction with its sharp sense of a world divided into haves and have nots; depictions of the catastrophic effects of the factory system on the urban poor pervade Victorian literature and challenge readers to ponder how, and if, reading might lead to political action. Race has increasingly reshaped understandings of the literature of the period; although Britain abolished slavery in 1833-34, the period saw both a heightening of racist rhetoric and representation and the growth of a market for works by writers of color from the colonies, including Mary Seacole, J. J. Thomas, and Toru Dutt. Digital tools have made the present moment an exciting one in which to study this literature because so much information is now available: Victorian writing has become hyperaccessible for those with access to computers. For this class, this accessibility means that students have the opportunity not just to learn existing knowledge about the period but to discover new truths about it for themselves. This course aims to empower students to find their own paths to understanding and representing the Victorians as a way of revising how they see their present.

ENGL 3181. Contemporary Literary Nonfiction. (LITR; 3 cr. ; Student Option; Every Spring)

Contemporary literary nonfiction from the 1960s to the present, covering developments in narrative nonfiction, memoir, and personal essay.

ENGL 3182. Irish Literature. (3 cr. ; Student Option; Every Spring)

Against competing historical and political narratives, this study of 20th century Irish writers will show how their writing challenges assumptions about identity and nation, producing literature that pointedly does not carry a flag but instead explores the oppression, injustice, and violence that the individual being suffers as a consequence of it, and INSISTS on the right to resist, create, and misbehave. Authors will include Yeats, Joyce, Beckett, as well as others.

ENGL 3212. American Poetry from 1900. (; 3 cr. ; Student Option; Spring Even Year)
Famous and lesser-known poems from the Modernist era, the time of Frost, HD, Pound, Eliot and the Harlem Renaissance. The course attends to the intellectual and cultural background of the poets, poetic theory and form.

ENGL 3221. American Novel to 1900. (; 3 cr. ; Student Option; Fall Even Year)
Novels, from early Republic, through Hawthorne, Melville, and Stowe, to writers at end of 19th century (e.g., Howells, Twain, James, Chopin, Crane). Development of a national literature. Tension between realism and romance. Changing role of women as writers and as fictional characters.

ENGL 3222. American Novel from 1900. (3 cr. ; Student Option; Every Fall & Spring)
In this course, we will read and study novels of twentieth and twenty-first century American writers, from early 1900's realism through Modernists (e.g., Faulkner, Hemingway, Fitzgerald) to more contemporary writers (e.g., Baldwin, Ellison, Erdrich, Roth, Pynchon). We will explore each text in relation to literary, cultural, and historical developments and question the narrative and stylistic strategies specific to each work.

ENGL 3222H. Honors: American Novel from 1900. (; 3 cr. ; A-F only; Periodic Fall & Spring)
Novels from early 1900s realism through Modernists (e.g., Faulkner, Hemingway, Fitzgerald) to recent writers (e.g., Ellison, Bellow, Erdrich, Pynchon). Stylistic experiments, emergence of voices from under-represented groups. Novelists' responses to a technologically changing society.

ENGL 3231. American Drama. (3 cr. ; Student Option; Periodic Fall & Spring)
Representative dramas from 18th through 20th centuries. Topics include staging of national identities, aesthetics of modern/contemporary drama. Production concerns of mainstream, regional, community theaters.

ENGL 3301. Asian America through Arts and Culture. (AH,DSJ; 3 cr. ; Student Option; Spring Even Year)
The course focuses on the close analysis and interpretation of individual works by a range of modern and contemporary artists. Students will analyze, critique, and interpret these works in light of the historical and social contexts in which they were produced, their creation and uses of aesthetic form, and their impact on individuals and communities. Discussion, writing assignments, and oral presentations will focus on different ways of encountering and evaluating artistic work; for instance, students will write critical analyses and production reviews as well as dialogue more informally through weekly journal entries and online discussion forums. We will examine what it means to define artists and their work as being "Asian American" and explore how other categories of identity such as gender, sexuality, or class intersect with race. We will study how art works not only as individual creativity but also as communal and social practice; for instance, we look at the history of

theaters, such as East-West Players or Pan Asian Repertory Theatre, that have sustained Asian Americans as actors, playwrights, and designers.

ENGL 3303W. Writing Differences: Literature by U.S. Women of Color. (DSJ,WI,LITR; 3 cr. ; Student Option; Fall Odd Year)
Interpret/analyze poetry, fiction, and drama of U.S. women minority writers. Relationship of writer's history, ethnicity, race, class, and gender to her writings.

ENGL 3331. LGBTQ Literature: Then and Now. (DSJ,LITR; 3 cr. ; Student Option; Every Fall)
LGBTQIA life in the US has changed significantly over the past few decades. By examining a selection of poetry, prose, and film, our class will try to answer the questions: "How did we get to where we are today?" and "Where do we go next?" We will look at classic works in their historical contexts to see what was revolutionary about their publication; we will trace how they paved the way for all that followed. We will look at very new works to understand the concerns of twenty-first century LGBTQIA writers and readers. From the "lavender scare" to the Stonewall Riots to the AIDS pandemic to marriage equality to genderqueer and trans movements, we will explore how LGBTQIA authors and filmmakers have both responded to and shaped the ethos of our times.

ENGL 3332. Black Times: Afrofuturism, Afropessimism and the Future (Ends) of the World. (DSJ; 3 cr. ; Student Option; Spring Even Year)
In 1993, Mark Dery coined the term Afrofuturism to describe "[s]peculative fiction that treats African-American themes and addresses African-American concerns in the context of twentieth-century technoculture" and, more generally, African-American signification that appropriates images of technology and a prosthetically enhanced future." At the same time, Dery places this fictional treatment of Black futures in the context of a history systematically denied. Afropessimism, on the other hand, emerges at the turn of the 21st century in an interview between Saidiya Hartman and Frank B. Wilderson III as a meta theory that evinces a skepticism about the utility of the term Human to understand the positionality of blackness in an antiblack world. Blackness, for Afropessimists, becomes a technology by which the Human constitutes its Humanity as difference. This body of work generally understands the end of antiblackness as only possible with the destruction of "the world," understood to be definitionally antiblack. Starting with W.E.B. Du Bois's "The Comet," this course traces the relationships between African American literature, politics and sociality through the representation of blackness in relationship to technology. This course interrogates Dery's description of Afro Futurism as both descriptive and ideological. Put another way, this class is attentive to the way that the future is signified in the

contemporary world as well as the fact that, following Afropessimism's analysis, that world, and thus this mode of signifying blackness, may itself be antiblack. As a result, this course juxtaposes traditionally, technologically, Afrofuturist works, with those such as Parable of the Sower, The Broken Earth Trilogy, and An Unkindness of Ghosts that depict Black futures at or after the apocalypse. Students should expect to think and rethink the relationship between technology as a signifier of the future and those structures that continue antiblackness and colonialism. Additionally, students should also expect to gain a broad conceptualization of African American speculative fiction. Finally, students can expect to read texts of Black fiction that imagine futures in ways beyond the disasters of not only antiblackness, but of misogyny, heterosexism, ableism, and transphobia.

ENGL 3350. Women Writers. (; 3 cr. [max 9 cr.] ; Student Option; Spring Odd Year)
Women writers in the 19th and/or 20th centuries. Will focus either on writers from a single country or be comparative in nature. The course will be organized thematically or according to topics of contemporary and theoretical interest.

ENGL 3353. Jane Austen's Afterlives. (LITR; 3 cr. ; Student Option; Every Spring)
Why do the novels of Jane Austen, which were first published over two hundred years ago, still captivate readers all over the world? In this discussion-based course, which fulfills the Literature Core LE, we will closely examine five of Austen's major novels alongside the far more voluminous body of scholarship, sequels, screen adaptations, and fan responses that these works have inspired. Besides considering Austen's distinctive style, her contribution to the development of the novel form, and the cultural and historical context in which she wrote, we will explore a variety of ways in which the author and her work have been represented and reimagined across the globe. By focusing on a single author in depth, members of this course will not only investigate the array of cultural functions that Jane Austen has come to serve, but also hone their ability to analyze fundamental aspects of literary technique.

ENGL 3401W. Decolonial Literatures of the Americas. (DSJ,WI,LITR; 4 cr. ; Student Option; Periodic Fall & Spring)
This course begins with the assumption that "coloniality" as an idea and a practice does not end when the period of colonization ends. Instead, it continues on, through material violences that maintain and reproduce the legacies of colonization—legacies such as racial and gendered violence, exploitative labor, social death, forced migration, and uneven urbanization, among other pressing issues. This course will examine and compare what have been called the "decolonial" literatures of the Americas—literatures written in English or appearing in English translation that concern communities that have been oppressed and made invisible by colonialism. We will study a network of resistance, tactics, strategies, social movements, and ongoing creative practices, and we will critique the potential and

limitations of literature as a tool for activism and social change. The course will focus on understanding the relationships between literature, art, politics, and memory, and it will foster learning by doing as well as community outreach and relationship with local Indigenous communities. Students will visit local art galleries and other locales, create and maintain a class blog to be featured on the course website, and engage in their own creative forms of decolonial critique through weekly blog posts. Students' final projects will also explore decolonial perspectives and activism that specifically involves local practices of water activism and re-linking to Indigenous ways of knowing. This course does not have prerequisites beyond the University's entrance requirements.

ENGL 3501. Public Discourse: Coming to Terms with the Environment. (ENV,LITR; 3 cr. ; Student Option; Every Fall & Spring) This course explores significant environmental issues (such as environmental justice, toxic chemicals, climate change) through the analysis of texts from diverse literary genres. It focuses as much on issues of language and meaning as it does on the subjects these texts concern. Students examine the formal dimensions of these texts, as well as their social and historical contexts. In addition, students are introduced to the underlying scientific principles, the limitations of technologies, and the public policy aspects of each of these issues, in order to judge what constitutes an appropriate response to them. Students also learn how to identify and evaluate credible information concerning the environment.

ENGL 3502. Nature Stories: Environmental Discourse in Action. (LITR,CIV; 4 cr. ; Student Option; Every Fall) Explore contemporary texts from multiple disciplines to analyze the role of stories in interpreting nature. Emphasis on lived experience, civic motivation, and observational research that enrich effective nature writing. Optional service-learning component.

ENGL 3505. Protest Literature and Community Action. (DSJ; 4 cr. ; A-F only; Every Fall) This course combines academic analysis and experiential learning to understand, in both theory and practice, different perspectives on the power of "protest" in civic life. We will read a selection from the vast genre of progressive protest literature (pamphlets, poems, polemics, lists of demands, teaching philosophies, organizing principles, cultural histories, newsletter articles, movement chronicles, and excerpts from novels and biographies) from four key social-justice movements: the American Indian Movement, the Black Power movement, the post-Great Recession struggle for economic power, and the battle for immigrant rights. We'll also learn about this experientially as we roll up our sleeves and get involved in local community-based education initiatives and local social-justice organizations through our service-learning. Students receive initial training from CLA Career Services, The Center for Community-Engaged Learning,

the Minnesota Literacy Council, as well as orientations at community sites.

ENGL 3506. Social Movements & Community Education. (CIV; 4 cr. ; A-F only; Every Spring)

In this course, we'll examine four progressive social movements. After beginning with a foundational civil rights movement example, we will learn about the anti-racist feminism branch of the women's movement, often referred to as "third-wave feminism." We'll also study the Occupy movement that arose in response to the Great Recession (the financial crisis beginning in 2008). Then we'll take a look at two social movements that, while by no means underground, tend to fly below the radar: the prison abolition movement and the fight for public schools. While all of these social movements have different emphases, they also overlap quite a bit in their systemic analysis of society and their strategies for action. As activist, organizer, and trainer Rinku Sen observes, "the history of community organizing and social movements is replete with tactics learned in one movement being applied to another." As we study these social movements, community organizing will be of particular interest to us. How do the groups, collectives, nonprofits, and communities propelling these different social movements organize themselves, their leadership, their strategies, and their activities? How do they make decisions? What do meetings and planning processes look like? What do they do when they disagree? How do they recruit and mobilize? How do they communicate with and confront the general public, elected officials, and the more powerful elements of the ruling class? How do they talk about the work they're doing? How do they develop a vision of the world they'd like to live in while still inhabiting the present one, with all its flaws and injustices? We'll also examine the role of education in organizations working for social change. Whether through trainings, "political education," reading groups, or small group activities associated with popular education, many of the social-movement groups we'll study have developed educational strategies and curricula. Hands-On Learning through Community Education: As we study these social movements and their approaches to organizing and educating in the comfortable confines of our university classroom, we'll also learn about them experientially through our service-learning. That is, we'll work 2 hours per week at local education initiatives in K-12 schools, adult programs, and social-justice organizations in the non-profit and grassroots sectors, comprising a total of 24 hours by the end of the semester. This hands-on learning will strengthen our academic grasp of social movements, organizational dynamics, and teaching and community organizing by providing us with grounded perspectives. More broadly, we'll get a feel for what it's like to get involved as citizens, activists, teachers, and learners attempting to build cross-organizational coalitions. And we'll share what we learn with each other. Representatives from the Center for Community-Engaged Learning (the U's service-learning office) and

various community organizations will attend our second class session to tell you about their respective sites and how you can get involved. For our third class session, you will rank the top three community sites you'd like to work at. You will then be "matched" with a community organization, and your community education work will begin as soon as this matching process is complete. (We try to honor students' first and second choices, while also making sure that you also have some fellow classmates at your site.) To help prepare you, at a time convenient for you, you will also attend a training session facilitated by the Minnesota Literacy Council (MLC) or the Center for Community-Engaged Learning--details will be provided in class.

ENGL 3507W. Introduction to Chicana/o Literature. (DSJ,WI,LITR; 3 cr. ; Student Option; Every Fall & Spring) Cultural, intellectual, and sociopolitical traditions of Mexican Americans as they are represented in creative literature. Genres/forms of creative cultural expression and their significance as representations of social, cultural, and political life in the United States. Novels, short stories, creative nonfiction, drama, essay, poetry, and hybrid forms of literature.

ENGL 3592W. Introduction to Black Women Writers in the United States. (DSJ,WI,LITR; 3 cr. ; A-F only; Periodic Fall & Spring) The literature of African American women writers explored in novels, short stories, essays, poetry, autobiographies, and drama from the 18th to the late-20th century.

ENGL 3593. The African American Novel. (3 cr. ; Student Option; Every Spring) Explore African American novelistic traditions. Plot patterns, character types, settings, symbols, themes, mythologies. Creative perspectives of authors themselves. Analytical frameworks from contemporary literary scholarship.

ENGL 3597W. Introduction to African American Literature and Culture I. (DSJ,WI,LITR; 4 cr. ; Student Option; Every Fall) African American oral tradition, slave narrative, autobiography, poetry, essay, fiction, oratory, and drama, from colonial era through Harlem Renaissance.

ENGL 3598W. Introduction to African American Literature and Culture II. (DSJ,WI,LITR; 4 cr. ; Student Option; Every Spring) African American oral tradition, autobiography, poetry, essay, fiction, oratory, drama. From after Harlem Renaissance to end of 20th century.

ENGL 3601. Analysis of the English Language. (; 4 cr. ; Student Option; Every Fall, Spring & Summer) Introduction to structure of English. Phonetics, phonology, morphology, syntax, semantics. pragmatics. Language variation/usage.

ENGL 3704. Introduction to Editing and Publishing. (4 cr. ; Student Option; Every Fall & Spring)

What are the myriad activities that constitute a day in the life of a professional editor? According to Susan L. Greenberg's *A Poetics of Editing*, "In the popular imagination, the editor is a passive creature, busy telling people 'No.'? Are editors glorified gatekeepers, benevolent literary midwives, or cultural evangelists? This class focuses on the art and craft of editing and revision. We'll begin the semester by analyzing the relationship between author and editor, writer and reader. Students will learn the creative, professional, and relational aspects of editing in addition to learning how to sharpen their inner critic. We'll experiment in the classroom with giving and receiving critical feedback in an attempt to make better, more discerning and curious readers of us all. We'll also explore the surrounding professional landscape that is the Twin Cities' local literary and publishing cultures, and on occasion, meet seasoned professionals working with print and digital media across literature and the arts. Students will adventure behind-the-scenes in order to discover how a book comes into print as it is shepherded through the various stages of production from editorial through publication. We'll also spend time researching and discussing editorial fellowships, freelance, and entry level job opportunities as we explore post-graduate career options in publishing. Recommended for students studying Creative Writing, English, Journalism, and Communications. Credit will not be granted if credit has been received for ENGW 5401, ENGL 5711, ENGL 5401, or ENGL 4711

ENGL 3711. Literary Magazine Production

Lab I. (4 cr. ; A-F only; Every Fall)
First of two courses. Students produce undergraduate art/literary magazine *The Tower*. Students decide upon identity, tone, and direction of the issue. They take on magazine staff responsibilities, call for submissions, make selections, edit/design, set budget, and begin fund-raising. prereq: [instructor consent required, instr consent]

ENGL 3712. Literary Magazine Production Lab II. (4 cr. ; A-F only; Every Spring)

ENGL 3712 is the second of a two-semester course. In this hands-on, experiential lab, we solicit, acquire, edit, copyedit, design, typeset, proofread, print, publicize and distribute the upcoming edition of *The Tower*, the magazine of undergraduate art and creative writing by University of Minnesota students. This is the semester in which we bring out the finished, printed magazine, and in which we host a launch party on campus. We'll continue to apply and expand the lessons from our exploration in ENGL 3711 of the theory and history of literary magazine production in any number of ways: we'll revise our mission and theme as we draft and revise ancillary copy for the issue itself and as we refresh the marketing copy for our social media, blog, and website; we'll hone our design and typesetting skills as we lay out the issue; we'll refine our aesthetic sensibilities as we collaborate on final selections, strengthening our willingness to revise our opinions as compromise for the greater good; we'll add to our firsthand valuable

on-the-job skills of budgeting, scheduling, and vendor relations; and we will deepen our understanding of the publishing profession as it exists today, locally, and nationally. prereq: [3711, instr consent]

ENGL 3714. The Business of Publishing. (3 cr. ; Student Option; Every Fall)

The Business of Publishing course, by focusing primarily on book publishing, will give a wide variety of students--from budding writers to business majors--exposure to a major industry (valued at \$125 billion worldwide) that curates, promotes and monetizes the written word. There are approximately 12,000 publishers in the U.S., and of those an estimated 3,000 are literary presses. An estimated 600,000 books are published in the U.S. annually; Nielsen Book Scan reports 674 million unit sales in 2016. Book, magazine, and newspaper publishing are still the most stable types of publishing in our society and form the nexus between commerce and culture. Broadly understood, "publishing" means "to make words and images public." It encompasses many activities and forms--for instance, business newsletters and websites; social media (Facebook, Twitter, and Snapchat); and organizational and personal blogs. More specifically, it is a profession with specialized components--marketing, design, sales, subsidiary rights, bookselling--each with its own standards and best practices. It is also a field rife with innovation, producing multiple "start-ups" constantly. To "publish well" means not only to deliver content to a page or screen but also to deliver it to an audience. Publishing crosses disciplines, and innovates new channels and modes of production. As such, publishing well has implications for all of us in our daily personal and professional lives. At the University of Minnesota, we have the advantage of living in a metro area that is regularly ranked near or at the top of lists for most literate cities in the U.S. We have one of the largest concentrations of literary presses in the country outside of the East Coast. This course will take advantage of guest lecturers from Minnesota's nationally recognized publishing community. It encourages students to discuss the work of publishing with these professionals, and provides them with networking opportunities. As well as exploring in-depth the specific components of the publishing process, this class also broadens our sense of what "publishing" is. It is a process as much as it is a product. Why publishing? Why is a whole profession devoted to it? Why might we want to dedicate our own lives to it, or value the portion it already plays in them? Through this course we will understand firsthand how a book makes its way out into the world, and why that process is so important to culture and community.

ENGL 3741. Literacy and American Cultural Diversity. (LITR,DSJ; 4 cr. ; Student Option No Audit; Every Fall & Spring)

Literacy and American Cultural Diversity combines academic study with experiential learning in order to collectively build more engaged, more complex understandings of literacy, educational institutions, counter-

institutional literacy programs, the grassroots and nonprofit sectors, and the struggles of a multicultural civil society in a putative democracy. We will ground our inquiry in government studies, as well as sociological, historical, and educational writings. Standard literature, such as a memoir, a selection of poems, some short fiction, and a novel will further open up our twin themes of literacy and multiculturalism? as will less? official? literature, such as manifestos and the transcribed stories of immigrants, refugees, and other marginalized communities. We begin with the basic understanding of literacy as reading and writing, noting that, according to the National Survey of Adult Literacy, 46% of Americans scored in the lowest two levels of a five-tiered literacy test. What does this mean? Are such tests accurate or otherwise helpful? What about your basic literacy? As you read this syllabus, you're making use of basic abilities that you've likely been practicing most of your life through formal schooling, daily routines, recreational pursuits, and work-related duties. But there's more. On another level, you bring knowledge to your reading (some conscious, some unconscious), and the ideological field supplies you with assumptions about the role of literacy in your development, the role of a university course in your plans for your personal and professional life, and your position in a society that constantly raises the standards of literacy, basing success on your ability to keep up. Thus the very word?literacy? calls into play many beliefs we have about our class system, our cultural life, economic and political structures, and educational institutions. Accordingly, our analysis will move beyond basic?reading and writing? to wider concepts of literacy in our society, investigating issues that have much to do with our role as public citizens involved in shaping our individual and collective future. In tandem with our?classroom? work, our service-learning work in the community (see Your Practicum as Literacy Workers, below) will enable us to develop more?tangible? understandings of the ways that literacy, educational theories, practices, and the construction of knowledge and skills through educational policies provide a?map? of the shifting socioeconomic, cultural, and political terrains of the U.S., the institutional inequities that result from these arrangements, as well as the justice work needed to transform those inequities.

ENGL 3885V. Honors Capstone Seminar in English. (WI; 4 cr. ; A-F only; Every Fall & Spring)

Honors students who wish to graduate magna cum laude or cum laude write an Honors thesis, 13-17 pages in length, in ENGL or ENGW 3885V that contains substantive and original analytical insights. Students must discuss their plans with their instructor by the end of the second week of the term. Student and instructor must decide together what additional or enriched work will be required to have the capstone paper count as an honors thesis. Examples of such work include covering the topic in greater depth, using primary sources more robustly, or incorporating more

creativity, more synthesis, and/or advanced analysis. Consult with your honors adviser for more details. This course also functions as a capstone experience that fulfills many of the Student Learning Outcomes for the English major. In this rigorous and intensive seminar, students receive instruction on writing this paper from tenured and tenure-track faculty in English. Students learn how to choose a topic and formulate a research question, conduct primary and secondary research, and produce a written document that incorporates research and analysis. Faculty teach students to produce an extended, scholarly essay through discussions of method, research, and development; instruction in specific writing techniques; workshoping and revising drafts; solving problems; and creating a coherent and elegant final product. While the subjects about which students write vary depending on student interest and faculty expertise, at least 50% of the course grade is determined by students' writing performance. Most students fulfill the senior paper requirement with a traditional seminar paper, but students sometimes complete alternative projects, such as blogs, analytic projects that incorporate creative or personal elements, collaborative projects, or projects that involve the creation of a podcast, video, web site, or some other means of documenting student learning and writing skills. Prerequisites for Admission: Honors, Admission to ENGL 3885V also requires English major status and completion of a Critical Theories and Methods course (ENGL 3001W, ENGL 3002, ENGL 4003) or approved transfer course with a minimum grade of C-minus. Priority will be given to students with senior status who have completed the majority of the major requirements, as well as to students who plan to graduate in the term they are requesting to take the senior seminar.

ENGL 3885W. Capstone Seminar in English. (WI; 4 cr. ; A-F only; Every Fall & Spring)

This course is devoted to the writing of the senior paper in English. To graduate with a BA in English, students must write a 13-17 page (4,000-5,500 word) senior paper that contains substantive and original analytical insights. In this rigorous and intensive seminar, students receive instruction on writing this paper from tenured and tenure-track faculty in English. Students learn how to choose a topic and formulate a research question, conduct primary and secondary research, and produce a written document that incorporates research and analysis. Faculty teach students to produce an extended, scholarly essay through discussions of method, research, and development; instruction in specific writing techniques; workshoping and revising drafts; solving problems; and creating a coherent and elegant final product. While the subjects about which students write vary depending on student interest and faculty expertise, at least 50% of the course grade is determined by students' writing performance. Most students fulfill the senior paper requirement with a traditional seminar paper, but students sometimes complete alternative projects, such as blogs, analytic projects that incorporate creative or personal elements, collaborative

projects, or projects that involve the creation of a podcast, video, web site, or some other means of documenting student learning and writing skills. The senior seminar also functions as a capstone experience that fulfills many of the Student Learning Outcomes for the English major. Prerequisites for Admission: Admission to ENGL 3885W requires English major status and completion of a Critical Theories and Methods course (ENGL 3001W, ENGL 3002, ENGL 4003) or approved transfer course with a minimum grade of C-minus. Priority will be given to students with senior status who have completed the majority of the major requirements, as well as to students who plan to graduate in the term they are requesting to take the senior seminar.

ENGL 3896. Internship for Academic Credit. (; 1-4 cr. [max 16 cr.]; A-F only; Every Fall, Spring & Summer)

Internships at local arts organizations, businesses, or publishing firms provide experiences in communications, arts administration, marketing, and editing-as well as an understanding of what students need to do to prepare for the job market. The Department of English offers course credit in connection with internships dedicated to UMN English majors as well as internships at other sites that meet our criteria. This course will enrich student learning by providing concrete experiences to apply knowledge of oral and written communication outside the academic context. Putting English skills to work in your internship tasks will allow you to see how communication changes with contexts and audiences. You will be able to practice new voices and styles. Depending on the internship activities, you may practice communication germane to marketing, development, editing, social media, and the professional office. You will receive feedback from your site supervisors and instructors as to your understanding of these new ways of communicating. In this course, you will keep a weekly journal detailing the work you do in the internship; analyzing the significance of the work within the greater activity of the internship site; and making connections between the work and the academic learning you have done in English. You will also write a final paper on a topic agreed upon with the instructor, which should build upon the writing you've done in the journals. We'll start by having you work with your internship supervisor to create a learning agreement that outlines what you plan to learn and accomplish during your internship and how you plan to contribute and add value to the organization. You will complete various additional assignments including discussion, readings, and writing. prereq: must be a formally declared English major registered in the College of Liberal Arts and have consent of instructor.

ENGL 3993. Directed Study. (1-4 cr. [max 8 cr.]; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study. Prereq-One 3xxx, [English major or minor or [BIS or IDIM or ICP] with English concentration], [jr or sr], instr consent, dept consent, college consent.

ENGL 3993W. Directed Study- Honors Thesis in English. (WI; 1-4 cr. ; A-F only; Every Fall & Spring)

ENGL 3993W is a writing intensive directed study that supports summa cum laude degree students completing their honors theses in the Department of English. Students will complete ENGL 3993, the non-WI version, in the first semester for 2 credits followed consecutively by ENGL 3993W for 2 additional credits in the second semester, when the polished product is evaluated. Summa candidates also must register for HCOL 3101H or HCOL 3102H, which counts as the classroom experience required for the completion of the Honors thesis. The thesis must be approximately 30 pages in length and may be scholarly, critical, or creative in nature. If the candidate elects to submit a topic, such as poetry, that poses a problem with this length, they must obtain permission from the English honors adviser and from all of his or her readers to adjust the length of the completed thesis. Summa candidates must apply for permission to register for ENGL 3993W one year before their expected graduation term. You will work with your faculty advisor to complete the University's directed study contract to clarify expectations and form a written agreement about expected workload, credits, and basis for grading. Prereq: Honors candidacy in English, consent of English honors advisor

ENGL 4003. History of Literary Theory. (; 3 cr. ; A-F or Audit; Fall Odd Year)

How thinkers from classical to modern times posed/answered questions about language (how words mean), audience (to whom they mean), and the literary (how literary writing differs from other forms of writing). Works by Plato, Aristotle, Augustine, Christine de Pizan, Dante, Sidney, Behn, Wordsworth, Shelley, and Woolf.

ENGL 4152. Nineteenth Century British Novel. (3 cr. ; A-F or Audit; Every Fall & Spring)

British novel during the century in which it became widely recognized as a major vehicle for cultural expression. Possible topics include the relation of novel to contemporary historical concerns: rise of British empire, developments in science, and changing roles for women; formal challenges of the novel; definition of realism.

ENGL 4232. American Drama by Writers of Color. (DSJ; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Selected works by African American, Latinx, Native American, and Asian American playwrights. How racial/ethnic differences are integral to shaping different visions of American drama. History of minority/ethnic theaters, politics of casting, mainstreaming of the minority playwright. Students in this class will have the opportunity to participate in service-learning.

