Field applications of sampling/measurement methods for inventory and assessment of forest and other natural resources. Offered at the Cloquet Forestry Center. prereq: FNRM 3218 or instructor consent

FNRM 4521. Field Timber Harvesting and Road Planning. (; 2 cr. ; Student Option; Every Spring)

Design, layout, and administration of timber sales. Forest road planning and design. Timber appraisal, forest management guidelines. Field visits to timber harvesting and road planning sites with private organizations. Develop a harvest plan for landowner's property. Taught at the Cloquet Forestry Center. prereq: FNRM 3411 and 3431, or instructor consent.

FNRM 5101. Park and Protected Area Tourism. (; 3 cr. ; A-F or Audit; Fall Odd Year)

Tourism is a significant industry locally, nationally, and internationally. Park and protected area attractions are among the most visited but also the most vulnerable attractions. This course is designed to familiarize you with the basic concept of park and protected area tourism, including cultural and ecotourism, and then develop your expertise to plan and evaluate sustainable tourism development and operations. Accordingly, you will complete assignments that apply the knowledge gained to planning and evaluation activities. This course is offered partially online. COURSE OBJECTIVES By the end of the class you will be able to: 1. Differentiate and appreciate the complexities involved with defining and developing nature, eco, heritage, geo-, park and protected, cultural & "sustainable tourism." 2. Identify specific social, economic, and environmental impacts associated with park and protected area tourism, how to measure them, and methods to minimize the negative and maximize the positive impacts. 3. Analyze domestic and international case studies of park and protected area tourism. 4. Critically evaluate park and protected area tourism services and effective management and planning. 5. Create elements of a business plan for park and protected area tourism operations that emphasize sustainability.

FNRM 5104. Forest Ecology. (; 4 cr. ; A-F or Audit; Every Fall)

Form and function of forests as ecological systems. Characteristics and dynamics of species, populations, communities, landscapes, and ecosystem processes. Examples applying ecology to forest management. Weekly discussions on research topics, exercises, and current issues in forest resource management. Required weekend field trip. Introductory biology course recommended.

FNRM 5114. Hydrology and Watershed Management. (; 3 cr. ; Student Option; Every Fall)

Hydrologic cycle and water processes in upland/riparian systems. Applications of hydrological concepts to evaluate impacts of forest and land management activities on water yield, streamflow, groundwater erosion, sedimentation, and water quality.

Concepts, principles, and applications of riparian/watershed management. Regional/national/global examples. Forest ecosystems.

FNRM 5131. Geographical Information Systems (GIS) for Natural Resources. (4 cr. ; A-F or Audit; Every Fall)

Geographic information systems (GIS), focusing on spatial data development and analysis in the science and management of natural resources. Basic data structures, sources, collection, and quality; geodesy and map projections; spatial and tabular data analyses; digital elevation data and terrain analyses; cartographic modeling and layout. Lab exercises provide practical experiences complementing theory covered in lecture. prereq: Grad student or instr consent

FNRM 5140. Traditional Ecological Knowledge and Western Natural Resource Management. (3 cr. ; Student Option; Every Fall)

This course is designed to refine your understanding of traditional ecological knowledge, Indigenous knowledge, and the relationship to western natural resource sciences and ecology. Students read and discuss foundational and current literature (typically one book per week) on the topic. The course focuses on Indigenous authors and scholarship. This is a graduate seminar where students will lead class discussions and prepare an individual research project (typically a research paper) related to the class topic and/or their thesis. Students will also discuss and practice how to be good relatives.

FNRM 5153. Forest Hydrology & Watershed Biogeochemistry. (3 cr. ; Student Option; Spring Odd Year)

This rigorous course examines hydrology and biogeochemical cycling in forested watersheds. Topics include role of forests in hydrologic processes (precipitation, runoff generation, and streamflow) and exports (sediment, carbon, and nitrogen). Readings from primary literature, active discussion participation, research/review paper. prereq: [Basic hydrology course, one course in ecology, and one course in chemistry [upper div or grad student]] or instr consent

FNRM 5161. Northern Forest Field Course. (; 2 cr. ; A-F or Audit; Every Summer)

Field identification of common trees, shrubs, and nonwoody vascular plants. Plant communities, soil site relationships, wildlife values. Natural history of northern/boreal forests in terms of soils, ecological characteristics of trees, community-environment relationships, stand development, succession, and regeneration ecology. Land survey, tree/forest stand measurement, forest sampling techniques. Taught at the Cloquet Forestry Center.

FNRM 5203. Forest Fire and Disturbance Ecology. (3 cr. ; A-F or Audit; Every Spring)

Ecology, history, management, control of fire, wind, insect infestation, deer browsing, other disturbances in forests, including disturbance regimes of boreal, northern hardwood, savannas of North America. Influence of disturbance on wildlife habitat, urban/wildland interfaces, forest management,

stand/landscape dynamics. Tree mortality in fires, successional patterns created by fires, interactions of life history traits of plants with disturbances. prereq: Grad student or instr consent

FNRM 5204. Landscape Ecology and Management. (; 3 cr. ; A-F or Audit; Every Fall)

Introduction to landscape ecology at different scales in time/space. Development/implications of broad-scale patterns of ecological phenomena, role of disturbance in ecosystems. Characteristic spatial/temporal scales of ecological events. Principles of landscape ecology as framework for landscape research, analysis, conservation, and management. prereq: Grad student or instr consent

FNRM 5206. Park and Protected Area Management Field Studies. (2 cr. [max 3 cr.] ; A-F only; Every Fall)

This course is designed to be a directed field study of park and protected area management including observation of and training in (1) recreation planning and visitor management, (2) cultural resource management, (3) natural resource management, (4) nature-based tourism management, and (5) resource interpretation and communication across local, state, federal and tribal park and protected areas in northern Minnesota. prereq: grad student

FNRM 5216. Geodesy, Coordinate, and Surveying Calculations for GIS Professionals. (1 cr. ; Student Option; Every Fall)

Where exactly are we? How do we define and refine geographic locations on a lumpy, spinning, unstable planet? On course completion students will understand concepts and practices that are at the very foundation of GIS: geodesy and geographic projections. They will have a working knowledge of geodetic datums and datum evolution, be able to make common geodetic and coordinate geometry calculations, and solve common problems that arise during datum and coordinate system conversions while engaged in the practice of GIS.

FNRM 5218. Measuring and Modeling Forests. (; 3 cr. ; A-F or Audit; Every Spring)

General sampling design and survey techniques to assess current resource conditions. Application of metrics/sampling methods to forest vegetation. Calculation of tree/stand volume, selection of modeling approaches. Case studies of modeling to project future growth. Landscape processes, characterization, and modeling.

FNRM 5228. Advanced Topics in Assessment and Modeling of Forests. (; 3 cr. ; A-F or Audit; Fall Even Year)

Application of recently developed mathematics, computer science, and statistics methodologies to natural resource functioning, management, and use problems. Specific topics, software, and methodologies vary. prereq: 3218, Math 1272, Stat 5021

FNRM 5232. Managing Recreational Lands. (; 4 cr. ; A-F or Audit; Every Spring)

Most of us participate in some form of outdoor recreation: hiking, hunting, riding all-terrain vehicles, or simply enjoying nature. Managing for outdoor recreation on public lands is mandated by federal law and an integral part of natural resource management. In this class, we'll learn why and how agencies manage recreation at the federal level, the management frameworks that guide this work, and apply management principles to an actual federal property in Minnesota. This course is designed to provide students with an understanding of the principles and practices of outdoor recreation management. Specific objectives are to: 1) Compare and contrast federal recreation land management policies and organizations, 2) Develop and demonstrate an understanding of conceptual frameworks for recreation resource and visitor use management, 3) Evaluate visitor caused impacts to resources and to visitor experiences, 4) Understand and apply management tools designed to reduce recreation-related impacts and conflicts, and 5) Demonstrate an understanding of course material through exams and applied assignments. prereq: Grad student or instr consent

FNRM 5259. Visitor Behavior Analysis. (; 3 cr. ; Student Option; Every Fall)

Recreation, leisure, and tourism are significant parts of the world, national, and state economies. Understanding visitor behavior is important and has significant implications for organizations, agencies, and businesses related to parks, tourism destinations, and museums. In this class, you will learn to apply both social science theory and methods to understand consumers, with an emphasis on visitors to parks and protected areas. You will immediately apply your learning of survey development, interviewing, observation and content analysis to real-world situations in class projects. This is an online course.

FNRM 5262. Remote Sensing and Geospatial Analysis of Natural Resources and Environment. (3 cr. ; Student Option; Every Fall & Spring)

Introductory principles and techniques of remote sensing and geospatial analysis applied to mapping and monitoring land and water resources from local to global scales. Examples of applications include: Land cover mapping and change detection, forest and natural resource inventory, water quality monitoring, and global change analysis. The lab provides hands-on experience working with satellite, aircraft, and drone imagery, and image processing methods and software. Prior coursework in Geographic Information Systems and introductory Statistics is recommended. prereq: Grad student or instr consent

FNRM 5264. Advanced Forest Management Planning. (; 3 cr. ; Student Option; Every Fall)

Modeling tools for forest planning to better integrate forest resource conditions/uses and better understand trade-offs and potential management strategies. Analyzing facets of forest management that add complexity including multi-market interactions, temporal detail, spatial objectives, planning under

uncertainty, and recourse strategies.

Optimization models, decomposition and heuristic techniques designed to capitalize on characteristics of forestry problems. Case studies involving recent or ongoing large-scale applications. Student projects with opportunity to tailor to student interests or expertise.

FNRM 5362. Drones: Data, Analysis, and Operations. (3 cr. [max 6 cr.] ; Student Option; Every Spring)

This course explores principles and techniques of Unmanned Aircraft Systems (UAS, also "drones"), applied to natural resource and environmental issues. The course provides hands-on experience with UAS vehicles, sensors, imagery, and software. Course topics include: UAS flight characteristics, regulations/safety, mission planning, flight operations, data collection, image analysis, and applications. Examples of UAS applications to be explored include: forest and natural resource inventory, wetland monitoring, and land cover mapping. Prior coursework in Geographic Information Systems is recommended. Prereq: grad student or instr consent

FNRM 5411. Managing Forest Ecosystems: Silviculture. (3 cr. ; A-F only; Every Fall)

Management of forest ecosystems for sustaining ecological integrity, soil productivity, water quality, wildlife habitat, biological diversity, commodity production in landscape context. Silvics, forest dynamics, disturbances, regeneration, restoration, silvicultural systems. Ramifications of management choices. Weekend field trip. FEMC track students should take FNRM 5413 concurrently. prereq: grad student

FNRM 5413. Managing Forest Ecosystems: Silviculture Lab. (1 cr. ; A-F only; Every Fall)

Development of silvicultural prescriptions to achieve various landowner objectives. Timber cruise, growth/yield simulations, stand density management diagrams, thinning schedules, use of forest vegetation simulator. Field trips, computer labs, lectures. prereq: FNRM major or minor or grad student; FNRM-FEMC track students should take FNRM 3411/5411 concurrently or instructor consent

FNRM 5431. Timber Harvesting and Road Planning. (; 2 cr. ; Student Option; Every Spring)

Introduction to forest operations. Terminology, basic engineering, equipment and harvesting system options, productivity/costs. Relationship to forest management and silviculture. Road planning, forest management guidelines, approaches for mitigating potential impacts to forest resources. Environmental implications of method/equipment choices. Selling timber. Sale design, layout, and administration. One all-day field trip. prereq: grad student

FNRM 5462. Advanced Remote Sensing and Geospatial Analysis. (3 cr. ; Student Option; Every Spring)

This course builds on the introductory remote sensing class, FNRM 3262/5262. It provides a detailed treatment of advanced remote sensing and geospatial theory and methods including Object-Based Image Analysis (OBIA), lidar processing and derivatives, advanced

classification algorithms (including Random Forest, Neural Networks, Support Vector Machines), biophysics of remote sensing, measurements and sensors, data transforms, data fusion, multi-temporal analysis, and empirical modeling. In-class and independent lab activities will be used to apply the course topics to real-world problems. Prior coursework in Geographic Information Systems, remote sensing, and statistics is necessary. Prereq: grad student or instr consent

FNRM 5471. Forest Management Planning. (; 3 cr. ; A-F or Audit; Every Fall)

Management science as applied to forest decision-making to help develop better forest management plans. Helps students develop a basic understanding of common analytical tools from operations research and how they are applied to forestry problems to help explore many potential solutions. Also reviews traditional approaches based on simulation. Emphasizes trade-off information, interpretation of model results, and linkages between stand-level economic analysis and forest-wide planning. Reviews recent modeling efforts in Minnesota. Includes synthesis of information from multiple natural resource disciplines. Guest speakers demonstrate value of analyses in planning. Emphasizes homework assignments with some group work. An individual project requires an informal class presentation. prereq: Grad student

FNRM 5480. Topics in Natural Resources. (; 1-3 cr. ; Student Option; Every Spring)

Lectures in special fields of natural resources given by visiting scholar or faculty member. Topics specified in Class Schedule.

FNRM 5501. Urban Forest Management: Managing Greenspaces for People. (; 3 cr. ; Student Option; Every Spring)

Management concepts for green infrastructure of cities, towns, and communities. Urban forest as social/biological resource. Emphasizes management of urban forest ecosystem to maximize benefits. Tree selection, risk assessment, cost-benefit analysis, landscape planning, values, perceptions. How urban forestry can be a tool to improve community infrastructure.

FNRM 5562. Field Remote Sensing. (; 1 cr. ; Student Option; Every Fall)

This course is intended to be taken with, or after, the introductory remote sensing class, FNRM 3262/5262. It builds on the introductory course by providing a field context to the remote sensing discipline. We will focus on field methods and associated analyses that are typical in using and applying imagery and other spatial data. We will use a variety of remote sensing imagery, maps, field data collection tools, and software. Students will learn in an active, hands-on, way through multiple small-group field exercises. This course includes two eight-hour weekend field sessions. Prerequisite: grad student

French (FREN)

FREN 1001. Beginning French I. (; 5 cr. ; Student Option; Every Fall, Spring & Summer)

Bonjour! Join us in learning the global language of diplomacy, culture, cuisine, and commerce! French is spoken on five continents, in approximately 40 countries, and even in Maine and Louisiana. Studying French will deepen your understanding of world history and the relationships between different cultures around the globe and close to home. Studying the language of Les Misérables, Monet, and joie de vivre allows you to access some of the most amazing art, thought, and food on the planet! Beginning French (French 1001) is designed for students with little or no knowledge of the French language. It focuses on developing your intercultural, reading, listening, speaking, and writing skills. By the end of this course, you will be able to communicate about family, housing, and school. You will also gain familiarity with French-speaking communities around the world. The course features preparatory and practice activities outside of class designed to encourage analysis of language structure so that class time can be primarily devoted to meaningful interaction in French.

FREN 1002. Beginning French II. (; 5 cr. ; Student Option; Every Fall, Spring & Summer)

Bienvenue en 1002! Ready to embark on a new journey to further develop your knowledge of the beautiful language of French? If you passed French 1001 or have taken the Entrance Proficiency Test (EPT) and were placed in 1002, this course is for you! While exploring topics such as French holidays and cultural celebrations and traditions, food, and ecology, you will further develop your listening, speaking, reading, and writing skills. You will also learn about the concept of laïcité, one of the pillars of French society, and the differences and similarities between the school systems in France and the U.S. Preparatory activities designed to encourage students to analyze grammar points need to be completed at home so that class time can be primarily devoted to meaningful interactions in French. prereq: FREN 1001 or equivalent.