ENGL 4233. Modern and Contemporary Drama. (AH,CIV; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Why did the polite Danish homes of 1879 bar discussions of Henrik Ibsen's *A Doll's*

House? How did Oscar Wilde surreptitiously signal his sexuality through a satire of Victorian seriousness in *The Importance of Being Earnest*? How do contemporary playwrights such as August Wilson or Lynn Nottage bring forgotten moments of African American history to light? This course shows how modern and contemporary theater presents original perspectives on human identities and relationships as well as encourages audiences to see the world in new ways. This course focuses on the close analysis and interpretation of plays written by dramatists from around the world from the late-nineteenth to the twenty-first century. The plays we will study are set in Europe, Great Britain, North America, Africa, and Asia, and we will examine each carefully in light of the unique historical and social contexts in which they were produced, their creation and uses of aesthetic form, and their impact on individuals and communities. Through the course, you will become familiar with such dramatic forms as the well-made play, modern satire, realism, expressionism, symbolism, epic theater, and absurdism. Each of these is interesting not only as a distinctive mode of artistic presentation, but also as it offers different perspectives on historical moments and present-day concerns about people and their communities. Theatrical works illustrate how the meanings ascribed to physical bodies are at the heart of social differences such as gender, sexuality, class, race, disability, and national identity. We will look at each play in its original cultural context as well as through the creative lens of more recent productions and assess how both historical and more recent reimagining changes the meaning of the work. We will also make use of the rich theatrical resources and cultural organizations available in communities such as the Twin Cities.

ENGL 4311. Asian American Literature and Drama. (DSJ,LITR; 3 cr. ; A-F or Audit; Fall Odd Year)

Literary/dramatic works by Asian American writers. Historical past of Asian America through perspective of writers such as Sui Sin Far and Carlos Bulosan. Contemporary artists such as Frank Chin, Maxine Hong Kingston, David Henry Hwang, and Han Ong. Political/historical background of Asian American artists, their aesthetic choices.

ENGL 4612. Old English I. (3 cr. ; Student Option; Periodic Fall)

"I am learning Anglo-Saxon and it is a vastly superior thing to what we have now" (Gerard Manley Hopkins, letter to fellow poet Robert Bridges, 1882). This course is an introduction to the rich language and literature of Anglo-Saxon England (ca. 500-1100). "Old English," or as it is sometimes known, "Anglo-Saxon," is the earliest form of the English language; therefore, the primary course goal will be to acquire the ability to read Old English texts in the original. No previous experience with Old English or any other language is necessary or expected; undergraduates and graduate students from all departments are welcome. For graduate students in English, Old English I may count for the rhetoric/language/literacy distribution area. This course also fulfills the

literary theory/linguistic requirement for the undergraduate English major. A knowledge of Old English will allow you to touch the most ancient literary sensibilities in the English tradition; these sensibilities are familiar and strange at the same time, as we sense our deep cultural connection to these texts across the centuries, yet also find that the past is a strange place indeed. The power of Old English literature has profoundly influenced authors such as Tennyson, Pound, Graves, Wilbur, Hopkins, Gunn, Auden, Seamus Heaney, C.S. Lewis, and of course, J.R.R. Tolkien.

ENGL 4613. Old English II. (3 cr. ; Student Option; Periodic Spring)

The second semester of Old English is devoted to a full translation and study of the great Anglo-Saxon epic "Beowulf." J.R.R. Tolkien wrote of the poem that "its maker was telling of things already old and weighted with regret, and he expended his art in making keen that touch upon the heart which sorrows have that are both poignant and remote." "Beowulf" is an exciting tale of strife and heroism; but it is also a subtle meditation upon the character of humanity as it struggles to understand the hazards of a harsh world, the inscrutability of fate, and the nature of history itself. "Beowulf" is not only important for a detailed understanding of Anglo-Saxon culture, but it is also a significant and moving poetic achievement in the context of world literature. We will read and translate the poem in the original Old English; thus ENGL 4612 (or a similar course resulting in a basic reading knowledge of Old English) is a prerequisite. "Beowulf" has been the object of intensive scholarly study; we will delve into the debates over the poem's date, genesis, manuscript and historical context and critical interpretation. Spending an entire semester studying one complex work can be an invaluable experience. Please contact the instructor for any questions concerning the prerequisite.

ENGL 4722. Alphabet to Internet: History of Writing Technologies. (3 cr. ; Student Option; Every Fall)

Equivocal relation of memory and writing. Literacy, power, control. Secrecy and publicity. Alphabetization and other ways of ordering world. Material bases of writing. Typographical design/expression. Theories of technological determinism.

ENGL 5001. Ph.D. Colloquium: Introduction to Literary Theory and Literary Studies in the Modern University. (3 cr. ; Student Option; Every Fall)

Where and what is literary study vis-a-vis the history of the discipline, of the humanities, and of the university--all in the context of a graduate education. Literary theory focusing on key theoretical works that address the discipline, the humanities, and the university. Prerequisite: English grad student

ENGL 5020. Studies in Narrative. (3 cr. [max 6 cr.] ; Student Option; Periodic Fall & Spring)

Examine issues related to reading and understanding narrative in a variety of interpretive contexts. Topics may include

"The 19th-century English (American, Anglophone) Novel," "Introduction to Narrative," or "Techniques of the Novel." Topics specified in the Class Schedule.

ENGL 5040. Theories of Film. (3 cr. [max 9 cr.] ; Student Option; Periodic Fall)

Advanced topics regarding film in a variety of interpretive contexts, from the range and historic development of American, English, and Anglophone film (e.g., "Fascism and Film," "Queer Cinemas"). Topics and viewing times announced in Class Schedule. prereq: Grad student or instr consent

ENGL 5090. Readings in Special Subjects. (1-4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

General background preparation for advanced study. Diverse selection of literatures written in English, usually bridging national cultures and time periods. Readings specified in Class Schedule.

ENGL 5110. Medieval Literatures and Cultures: Intro to Medieval Studies. (3 cr. [max 9 cr.] ; Student Option; Every Spring)

Major and representative works of the Middle Ages. Topics specified in the Class Schedule.

ENGL 5121. Readings in Early Modern Literature and Culture. (3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)

Topical readings in early modern poetry, prose, fiction, and drama. Attention to relevant scholarship or criticism. Preparation for work in other courses or seminars. prereq: Grad student or instr consent

ENGL 5140. Readings in 18th Century Literature and Culture. (3 cr. ; Student Option; Every Spring)

Literature written in English, 1660-1798. Topics may include British literature of Reformation and 18th century, 18-century American literature, a genre (e.g., 18th-century novel). prereq: Grad student or instr consent

ENGL 5150. Readings in 19th-Century Literature and Culture. (3 cr. [max 9 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Topics may include British Romantic or Victorian literatures, American literature, important writers from a particular literary school, a genre (e.g., the novel). Readings.

ENGL 5170. Readings in 20th-Century Literature and Culture. (3 cr. [max 9 cr.] ; Student Option; Periodic Fall)

British, Irish, or American literatures, or topics involving literatures of two nations. Focuses either on a few important writers from a particular literary school or on a genre (e.g., drama). Topics specified in Class Schedule.

ENGL 5300. Readings in American Minority Literature. (3 cr. [max 9 cr.] ; Student Option; Every Fall)

Contextual readings of 19th-/20th-century American minority writers. Topics specified in Class Schedule.

ENGL 5501. Origins of Cultural Studies. (3 cr. ; Student Option; Periodic Fall & Spring)

Intellectual map of the creation of cultural studies as a unique approach to studying

social meanings. Key figures and concepts, including nineteenth- and early twentieth century precursors.

ENGL 5510. Readings in Criticism and Theory. (; 3 cr. [max 9 cr.] ; Student Option; Spring Odd Year)

Major works of classical criticism in the English critical tradition from Renaissance to 1920. Leading theories of criticism from 1920 to present. Theories of fiction, narratology. Feminist criticisms. Marxist criticisms. Psychoanalytic criticisms. Theories of postmodernism.

ENGL 5593. The African-American Novel. (3 cr. ; Student Option; Every Spring)

Explore African American novelistic traditions. Plot patterns, character types, settings, symbols, themes, mythologies. Creative perspectives of authors themselves. Analytical frameworks from contemporary literary scholarship.

ENGL 5701. Great River Review. (4 cr. ; Student Option; Every Spring)

Students will be assigned roles, both editorial and managerial, to assist in production of The Great River Review journal. They will explore and present on the history of the small magazine in American literature and meet with Twin Cities publishing professionals.

ENGL 5790. Topics in Rhetoric, Composition, and Language. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring) Topics specified in Class Schedule. prereq: Grad student or instr consent

ENGL 5800. Practicum in the Teaching of English. (; 1-3 cr. ; Student Option; Every Fall) Discussion of and practice in recitation, lecture, small-groups, tutoring, individual conferences, and evaluation of writing/reading. Emphasizes theory informing effective course design/teaching for different disciplinary goals. Topics vary. See Class Schedule. prereq: Grad student or instr consent

ENGL 5805. Writing for Publication. (; 3 cr. ; Student Option; Fall Even Year)

Conference presentations, book reviews, revision of seminar papers for journal publication, and preparation of a scholarly monograph. Style, goals, and politics of journal and university press editors/readers. Electronic publication. Professional concerns. prereq: Grad student or instr consent

ENGL 5992. Directed Readings, Study, or Research. (1-3 cr. [max 45 cr.] ; Student Option; Every Fall, Spring & Summer) TBD Prereq-Grad student or instr consent.

English: Creative Writing (ENGW)

ENGW 1101V. Honors Introduction to Creative Writing. (LITR,WI; 4 cr. ; A-F only; Every Fall)

In this course, we will explore the fundamentals of creative writing. We will start by looking at the building blocks of good imaginative writing: image, voice, character, setting, story, and revision. We will then move on to a more in-depth examination of three forms: literary nonfiction, fiction, and poetry. Students

will learn how to read as writers, obtain an understanding and appreciation for imaginative writing, and gain a sense of themselves as creative writers. We will be trying many exercises and assignments, from brainstorming experiments to final drafts, so come ready to write. Since this is an Honors course, it is designed to be challenging and to immerse students in the literary landscape. The literary citizenship requirement will take students beyond the normal classroom environment and into the community to attend and respond to readings. We will also supplement the textbook with classroom visits and additional readings by the most exciting and innovative poets, fiction writers, and creative nonfiction writers working today. Students will also contribute to the course readings by presenting a poem of their choosing to the class, explaining its techniques and importance. This will tie in with larger discussions of what works gain popular and academic attention and how this happens, including investigations of the role of anthologies and social media.

ENGW 1101W. Introduction to Creative Writing. (LITR,WI; 4 cr. ; Student Option No Audit; Every Fall & Spring)

In this course, we will explore the fundamentals of creative writing. We will start by looking at the building blocks of good imaginative writing: image, voice, character, setting, story, and revision. We will then move on to a more in-depth examination of three forms: literary nonfiction, fiction, and poetry. Students will learn how to read as writers, obtain an understanding and appreciation for imaginative writing, and gain a sense of themselves as creative writers. We will be trying many exercises and assignments, from brainstorming experiments to final drafts, so come ready to write. prereq: Students may not audit this course

ENGW 1102. Introduction to Fiction Writing. (; 3 cr. ; Student Option No Audit; Every Fall & Spring)

Beginning instruction in art of fiction: characterization, plot, dialogue, and style. Writing exercises to generate ideas. Students read/discuss published fiction and their own writing.

ENGW 1103. Introduction to Poetry Writing. (; 3 cr. ; Student Option No Audit; Every Fall, Spring & Summer)

Beginning instruction in art of poetry. Discussion of student poems and contemporary poetry. Ideas for generating material. Writing exercises in/out of class.

ENGW 1104. Introduction to Literary Nonfiction Writing. (; 3 cr. ; Student Option No Audit; Every Fall & Spring)

Art of literary nonfiction. Discussion of student work and contemporary creative nonfiction. Ideas for generating material. Writing exercises. prereq: Students not allowed to audit this course

ENGW 3102. Intermediate Fiction Writing. (3 cr. ; Student Option No Audit; Every Fall & Spring)

Exercises, experiments, assigned readings, discussion of student work. prereq: [EngW

1101 OR 1102 OR 1103 OR 1104], students cannot audit course

ENGW 3104. Intermediate Poetry Writing. (3 cr. ; Student Option No Audit; Every Fall & Spring)

Exercises, experiments, assigned readings, discussion of student work. prereq: [1101 or 1102 or 1103 or 1104], students cannot audit course

ENGW 3106. Intermediate Literary Nonfiction Writing. (3 cr. ; Student Option No Audit; Every Fall & Spring)

Exercises, experiments, assigned readings, discussion of student work. prereq: [1101 or 1102 or 1103 or 1104], students cannot audit course

ENGW 3110. Topics in Creative Writing. (; 3 cr. [max 9 cr.] ; Student Option No Audit; Every Fall, Spring & Summer)

Topics specified in Class Schedule. prereq: 1101 or 1102 or 1103 or 1104 or dept consent

ENGW 3801W. Eat, Write, Learn: Creative Writing in Spain. (AH,WI; 3 cr. ; Student Option No Audit; Periodic Spring & Summer)

This undergraduate creative writing class which satisfies both the LE and the Writing-Intensive requirements focuses on the experience and the literary evocation of travel, with students based first in the capital, Madrid, and then in Toledo, a medieval city in the center of Spain. In Madrid, students will write about the Spanish tradition of eating twelve grapes at the stroke of midnight on New Year's eve; they will compare the characteristics of two different plazas; they will write poetry about art in the Prado Museum. In Toledo, they will wander through tangled streets, shops, cathedrals, fortresses, synagogues and museums, taking notes for poems, stories, and essays as they go. Madrid is a vibrant, modern European center; Toledo, a beautifully preserved city on a hill, has been declared, in its entirety, a national monument. For centuries an historic, scholarly and artistic center, Toledo was long famed for its religious tolerance, with Christian, Jewish, and Muslim populations coexisting within its walls. In both locations, we will have guided tours of Spanish monuments and museums, and students will reflect on the experience of travel via many different types and styles of writing assignments: the daily post-card, the food review, the creative travel guide, the work of ekphrasis, the annotated map, the daily journal, etc. Why do we travel and what do we gain from visiting cultures and environments that may be unfamiliar? Writing and revising will be emphasized as creative ways of reflecting on the phenomenon of departure and return.

ENGW 3885V. Honors Capstone Seminar in Creative Writing. (WI; 4 cr. ; A-F only; Every Fall & Spring)

Honors students who wish to graduate magna cum laude or cum laude write an Honors thesis, 13-17 pages in length, in ENGL or ENGW 3885V that contains substantive and original analytical insights. Students must discuss their plans with their instructor by the end of the second week of the term. Student and instructor must decide together what additional or enriched work will be required to

have the capstone paper count as an honors thesis. Examples of such work include covering the topic in greater depth, using primary sources more robustly, or incorporating more creativity, more synthesis, and/or advanced analysis. Consult with your honors adviser for more details. This course also functions as a capstone experience for the English major and the Creative Writing minor. To graduate with a BA in English, students with an interest in creative writing may choose to produce a substantial manuscript of poetry, literary fiction, or literary nonfiction rather than an extended, scholarly essay. In this advanced creative writing workshop, students receive instruction on writing this manuscript from tenured and tenure-track faculty in English. Class sessions typically include in-class writing exercises, which are then expanded into more finished works of poetry or prose reviewed by the faculty and discussed in workshops by the students themselves. Writing exercises and assignments lead, at the end of the semester, to a finished, thoroughly revised manuscript. Faculty teach students to produce a significant body of poetry, fiction, or creative nonfiction through discussions of method, craft, and development; instruction in specific writing techniques; workshopping and revising drafts; solving problems; and creating a coherent and elegant final product. While the subjects about which students write vary depending on student interest and faculty expertise, at least 50 percent of the course grade is determined by students' writing performance. Prerequisites for Admission: (1) Honors candidacy in English, (2) English major status and completion of a Critical Theories and Methods course (ENGL 3001W, ENGL 3002, ENGL 4003) or approved transfer course with a minimum grade of C-minus, (3) completion of at least six credits of creative writing courses, including one intermediate (ENGW 3xxx-level) or advanced creative writing workshop, preferably in the genre of the ENGW 3885V workshop to which you are applying; and (4) submission of a creative writing sample. Admission is by permission of the instructor. Priority will be given to students with senior status who have completed the majority of the major requirements, as well as to students who plan to graduate in the term they are requesting to take the senior seminar.

ENGW 3885W. Capstone Seminar in Creative Writing. (WI; 4 cr. ; A-F only; Every Fall & Spring)

This course is devoted to the writing of the senior paper in creative writing. To graduate with a BA in English, students with an interest in creative writing may choose to produce a substantial manuscript of poetry, literary fiction, or literary nonfiction rather than an extended, scholarly essay. In this advanced creative writing workshop, students receive instruction on writing this manuscript from tenured and tenure-track faculty in English. Class sessions typically include in-class writing exercises, which are then expanded into more finished works of poetry or prose reviewed by the faculty and discussed in workshops by the students themselves. Writing exercises and assignments lead, at the end of the semester,

to a finished, thoroughly revised manuscript of at least 2,500 words. Faculty teach students to produce a significant body of poetry, fiction, or creative nonfiction through discussions of method, craft, and development; instruction in specific writing techniques; workshopping and revising drafts; solving problems; and creating a coherent and elegant final product. While the subjects about which students write vary depending on student interest and faculty expertise, at least 50 percent of the course grade is determined by students' writing performance. The seminar also functions as a capstone experience that fulfills many of the Student Learning Outcomes for the English major and the capstone course for those who are pursuing a Minor in Creative Writing. Prerequisites for Admission: (1) English major status and completion of a Critical Theories and Methods course (ENGL 3001W, ENGL 3002, ENGL 4003) or approved transfer course with a minimum grade of C-minus; (2) completion of at least six credits of creative writing courses, including one intermediate (ENGW 3xxx-level) or advanced creative writing workshop, preferably in the genre of the ENGW 3885W workshop to which you are applying; and (3) submission of a creative writing sample. Admission is by permission of the instructor. Priority will be given to students with senior status who have completed the majority of the major requirements, as well as to students who plan to graduate in the term they are requesting to take the capstone seminar.

ENGW 3993. Directed Study - Honors Thesis in Creative Writing. (2-4 cr. ; A-F only; Every Fall & Spring)

ENGW 3993 is a directed study that supports summa cum laude degree students beginning their honors theses in the Department of English, with a focus on creative writing. Students will complete ENGW 3993, the non-WI version, in the first semester for 2 credits followed consecutively by ENGW 3993W for 2 additional credits in the second semester, when the polished product is evaluated. Summa candidates also must register for HCOL 3101H or HCOL 3102H, which counts as the classroom experience required for the completion of the Honors thesis. The thesis must be approximately 30 pages in length and may be scholarly, critical, or creative in nature. If the candidate elects to submit a topic, such as poetry, that poses a problem with this length, they must obtain permission from the English honors adviser and from all of his or her readers to adjust the length of the completed thesis. Summa candidates must apply for permission to register for ENGW 3993 one year before their expected graduation term. They will work with their faculty advisor to complete the University's directed study contract to clarify expectations and form a written agreement about expected workload, credits, and basis for grading. Prereq: Honors candidacy in English, consent of English honors advisor

ENGW 3993W. Directed Study- Honors Thesis in Creative Writing. (WI; 1-4 cr. ; A-F only; Every Fall & Spring)

ENGW 3993W is a directed study that supports summa cum laude degree students completing their honors theses in the Department of English, with a focus on creative writing. Students will complete ENGW 3993, the non-WI version, in the first semester for 2 credits followed consecutively by ENGW 3993W for 2 additional credits in the second semester, when the polished product is evaluated. Summa candidates also must register for HCOL 3101H or HCOL 3102H, which counts as the classroom experience required for the completion of the Honors thesis. The thesis must be approximately 30 pages in length and may be scholarly, critical, or creative in nature. If the candidate elects to submit a topic, such as poetry, that poses a problem with this length, they must obtain permission from the English honors adviser and from all of his or her readers to adjust the length of the completed thesis. Summa candidates must apply for permission to register for ENGW 3993W one year before their expected graduation term. You will work with your faculty advisor to complete the University's directed study contract to clarify expectations and form a written agreement about expected workload, credits, and basis for grading. Prereq: Honors candidacy in English, consent of English honors advisor

ENGW 4205. Screenwriting. (; 3 cr. ; Student Option No Audit; Every Fall & Spring)

An introductory workshop to screenwriting basics, including formatting, style, and structure. In-class and take-home exercises will assist the students in learning techniques for developing engaging characters, writing concise description and vivid dialogue, and outlining a usable plot. prereq: ENGL 3001W or 3001V or EngW 3102 or 3104 or 3106 or 3110, or jr or sr in SCMC major or minor

ENGW 5102. Graduate Fiction Writing. (4 cr. [max 12 cr.] ; Student Option No Audit; Every Fall)

Advanced workshop for graduate students with considerable experience in writing fiction.

ENGW 5104. Graduate Poetry Writing. (4 cr. [max 8 cr.] ; Student Option No Audit; Every Fall)

Advanced workshop for graduate students with considerable experience in writing poetry. Students will explore new poetic possibilities while studying contemporary poetry and poetics.

ENGW 5106. Graduate Literary Nonfiction Writing. (4 cr. [max 12 cr.] ; Student Option No Audit; Every Fall)

Advanced workshop for graduate students with considerable experience in writing literary nonfiction.

ENGW 5130. Topics in Graduate Creative Writing. (; 4 cr. [max 16 cr.] ; Student Option; Periodic Fall & Spring)

Workshop. Might include work in more than one genre. prereq: instr consent

ENGW 5310. Reading as Writers. (; 4 cr. [max 12 cr.] ; Student Option No Audit; Periodic Fall & Spring)

Special topics in reading fiction, literary nonfiction, poetry. Topics specified in Class Schedule.

ENGW 5606W. Literary Aspects of Journalism. (WI; 3 cr. ; Student Option; Every Spring)

Journalism isn't fiction. Yet the relationship between what is true and what is artfully constructed toward a "larger truth" -- beyond the facts -- has a complex and intriguing history. This writing-intensive course explores that relationship through close readings of some of the best writers of long-form nonfiction, starting with the birth of the novel from journalistic roots in the 18th century and ending with postmodern forms that challenge the notion of what we can ever know. Discover the literary devices used by Stephen Crane's reported street scenes or Nellie Bly's first-hand investigations into conditions for the mentally ill in the 19th century, and, later, Truman Capote's nonfiction novel about a Kansas farm family's murder. Readings include works by pivotal 20th-century writers such as John Hersey, Joseph Mitchell, Lillian Ross, Michael Herr, Norman Mailer, Gay Talese, Joan Didion, Tom Wolfe, and Hunter S. Thompson, and will trace how their pioneering methods influenced contemporary journalism as well as the documentary films of Errol Morris and contemporary nonfiction writers expanding into new forms.

ENGW 5701. Great River Review. (4 cr. ; Student Option; Every Spring)
Students will be assigned roles, both editorial and managerial, to assist in production of The Great River Review journal. They will explore and present on the history of the small magazine in American literature and meet with Twin Cities publishing professionals.

ENGW 5993. Directed Study in Writing. (1-4 cr. [max 18 cr.]; Student Option; Every Fall & Spring)
Projects in writing poetry, fiction, drama, and nonfiction, or study of ways to improve writing. Prereq-instr consent, dept consent, college consent.

Entomology (ENT)

ENT 1001. How Insects Shape Society: Pollinators, Pests, and Policy. (CIV; 3 cr. ; A-F only; Every Fall)

Do you eat genetically modified foods, or do you avoid them? Vaccinate, or do not vaccinate? Did you know these are in part insect related questions? Insects make up more than half of the living organisms on this planet, and they have had a profound impact in shaping human society and culture. Even so, insects are swatted, stomped, squished, and otherwise misunderstood. In this course students will explore the complex, and often uncomfortable, relationships between insects and humans and explore the ethical dilemmas posed by our close relationships with the insect world. Ultimately this course examines the interactions between insects and humans, focusing on contemporary topics that explore how insects dictate human actions,

policies, and behaviors. Topics include: human perception of insects; basic concepts in insect biology and behavior; environmental and cultural importance of insects; the role of insect pests in determining human food choice; insect vectors and disease transmission; perception and awareness about humanity's role in nature.

ENT 1004. The Insects. (; 3 cr. ; A-F only; Every Fall & Spring)

Insects represent one of the most abundant and diverse life forms on Earth, and their environmental importance is displayed across both terrestrial and aquatic ecosystems. Beyond environmental importance, insects shape human society through their impact on our health, the pollination of our food crops, and damage to our commodities and homes. Insect Biology is an introductory entomology course on the biology and ecology of insects, their classification, and their interactions with the environment and human society. This course will provide background on insect diversity and physiology, while providing insight into how scientists examine the roles of insects in medicine, agriculture, advances in genetics, and ecology. These topics will provide fundamental biological knowledge needed to make informed decisions about insect-related topics in a global society.

ENT 1005. Insect Biology with Lab. (BIOL; 4 cr. ; A-F only; Every Fall & Spring)

Insects represent one of the most abundant and diverse life forms on Earth, and their environmental importance is displayed across both terrestrial and aquatic ecosystems. Beyond environmental importance, insects shape human society through their impact on our health, the pollination of our food crops, and damage to our commodities and homes. Insect Biology is an introductory entomology course on the biology and ecology of insects, their classification, and their interactions with the environment and human society. This course will provide background on insect diversity and physiology while providing insight into how scientists examine the roles of insects in medicine, agriculture, advances in genetics, and ecology. These topics will provide fundamental biological knowledge needed to make informed decisions about insect-related topics in a global society.

ENT 1021. An Introduction to Forensic Entomology. (3 cr. ; A-F only; Every Spring)

What can maggots and beetles collected at a crime scene tell investigators about the body? Often, insect evidence collected at the scene of a crime can help experts make a variety of conclusions, such as time of death and whether or not the body has been moved from the original crime scene. In this seminar, students will explore how insect evidence can be used in various ways in the field of forensic science. This class will discuss the scientific approaches and techniques involved in forensic entomological analysis. Topics will include, but are not limited to, the different insects found in decomposing bodies, how insect development time can be affected by factors like the weather or body placement, and how insect evidence

can be useful to both crime scene investigators and medical examiners.

ENT 1906. Magnificent, Miniature Minds: From Dancing Honeybees to Cyborgs. (; 3 cr. ; A-F only; Periodic Fall)

Did you know that honeybees can be trained to recognize human faces or that desert ants can count their steps while walking? Have you ever thought about how an octopus knows how to match its body coloration to its marine environment and a monarch butterfly can find its over-wintering site located thousands of miles away? These are just a few examples of the extraordinary abilities that invertebrate animals display, reflecting the mighty power of their miniature brains and nervous systems. In this course, we will discuss the fascinating behaviors of animals with miniature brains and how their numerally-limited nervous systems enable them to do what they do. We will also explore how a deeper understanding of small-brain networks can inform us about how our own brains work, and how such knowledge can be used to engineer adaptive robots, cyborgs and smart machines. This course is designed to be integrative including disciplines intersecting with animal behavior, entomology, evolution, ecology, neuroscience, psychology and bioengineering. A major goal of this course is to widen one's view of the importance of invertebrate animals in the field of neuroscience and gain an appreciation of the translational impact that this knowledge can have and will continue to have on our society and daily lives. Students will also be introduced to basic concepts in neurobiology and learn how small neural networks operate.

ENT 1909. Got Bees? Declines and Conservation of Honey bees and Native bees. (ENV; 3 cr. ; A-F only; Periodic Fall)

Humans are largely aware that bees are declining globally, due in large part to human land use, agricultural practices, and the changing climate. The loss of insect pollinators, including native and honeybees, presents a grand challenge that will have cascading effects throughout ecological systems and human food crop systems. Preservation of pollination services is not only an environmental issue, it is also an important challenge facing our society and world. How we, as a society, choose to address this problem will reflect on how we value the environment and the services it provides. This course is designed to reflect on the shared sense of responsibility for building a community that will address this issue. Intended audience: Undergraduates who may or may not be majoring within the sciences. Students interested in how humans interact with the environment, and how the choices we make as a society impact environmental processes. No prerequisite courses required.

ENT 2884. The Six-legged Conquerors: How insects have shaped human history. (HIS; 3 cr. ; A-F or Audit; Every Fall)

Insects have had an immense yet underappreciated impact on the course of human history and civilization. Through their effects as carriers of disease, insects have

decided the outcomes of numerous battles and wars, often causing many more deaths than weapons did. On the other hand, beneficial insects have made important contributions to the development of many industries, in particular related to textiles and agriculture, and they also serve as important sources of food in many cultures. Because of their varied and important roles in human life and well-being, insects feature prominently in sacred texts and have thus influenced spiritual and religious thought through the ages. And from Greek times until the present, insects have contributed greatly to the development of scientific thought. Many of the great naturalists throughout history ? from Aristotle to Darwin to EO Wilson ? have had an inordinate fascination with insects. In the second half of the 20th century and beyond, insects sparked the environmental movement, serve as models for innovating technologies such as robots, and continue to shape our lives in fascinating, challenging and novel ways. In this class we will discuss the major ways in which the fates of humans and insects have been intertwined over the course of human history. Throughout the class we focus on ways that historical inquiry can be used to elucidate entomological questions and, conversely, how entomological knowledge can be brought to bear to solve historical mysteries.