FREN 1003. Intermediate French I. (5 cr. ; Student Option; Every Fall, Spring & Summer)

Nous vous souhaitons la bienvenue dans le troisième semestre de français. In this course, you will explore current issues such as the role technology plays in today's society and living a healthy lifestyle. Other themes include family, friends, and current social issues such as environment, energy, and immigration. Students will use film, excerpts of literature, and other authentic texts as part of the curriculum. Upon completion of the class, you will have more confidence in expressing past, future, and hypothetical events as well as your own opinions, feelings, and regrets. French 1003 is a five-credit course, so you should plan to spend an additional 10 hours a week on coursework outside the classroom. Upon successful completion of this course you will be able to enroll in French 1004. prereq: C- or better in FREN 1002 or 1022, or EPT (for students taking their first French course at the U)

FREN 1004. Intermediate French II. (5 cr. ; Student Option; Every Fall, Spring & Summer)

Vous ?tes les bienvenus! Come join us in exploring some of the foundations of cultural identity. What does it mean to be "French?" What does it mean to be "American?" What are some things that people living within a particular culture have in common as a function of living in that culture? Where do personal and cultural identities intersect? We pay special attention to development of intercultural competence, comparing how food, child-rearing practices, elements of national identity, and diversity are treated in France and the US. We revisit many grammar concepts you have seen before, focusing on accuracy and extended language use. This course will allow you to be much more confident in using comparisons, narrating (past and present), linking ideas together into longer discourse, describing, etc. Upon successful completion of this course, you should be solidly in the Intermediate ranges of proficiency in French, able to travel and/or use French for your own goals. You will also be prepared for more advanced study in French here or abroad (FREN 3015 and 3014 are options after this course). prereq: C- or better in FREN 1003, or EPT/LPE (for students taking their first French course at the U)

FREN 1022. Accelerated Beginning French. (5 cr. ; Student Option; Every Fall & Spring) Heureux de vous revoir! Because you have studied French before, you already know what a wonderful language it is. This course is designed to return you to studying the language of Les Mis?rables, Monet, and joie de vivre! French 1022 is an accelerated review of French 1001 followed by the material covered in French 1002. At the end of this course, you will be able to communicate about topics such as food, family, school, the environment, travel and much more. If you have had a gap of more than a year since your last French class, you need to take the EPT to place into French 1022.

FREN 1501. Gateways to French and Francophone Studies: English Only. (AH,GP; 3 cr. ; A-F or Audit; Every Fall & Spring)

What key moments in French and Francophone culture can help us understand our world today? What are French and Francophone Studies? This course taught in English answers these questions by letting you discover the diverse cultures of France and French-speaking countries (such as Senegal, Canada or Belgium), and the ways we study them in the humanities. You will encounter texts, visual material, films, music, and historical events from various eras and learn how to make sense of them. Faculty from the French program will come and share with you what they research and why. A portion of the semester will be devoted to one of two role-playing simulations. During these weeks, you will delve deeply into the material, researching your historical character and working with other students whose goals converge with yours to sway the opinions of your other classmates. Along the way, you will enhance your skills in public speaking and writing. (1) The French Revolution. Where did the notion of the social contract and human

rights come from? What dilemmas did the people of France face in this turbulent attempt to transition from monarchy to a new form of government? (2) The 1889 Universal Exhibition in Paris, which was a focus of debates about art, esthetics and urbanism. Do you want to be a traditional painter, Van Gogh, an art critic, a woman patron, an anarchist, or a worker on the Eiffel Tower? How did each of these groups or individuals understand the role of art? You can take French 1501 as a freestanding class or at the same time as a language class (FREN 1001-1004, depending on your level). The class is required for new majors and minors in French Studies, but you can take it simply to discover the fascinating cultures of French-speaking communities worldwide! No prerequisites. All materials for French 1501 are in English, and students in all programs are welcome!

FREN 1502. Gateways to French and Francophone Studies: Bilingual. (AH,GP; 3 cr. ; A-F or Audit; Every Fall & Spring)

What are French and Francophone Studies? What key moments in French and Francophone culture can help us understand our world today? This course taught in English answers these questions by letting you discover the diverse cultures of France and French-speaking countries (such as Senegal, Canada or Belgium), and the ways we study them in the humanities. You will encounter texts, visual material, films, music, and historical events from various eras and learn how to make sense of them. Faculty from the French program will come and share with you what they research and why. A portion of the semester will be devoted to one of two role-playing simulations. During these weeks, you will delve deeply into the material, researching your historical character and working with other students whose goals converge with yours to sway the opinions of your other classmates. Along the way, you will enhance your skills in public speaking and writing. (1) The French Revolution. Where did the notion of the social contract and human rights come from? What dilemmas did the people of France face in this turbulent attempt to transition from monarchy to a new form of government? (2) The 1889 art exhibition in Paris, which was a focus of debates about art, esthetics and urbanism. Do you want to be a traditional painter, Van Gogh, an art critic, a woman patron, an anarchist, or a worker on the Eiffel Tower? French 1502 is taught in English, but it includes some readings in French. In some semesters, it may also include occasional discussions or small group activities in French. You can take French 1502 as a freestanding class or at the same time as a language class (FREN 3015-3016, depending on your level). The class is required for new majors and minors in French Studies, but you can take it simply to discover the fascinating cultures of French-speaking communities worldwide! prereq: FREN 1004 (or equivalent through the LPE)

FREN 1911. Globalizing the ?Middle Ages?. (; 3 cr. ; A-F only; Periodic Fall) Students in this seminar will help develop ? Medieval Studies? as a part of ?Global

Studies.? After learning how Medieval Studies was invented, developed, and utilized in the development of European power relations from the 14th through 21st centuries, students will read, view, and discuss material about other parts of the globe during the time corresponding to Europe?s Middle Ages (ca. 500- 1500 C.E.), envisaging how the integration of such material into ?Medieval Studies? can change not only education, but also social and political encounters among peoples and nations today.

FREN 3014. French Phonetics. (3 cr. ; Student Option; Every Fall & Spring)

Survey of major institutions/components of modern French culture with special attention to lexical enrichment/pronunciation practice. Study of linguistic description of French sounds/transcription. prereq: 1004

FREN 3015. Advanced French Grammar and Communication. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Taught entirely in French. Prerequisite: French 1004 or LPE. Voil?, c'est fait: You have completed French 1004 or passed the LPE. You are certified as an intermediate speaker of French. Don't lose your momentum! French 3015 allows you to start working toward a new goal: advanced proficiency in speaking, listening, reading, and writing French. Along with this higher proficiency comes a deeper understanding of French and Francophone culture around the world. In this class, you will focus on grammar in context, reading longer, more complex texts in the original language. You will write short compositions that include various genres such as the first-person narrative, the business letter, and the essay. You will learn how to use the correction software Antidote as a means of perfecting your writing skills. In class, you will participate in group work to boost your oral comprehension skills and in writing workshops to boost your writing skills. Listening activities include a film, an audiobook, a song, and videos related to readings. Written exercises include translation, grammar, and vocabulary building. Literary readings include excerpts from a medieval text (La l?gende de Tristan et Iseut), as well as four 20th-century texts (by Danielle Cadorette, Annie Ernaux, Albert Camus, and Pierre-Jakez H?lias). Journalists include Kamel Daoud (published in the Le Monde) and Fatym Layachi (published in the Moroccan newspaper Tel Quel). Based on these readings and discussions of the themes of friendship, family, education, work, technology, and bilingualism, you will explore notions of identity in the French and Francophone world.

FREN 3016. Advanced French Composition and Communication. (3 cr. ; Student Option; Every Fall & Spring)

Taught entirely in French. In this class, you will continue the work you began in FREN 3015, keeping your eyes on the goal of advanced proficiency. You will continue to focus on grammar in context, reading challenging texts in the original language. You will write short compositions that include various genres: a summary of an online article of your own

choosing, an argumentative essay, and a film or literary analysis. You will perfect your use of the correction software Antidote as you move toward advanced proficiency in writing. In class, you will participate in group work to boost your oral comprehension skills and in writing workshops to boost your writing skills. Listening activities include several films, a song, and videos related to readings. Written exercises include translation, grammar, and vocabulary building. This course explores identity in the French and Francophone world through the themes of youth, travel, immigration, and colonisation. Literary readings include excerpts from the 18th century (Voltaire and Louis S?bastien Mercier), the 20th century (Ying Chen and Driss Chra?bi), and the 21st century (Tahar Ben Jelloun, Abdellah Ta?a, and Mina Oualdhadj). Newspaper articles include the sociologist Edgar Morin (published in *Le Monde*) and the columnist R?da Allali (published in the Moroccan newspaper *Tel Quel*). But French 3016 adds new genres of writing as well. We will read selections from crime novels (Ren? Fr?gni and Michel de Roy), a graphic novel (Marjane Satrapi), and science-fiction (Pierre Boulle). This course is a good stepping-stone for an advanced course in French and Francophone film as we read about and view samples of Algerian, Canadian, and French films. Prerequisite: FREN 3015.

FREN 3017W. Advanced Writing in French: Genre, Style, Rhetoric. (WI; 3 cr. ; A-F only; Every Fall)

Workshop in journalistic/literary prose writing in French. Theme of journalistic/literary readings varies. Article, editorial, review, essay, biography, tale, prose poem. Word order, sequence of tenses, indirect discourse, literary tenses. Overview of stylistics/use of rhetorical figures. prereq: 3016

FREN 3018. French Oral Communication. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Intensive work in oral expression, listening comprehension. Incorporates wide variety of cultural topics. prereq: 3014, 3015

FREN 3022. The Language and Culture of Business in France. (; 3 cr. ; Student Option; Every Spring)

Examines French business language as well as business practices and culture in France. Includes cross-cultural analysis. prereq: 3015; completion of 3016 recommended

FREN 3101W. Methods in French and Francophone Studies. (LITR,WI; 3 cr. [max 4 cr.] ; Student Option; Every Fall & Spring)

Taught entirely in French. In this course, you will delve deeply into original stories, lyrics, plays, and films in French, from around the world and across time. What verbal and visual codes carry meaning in a given culture? How do cultures create a space for the subject or the self? As you discuss these questions, you will become a faster and more independent reader, gain sensitivity to the sonorities and rhythms of the French language and the nuances of sense it makes possible, and learn to perceive implicit meaning in texts. Theoretical readings and lessons in developing

thesis statements and organizing arguments will enhance your ability to understand and create complex arguments in French. Each individual section of this course addresses these questions with a different selection of readings and films grouped around a specific theme, so please consult the Class Info page to find out more! nonfiction texts, cultural artifacts, and audio/visual media pertaining to France and Francophone communities across the centuries. prereq: 3016 or equiv

FREN 3140. Topics in Medieval and Renaissance Literature. (; 3 cr. [max 9 cr.] ; Student Option; Every Spring)

Different aspects of French literature/culture of medieval/Renaissance periods (11th-16th century). Content varies depending on instructor. Literary, historical, or social problem. Period, author, genre, or topic of interest. Readings may be literary, critical, cultural, historical, political, etc. Specific content posted in department and in Course Guide. prereq: 3101

FREN 3172. The Court Society: Literature, Culture, Spectacle. (3 cr. ; Student Option; Periodic Fall)

Examines the court and salon society in 17th-century France. The production of taste, sociability, and national identity is considered in literature, painting, architecture, and the plastic arts. prereq: FREN 3101W or instructor permission. Old:

FREN 3240. Topics in Ancien Regime Literature. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall)

Different aspects of French literature/culture from early modern period (17th/18th centuries). Content varies depending on instructor. Literary, historical, or social problems. Period, author, genre or topic of interest. Readings may be literary, critical, cultural, historical, political, etc. Specific content posted in department/Course Guide. prereq: 3101

FREN 3345. The Holocaust in France: Literature, History, Testimony. (3 cr. ; Student Option; Periodic Fall & Spring)

This course examines the event of the Holocaust (which we call "Shoah" in France since the 80s and especially since the film of the same name by Claude Lanzmann) in literature, film, and archives. France has a complex relationship with Jews since the Middle Ages. During the French Revolution (1789), then under the Empire (Napoleon Bonaparte, 1800-1815), the Jews benefitted from political emancipation. The Republic defended the equality of Jews before the law as French citizens. But France was also the country of political anti-Semitism and of the Dreyfus Affair (there were in the nineteenth century some very virulent anti-Semitic propaganda writers, for example Edouard Drumont, author of *Jewish France*, in 1880, just before the Dreyfus Affair). This history of the Jews in France culminates with the Vichy regime, the policy of collaboration with Nazi Germany, antisemitic writings and propaganda emanating from important writers such as Louis-Ferdinand Celine and politicians, and the deportation of part of the Jewish population to

the extermination camps. How does this story affect fictional writing, and debates on how to represent this event? More than a course on the Holocaust, we explore the story of its reminiscence in French culture. It is not a history class, but a class in culture, literature, memory and testimony. prereq: FREN 3015; it is recommended that students have taken, or take concurrently, FREN 3101W.

FREN 3350. Topics in Literature. (; 3 cr. [max 9 cr.] ; Student Option; Every Fall & Spring)

Focuses on a problem, period, author, or topic of interest. Specific content posted in department and listed in Course Guide. prereq: 3101

FREN 3410. Topics in Quebecois Literature. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)

Study writing produced in Quebec as a literature of its own, not simply as a part of Canadian literature. Literature will be studied in relation to other North American literatures and to Francophone literature produced elsewhere in the world. prereq: 3101

FREN 3431. Gender and Sexuality in Francophone Literature and Cinema. (3 cr. ; A-F only; Periodic Fall & Spring)

This course will introduce students to colonial and postcolonial representations of gender and sexuality in Francophone contexts. Through literary and cinematic works from the Caribbean, Maghreb, West Africa, and Quebec, we will examine constructions and deconstructions of gender roles and sexual norms in relation to other identity categories such as race, class, nation and religion. We will consider topics such as exotic portrayals of the other, repressive and rebellious eroticism, and ambivalent or unruly affirmations of identity. Taught in French. prereq: 3101W. All courses counted toward a major/minor must be taken on an A-F basis.

FREN 3451. North African Cinema. (; 3 cr. ; Student Option; Fall Odd Year)

Cinemas of the Maghreb, the northern African nations of Morocco, Algeria, and Tunisia. Themes may include North African cities/communities; gender, class and ethnicity; and impact of globalization in migratory patterns. Films. Readings in philosophy, history, sociology, anthropology, and cultural critique. prereq: 3101

FREN 3471. Topics in Francophone African Literature and Cultures. (GP; 3 cr. ; Student Option; Fall Odd Year)

Issues relevant to cultures/societies of francophone Sub-Saharan Africa as reflected in literature, film, and cultural critique. prereq: 3101W

FREN 3479. Francophone Writers of the African Diaspora. (; 3 cr. ; Student Option; Fall Even Year)

Literature from Francophone North Africa, Africa, the Caribbean of the colonial and/or post-colonial eras, examined in its historical, cultural, or ideological contexts. Reading selections may include texts by immigrant or exiled writers in France. prereq: 3101

FREN 3500. Linguistic Analysis of French.

(3 cr. ; A-F only; Fall Even Year)
Introduction to scientific study of French language. Concepts/terminology to describe nature/functioning of sounds, words, sentences/meaning, and variation. Taught in French. prereq: 3015

FREN 3521. History of the French Language.

(; 3 cr. ; Student Option; Fall Odd Year)
Origins/development of French language from Latin to contemporary French. Selected texts. Present stage/development. prereq: 3015, [3500 or Ling 3001 or instr consent]

FREN 3531. Sociolinguistics of French.

(GP; 3 cr. ; Student Option; Periodic Fall)
Explores variation in the use of French associated with factors such as medium (oral/written), style (formal/informal), region, social and economic groups. Prerequisite: FREN 3015 or equivalent; strongly recommended: FREN 3500 or LING 3001.

FREN 3541. Oral Discourse of French.

(; 3 cr. ; Student Option; Periodic Fall & Spring)
Contemporary French discourse. Spontaneous, multi-speaker discourse. Readings. Syntactic analysis. Phonological/lexical particularities. Macro level analyses. Discourse analysis/conversation analysis. prereq: 3015, [3500 or Ling 3001 or instr consent]

FREN 3611. Speaking of Love in Medieval France: Stories, Songs, and Letters.

(GP,LITR; 3 cr. ; A-F only; Fall Even Year)
How did people talk about love in the Middle Ages? What songs did they sing about it? What stories did they tell? How did it define the self? In this course, we will study troubadour songs, short tales, romances, and letters composed in twelfth-century France and Anglo-Norman England. We will examine their historical context: the patronage of Eleanor of Aquitaine and her family, the broader context of medieval court life, and the erudite circles that formed during the rise of the Parisian schools. Because what people say is determined by the language, motifs, and forms that they have available to them, we will discuss the transmission of ideas about love and the interpretation of exemplary figures (Tristan and Iseut, Lancelot and Guinevere). We will also consider the literary form of these texts in relation to their meaning. But at the heart of our inquiry will be the notion of the self. How did "speaking of love" allow medieval writers to cultivate their own subjectivity or individuality? Texts will include troubadour songs, the Lais of Marie de France, the romances of Tristan and Iseut by Thomas of England and B?roul, Chr?tien de Troyes's Arthurian romances, and the letters of Abelard and Heloise. We will also study a film about Eleanor of Aquitaine and her family (The Lion in Winter, 1968) and a contemporary opera about a troubadour and his lady, Kaija Saariaho's L'Amour de loin (2000). FREN 3611 and 3711 meet together. Both FREN 3611 and 3711 are taught in English. Reading and writing assignments for FREN 3611 are in modern French. FREN 3611 may count towards the major or minor in French Studies. Reading and writing

assignments for FREN 3711 are in English. FREN 3711 does not count towards the major or minor in French Studies. prereq: FREN 3015

FREN 3614. Disabled Bodies, Minds and Selves in French Literature, Culture and Art.

(3 cr. ; Student Option; Periodic Fall & Spring)
At any given moment in history, what are the socio-cultural forces that give rise to an understanding of physical difference? What forces enable self-expression, self-determination, and liberation from this understanding? This course explores the history of disability and the representations of disability in literature, art, and culture. We will investigate theory and praxis of disability studies in France. Spanning the Renaissance to the present day, this course seeks to understand the experiences of disabled people and their communities in different periods, through a variety of genres and media, exploring medical histories, representation (for a public presumed to be able-bodied), memoir, activism, and art and literature by disabled people.

FREN 3632. Revolution and Human Rights: The French Revolution and its Legacy.

(AH,CIV; 3 cr. ; Student Option; Spring Even Year)
What role did the French Revolution play in shaping how we think about the possibility of massive social change, justice, and rights today? How especially did 18th-century philosophy, culture, politics, and economics influence the development of what we call universal individual "human rights." We also ask: could we have done better? To do so, we will play "Rousseau, Burke, and Revolution in France, 1791," a Reacting to the Past flipped-classroom role-playing game. Working individually and in teams, students will prepare speeches, produce pamphlets and newspapers, not only to learn about the stakes of this historical turning point and the philosophical debates surrounding it, but also to imagine changing it. We will also seek out and document the legacy of this Revolution in our lives and around the world today. This class offers students the knowledge and skills to participate in substantive debate aimed at solving problems collectively, to effect change aligning with their beliefs and philosophies, and to reflect critically on historical legacy. prereq: Fren 3015; Fren 3016 recommended

FREN 3650. Topics in French/Francophone Cultures.

(; 3 cr. [max 9 cr.] ; Student Option; Every Fall, Spring & Summer)
French/francophone cultures in various historical, social, political, geographical contexts. prereq: 3015

FREN 3661. Francophone North America.

(3 cr. ; Student Option; Periodic Fall & Spring)
Ce cours est une introduction aux diff?rentes communit?s francophones en Am?rique du Nord. Nous retracerons l'histoire de ces communit?s au Canada, aux ?tats-Unis et ? Saint-Pierre et Miquelon (une collectivit? d'outre-mer fran?aise) et examinerons les diff?rentes manifestations des cultures francophones qui se sont d?velopp?es: leur langue, leur musique, leurs traditions, leurs

drapeaux, leur cuisine, leur litt?rature et leur cin?ma. Nous explorerons aussi l'impact que ces cultures exercent sur une r?gion majoritairement anglophone. This course is an introduction to the different Francophone communities in North America. We will retrace the history of these communities in Canada, the United States, and Saint-Pierre et Miquelon (a French collectivit? d'outre-mer), and examine the different manifestations of the Francophone cultures that developed: language, music, traditions, flags, cuisine, literature, and cinema. We will also explore the impact that these cultures exert on a region predominantly English speaking.

FREN 3732. Revolution and Human Rights: The French Revolution and its Legacy.

(AH,CIV; 3 cr. ; Student Option; Spring Even Year)
What role did the French Revolution play in shaping how we think about the possibility of massive social change, justice, and rights today? How especially did 18th-century philosophy, culture, politics, and economics influence the development of what we call universal individual "human rights." We also ask: could we have done better? To do so, we will play "Rousseau, Burke, and Revolution in France, 1791," a Reacting to the Past flipped-classroom role-playing game. Working individually and in teams, students will prepare speeches, produce pamphlets and newspapers, not only to learn about the stakes of this historical turning point and the philosophical debates surrounding it, but also to imagine changing it. We will also seek out and document the legacy of this Revolution in our lives and around the world today. This class offers students the knowledge and skills to participate in substantive debate aimed at solving problems collectively, to effect change aligning with their beliefs and philosophies, and to reflect critically on historical legacy. No prerequisites. All materials for Fren 3732 are in English, and students in all programs are welcome!

FREN 3750. Topics in French or Francophone Literature and Culture.

(; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall)
Theme, problem, period, or topic of interest in French or Francophone literature or culture. See Class Schedule. Taught in English. prereq: Non-French major; knowledge of French helpful

FREN 3850. Topics in French and Francophone Media.

(; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)
Topics in French and Francophone media. Content varies by instructor; topics may include studies in French and/or Francophone cinema, film, theater, television, and/or other media. prereq: FREN 3015.

FREN 3852. Memory in French and Francophone Cinema.

(; 3 cr. ; Student Option; Periodic Fall & Spring)
This course will examine cinema?s privileged relationship with memory. Our itinerary will take us through key French and Francophone films, asking how these works record, construct and deconstruct ?individual? and ?collective?

memories. Topics will include bearing witness to the traumas of war, genocide and colonization; commemorating resistance and fostering emancipation; interventions in identity politics; (re)partitions of rural and urban spaces; and the elusive divide between fiction, documentary and memoir. Students will be expected to master a vocabulary for the formal analysis of film. prereq: Students should have completed FREN 3016 with a minimum grade of B.

FREN 3896. Internship in a French-Speaking Milieu. (; 1-4 cr. ; A-F only; Every Fall, Spring & Summer)

Volunteer or paid work in French-speaking milieu, undertaken at initiative of individual students. Work under direction of work supervisor/advisor chosen from among regular or adjunct faculty. Complete two-three written assignments designed to enhance language/field-specific learning. prereq: 3016, 3014 [3018 strongly recommended], [3022 strongly recommended for students undertaking internships in business, government, or law]

FREN 4001. Beginning French for Graduate Student Research I. (; 5 cr. ; Student Option; Every Fall, Spring & Summer)

Bonjour! Join us in learning the global language of diplomacy, culture, cuisine, and commerce! French is spoken on five continents, in approximately 40 countries, and even in Maine and Louisiana. Studying French will deepen your understanding of world history and the relationships between different cultures around the globe and close to home. Studying the language of Les Misérables, Monet, and joie de vivre allows you to access some of the most amazing art, thought, and food on the planet! Beginning French (French 1001) is designed for students with little or no knowledge of the French language. It focuses on developing your intercultural, reading, listening, speaking, and writing skills. By the end of this course, you will be able to communicate about family, housing, and school. You will also gain familiarity with French-speaking communities around the world. The course features preparatory and practice activities outside of class designed to encourage analysis of language structure so that class time can be primarily devoted to meaningful interaction in French.

FREN 4002. Beginning French for Graduate Student Research II. (5 cr. ; Student Option; Every Fall, Spring & Summer)

Bienvenue en 4002! Ready to embark on a new journey to further develop your knowledge of the beautiful language of French? If you passed French 1001/4001 or have taken the Entrance Proficiency Test (EPT) and were placed in 1002, this course is for you! While exploring topics such as French holidays and cultural celebrations and traditions, food, and ecology, you will further develop your listening, speaking, reading, and writing skills. You will also learn about the concept of laïcité, one of the pillars of French society, and the differences and similarities between the school systems in France and the US. Preparatory activities designed to encourage students to analyze grammar points need to be completed

at home so that class time can be primarily devoted to meaningful interactions in French. prereq: FREN 1001/4001 or equivalent.

FREN 4003. Int French for Grad Research I. (; 5 cr. ; Student Option; Every Fall, Spring & Summer)

Nous vous souhaitons la bienvenue dans le troisième semestre de français. In this course, you will explore current issues such as the role technology plays in today's society and living a healthy lifestyle. Other themes include family, friends, and current social issues such as environment, energy, and immigration. Students will use film, excerpts of literature, and other authentic texts as part of the curriculum. Upon completion of the class, you will have more confidence in expressing past, future, and hypothetical events as well as your own opinions, feelings, and regrets. French 4003 is a five-credit course, so you should plan to spend an additional 10 hours a week on coursework outside the classroom. Upon successful completion of this course you will be able to enroll in French 4004. prereq: C- or better in FREN 1002/4002 or 1022/4022, or EPT (for students taking their first French course at the U)

FREN 4004. Intermediate French for Graduate Student Research II. (; 5 cr. ; Student Option; Every Fall, Spring & Summer)

Vous êtes les bienvenus! Come join us in exploring some of the foundations of cultural identity. What does it mean to be "French?" What does it mean to be "American?" What are some things that people living within a particular culture have in common as a function of living in that culture? Where do personal and cultural identities intersect? We pay special attention to development of Intercultural Competence, comparing how food, child-rearing practices, elements of national identity, and diversity are treated in France and the US. We revisit many grammar concepts you have seen before, focusing on accuracy and extended language use. This course will allow you to be much more confident in using comparisons, narrating (past and present), linking ideas together into longer discourse, describing, etc. Upon successful completion of this course, you should be solidly in the Intermediate ranges of proficiency in French, able to travel and/or use French for your own goals. You will also be prepared for more advanced study in French here or abroad. prereq: C- or better in FREN 1003/4003, or EPT/LPE (for students taking their first French course at the U)

FREN 4022. Accelerated Beginning French for Graduate Student Research. (; 5 cr. ; Student Option; Every Fall & Spring)

Heureux de vous revoir! Because you have studied French before, you already know what a wonderful language it is. This course is designed to return you to studying the language of Les Misérables, Monet, and joie de vivre! French 1022 is an accelerated review of French 1001/4001 followed by the material covered in French 1002/4002. At the end of this course, you will be able to communicate about topics such as food, family, school, the

environment, travel and much more. If you have had a gap of more than a year since your last French class, you need to take the EPT to place into French 1022. prereq: 1001/4001 or equivalent

FREN 4101V. Honors Capstone Seminar in French and Francophone Studies. (WI; 2 cr. [max 3 cr.] ; A-F only; Every Spring)

Course for French and FRIT majors only, to be taken during the final semester. This is the capstone experience of the major in French and Francophone or FRIT Studies. Building on your prior coursework, your linguistic expertise in French, and your analytical skills, it gives you the opportunity to do independent, original work on a topic of particular interest to you. This project is designed to bridge two upper-division French courses: a 3-credit elective of your own choice in the areas of literature, culture, or linguistics (i.e., one of your required electives numbered 31xx-36xx) and the senior project course itself (4101W/V). The elective provides background in the general field of research, while French 4101W/V allows you to learn the basics of research and advanced academic writing while working with a faculty member and a group of peers involved in similar projects. prereq: French 3101W and at least three electives completed.

FREN 4101W. Capstone Seminar in French and Francophone Studies. (WI; 2 cr. [max 3 cr.] ; A-F only; Every Spring)

Course for French and FRIT majors only, to be taken during the final semester. This is the capstone experience of the major in French and Francophone or FRIT Studies. Building on your prior coursework, your linguistic expertise in French, and your analytical skills, it gives you the opportunity to do independent, original work on a topic of particular interest to you. This project is designed to bridge two upper-division French courses: a 3-credit elective of your own choice in the areas of literature, culture, or linguistics (i.e., one of your required electives numbered 31xx-36xx) and the Senior Project Course itself (4101W/V). The elective provides background in the general field of research, while French 4101W/V allows you to learn the basics of research and advanced academic writing while working with a faculty member and a group of peers involved in similar projects. prereq: French 3101W and at least three electives completed.

FREN 4109W. Capstone Independent Study in French and Francophone Studies. (WI; 2 cr. ; A-F only; Every Fall & Spring)

Completion of research paper based on paper written for previous course or expansion of project undertaken in concurrent course. prereq: instr consent, [completion of most major coursework or permission of DUS]

FREN 4110V. Honors Capstone Independent Study in French and Francophone Studies. (WI; 2-4 cr. [max 8 cr.] ; A-F only; Every Fall & Spring)

Directed study used to develop or complete honors thesis in French and Francophone studies. prereq: [Completion of most major coursework or permission of DUS], candidate for honors in French, instr consent

FREN 4993. Directed Study. (; 1-4 cr. [max 9 cr.] ; Student Option; Every Fall, Spring & Summer)

Designed to meet unique requirements agreed upon by a faculty member and a student. Individual contracts are drawn up listing contact hours, number of credits, written and other work required. Each contract will vary. prereq: instr consent

FREN 5265. Graduate Proseminar in French Studies. (2 cr. ; Student Option; Every Spring)

This course introduces new graduate students to the goals, skills, practices, standards and other components of academic careers in the fields of French and Francophone studies, mostly in the US context. It is an introduction to all major aspects of our profession. The seminar combines readings, lectures and presentations by the instructor and guest lecturers, collective discussions, individual and group research, and writing assignments. The final product of the seminar is a talk ready to be delivered at a graduate or national conference, or a book review or short article ready to be submitted for publication.

FREN 5350. Topics in Literature and Culture. (; 3 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Problem, period, author, or topic of interest. See Class Schedule. prereq: 3101 or equiv

FREN 5410. Topics in Quebecois Literature. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)

Study writing produced in Quebec as a literature of its own, not simply as a part of Canadian literature. Literature will be studied in relation to other North American literatures and to Francophone literature produced elsewhere in the world.

FREN 5431. Gender and Sexuality in Francophone Literature and Cinema. (3 cr. ; A-F only; Periodic Fall & Spring)

This course will introduce students to colonial and postcolonial representations of gender and sexuality in Francophone contexts. Through literary and cinematic works from the Caribbean, Maghreb, West Africa, and Quebec, we will examine constructions and deconstructions of gender roles and sexual norms in relation to other identity categories such as race, class, nation and religion. We will consider topics such as exotic portrayals of the other, repressive and rebellious eroticism, and ambivalent or unruly affirmations of identity. Taught in French.