ENT 2920. Introductory Lectures in Entomology. (; 1-4 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer) Introductory lectures or labs in special fields of entomological research. Given by visiting scholar or regular staff member.

ENT 3021. Insect Biodiversity and Evolution. (; 4 cr. ; A-F only; Every Fall) Insects are the most diverse group of organisms on Earth with almost 1 million described species. Millions more remain to be described, especially in tropical regions of the world. Insects come in a remarkable array of sizes, colors, and shapes. Taxonomists use this morphological complexity as the primary means of identifying insects, but also for inferring evolutionary relationships. In this course, we will learn how to identify insects, explore methods of collection and curation of insects, discuss their evolutionary relationships, see how insects fit in the natural world, and discuss exciting new efforts to inventory, describe, and conserve the remarkable diversity of insects.

ENT 3211. Insect Pest Management. (3 cr. ; A-F only; Every Spring) Management of Insect Pests is designed for upper division undergraduates in any major or minor. The course will emphasize principles of insect pest management and draw from examples related to agricultural, horticultural and landscape and urban systems. Conventional (nonorganic) and organic approaches, the use of social media and modern technology, and economic, environmental and social consequences of diverse tactics (chemical, cultural, biological, genetic, etc.) will be covered by the Instructor and, on occasion, by guest lecturers. Student

debates on pesticide-pollinator and genetic engineering issues will provide real-world context and insights on complexities of insect pest prevention and management.

ENT 3275. Insect-transmitted diseases of humans. (3 cr. ; Student Option; Every Spring) What?s so attractive about human blood? How have human interactions with insects evolved? Insects and ticks transmit viral, bacterial, protozoan and filarial diseases to humans, particularly in tropical countries. Zika, most recently, and also dengue and other mosquito-borne viruses pose an emerging challenge in the southern US as climate change increases the range of important vector species. Lyme disease and other tick-borne diseases are increasing in the US, and pose challenges in diagnosis and treatment. This course covers contemporary topics in "Medical Entomology" that will provide an overview of arthropod-borne disease and its impacts on global health from the perspective of insect vectors and microbial pathogens. Students will explore historical, contemporary and epidemiologic stories demonstrating exposure and control strategies via lecture, student discussions, laboratory demonstrations, and critical review of current best practices in medical entomology. This course is designed for upper division undergraduate and graduate students in any major or minor.

ENT 3294. Directed Research in Entomology. (1-4 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer) An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research course will be required to use the University-wide online directed research contract process in order to enroll. prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

ENT 3341. Biological control of insect pests and weeds. (; 3 cr. [max 4 cr.]; A-F or Audit; Every Fall & Spring) Biological control is the suppression of pests and weeds using living organisms. It involves fascinating interactions between organisms such as plants and herbivores, and insects and the predators and parasitoids that attack them. These interactions can provide spectacular protection from invasive species but risks to the environment are possible as well so biological control interventions must be undertaken with great care. We will explore these interactions and interventions in depth in this class.

ENT 3910. Introduction to Research in Entomology. (1-6 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer) This course will provide the framework for offering field, lab, or library-based entomological research under the supervision of faculty or graduate-faculty staff in the Department of Entomology. It is anticipated that this course will provide hands-on experiences, and that the research focus will generally be

aligned with the research specialization of the instructor.

ENT 3927. Data Management for Biologists. (2 cr. ; A-F only; Periodic Fall & Spring) This course is focused on providing hands-on experience in organizing, managing, curating, and accessing data. Students will encounter the data life cycle from generation to preservation. Students will be expected to complete assignments using their own data or other available datasets. It is a topic-driven weekly seminar (12 sessions at ~2h each), combining small amounts of lecture with problem solving and hands-on exercises. The course is taught for the requisite number of hours for a 2-credit, semester long course. For each week we will have short lectures followed by hands-on activities. The longer course sessions (~120 minutes per week in class vs. 100 minutes) also allow the course to end two weeks early so students can begin or prepare for their field seasons if necessary.

ENT 4021. Honey Bees and Insect Societies. (; 3 cr. ; Student Option; Fall Odd Year) Natural history, identification, and behavior of honey bees and other social insects. Evolution of social behavior, pheromones and communication, organization and division of labor, social parasitism. Lab with honey bee management and maintenance of other social bees for pollination. prereq: Biol 1009 or instr consent

ENT 4096. Professional Experience Program: Internship. (; 1-3 cr. ; S-N or Audit; Every Fall, Spring & Summer) Professional experience in entomology firms or government agencies through supervised practical experience; evaluative reports and consultations with faculty advisers and employers. prereq: COAFES jr or sr, complete internship contract available in COAFES Career Services before enrolling, UC only, instr consent

ENT 4251. Forest and Shade Tree Entomology. (; 3 cr. ; Student Option; Every Fall) Biology, ecology, population management of forest/shade tree insects. Emphasizes predisposing factors/integrated management. Lecture/lab.

ENT 5001. Entomology Orientation. (; 1 cr. [max 2 cr.]; S-N only; Every Fall) Class will comprise short lectures and visits to laboratories for first-hand exposure to entomological research at the University of Minnesota. Lectures will represent different research areas related to basic and applied entomology. Students will acquire an understanding of the diversity and significance of different areas of entomological research at the University of Minnesota. Students will also learn about techniques used by entomologists for answering questions related to insects and their associations with humans and the environment.

ENT 5011. Insect Structure and Function. (4 cr. ; A-F or Audit; Every Spring) Comparative study of insect structures/functions from evolutionary perspective.

Introduction to physiology of digestion, respiration, other organ systems.

ENT 5021. Insect Biodiversity and Evolution. (4 cr. ; Student Option; Every Fall)

Insects are the most diverse group of organisms on Earth with almost 1 million described species. Millions more remain to be described, especially in tropical regions of the world. Insects come in a remarkable array of sizes, colors, and shapes. Taxonomists use this morphological complexity as the primary means of identifying insects, but also for inferring evolutionary relationships. In this course, we will learn how to identify insects, explore methods of collection and curation of insects, discuss their evolutionary relationships, see how insects fit in the natural world, and discuss exciting new efforts to inventory, describe, and conserve the remarkable diversity of insects.

ENT 5041. Insect Ecology. (3 cr. ; Student Option; Fall Even Year)

Synthetic analysis of the causes of insect diversity and of fluctuations in insect abundance. Focus on abiotic, biotic, and evolutionary mechanisms influencing insect populations and communities. prereq: Biol 5041 or EBB 5122 or instr consent

ENT 5051. Scientific Illustration of Insects.

(; 3 cr. ; Student Option; Spring Even Year)
Techniques for preparing and observing insects for subsequent illustration. Traditional illustration techniques using the drawing tube and ocular grid on the microscope, including pencil sketching and pen and ink line drawing. Other ?traditional? rendering methods will include line and ink, stippling, cross-hatching, color illustration. Major emphasis will be in computer-assisted techniques of scientific illustration using Adobe Illustrator and Adobe Photoshop, including instruction on preparing full body, true-to-life, color illustrations of insects on the computer.

ENT 5061. Insect Molecular Science. (; 2

cr. ; Student Option; Periodic Fall & Spring)
Molecular genetic techniques and their applications. Emphasizes insect species other than *Drosophila*. Application of genetic techniques to physiological processes. prereq: [5011, basic genetics course] or instr consent

ENT 5121. Applied Experimental Design. (;

4 cr. ; Student Option; Periodic Fall)
Principles of sampling methodologies, experimental design, and statistical analyses. Methods/procedures in generating scientific hypotheses. Organizing, initiating, conducting, and analyzing scientific experiments using experimental designs and statistical procedures. Offered with AGRO 5121. prereq: Stat 5021 or equiv or instr consent

ENT 5126. Spatial and Temporal Analysis of Ecological Data. (3 cr. [max 6 cr.] ; A-F or Audit; Spring Even Year)

This course covers linear models (regression and ANOVA) and extensions to temporal data and spatial point processes, lattice/areal data, and geostatistics. The course bridges sufficient theory to understand why contending with spatiotemporal dependence is important with

enough application to make students confident in their own data analyses.

ENT 5211. Insect Pest Management. (3 cr. ; Student Option; Every Spring)

Insect Pest Management is designed for graduate students in any major or minor. The course will emphasize principles of insect pest management and draw from examples related to agricultural, horticultural and landscape, and urban systems. Conventional (nonorganic) and organic approaches, the use of social media and modern technology, and economic, environmental, and social consequences of diverse tactics (chemical, cultural, biological, genetic, etc.) will be covered by the instructor and, on occasion, by guest lecturers. Student debates on pesticide-pollinator and genetic engineering issues will provide real-world context and insights on complexities of insect pest prevention and management.

ENT 5275. Insect-transmitted diseases of humans. (3 cr. ; Student Option; Every Spring)

What's so attractive about human blood? How have human interactions with insects evolved? Insects and ticks transmit viral, bacterial, protozoan and filarial diseases to humans, particularly in tropical countries. Zika, most recently, and also dengue and other mosquito-borne viruses pose an emerging challenge in the southern US as climate change increases the range of important vector species. Lyme disease and other tick-borne diseases are increasing in the US, and pose challenges in diagnosis and treatment. This course covers contemporary topics in "Medical Entomology" that will provide an overview of arthropod-borne disease and its impacts on global health from the perspective of insect vectors and microbial pathogens. Students will explore historical, contemporary and epidemiologic stories demonstrating exposure and control strategies via lecture, student discussions, laboratory demonstrations, and critical review of current best practices in medical entomology. This course is designed for upper division undergraduate and graduate students in any major or minor.

ENT 5341. Biological Control of Insects and Weeds. (; 3 cr. ; Student Option; Every Spring)

Biological control is the suppression of pests and weeds using living organisms. It involves fascinating interactions between organisms such as plants and herbivores, and insects and the predators and parasitoids that attack them. These interactions can provide spectacular protection from invasive species but risks to the environment are possible as well so biological control interventions must be undertaken with great care. We will explore these interactions and interventions in depth in this class. The class is online.

ENT 5481. Invertebrate Neurobiology. (; 2

cr. [max 3 cr.] ; Student Option; Every Spring)
The study of invertebrate animals, such as honey bees, sea slugs, and fruit flies, have been instrumental in informing us humans about how our own brains operate. In addition, the ability of some invertebrate animals to sense certain stimuli beyond what humans can detect, has enabled scientists to build

smart machines and robots with extraordinary capabilities. Since 80% of the world's species are insects, understanding the basics of how their nervous systems function will enable societies to better manage their health (e.g., helping insect pollinators) or combat their destruction (e.g., preventing locust plagues). Invertebrate Neurobiology is a course that will explore the underlying neural mechanisms that enable animals to solve or respond to particular problems encountered in their natural environments. Many of the invertebrate animals presented will not only exhibit interesting behaviors, but will reveal important and often conserved principles of neuroscience applicable to a host of animals, including us humans. This course is designed to be integrative ? including disciplines intersecting with animal behavior, entomology, evolution, ecology, neuroscience, psychology, and bioengineering. A major goal of this course is to widen one's view of the importance of invertebrate animals in the field of neuroscience and gain an appreciation of the translational impact that this knowledge can have and will continue to have on our society and daily lives. Students will also be introduced to important concepts in neurobiology and learn how small neural networks operate.

ENT 5900. Basic Entomology. (; 1-6 cr. [max

12 cr.] ; Student Option; Every Fall & Spring)
For graduate students who need to make up certain deficiencies in their biological science background. prereq: instr consent

ENT 5910. Special Problems in Entomology.

(; 1-6 cr. [max 10 cr.] ; Student Option; Every Fall & Spring)
Individual field, lab, or library studies in various aspects of entomology. prereq: instr consent

ENT 5920. Special Lectures in Entomology.

(; 1-4 cr. [max 12 cr.] ; S-N only; Every Fall & Spring)
Lectures or labs in special fields of entomological research. Given by visiting scholar or regular staff member.

ENT 5927. Data Management for Biologists.

(; 2 cr. ; A-F only; Periodic Fall & Spring)
This course is focused on providing hands-on experience in organizing, managing, curating, and accessing data. It is conceived as a topic-driven weekly seminar (12 sessions at ~2h each), combining small amounts of lecture with problem solving and hands-on exercises. The course is taught for the requisite number of hours (1400) for a 2-credit course. The longer course sessions allow for short lectures followed by hands-on activities. Students will encounter the data life cycle from generation to preservation. Students will be expected to complete assignments using their own data or other available datasets.

Environment Sci, Policy, Mgmt (ESPM)

ESPM 1001. Freshmen Orientation to Environmental Sciences, Policy, and Management. (; 1 cr. ; A-F or Audit; Every Fall)

Academic planning, ESPM careers, liberal education requirements, internships. Building relationships with other students/faculty, student life, information technology, critical computer skills. New freshmen.

ESPM 1002. Transfer Orientation Seminar. (; 1 cr. ; A-F or Audit; Every Fall & Spring)

This required course provides orientation and guidance in planning for students transferring into the environmental sciences, policy and management (ESPM) major. We will use course activities to enhance your success and sense of community at the University and within the ESPM major while we explore the major, maximizing your time at the University, and preparing you for an environmentally-focused career.

ESPM 1011. Issues in the Environment. (ENV; 3 cr. ; Student Option; Every Fall & Spring)

Introductory survey of environmental issues that explores the connections between environmental sciences, policy, and management. You will explore interrelationships between the environment and human society, as well as the underlying social, ethical, political and economic factors that affect those relationships. You will also examine the roles for science, technology, policy, and environmental justice in meeting environmental challenges. Asynchronous online lectures with weekly discussions in small groups.

ESPM 1012H. Environmental Science and Society. (ENV; 3 cr. ; A-F only; Every Spring)

Selection of current environmental issues affecting our daily lives. Evaluate the scientific and social approaches necessary to resolve environmental issues. Students explore how everything we do affects the environment in different ways.

ESPM 1202. People, Land, and Water: Systems Under Stress. (HIS; 3 cr. ; A-F only; Every Spring)

Policies/community engagement around water sustainability. Students engage directly with local case on Mississippi River.

ESPM 1425. Introduction to Weather and Climate. (ENV,PHYS; 4 cr. ; Student Option; Every Fall & Spring)

pre-calculus introduction to the nature of the atmosphere and its behavior. Topics covered include atmospheric composition, structure, stability, and motion; precipitation processes, air masses, fronts, cyclones, and anticyclones; general weather patterns; meteorological instruments and observation; weather map analysis; and weather forecasting.

ESPM 2021. Environmental Sciences: Integrated Problem Solving. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Environmental issues facing the world today are increasingly complex. Challenges such as global climate change, air and water quality impairments, land use change for forest and agricultural production, and species conservation require an ability to conceptualize problems broadly so that solutions are crafted

in a manner that addresses a multitude of perspectives and considerations. This course will use an interdisciplinary case-study approach to expose students to the most important environmental problems facing society today as well as innovative solutions. The case studies include investigations of ecosystem services, invasive species and pollution remediation, with world experts on these topics leading the discussions. Throughout, a focus on interdisciplinary analysis, including linkages to environmental grand challenges will be emphasized. An interactive approach will be utilized as well, in which students work in groups and engage in class discussions as ways to internalize and conceptualize information. prereq: 1011, ESPM major

ESPM 2886. Pollinator Conservation: From Biodiversity to Food Production. (ENV; 3 cr. ; A-F only; Every Spring)

Flowers are strikingly beautiful as their main purpose is to attract an animal that will transfer pollen and produce seeds. In fact, nearly 300,000 species of plants rely on these animal pollinators. Pollinators include a diverse suite of organisms including insects, mammals, birds, and even lizards. One of the most important groups of pollinators, the bees, contain over 20,000 species. Through a mix of readings, active learning activities and lectures, this course will allow students to learn about the biology, conservation, and importance of pollinators. The first portion of the class will focus on the fascinating biology of pollination and pollinators, including mutualisms, trickery and other complex species interactions. Students will explore the evolutionary biology of plant-pollinator interactions and how the millions of years of interactions between plants and pollinators have led to diverse array of colors, smells and floral forms we see today. The second section of the course will explore actions of pollinators in terms of honey production, crop pollination, economics and cultural appreciation. Students will explore how pollinators contribute to human society and how the actions of humans impact pollinator populations. Both sections will be viewed through a lens of pollinator conservation and environmental policy. Here students will be expected to ability to locate and evaluate scientific information and think critically how science does and does not affect environmental policy.

ESPM 3000. Seminar on Current Issues for ESPM. (; 1 cr. [max 6 cr.] ; A-F or Audit; Every Fall & Spring)

Environmental issues students will have to address in their future careers. Small group discussion, in-depth/focused intellectual debate. Topics depend on faculty selection or student interest. prereq: Jr

ESPM 3011W. Ethics in Natural Resources. (WI,CIV; 3 cr. ; Student Option; Every Fall & Spring)

Normative/professional ethics, and leadership considerations, applicable to managing natural resources and the environment. Readings, discussion.

ESPM 3012. Statistical Methods for Environmental Scientists and Managers.

(MATH; 4 cr. ; A-F or Audit; Every Spring) Introduction to statistical principles, foundations, and methods for examining data and drawing conclusions. Confidence intervals, hypothesis testing, analysis of variance, and regression modeling of relationships in environmental and natural resource science and management problems. prereq: Two yrs of high school math

ESPM 3014. Tribal and Indigenous Natural Resource Management. (3 cr. ; Student Option; Every Fall)

This course is designed to develop and refine your understanding of tribal and Indigenous natural resource management, tribal and Indigenous perspectives, and responsibilities natural resource managers have for tribal and Indigenous communities. This course includes one eight-hour weekend field session.

ESPM 3015. Invasive Plants and Animals: Ecology and Management. (3 cr. ; Student Option; Fall Odd Year)

Overview of invasive plants/animals in North America and around the world. A range of taxa are covered along with their impact and approaches to control. Readings, discussions, and lectures from experts on topics such as invasion theory and real world management.

ESPM 3031. Applied Global Positioning Systems for Geographic Information Systems. (; 3 cr. ; A-F or Audit; Every Spring)

GPS principles, operations, techniques to improve accuracy. Datum, projections, and coordinate systems. Differential correction, accuracy assessments discussed/applied in lab exercises. Code/carrier phase GPS used in exercises. GPS handheld units, PDA based ArcPad/GPS equipment. Transferring field data to/from desktop systems, integrating GPS data with GIS. prereq: Intro GIS course

ESPM 3051. Lands and Humans in World Cultures: the Past and the Present. (GP; 3 cr. ; A-F only; Every Spring)

This course focuses on globally diverse farming and land use practices and associated sustainability issues. By examining diverse land uses issues in different countries in the world, this course seeks to provide global perspective on the US and global land use practices and its sustainability. This course seeks to build interdisciplinary perspectives to better understand the mechanisms and changes in diverse human-nature interactions via land. Class materials will be sourced from multiple disciplines including soil science, ecology, geology, geography, anthropology, and history.

ESPM 3108. Ecology of Managed Systems. (ENV; 3 cr. ; Student Option; Every Fall)

Ecology of ecosystems that are primarily composed of managed plant communities, such as managed forests, field-crop agroecosystems, rangelands and nature reserves, parks, and urban open-spaces. Concepts of ecology and ecosystem management. prereq: BIOL 1001 or BIOL 1009 or HORT 1001 or instr consent

ESPM 3111. Hydrology and Water Quality Field Methods. (3 cr. ; A-F or Audit; Every Spring)

Integrates water quality, surface/groundwater hydrology. Case studies, hands-on field data collection, calculations of hydrological/water quality parameters. Meteorological data, snow hydrology, stream gauging, well monitoring, automatic water samplers. Designing water quality sampling program. Geomorphology, interception, infiltration.

ESPM 3131. Environmental Physics. (; 3 cr. ; A-F or Audit; Every Spring)

Concepts and principles of classic and modern physics applied to environmental problems arising from interaction between humans and the natural environment. Forms of pollution (e.g., land, water, air). Transport mechanisms. Anthropogenic greenhouse gas emissions. Global climate change. Social issues related to environmental problems. prereq: Phys 1101

ESPM 3202W. Environmental Conflict Management, Leadership, and Planning. (WI; 3 cr. ; A-F or Audit; Every Spring)

Negotiation of natural resource management issues. Use of collaborative planning. Case study approach to conflict management, strategic planning, and building leadership qualities. Emphasizes analytical concepts, techniques, and skills.

ESPM 3211. Survey, Measurement, and Modeling for Environmental Analysis. (3 cr. ; Student Option; Every Spring)

Survey, measurement, and modeling concepts/methods for study of natural resources/environmental issues. Emphasizes survey design for data collection, estimation, and analysis for issues encompassing land, water, air, vegetation, wildlife, and human/social variables. prereq: ESPM 3012, FW 4001, STAT 3011, or equivalent

ESPM 3221. Soil Conservation and Land-Use Management. (; 3 cr. ; Student Option; Every Spring)

This course is designed to provide a local and global historical perspective of soil erosion (causes and consequences); develop a scientific understanding of soil erosion processes; and relates various soil conservation and land-use management strategies to real-world situations. Basics of soil erosion processes and prediction methods will be the fundamental building blocks of this course. From this understanding, we will discuss policies and socioeconomic aspects of soil erosion. Lastly, we will focus on effective land-use management using natural resource assessment tools. Case studies and real-world and current events examples will be used throughout the course to relate course material to experiences. prereq: SOIL 2125 or instr consent

ESPM 3241W. Natural Resource and Environmental Policy. (CIV,WI,SOCS; 3 cr. ; Student Option; Every Spring)

Political processes in management of the environment. How disagreements are addressed by different stakeholders, private-sector interests, government agencies,

institutions, communities, and nonprofit organizations.

ESPM 3245. Sustainable Land Use Planning and Policy. (ENV; 3 cr. ; A-F or Audit; Every Fall)

Policies affecting land use planning at local, state, and federal levels. Ecosystem and landscape scale planning. Collaborative and community-based approaches to planning for ecological, social, and economic sustainability. Class project applies interdisciplinary perspectives on planning and policy, including information gathering techniques, conservation planning tools, and evaluation of planning options.

ESPM 3251. Natural Resources in Sustainable International Development. (GP; 3 cr. ; A-F or Audit; Every Fall)

International perspectives on resource use and sustainable development. Integration of natural resource issues with social, economic, and policy considerations. Agriculture, forestry, agroforestry, non-timber forest products, water resources, certification, development issues. Global case studies. Impact of consumption in developed countries on sustainable development in lesser developed countries.

ESPM 3261. Economics and Natural Resources Management. (ENV,SOCS; 4 cr. ; A-F or Audit; Every Spring)

Microeconomic principles and their application to natural resource management problems. Economic and policy tools to address market failures. Discussion of regulatory and market-based instruments. Discounting and compounding concepts. Methods for conducting financial and economic analyses of natural resource management projects. Decision criteria when conducting benefit/cost analysis of natural resource projects. Methods for valuing non-market natural resource goods and services. Economics of managing renewable natural resources such as forests and fisheries. Land economics. Payments for environmental services. Planning and management problems. Case studies. prereq: MATH 1031 or equivalent.

ESPM 3271. Environmental Policy, Law, and Human Behavior. (CIV,SOCS; 3 cr. ; A-F or Audit; Every Fall)

What is necessary to achieve sustainable societies. What influences societal deliberation/decisions about environmental issues. How our behaviors affect natural systems. Key theoretical concepts of environmental social psychology and political science. How people respond to policies, using theoretical concepts from social psychology about attitudes, values, and social norms; applying these ideas to specific environmental problems and ethical debates.

ESPM 3425. Atmospheric Pollution: From Smog to Climate Change. (3 cr. ; A-F only; Periodic Fall)

Processes governing chemical makeup of Earth's atmosphere. Implications for air pollution, climate, human welfare. Evolution of atmosphere. Atmospheric structure/transport. Biogeochemical cycles of carbon, nitrogen, oxygen, mercury. Greenhouse effect. Aerosols.

Stratospheric ozone loss. prereq: [CHEM 1061, PHYS 1101W, MATH 1142 or 1271] or equiv or instr consent

ESPM 3480. Topics in Natural Resources. (; 1-4 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer)

Lectures by visiting scholar or regular staff member. Topics specified in Class Schedule.

ESPM 3575. Wetlands. (; 3 cr. ; Student Option; Every Spring)

Freshwater wetland classification, wetland biota, current/historic status of wetlands, value of wetlands. National, regional, Minnesota wetlands conservation strategies, ecological principles used in wetland management.

ESPM 3601. Sustainable Housing--Community, Environment, and Technology. (TS; 3 cr. ; A-F or Audit; Every Fall & Spring)

How sustainable housing practices build community. How community growth has impacted the environment and how natural events impact our communities. Science and technology required to build high performance houses.

ESPM 3602. Regulations and Corporate Environmental Management. (; 3 cr. ; A-F only; Every Spring)

Concepts/issues relating to industrial ecology and industry as they are influenced by current standards/regulations at local, state, and national levels. prereq: APEC 1101 or ECON 1101 or 3261W

ESPM 3603. Environmental Life Cycle Analysis. (; 3 cr. ; A-F only; Every Fall)

Concepts/issues relating to inventory, subsequent analysis of production systems. Production system from holistic point of view, using term commonly used in industrial ecology: "metabolic system."

ESPM 3604. Environmental Management Systems and Strategy. (; 3 cr. ; A-F only; Every Fall)

Environmental problems such as climate change, ozone depletion, and loss of biodiversity.

ESPM 3605. Recycling: Extending Raw Materials. (TS; 3 cr. ; A-F only; Every Spring)

Basic principles of recycling and its role in raw materials utilization, energy, and the environment. Recycling processes for commonly recycled materials, products, and their properties and environmental implications of recycling.

ESPM 3607. Natural Resources Consumption and Sustainability. (GP; 3 cr. ; A-F only; Every Spring)

Current world trends for industrial raw materials; environmental/other tradeoffs related to options for satisfying demand/needs; global and systemic thinking; provides a framework for beginning a process of thinking critically about complex environmental problems/potential solutions in a diverse global economy.

ESPM 3612W. Soil and Environmental Biology. (WI; 4 cr. ; Student Option; Every Fall)

Properties of microorganisms that impact soil fertility, structure, and quality. Nutrient

requirements of microbes and plants and mineral transformations in biogeochemical cycling. Symbiotic plant/microbe associations and their role in sustainable agricultural production. Biodegradation of pollutants and bioremediation approaches. prereq: Biol 1009 or equiv, Chem 1021 or equiv; SOIL 2125 recommended

ESPM 3777. Climate Change- Physics, Myths, Mysteries, and Uncertainties. (; 3 cr. ; A-F only; Every Spring)
Climate variations are the norm; not the exception. The geological and archaeological records are rich with evidence of a climate system that is dynamic and non-steady state. Yet we face the challenges of understanding the complexities of this system in order to manage our natural resources and to prepare wisely for the future. This class examines the basic theory and Physics behind the atmospheric greenhouse effect and radiative forcings in the climate system. The Myths, Mysteries, and Uncertainties about the climate record and feedback processes operating in the Earth-Atmosphere system will be examined. Simple models will be used to demonstrate the atmospheric greenhouse effect. Sophisticated numerical weather models, such as the Regional Weather and Forecast Chemistry (WRF-CHEM) model, will be used to demonstrate climate predictions and biophysical feedback processes. We will also study some of the classic Warming Papers that provide the physical scientific basis for the anthropogenic greenhouse effect. Finally, we will explore the uncertainties related to climate predictions and how scientists use fingerprint techniques to diagnose natural versus anthropogenic climate signals. There is no prerequisite required for this course, but first year calculus and one other first year science course is recommended.

ESPM 3921. Science and Critical Thinking for Understanding Our World. (CIV; 3 cr. ; A-F only; Every Fall)
Today more than ever we must deal with multiple sources of conflicting information on topics that affect our lives in big ways. We use this information to make important decisions, from major policy decisions to personal lifestyle choices. Understanding complex, high-stakes societal issues such as the global COVID-19 pandemic requires that we rapidly process and synthesize new science that is changing fast, and that we do so in an environment of partisan bias and media spin that make it extremely difficult for citizens to stay informed and make good decisions. The debate surrounding the response to COVID-19, climate change, water policy, and other planetary and human health issues, invoke moral or ethical principles in addition to scientific arguments. As a result, problem solving and decision making requires simultaneously evaluating complex scientific and ethical arguments. Several aspects of human psychology mean that we do not reliably make logical choices when presented with complex information. Furthermore, data and science are frequently used to mislead, from the naive misuse of statistics to deliberate misinformation

campaigns. As a result, weighing evidence and rational decision-making for complex issues requires skepticism, critical thinking, and lots of practice. In this course, students will develop critical thinking tools and cultivate scientific skepticism for evaluating claims encountered in peer-reviewed scientific papers, popular press articles, or on social media. Examples and case studies will draw heavily on current events surrounding the COVID-19 pandemic and associated societal and environmental responses, but will also include other environmental, health, and public policy issues to demonstrate the range of ways in which data and science can be used or misused to support a position. To create the necessary habits of mind for skepticism and critical thinking, this course will cover background material from ethics, neurology, behavioral economics, statistics, and logic. We will employ a number of active learning strategies, and class meetings will frequently consist of students actively engaged in processing and understanding course content. Upon leaving this course students will be able to confidently evaluate the veracity of information as they encounter it in multiple contexts throughout their lives. Students will understand how views of the role of ethics in scientific inquiry have evolved, and the roles of science, uncertainty, and ethics in determining public opinion and policy decisions on environmental topics. Students will learn to identify and recognize misinformation in its various forms and to articulate why a particular piece of information is misleading. We will explore the various ways that our intuition and memory make interpreting data and statistics challenging, and develop tools and habits of mind to overcome these challenges.

ESPM 3993. Directed Study. (; 1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: Department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements

ESPM 3994. Directed Research. (; 1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: Department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

ESPM 4021W. Problem Solving: Environmental Review. (WI; 4 cr. ; Student Option; Every Spring)
Roles of governmental agencies, consultants, and private citizens in EIS process. Students read EIS/EAW, analyze their content/scope, and prepare an EAW and EIS according to Minnesota EQB guidelines. prereq: ESPM 2021 and jr or sr

ESPM 4041W. Problem Solving for Environmental Change. (WI; 4 cr. ; A-F or Audit; Every Fall)
Capstone course. Students working with a team on a real world project related to selected track, gather/analyze data relevant to client's objectives, and make recommendations for future use. Students produce a final written report and formal presentation, and present findings to client group.

ESPM 4061W. Water Quality and Natural Resources. (ENV,WI; 3 cr. ; Student Option; Every Fall)
Water quality decision making. International focus. Ecology of aquatic ecosystems, how they are valuable to society and changed by landscape management. Case studies, impaired waters, TMDL process, student engagement in simulating water quality decision making.

ESPM 4096. Professional Experience Program: Internship. (; 1 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)
Students create oral/written report based on paid or volunteered work or field experience. prereq: CFANS undergrad, instr consent, completed internship contract

ESPM 4216. Contaminant Hydrology. (3 cr. ; A-F or Audit; Every Fall)
Principles of contaminant transport in percolate solution and in overland flow. Hydrologic cycle, percolation/runoff processes, contaminant transport, leachate sampling methods, remediation technologies, scale effects on runoff water quality, tillage technologies, control of sediment/chemical losses. Discussions mostly descriptive, but involve some computations.

ESPM 4242. Methods for Environmental and Natural Resource Policy Analysis. (; 3 cr. ; A-F only; Fall Even Year)
Methods, formal/informal, for analyzing environmental/natural resource policies. How to critically evaluate policies, using economic/non-economic decision-making criteria. Application of policy analysis to environmental/natural resource problems. Recognizing politically-charged environment in which decisions over use, management, and protection of resources often occur. Prereqs: ESPM 3241W or ESPM 3271 and ESPM 3261, undergrads with jr or sr standing.

ESPM 4256. Natural Resource Law and the Management of Public Lands and Waters. (; 3 cr. ; A-F or Audit; Every Fall)
This course is intended to provide non-law students with an understanding of the role of the judiciary in the management of public lands and public waters. The course will examine Constitutional provisions affecting the

management of public resources, the concept of property rights, major principles of water law, the role of the legal system in environmental review, the scope of legal authority granted to administrative agencies, and limitations of private property rights to protect public lands and public waters. The class will introduce students to the concepts of legal reasoning including case synthesis and analysis. The class will be taught using a combination of lecture, guest lectures, written exercises, and class participation. This course will be taught online. Prereqs: 3241W, juniors, seniors and graduate students or instructor permission

ESPM 4295W. GIS in Environmental Science and Management. (WI; 4 cr. ; A-F or Audit; Every Fall)

Application of geographic information science and technologies (GIS) in complex environmental problems. Students gain experience in spatial data collection, database development, and spatial analysis, including GNSS and field attribute collection, image interpretation, and existing data fusion, raster/vector data integration and analysis, information extraction from LiDAR data, DEM conditioning and hydrologic analysis, neighborhood analysis, bulk processing and automation, and scripting. Problems vary depending on topics, often with extra-University partners. prereq: FNRM 3131 or Geog 3561 or instr consent

ESPM 4601. Environmental Pollution. (; 3 cr. ; Student Option; Every Spring)

This course uses the principles of chemistry, microbiology, physics, and toxicology to understand the fate and behavior of environmental contaminants and the pollution of soils, surface waters, groundwater, and sediments. The course is structured around a semester-long risk assessment project that provides a framework for integrating concepts of pollution, contaminant movement, contaminant degradation, human health risk, ecological risk, risk mitigation, environmental remediation processes, and interactions among them. The history of federal regulations concerning environmental contamination is presented in the context of the major episodes of environmental pollution that motivated legislative action. prereq: SOIL 2125, CHEM 1061 and 1062 or equiv, or permission

ESPM 4607. Industrial Biotechnology and the Environment. (; 3 cr. ; A-F only; Every Spring)

Biotechnology pertaining to biobased products development, their environmental impact. prereq: BIOL 1009, CHEM 1021

ESPM 4811. Environmental Interpretation. (; 3 cr. ; A-F or Audit; Every Spring)

This course is designed to be an introduction to the broad field of Environmental Interpretation, Communication Theory, Visitor Information Services (VIS), and Nonformal Education experience's found in parks, nature centers, camps, zoos, museums, arboretums, and free-choice learning environments. Students will understand the definitions, role and scope of interpretation, differences between audiences and/or users of interpretive services, and

distinguish between interpretive techniques based on their advantages/disadvantages. Students can also qualify for the National Association for Interpretation's (NAI) Certified Interpretive Guide (CIG) program.

ESPM 5014. Tribal and Indigenous Natural Resource Management. (3 cr. ; Student Option; Every Fall)

This course is designed to develop and refine your understanding of tribal and Indigenous natural resource management, tribal and Indigenous perspectives, and responsibilities natural resource managers have for tribal and Indigenous communities. This course includes one eight-hour weekend field session.

ESPM 5015. Invasive Plants and Animals: Ecology and Management. (3 cr. ; Student Option; Fall Odd Year)

Overview of invasive plants/animals in North America and around the world. A range of taxa are covered along with their impact and approaches to control. Readings, discussions, and lectures from experts on topics such as invasion theory and real-world management.

ESPM 5031. Applied Global Positioning Systems for Geographic Information Systems. (; 3 cr. ; A-F or Audit; Every Spring)

GPS principles, operations, techniques to improve accuracy. Datum, projections, and coordinate systems. Differential correction, accuracy assessments discussed/applied in lab exercises. Code/carrier phase GPS used in exercises. GPS handheld units, PDA based ArcPad/GPS equipment. Transferring field data to/from desktop systems, integrating GPS data with GIS. prereq: Grad student or instr consent

ESPM 5061. Water Quality and Natural Resources. (; 3 cr. ; Student Option; Every Fall & Spring)

Recent literature in field. Complements 4061. Ecology of aquatic ecosystems, how they are valuable to society and changed by landscape management. Case studies, impaired waters, TMDL process, student engagement in simulating water quality decision making.

ESPM 5071. Ecological Restoration. (; 4 cr. ; Student Option; Every Fall)

Each ecosystem restoration is the product of a myriad of decisions made in response to existing site conditions (biotic and abiotic), anticipated effects from the surrounding landscape, predictions about future events, logistical realities, and, of course, desired conditions. During this course, you will learn about the ecological and social factors that affect ecosystem recovery and how people intervene to reverse ecosystem degradation. The course includes examples from ecosystems around the world, with emphasis on those found in the Midwestern US. Field trips. PREREQUISITES: This course presumes previous courses in basic ecology and plant science.

ESPM 5108. Ecology of Managed Systems. (; 4 cr. ; A-F or Audit; Every Fall)

Analysis of functioning of ecosystems primarily structured by managed plant communities. Managed forests, field-crop agroecosystems, rangelands, aquatic systems. Structure-function relations. Roles of biodiversity in

productivity, resource-use efficiency, nutrient cycling, resilience. Emerging principles for design of sustainable managed ecosystems, provision of ecological services. prereq: Sr or grad student

ESPM 5111. Hydrology and Water Quality Field Methods. (3 cr. ; A-F or Audit; Every Spring)

Integrates water quality, surface/groundwater hydrology. Case studies, hands-on field data collection, calculations of hydrological/water quality parameters. Meteorological data, snow hydrology, stream gauging, well monitoring, automatic water samplers. Designing water quality sampling program. Geomorphology, interception, infiltration. prereq: Grad student or instr consent

ESPM 5202. Environmental Conflict Management, Leadership, and Planning. (; 3 cr. ; A-F or Audit; Every Spring)

Negotiation of natural resource management issues. Use of collaborative planning. Case study approach to conflict management, strategic planning, and building leadership qualities. Emphasizes analytical concepts, techniques, and skills.

ESPM 5211. Survey, Measurement, and Modeling for Environmental Analysis. (; 3 cr. ; Student Option; Every Spring)

Survey, measurement, and modeling concepts/methods for study of natural resources/environmental issues. Emphasizes survey design for data collection, estimation, and analysis for issues encompassing land, water, air, vegetation, wildlife, and human/social variables.

ESPM 5241. Natural Resource and Environmental Policy. (; 3 cr. ; Student Option; Every Spring)

Political processes at play in management of environment and how disagreements are addressed by different stakeholders, private-sector interests, government agencies and institutions, communities, and nonprofit organizations. prereq: Grad student or instr consent

ESPM 5242. Methods for Environmental and Natural Resource Policy Analysis. (; 3 cr. ; A-F only; Fall Even Year)

Methods, formal and informal, for analyzing environmental and natural resource policies. How to critically evaluate policies, using economic and non-economic decision-making criteria. Application of policy analysis principles/concepts to environmental/natural resource problems. Recognizing politically-charged environment in which decisions over use, management, and protection of these resources often occur. prereq: grad student

ESPM 5245. Sustainable Land Use Planning and Policy. (; 3 cr. ; A-F or Audit; Every Fall)

Planning theories, concepts, and constructs. Policies, processes, and tools for sustainable land use planning. Scientific/technical literature related to land use planning. Skills needed to participate in sustainable land use planning.

ESPM 5251. Natural Resources in Sustainable International Development. (; 3 cr. ; A-F or Audit; Every Fall)

International perspectives on resource use in developing countries. Integration of natural resource issues with social, economic, and policy considerations. Agriculture, forestry, agroforestry, non-timber forest products, water resources, certification, development issues. Latin American case studies. prereq: Grad student or instr consent

ESPM 5256. Natural Resource Law and the Management of Public Lands and Waters. (; 3 cr. ; A-F or Audit; Every Fall)

This course is intended to provide non-law students with an understanding of the role of the judiciary in the management of public lands and public waters. The course will examine Constitutional provisions affecting the management of public resources, the concept of property rights, major principles of water law, the role of the legal system in environmental review, the scope of legal authority granted to administrative agencies, and limitations of private property rights to protect public lands and public waters. The class will introduce students to the concepts of legal reasoning including case synthesis and analysis. The class will be taught using a combination of lecture, guest lectures, written exercises and class participation. prereq: grad student

ESPM 5261. Economics and Natural Resources Management. (4 cr. ; A-F or Audit; Every Spring)

Microeconomic principles and their application to natural resource management problems. Economic and policy tools to address market failures. Discussion of regulatory and market-based instruments. Discounting and compounding concepts. Methods for conducting financial and economic analyses of natural resource management projects. Decision criteria when conducting benefit/cost analysis of natural resource projects. Methods for valuing non-market natural resource goods and services. Economics of managing renewable natural resources such as forests and fisheries. Land economics. Payments for environmental services. Planning and management problems. Case studies.

ESPM 5295. GIS in Environmental Science and Management. (4 cr. ; A-F or Audit; Every Fall)

Application of geographic information science and technologies (GIS) in complex environmental problems. Students gain experience in spatial data collection, database development, and spatial analysis, including GNSS and field attribute collection, image interpretation, and existing data fusion, raster/vector data integration and analysis, information extraction from LiDAR data, DEM conditioning and hydrologic analysis, neighborhood analysis, bulk processing and automation, and scripting. Problems vary depending on topics, often with extra-University partners. *Please note that students should have completed a semester-long, introductory lab/lecture GIS course at the graduate or undergraduate level before enrolling in this course, e.g., FNRM 5131. We do not require any given course because students come from varied universities and backgrounds. That said, we assume a knowledge commensurate with a

comprehensive introductory course. Students seeking a first course are directed to FNRM 5131. If you have questions regarding your capabilities, please contact the instructor prior to enrolling.

ESPM 5402. Biometeorology. (; 3 cr. ; Student Option; Fall Even Year)

This course examines the interactions between the atmosphere and the Earth's surface.

We will discuss the principles of the surface energy and radiation balance, air motion in the atmospheric boundary layer, land surface parameterization for climate models, boundary layer budgets, and field research methods. The course aims to achieve exemplary learning through hands-on activities and examining recent field studies conducted in natural and managed ecosystems. prereq: MATH 1271, PHYS 1201, STAT 3011, [instr consent]

ESPM 5480. Topics in Natural Resources. (; 1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Lectures by visiting scholar or regular staff member. Topics specified in class schedule.

ESPM 5555. Wetland Soils. (; 3 cr. ; A-F or Audit; Every Fall)

Morphology, chemistry, hydrology, formation of mineral/organic soils in wet environments. Soil morphological indicators of wet conditions, field techniques of identifying hydric soils for wetland delineations. Peatlands. Wetland benefits, preservation, regulation, mitigation. Field trips, lab, field hydric soil delineation project. prereq: SOIL 1125 or 2125 or equiv or instr consent; concurrent registration is required (or allowed) in SOIL 4511 recommended

ESPM 5575. Wetlands. (; 3 cr. ; Student Option; Every Spring)

Freshwater wetland classification, wetland biota, current/historic status of wetlands, value of wetlands. National, regional, Minnesota wetlands conservation strategies. Ecological principles used in wetland management. prereq: 3575, [sr or grad student or instr consent]

ESPM 5602. Regulations and Corporate Environmental Management. (; 3 cr. ; A-F only; Every Spring)

Concepts, major issues relating to industrial ecology and industry as they are influenced by current standards/regulations at local, state, and national levels. prereq: APEC 1101 or ECON 1101

ESPM 5603. Environmental Life Cycle Analysis. (; 3 cr. ; A-F only; Every Fall)

Concepts, major issues relating to inventory and subsequent analysis of production systems. Production system from holistic point of view, using term commonly used in industrial ecology: "the metabolic system." prereq: [Math 1142 or [Math 1271, Math 1282]], [Econ 1101 or ApEc 1101]

ESPM 5604. Environmental Management Systems and Strategy. (; 3 cr. ; A-F only; Every Fall)

Environmental problems such as climate change, ozone depletion, and loss of biodiversity.

ESPM 5605. Recycling: Extending Raw Materials Supplies. (; 3 cr. ; A-F only; Every Spring)

Principles of recycling. Role of recycling in raw materials utilization, energy, and the environment. Recycling processes for number of commonly recycled materials/products. Properties, environmental implications of recycling.

ESPM 5607. Industrial Biotechnology and the Environment. (; 3 cr. ; A-F only; Every Spring)

Biotechnology pertaining to biobased products development and their environmental impact. prereq: BIOL 1009, CHEM 1021

ESPM 5811. Environmental Interpretation. (; 3 cr. ; A-F or Audit; Every Spring)

This course is designed to be an introduction to the broad field of Environmental Interpretation, Communication Theory, Visitor Information Services (VIS), and Nonformal Education experience's found in parks, nature centers, camps, zoos, museums, arboretums, and free-choice learning environments. Students will understand the definitions, role and scope of interpretation, differences between audiences and/or users of interpretive services, and distinguish between interpretive techniques based on their advantages/disadvantages. Students can also qualify for the National Association for Interpretation's (NAI) Certified Interpretive Guide (CIG) program.

Experimental and Clinical Phar (ECP)

ECP 5220. Regulatory Issues in Drug Research. (2 cr. ; Student Option; Every Fall)

Regulatory issues encountered in conducting drug research trials. Performing different aspects of clinical trials. Lectures, readings, small group discussions, homework assignments. prereq: ECP grad student or Pharm.D. professional student or instr consent

ECP 5290. Clinical Clerkship. (1-8 cr. [max 16 cr.] ; Student Option; Every Fall)

Supervised study of pharmaceutical services at University of Minnesota Medical Center, Fairview or affiliated institutions. prereq: Grad experimental and clinical pharmacology

ECP 5620. Drug Metabolism and Disposition. (3 cr. ; A-F or Audit; Spring Odd Year)

Oxidative/conjugative enzymes systems involved in human drug metabolism/disposition. Various in vitro models used to evaluate drug metabolism or chemical entity, pros/cons of each. Factors involved in conducting in vivo studies. Components used to predict in vivo drug disposition from in vivo studies. prereq: Grad student or instr consent

ECP 5982. Inter-Institutional Journal Club in Translational Research. (1 cr. [max 2 cr.] ; Student Option; Every Fall)

This course is structured as an inter-institutional journal club between universities of Minnesota, Pittsburgh, and Kentucky that is focused on translational research in clinical pharmacology. Articles will be

discussed on topics such as precision medicine, pharmacokinetics, pharmacometrics, pharmacogenomics, and clinical biomarkers.

ECP 5983. Scientific Communications in Experimental and Clinical Pharmacology. (1 cr. ; Student Option; Spring Odd Year) Introduction of professional development concepts in written and oral scientific communication through lectures, literature readings, and class participation.

ECP 5984. Scientific Communications in Experimental and Clinical Pharmacology II. (1 cr. ; Student Option; Spring Even Year) Dissemination of advanced professional development concepts in written and oral scientific communication through lectures, literature readings, and class participation.

ECP 5993. Directed Study in Experimental and Clinical Pharmacology. (; 1-4 cr. [max 8 cr.] ; Student Option; Every Fall & Spring) Student working with faculty member designs a directed study course, including a complete syllabus, appropriate time commitment, and workload for number of credits.

ECP 5994. Directed Research in Experimental and Clinical Pharmacology. (; 1-4 cr. ; Student Option; Every Fall & Spring) Student works with faculty adviser to design a scientific research project.

Family Med & Community Health (FMCH)

FMCH 5345. Curriculum Design and Teaching Strategies for Medical Education I. (; 3 cr. ; A-F or Audit; Every Spring) Identifying/developing course goals. Developing course, teacher, learner evaluations. Students must also take 5346, which follows immediately after 5345. prereq: concurrent enrollment in 5346, instr consent

FMCH 5346. Curriculum Design and Teaching Strategies for Medical Education II. (; 1 cr. ; A-F or Audit; Summer Even Year) Taken with 5345. Practicum of lecture, demonstration, small-group discussion, clinical teaching, and computer-assisted instruction. Academic ethics, policies, copyright issues, tenure, academic freedom, problem-based learning. prereq: concurrent registration is required (or allowed) in 5345, instr consent

FMCH 5564. Family Practice Seminar. (; 1 cr. [max 9 cr.] ; O-N or Audit; Every Fall & Spring) Knowledge, skills, and attitudes in biomedical and behavioral sciences that form foundation for academic discipline of family medicine; medical decision making, common problems and procedures, family theory and assessment, clinical pharmacy, human sexuality. prereq: MD or DO degree

FMCH 5651. Principles of Geriatrics II. (; 1 cr. [max 5 cr.] ; P-N or Audit; Periodic Fall) Second in two-course sequence. Survey of major topics in geriatric medicine. Epidemiology, etiology, diagnosis, and treatment of major geriatric syndromes and illnesses. prereq: Medical School or dental school or GNP school graduate

FMCH 5950. Clinical Issues in Human Sexuality. (; 2 cr. ; O-N or Audit; Every Fall & Spring)

Assessment and treatment techniques pertaining to common sexual problems. prereq: Enrollment in health sci grad programs in CSPP, Psy, PubH, SW or FSoS or instr consent

FMCH 5955. Directed Study. (; 1-10 cr. ; O-N or Audit; Every Fall, Spring & Summer) Studies on special topics as arranged between student and faculty. prereq: instr consent; qualified students may arrange for work on a tutorial basis

Family Social Science (FSOS)

FSOS 1101. Intimate Relationships. (SOCS; 4 cr. ; Student Option; Every Fall & Spring) Couple dynamics. Overview of how to develop, maintain, and terminate an intimate relationship. Communication, conflict resolution, power, roles. Programs for marriage preparation, marriage enrichment, and marital therapy.

FSOS 1101H. Intimate Relationships Honors. (SOCS; 4 cr. ; A-F only; Every Fall & Spring) Couple dynamics. Overview of how to develop, maintain, and terminate an intimate relationship. Communication, conflict resolution, power, roles. Programs for marriage preparation, marriage enrichment, and marital therapy.

FSOS 1201. Human Development in Families: Lifespan. (DSJ,SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer) Human development in a family context. Life-course and human development theories. Individual/family development, mate selection, birth, life cycle. Physical, cognitive, language, social, and personality development. Historical, social, and cultural factors. How theory/research are applied to everyday lives.

FSOS 1211. An Interdisciplinary Look at the Family in Multicultural America. (SOCS,DSJ; 4 cr. ; A-F or Audit; Every Fall & Spring)

This course is designed as an introduction to multicultural families using an ecological lens. The institution of the family is recognized globally as a basic unit of a society that produces, develops, socializes, and launches the next generation of its citizenry. This course will focus on families in contemporary America, a society that has grown increasingly diverse, and faces many complex challenges in today's global environment. Using a human ecological lens allows us to examine families in their nested and interdependent environments--how individuals shape and are shaped by families, their human built environments, their socio-cultural environments, and their natural-physical environments. This is a service learning class.

FSOS 1301. Cash or Credit: You Need to Know. (; 1 cr. ; A-F only; Every Fall, Spring & Summer)

Factual information about basic money management skills. Topics covered can be applied to everyday life. Online, interactive learning based class.

FSOS 1461. Presentations at Work: Families, Communities, Nonprofits, and Schools. (CIV; 3 cr. ; A-F or Audit; Every Spring)

This course prepares students to present information and adjust their messages based on audience need in a variety of future work contexts. Students interested in majoring in Family Social Science, Education, Youth Studies, and Kinesiology will take this course in order to develop the disciplinary practices used in counseling, community-based organizations, education, and health sciences to convey important, and often sensitive, material to specific audiences.

FSOS 2101. Preparation for Working With Families. (; 3 cr. ; A-F or Audit; Every Fall & Spring) Systematic preparation for upper division education, research/field internships, and career possibilities in Family Social Science.

FSOS 2103. Family Policy. (3 cr. ; Student Option; Every Fall)

Connections between policies that governments enact, and families and their well-being. Conceptual frameworks for influences underlying policy choices. Evaluating consequences of such choices for diverse families.

FSOS 2105. Methods in Family Research. (3 cr. ; Student Option; Every Fall & Spring) Scientific method. Major questions/objectives of family research. Data collection/analysis/reporting. Social context of family research. prereq: STAT 3011 or PSTL 1004 or STAT 1001 or ESPY 3264 or ESPY 1261 or SOC 3811 or SOC 2550 or PSY 3801 or instr consent

FSOS 2106. Family Resource Management. (3 cr. ; Student Option; Every Spring) Analysis of how individuals/families use interpersonal, economic, natural, and community resources to make decisions, solve problems, and achieve central life purposes.

FSOS 2107. Preparation for Family and Community Engagement. (3 cr. ; Student Option; Every Fall & Spring) This course will focus on preparing students to work with families in a community context. Central themes of the course include strategies for family and community engagement, understanding how families interact with community organizations and institutions, how to mobilize family and community assets, and collaborating with families to create systems change and build positive community resources. The course will pose questions for students about the roles of family professionals in supporting families in community contexts. The course will utilize readings about best practices in family and community engagement, both from the family studies literature and from cutting edge community-based organizations. Students will participate in a community

project with a community organization that focuses on supporting families. This will enable them to attend community meetings, shadow family/community liaisons, and better understand the interface between families, community organizations, and institutions. Class assignments will allow students to engage in reflective practice and pull learning from their community-based experiences. They will learn concrete skills like meeting facilitation through a workshop format.

FSOS 2191. Independent Study in Family Social Science. (; 1-4 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer) Independent reading or writing or research under faculty supervision. prereq: Soph, instr consent

FSOS 3101. Personal and Family Finances. (; 3 cr. ; Student Option No Audit; Every Fall & Spring)

Analysis of personal/family financial management principles. Financial planning of savings, investments, credit, mortgages, and taxation. Life, disability, health, and property insurance. Public/private pensions. Estate planning.

FSOS 3102. Family Systems and Diversity. (DSJ,SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Family systems/theories applied to dynamics/processes relevant to family life. Diversity issues related to gender, ethnicity, sexual orientation, and disability. Divorce, single parenthood, remarriage. Family strengths/problems. prereq: At least soph or instr consent

FSOS 3105. Technology in Parenting and Family Relationships. (TS; 3 cr. ; Student Option; Every Fall & Spring)

The role of information and communications technologies in contemporary family life is explored through examination of theory, and research on technology use and family and family member outcomes. Applications of technology in family practice and issues regarding professional preparation will identify avenues for support and development.

FSOS 3191. Independent Study in Family Social Science. (; 1-5 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer) Independent reading or writing or research under faculty supervision. prereq: Jr, instr consent

FSOS 3222W. Our Addicted World: Going Beyond the Individual in Looking at the Addiction. (WI; 3 cr. ; A-F only; Every Spring)

This course will explore addiction and how we, as members of a family and community can better understand the complexity of the systems that simultaneously create environments that foster addiction and assist individuals in their quest to heal from addiction. We will explore our personal beliefs and experiences with addiction, often challenging the dominant discourses that inform who gets blamed and who gets helped when dealing with addiction. We will do this by reading, discussing and writing about three different types of addiction that are currently being discussed by families, communities

and policymakers: opiate addiction, screen addiction and gambling.

FSOS 3426. Alcohol and Drugs: Families and Culture. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Psychology/sociology of drug use/abuse. Life-span, epidemiological, familial, cultural data regarding use. Fundamentals of licit/illicit drug use behavior. Variables of gender, ethnicity, social class, sexuality, sexual orientation, disability.

FSOS 3429. Counseling Skills Practicum I. (3 cr. ; Student Option; Every Fall & Spring)

Basic counseling skills. Counselor needs/motivations, non-verbal communication, basic/advanced empathy, identifying strengths, maintaining focus, challenging discrepancies, use of self. Emphasizes building from client strengths, learning through role-playing.

FSOS 3431. Counseling Skills Practicum II. (; 3 cr. ; Student Option; Every Spring)

Advanced therapeutic methods. Processes of change. Identifying, reinforcing, challenging core beliefs. Reframing. Paradox. Trance, guided imagery. Cognitive-behavioral, solution-focused, narrative therapies. Emphasizes non-pathologizing models of therapy.

FSOS 4101. Sexuality and Gender in Families and Close Relationships. (; 3 cr. ; Student Option; Every Fall & Spring)

Human ecology/development as frameworks for examining sexuality in close relationships. Diversity of sexual beliefs, attitudes, behaviors within differing social contexts. Using scientific knowledge to promote sexual health among individuals, couples, families through various life stages. prereq: At least jr or instr consent

FSOS 4104. Family Psychology. (3 cr. ; Student Option; Every Fall & Spring)

Processes in families of origin, families of choice, and other close relationships, within diverse social contexts. Evaluating current research on family dynamics within/across generations.

FSOS 4107. Traumatic Stress and Resilience in Vulnerable Families Across the Lifespan. (3 cr. ; Student Option; Periodic Fall & Spring)

This course will focus on stress contexts that place families at risk across the life span such as poverty, war/civil conflict, disability, social disparities/discrimination, and family dissolution. An examination of family strengths, cultural diversity, and approaches for working with families across the life course in community based settings including classrooms, programs, and agencies will be emphasized. This course focuses on vulnerable families and those affected by historical and traumatic stress. It covers family members of all ages who face particular challenges, such as intergenerational exposure to traumatic events, persistent and structural inequality, and health disparities. This course is designed to increase awareness of the conditions that place families and children at risk, the theories and frameworks available to understand these risks, and both individual and family resiliency to these conditions. The

course will primarily focus on a) individual, family, community, and developmental contexts of risk and resiliency, and b) family-level preventive and intervention frameworks and approaches to support individuals and families.