FREN 5531. Sociolinguistics of French. (; 3 cr. ; Student Option; Periodic Fall)

Explores variation in the use of French associated with factors such as medium (oral/written), style (formal/informal), region, social and economic groups. prereq: Graduate student status and advanced proficiency in French

FREN 5614. Disabled Bodies, Minds and Selves in French Literature, Culture and Art. (3 cr. ; Student Option; Periodic Fall & Spring)

At any given moment in history, what are the socio-cultural forces that give rise to an understanding of physical difference?

What forces enable self-expression, self-determination, and liberation from this understanding? This course explores the history of disability and the representations of disability in literature, art, and culture. We will investigate theory and praxis of disability studies in France. Spanning the Renaissance to the present day, this course seeks to understand the experiences of disabled people and their communities in different periods, through a variety of genres and media, exploring medical histories, representation (for a public presumed to be able-bodied), memoir, activism, and art and literature by disabled people.

FREN 5852. Memory in French and Francophone Cinema. (; 3 cr. ; Student Option; Periodic Fall & Spring)

This course will examine cinema's privileged relationship with memory. Our itinerary will take us through key French and Francophone films, asking how these works record, construct and deconstruct individual and collective memories. Topics will include bearing witness to the traumas of war, genocide and colonization; commemorating resistance and fostering emancipation; interventions in identity politics; (re)partitions of rural and urban spaces; and the elusive divide between fiction, documentary and memoir. Students will be expected to master a vocabulary for the formal analysis of film. prereq: Students should have completed FREN 3016 with a minimum grade of B.

FREN 5995. Directed Teaching. (; 1 cr. ; S-N or Audit; Every Fall)

Directed teaching.

French and Italian (FRIT)

FRIT 1601. Migrants and Refugees in Mediterranean Cinema. (AH,GP; 3 cr. ; Student Option; Periodic Spring)

This course deals with films made in France, Spain, Italy, the Maghreb (Morocco, Algeria, and Tunisia), sub-Saharan Africa and the Levant (mostly Syria). All of the films tackle migration and most of them deal with the crossing of the Mediterranean Sea in particular. It focuses on how migrants, regular and clandestine migrations, as well as related themes, including globalization, hospitality and transnational modes of transportation have been filmed, discussed and written about in various types of discourses. Why and how do people emigrate? Where are the major destinations of migrants? What is Fortress Europe? What is the "global South"? What is the so-called refugee crisis? Who is a refugee? What impact has the Arab Spring had on contemporary migrations to Europe? How does mass media portray the global South? What do political discourses tell us about the European and North African handlings of recent human migratory movements? Can artists effectively put forward an alternate take on such issues? What types of responses in artistic productions as well as in the political and humanitarian arenas have failed attempts at crossing the Mediterranean Sea triggered? These are some of the questions we will address. Among the films that we will analyze?all shown in class?

are Chus Guti?rrez?s Return to Hansala, Reem Kherici?s Paris or Perish, Isma?l Ferroukhi?s The Grand Voyage and Gianfranco Rosi?s Fire at Sea. All films have English subtitles. The class will be conducted in English.

FRIT 3850. Topics in French and Italian Cinema. (; 3 cr. [max 9 cr.] ; Student Option; Every Fall & Summer)

Theme, problem, period, filmmaker, or topic of interest in French/Italian cinema. See Class Schedule. Taught in English. prereq: Knowledge of [French or Italian] helpful but not required

FRIT 5240. Topics in French & Italian Literatures & Cultures. (; 3 cr. [max 12 cr.] ; Student Option; Periodic Fall & Spring)

Topics dealing with intersections of French & Italian literatures & cultures. Taught in English.

FRIT 5999. Teaching of French and Italian: Theory and Practice. (; 3 cr. ; Student Option; Every Fall)

Theoretical and practical aspects of language learning and teaching applied to French and Italian. Includes history of foreign language teaching in 20th-century United States. Taught in English.

Gay, Lesbian, Bisexual, Transg (GLBT)

GLBT 1001. Introduction to GLBT Studies. (DSJ,SOCS; 3 cr. ; Student Option; Every Fall)

History of contemporary GLBT-identified communities. Terms of theoretical debates regarding sexual orientation, identity, and experience. Analyzes problems produced and insights gained by incorporating GLBT issues into specific academic, social, cultural, and political discourses.

GLBT 3211. History of Sexuality in Europe. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

History of sexuality in Europe, from ancient Greece to present. Plato's philosophy of love, St. Augustine's conception of sin, prostitution in 15th century, sexual science of Enlightenment. Industrial revolution and homosexual subcultures. Rape scares and imperialism. Eugenics and Nazi Germany.

GLBT 3212. Dissident Sexualities in U.S. History. (3 cr. ; A-F or Audit; Every Fall)

History of sexuality in United States. Emphasizes sexualities that have challenged dominant social/cultural norms. Development of transgender, bisexual, lesbian, gay identities/communities. Politics of sex across lines of race/ethnicity. Historical debates over controversial practices, including sex work.

GLBT 3301. Gay, Lesbian, Bisexual, and Transgender Social Movements in the United States. (; 3 cr. ; Student Option; Every Spring)

Interdisciplinary course. Development of GLBT social movements using social movement theory/service learning.

GLBT 3305. Queer Cinema. (AH; 3 cr. ; Student Option; Periodic Fall & Spring)

What "queer" and "queering" signify in relation to cinema. Directors, films, styles, genres

of queer cinema. Ways in which traditional narrative codes are challenged/repackaged. Ideological dimensions. Impact of political climate. Readings, screenings, discussions, assignments.

GLBT 3309. LGBTQ Literature: Then and Now. (DSJ,LITR; 3 cr. ; Student Option; Every Fall)

LGBTQIA life in the US has changed significantly over the past few decades. By examining a selection of poetry, prose, and film, our class will try to answer the questions: "How did we get to where we are today?" and "Where do we go next?" We will look at classic works in their historical contexts to see what was revolutionary about their publication; we will trace how they paved the way for all that followed. We will look at very new works to understand the concerns of twenty-first century LGBTQIA writers and readers. From the "lavender scare" to the Stonewall Riots to the AIDS pandemic to marriage equality to genderqueer and trans movements, we will explore how LGBTQIA authors and filmmakers have both responded to and shaped the ethos of our times.

GLBT 3404. Transnational Sexualities. (GP; 3 cr. ; Student Option; Periodic Fall & Spring) Lesbian/gay lives throughout world. Culturally-specific/transcultural aspects of lesbian/gay identity formation, political struggles, community involvement, and global networking. Lesbian/gay life in areas other than Europe and the United States.

GLBT 3456W. Sexuality and Culture. (DSJ,WI; 3 cr. ; Student Option; Periodic Fall & Spring)

Historical/critical study of forms of modern sexuality (heterosexuality, homosexuality, romance, erotic domination, lynching). How discourses constitute/regulate sexuality. Scientific/scholarly literature, religious documents, fiction, personal narratives, films, advertisements.

GLBT 3502. Transgender Studies Now. (DSJ; 3 cr. ; Student Option; Periodic Fall & Spring)

Transgender studies transforms ideas about gender, sexuality, identity, and biology. We look at how knowledge is made about transgender life across disciplines and media: film, fiction, and the internet, as well as medicine, history, anthropology, and gender studies. This course also asks how transgender social practices and community politics are embedded in dynamics of race, class, sexuality, nationality, and ability.

GLBT 3993. Directed Studies. (; 1-6 cr. ; A-F or Audit; Periodic Fall & Spring)

Guided individual study. GLBT topic not available through regular course offerings. Students work with faculty who share their research interests. Number of credits based on scope of project, student needs, and advising instructor's approval. prereq: GLBT studies minor, instr consent

GLBT 4101. Gender, Sexuality, and Politics in America. (DSJ,HIS; 3 cr. ; Student Option; Every Fall)

Ways public and private life intersect through the issues of gender, sexuality, family, politics, and public life; ways in which racial, ethnic, and class divisions have been manifest in the political ideologies affecting private life.

GLBT 4204. Sex, Love, & Disability. (3 cr. ; Student Option; Periodic Fall & Spring)

In America's cultural imagination, people with disabilities are figured either as childlike and asexual, or improperly hypersexual. For disabled people (or anyone perceived as disabled) this paradox has meant denial of sexual agency and gender expression, histories of forced sterilization and institutionalization, sociopolitical marginalization, and great risk of sexual violence (and even death). In this course, we'll examine this history to better understand our contemporary present. We'll analyze constructions of disability and sexuality as they are interwoven with gender, class, race, and citizenship. We will ask: What might it mean to desire disability? Is there a disability sexual culture? Do disabled people queer sex, or does sexuality queer disability? What is the relationship between GLBTQ and disability rights and liberation movements? Drawing from feminist, queer, and disability studies, we'll answer these questions (and more) by examining how the imagined able-bodymind structures our understanding of gender/sexuality, and how disability sexual cultures resist these norms.

GLBT 4403. Queering Theory. (; 3 cr. ; Student Option; Periodic Fall & Spring)

This course will give you a solid theoretical foundation in the field of queer studies in addition to explaining its relation to other scholarly traditions, including (but not limited to) feminist theory, GLBT studies, literary studies, psychoanalysis, and postmodernism. Over the course of the semester you will examine the historical forces that birthed queer politics and theory, become conversant in its conceptual basis, interrogate and analyze its various uses and applications, and finally apply it in your own arguments. prereq: Any GWSS or GLBT course

GLBT 4415. Transnational Body Politics.

(GP; 3 cr. ; A-F only; Periodic Fall & Spring) Our bodies are always already modified. How we shape our bodies can express our deepest feelings about who we are. Body modification can also represent cultural and subcultural identifications or expectations based on gender, race, class, and sexuality. But what we do with our bodies is never separate from the politics of cultural difference and fluctuating ideas of what is acceptable or unacceptable, civilized or uncivilized. These ideas are historically and culturally specific. This course looks at body modification on a transnational scale to ask how we come to know what differentiates "mutilation" from "correction." We ask how feminist, queer and critical race theories illuminate these debates, reading across historical, anthropological, medical, and literary texts. Weekly topics include gender, race, and cosmetic surgery; skin whitening technologies; transnational gender

reassignment; surgical tourism; female genital cutting; piercing, tattooing and scarification; the cultural politics of hair; and body modification in the context of transnational feminized labor.

GLBT 4502. Gender and Public Policy. (3 cr. ; Student Option; Periodic Fall & Spring) Public policy issues, processes, and histories as these affect women-, children-, and gender-related issues.

GLBT 5993. Directed Study. (; 1-12 cr. ; Student Option; Every Fall & Spring) Directed Study

Gender, Women, & Sexuality Std (GWSS)

GWSS 1001. Gender, Power, and Everyday Life. (; 3 cr. ; Student Option; Every Summer) U.S. multi-/cross-cultural studies of contemporary social, cultural, and personal conditions of women's lives.

GWSS 1002. Politics of Sex. (DSJ,SOCS; 3 cr. ; Student Option; Every Spring) Introductory survey of historical, cultural, psychological, and sociopolitical dimensions of analyzing gender/sexuality. Norms/deviances pertaining to gender/sexuality as differently enacted/understood by social groups in different time-/place-specific locations.

GWSS 1003W. Women Write the World. (GP,WI,LITR; 3 cr. ; Student Option; Every Fall) Concepts in literary studies. Poems, plays, short stories, novels, essays, letters by women from different parts of world. Focuses on lives, experiences, and literary expression of women, including basic concepts of women's studies.

GWSS 1004. Screening Sex: Visual and Popular Culture. (AH; 3 cr. ; Student Option; Fall Even, Spring Odd Year) Film history and theory; feminist critique of popular culture.

GWSS 1005. Engaging Justice. (CIV; 3 cr. ; Student Option; Fall Odd, Spring Even Year) U.S./cross-cultural studies of social movements/political organizing around justice/equality.

GWSS 1006. Skin, Sex, and Genes. (SOCS,TS; 3 cr. ; Student Option; Fall Odd Year) Interdisciplinary course that explores the tense relationships between science, medicine, and gender and sexuality.

GWSS 1007. Introduction to GLBT Studies. (DSJ,SOCS; 3 cr. ; Student Option; Every Fall) History of contemporary GLBT-identified communities. Terms of theoretical debates regarding sexual orientation, identity, experience. Analyzes problems produced/insights gained by incorporating GLBT issues into specific academic, social, cultural, political discourses.

GWSS 1916. Life and Debt: Gender, Race and Debt. (; 3 cr. ; A-F only; Every Fall) This course borrows its title from the film ?Life and Debt? by Stephanie Black, based on the essay ?A Small Place? by Jamaica Kincaid. The film examines the deployment of credit and

debt to establish and maintain hierarchies of power and wealth among nations. The course will explore the ways allocations of credit and debt are used to create, transform, or maintain gender roles and hierarchies, racial hierarchies, and other power relations, as well as economic relationships, at various scales, from global to the most local and interpersonal. This course thus provides students with the opportunity to situate one of the most difficult features of contemporary life ? debt ? in a larger context.

GWSS 3002V. Honors: Gender, Race and Class in the U.S.. (WI,DSJ; 3 cr. ; A-F only; Periodic Fall & Spring)

Comparative study of women, gender, race, class, sexuality in two or more ethnic cultures in U.S. prereq: Honors

GWSS 3002W. Gender, Race, and Class in the U.S.. (DSJ,WI; 3 cr. ; A-F only; Every Fall & Spring)

Comparative study of women, gender, race, class, sexuality in two or more ethnic cultures throughout U.S.

GWSS 3003. Gender and Global Politics.

(GP,SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Similarities/differences in women's experiences throughout world, from cross-cultural/historical perspective. Uses range of reading materials/ media (feminist scholarship, fiction, film, news media, oral history, autobiography).

GWSS 3102V. Honors: Feminist Thought and Theory. (AH,WI,CIV; 3 cr. ; A-F only; Every Fall)

Substantively, this course surveys the rich and varied history of influential feminist ideas. These ideas propel us to think critically about sex, gender, sexuality, and the categories that intersect with them; these ideas provide us with language to express ourselves more critically and creatively; these ideas enable us to rethink relationships of power and forge coalition-al values and connections across difference. This course also holds the field of feminism accountable for its influence, in hopes of contributing to more liberating feminist theories. Methodologically, this course develops students' skills in tracking arguments, understanding commonly used theoretical terms, learning how to apply theory to real life situations, and honing students' theoretical writing.

GWSS 3102W. Feminist Thought and Theory. (AH,WI,CIV; 3 cr. ; A-F only; Periodic Fall & Spring)

Substantively, this course surveys the rich and varied history of influential feminist ideas. These ideas propel us to think critically about sex, gender, sexuality, and the categories that intersect with them; these ideas provide us with language to express ourselves more critically and creatively; these ideas enable us to rethink relationships of power and forge coalition-al values and connections across difference. This course also holds the field of feminism accountable for its influence, in hopes of contributing to more liberating feminist theories. Methodologically, this course develops students' skills in tracking

arguments, understanding commonly used theoretical terms, learning how to apply theory to real life situations, and honing students' theoretical writing.

GWSS 3203W. Blood, Bodies and Science. (SOCS,WI,TS; 3 cr. ; Student Option; Every Fall & Summer)

What does the ?social life? of Coronavirus and Covid-19 look like? Do pandemics have politics? Are diseases biomedical or socio-political phenomena? Why are African-Americans disproportionately affected by Covid-19 and HIV in the US? Why did the US become a hotspot for the rapid transmission of Coronavirus and what does this reveal about the market-based healthcare system? What are the global stories, struggles, failures, and successes of the Covid-19 pandemic? What will a post-pandemic world look like? In this class, you will answer these questions as they learn about the intersections of science and technology with the politics of race, ethnicity, gender, sexuality, and disability.

GWSS 3208. Transgender Health. (; 3 cr. ; A-F only; Every Summer)

Transgender Health is an online, 3 credit, 8-week course, in which we will learn how the social categories of sex and gender transform our understanding of health and medicine. This course offers feminist perspectives on transgender health care and considers how health care and social services professionals serve (or fail to serve) the diverse needs of transgender patients and clients. Students will engage with literature from feminist and queer studies, the media, public health, medicine, social work, and legal studies.

GWSS 3212. Chicana Feminism: La Chicana in Contemporary Society. (AH,DSJ; 3 cr. ; Student Option; Every Fall & Spring)

Scholarly/creative work of Chicanas or politically defined women of Mexican American community. Interdisciplinary. Historical context, cultural process, and autoethnography.

GWSS 3215. Bodies That Matter: Feminist Approaches to Disability Studies. (DSJ; 3 cr. ; Student Option; Periodic Spring)

The COVID-19 pandemic has made questions of disability and ableism central and visible for all of us as never before. Dis/ability is not a physical or mental defect but a form of social meaning mapped to certain bodies in larger systems of power and privilege. Feminist approaches explore dis/ability as a vector of oppression intersecting and constituted through race, class, gender, sexuality, and citizenship. The course examines ideologies of ableism and the material realities of such oppression, and works toward imagining and constructing a more just and equitable society. As health care is differentially distributed or limited for people who are sickened by COVID-19, we see that systems of social and economic power determine the life chances of those who claim, or are claimed by disability. Meanwhile, people with disabilities have developed many daily life strategies that can be models for everyone coping with the pandemic.

GWSS 3218. Politics of Reproduction. (3 cr. ; A-F only; Every Fall & Spring)

We often think of reproduction solely in terms of physiological events like pregnancy, delivery, or menstruation that occur in (or to) individual female bodies. Additionally, physicians and demographers appear to be the primary professional experts when it comes to managing and quantifying such reproductive events. In contrast, this class grapples with reproduction as a social and biological set of meanings and processes through which racial, gender, sexual, and socio-economic inequalities have been amplified, reconfigured, and contested across time and space. We trace how control over reproduction has been critical to a variety of professional, economic and political endeavors, including the rise and consolidation of disciplines like obstetrics-gynecology and demography; the maintenance of white privilege in colonial spaces and the metropole; post-World War II techno-scientific projects of "development" in the global South; and the emergence of the welfare state. The course identifies inequalities along the lines of race, class, gender, sexuality, and nationality in reproductive experiences and outcomes in a wide range of countries, including Cameroon, China, Cuba, Sudan, Soviet Russia, Romania, Zimbabwe, India, Senegal, Burkina Faso, South Africa, Nigeria, and the US. We locate individually embodied reproductive meanings and practices related to pregnancy, delivery, abortion, post-abortion care, contraception, sterilization, surrogacy, and child care in regional, national and global political economies. In other words, we investigate continuities and disruptions in reproductive politics between the individual body and the social body; the past, present and future; and local and global arenas. By exploring how reproduction operates domestically and globally as a mechanism of governance and social and economic stratification, we also consider possibilities for reproductive justice.

GWSS 3301W. Women Writers. (LITR,WI; 3 cr. ; Student Option; Every Spring)

Complexities of women's roles and way women writers have used various genres of literature to articulate personal and social struggles. Fiction, poetry, drama, critical nonfiction texts. Fidelity/ betrayal within relationships and societal perceptions. What images of femininity do these writers convey? How do formal and stylistic devices transform meaning?

GWSS 3302. Women and the Arts. (AH,DSJ; 3 cr. ; Student Option; Every Fall)

Study of women in the arts, as represented and as participants (creators, audiences). Discussion of at least two different art forms and works from at least two different U.S. ethnic or cultural communities.

GWSS 3303W. Writing Differences: Literature by U.S. Women of Color. (DSJ,WI,LITR; 3 cr. ; Student Option; Fall Odd Year)

Interpret/analyze poetry, fiction, and drama of U.S. women minority writers. Relationship of writer's history, ethnicity, race, class, and gender to her writings.

GWSS 3305. Queer Cinema. (AH; 3 cr. ; Student Option; Periodic Fall & Spring)

What "queer" and "queering" signify in relation to cinema. Directors, films, styles, genres of queer cinema. Ways in which traditional narrative codes are challenged/repackaged. Ideological dimensions. Impact of political climate. Readings, screenings, discussions, assignments.

GWSS 3306. Pop Culture Women. (AH,DSJ; 3 cr. ; Student Option; Every Fall & Spring) Contemporary U.S. feminism as political/intellectual movement. Ways in which movement has been represented in popular culture.

GWSS 3307. Feminist Film Studies. (AH,DSJ; 3 cr. ; Student Option; Every Fall) Construction of different notions of gender in film, social uses of these portrayals. Lectures on film criticism, film viewings, class discussions.

GWSS 3390. Topics in Visual, Cultural, and Literary Studies. (; 3 cr. [max 6 cr.] ; Student Option; Periodic Fall & Spring) Topics specified in Class Schedule.

GWSS 3402. Pleasure, Intimacy and Violence. (3 cr. ; Student Option; Spring Odd Year) Gender/sexual?violence?to?poststructural,?anti?racist?theories/debates?about?social?construction?of?sexuality. How?intimacy/violence?are?co?-constituted?within?normative frameworks?of?U.S.?governmentality.?Writings?by?black feminist?criminologists?who?have?linked?incarceration,?welfare?reform,?other?forms?of?state?regulation?to?deeply? systemic?forms?of?violence?against?people?of?color.

GWSS 3404. Transnational Sexualities. (GP; 3 cr. ; Student Option; Fall Odd, Spring Even Year) Lesbian/gay lives throughout world. Culturally-specific/transcultural aspects of lesbian/gay identity formation, political struggles, community involvement, and global networking. Lesbian/gay life in areas other than Europe and the United States.

GWSS 3406. Gender, Labor, and Politics. (GP,SOCS; 3 cr. ; Student Option; Every Fall) Historical developments/contemporary manifestations of women's participation in labor force/global economy. Gender as condition for creation/maintenance of exploitable category of workers. How women's choices are shaped in various locations. Women's labor organizing. GWSS / Gender, Women, and Sexuality Studies / Gender Studies

GWSS 3406H. Honors: Gender, Work, Labor. (GP,SOCS; 3 cr. ; A-F only; Every Fall) Historical developments/contemporary manifestations of women's participation in labor force/global economy. Gender as condition for creation/maintenance of exploitable category of workers. How women's choices are shaped in various locations. Women's labor organizing.

GWSS 3409W. Asian American Women's Cultural Production. (AH,WI,DSJ; 3 cr. ; Student Option; Every Fall) Analysis of media, art, literature, performance, on artistic contributions. History, politics,

culture of Asian American women. Interpret cultural production to better understand role of race, gender, nation within American society/citizenship.

GWSS 3415. Feminist Perspectives on Domestic Violence and Sexual Assault. (DSJ; 3 cr. ; A-F only; Every Fall) History of and contemporary thinking about public policies and legal remedies directed toward domestic violence and sexual assault. How notions of public/private spheres and social constructions of gender roles, agency, and bodies contribute to attitudes/responses.

GWSS 3490. Topics in Political Economy and Global Studies. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer) Topics specified in Class Schedule.

GWSS 3501. Gay, Lesbian, Bisexual and Transgender Social Movements in the United States. (3 cr. ; Student Option; Every Spring) Interdisciplinary course. Development of GLBT social movements using social movement theory/service learning.

GWSS 3502. Transgender Studies Now. (DSJ; 3 cr. ; Student Option; Periodic Fall & Spring) Transgender studies transforms ideas about gender, sexuality, identity, and biology. We look at knowledge is made about transgender life across disciplines and media: film, fiction, and the internet, as well as medicine, history, anthropology, and gender studies. Also asks how transgender social practices and community politics are embedded in dynamics of race, class, sexuality, nationality and ability.

GWSS 3503. Women and the Law. (; 3 cr. ; Student Option; Periodic Fall & Spring) Legal system as it relates to women: historical legal approach to issues related to constitutional rights of women.

GWSS 3505V. Girls, Girlhood, and Resistance. (WI; 0-3 cr. ; A-F only; Fall Odd Year) A critical engagement with what constitutes "girlhood" and "resistance" through comparative analyses of girls' resistance and activism across North America.

GWSS 3505W. Girls, Girlhood, and Resistance. (WI; 3 cr. ; Student Option; Fall Odd Year) A critical engagement with what constitutes "girlhood" and "resistance" through comparative analyses of girls' resistance and activism across North America.

GWSS 3515. Comparative Indigenous Feminisms. (GP; 3 cr. ; Student Option; Periodic Fall & Spring) The course will examine the relationship between Western feminism and indigenous feminism as well as the interconnections between women of color feminism and indigenous feminism. In addition to exploring how indigenous feminists have theorized from 'the flesh' of their embodied experience of colonialism, the course will also consider how indigenous women are articulating decolonization and the embodiment of

autonomy through scholarship, cultural revitalization, and activism.

GWSS 3549. U.S. Women's Legal History. (DSJ,HIS; 3 cr. ; A-F or Audit; Fall Odd Year) Women's legal status, from colonial era through 20th century. Women's citizenship, civil rights. Marriage, divorce, and child custody. Reproductive/physical autonomy/integrity. Economic/educational equality. prereq: Soph or jr or sr

GWSS 3590. Topics: Social Change, Activism, Law, and Policy Studies. (; 3 cr. [max 6 cr.] ; Student Option; Periodic Fall, Spring & Summer) Topics specified in Class Schedule.

GWSS 3611. Stories, Bodies, Movements. (6 cr. ; A-F only; Periodic Fall & Spring) For most of us, stories seem to simply 'happen.' We listen to stories, we tell stories, we are moved by stories, and we retell stories. However, every act of telling stories involves making decisions or moves, and each re-telling of a familiar story may either give birth to new meanings, nuances, and affects, or, it may erase their possibility. Thus, each storyteller can be seen as a translator of stories with a responsibility to retell stories ethically. It is precisely through these translational acts that all politics become politics of storytelling. In this course, we will consider the ways in which the politics of the global and the intimate derive their meanings, effects, and affects from the circulation, transaction, and re-tellings of stories within and across borders. We will ask how a praxis of ethical engagement with politics can be imagined as a praxis of receiving and retelling stories. By immersing ourselves in the process of remembering, telling, listening, trimming, interweaving, distilling, and performing stories, we will consider how ethical receiving and retelling of stories involves continuous revising, repositioning, and re-theorizing of such vexed and entangled terrains and terminologies as identity, community, rights, and justice, as well as the contingent meanings of knowledge, truth, and ethics. This course engages this terrain through a mode of active learning in which all the participants will read and reflect, listen and discuss, tell and retell, watch and play, move and perform collectively. By becoming aware of the ways in which our minds-bodies-souls are inserted in the receiving and translation of stories, we will grapple together with the ways in which our bodies--as our embodiments--help to relationally shape not only our own performances but also our responses to the performances of other living and moving bodies around us. We will learn from writings, film, songs, and plays by writers, artists, activists, and thinkers from a range of historical and contemporary locations and struggles. These include: Marie Lily Cerat, W. E. B. Du Bois, Suheir Hamad, Sterlin Harjo, Naeem Inayatullah, June Jordan, AnaLouise Keating, Kauanui, J. Kehaulani, Audre Lorde, Viet Thanh Nguyen, Middle East Research and Information Project, Alok Rai, Nina Simone, Leanne Betasamosake Simpson, Sangtin Writers, Standing Rock Collective, Eve Tuck,

Patrick Wolfe, and K. Wayne Yang. Many of the 'Acts' in this course will be co-facilitated with local or international artists and writers. There are no prerequisites for this course. We invite people from all kinds of locations and journeys to join us in this collective exploration. For further information, email: nagar@umn.edu. Grading Basis: A/F. The course requires all the participants to do sustained work and deep reflections, enjoy the process of imagining and creating with peers in a non-competitive environment.

GWSS 3612. Global Tourism, Ecology and the Creative Arts in Indonesia. (3 cr. [max 6 cr.] ; Student Option; Periodic Summer)

Students in this course will study cultural traditions, the creative industry, and tourism in Indonesia as an important part of the economy of the global south. The course will be held on the sites of dance performances, temples, heritage houses, and other cultural sites. Artists, cultural practitioners, cultural ministry officers, and policy makers for the tourism industry will serve as guest lecturers throughout. The course will be centered on creative intervention through the tourism industry and the arts and the particularity of creative impulse, gender difference, value of tradition, and modernity as a concept in Balinese culture.

GWSS 3626W. Witches, Seers and Saints: Women, Gender and Religion in the US. (WI; 3 cr. ; Student Option; Periodic Fall & Spring)

This course examines the development and ramifications of gender ideologies within several religious groups in North America from the colonial period to the present and explores women's strategies that have contributed to and resisted these ideologies.

GWSS 3681. Gender and the Family in the Islamic World. (; 3 cr. ; A-F only; Periodic Spring)

This course explores the experiences of Muslim women and Muslim families from a historical and comparative perspective. Expanding the discussion on Muslim women's lives and experiences beyond the Middle East, by also centralizing on the experiences of Muslim women and families outside of this geographical area highlights the complex and diverse everyday experiences of Muslim women around the world. This wider lens exposes the limitations intrinsic in the stereotypical representation of Muslims in general and Muslim women in particular. We will explore the intricate web of gender and family power relations, and how these are contested and negotiated in these societies. Some of the themes the course explores include the debates on Muslim women and colonial representations, sexual politics, family, education and health, women and paid work, gender and human rights, and Islamic feminisms debates. prereq: At least soph; 1001 recommended

GWSS 3690. Topics: Women, Society, and Race in the United States. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Topics specified in Class Schedule.

GWSS 3896. Internship for Academic Credit. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)

An applied learning experience in an agreed-upon, short-term, supervised workplace activity, with defined goals, which may be related to a student's major field or area of interest. The work can be full or part time, paid or unpaid, primarily in off-campus environments. Internships integrate classroom knowledge and theory with practical application and skill development in professional or community settings. The skills and knowledge learned should be transferable to other employment settings and not simply to advance the operations of the employer. Typically the student's work is supervised and evaluated by a site coordinator or instructor

GWSS 3993. Directed Study. (1-12 cr. ; Student Option; Every Fall, Spring & Summer) TBD Prereq instr consent, dept consent, college consent.

GWSS 3994. Directed Research. (1-12 cr. ; Student Option; Every Fall & Spring) TBD Prereq instr consent, dept consent, college consent.

GWSS 4001. Nations, Empires, Feminisms. (; 3 cr. ; A-F only; Spring Even Year) Feminist critiques of the nation-state and citizenship, political economy and development, globalization, and/or empire and colonialism. Overview of the broader literature and an interrogation of specific attendant questions (such as how do feminists theorize state violence; what are feminist and queer critiques of U.S. empire; and how do feminists theorize globalization from above and below).

GWSS 4002. Politics of Engagement and Social Justice. (CIV; 3 cr. ; A-F only; Fall Odd Year)

Ways in which feminist scholars have thought about and worked to complicate the opposition between theory and praxis. Diverse efforts by intellectuals situated within the Western academy to produce scholarship that is committed to deinstitutionalizing knowledge production and relevant to political struggles confronted by their own material and institutional inequalities.

GWSS 4003. Science, Bodies, Technologies. (; 3 cr. ; Student Option; Spring Odd Year)

Feminist approaches to scientific methods and practices. Relationship between scientific practices and social relations, emphasizing the larger social, political, and economic context in which scientific knowledge production takes place. How scientific knowledge structures relationships of power and inequality, and constructs understandings of bodies and identities. Ways in which science shapes meanings of sex, race, gender and sexuality.

GWSS 4103. Transnational Feminist Theories. (GP; 3 cr. ; Student Option; Periodic Fall & Spring)

Western/non-Western feminist theories in conversation. Historical, cultural, political context. Relation of theory to activism.