FSOS 4108. Understanding and Working with Immigrants and Refugee Families. (DSJ,SOCS; 3 cr. ; Student Option; Every Fall & Spring)

This course focuses on the impact of ? immigration? (i.e., refugee vs. various types of immigration statuses) on family relationships, specifically how culture of origin and acculturation processes influence individuals and families over time; explores issues faced by various immigrant family systems, including a consideration of generational status, gender identities, social classes, and ethnic/racial group identities; develops intercultural interaction skills that prepare students to effectively engage with diverse immigrant families in multiple contexts; and builds practical skills that enhance students? abilities to work in and collaborate with community- and faith-based organizations to strengthen cultural resources while overcoming barriers to increase service utilization.

FSOS 4109W. Family Theories. (WI; 3 cr. ; Student Option; Every Fall & Spring)

This course will include a review of current family theories, use of writing self-assessments, and application of theory to phenomena affecting families today.

FSOS 4111. Introduction to Family Therapy. (3 cr. ; Student Option; Every Fall & Spring)

This course is designed as an introduction to the field of Family Therapy. Students who successfully complete the course should be well versed in the basics of both the foundational and contemporary theories of the discipline. Further, students will be exposed to a number of clinical vignettes and case scenarios that demonstrate the application of the theories in pre-recorded family therapy sessions. Through class assignments and discussions, students will be able to make a more informed decision as to whether or not family therapy is a field that holds potential for them in their own professional pursuits. Other mental health disciplines attend to family variables but having a background in family systems theory and family therapy theories will provide a solid knowledge base for someone embarking on a career in family clinical work. Systems theory guides the majority of what will be discussed in class.

FSOS 4150. Special Topics in Family Social Science. (; 1-4 cr. [max 8 cr.]; Student Option; Periodic Fall, Spring & Summer)

Review of research/scholarly thought. Topics specified in Class Schedule.

FSOS 4153. Family Financial Counseling. (; 3 cr. ; A-F only; Fall Odd Year)

Family financial issues are studied with an emphasis on the role of the financial counselor. This course emphasizes the development of professional skills for assisting individuals and families to cope with financial concerns in their day-to-day lives. This course includes an optional service-learning component where

students will work throughout the semester with local non-profit organizations focused on financial literacy, financial counseling, financial curriculum development, and/or researching financial resources. This course will require students to produce video recordings. At minimum students will need recording equipment that captures both video and audio. The resulting file will need to be uploaded to the internet. Laptops with webcams and smart phones with video capabilities should be sufficient for this purpose. Equipment and training are available from the Library's SMART Learning Commons.

FSOS 4155. Parent-Child Relationships. (; 3 cr. ; A-F or Audit; Every Spring)

History, theories, research, and contemporary practices of parent-child relationships in diverse families/cultures across the life span. Preparation for professionals in education, social work, and other human service occupations.

FSOS 4158. Thailand: Global Change, Communities and Families. (GP; 3 cr. ; A-F only; Periodic Spring)

This interdisciplinary course uses social justice and human ecological lenses to examine global change that is occurring at the intersections among Thailand's natural environment, communities, families, and culture. Topics include globalization, human trafficking, education, religion, environmental issues, and cultural integration/identity formation, particularly among indigenous populations in northern Thailand. Students interact with key community leaders, village leaders, elders, and students who serve as teachers; this leads to critical understanding of Thai culture and the contemporary issues faced by Thailand's families and communities. Through journaling, digital stories, blogging, and discussions, students will synthesize, integrate, apply, and communicate what they've learned.

FSOS 4191. Independent Study in Family Social Science. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Independent reading or writing or research under faculty supervision. prereq: Sr, instr consent

FSOS 4193. Directed Capstone Project. (; 1-4 cr. [max 8 cr.] ; A-F only; Every Fall & Spring)

Individualizes experience by connecting aspects of major program with special academic interests.

FSOS 4294. Research Internship. (1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Research project with faculty. May include planning, proposal writing, literature review, data collection/coding/cleaning/analysis, and reporting. prereq: [FSOS major, at least jr] or instr consent

FSOS 4296. Field Study: Working With Families. (; 1-12 cr. [max 24 cr.] ; S-N or Audit; Every Fall & Spring)

Directed paraprofessional work experience related to student's area of study. prereq: 2101 or instr consent

FSOS 5014. Quantitative Family Research Methods I. (; 3 cr. ; Student Option; Every Spring)

Family research methods, issues associated with multiple levels of analysis. Conducting family-focused data analyses using basic/intermediate methods (through ANOVA and multiple regression), including power analysis. Ethical issues involved in family research such as IRB/HIPAA regulations. prereq: Grad student or instr consent

FSOS 5015. Family Research Laboratory. (; 1 cr. ; S-N or Audit; Every Spring)

Application of basic family research methods into experiential learning using statistical software. Analyses that correspond with problem situations in 5014 and that involve secondary data analyses. Using statistical software for basic family research. Preparation to work with quantitative family data sets. prereq: Grad student or instr consent

FSOS 5111. Introduction to Family Therapy. (3 cr. ; A-F only; Periodic Fall & Spring)

This course is designed as an introduction to the field of marriage/couple and family therapy. Students who successfully complete the course should be well versed in the basics of both the foundational and contemporary theories of the discipline. Further, students will be exposed to a number of clinical vignettes and case scenarios that demonstrate the application of the theories in pre-recorded family therapy sessions. Through class assignments and discussions, students will be able to make a more informed decision as to whether or not family therapy is a field that holds potential for them in their own professional pursuits. Other mental health disciplines attend to family variables but having a background in family systems theory and family therapy theories will provide a solid knowledge base for someone embarking on a career in relationship-oriented clinical work. Family systems theory guides the majority of what will be discussed in class.

FSOS 5150. Special Topics in Family Social Science. (; 1-4 cr. [max 12 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Review of research and scholarly thought. Topics specified in Class Schedule. prereq: instr consent

FSOS 5193. Directed Study in Family Social Science. (; 1-6 cr. ; Student Option; Every Fall, Spring & Summer)

tbd prereq: FSOS or grad student in related field

FSOS 5426. Alcohol and Drugs: Families and Culture. (3 cr. ; Student Option; Periodic Fall, Spring & Summer)

Overview of psychology/sociology of drug use/abuse. Life-span, epidemiological, familial, cultural data regarding use. Fundamentals of licit/illicit drug use behavior. Gender, ethnicity, social class, sexuality, sexual orientation, disability.

FSOS 5429. Counseling Skills Practicum I. (3 cr. ; Student Option; Periodic Fall, Spring & Summer)

Basic counseling skills. Counselor needs/motivations, non-verbal communication, basic/

advanced empathy, identifying strengths, maintaining focus, challenging discrepancies, use of self. Emphasizes building from client strengths, learning through role-playing.

FSOS 5701. Prevention Science: Principles and Practices. (3 cr. ; A-F or Audit; Spring Even Year)

Theoretical, empirical, and practical foundations for strategic interventions to prevent behavioral problems and promote healthy development. Multidisciplinary roots of prevention science. Trends/directions and best practices.

FSOS 5702. Prevention Science Research Methodology. (3 cr. ; A-F or Audit; Fall Even Year)

This course is intended to provide students with broad exposure to topics in research methodology within the field of prevention science. Prevention science as a discipline focuses on the etiology and prevention of social, physical, and mental health problems and the translation of that information to promote health and well-being. This course will emphasize research methodology as it pertains to preventive interventions in youth and family contexts. The course is intended to serve as a survey of a wide range of topics within these areas, with research design, measurement issues, and analytic methods representing the major foci. Topics will be covered with attention to the community contexts within which prevention research often occurs as well as the ethical and human subjects issues that may arise. Students who successfully complete the course are expected to be able to interpret and critically evaluate prevention research methodology as well as identify appropriate methodical strategies to address research questions within prevention science.

FSOS 5703. New Topics in Prevention: Implementation and Dissemination. (3 cr. ; A-F or Audit; Spring Odd Year)

This is an interdisciplinary course focused on the new science of implementation and dissemination of evidence-based/empirically-supported family-focused psychosocial prevention programs. Course content will include an overview of conceptual and theoretical foundations of implementation research, key research questions, methods for evaluating implementation and dissemination efforts, and case examples from the empirical literature. The course will take an ecological perspective to the implementation of family-based prevention programs, addressing questions such as how widespread efforts to install programs in communities can ensure that programs create change in children and families.

FSOS 5937. Parent-Child Interaction. (; 3 cr. ; A-F only; Every Fall & Spring)

In Parent-Child Interaction, we will examine the dynamic, reciprocal nature of parent-child interactions across the lifespan through multidisciplinary and diverse research, theories and practices. Emphasis will be given to the bidirectional impact of parent-child interactions on the parent-child relationship and on parents' and children's development within complex

family, community, cultural and other socio-ecological contexts. Students will continue to reflect and grow in their understanding of the professional role and competencies of a parent educator and learning activities will focus on practical application to both personal lives and professional work with families.

FSOS 5942. Diverse Family Experiences. (; 3 cr. ; A-F only; Every Fall & Spring)

This course is a research-based in-depth look at family experiences from many diverse points of view. Students will examine diverse experiences of families and their relevance to parent education and to the professional development of parent educators. Research and theoretical knowledge are woven together with observation and personal reflection to create a strength-based approach to both families and professional development.

FSOS 5944. Curricular Design in Parent Education. (; 3 cr. ; A-F only; Every Fall)

Students will develop the skills to adapt and design curricular resources and teaching strategies for effective parent education with diverse families across multiple contexts. Students will develop competence in conducting needs assessment, identifying content, discerning teaching methods, and designing lesson plans. As they develop their own philosophy of practice, students will study the history and evolution of parent education in Minnesota and across the U.S. prereq: FSoS 5937 & FSoS 5942 or instr consent

FSOS 5945. Teaching and Learning in Parent Education. (; 3 cr. ; A-F only; Every Fall)

Students will examine adult, adolescent, and parent learning and development from the perspective of their relevance for parent education. Students will select, use, and reflect on group and individual parent education teaching strategies and facilitation processes designed to meet the needs of diverse populations of adult learners. Critical reflection, ethical practices, and other parent educator competencies related to teaching methods and processes will be addressed. Personal professional development will be facilitated through challenging assumptions and examining the knowledge and competencies required for parent educators. prereq: FSoS 5937 & FSoS 5942 or instr consent

FSOS 5946. Assessment and Evaluation in Parent Education. (; 3 cr. ; A-F only; Every Spring)

Students will be introduced to theory, terminology, issues, and approaches in assessment and evaluation. Students will apply this new material to the tasks of monitoring program performance, assessing program quality, and measuring parent learning and development. prereq: 5944 or instr consent

FSOS 5949. Student Teaching in Parent Education. (; 3 cr. ; A-F only; Every Spring)

Students will participate in mentored and supervised parent education practice designed to meet individual student needs and interests in parent education. The student teaching assignment is supplemented with

online discussions and chats intended to provide students an opportunity to engage in discussion, reflection, and cooperative learning with regard to the practice of parent education. prereq: Application for student teaching; FSoS 5937, 5942, 5944 and 5945 or instr consent

Finance (FINA)

FINA 3001. Finance Fundamentals. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

How competition for capital in Capital Markets establishes metrics and measures used to understand financial performance of the firm. The course introduces the finance view of the firm and the application of value creation principles to firm decision making. Course presents the centrality of cash flows, the theoretical foundations for Time Value of Money, decision tools for investment of capital, basic valuation of stocks and bonds, and the theoretical foundations for the impact of risk on the required return on investor capital. prereq: ACCT 2050 or ACCT 2051, SCO 2550 or BA 2551 or equivalent statistics course

FINA 3001H. Honors: Finance Fundamentals. (; 3 cr. ; A-F only; Every Fall)

Financial management principles. Money/capital markets, risk/return/valuation triad, capital budgeting. Capital structure, financial leverage. Cost of capital, financial performance measures, dividend policy, working capital management, international financial management/derivatives. prereq: Acct 2050 or Acct 2051, SCO 2550 or BA 2551 or equivalent statistics course

FINA 4121. Financial Markets and Interest Rates. (2 cr. ; A-F or Audit; Every Fall & Spring)

This course provides a framework to understand how financial markets operate and how they establish the cost of capital demanded by investors through market interest rates. Course presents valuation models for bonds, the impact of the Federal Reserve on the level and term structure of interest rates, measures of interest rate risk, financing markets for securities and how these define the pricing of futures and forward contracts. prereq: 3001 or 3001H, CSOM major or Math/Actuarial Science major or Management minor.

FINA 4122. Banks, Banking Services, and FinTech. (; 2 cr. ; A-F or Audit; Every Spring)

This course examines the traditional economic functions of commercial banks, especially lending, savings and liquidity provision, and payment services. For each function, we will address key business risks, policy concerns, and the impact of competition both from traditional nonbank financial institutions and from fintechs? seeking to leverage new information technology. preq Fina 3001

FINA 4221. Principles of Corporate Finance. (2 cr. ; A-F only; Every Fall & Spring)

This course evaluates how the financing choices the firm makes influence the creation of firm value and allocation of firm risks among investors. Course presents the debt vs. equity trade-off, tax effects of financing, dividend

vs. share repurchases, and the impact on managerial incentives and agency problems. prereq: 3001 or 3001H, CSOM major or Math/Actuarial Science major or Management Minor

FINA 4234. Mergers and Acquisitions In Action ? Process and Valuation. (2 cr. ; A-F only; Every Fall)

This Action Based Course will explore in an experiential way the methodology corporate managers employ and invest capital to achieve growth and a return to its shareholders through mergers and acquisitions. Starting with the strategic rationale and ending with the challenges of integration, this course will focus on the process used for identifying M&A targets and the methods used in practice to value these transactions. The objectives of the course will be to leverage skills mastered in the core curriculum: finance, marketing, accounting, and operations ? and other related courses that will help you in this class. Prerequisite: Fina 4422

FINA 4242W. Corporate Investment Decisions. (WI; 4 cr. ; A-F or Audit; Every Fall & Spring)

his case based course provides the student with an opportunity to apply the concepts from previous finance coursework to a variety of decisions a firm would face when allocating capital to investment decisions. The focus is weighted toward combining the theory with the practice of valuation of investment opportunities through the use of group cases to give the student a sense of the strengths and weaknesses of such analysis. The course presents firm performance measurement metrics, APV & WACC based valuation, working capital management, making capital budgeting decisions, financial distress and capital structure, real options and mergers& acquisitions. prereq: 4121, 4321, 4422, 4522, and CSOM major

FINA 4321. Portfolio Management and Performance Evaluation. (2 cr. ; A-F or Audit; Every Fall & Spring)

This course uses statistics to demonstrate how the construction of portfolios of individual securities impacts the risk return trade-off for investors through diversification. Course presents models of pricing investor risk, impact of asset allocation on returns, active versus indexed portfolio management, and approaches to measure value added performance of investment portfolios. prereq: 3001 or 3001H, CSOM major or math/actuarial science major or Management minor

FINA 4325. Behavioral Finance. (2 cr. ; A-F only; Every Spring)

This course introduces students to how the application of psychology and realistic settings to guide and develop the alternative theories of financial market complements the traditional theoretical finance paradigm. The student will use the insights of behavioral finance to shed light on trading patterns, behavior of asset prices, corporate finance and various other financial topics. prereq: 4321 or 4321H

FINA 4329. Security Analysis Capstone. (2 cr. ; A-F only; Every Fall & Spring)

Valuation of equity securities. Principles. Relationship between various valuation approaches. Tools to test self-designed security selection rules. prereq: 4121 or 4121H, 4321 or 4321H, 4422, 4522, ACCT 5100 or ACCT 5101

FINA 4422. Financial Modeling. (; 2 cr. ; A-F only; Every Fall & Spring)

This applied course builds on principles from the prerequisite courses and provides students with significant practice building financial models to identify the free cash flow from and required investment in projects or firms for discounted cash flow and sensitivity analysis. Course presents net operating working capital requirements, Valuation with Free Cash Flow based methods, and the construction of three statement pro-forma cash flow projections. Prereq: FINA 4221, ACCT 5101, CSOM major

FINA 4522. Options & Derivatives I. (2 cr. ; A-F only; Every Fall & Spring)

This course provides a comprehensive introduction to derivative contracts and their pay-offs and basic pricing and how they are used to manage risk or speculate in financial markets. Course presents forward and futures contracts, option contracts and swap contracts. prereq: 3001 or 3001H or ApEc 3501, 4121 or 4121H, 4321 or 4321H (can be concurrent), CSOM major

FINA 4529. Derivatives II Capstone. (2 cr. ; A-F only; Every Spring)

Quantitatively advanced material such as Black-Scholes model for valuing option sensitivities (the Greeks). Value-at-risk methods. Valuation/uses of credit derivatives such as default swaps/collateralized debt obligations. prereq: 4522 or 4523

FINA 4621. The Global Economy (Macro). (; 2 cr. ; A-F only; Every Fall & Spring)

This course provides the student with a foundation for understanding the macroeconomics of the global economy with a focus on international financial issues. The course presents macroeconomic models, international capital flows, and currency and exchange rate systems. prereq: 3001 or 3001H, CSOM major or Math major/Act Sci, or Management minor.

FINA 4622. International Finance. (2 cr. ; A-F only; Every Fall & Spring)

This course provides the student with an understanding of the nature and purposes of financial management in the international context for multinational enterprises and skills in international investment, financing techniques and exchange rate risks. The student will examine barriers to international capital flows and some of the tools used to overcome these barriers. The course presents cost of capital in emerging economies and currency risk management. prereq: CSOM major, FINA 3001 or 3001H, 4121 or 4121H, 4221

FINA 4920. Finance Topics. (; 2-4 cr. [max 10 cr.] ; A-F or Audit; Periodic Fall & Spring)

Discussion and analysis of current topics and developments in Finance.

FINA 5125. Cryptocurrency, Blockchain, and Their Business Applications. (2 cr. ; A-F only; Every Spring)

This course discusses cryptocurrencies (including Bitcoin, Ethereum, and others), blockchain, also referred to as distributed ledger technology (DLT), and their applications in various business sectors. The course first explains the history of cryptocurrency and the fundamentals of blockchain including cryptography and consensus mechanism. Although technical, this part is essential to establish a foundation to understand cryptocurrencies and blockchain. The rest of the course is on the applications of blockchain. We will discuss enterprise blockchain, smart contracts, and token offerings, e.g., initial coin offerings (ICOs) and securities token offering (STOs). We will have industry experts to give guest lectures on the realworld blockchain applications and interact with students. Finally, we will cover the valuation models for cryptoassets, the practical details of how to use cryptocurrency, and various investments related to blockchain. The goal of the course is to provide students with a basic set of skills to understand cryptocurrencies and blockchain and how businesses can use them.

FINA 5422. Financial Econometrics and Computational Methods I. (2 cr. ; A-F only; Every Fall)

This course provides an introduction to the methods used in empirical finance. A review of statistics is followed by intensive instruction on matrix algebra that culminates in a fundamental understanding of linear regression, the basic empirical tool. Asset pricing theories are discussed and developed and then methods are derived to test them. The course will emphasize estimation and inference using computer-based applications.

FINA 5423. Financial Econometrics and Computational Methods II. (2 cr. ; A-F only; Every Fall)

This course builds on Financial Econometrics I and provides instruction on the econometrics used in empirical finance. Topics will include time series analysis, parametric models of volatility, evaluation of asset pricing theories, and models for risk management. The course will emphasize estimation and inference using computer-based applications.

FINA 5529. Derivatives II. (; 2 cr. ; A-F only; Every Spring)

This course begins with a discussion of advanced derivative hedging techniques and proceeds to the economics and mechanics of advanced derivative securities, including interest rate derivatives, swaps, Asian options, and barrier options. The second phase of the course investigates mathematical techniques for stochastic and dynamic modeling of asset prices and derivative security values. Students must use these statistical modeling techniques and advanced programming software (Matlab, Python, R, etc) in a group project to price path dependent securities such as American style options.

FINA 5920. Finance Topic. (; 2-4 cr. [max 8 cr.] ; A-F only; Periodic Fall & Spring)

Discussion and analysis of current topics and developments in Finance.

Financial Mathematics (FM)

FM 5001. Preparation for Financial Mathematics I. (; 3 cr. ; Student Option; Every Fall)

Mathematics needed for MFM program. prereq: Grad MFM major or MFM program director approval

FM 5002. Preparation for Financial Mathematics II. (; 3 cr. ; Student Option; Every Spring)

Mathematics needed for MFM program. prereq: 5001, program director approval

FM 5011. Mathematical Background for Finance I. (; 4 cr. ; Student Option; Every Fall)

Mathematics needed for MFM program. Focuses on finance. prereq: [5001, 5002] with grade of at least B or [MFM program director approval, grad MFM major]

FM 5012. Mathematical Background for Finance II. (; 4 cr. ; Student Option; Every Spring)

Mathematics needed for MFM program. Focuses on finance. prereq: 5011, grad MFM major, program director approval

FM 5021. Mathematical Theory Applied to Finance I. (; 4 cr. ; Student Option; Every Fall)

Bridge between theory and application. prereq: [5011 or concurrent registration is required (or allowed) in 5011], grad MFM major, program director approval

FM 5022. Mathematical Theory Applied to Finance II. (; 4 cr. ; Student Option; Every Spring)

Bridge between theory and application. prereq: 5021, [5012 or concurrent registration is required (or allowed) in 5012], grad MFM major, program director approval

FM 5031. A Practitioner's Course in Finance I. (; 4 cr. ; Student Option; Every Fall)

Practical course taught by industry professionals. Focuses on hands-on real-world problem solving. prereq: [5021 or concurrent registration is required (or allowed) in 5021], grad MFM major, program director approval

FM 5032. A Practitioner's Course in Finance II. (; 4 cr. ; Student Option; Every Spring)

Taught by industry professionals. Focuses on hands-on real-world problem solving. prereq: 5031, [5022 or concurrent registration is required (or allowed) in 5022], grad MFM major, program director approval

FM 5091. Computation, Algorithms, and Coding in Finance I. (4 cr. ; Student Option; Every Fall)

Implements popular finance models and numerical techniques using mainstream computational tools/languages. prereq: Grad MFM major, program director approval

FM 5092. Computation, Algorithms, and Coding in Finance II. (4 cr. ; Student Option; Every Spring)

Implements popular finance models and numerical techniques using mainstream

computational tools/languages. prereq: 5091, grad MFM major, program director approval

FM 5101. Current Events in Finance. (1 cr. [max 3 cr.]; S-N only; Every Fall)

This seminar course focuses on gathering current information and analyzing the effect of local and global happenings on the behavior of the financial markets. Students will use concepts from other courses to interpret weekly market events and present to the class.

FM 5111. Introduction to Financial Markets. (; 3 cr. ; Student Option; Every Fall)

This course is a survey of important elements of financial markets and setting the context to the program. Topics include Complete vs incomplete markets, financial institutions, traded instruments, elements of accounting, arbitrage, Fundamental Theorem of Asset Pricing, Credit, Investment and Risk Management.

FM 5121. Mathematics for Finance. (3 cr. ; Student Option; Every Fall)

This course establishes the mathematical foundation needed for modeling in finance, with focus on probability and statistics, stochastic processes, linear algebra, and more.

FM 5151. Financial Modeling I: Python. (; 3 cr. ; Student Option; Every Fall)

This course establishes the basic principles of Financial Modeling. Topics include different kinds of models (e.g. descriptive vs explanatory, statistical vs structural, etc.), foundational models used in finance (binomial, lognormal, Gaussian, etc.) and their applications (stocks, interest rates, commodities, etc.). Python will be used extensively to illustrate the models, therefore this course also serves as an introduction to the use of Python in finance.

FM 5202. Ethics in Finance. (1 cr. ; S-N only; Every Spring)

This Seminar is formatted as a case study, focusing on financial law, regulation and ethics. Students will analyze various financial decision and discuss cases that exhibit ethical challenges, such as conflict of interests. Discussion will be conducted in small groups and summarized as a presentation to the whole group.

FM 5212. Continuous Time Finance. (3 cr. ; Student Option; Every Spring)

A course on Stochastic Calculus - based modeling in finance, focusing on the Black-Scholes model and its extensions.

FM 5222. Statistical Methods in Finance. (3 cr. ; Student Option; Every Spring)

A course on Statistical methods used in the analysis of financial markets data. It will cover topics such as, Bayesian Statistics, Linear and Non-Linear Regression, Markov Chain Monte Carlo, Copulas and Time-series Analysis, and their applications to financial data.

FM 5252. Financial Modeling II: Numerical Methods and Simulations. (; 3 cr. ; Student Option; Every Spring)

This course focuses on Monte Carlo simulations and elements of scientific computing as tools in modeling. These

methods will be used as a key technique to develop and assess models, and considerable time will be spent on the interpretation of model outputs.

FM 5323. Data Science and Machine Learning in Finance. (3 cr. ; Student Option; Every Fall)

This course introduces the basic principles underlying Data Science and Machine Learning, focusing on their applications in finance. Topics include: understanding data, EDA, various types of Machine Learning problems (e.g. classification, regression, recommendation, etc.), various algorithmic approaches (GLMs, Trees, Neural Networks, etc.), model selection, limitations of ML models, and issues in their implementations.

FM 5343. Quantitative Risk Management. (3 cr. ; Student Option; Every Fall)

Topics include: Taxonomies of Risk, Measures of Risk, Risk Modeling and Risk Mitigation strategies. Additionally, the role and purpose of Risk Management will be discussed.

FM 5353. Software Development in Finance. (3 cr. ; Student Option; Every Fall)

This class introduces the toolset of a compiled language and principles of object-oriented programming. Databases are introduced and data models related to finance applications are explored. Projects are sourced from applied finance problems and are implemented with a focus on performance and common practices in professional software development.

FM 5411. Fixed Income Market. (2 cr. ; Student Option; Periodic Fall)

This elective on fixed income markets expands on the basic concepts in the core curriculum and provides students a deeper understanding of this market through a hands-on approach.

FM 5422. Quantitative Hedge Fund Strategies. (2 cr. ; Student Option; Periodic Spring)

A practical course exposing students to a variety of trading strategies used in Hedge Funds.

FM 5443. Credit Risk Models. (2 cr. ; Student Option; Periodic Spring)

This course focuses on basic kinds of credit models (structural, intensity, etc.), and their applications. Both individual credit and portfolio level approaches will be considered.

FM 5462. Market Microstructure. (2 cr. ; Student Option; Periodic Spring)

This course focuses on the stylized facts in market microstructure and its application in algorithmic trading. In order to deal with the vast amount of real time streaming data in algorithmic trading, students will learn how to use KDB+ (a time series database) and its language q (a vectorized functional language).

FM 5990. Topics in Financial Mathematics. (; 1-2 cr. [max 6 cr.]; Student Option; Periodic Fall & Spring)

The course will focus on a special topic in quantitative finance that supplements the regular curriculum of the Master of Financial Mathematics program. The course features experts, often finance industry practitioners,

who share their experience and knowledge. prereq: enrolled in the Master of Financial Mathematics program or instr consent

FM 5993. Directed Study in Financial Mathematics. (1-2 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer)

A course in which a student is conducting a directed study or a research project under the direction of a faculty member / program instructor. Can be repeated.

FM 5996. Internship. (1 cr. [max 8 cr.]; S-N only; Every Fall, Spring & Summer)
Financial Mathematics curriculum related Internship. Can be repeated.

Finnish (FIN)

FIN 1001. Beginning Finnish I. (; 5 cr. ; Student Option; Every Fall)

Emphasis on working toward novice-intermediate low proficiency in all four language modalities (listening, reading, speaking, writing). Topics include every day subjects (shopping, directions, family, food, housing, etc.).

FIN 1002. Beginning Finnish II. (; 5 cr. ; Student Option; Every Spring)

Continues the presentation of all four language modalities (listening, reading, speaking, writing) with a proficiency emphasis. Topics include free-time activities, careers, and the Finnish culture. prereq: 1001

FIN 1003. Intermediate Finnish I. (; 5 cr. ; Student Option; Every Fall)

Emphasis on intermediate proficiency in listening, reading, speaking, and writing. Contextualized work on grammar and vocabulary is combined with authentic readings and essay assignments. prereq: 1002

FIN 1004. Intermediate Finnish II. (; 5 cr. ; Student Option; Every Spring)

Emphasis on developing intermediate mid-high proficiency in listening, reading, speaking, and writing. Contextualized work on grammar and vocabulary is supported by work with authentic readings and essay assignments. prereq: 1003

FIN 3011. Advanced Finnish. (; 3 cr. ; Student Option; Every Fall)

Designed to help students achieve advanced proficiency in Finnish. Discussion of fiction, film, journalistic, and professional prose is complemented by grammar, vocabulary building exercises, and review of oral/written modes of communication. prereq: 1004 or 4004

FIN 3012. Advanced Finnish. (; 3 cr. ; Student Option; Every Spring)

Discussion of novels, short stories, plays, articles. Structural, stylistic, vocabulary-building exercises. prereq: 3011 or 4011

FIN 4001. Beginning Finnish for Graduate Research I. (; 5 cr. ; Student Option; Every Fall)

Emphasis on working toward novice-intermediate low proficiency in all four language modalities (listening, reading, speaking, writing). Topics include every day subjects (shopping, directions, family, food, housing, etc.). Meets concurrently with 1001.

FIN 4002. Beginning Finnish for Graduate Research II. (; 5 cr. ; Student Option; Every Spring)

Continues the presentation of all four language modalities (listening, reading, speaking, writing) with a proficiency emphasis. Topics include free-time activities, careers, and the Finnish culture. Meets concurrently with 1002.

FIN 4003. Intermediate Finnish for Graduate Research I. (; 5 cr. ; Student Option; Every Fall)

Emphasis on intermediate proficiency in listening, reading, speaking, and writing. Contextualized work on grammar and vocabulary is combined with authentic readings and essay assignments. Meets concurrently with 1003.

FIN 4004. Intermediate Finnish for Graduate Research II. (; 5 cr. ; Student Option; Every Spring)

Emphasis on developing intermediate mid-high proficiency in listening, reading, speaking, and writing. Contextualized work on grammar and vocabulary is supported by work with authentic readings and essay assignments. Meets with 1004.

FIN 4011. Advanced Finnish for Graduate Research. (; 3 cr. ; Student Option; Every Fall)

Designed to help students achieve advanced proficiency in Finnish. Discussion of fiction, film, journalistic, and professional prose is complemented by grammar, vocabulary building exercises, and review of oral/written modes of communication. Meets with 3011.

FIN 4012. Advanced Finnish for Graduate Research. (; 3 cr. ; Student Option; Every Spring)

Discussion of novels, short stories, plays, articles. Structural, stylistic, vocabulary-building exercises. Meets with 3012.

Fisheries and Wildlife (FW)

FW 1001. Orientation in Fisheries, Wildlife, and Conservation Biology. (; 1 cr. ; A-F or Audit; Every Fall)

Survey of technical requirements and education needed for careers in fisheries, wildlife, and conservation biology. Introduction to fields of work, problems, career opportunities. Prerequisite: FWCB major or instructor permission.

FW 2001W. Introduction to Fisheries, Wildlife, and Conservation Biology.

(ENV,WI; 3 cr. ; Student Option; Every Fall) Fish, wildlife, and other forms of biodiversity. Single species, populations, ecosystem, and landscape approaches. Experiential/interactive course. Decision-case studies. prereq: BIOL 1001 or BIOL 1009

FW 2003. Introduction to Marine Biology. (3 cr. ; Student Option; Every Spring)

Nature of oceans, their role sustaining life on planet. Diversity/ecology of organisms that live in coastal, deep, open seas. Effects of humans on marine life. Resilience of marine life, its importance to human society. Cultures of oceanic peoples. Selected topics. prereq: BIOL 1001 or BIOL 1009 or BIOL 2002 or ESCI 1006 or ESCI 1106 or instr consent

FW 3104. Skills for Field Techniques in Habitat Assessment, Research, and Conservation. (; 2 cr. ; A-F only; Every Fall, Spring & Summer)

In this field-preparation and application class, students develop skills required for the field session (FW 3106 + FW 3108) and future professional positions in fisheries, wildlife, and conservation biology. Students complete a series of online activities that prepare them to use analytical tools (e.g., tools for statistical analysis, GIS/GPS, spatial methodology, advanced lab- and field-based skills). Students build knowledge about Minnesota species including identification and natural history information of plants, amphibians and reptiles, birds, fish, and mammals. Students demonstrate readiness for fieldwork by conducting an independent, field-focused project. prereq: [soph, jr, sr], FW major

FW 3106. Vegetation Sampling for Habitat Assessments. (; 1 cr. ; A-F or Audit; Every Summer)

Common vegetation sampling methods used for habitat assessments. Identify approximately 75 vascular plant species typical of Minnesota terrestrial and aquatic ecosystems using taxonomic keys and readily observable traits. Importance of plants for providing food, cover, and nesting habitat. prereq: [soph, jr, sr], FW major, must be taken concurrently with FW 3108

FW 3108. Field Methods in Research and Conservation of Vertebrate Populations. (3 cr. ; A-F or Audit; Every Fall & Spring)

The goal of this course is to help students develop skills and confidence in planning and implementing effective field research. The topics we will cover include species identification, basic statistical analysis, aquatic ecological assessments, and wildlife research. 1. Students in the course will gain experience in planning and conducting field-based research projects and will be introduced to a variety of techniques used in assessing and/or monitoring terrestrial and aquatic wildlife populations. 2. Students will learn to (1) identify common terrestrial and aquatic vertebrate species in Minnesota, (2) design, plan, and conduct field-based research, (3) collect, analyze, and interpret field data including telemetry, bird point counts, amphibian surveys, and trap-grid and remote-camera data, (4) put data findings into a context of management implications and decisions, and (5) communicate findings in written formats 3. Multiple full-day field trips or a 5-day field session is required for this course. prereq: [soph, jr, sr], FW major, must be taken concurrently with FW 3106

FW 3293. Directed Study Fisheries. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed

study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

FW 3294. Directed Research Fisheries. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research course will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

FW 3393. Directed Study Wildlife. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

FW 3394. Directed Research Wildlife. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research course will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

FW 3480. Topics in Fisheries, Wildlife & Conservation Biology. (; 1-4 cr. [max 16 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Lectures by visiting scholar or regular staff member. Topics specified in Class Schedule.

FW 3493. Directed Study Conservation Biology. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-

wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

FW 3494. Directed Research Conservation Biology. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research course will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

FW 3925. Human Dimensions of Fisheries and Wildlife Management. (3 cr. ; A-F only; Every Spring)

Human dimensions of fish and wildlife concerns. Theory and methods from social sciences to address challenges and issues of managing fish and wildlife resources. Integrating social science information into fish and wildlife decision-making. Guest lecturers.

FW 4001. Biometry. (; 4 cr. ; A-F or Audit; Every Fall)

This course covers the basic foundations of statistical methods. In contrast to traditional methods of teaching statistics based on analytical formulas and hand-calculations, we will initially emphasize simulation-based methods (randomization tests, bootstrapping) for analyzing data. Students will learn how to implement common statistical methods (e.g., one and two sample tests, interval estimation techniques, linear regression) in the R programming language, and gain experience analyzing real data from a variety of fields, with particular emphasis on biological examples and applications.

FW 4101. Herpetology. (; 4 cr. ; Student Option; Spring Odd Year)

Reptiles/amphibians, their systematics, behavior, ecology, physiology, development, and morphology. Diversity of reptiles/amphibians. Focuses on Minnesota fauna. Lab. prereq: BIOL 1001 or BIOL 2012

FW 4102. Principles of Conservation Biology. (ENV; 3 cr. ; Student Option; Every Spring)

Introduction to themes/concepts of diverse, dynamic, and interdisciplinary field. Biological/social underpinnings of conservation problems/solutions. prereq: introductory biology course

FW 4103. Principles of Wildlife Management. (; 3 cr. ; Student Option; Every Fall)

This course covers the ecological basis for management of wildlife, including biological and sociological factors that influence management. Goals include: understanding the ecological mechanisms influencing the distribution and abundance of wildlife, learning the ecological and historical foundations of

wildlife management and the ecological and social ramifications of management actions, thinking critically and logically about current wildlife issues, honing writing skills, and developing technical skills in key areas. prereq: Intro biology course, [jr or sr]

FW 4107. Principles of Fisheries Science and Management. (3 cr. ; A-F only; Spring Even Year)

Principles of Fisheries Management is an engaging and dynamic exploration to the principles and practices of fisheries management. The course is designed as a major requirement for Fisheries subplan majors in Fisheries, Wildlife, and Conservation Biology. It is also appropriate as an elective course for other majors and minors in FWCB, ESPM, or related biological disciplines. We cover the basics of fisheries science (habitats, ecology, and population dynamics) and management (e.g., goals, tools, implementation, and assessment) with an emphasis on human intervention and regulation. We first cover management approaches and planning, the development of an information base, and the identification of problems. We then provide a brief overview of applied limnology, fish ecology, and population dynamics, followed by approaches to manage fishery populations and habitats in freshwater and marine systems along with methods to assess management outcomes. Throughout, we demonstrate applications to specific fisheries and habitats. This is primarily a lecture-based course that also integrates field trips, group discussions, and activities. We use exams to measure comprehension, and case studies and assignments to encourage practical application. Prerequisite: Intro biology course, [jr or sr]

FW 4136. Ichthyology. (; 4 cr. ; Student Option; Every Fall)

Fish biology, adaptations to different environments and modes of living, and environmental relationships. Lab emphasizes anatomy and identification of Minnesota fishes. prereq: Biol 1001 or Biol 2012

FW 4301. Conservation Genetics. (3 cr. ; A-F or Audit; Spring Even Year)

This course introduces students to fundamental principles of population genetics and molecular phylogenetics and explores their applications to problems in the conservation, management, and restoration of biodiversity.

FW 4401. Fish Physiology and Behavior. (; 3 cr. ; Student Option; Every Fall)

Fish mechanisms/behavior. Links between fish biology, fisheries ecology, management, aquaculture. Homeostasis, neurobiology, bioenergetics, reproduction, movement. prereq: 4136, BIOL 2012, CHEM 1021(may be taken concurrently)

FW 4603. Preparing Research Proposals for Wildlife Biologists. (1 cr. ; A-F only; Every Fall)

This course will give students experience developing research proposals and presentations. The course material will focus primarily on how to identify research questions, develop a budget, construct a written proposal,

and present the proposal verbally. Students will work in small groups throughout the semester to develop their proposal and will gain skills in peer review and reference management. Prerequisites: EEB 3407 OR 3408 OR 3807, FW 4102 OR 4103, or permission from instructor, concurrent with FW 5603W.

FW 4629. Wildlife Care and Handling Externship. (3 cr. ; A-F only; Every Spring)

This externship class is the capstone experience of the wildlife care and handling minor curriculum. The class synthesizes the practical skills and experience you have developed in earlier classes in the minor. The capstone is a guided, supervised, hands-on, on-site experience in a wildlife handling setting, complemented by pre-, during- and post-experience reflection and analysis.

FW 5003. Human Dimensions of Biological Conservation. (; 3 cr. ; Student Option; Every Fall)

Survey of social, psychological, economic, policy aspects of managing/conserving wildlife, fisheries, and related resources. prereq: [Biol 1001 or Biol 1009], Biol 3407

FW 5051. Analysis of Populations. (; 4 cr. ; Student Option; Every Spring)

Regulation, growth, general dynamics of populations. Data needed to describe populations, population growth, population models, regulatory mechanisms. prereq: [4001 or STAT 3011 or ESPM 3012], [EEB 3407 or EEB 3408W or EEB 3807], Senior or grad student

FW 5121. Conservation Planning and Structured Decision-making. (3 cr. ; A-F only; Every Spring)

We are impacting our planet and the species and ecosystems on it at an unprecedented rate. This creates key policy challenges to conserve species, ecosystems, and the benefits they provide to people. But, how do we decide what is the best way to tackle these challenges? How do we do this in a world with limited resources (time, money) for conservation and multiple stakeholders with different objectives? How can we make systematic decisions to get the biggest bang for our conservation buck? To address these questions, this course will cover key topics and concepts in conservation planning and provide exposure and hands-on experience with techniques for conservation plans and decisions. We will cover topics ranging from protected areas, restoration, ecosystem services, and climate change to structured decision-making, adaptive management, and return on investment. The course has a lecture and in-class computer lab component. This course will present structured approaches to problem-solving and decision-making from a conservation perspective, and students will leave with tools for structuring and solving complex environmental problems. Therefore, this is a foundational course in conservation planning but will also provide students will a tool-box to formulate and solve complex problems in environmental management more broadly and in life. Prerequisites: Senior or graduate standing, or permission of instructor.

Recommended: One course in ecology, environmental science or permission of instructor.

FW 5136. Ichthyology. (; 4 cr. ; Student Option; Every Fall)

Fish biology, adaptations to different environments and modes of living, and evolutionary relationships. Laboratory emphasizes anatomy and identification of Minnesota fishes.

FW 5293. Directed Study Fisheries. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

FW 5294. Directed Research Fisheries. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research course will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

FW 5392. Special Lectures: Wildlife. (; 1-5 cr. [max 15 cr.] ; Student Option; Every Fall & Spring)

Lectures given by visiting scholar or staff member.

FW 5393. Directed Study Wildlife. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out an independent project under the direction of a faculty member. Directed study courses may be taken for variable credit and special permission is needed for enrollment.

FW 5394. Directed Research Wildlife. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Directed Research: An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

FW 5401. Fish Physiology and Behavior. (; 3 cr. ; Student Option; Every Fall)

Fish mechanisms/behavior. Links between fish biology, fisheries ecology, management, aquaculture. Homeostasis, neurobiology, bioenergetics, reproduction, movement.

FW 5459. Stream and River Ecology. (3 cr. ; Student Option; Fall Even Year)

Structure/dynamics of running waters from ecosystem perspective. Historical perspective, basic hydrology/fluvial geomorphology, terrestrial-aquatic interactions, detrital dynamics, metabolism, drift, trophic relations, biotic/abiotic interactions, ecosystem experiments and natural alterations, stability/succession, ecosystem dynamics in a watershed. prereq: Limnology course or instr consent

FW 5493. Directed Study Conservation Biology. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

FW 5494. Directed Research Conservation Biology. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research course will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

FW 5603W. Habitats and Regulation of Wildlife. (WI; 3 cr. ; A-F or Audit; Every Fall)

Environmental interactions of wildlife at population/community levels. Environmental threats from human activities. Habitat management practices. Objectives, policies, regulations in population management. prereq: [FW 4102 or FW 4103], [EEB 3407 or EEB 3408 or EEB 3807]

FW 5625. Wildlife Handling and Immobilization for Research and Management. (; 2 cr. ; S-N or Audit; Every Spring)

Practical techniques to maximize human/animal safety and encourage effective operations. Preparation procedures, legal responsibilities, capture drugs/delivery systems, safety measures, ethical issues, basic veterinary procedures for handling wildlife. Field course. Uses live animals. prereq:

General biology, [grad student or vet med student or FW sr]

Food Science and Nutrition (FSCN)

FSCN 1001. Orientation to the Majors: Food Science and Nutrition. (1 cr. ; S-N only; Every Fall)

Advising, student opportunities, networking, what kinds of jobs will be available after graduating.

FSCN 1011. Science of Food and Cooking. (PHYS; 4 cr. ; Student Option; Every Fall & Spring)

Souffles, custards, sauces, coffee brewing, candy making used to examine physics/chemistry of heat transfer, foams, gels, emulsions, extractions, crystallization.

FSCN 1012. Sports Nutrition. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Physiological function and metabolic fate of all six classes of nutrients ingested by active individuals to improve athletic performance. Impact on physiology of ergogenic aids and various dietary supplements. Overview of these components in fulfilling energy/recovery needs for continual/progressive athletic performance. Web-based course.

FSCN 1013. Dietary Supplements: scientific, regulatory, and cultural aspects. (CIV; 3 cr. ; Student Option; Every Spring)

Dietary supplements are commonplace in modern life, especially in the United States, furthermore the dietary supplement industry is a multi billion dollar industry with relatively little government oversight and regulation. Many factors have spurred the use of dietary supplements such as changes in dietary patterns, growing focus on preventative healthcare, marketing & social media (e.g., celebrity and athletic endorsements & consumer anecdotes), and increased accessibility through e-commerce, but there has been little philosophical work on the ethical issues surrounding these. This course is designed to encourage students to critically examine and reflect on these factors as well as dietary supplement use across cultures and the appropriation of traditional medicines and knowledge for commercial gains. Students will also evaluate information on dietary supplements for performance, strength, weight loss, and the treatment of diseases or delay of disease onset and assess the ethical decision making related to the marketing and use of supplements for these purposes.

FSCN 1102. Food: Safety, Risks, and Technology. (CIV; 3 cr. ; Student Option No Audit; Every Fall & Spring)

Introduction to inherent risks/safety of food supply. Use of public policy and food technology to reduce risks. Microbiological, chemical, and environmental hazards, government/industry controls.

FSCN 1112. Principles of Nutrition. (TS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course explores fundamental concepts of nutrition, nutrient functions, human nutritional requirements, and food sources. We will

learn about evaluating nutrition information and food safety, and investigate the role of nutrition in chronic disease, public policy, and the environment. Nutrition is both a science and social science. This class involves social aspects, but mainly concerns the biochemistry and physiology of how food is processed in the body. The chapters on carbohydrates, lipids, proteins, and metabolism especially built on biology and physiology. Course topics include: 1. essential nutrients (macro-and-micro-nutrients) needed from the diet; 2. major functions of nutrients and physiological changes with deficiency or excess; 3. digestion, absorption, and metabolism of nutrients; 4. weight management; 5. scientific method and nutrition; 6. life cycle issues; 7. food safety issues 8. nutrition for sports Prerequisites: High school biology and chemistry

FSCN 1906. Farm to Someone Else's Table: Making food accessible for all students. (; 3 cr. ; Student Option; Every Fall)

Overview This course explores a potential theory of gradually changing the food system to better include meaningful and relevant practical, healthy, affordable, desirable (PHAD) foods that will enhance the nutrition of the general population and ultimately enhance public health. We will foster essential leadership qualities, skills, and knowledge to work toward collective solutions around adaptive challenges. We will create a valid, reliable, and sustainable process for the development of practical, healthier, affordable, and desirable foods.

FSCN 2001. A Food Systems Approach to Cooking for Health and the Environment. (3 cr. ; Student Option; Every Fall)

This is a fun, hands-on cooking class. It is also an Experiential Learning (EL) course which meets the EL requirement for all CFANS students. This lecture /lab format course will give students the confidence to cook healthful whole foods as they learn about the food system. Subject matter will be taught from an interdisciplinary perspective. Concepts covered include fundamental concepts of nutrition, food sources, food safety, the food system; skills/resources for food choices based on nutritional, environmental, local and global societal implications. We will examine the ethical and civic themes that guide food choices. We will discuss and write about how environmental, cultural, social, and health issues impact personal food choices. prereq: [soph, jr, sr] or instructor consent

FSCN 2002. Healthy Foods, Healthy Lives - Cooking on a Student's Budget. (1 cr. ; Student Option; Every Fall & Spring)

Skills/tools necessary to be comfortable/confident home cooks, knowledgeable about preparation of nutritional/safely prepared foods. Food safety, basic nutrition, technique instruction, budgeting, time management, menu design, measuring, cooking methods, preservation.

FSCN 2021. Introductory Microbiology. (; 4 cr. ; A-F only; Every Fall & Spring)

How microbes impact our world in deadly/life-saving ways. Roles of bacteria, fungi, and

viruses as agents of human diseases; in food spoilage/food borne diseases; and in food preservation/health promotion. Preventing plant diseases, food/drug production, cleaning up oil spills. Genetic engineering.

FSCN 2512. Food Customs and Culture. (GP; 3 cr. ; A-F or Audit; Every Fall & Spring)

Account of traditional and contemporary food customs and culture. Practice of food choice, preparation, and preservation in the context of worldview, perspectives on diet and health, and belief systems of communities and societies around the world. Major emphasis on US cultures including Native American, Hispanic American, European American, African American, and Asian American. Development of cultural self-understanding and intercultural awareness via food and food habits-related experiences and reflections.

FSCN 3102. Introduction to Food Science. (; 3 cr. ; Student Option; Every Fall)

Introduction to chemical/physical properties of foods. Evaluating interaction/reaction of foods due to formulation, processing, preparation. prereq: CHEM 1022 or [CHEM 1062 and CHEM 1066]

FSCN 3612. Life Cycle Nutrition. (3 cr. ; Student Option; Every Fall & Spring)

FSCN 3612 focuses on nutritional requirements and common issues during different stages of the life cycle, including pregnancy, lactation, childhood, adulthood, and aging. There are no required courses for this class; however, it is best to take a basic nutrition class beforehand, such as FSCN 1112 Principles of Nutrition or an equivalent.

FSCN 3614. Nutrition Education and Counseling. (; 3 cr. ; Student Option; Every Fall)

Effective communication and counseling skills are essential for all food and nutrition professionals, whether working in clinical, community, or food service settings. This course will teach necessary concepts and skills for entry-level dietitians, such as educational theory, basic counseling techniques, and health disparities and health literacy. You will develop skills and explore these concepts through application: by practicing in small group breakout sessions and by completing written assignments. You will also reflect on the nature of dietetics as a helping profession and your role in supporting clients who want to make lifestyle changes. There are no required prerequisites courses for FSCN 3614. However, it is recommended that students take an introductory nutrition course, such as FSCN 1112 (Principles of Nutrition) or equivalent in order to be prepared.

FSCN 3731. Food Service Operations Management Laboratory. (; 2 cr. ; A-F or Audit; Every Fall)

Experience in managing a food service operation. On- and off-campus commercial and institutional restaurants used as labs. Required field trips. prereq: [3102 or concurrent registration is required (or allowed) in 3102], [3732 or concurrent registration is required (or allowed) in 3732]

FSCN 3732. Food Service Operations Management. (; 3 cr. ; A-F or Audit; Every Fall)

Planning, preparing, delivering, serving, managing foods served away from home.

FSCN 3993. Directed Study. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

FSCN 3994. Directed Research. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

FSCN 4096. Professional Experience Program: Internship. (1-4 cr. [max 24 cr.] ; A-F only; Every Fall, Spring & Summer)

Apply knowledge from Food Science BS or Nutrition BS program to real-life problems in professional internship. Performance evaluated for credit. prereq: To register, students must fill out FScN Internship Agreement form, available at <http://fscn.cfans.umn.edu>. Contact fscnug@umn.edu with questions.

FSCN 4112. Food Chemistry and Functional Foods. (; 3 cr. ; Student Option; Every Fall)

Most-important food constituents, their occurrence, structures, functional properties, and health benefits. Proteins, lipids, carbohydrates, water. Vitamins, minerals, enzymes, phytochemicals, food additives, contaminants. prereq: 3102, BIOC 3021

FSCN 4113. Ingredient Functionality and Applications in Food. (2 cr. ; Student Option; Every Spring)

The course covers the practical use of various ingredients in different food matrices, with a focus on ingredient functionality, interactions, and substitutions. The emphasis will be on demonstrating the use of different ingredients to achieve a desired product quality, while addressing trends such diet restrictions, healthy foods, clean label, fair trade, sustainable sourcing, cost-optimization, among others. Other emphases will include ingredient handling, processing and stability. The course will be organized based on different

food systems such as confectionery, baked products, fried foods, dairy and imitation dairy, etc.

FSCN 4121. Food Microbiology. (; 3 cr. ; Student Option No Audit; Every Spring)
Microorganisms involved in food-borne disease, food fermentations, and food spoilage. Methods for their control/detection. Food microbiology. Foodborne pathogens. Microbial food spoilage. Control of microorganisms in food. prereq: BIOC 3021, [2021 or VBS 2032 or MICB 3301]

FSCN 4122. Food Fermentations and Biotechnology. (; 2 cr. ; Student Option; Every Fall)

Major food fermentations important for food industry. Microbiological components. Impact of biotechnology on food production. Genetic tools. Improvement of microbes used in food production by biotechnological approaches. prereq: [MICB 3301, BIOL 4003] or instr consent

FSCN 4123. Molecular Biology for Applied Scientists. (1 cr. ; A-F only; Every Fall)

Basics of molecular biology. Origins of molecular biology from discovery to ad of gene cloning/sequencing technologies. PCR, DNA fingerprinting, metagenomics. Synthetic biology for biotechnological production of novel peptides/ proteins. prereq: [BioC 3021 and MicB 3301] or FScN 2021 or instr consent

FSCN 4131. Food Quality. (; 3 cr. ; Student Option; Every Fall)

This course is designed to give students an overview of the management systems, statistical procedures, and regulatory requirements involved with producing quality food and ingredients. The course material includes risk assessment and management, good manufacturing practices, hazard analysis critical control point (HACCP), statistical methods for process control, total quality management, and food and drug laws. The course is intended primarily for upper division undergraduates majoring in food science. prereq: jr

FSCN 4291. Independent Study. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)
Individual lab or library research in an area related to food science or nutrition. prereq: Undergrads, instr consent

FSCN 4311. Chemical Reactions in Food Systems. (; 2 cr. ; Student Option; Every Spring)

Chemical structure of major food constituents, carbohydrates, lipid, and proteins. Reaction/ interaction pathways. Function within complex food matrix under various storage/processing conditions. prereq: 4112, 4312W

FSCN 4312W. Food Analysis. (WI; 4 cr. ; Student Option; Every Fall)

The course covers major analytical tools needed for any investigation in food science and technology, whether by the food industry, governmental agencies, or universities. Specifically, the course covers: application of quantitative and qualitative physical, chemical, and instrumental methods used for

analysis and examination of food constituents, ingredients, and products; sensory evaluation techniques; and evaluation of methods and interpretation of results. The course covers methods used for: compositional analysis of foods; chemical characterization of foods and food constituents; and spectroscopic, chromatographic, and spectrometric analysis used for the detection, identification, and quantification of food macro- and micro-components. In this course the students will learn to identify the appropriate methods of analysis based on the investigation purpose, either nutrition labeling, quality control, product development, or scientific research. prereq: FSCN 4112

FSCN 432. Food Processing Operations. (; 3 cr. ; A-F or Audit; Every Spring)

Engineering principles applied to commonly used food processing operations. Blanching, pasteurization, sterilization, frying, baking, milling, extrusion. Meat processing, water treatment, waste management. Prerequisite: BBE 4744

FSCN 4334. Food Processing Fundamentals I. (3 cr. [max 6 cr.]; A-F only; Every Fall)

Food processing fundamentals (add heat, remove heat, remove water, add barriers and add preservatives). Overview of mass and energy balances for food process design, fundamentals of fluid flow, heat transfer as applied to food process unit operations such as pumping, heat exchangers, thermal processing, dehydration, refrigeration, freezing, and extrusion.

FSCN 4335. Food Processing Fundamentals II. (3 cr. ; A-F only; Every Spring)

Food processing fundamentals (add heat, remove heat, remove water, add barriers, and add preservatives). Overview energy requirement in food processing, food process plant design, mass transfer fundamentals, mass transfer operations including size reduction, agglomeration, membrane filtration, and packaging. Energy in food processing and pilot plant design. Wastewater treatment.

FSCN 4349. Food Science Capstone. (2 cr. ; A-F only; Every Fall & Spring)

Planning of process or product development project. Defining goals, preparing/following time line, reviewing literature, coordinating with experts, procuring supplies, writing progress reports. Determining ingredient specifications, lab/pilot plant production. Chemical, microbiological, sensory testing. Oral/written presentations. prereq: 4112, 4121, 4131, 4312, 4332, BBE 4744, Food Science Major, senior

FSCN 4481. Sensory Evaluation of Food Quality. (1 cr. ; A-F only; Every Spring)

Fundamentals of sensory perception. Test designs and methods used in studying sensory qualities of foods and consumer responses to foods. prereq: 3102, Stat 3011

FSCN 4482. Sensory Evaluation of Food Quality. (2 cr. [max 4 cr.]; A-F only; Every Spring)

Fundamentals of sensory perception. Test designs and methods used in studying the

sensory qualities of foods and consumer responses to foods. This course includes six, 1-hour tasting sessions, six, 1-hour data analysis sessions and weekly 50-minute classroom activities.

FSCN 4612W. Advanced Human Nutrition.

(WI; 4 cr. ; Student Option; Every Fall & Spring)
Advanced study of digestion/absorption of nutrients. Research techniques in nutrition, including human/epidemiological studies. Health promotion, disease prevention theories. Non-Enforced Prerequisites: FSCN 1112, CHEM 1062 and CHEM 1066 Enforced Prerequisites (students cannot register without the following): BioC 3021 or PHSL 3051 or ANSC 3301 or BIOL 3211 or Instructor Consent

FSCN 4613. Experimental Nutrition. (; 2 cr. ; Student Option; Every Spring)

This is a laboratory course focused on biochemical methods for determining nutritional status. This course uses biological samples from the students themselves as the source material. In this course, students will develop a better understanding of the usefulness and limitations of the biochemical methods, as well as the principles behind the procedures and instruments used. Students will also expand their nutrition knowledge, improve their lab skills, develop their scientific writing abilities, and exercise their problem solving skills. Prerequisites: BIOC 3021, STAT 3011, Nutrition Major, or Instructor Consent

FSCN 4614W. Community Nutrition.

(DSJ,WI,SOCS; 3 cr. ; A-F only; Every Spring)
Nutrition risks associated with different age, sex, ethnic, and socioeconomic groups. Community needs assessment. Program planning and evaluation. Programs developed to address the needs and interests of people at different stages of the life cycle, ethnic or cultural backgrounds, and literacy levels.