GWSS 4107. Feminist Methods. (3 cr. ; A-F only; Every Fall)

This course considers the relationship between theory and research in feminist studies. Students review and examine the key issues of feminist scholarship. Methods and methodologies are learned through developing a research proposal for the senior capstone.

GWSS 4108. Senior Capstone: Writing. (3 cr. ; A-F only; Every Fall & Spring)

The GWSS 4108 is the capstone of a GWSS major's education in GWSS and an opportunity for them to produce a thorough and significant research project. While the final version of the project can take several different forms, each one requires the student to do a deep examination of your topic. GWSS 4108 is a 3-credit class that allows students the opportunity to be surrounded by other GWSS majors as you work through their projects collaboratively. This class allows students to keep organized and on track with their projects, be a part of a writing and research community, and have their work read and critiqued by others so their end results are nuanced, polished pieces of writing and research.

GWSS 4122. Philosophy and Feminist Theory. (; 3 cr. ; Student Option; Periodic Fall)

Encounters between philosophy/feminism. Gender's influence in traditional philosophical problems/methods. Social role of theorist/theorizing as they relate to politics of feminism. This course surveys central debates in feminist philosophy, with a focus on the methods and virtues of resistance. Along the way, we will consider the question of how we should live in an oppressive society. Topics may include intimidation, gaslighting, silencing, epistemic injustice, emotional labor, intersectionality, resistance, anger, and violence. prereq: 8 crs in [philosophy or women's studies] or instr consent

GWSS 4204. Sex, Love, & Disability. (3 cr. ; Student Option; Periodic Fall & Spring)

In America's cultural imagination, people with disabilities are figured either as childlike and asexual, or improperly hypersexual. For disabled people (or anyone perceived as disabled) this paradox has meant denial of sexual agency and gender expression, histories of forced sterilization and institutionalization, sociopolitical marginalization, and great risk of sexual violence (and even death). In this course, we'll examine this history to better understand our contemporary present. We'll analyze constructions of disability and sexuality as they are interwoven with gender, class, race, and citizenship. We will ask: What might it mean to desire disability? Is there a disability sexual culture? Do disabled people queer sex, or does sexuality queer disability? What is the relationship between GLBTQ and disability rights and liberation movements? Drawing from feminist, queer, and disability studies, we'll answer these questions (and more) by examining how the imagined able-bodymind structures our understanding of gender/sexuality, and how disability sexual cultures resist these norms.

GWSS 4303W. Writing Differences: Literature by U.S. Women of Color.

(DSJ,WI,LITR; 3 cr. ; Student Option; Fall Odd Year)

Interpret/analyze poetry, fiction, drama of U.S. women minority writers. Relationship of writer's history, ethnicity, race, class, gender to writings.

GWSS 4401. Chicana/Latina Cultural Studies.

(AH,DSJ; 3 cr. ; Student Option; Fall Even Year)

Readings in Chicana/Latina cultural studies. TV, film, art, music, dance, theatre, literature. Identity/sexuality. Production of culture/theory.

GWSS 4403. Queering Theory. (3 cr. ; Student Option; Periodic Fall & Spring)

This course will give you a solid theoretical foundation in the field of queer studies in addition to explaining its relation to other scholarly traditions, including (but not limited to) feminist theory, GLBT studies, literary studies, psychoanalysis, and postmodernism. Over the course of the semester you will examine the historical forces that birthed queer politics and theory, become conversant in its conceptual basis, interrogate and analyze its various uses and applications, and finally apply it in your own arguments. prereq: Any GWSS or GLBT course

GWSS 4406. Black Feminist Thought in the American and African Diasporas. (; 3 cr. ; Student Option; Periodic Spring)

Critically examine spatiality of African descendant women in Americas/larger black diaspora. Writings from black feminist/queer geographies, history, contemporary cultural criticism. Recent black feminist theorizing.

GWSS 4415. Transnational Body Politics. (GP; 3 cr. ; A-F only; Periodic Fall & Spring)

Our bodies are always already modified. How we shape our bodies can express our deepest feelings about who we are. Body modification can also represent cultural and subcultural identifications or expectations based on gender, race, class, and sexuality. But what we do with our bodies is never separate from the politics of cultural difference and fluctuating ideas of what is acceptable or unacceptable, civilized or uncivilized. These ideas are historically and culturally specific. This course looks at body modification on a transnational scale to ask how we come to know what differentiates "mutilation" from "correction." We ask how feminist, queer, and critical race theories illuminate these debates, reading across historical, anthropological, medical and literary texts. Weekly topics include gender, race and cosmetic surgery; skin whitening technologies; transnational gender reassignment; surgical tourism; female genital cutting; piercing, tattooing and scarification; the cultural politics of hair; and body modification in the context of transnational feminized labor.

GWSS 4490. Topics: Political Economy and Global Studies. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Topics specified in Class Schedule. prereq: Sr or grad student or instr consent

GWSS 4502. Gender and Public Policy. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Public policy issues, processes, and histories as these affect women-, children-, and gender-related issues.

GWSS 4590. Topics: Social Change, Activism, Law, and Policy Studies. (; 3 cr. ; Student Option; Spring Even Year)

Topics specified in Class Schedule.

GWSS 4980. Directed Instruction. (1-8 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Guided individual reading or study.

GWSS 4993. Directed Study. (; 1-5 cr. [max 10 cr.] ; Student Option; Every Fall, Spring & Summer)

TBD prereq: Filled out student/faculty contract, instr consent, dept consent, college consent

GWSS 4994. Directed Research. (1-8 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Guided individual reading or study.

GWSS 5104. Transnational Feminist Theory. (; 3 cr. ; Student Option; Fall Odd Year)

Third World and transnational feminisms. Interrogating the categories of "women," "feminism," and "Third World." Varieties of power/oppression that women have endured/resisted, including colonization, nationalism, globalization, and capitalism. Concentrates on postcolonial context.

GWSS 5122. Philosophy and Feminist Theory. (; 3 cr. ; Student Option; Periodic Fall)

Encounters between philosophy/feminism. Gender's influence in traditional philosophical problems/methods. Social role of theorist/theorizing as they relate to politics of feminism. This course surveys central debates in feminist philosophy, with a focus on the methods and virtues of resistance. Along the way, we will consider the question of how we should live in an oppressive society. Topics may include intimidation, gaslighting, silencing, epistemic injustice, emotional labor, intersectionality, resistance, anger, and violence. prereq: 8 crs in [philosophy or women's studies] or instr consent

GWSS 5190. Topics: Theory, Knowledge, and Power. (; 3 cr. ; Student Option; Fall Odd, Spring Even Year)

Topics specified in Class Schedule.

GWSS 5290. Topics: Biology, Health, and Environmental Studies. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Topics specified in class schedule.

GWSS 5390. Topics: Visual, Cultural, and Literary Studies. (; 3 cr. [max 6 cr.] ; Student Option; Periodic Fall & Spring)

Topics specified in Class Schedule.

GWSS 5406. Black Feminist Thought in the American and African Diasporas. (; 3 cr. ; Student Option; Periodic Spring)

Critically examines spatiality of African descendant women in Americas/larger black diaspora. Writings from black feminist/queer geographies, history, contemporary cultural criticism. Recent black feminist theorizing.

GWSS 5490. Topics: Political Economy and Global Studies. (; 3 cr. [max 12 cr.] ; Student Option; Every Spring)

Topics specified in Class Schedule.

GWSS 5502. Gender and Public Policy. (3 cr. ; Student Option; Periodic Fall & Spring)

Public policy issues, processes, and histories as these affect women-, children-, and gender-related issues.

GWSS 5503. Queering Theory. (3 cr. ; Student Option; Periodic Fall & Spring)

This course will give you a solid theoretical foundation in the field of queer studies in addition to explaining its relation to other scholarly traditions, including (but not limited to) feminist theory, GLBT studies, literary studies, psychoanalysis, and postmodernism. Over the course of the semester you will examine the historical forces that birthed queer politics and theory, become conversant in its conceptual basis, interrogate and analyze its various uses and applications, and finally apply it in your own arguments. prereq: Any GWSS or GLBT course

GWSS 5993. Directed Study. (; 1-12 cr. ; Student Option; Every Fall, Spring & Summer)

TBD

GWSS 5994. Directed Instruction. (; 1-12 cr. [max 36 cr.] ; Student Option; Every Fall, Spring & Summer)

TBD

GWSS 5995. Directed Research. (; 1-8 cr. [max 36 cr.] ; Student Option; Every Fall & Spring)

TBD

General Dentistry (GEND)**GEND 5151. Advanced General Dentistry Seminar I.** (; 5-10 cr. ; S-N or Audit; Every Fall & Summer)

Clinical seminars with emphasis on treatment planning, case presentation, techniques and materials, comprehensive oral healthcare and maintenance, and issues in practice management. Correlated with concurrent clinical experiences.

GEND 5152. Advanced General Dentistry Seminar II. (; 5-10 cr. ; S-N or Audit; Every Fall)

Clinical seminars with emphasis on treatment planning, case presentation, techniques and materials, comprehensive oral healthcare and maintenance, and issues in practice management. Correlated with concurrent clinical experiences.

GEND 5153. Advanced General Dentistry Seminar III. (; 2-10 cr. ; S-N or Audit; Every Fall & Spring)

Clinical seminars with emphasis on treatment planning, case presentation, techniques and materials, comprehensive oral healthcare and maintenance, and issues in practice management. Correlated with concurrent clinical experiences.

GEND 5254. Advanced General Dentistry Clinic I. (; 5-15 cr. ; S-N or Audit; Every Fall & Summer)

Comprehensive oral health care delivered in a variety of settings, emphasizing complex restorative care, coordinating care with dental and medical specialists, special needs patients, and advanced techniques.

GEND 5255. Advanced General Dentistry Clinic II. (; 5-15 cr. ; S-N or Audit; Every Fall)

Comprehensive oral health care delivered in a variety of settings, emphasizing complex restorative care, coordinating care with dental and medical specialists, special needs patients, and advanced techniques.

GEND 5256. Advanced General Dentistry Clinic III. (; 5-15 cr. ; S-N or Audit; Every Fall & Spring)

Comprehensive oral health care delivered in a variety of settings, emphasizing complex restorative care, coordinating care with dental and medical specialists, special needs patients, and advanced techniques.

GEND 5261. Advanced General Dentistry Clinical Administration I. (; 5-10 cr. ; S-N or Audit; Periodic Fall & Spring)

Field experience in community dental clinic practice and administration.

GEND 5262. Advanced General Dentistry Clinical Administration II. (; 5-10 cr. ; S-N or Audit; Every Fall)

Field experience in community dental clinic practice and administration.

GEND 5263. Advanced General Dentistry Clinical Administration III. (; 1-10 cr. ; S-N or Audit; Every Fall & Spring)

Field experience in community dental clinic practice and administration.

GEND 5264. Advanced General Dentistry Clinic IV. (; 1-15 cr. ; S-N or Audit; Every Summer)

Comprehensive oral health care delivered in a variety of settings, emphasizing complex restorative care, coordinating care with dental and medical specialists, special needs patients, and advanced techniques.

GEND 5265. Advanced General Dentistry Clinic V. (; 1-15 cr. ; S-N or Audit; Every Fall)

Comprehensive oral health care delivered in a variety of settings, emphasizing complex restorative care, coordinating care with dental and medical specialists, special needs patients, and advanced techniques.

GEND 5266. Advanced General Dentistry Clinic VI. (; 1-15 cr. ; S-N or Audit; Every Fall & Spring)

Comprehensive oral health care delivered in a variety of settings, emphasizing complex restorative care, coordinating care with dental and medical specialists, special needs patients, and advanced techniques.

Genetics, Cell Biol/Developmnt (GCD)

GCD 2002W. Ethical and Social Challenges in Genetics. (TS,WI; 3 cr. ; A-F only; Every Fall)

For nonscientists. Advances in genetics and their application to society. Ethical and social issues of advancements in genomics and

genetics in our everyday lives. prereq: BIOL 1009 or equiv

GCD 2171. Stem Cells in Biomedicine and Society. (TS; 3 cr. [max 6 cr.] ; Student Option; Every Spring)

A course that focuses on the general properties of stem cells, their potential uses in biomedicine, and the potential impact of their use on society. The course is suitable for students who have successfully completed at least one general biology course that included coverage of basic genetics and cell biology. Stem cells are one of the rapidly growing topics in biology. Research into stem cells ranges from basic biology to regeneration to clinical applications to ethics. In this course, you will learn the general features of embryonic, artificial, or adult-tissue stem cells: how they contribute to tissue regeneration, how scientists create and manipulate stem cells, what scientists do with them, what the public considers stem cell research and why. Then, you will learn about bone marrow transplantation, an established stem cell-based therapy, and various diseases and potential applications of stem cells to treat/cure the diseases. By the end of this course, you will have deeper insights into stem cells. Recommended prerequisites: BIOL1009 (General Biology), BIOL1951 (Foundations of Biology Lecture I for Biological Sciences Majors) or an equivalent General Biology course that includes basic coverage of genetics and cell biology This course can NOT be used as an elective for some CBS majors, such as the GCD major. Check the Program Requirements for your major to determine if it can be used as an elective.

GCD 3022. Genetics. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Mechanisms of heredity, implications for biological populations. Applications to practical problems. prereq: Introductory biology course such as Biol 1009

GCD 3033. Principles of Cell Biology. (; 3 cr. ; A-F only; Every Fall & Spring)

Components and activities common to eukaryotic cells. Chromosomes, membranes, organelles and the cytoskeleton, and processes including cellular communication, replication, motility, transport and gene expression. Relevance to human health and medicine. Appropriate for non-CBS majors. prereq: BIOL 1009 or equiv

GCD 3035. Culture, Identity & Precision Medicine. (2 cr. ; A-F or Audit; Every Fall)

Working effectively across cultural differences is essential to healthcare. As we reduce healthcare disparities and improve access to treatment, cultural competence will only become more important. This course will explore issues of culture and identity (broadly defined) relevant to the practice of precision medicine (the practice of using genomic information to predict risk, inform diagnosis, and plan treatment for medical issues). Examples of the intersections of culture/identity and precision medicine include incorporating religious beliefs and traditions into treatment or prevention recommendations, how to document

gender inclusively and accurately in medical records, underrepresentation of minority groups in research databases, and identifying systemic barriers to access. Students will cultivate a better understanding of their own intersectional identity, build language to effectively address cultural differences in healthcare interactions, and critically assess the research and practice of genomic healthcare. This course is open to all students interested in culture and identity in healthcare, as the lessons will translate to all allied health fields.

GCD 3485. Bioinformatic Analysis: Introduction to the Computational Characterization of Genes and Proteins. (; 4 cr. ; A-F only; Every Fall, Spring & Summer)

Bioinformatic analysis is the exploration of molecular sequence, structure, and function using online tools and databases. In this class, we'll learn to use some of the most powerful tools available for biologists to investigate the nature of genes and proteins. We will each explore a gene and the protein it encodes that no one before us has studied. We will learn to analyze and interpret the diverse forms of bioinformatic data we obtain, and we will consider how the data we find allows us to generate and evaluate original hypotheses that can be tested in the laboratory. This is a hands-on course. While the class has no exams, it does require the completion of four problem sets and a summative final project over the course of the semester. It also involves doing some peer review of classmates' work. prereq: introductory course in genetics and cell biology such as Foundations

GCD 3486. Personal Genome Analysis. (3 cr. [max 4 cr.] ; A-F only; Every Spring)

In this course, students will analyze their personal genome data. They will gain experience using computer applications and online databases of human genetic information. They will learn about their ancestry, their regional origins, and their risks of genetically linked disease. They will learn how to put human genome results into context and how to explain human genomics in non-technical language. prereq: Biol 2003/2003H

GCD 4005W. Cell Biology-Writing Intensive. (WI; 4 cr. ; A-F only; Every Spring)

Processes fundamental to cells. Emphasizes eukaryotic cells. Assembly/function of membranes/organelles. Cell division, cell form/movement, intercellular communication, transport, secretion pathways. Cancer cells, differentiated cells. prereq: GCD major, Biol2003/2003H or Biol4003 or grad

GCD 4025. Cell Biology, Development & Regeneration Laboratory. (3 cr. ; Student Option; Every Spring)

This course is designed for juniors and seniors to learn experimental approaches and techniques to study cellular processes and stem cell biology during animal development and tissue regeneration. Students will be exposed to the advantages of different model systems that include cultured cells, chick, *C. elegans* and zebrafish. Students will learn to manipulate the cytoskeleton, perform cell differentiation, RNAi and regeneration assays,

and to image both fixed tissue and live animal samples with conventional light microscopes as well as cutting edge technology, including super-resolution and multi-photon microscopes. prereq: Biol 2003/2003H or instructor permission; Recommended prerequisite: Biol 4004 or GCD 4005W (priority enrollment to GCD majors)

GCD 4034. Molecular Genetics and Genomics. (; 3 cr. ; Student Option; Every Fall)

Molecular genetics and genomics of eukaryotes. Course emphasizes mechanisms of gene regulation and how these are studied. Current strategies used to study the activity and function of genes and genomes, including the role of chromatin, will be covered. Techniques will include gene knockouts/ knockdown, genome engineering, genome-wide analysis of RNA and protein expression and function, as well as genome-wide protein binding and chromatin interaction mapping. Technologies covered will include next-generations and third-generation sequencing and CRISPR-based strategies for gene modification and precision gene regulation. Students will analyze and present recent primary papers in molecular genetic and genomics. prereq: BIOL 4003

GCD 4111. Histology: Cell and Tissue Organization. (; 4 cr. ; Student Option; Every Spring)

Structure/function of vertebrate tissues/organs. Electron microscopy, light microscopy, physiology, cell biology of higher animals. Light microscopy of mammalian tissues. prereq: GCD 3033 or BIOL 4004 or instructor consent

GCD 4143. Human Genetics and Genomics. (; 3 cr. ; Student Option; Every Spring)

Human Genetics ? the science of how our genomes function, vary, and shape our unique, individual characteristics ? is a rapidly expanding field with major implications for medical and fundamental research, clinical practice, and many other areas. In this course, students will learn about the principles of human genetics & genomics at the levels of molecules, cells, individuals, and populations. Topics include patterns of inheritance; the molecular causes and biochemical basis of genetic disorders; disease gene identification; the origin and distribution of human genetic variation; genetic influences on common, complex diseases; epigenetics and regulation of gene expression; genomic technologies for understanding human genomes; cancer genetics; behavioral genetics; human ancestry and evolution; applications such as genetic screening, genetic counseling, and gene therapy; and ethical questions raised by emerging abilities to edit the human genome, modify the human germline, and many more. prereq: Biol 4003 or instructor consent

GCD 4144W. Human Genetics - Writing Intensive. (WI; 4 cr. ; Student Option No Audit; Every Spring)

Human Genetics is the science of how our genomes function, vary, and shape our unique, individual characteristics and is a rapidly expanding field with major implications for

medical and fundamental research, clinical practice, and many other areas. In this course, students will learn about the principles of human genetics & genomics at the levels of molecules, cells, individuals, and populations. Topics include patterns of inheritance; the molecular causes and biochemical basis of genetic disorders; disease gene identification; the origin and distribution of human genetic variation; genetic influences on common, complex diseases; epigenetics and regulation of gene expression; genomic technologies for understanding human genomes; cancer genetics; behavioral genetics; human ancestry and evolution; applications such as genetic screening, genetic counseling, and gene therapy; and ethical questions raised by emerging abilities to edit the human genome, modify the human germline, and many more. This writing intensive course is available only to Health and Genomics minors. prereq: BIOL 4003 or instr consent; Health and Genomics minor

GCD 4151. Molecular Biology of Cancer. (3 cr. ; A-F or Audit; Every Fall)

Regulatory pathways involved in directing normal development of complex eukaryotic organisms, how disruptions of these pathways can lead to abnormal cell growth/cancer. Causes, detection, treatment, prevention of cancer. prereq: Biol 4003

GCD 4161. Developmental Biology. (; 3 cr. ; Student Option; Every Fall)

Developmental biology is the study of the process by which organisms grow and develop from embryo to adult. This field encompasses the biology of morphogenesis, differentiation, regeneration, metamorphosis, and the growth and differentiation of stem cells. Topics focus primarily on animal development to include fertilization, cell specification, body patterning, stem cells, neurogenesis, organogenesis, limb formation, regeneration, sex determination, and developmental timing, as well as environmental impacts on development. Students will learn about genetic models such as fruit flies, nematodes, fish, mice, and plants. Coverage will be extended to human development and disease as appropriate. prereq: BIOL 4003; also recommended prerequisite: BIOL 4004 or GCD 4005W

GCD 4171. Stem Cells in Biology and Medicine. (; 3 cr. ; A-F only; Every Spring)

Contemporary stem cell biology with emphasis on mechanisms/applications. Embryonic, tissue-specific, and induced pluripotent stem cells and potential uses in human disease. prerequisites: BIOL 4003 Genetics; recommended prerequisite: BIOL 4004 Cell Biology or GCD 4005W This course can be used as an elective for certain CBS majors, such as the GCD major. Check the Program Requirements for your major to determine if it can be used as an elective.

GCD 4593. Genomics Directed Studies - Community Experience. (2-4 cr. ; S-N only; Every Fall, Spring & Summer)

Directed Studies is an individual-study, community-based experience in which the student is mentored directly by a faculty

member. The topic for the course is the application of genomics in human health and healthcare. This course is designed for students to get experience in applied genetics or genomics. The details need to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the director of undergraduate studies (DUGS) for the minor before the student is allowed to register. Four credits total of 4593, 4693, or 4694, or a combination thereof, are required for the Health & Genomics minor. prereq: department consent, instructor consent

GCD 4693. Genomics Directed Studies - Literature Review. (2-4 cr. ; S-N only; Every Fall, Spring & Summer)

Directed Research is an individual-study, laboratory, or field investigation course. The research topic needs to be agreed on by both the student and the faculty mentor and explained in a Research/Directed Studies contract. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, methodology to be used, and how the assessment of learning will be conducted. Four credits total of 4593, 4693, or 4694, or a combination thereof, are required for the Health & Genomics minor. prereq: department consent; instructor consent.

GCD 4694. Genomics Directed Research. (2-4 cr. ; S-N only; Every Fall, Spring & Summer)

Directed Research is an individual-study, laboratory, or field investigation course. The research topic needs to be agreed on by both the student and the faculty mentor and explained in a Research/Directed Studies contract. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, methodology to be used, and how the assessment of learning will be conducted. Four credits total of 4593, 4693, or 4694, or a combination thereof, are required for the Health & Genomics minor. prereq: department consent; instructor consent.

GCD 4793W. Directed Studies: Writing Intensive. (WI; 1-7 cr. ; S-N only; Every Fall & Summer)

Writing Intensive Directed Studies is an individual-study, literature-based investigation in which the student is mentored directly by a faculty member. One main feature of this course is that the student will receive writing instruction and the written output of the course will be revised during the semester. The project needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, how writing instruction will take place, a timeline for when student writing will be handed in and how it will be assessed,

methodology to be used by the student, and how assessment of learning will be conducted by the mentor. Additional oversight is established for this course near the end of the semester the written output is submitted to the DUGS for the major. The DUGS is responsible to determine that the writing meets standards set by the CBS Education Policy Committee for quality of writing, appropriate citation of literature, well-constructed figures, tables, and legends (if present), appropriate use and interpretation of statistics (if present), conclusions that are supported by evidence, and well-formatted references. This course is graded S/N and approval of the DUGS is required before a grade of S can be given by the faculty mentor. prereq: department consent, instructor consent, no more than 7 credits of 4793, 4794, 4993W, 4994W counts towards CBS major requirements.

GCD 4794W. Directed Research: Writing Intensive. (WI; 1-7 cr. [max 42 cr.]; S-N only; Every Fall & Summer)

Writing Intensive Directed Research is an individual-study, laboratory or field research experience in which the student is mentored directly by a faculty member. This course is intended for students who already have initiated a research project in the lab of the mentor and already have results. In this course the student will receive writing instruction. The written output usually is in the form of a scientific paper describing the results of the student's project. Written output of the course must be revised during the semester and a schedule for writing, assessment and revision needs to be in place at the beginning of the semester. The project needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the Director of Undergraduate Studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, how writing instruction will take place, a timeline for when student writing will be handed in and how it will be assessed, methodology to be used by the student, and how assessment of learning will be conducted by the mentor. Additional oversight is established for this course - near the end of the semester the written output is submitted to the DUGS for the major. The DUGS is responsible to determine that the writing meets standards set by the CBS Education Policy Committee for quality of writing, appropriate citation of literature, well-constructed figures, tables, and legends (if present), appropriate use and interpretation of statistics (if present), conclusions that are supported by evidence, and well-formatted references. The DUGS can call for a final revision before a grade is given. This course is graded S/N and approval of the DUGS is required before a grade of S can be given by the faculty mentor. prereq: department consent, instructor consent, no more than 7 credits of 4793, 4794, 4993W, 4994W counts towards CBS major requirements.

GCD 4950. Special Topics in Genetics. (; 1-3 cr. ; Student Option; Every Fall)

Special Topics Shell

GCD 4993. Directed Studies. (; 1-7 cr. ; S-N only; Every Fall, Spring & Summer)

Directed Studies is an individual-study, literature-based investigation in which the student is mentored directly by a faculty member. The topic for the course needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, methodology to be used, and how the assessment of learning will be conducted. prereq: department consent, instructor consent, no more than 7 credits of 4793, 4794, 4993W, 4994W counts towards CBS major requirements.

GCD 4994. Directed Research. (; 1-7 cr. [max 42 cr.] ; S-N only; Every Fall, Spring & Summer)

Directed Research is an individual-study, laboratory or field investigation course. The research topic needs to be agreed on by both the student and the faculty mentor and explained in a Research/Directed Studies contract. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, methodology to be used, and how the assessment of learning will be conducted. prereq: department consent, instructor consent, no more than 7 credits of 4793, 4794, 4993W, 4994W counts towards CBS major requirements.

GCD 5005. Computer Programming for Biology. (3 cr. ; Student Option; Every Fall)

Computer programming skills with applications in biology. Design/build new computer programs for applications in cell/developmental biology, including modeling of biological processes, advanced data analysis, automated image analysis. prereq: BIOL 4003 or BIOL 4004 or GCD 3033 or CBS grad or BMBB or MCDB&G grad student, general statistics course

GCD 5036. Molecular Cell Biology. (; 3 cr. ; Student Option; Every Fall)

Analysis of dynamic cellular activities at the molecular level in cell biological fields that are experiencing new research advances not yet reflected in textbooks. Significant emphasis is placed on understanding the experimental basis of our current knowledge of cellular processes through analysis of scientific papers. Project and presentation-based assessments of learning outcomes. prereq: Biol 4004 or GCD 4005W or grad

GCD 5101. Critical and Translational Reasoning in Visual Science. (3 cr. ; A-F only; Every Spring)

This course is appropriate for graduate and senior undergraduate students in several areas of biology, including GCD, NSC, IBP, and BMBB programs. Students will be introduced to the function of the visual system,

including the retina and brain, and learn to understand the visual system on a cellular level. Main goals of the course include to practice scientific and translational reasoning and scientific communication. This will be facilitated through a combination of lectures and group discussions of scientific papers, as well as writing of a term paper. In most weeks one lecture and one group discussion will be held. Scientific and translational reasoning and scientific communication are core competencies for life scientists. Scientific reasoning includes the ability to recognize why a scientific question is significant (or not), experimental design and rigor, interpretation of data, and identifying caveats to conclusions. Models of biological processes will be discussed and appropriate predictions will be identified in order to test those models. Translational reasoning is needed to move basic scientific discoveries into practice. To practice translational reasoning, we will investigate how diseases manifest on the cellular level, examine the use of disease models (cell based or animal models) and their limitations, how investigational therapeutic drugs are tested, how their effects on disease are scored, and how clinical trials are used to test the safety and efficacy of new therapeutic drug candidates. Students will interact with MD and PhD faculty and learn about their respective priorities. This course should be informative for students who are interested in the life sciences, and may help to discover personal interests and preferred career paths. The course will be taught by a team of instructors who share an interest in vision science. prereq: Senior major in GCD, Neuroscience, IBP, or BMBB or grad, open to advanced juniors with instructor permission

GCD 5111. Quantitative Fluorescence Microscopy. (3 cr. ; A-F only; Every Summer)

Fluorescence microscopy is an essential technique to probe the inner workings of cells and tissues. You will learn hands on the inner workings of fluorescent microscopes, how to set up and acquire fluorescent images using microscopes, and how to quantitatively analyze image data using FIJI (ImageJ) software. prereq: Undergraduate students require instructor permission for enrollment. Graduate students are allowed to register for 5111 without instructor permission. Recommended prerequisite: GCD 3033 or BIOL 4004

GCD 5914. Ethical and Legal Issues in Genetic Counseling. (2 cr. ; A-F only; Every Fall)

This course will provide a foundational knowledge of the ethical and legal considerations that are relevant to individuals working at the intersection of genetics and medical science. This will involve pre-class reading and research assignments in addition to relevant videos, podcasts, blog readings, and documentaries on this topic. Students will learn to frame ethical questions using appropriate frameworks, consult research, develop strategies for reaching resolutions, and communicate their process and outcomes. Students will work individually as well as collectively through case discussions in small

groups and large group settings. Class time will be split between lecture, discussion, and in-class activities.

Geographic Information Science (GIS)

GIS 5530. GIS Internship. (; 1-3 cr. [max 6 cr.] ; S-N only; Every Fall & Spring)
Practical hands-on experience using GIS to solve problems in a real-world work environment. prereq: instr consent, strong GIS/mapping skills

GIS 5555. Basic Spatial Analysis. (; 3 cr. ; Student Option; Every Fall)
How to use spatial data to answer questions on a wide array of social, natural, and information science issues. Exploratory data analysis/visualization. Spatial autocorrelation analysis/regression. prereq: [STAT 3001 or equiv, MGIS student] or instr consent

GIS 5571. ArcGIS I. (; 3 cr. ; Student Option; Every Fall)
First of a two-course series focusing on ArcGIS Desktop. Overview of ArcGIS system and its use for spatial data processing. Data capture, editing, geometric transformations, map projections, topology, Python scripting, and map production. prereq: [GEOG 5561 or equiv, status in MGIS program, familiarity with computer operating systems] or instr consent

GIS 5572. ArcGIS II. (; 3 cr. ; Student Option; Every Spring)
Continues GIS 5571. Raster analysis, dynamic segmentation, geometric networks, geocoding, Python scripting, and data interoperability. Substantial projects include map and poster design and production. prereq: [5571, [GEOG 5561 or equiv], in MGIS program] or instr consent

GIS 5573. Introduction to Digital Mapping: ArcGIS Basics. (2 cr. ; A-F only; Every Fall)
Desktop mapping functions using ArcGIS software. Application of systems to display/analysis of geographical data. prereq: [GEOG 5561 or equiv, in MGIS program] or instr consent

GIS 5574. Web GIS and Services. (3 cr. ; Student Option; Every Fall)
Plan, design, develop, publish web-based GIS solution. Build websites, prepare data for web. Commercial software, Open Source software, volunteer geographic information, open GIS standards/developing web GIS application. Hands-on experience with variety of web GIS technologies/software. prereq: [GEOG 5561 or equiv, in MGIS program] or instr consent

GIS 5576. Spatial Digital Humanities. (3 cr. ; Student Option; Every Spring)
Introduction to Spatial Digital Humanities
GIS 5576 is a basic overview of desktop GIS (both Esri and open source), as well as an introduction to a number of other mapping techniques (such as Esri Maps for Office, ArcGIS Online, web mapping basics, georeferencing historical maps, etc) in addition to digital scholarship techniques. Course

objectives include: understanding the basics of mapping and geospatial information using GIS; documenting and managing spatial data using coherent/standardized methods; understanding several spatial analysis methods that are relevant to student research area; and applying spatial research methods into student research.