FSCN 4621. Nutrition and Metabolism. (4 cr. ; Student Option; Every Fall)

Carbohydrate, lipid, protein metabolism. Uses systems/holistic approach to emphasize how metabolic pathways interrelate. Prerequisite courses: FSCN 4612, BIOC 3021, ANSC 3301

FSCN 4622. Nutritional Toxicology, the basic science of diet-related toxicants. (; 3 cr. ; A-F only; Every Spring)

Concepts of toxicology. Molecular mechanism behind dietary chemical-induced toxicities. Impact/risk of dietary chemicals for human health. prereq: BIOC 3021; designed for students majoring in [nutrition or food science or toxicology]

FSCN 4664. Senior Capstone: Becoming a Registered Dietitian. (1 cr. ; S-N or Audit; Every Fall)

Preparation for advancement in career as registered dietitian, including completion of dietetic internship application. Current issues in dietetics. prereq: [4665 or concurrent registration is required (or allowed) in 4665], Nutrition/dietetics subplan of nutrition major or instr consent

FSCN 4665. Medical Nutrition Therapy I. (; 3 cr. ; A-F or Audit; Every Fall)

Nutrition care process, with a focus on nutrition assessment and support, and on pathophysiology, management, and nutrition care of disease and injury, e.g. gastrointestinal (GI), pancreatic, hepatic, and pulmonary disorders; surgery/trauma/burns; and cancer. prereq: FSCN 4612, PHSL 3051, BIOC 3021

FSCN 4666. Medical Nutrition Therapy II. (3 cr. ; A-F or Audit; Every Spring)

Nutrition care process, with a focus on pathophysiology, management, and nutrition care of diabetes mellitus, cardiovascular disorders, renal disorders, and obesity.

FSCN 4667. Dietetics Capstone and Interprofessional Education. (1 cr. ; S-N only; Every Fall)

Preparation for advancement in career as registered dietitian, including completion of dietetic internship application. Current issues in profession of dietetics; interprofessional education. prereq: Senior Nutrition Major with DPD subplan, [FScN 4665 or concurrent registration is required (or allowed) in 4665]

FSCN 4732. Food and Nutrition Management. (; 3 cr. ; A-F or Audit; Every Spring)

Financial and human resource management applied to a variety of business and institutional settings. Field trips may be required. prereq: 3732

FSCN 5122. Food Fermentations and Biotechnology. (2 cr. ; Student Option; Every Fall)

Major food fermentations important for today's food industry, with particular focus on microbiological components. Fermentations cover all major commodity food groups of dairy, cereal, meat, vegetables, fruits. prereq: MICB 3301, BIOL 4003

FSCN 5123. Molecular Biology for Applied Scientists. (1 cr. ; A-F only; Every Fall)

Half semester course. Two hours per week for 8 weeks. Basics of molecular biology/ how it has been used for biotechnological applications. Origins of molecular biology from discovery of DNA as inheritance material within cells to advent of gene cloning/sequencing technologies. prereq: MicB 3301 or FScN 2021 or instr consent

FSCN 5131. Food Quality for Graduate Credit. (3 cr. ; Student Option; Every Fall)

Management systems, statistical procedures, regulatory requirements involved with producing quality food/ingredients. Risk assessment/management, good manufacturing practices, hazard analysis critical control point (HACCP), statistical methods for process control, total quality management, food/drug laws. Prereq: Food Science Grad Student Student may select grading basis if instructor approves. A-F registration is required for class to count toward degree.

FSCN 5312. Food Analysis. (4 cr. ; A-F or Audit; Every Fall)

Analytical tools needed for investigation in Food Science/Technology, whether by food industry, governmental agencies, or universities. Application of quantitative/ qualitative physical, chemical/instrumental

methods used for analysis/examination of food constituents. Sensory evaluation techniques, evaluation of methods/interpretation of results. prereq: 4112, STAT 3011

FSCN 5334. Food Processing Fundamentals I. (3 cr. ; Student Option; Every Fall)

Food processing fundamentals (add heat, remove heat, remove water, add barriers and add preservatives) Overview of mass and energy balances for food process design, fundamentals of fluid flow, heat transfer as applied to food process unit operations such as pumping, heat exchangers, thermal processing, dehydration, refrigeration, freezing and extrusion. Two lecture periods (50 min each) and one laboratory (105 min each) period each week.

FSCN 5441. Introduction to New Product Development. (; 2 cr. ; Student Option; Fall Even, Spring Odd Year)

This course is designed to give students an overview of the product development process including management systems, team dynamics, technical problem solving, idea generation, and differences between different categories of food R&D. Prerequisites: FSCN 4112

FSCN 5461. Food Packaging. (2 cr. ; Student Option; Fall Odd Year)

Materials, principles, and procedures of packaging as they apply to food products. Emphasis is on consumer products, but the principles also apply to bulk and institutional foods and ingredients. prereq: 1102, 3102, Phys 1102 or Phys 1302

FSCN 5481. Sensory Evaluation of Food Quality. (; 2 cr. ; Student Option; Periodic Spring)

Fundamentals of sensory perception. Test designs and methods in studying sensory qualities of foods. Issues in sensory evaluation. Group research project. prereq: 3102, STAT 3011

FSCN 5521. Flavor Technology. (; 2 cr. ; Student Option; Spring Even Year)

Overview of flavor chemistry/related technology. Analytical techniques, mechanisms of flavor development (chemical/ biogenesis), off-flavors, industrial production/application of food flavorings. prereq: 4112

FSCN 5531. Grains: Introduction to Cereal Chemistry and Technology. (; 2 cr. ; Student Option; Periodic Fall & Spring)

Origins, structure, biochemistry, and cellular properties of major cereal grains as they relate to primary processing (milling) and secondary processing (production of cereal products). prereq: Biol 1009, Chem 1022

FSCN 5541. Dairy Product Chemistry and Technology. (2 cr. ; Student Option; Fall Odd Year)

Designed for upper division Food Science undergraduate/graduate students. Physiology of milk production in ruminants. Resulting composition. Chemical, physical, microbiological properties of milk components. How milk products are manufactured. prereq: 3102, 4112, Food Science major, upper division undergraduate or graduate student

FSCN 5601. Management of Eating Disorders. (3 cr. ; Student Option; Every Fall & Spring)

Etiology, occurrence, course, treatment, prevention of eating disorders from multidisciplinary perspective. Roles and responsibilities of eating disorder treatment team members of varying types across various treatment milieus. Prereq: Junior, senior or graduate student in nutrition or health related program or instructor consent.

FSCN 5993. Directed Study. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

FSCN 5994. Directed Research. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

Food Systems (FDSY)

FDSY 1016W. Growing Food & Building Community: Urban Agriculture in the Twin Cities. (WI; 3 cr. ; A-F only; Every Fall)

The capacity and support for urban agriculture is expanding globally. It is estimated that 25-30% of urban dwellers worldwide are involved in agriculture. In the future, we can expect that more of our food will be grown in urban centers. Urban farms and food businesses, food hubs, neighborhood community gardens, schoolyard and residential gardens are all part of the current urban food movement. As the first year colloquium for food systems majors, this course will integrate academic and orientation learning objectives and allow students to gain practice in systems thinking-- exhibited through in-class discussion and writing-- using urban agriculture as a framework. In this course, we will evaluate the direct and indirect benefits and challenges of urban agriculture by looking through environmental, political and social lenses. Class field trips and a service learning activity are used to demonstrate the various ways food is grown and how food may be used as a vehicle to achieve social goals. We

will discuss a broad array of topics including horticultural production practices, soil health and environmental sustainability issues, social justice and food access, and public policy and regulations constraining urban farms, with an emphasis on the Minneapolis/St. Paul metro area. Students in this course will deepen their understanding of the complexity of urban food systems, while also recognize social differences of race, ethnicity and class; improve intercultural competence skills as a foundation for positive cross-cultural relationships; and gain an awareness of how urban agriculture can be a force for change.

FDSY 2101. Plant Production Systems. (3 cr. ; Student Option; Every Spring)

How food production systems fit within overall food system. Fundamentals of soils, plant nutrition, plant production metabolites as they affect food production systems. Decisions that differentiate among conventional sustainable/organic systems. prereq: College level general biology course or Hort 1001 or instr consent

FDSY 2102. Diversity of Agricultural Production Systems. (3 cr. ; A-F only; Every Spring)

Examination of agricultural production systems, including organic, alternative, and conventional systems. History of production systems and their implications for producer lifestyles, social and natural environments, and economics at local to global scales. Includes farm visits, producer interviews, group projects, and classroom presentations and debates in addition to lectures and readings. This multidisciplinary course is offered at the University of Minnesota-St. Paul campus, West Central Research and Outreach Center and the University of Minnesota-Morris campus.

FDSY 3093. Directed Study. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

FDSY 3094. Directed Research. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

FDSY 4101. Holistic Approaches to Improving Food Systems Sustainability. (; 3 cr. ; A-F only; Every Spring)

Students in this capstone course address food system sustainability challenges both in the classroom and via service-learning, where they spend 45 hours engaged with a food justice-based community organization. Requires off-campus work at the community partner site. Prerequisites: FDSY 1016W and APEC 3202; or instructor consent

Foreign Study (FOST)

FOST 1040. Study Abroad. (; 1-32 cr. [max 128 cr.] ; Student Option; Every Fall, Spring & Summer)

Course used to grant credit for a new study abroad course or program that, by the time recruiting begins, has not had time to go through the normal approval process.

FOST 1201. Study Abroad. (; 1-32 cr. ; Student Option; Periodic Fall)
Not published in catalog.

FOST 1202. Study Abroad. (; 1-32 cr. ; Student Option; Every Fall, Spring & Summer)
Not published in catalog. prereq: dept consent

FOST 1203. Study Abroad. (; 1-32 cr. ; Student Option; Every Fall, Spring & Summer)
Not published in course catalog. prereq: dept consent

FOST 1204. Study Abroad. (; 1-32 cr. ; Student Option; Every Fall, Spring & Summer)
Not published in catalog. prereq: dept consent

FOST 1205. Study Abroad. (; 1-32 cr. ; Student Option; Every Fall, Spring & Summer)
Not published in catalog. prereq: dept consent

FOST 1206. Study Abroad. (; 1-32 cr. ; Student Option; Periodic Fall)
Not published in catalog. prereq: dept consent

FOST 1207. Study Abroad. (; 1-32 cr. ; Student Option; Periodic Fall)
Not published in catalog. prereq: dept consent

FOST 1208. Study Abroad. (; 1-32 cr. ; Student Option; Periodic Fall)
Not published in course catalog. prereq: dept consent

FOST 1209. Study Abroad. (; 1-32 cr. ; Student Option; Periodic Fall)
Not published in catalog. prereq: dept consent

FOST 1400. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)
Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Designated Theme in Cultural Diversity. prereq: dept consent

FOST 1410. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)
Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Designated Theme in Citizenship and Public Ethics. prereq: dept consent

FOST 1420. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Designated Theme in The Environment. prereq: dept consent

FOST 1430. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Designated Theme in International Perspectives. prereq: dept consent

FOST 1460. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as two Designated Themes, in Cultural Diversity and International Perspectives. prereq: dept consent

FOST 1480. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as two Designated Themes, in Citizenship and Public Ethics and International Perspectives. prereq: dept consent

FOST 1490. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as two Designated Themes, in The Environment and International Perspectives. prereq: dept consent

FOST 1495. Study Abroad Course. (; 1-10 cr. [max 20 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course.

FOST 1500. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Arts and Humanities. prereq: dept consent

FOST 1501. The United States in the Post-WW2 Era. (HIS; 3 cr. ; Student Option No Audit; Every Fall, Spring & Summer)

This course is designed as a survey of US history since the Second World War, from the prosperous post-war period of the 1950s to the forty years between the election of JFK in 1960 and the election of Barack Obama in 2008, which mark one of the most turbulent periods in American history. Radical changes occurred during these decades in American political, social, and cultural life, changes which still have repercussions on American society today. Through a variety of readings, seminars, discussions, and research papers, as well as screenings of feature films, documentaries, and musical albums, the course aims at evoking the four decades for the purpose of arriving at

a deeper understanding of the major events that took place during the period. A complete understanding of the transformational nature of these events is not possible, however, without placing them within the context of political and social history, and most especially within the framework of the larger interpretive principles of the culture which American Studies offers.

FOST 1502. Introduction to Popular Music - Many a Voice to Sing With: American Popular Music Since World War II. (HIS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course examines the historical significance of popular music in the United States from the mid twentieth century to the present. Ethnomusicologist Alan Lomax stated, "As we live, so do we sing." Those words have never been more applicable to the plight of the African American who came to America as slaves. We will examine a variety of musical genres beginning with the music of West Africa and moving to Plantations songs (spirituals, work songs), and a variety of musical genres ranging from the blues, rhythm and blues, country, folk, soul, rock, disco, and hip-hop. As we examine the various genres we will need to identify some of the individuals who were instrumental in shaping the landscape of what became American popular music. Such figures as Woody Guthrie, Bessie Smith, Duke Ellington, Buddy Holly, Robert Johnson, Ma Rainey, Elvis Presley, Stevie Wonder, James Brown, Bob Dylan, Joan Baez, Peter, Paul and Mary, Bruce Springsteen, Lauryn Hill, Tracy Chapman, and Jay-Z and many others. All of these individuals helped to shape and define the American popular music scene. All of the musical innovations and opportunities experienced by them are tempered by social, political, economic, and religious variables. As we progress through each era, we will examine many of the social, economic, religious, political, and technological variables that influenced the direction of the music. For example, Jim Crow laws, the church, the Civil Rights Movements, the student, the anti-war movement, the environment protection and the Women's Liberation movements, (anti)-Globalization, all played a major role in how the music was influenced. This course will also consider the global impact American pop music has had on the direction and influences of various musical styles and the economic force it has had on the global economy. The diversity dimensions for this course will be Race, Religion, and Gender. This will be the reoccurring theme throughout the semester as we examine the various developments and contributions of African Americans.

FOST 1510. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a diversified core in Biological Science with Lab. prereq: dept consent

FOST 1520. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a diversified core in Biological Science without Lab. prereq: dept consent

FOST 1530. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Historical Perspective. prereq: dept consent

FOST 1540. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Literature. prereq: dept consent

FOST 1550. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Mathematical Thinking. prereq: dept consent

FOST 1560. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Philosophical Perspective. prereq: dept consent

FOST 1570. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Physical Science with Lab. prereq: dept consent

FOST 1580. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Physical Science without Lab. prereq: dept consent

FOST 1590. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirement as a Diversified Core in Social Science. prereq: dept consent

FOST 1600. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Visual or Performing Arts. prereq: dept consent

FOST 1710. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Arts

and Humanities and a Designated Theme in Cultural Diversity. prereq: dept consent

FOST 1720. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Historical Perspective and a Designated Theme in Cultural Diversity. prereq: dept consent

FOST 1730. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as Diversified Core in Literature and Cultural Diversity. prereq: dept consent

FOST 1740. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Social Science and Cultural Diversity. prereq: dept consent

FOST 1750. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Arts and Humanities and a Designated Theme in Citizenship and Public Ethics. prereq: dept consent

FOST 1760. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Biological Science with Lab and a Designated Theme in Citizenship and Public Ethics. prereq: dept consent

FOST 1770. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Historical Perspective and a Designated Theme in Citizenship and Public Ethics. prereq: dept consent

FOST 1780. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Philosophical Perspective and a Designated Theme in Citizenship and Public Ethics. prereq: dept consent

FOST 1790. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified core in Social

Science and Citizenship and Public Ethics.
prereq: dept consent

FOST 1800. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Arts and Humanities and a Designated Theme in The Environment. prereq: dept consent

FOST 1810. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal education graduation requirements as a Diversified Core in Biological Science with a Lab and a Designated Theme in The Environment. prereq: dept consent

FOST 1820. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Biological Science without Lab and a Designated Theme in The Environment. prereq: dept consent

FOST 1830. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Historical Perspective and a Designated Theme in The Environment. prereq: dept consent

FOST 1840. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the liberal Education graduation requirements as a Diversified core in Physical Science with Lab and a Designated Theme in The Environment. prereq: dept consent

FOST 1850. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Physical Science without Lab and a Designated Theme in The Environment. prereq: dept consent

FOST 1860. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Social Science and a Designated Theme in The Environment. prereq: dept consent

FOST 1870. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Arts and Humanities and a Designated Theme in International Perspectives. prereq: dept consent

FOST 1880. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall & Spring)
Course taken through study abroad that counts toward the Liberal Education requirements for graduation as a Diversified Core in Historical Perspective and a Designated Theme in International Perspectives. prereq: dept consent

FOST 1890. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall & Spring)
Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Literature and a Designated Theme in International Perspectives. prereq: dept consent

FOST 1900. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Philosophical Perspective and a Designated Theme in International Perspectives. prereq: dept consent

FOST 1910. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Social Science and a Designated Theme in International Perspectives. prereq: dept consent

FOST 1920. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Visual and Performing arts and a Designated Theme in International Perspectives. prereq: dept consent

FOST 3000. Study Abroad: Outside Program. (; 0-20 cr. [max 200 cr.] ; S-N only; Every Fall, Spring & Summer)
Study abroad outside program placeholder course. prereq: dept consent

FOST 3010. Directed Study Abroad. (; 0-18 cr. [max 180 cr.] ; S-N only; Every Fall, Spring & Summer)
N/A

FOST 3020. Exchange Study Abroad. (; 0-18 cr. [max 40 cr.] ; S-N only; Every Fall, Spring & Summer)
N/A prereq: dept consent

FOST 3021. Study Abroad: Bilateral Exchange Program. (; 0-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3022. Study Abroad: China Center Exchange Program. (0-20 cr. [max 40 cr.] ; S-N only; Every Fall, Spring & Summer)
Study abroad course

FOST 3023. Study Abroad: CSE Exchange Program. (0-20 cr. [max 40 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

FOST 3024. Study Abroad: Collegiate Exchange Programs. (0-20 cr. [max 40 cr.] ; S-N only; Every Fall, Spring & Summer)
study abroad course

FOST 3025. Study Abroad: Scholarship / IRSEP Exchange Program. (0-20 cr. [max 40 cr.] ; S-N only; Every Fall, Spring & Summer)
Study abroad course

FOST 3026. Study Abroad: ISEP Exchange Program. (0-20 cr. [max 40 cr.] ; S-N only; Every Fall, Spring & Summer)
Study abroad course

FOST 3027. Study Abroad: Departmental Affiliated Program. (0-20 cr. [max 40 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad placeholder course.

FOST 3028. Study Abroad: AC China Flagship Capstone Year Program. (0-20 cr. [max 40 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad placeholder course

FOST 3029. Study Abroad: Study Abroad in Dublin. (1-20 cr. ; Student Option; Every Fall, Spring & Summer)

Similar to many already-existing courses (ex: FOST 3245 - Study Abroad: Morocco Program), this is a course shell that will be used as a placeholder course for the number of credits planned to take abroad that helps to ensure students maintain their student status and allows financial aid eligibility. Upon the student's return at the end of the program, this course will be removed from the student's record and replaced with actual, individual courses, credits and grades taken while abroad.

FOST 3032. Study Abroad: Study Abroad in Jordan. (1-20 cr. ; Student Option; Every Fall, Spring & Summer)

Similar to many already-existing courses (ex: FOST 3245 - Study Abroad: Morocco Program), this is a course shell that will be used as a placeholder course for the number of credits planned to take abroad that helps to ensure students maintain their student status and allows financial aid eligibility. Upon the student's return at the end of the program, this course will be removed from the student's record and replaced with actual, individual courses, credits and grades taken while abroad.

FOST 3033. Study Abroad: Summer Internships in Panama. (1-20 cr. ; Student Option; Every Fall, Spring & Summer)

Similar to many already-existing courses (ex: FOST 3245 - Study Abroad: Morocco Program), this is a course shell that will be used as a placeholder course for the number of credits planned to take abroad that helps to ensure students maintain their student status and allows financial aid eligibility. Upon the student's return at the end of the program, this course will be removed from the student's record and replaced with actual, individual courses, credits and grades taken while abroad.

FOST 3034. Study Abroad: Study & Intern in Barcelona. (1-20 cr. ; Student Option; Every Fall, Spring & Summer)

Similar to many already-existing courses (ex: FOST 3245 - Study Abroad: Morocco Program), this is a course shell that will be used as a placeholder course for the number of credits planned to take abroad that helps to ensure students maintain their student status and allows financial aid eligibility. Upon the student's return at the end of the program, this course will be removed from the student's record and replaced with actual, individual courses, credits and grades taken while abroad.

FOST 3035. Study Abroad: SOR CAPA Barcelona. (1-20 cr. ; Student Option; Every Fall, Spring & Summer)

Similar to many already-existing courses (ex: FOST 3245 - Study Abroad: Morocco Program), this is a course shell that will be used as a placeholder course for the number of credits planned to take abroad that helps to ensure students maintain their student status and allows financial aid eligibility. Upon the student's return at the end of the program, this course will be removed from the student's record and replaced with actual, individual courses, credits and grades taken while abroad.

FOST 3036. Study Abroad: SOR CET. (1-20 cr. ; Student Option; Every Fall, Spring & Summer)

Similar to many already-existing courses (ex: FOST 3245 - Study Abroad: Morocco Program), this is a course shell that will be used as a placeholder course for the number of credits planned to take abroad that helps to ensure students maintain their student status and allows financial aid eligibility. Upon the student's return at the end of the program, this course will be removed from the student's record and replaced with actual, individual courses, credits and grades taken while abroad.

FOST 3037. Study Abroad: University Study in Italy. (1-20 cr. ; Student Option; Every Fall, Spring & Summer)

Similar to many already-existing courses (ex: FOST 3245 - Study Abroad: Morocco Program), this is a course shell that will be used as a placeholder course for the number of credits planned to take abroad that helps to ensure students maintain their student status and allows financial aid eligibility. Upon the student's return at the end of the program, this course will be removed from the student's record and replaced with actual, individual courses, credits and grades taken while abroad.

FOST 3038. Study Abroad: SOR CAPA Hong Kong. (1-20 cr. ; Student Option; Every Fall, Spring & Summer)

Similar to many already-existing courses (ex: FOST 3245 - Study Abroad: Morocco Program), this is a course shell that will be used as a placeholder course for the number of credits planned to take abroad that helps to ensure students maintain their student status and allows financial aid eligibility. Upon the student's return at the end of the program, this course will be removed from the student's record and replaced with actual, individual

courses, credits and grades taken while abroad.

FOST 3039. Study Abroad: Study & Intern in Hong Kong. (1-20 cr. ; Student Option; Every Fall, Spring & Summer)

Similar to many already-existing courses (ex: FOST 3245 - Study Abroad: Morocco Program), this is a course shell that will be used as a placeholder course for the number of credits planned to take abroad that helps to ensure students maintain their student status and allows financial aid eligibility. Upon the student's return at the end of the program, this course will be removed from the student's record and replaced with actual, individual courses, credits and grades taken while abroad.

FOST 3040. Study Abroad. (; 1-32 cr. ; A-F only; Every Fall, Spring & Summer)

Course used to grant credit for a new study abroad course or program that, by the time recruiting begins, has not had time to go through the normal approval process. prereq: dept consent

FOST 3050. Study Abroad Through UMN System. (; 0-32 cr. ; Student Option; Every Fall, Spring & Summer)

Study abroad through program sponsored by Duluth, Morris, or Crookston campus. prereq: dept consent

FOST 3060. Global Seminar. (; 3 cr. [max 9 cr.] ; A-F only; Every Spring & Summer)

Short term study abroad program during May Session or winter break.

FOST 3110. HECUA-Sponsored Study Abroad Programs. (; 1-20 cr. [max 80 cr.] ; A-F only; Every Fall, Spring & Summer)

Study abroad through Higher Education Consortium for Urban Affairs. prereq: dept consent

FOST 3111. Study Abroad: International Chinese Language Program. (0-20 cr. [max 40 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad placeholder course for new affiliate program, ICLP.

FOST 3115. Study Abroad: Alliance Program. (; 0-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)

Study abroad course

FOST 3120. AESOP/CIC-Study Abroad Programs. (; 1-20 cr. [max 120 cr.] ; A-F only; Every Fall, Spring & Summer)

Study abroad through Committee on Institutional Cooperation. prereq: dept consent

FOST 3125. Study Abroad: USIT Irish Studies Summer School Program. (; 0-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)

Study abroad course

FOST 3130. IES-Study Abroad Program. (; 1-20 cr. [max 120 cr.] ; A-F only; Every Fall, Spring & Summer)

Study abroad through Institute for the International Education of Students (IES). prereq: dept consent

FOST 3135. Study Abroad: CET Programs. (; 0-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)

Study abroad course

FOST 3140. CIEE-Study Abroad Program. (; 1-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)

Study abroad through Council on International Educational Exchange. prereq: dept consent

FOST 3150. Butler/IFSA: Study Abroad Program. (; 1-20 cr. [max 120 cr.] ; A-F only; Every Fall, Spring & Summer)

Study abroad sponsored by Butler University/IFSA and cosponsored by the University of Minnesota. prereq: dept consent

FOST 3160. Arcadia/CEA: Study Abroad Program. (; 1-20 cr. [max 120 cr.] ; A-F only; Every Fall, Spring & Summer)

Study abroad sponsored by Arcadia College/CEA and cosponsored by the University of Minnesota. prereq: dept consent

FOST 3170. Study Abroad: Integrated Studies in Freiburg. (; 0-20 cr. [max 80 cr.] ; A-F only; Every Fall & Spring)

Study Abroad placeholder course for the Integrated Studies in Freiburg program.

FOST 3175. Study Abroad: AC China Flagship Capstone Year Program. (0-20 cr. [max 40 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course

FOST 3180. Bologna Cooperative Studies Program, Italy. (; 1-20 cr. [max 120 cr.] ; A-F only; Every Fall & Spring)

Study abroad through Bologna Cooperative Studies Program at the University of Bologna, Italy. prereq: dept consent

FOST 3201. Study Abroad. (; 1-32 cr. ; Student Option; Every Fall, Spring & Summer)

Course used to grant credit for a new study abroad course or program that, by the time recruiting begins, has not had time to go through the normal approval process. prereq: dept consent

FOST 3202. Study Abroad. (; 1-32 cr. ; Student Option; Every Fall, Spring & Summer)

Course used to grant credit for a new study abroad course or program that, by the time recruiting begins, has not had time to go through the normal approval process. prereq: dept consent

FOST 3203. Study Abroad. (; 1-32 cr. [max 1 cr.] ; Student Option; Every Fall, Spring & Summer)

Course used to grant credit for a new study abroad course or program that, by the time recruiting begins, has not had time to go through the normal approval process. prereq: dept consent

FOST 3204. Study Abroad. (; 1-32 cr. ; Student Option; Every Fall, Spring & Summer)

Course used to grant credit for a new study abroad course or program that, by the time recruiting begins, has not had time to go through the normal approval process. prereq: dept consent

FOST 3205. Study Abroad. (; 1-32 cr. ; Student Option; Every Fall, Spring & Summer)
Course used to grant credit for a new study abroad course or program that, by the time recruiting begins, has not had time to go through the normal approval process. prereq: dept consent

FOST 3206. Study Abroad. (; 1-32 cr. ; Student Option; Every Fall, Spring & Summer)
Course used to grant credit for a new study abroad course or program that, by the time recruiting begins, has not had time to go through the normal approval process. prereq: dept consent

FOST 3207. Study Abroad. (; 1-32 cr. ; Student Option; Every Fall, Spring & Summer)
Course used to grant credit for a new study abroad course or program that, by the time recruiting begins, has not had time to go through the normal approval process. prereq: dept consent

FOST 3208. Study Abroad. (; 1-32 cr. ; Student Option; Every Fall, Spring & Summer)
Course used to grant credit for a new study abroad course or program that, by the time recruiting begins, has not had time to go through the normal approval process. prereq: dept consent

FOST 3209. Study Abroad. (; 1-32 cr. ; Student Option; Every Fall, Spring & Summer)
Course used to grant credit for a new study abroad course or program that, by the time recruiting begins, has not had time to go through the normal approval process. prereq: dept consent

FOST 3210. Study Abroad. (; 0-20 cr. [max 80 cr.] ; Student Option; Every Fall, Spring & Summer)
TBD

FOST 3211. Study Abroad. (; 1-32 cr. ; Student Option; Every Fall, Spring & Summer)
Course used to grant credit for a new study abroad course or program that, by the time recruiting begins, has not had time to go through the normal approval process. prereq: dept consent

FOST 3212. Study Abroad. (; 1-32 cr. ; Student Option; Periodic Fall)
Not published in catalog. prereq: dept consent

FOST 3213. Study Abroad. (; 1-32 cr. ; Student Option; Every Fall, Spring & Summer)
Not published in course catalog. prereq: dept consent

FOST 3214. Study Abroad. (; 1-32 cr. ; Student Option; Periodic Fall)
Not published in course catalog. prereq: dept consent

FOST 3215. Study Abroad. (; 1-32 cr. ; Student Option; Periodic Fall)
Not published in catalog. prereq: dept consent

FOST 3220. Study Abroad: SIT Program. (; 1-20 cr. [max 60 cr.] ; A-F only; Every Fall & Spring)
TBD

FOST 3225. Study Abroad: Language Immersion in China. (; 0-20 cr. [max 40 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course.

FOST 3230. Study Abroad: School for Field Studies (SFS) Program. (; 1-20 cr. [max 60 cr.] ; A-F only; Every Fall & Spring)
TBD

FOST 3235. Study Abroad: University Study in Ireland. (; 0-20 cr. [max 40 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

FOST 3240. University Study in Norway. (; 1-20 cr. [max 60 cr.] ; A-F only; Every Fall & Spring)
TBD

FOST 3245. Study Abroad: Arabic Language and Culture in Morocco Program. (; 0-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3255. Study Abroad: Language and Culture in Buenos Aires Program. (; 0-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3265. Study Abroad: Florence Program. (; 0-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3270. Denmark's International Study Program. (; 1-20 cr. [max 120 cr.] ; A-F only; Every Fall, Spring & Summer)
Study abroad in Denmark or Iceland through Denmark's international study program. prereq: dept consent

FOST 3275. Study Abroad: Mexico Program. (; 0-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3285. Study Abroad in Rome Program. (; 0-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3290. University Study in New Zealand. (; 1-20 cr. [max 60 cr.] ; A-F only; Every Fall & Spring)
TBD

FOST 3295. Study and Internships in Sydney Program. (; 0-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3305. Study Abroad: Turkey. (; 0-20 cr. [max 40 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

FOST 3306. Study Abroad: Study and Internships in Madrid. (0-20 cr. [max 60 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad placeholder course.

FOST 3310. Study Abroad in Montpellier. (; 1-20 cr. [max 120 cr.] ; A-F only; Every Fall & Spring)
Semester or year at Universit? Paul Val?ry, Montpellier, France, sponsored by Global Campus and the Department of French and Italian. Students take regular courses or special courses for foreigners. All courses taught

entirely in French by Paul Val?ry faculty. Many disciplines available. prereq: dept consent

FOST 3315. Study Abroad: MSID Ecuador Program. (; 0-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3316. Study Abroad: Health and Society in Ecuador. (0-20 cr. [max 40 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad placeholder course for the new program, "Health and Society in Ecuador"

FOST 3320. International Program in Toledo, Spain. (; 1-20 cr. [max 120 cr.] ; A-F only; Every Fall, Spring & Summer)
Study through International Program of Spanish, European, and Latin American Studies in Toledo, Spain. prereq: dept consent

FOST 3325. Study Abroad: MSID India. (; 0-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3326. Study Abroad: MSID Thailand. (0-20 cr. [max 40 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

FOST 3330. Study Abroad in Venezuela. (; 1-20 cr. [max 120 cr.] ; A-F only; Every Fall, Spring & Summer)
Semester or summer study in Venezuela through a University of Minnesota program administered by Learning Abroad Center and VENUSA. Spanish language, Venezuelan/Latin American studies. prereq: dept consent

FOST 3335. Study Abroad: MSID Kenya. (; 0-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3340. Study Abroad in London. (; 1-20 cr. [max 120 cr.] ; A-F only; Every Fall, Spring & Summer)
TBD

FOST 3345. Study Abroad: MSID Senegal. (; 0-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3350. University Study in Australia. (; 1-20 cr. [max 120 cr.] ; A-F only; Every Fall & Spring)
Not listed in catalog.

FOST 3355. Study Abroad: University Study in Israel Program. (; 0-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3360. University Study in the United Kingdom. (; 1-20 cr. [max 120 cr.] ; A-F only; Every Fall & Spring)
Not printed in catalog.

FOST 3365. Study Abroad: University Study in South Africa Program. (; 0-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3370. Study Abroad Through InterStudy. (; 1-20 cr. [max 120 cr.] ; A-F only; Every Fall & Spring)
Study abroad program cosponsored by InterStudy and the University.

FOST 3375. Study Abroad: University Study in South Korea Program. (; 0-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3380. Study Abroad: American University Cairo. (; 0-21 cr. [max 42 cr.] ; A-F only; Every Fall, Spring & Summer)
Placeholder course for students studying at American University Cairo.

FOST 3385. Study Abroad in Tanzania Program. (; 0-20 cr. [max 40 cr.] ; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3390. Study Abroad: GlobalLinks, AustraLearn. (; 1-20 cr. [max 120 cr.] ; A-F only; Every Fall & Spring)
Study abroad program sponsored by AustraLearn and approved by University of Minnesota.

FOST 3391. Study Abroad: GlobalLinks, AsiaLearn. (; 1-20 cr. [max 120 cr.] ; A-F only; Every Fall & Spring)
Study abroad program sponsored by AsiaLearn and approved by University of Minnesota.

FOST 3392. Study Abroad: GlobalLinks, EuroLearn. (; 1-20 cr. [max 120 cr.] ; A-F only; Every Fall & Spring)
Study abroad program sponsored by EuroLearn and approved by University of Minnesota.

FOST 3400. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)
Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Designated Theme in Cultural Diversity prereq: dept consent

FOST 3410. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)
Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Designated Theme in Citizenship and Public Ethics. prereq: dept consent

FOST 3420. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)
Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Designated Theme in the Environment. prereq: dept consent

FOST 3430. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)
Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Designated Theme in International Perspectives. prereq: dept consent

FOST 3460. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)
Course taken through study abroad that counts toward the Liberal Education graduation requirements as two Designated Themes, in Cultural Diversity and International Perspectives. prereq: dept consent

FOST 3480. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)
Course taken through study abroad that counts toward the Liberal Education graduation requirements as two Designated Themes, in Citizenship and Public Ethics and International Perspectives. prereq: dept consent

FOST 3490. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)
Course taken through study abroad that counts toward the Liberal Education graduation requirements as two Designated Themes, in The Environment and International Perspectives. prereq: dept consent

FOST 3495. Study Abroad Course. (; 1-10 cr. [max 20 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

FOST 3500. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)
Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Arts and Humanities. prereq: dept consent

FOST 3501. Comparative Studies in US and Chinese Film. (AH; 3 cr. ; Student Option; Every Fall, Spring & Summer)
This course compares major issues, theories, and methods in Chinese and American cinema. The course is organized around a series of keywords, comprising a living vocabulary of culture, power, social change, identity, nationhood, and globalization. Through these and related terms, we will analyze the construction of class, gender, politics and other relationships of power central to the U.S. and Chinese society. Course materials are interdisciplinary and, in addition to film, will also include history, cultural studies, fiction, and popular culture. Assignments include reading, writing, discussion, and a field trip exploring public memory at the China National Film Museum in Beijing. Students analyze similarities and differences between films produced in Hollywood and Beijing, gaining a transnational understanding of film studies and a critical perspective on Chinese and American film traditions. The course also has a strong cultural focus, highlighting the differences in history, economy, social structure, and values systems in the two countries, as seen through the prism of cinema.

FOST 3502. Chinese and Western Cross-Cultural Concepts. (GP,SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer)
As political, economic, and social integration of China and Western cultures increases in the 21st century, it is increasingly vital that we attempt to attain a greater mutual understanding between East and West. One path to this goal is to make a comparative study of Chinese and Western core concepts, taking advantage of the growing body of ethnological, sociological, and psychological evidence for cultural differences. Just as ? Western culture? is not a monolithic category,

so what it means to be ?Chinese? is embedded in a larger, Eastern context. This course attempts to present a contrastive analysis of the defining concepts of Chinese and Western culture through the lens of different academic disciplines, including sociology, anthropology, language, semiotics cognitive science, and cross-cultural psychology. The approach is interdisciplinary and comparative, leading students to explore central concepts in Chinese and Western philosophy, values, interpersonal relationships, communication patterns, thinking, and behavioral norms. Emphasis will be on specific examples of various cultural phenomena, and will draw on both scientific research and illustrative informal data in order to generate classroom discussion and open analysis.

FOST 3503. Environmental Issues and International Cooperation. (ENV; 3 cr. ; Student Option; Every Fall, Spring & Summer)
The global environmental crisis is the planet?s biggest existential threat, and will have an incalculable impact on all societies and economies. For students interested in environmental policy, social impact, entrepreneurship, risk management, and sustainability, this course will provide a foundational understanding of the environmental policy decisions that will shape their future careers. With a focus on US-China cooperation, the course will provide case studies of specific international accords and local regulations, as well as the latest scientific and technological advances. Upon completion of the course, students should have a grasp of such questions as how to determine the biggest environmental threats and opportunities, how to measure effectiveness of policy and business decisions, and how to conduct thoughtful, inclusive analysis. The curriculum will also include site visits in Beijing, and guest lectures from local environmental experts.

FOST 3510. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)
N/A prereq: dept consent

FOST 3520. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)
Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified core in Biological Science without Lab. prereq: dept consent

FOST 3530. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)
Course taken through study abroad that counts toward the Liberal Education graduation requirements as Diversified Core in Historical Perspective. prereq: dept consent

FOST 3540. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)
Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Literature. prereq: dept consent

FOST 3550. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Mathematical Thinking. prereq: dept consent

FOST 3560. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Philosophical Perspective. prereq: dept consent

FOST 3570. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Physical Science with Lab. prereq: dept consent

FOST 3580. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Physical Science without Lab. prereq: dept consent

FOST 3590. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Social Science. prereq: dept consent

FOST 3600. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Visual or Performing Arts. prereq: dept consent

FOST 3710. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Arts and Humanities and a Designated Theme in Cultural Diversity. prereq: dept consent

FOST 3720. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Historical Perspective and a Designated Theme in Cultural Diversity. prereq: dept consent

FOST 3730. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Study Abroad prereq: dept consent

FOST 3740. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation

requirements as a Diversified Core in Social Science and Cultural Diversity. prereq: dept consent

FOST 3750. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Arts and Humanities and a Designated Theme in Citizenship and Public Ethics. prereq: dept consent

FOST 3760. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Biological Science With Lab and a Designated Theme in Citizenship and Public Ethics. prereq: dept consent

FOST 3770. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Historical Perspective and a Designated Theme in Citizenship and Public Ethics. prereq: dept consent

FOST 3780. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Philosophical Perspective and a Designated Theme in Citizenship and Public Ethics. prereq: dept consent

FOST 3790. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Social Science and Citizenship and Public Ethics. prereq: dept consent

FOST 3800. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Arts and Humanities and a Designated Theme in The Environment. prereq: dept consent

FOST 3810. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Biological Science with a Lab and a Designated Theme in The Environment. prereq: dept consent

FOST 3820. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation

requirements as a Diversified Core in Biological Science without Lab and a Designated Theme in The Environment. prereq: dept consent

FOST 3830. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Historical Perspective and a Designated Theme in The Environment. prereq: dept consent

FOST 3840. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Physical Science with Lab and a Designated Theme in The Environment. prereq: dept consent

FOST 3850. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Physical Science without Lab and a Designated Theme in The Environment. prereq: dept consent

FOST 3860. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Social Science and a Designated Theme in The Environment. prereq: dept consent

FOST 3870. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Arts and Humanities and a Designated Theme in International Perspectives. prereq: dept consent

FOST 3880. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education requirements for graduation as a Diversified Core in Historical Perspective and a Designated Theme in International Perspectives. prereq: dept consent

FOST 3890. Study Abroad. (; 1-10 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Literature and a Designated Theme in International Perspectives. prereq: dept consent

FOST 3896. Virtual International Internship. (GP; 3-4 cr. [max 7 cr.] ; A-F only; Every Fall, Spring & Summer)

This course is designed to provide students with an opportunity to learn about the virtual international work environment by critically examining a professional, remote experience

abroad through an intercultural lens. A key element to this course is to deepen students' knowledge of their internship placement country's professional norms and cultural context in comparison to other students' internship placement countries, as well as the United States, and understand how COVID-19 has impacted these environments. Students' research and writing on COVID-19 globally will include ethical analysis on how the national approach has impacted society, if they agree with this approach or not, and why. We will interrogate how this knowledge will influence their behavior in their society and the world. Students will also enhance their understanding of their chosen field using a global mindset. The course is designed to guide students in the internship experience and create a foundation for a successful professional career as well as working to understand and articulate career skill outcomes. In addition to gaining a cross-cultural comparative view on work, the topics and assignments will deepen students' insights about themselves, professional expectations, and being successful in the virtual workplace. Students are expected to make a valuable contribution to the virtual internship placement through the completion of projects and tasks guided by their internship supervisor in the placement country. This will require students to employ intercultural communication skills in a professional, virtual setting while critically examining their own worldview. Three Credit Course Students who take the Virtual International Internship a second time will complete the three-credit version of this course and will be expected to complete the same number of hours at their internship sites as those who are taking the four-credit course. The academic work for the three-credit course will correspond to the second semester of internship participation in order to increase students' remote, professional experience, strengthen their knowledge of their chosen industry, as well as enhance their global mind-set. The Global Perspectives liberal education requirement is not fulfilled by taking the three-credit version of this course.

FOST 3900. Study Abroad. (; 1-10 cr. [max 30 cr.]; Student Option; Every Fall, Spring & Summer)
Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Philosophical Perspective and a Designated Theme in International Perspectives. prereq: dept consent

FOST 3910. Study Abroad. (; 1-10 cr. [max 30 cr.]; Student Option; Every Fall, Spring & Summer)
Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified Core in Social Science and a Designated Theme in International Perspectives. prereq: dept consent

FOST 3920. Study Abroad. (; 1-10 cr. [max 30 cr.]; Student Option; Every Fall, Spring & Summer)

Course taken through study abroad that counts toward the Liberal Education graduation requirements as a Diversified core in Visual and Performing Arts and a Designated Theme in International Perspectives. prereq: dept consent

FOST 3991. Study Abroad: SOR London Semester & Quarter Programs. (; 0-20 cr. [max 40 cr.]; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3993. Study Abroad: SOR CAPA Sydney. (; 0-20 cr. [max 40 cr.]; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3994. Study Abroad: SOR CAPA Australian Catholic University. (; 0-20 cr. [max 40 cr.]; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3995. Study Abroad: SOR DIS. (; 0-20 cr. [max 40 cr.]; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3996. Study Abroad: SOR GlobaLinks. (; 0-20 cr. [max 40 cr.]; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3997. Study Abroad: SOR Rome. (; 0-20 cr. [max 40 cr.]; A-F only; Every Fall, Spring & Summer)
Study abroad course

FOST 3998. Study Abroad: SOR SFS. (0-20 cr. [max 60 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

FOST 3999. Study Abroad. (; 1-20 cr. [max 40 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad for-credit internship course.

FOST 5000. Study Abroad. (0-18 cr. [max 40 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad registration. prereq: dept consent

FOST 5010. Study Abroad Directed Study placeholder course. (; 0-10 cr. [max 20 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

FOST 5020. Global Experience Program. (; 0-6 cr. [max 18 cr.]; Student Option; Every Fall & Summer)

The course is used to award credit for work successfully completed on the Global Experience Program study abroad internship program. Evaluation standards and work load are determined by the graduate faculty member who signs the Global Experience Program learning contract required of each participant. Number of contact hours varies from location to location. prereq: Must have graduate student status

Forest and Natural Res. Mgmt. (FNRM)

FNRM 1001. Orientation and Information Systems. (; 1 cr. ; A-F or Audit; Every Fall)
Forest resources, recreation resource management, urban forestry programs. Forestry and natural resource careers. Qualification requirements for government positions, competencies, internships, and experiences to compete for jobs in industry. Course planning, mentoring, alumni contacts. Leadership, organization, process. Lab equipment/software, GUIs, the Internet, spreadsheets, Lumina, periodical indexes.

FNRM 1101. Dendrology: Identifying Forest Trees and Shrubs. (; 3 cr. ; Student Option; Every Fall)
Identification nomenclature, classification, and distribution of common/important forest trees/shrubs. Use of keys. Field/lab methods of identification.

FNRM 1902. Satellites to Drones: Monitoring our Changing Environment. (; 3 cr. [max 6 cr.]; Student Option; Every Fall)

This Freshman Seminar course explores the many ways imagery from satellites, airplanes, and more recently drones, allows us to better manage our environment and natural resources. This remotely sensed imagery, combined with other geospatial technologies, gives us an unparalleled ability to monitor our changing world, including identifying natural and anthropogenic environmental impacts such as deforestation and urbanization. Imagery also allows us to plan our land use to minimize or avoid those impacts. In this course, we will discuss how imagery and geospatial data are being used to solve environmental problems, experience imaging data applied to actual environmental issues, learn about the imaging sensors used to acquire these data, and study related applications of remote sensing. We will explore imagery from satellites such as NASA's Landsat, high-resolution commercial sensors (as seen in Google Earth), aircraft-based imaging and lidar sensors, drones, and non-Earth remote sensing. We will discuss the future of the remote sensing of the environment in light of new and emerging imaging technologies. Since this is a Freshman Seminar that is focused on new college students, each class period will begin with a "College Pro Tip" that will cover an important skill, piece of information, or resource that will help you succeed at the University of Minnesota. These will generally take 10-15 minutes, after which we will cover the geospatial topic of the day. See the Class Schedule at the end of this syllabus for more information. prereq: freshman

FNRM 2101. Identifying Forest Plants. (; 1 cr. ; A-F or Audit; Every Summer)
Field identification of common northwoods trees, shrubs, and nonwoody vascular plants. Emphasizes concept of plant communities, soil site relationships, and wildlife values. Taught at Cloquet Forestry Center.

FNRM 2102. Northern Forests Field Ecology. (; 2 cr. ; A-F or Audit; Every Fall)
Field examination of natural history of northern/boreal forests with respect to soils, ecological characteristics of trees, community-

environment relationships, stand development, succession, and regeneration ecology. Taught at the Cloquet Forestry Center. prereq: Biol 1001 or Biol 1009

FNRM 2104. Measuring Forest Resources.

(; 1 cr. ; A-F or Audit; Every Summer)
Introduction to land survey, tree/forest stand measurement (mensuration), and forest sampling techniques. Taught at Cloquet Forestry Center.

FNRM 3101. Park and Protected Area Tourism.

(; 3 cr. ; A-F or Audit; Fall Odd Year)
Tourism is a significant industry locally, nationally, and internationally. Park and protected area attractions are among the most visited but also the most vulnerable attractions. This course is designed to familiarize you with the basic concept of park and protected area tourism, including cultural and ecotourism, and then develop your expertise to plan and evaluate sustainable tourism development and operations. Accordingly, you will complete assignments that apply the knowledge gained to planning and evaluation activities. This course is offered partially on-line. COURSE OBJECTIVES By the end of the class you will be able to: 1. Differentiate and appreciate the complexities involved with defining and developing nature, eco, heritage, geo-, park and protected, cultural and "sustainable tourism." 2. Identify specific social, economic, and environmental impacts associated with park and protected area tourism, how to measure them, and methods to minimize the negative and maximize the positive impacts. 3. Analyze domestic and international case studies of park and protected area tourism. 4. Critically evaluate park and protected area tourism services and effective management and planning. 5. Create elements of a business plan for park and protected area tourism operations that emphasize sustainability.

FNRM 3104. Forest Ecology.

(; 4 cr. ; A-F or Audit; Every Fall)
Form and function of forests as ecological systems. Characteristics and dynamics of species, populations, communities, landscapes, and ecosystem processes. Examples applying ecology to forest management. Weekly discussions focus on research topics in forest ecology, exercises applying course concepts, and current issues in forest resource management. Required weekend field trip. Prereq: Biol 1001, 1009 or equivalent introductory biology course; 1 semester college chemistry recommended.

FNRM 3114. Hydrology and Watershed Management.

(; 3 cr. ; Student Option; Every Fall)
Hydrologic cycle and water processes in upland/riparian systems. Applications of hydrological concepts to evaluate impacts of forest and land management activities on water yield, streamflow, groundwater erosion, sedimentation, and water quality. Concepts, principles, and applications of riparian/watershed management. Regional/national/global examples. Forest ecosystems. prereq: [[BIOL 1001 or BIOL 1009], [[CHEM 1015, CHEM 1017] or CHEM 1021], MATH 1151] or instr consent

FNRM 3131. Geographical Information Systems (GIS) for Natural Resources.

(TS; 4 cr. ; A-F only; Every Fall & Spring)
Spatial data development/analysis in science/management of natural resources. Data structures/sources/collection/quality. Geodesy, map projections, spatial/tabular data analysis. Digital terrain analysis, cartographic modeling, modeling perspectives, limits of technology. Lab exercises. Both onsite and fully online options for course enrollment. prereq: Soph or jr or sr or UHP fr

FNRM 3203. Forest Fire and Disturbance Ecology.

(3 cr. ; A-F or Audit; Every Spring)
Ecology, history, management, control of fire, wind, insect infestation, deer browsing, other disturbances in forests, including disturbance regimes of boreal, northern hardwood, savannas of North America. Influence of disturbance on wildlife habitat, urban/wildland interfaces, forest management, stand/landscape dynamics. Tree mortality in fires, successional patterns created by fires, interactions of life history traits of plants with disturbances.

FNRM 3204. Landscape Ecology and Management.

(; 3 cr. ; A-F or Audit; Every Fall)
Introduction to landscape ecology at different scales in time/space. Development/implications of broad-scale patterns of ecological phenomena, role of disturbance in ecosystems, characteristic spatial/temporal scales of ecological events. Principles of landscape ecology as framework for landscape research, analysis, conservation, and management. prereq: Ecology course

FNRM 3206. Park and Protected Area Management Field Studies.

(2 cr. [max 3 cr.] ; A-F only; Every Fall)
This course is designed to be a directed field study of park and protected area management including observation of and training in (1) recreation planning and visitor management, (2) cultural resource management, (3) natural resource management, (4) nature-based tourism management, and (5) resource interpretation and communication across local, state, federal and tribal park and protected areas in northern Minnesota. prereq: Sophomore status or higher

FNRM 3218. Measuring and Modeling Forests.

(; 3 cr. ; A-F or Audit; Every Spring)
Sampling design, survey techniques to assess resource conditions. Applying metrics/sampling methods to forest vegetation. Calculating tree/stand volume. Modeling approaches. Case studies of modeling to project future growth. Landscape processes, characterization, modeling. prereq: [ESPM 3012 or STAT 3011], MATH 1151

FNRM 3262. Remote Sensing and Geospatial Analysis of Natural Resources and Environment.

(3 cr. ; Student Option; Every Fall & Spring)
Introductory principles and techniques of remote sensing and geospatial analysis applied to mapping and monitoring land and water resources from local to global scales.

Examples of applications include: Land cover mapping and change detection, forest and natural resource inventory, water quality monitoring, and global change analysis. The lab provides hands-on experience working with satellite, aircraft, and drone imagery, and image processing methods and software. Prior coursework in Geographic Information Systems and introductory Statistics is recommended. Prereq: None, but prior coursework in GIS and Statistics is recommended.

FNRM 3362. Drones: Data, Analysis, and Operations.

(3 cr. ; Student Option; Every Spring)
This course explores principles and techniques of Unmanned Aircraft Systems (UAS, also 'drones'), applied to natural resource and environmental issues. The course provides hands-on experience with UAS vehicles, sensors, imagery, and software. Course topics include: UAS flight characteristics, regulations/safety, mission planning, flight operations, data collection, image analysis, and applications. Examples of UAS applications to be explored include forest and natural resource inventory, wetland monitoring, and land cover mapping. Prior coursework in Geographic Information Systems is recommended. Prereq: None, but prior coursework in GIS is recommended.

FNRM 3411. Managing Forest Ecosystems: Silviculture.

(3 cr. ; A-F only; Every Fall)
Management of forest ecosystems for sustaining ecological integrity, soil productivity, water quality, wildlife habitat, biological diversity, commodity production in landscape context. Silvics, forest dynamics, disturbances, regeneration, restoration, silvicultural systems. Ramifications of management choices. Weekend field trip. FEMC track students should take FNRM 5413 concurrently

FNRM 3431. Timber Harvesting and Road Planning.

(; 2 cr. ; Student Option; Every Spring)
Introduction to forest operations. Terminology, basic engineering, equipment and harvesting system options, productivity/costs. Relationship to forest management and silviculture. Road planning, forest management guidelines, approaches for mitigating potential impacts to forest resources. Environmental implications of method/equipment choices. Selling timber. Sale design, layout, and administration. One all-day field trip. prereq: FNRM 3411 or instr consent

FNRM 3462. Advanced Remote Sensing and Geospatial Analysis.

(3 cr. [max 6 cr.] ; Student Option; Every Spring)
This course builds on the introductory remote sensing class, FNRM 3262/5262. It provides a detailed treatment of advanced remote sensing and geospatial theory and methods including Object-Based Image Analysis (OBIA), lidar processing and derivatives, advanced classification algorithms (including Random Forest, Neural Networks, Support Vector Machines), biophysics of remote sensing, measurements and sensors, data transforms, data fusion, multi-temporal analysis, and empirical modeling. In-class and independent lab activities will be used to apply the course

topics to real-world problems. Prior coursework in Geographic Information Systems, remote sensing, and statistics is necessary. prereq: FNRM 3262/5262 or instr consent

FNRM 3471. Forest Management Planning. (; 3 cr. ; A-F or Audit; Every Fall)

Management science as applied to forest decision-making to help develop better forest management plans. Helps students develop a basic understanding of common analytical tools from operations research and how they are applied to forestry problems to help explore many potential solutions. Also reviews traditional approaches based on simulation. Emphasizes trade-off information, interpretation of model results, and linkages between stand-level economic analysis and forest-wide planning. Reviews recent modeling efforts in Minnesota. Includes synthesis of information from multiple natural resource disciplines. Guest speakers demonstrate value of analyses in planning. Emphasizes homework assignments with some group work. An individual project requires an informal class presentation. prereq: recommended ESPM 3261 and [3218 or 3411]

FNRM 3480. Topics in Natural Resources. (; 1-3 cr. [max 12 cr.] ; Student Option; Periodic Fall & Spring)

Lectures in special fields of natural resources given by visiting scholar or faculty member. Topics specified in Class Schedule.

FNRM 3501. Arboriculture: Selection and Maintenance of Trees. (; 3 cr. ; Student Option; Every Spring)

Selection, growth, propagation, and maintenance of trees for urban spaces. Tree selection, site preparation, plant health care management. Prevention, diagnosis, and remediation of urban tree risks such as insects, pathogens, pollution, development, and climate change.

FNRM 3562. Field Remote Sensing. (; 1 cr. ; Student Option; Every Fall)

This course is intended to be taken with, or after, the introductory remote sensing class, FNRM 3262/5262. It builds on the introductory course by providing a field context to the remote sensing discipline. We will focus on field methods and associated analyses that are typical in using and applying imagery and other spatial data. We will use a variety of remote sensing imagery, maps, field data collection tools, and software. Students will learn in an active, hands-on, way through multiple small-group field exercises. This course includes two eight-hour weekend field sessions.

FNRM 3993. Directed Study. (; 1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in

order to enroll. Prereq: Department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements

FNRM 3994. Directed Research. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

FNRM 4232W. Managing Recreational Lands. (WI; 4 cr. ; A-F or Audit; Every Spring)

Most of us participate in some form of outdoor recreation: hiking, hunting, riding all-terrain vehicles, or simply enjoying nature. Managing for outdoor recreation on public lands is mandated by federal law and an integral part of natural resource management. In this class, we'll learn why and how agencies manage recreation at the federal level, the management frameworks that guide this work, and apply management principles to an actual federal property in Minnesota. This course is designed to provide students with an understanding of the principles and practices of outdoor recreation management. Specific objectives are to: 1)compare and contrast federal recreation land management policies & organizations, 2)develop and demonstrate an understanding of conceptual frameworks for recreation resource and visitor use management, 3)evaluate visitor caused impacts to resources and to visitor experiences, 4)understand and apply management tools designed to reduce recreation-related impacts and conflicts, and 5)demonstrate an understanding of course material through exams & applied assignments.

FNRM 4501. Urban Forest Management: Managing Greenspaces for People. (; 3 cr. ; Student Option; Every Spring)

Management concepts for green infrastructure of cities, towns, and communities. Urban forest as a social/biological resource. Emphasizes management of urban forest ecosystem to maximize benefits to people. Tree selection, risk assessment, cost-benefit analysis, landscape planning, values, perceptions. How urban forestry can be a tool to improve community infrastructure.

FNRM 4511. Field Silviculture. (; 2 cr. ; A-F only; Every Spring)

Collection of field data to prepare/write silvicultural prescriptions for regeneration, thinning, and harvesting in context of landscape, watershed, and wildlife habitat issues. Field exercises in forest entomology, pathology, tree improvement, and non-timber forest products. Tree planting. Marking stands for harvest. Taught at the Cloquet Forestry Center. Field trips to forests managed by state/industry. prereq: FNRM 3411

FNRM 4515. Field Resource Survey. (; 1 cr. ; Student Option; Every Spring)