GIS 5577. Spatial Database Design and Administration. (3 cr. ; Student Option; Every Spring)
Spatial database design, development planning/management, maintenance, security, access/distribution, and documentation. prereq: instr consent

GIS 5578. GIS Programming. (3 cr. ; Student Option; Every Spring)
Programming techniques using Python and other languages specifically relating to GIS technologies. prereq: instr consent

Geography (GEOG)

GEOG 1301W. Our Globalizing World. (GP,WI,SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer)
Introduction to geographical understandings of globalization and of connections/differences between places.

GEOG 1372. Geography of Global Cities. (GP,SOCS; 3 cr. ; Student Option; Every Fall)
Urban forms/processes. Uses key global cities as examples. Political, historical, and economic contexts of cities. Planning ideologies. Globalization. Race/segregation. Population growth. Environmental problems. Current issues in global urbanization.

GEOG 1403. Biogeography of the Global Garden. (BIOL,ENV; 4 cr. ; Student Option; Every Fall & Spring)
The geography of biodiversity and productivity, from conspicuous species to those that cause human disease and economic hardship. The roles played by evolution and extinction, fluxes of energy, water, biochemicals, and dispersal. Experiments demonstrating interactions of managed and unmanaged biotic with the hydrologic cycle, energy budgets, nutrient cycles, the carbon budget, and soil processes.

GEOG 1403H. Honors: Biogeography of the Global Garden. (BIOL,ENV; 4 cr. ; A-F only; Every Fall & Spring)
The geography of biodiversity and productivity, from conspicuous species to those that cause human disease and economic hardship. The roles played by evolution and extinction, fluxes of energy, water, biochemicals, and dispersal. Experiments demonstrating interactions of managed and unmanaged biotic with the hydrologic cycle, energy budgets, nutrient cycles, the carbon budget, and soil processes. prereq: Honors

GEOG 1425. Introduction to Weather and Climate. (ENV,PHYS; 4 cr. ; Student Option; Every Fall & Spring)
A pre-calculus introduction to the nature of the atmosphere and its behavior. Topics covered include atmospheric composition, structure, stability, and motion; precipitation processes,

air masses, fronts, cyclones, and anticyclones; general weather patterns; meteorological instruments and observation; weather map analysis; and weather forecasting.

GEOG 1502. Mapping Our World. (SOCS,TS; 3 cr. ; Student Option; Every Fall & Spring)
Learn how maps and other spatial technologies like phones, drones, and GPS work. Use web-based tools to make maps for class, jobs, and fun. Explore how mapping is a useful lens through which to view interactions between technology and society, and see how mapping technology saves lives, rigs elections, and spies on people.

GEOG 1913. Living with Innovation. (; 3 cr. ; A-F only; Periodic Fall & Spring)
Technology has significantly improved lives across the globe: we have seen the cost of goods fall due to mass production; people have become more connected through revolutionary developments in transport and electronic communication; health has improved through better sanitation, pharmaceuticals, and surgical techniques. Yet there are still challenges for the future in terms of feeding a growing world population and coming to terms with climate changes. The solutions will be through new developments, innovations, in bio-, nano-, info-, and energy-technologies. These are already bringing benefits but also possible risks. For example, the benefits of genetic engineering for improved food security are obvious and yet there is a fear that it will lead to ?frankenfoods?. Similarly, artificial intelligence (AI) has the potential to take over boring and repetitive jobs in the work place but in so doing could put millions out of work, and some even fear robots threatening human existence. This seminar will examine the idea that living with innovation depends on developing policies that properly manage risks in an informed way, by trying to anticipate and assess them rather than just to avoid them. Risk assessment is a scientific approach that combines an understanding of threat, exposure and vulnerability ? recognizing uncertainties in all the elements ? to estimate the likelihood of impacts. Risk management policy often has to balance the risks from emerging technologies with their benefits. Historically the risks that have arisen from innovation have been small compared with benefits so decisions have been relatively easy. However, some of the risks from the new generation of emerging technologies have potentially big consequence, e.g. in the development of bioweapons, misuse of geo-engineering to unilaterally alter climate, cyberwar, and killer robots. These present special challenges for policy to ensure that we enjoy the benefits of the technology while keeping catastrophic threats acceptably low ? and will form a basis of small group discussions as part of the seminar. An underlying message from the seminar will be that making the right connections between science and policy is a key part of living with innovation.

GEOG 1915. Cultural heritage and environmental change in Gullah/Geechee Nation. (; 3 cr. ; A-F only; Periodic Fall)

Sea level rise and climate change pose serious challenges for the well-being of people living along the coast. When responding to these challenges, communities, scientists, and governments have to take account of the way in which some communities have deep cultural ties to the land they inhabit. Co-taught by Queen Quet, the Chiefess and Head of State of the Gullah/Geechee Nation and Kate Derickson, faculty in Geography and long time collaborator of Queen Quet's, this course will explore the thorny challenges at the intersection of cultural heritage and environmental change by engaging with the case of the Gullah/Geechee people. The Gullah/Geechee people are descended from freed and escaped enslaved Africans brought to the Southeast coast and the Sea Islands in part due to their knowledge of agriculture to be enslaved on rice, cotton, and indigo plantations. Today, many Gullah/Geechee people still live on the same land that their ancestors were enslaved on. Their ancestors bought this land during Reconstruction and continued to practice traditional farming and it and traditional fishing in the surrounding waterways. The Gullah/Geechee culture is inextricably tied to the land and the water of the Sea Islands and the coast, a connection that has to be accounted for in efforts to mitigate the effects of climate change and inform future planning and community development in the region. Students will spend the course in a virtual "studio" setting on campus once weekly - learning, discussing, and exploring the history and culture of the Gullah/Geechee people and the causes and consequences of environmental change in the region. We will also explore different models, ethics, and approaches to engaged scholarship. Students will be divided into groups with a region of Gullah/Geechee Nation to focus on. Each group will produce a StoryMap with archival data, photos, and other relevant data and information collected during and after the field trip. Training in building StoryMaps will be provided. Grades will be assessed on an individual and group basis.

GEOG 1916. Social Justice and the Twin Cities. (; 3 cr. ; A-F only; Periodic Fall)

This seminar will explore the interconnected histories, geographies, and politics of the Twin Cities ? Minneapolis and St. Paul, Minnesota. Drawing on urban geography, urban studies, feminist, and critical race theory literatures, we will examine how settler colonialism, anti-Black racism, and other intersecting forces of oppression shape how urban spaces are formed and experienced in the Twin Cities. We will also closely examine how different urban actors, from local grassroots collectives, non-profit organizations, and city governments, have sought to address social and racial inequities and work towards social change. Furthermore, we will deeply engage with the longstanding histories and presents of Black, Indigenous, and Latinx social justice activism in the Twin Cities. Students will have the opportunity to learn from local community organizers and activists and go on a field trip to learn about social justice and social change in the Twin Cities.

GEOG 1973. Geography of the Twin Cities. (SOCS; 3 cr. ; Student Option; Every Fall & Spring)

Social and physical characteristics of the Twin Cities. Their place in the urban network of the United States.

GEOG 3101. Geography of the United States and Canada. (SOCS,TS; 4 cr. ; Student Option; Every Fall & Spring)

Analysis of the ways in which the aspirations and abilities of diverse groups of people interact with the complexities of the natural environment to produce the contemporary pluralistic cultures and regional differentiation of the United States and Canada.

GEOG 3111. Geography of Minnesota. (; 3 cr. ; Student Option; Every Spring & Summer)

The evolution of Minnesota and its current geographical characteristics. The state is a unique political entity that possesses similarities with other states because of the homogenizing influence of the federal government.

GEOG 3121. Geography of Latin America. (3 cr. ; Student Option; Every Fall)

This course will look at historical and contemporary Latin America to give students an idea about the varied political, economic, and cultural practices in the Caribbean, Central America, and South America. Readings will focus mostly on the experiences and struggles of Afro-Latin, indigenous, and working-class populations in Latin America, in order that we might learn about the region from otherwise marginalized viewpoints. Course assignments will ask students to critically reflect on the power relations that shaped and continue to shape the region. Course topics include colonialism, state formation, present-day territorial contestation, and the current political shifts that dominate the news headlines across the region. At the end of the semester students will have a solid understanding of the forces responsible for conditions in present-day Latin America.

GEOG 3145. The Islamic World. (GP,SOCS; 3 cr. ; Student Option; Every Fall)

Foundation of Islam in Arabian Peninsula, its spread to Asia and Africa. Islamic civilization, influence on Europe before rise of capitalism. Rise of Capitalist Europe, colonization of Islamic World Islamic resurgence and post-colonial world. State-society and development. Culture/conflict in Moslem societies. Gender and Islam. Islamic World and the West. Moslems in North America and Europe. Case studies.

GEOG 3161. Europe: A Geographic Perspective. (GP; 3 cr. ; Student Option; Fall Even Year)

Comparative analysis and explanation of Europe's physical, demographic, ethnic/cultural, economic, political, and urban landscapes. European integration--the European Union. Transformation of Eastern Europe.

GEOG 3211. East Asia. (; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)

Physical and human geography of Japan, mainland China and Taiwan, North and South Korea; population pressure, economic and urban development, and international relations.

GEOG 3331. Geography of the World Economy. (GP,SOCS; 3 cr. ; Student Option; Every Fall)

Geographical distribution of resources affecting development; location of agriculture, industry, services; geography of communications; agglomeration of economic activities, urbanization, regional growth; international trade; changing global development inequalities; impact of globalizing production and finance on the welfare of nations, regions, and cities.

GEOG 3341. Black Geographies. (3 cr. ; Student Option; Every Fall)

This course will engage the sub-discipline of Black Geographies by looking at Geographical literature on the question of Blackness as well as case studies on the ways in which Afro-descendant populations make place. Course readings and films will attend to Blackness as it manifests across the African Diaspora, with specific focus on the Americas. We will discuss the experiences and struggles of enslaved Africans in the Americas, struggles against slavery, the ways in which we can understand histories of Blackness, and different forms of struggle employed by Afro-descendant populations today. At the end of the semester students will have a solid grounding in the literature around Black Geographies, as well as a nuanced understanding of the different ways in which Black populations analyze and create space.

GEOG 3371W. Cities, Citizens, and Communities. (DSJ,WI; 3 cr. [max 4 cr.] ; Student Option; Every Fall, Spring & Summer)

Introduction to cities and suburbs as unique crossroads of cultural, social, and political processes. Competing/conflicting visions of city life, cultural diversity, and justice. Focuses on the American city.

GEOG 3373. Changing Form of the City. (GP,HIS; 3 cr. ; Student Option; Every Spring)

Urban origins, ancient cultures/cities, the medieval city, rediscovery of planning, colonial cities. Industrialization and urban expansion. Speculative cities, utopian cities, planning triumphs/disasters. Cities as reflections of society, culture, the past.

GEOG 3374W. The City in Film. (AH,WI; 4 cr. ; Student Option; Every Spring)

Cinematic portrayal of changes in 20th-century cities worldwide including social and cultural conflict, political and economic processes, changing gender relationships, rural versus urban areas, and population and development issues (especially as they affect women and children).

GEOG 3376. Political Ecology of North America. (ENV; 3 cr. ; Student Option; Every Fall)

Social production of nature in North America related to questions of social/environmental justice. Economic, political, cultural, ecological

relations that shape specific urban/rural environments, social movements that have arisen in response to environmental change. Importance of culture/identity in struggles over resources/environments.

GEOG 3377. Music in the City. (AH,DSJ; 3 cr. ; A-F or Audit; Every Spring)

Why is music so central to the life of the city? Throughout the ages, throughout the world, music seems to have a special power to fill urban space with meaning. This is mostly why the music industry is always desperately trying to chase the new ways music is produced and consumed. Much about the rapid changes in the industry can be linked to changes taking place in the geography of cities and globalization. Through music, people feel connected to landscapes, neighborhoods, buildings, and identities. Music gives value to places, so helps cement us/them divisions, a process easily seen (heard) in national anthems. This course tries to understand how the interplay exactly occurs between sounds, places, and differences through case studies from many genres. The course makes use of a large range of media and learning styles. Themes include the transnational circuits of reggae, the class backgrounds of punk, Motown and civil rights, psychedelic counterculture, underground electronic music, and the ambivalent identities of Minneapolis's very own Prince.

GEOG 3379. Environment and Development in the Third World. (ENV,SOCS; 3 cr. ; A-F or Audit; Every Spring)

Concepts for analyzing relations between capitalist development and environment in Third World. Historical geography of capitalist development. Case studies. Likelihood of social/environmental sustainability. prereq: Soph or jr or sr

GEOG 3381W. Population in an Interacting World. (GP,WI,SOCS; 3 cr. [max 4 cr.] ; Student Option; Every Fall, Spring & Summer)

Comparative analysis and explanation of trends in fertility, mortality, internal and international migration in different parts of the world; world population problems; population policies; theories of population growth; impact of population growth on food supply and the environment.

GEOG 3388. Going Places: Geographies of Travel and Tourism. (CIV; 3 cr. ; A-F only; Every Spring)

Are you wondering whether you will be able to travel as you did a few years ago? One of the largest industries, tourism is in a profound crisis. This course understands tourism in relation to other kinds of mobility, like shopping, colonialism, trafficking, migration, and pilgrimage. As the negative environmental and health impacts of tourism have become obvious, significant demands have emerged on its practices and policies. Investigating the landscapes and economies of cars, planes, beaches, parks, malls, and museums, we come to appreciate the unique challenges tourism poses for global citizenship and the planet. To gain a critical geographical understanding of mobility we engage a range of ethical

frameworks such as human rights, feminism, social justice, and utilitarianism. Our final destination is an informed and critical ethics of travel in the age of pandemics and climate change.

GEOG 3401W. Geography of Environmental Systems and Global Change. (ENV,WI; 3 cr. [max 4 cr.] ; Student Option; Every Spring)

Geographic patterns, dynamics, and interactions of atmospheric, hydrospheric, geomorphic, pedologic, and biologic systems as context for human population, development, and resource use patterns.

GEOG 3411W. Geography of Health and Health Care. (WI; 3 cr. [max 4 cr.] ; Student Option; Every Fall)

Application of human ecology, spatial analysis, political economy, and other geographical approaches to analyze problems of health and health care. Topics include distribution and diffusion of disease; impact of environmental, demographic, and social change on health; distribution, accessibility, and utilization of health practitioners and facilities.

GEOG 3421. Climatology. (4 cr. ; Student Option; Every Spring)

This is a course on general climatology and the physical fundamentals of climate change that are most relevant to biophysical and socio-environmental processes. It is geared towards students in geography, environmental science, and the liberal arts and humanities who need a foundational understanding of climatology to grapple with social and biophysical dimensions of climate change. In a conceptual but not heavily quantitative framework, course activities (readings, discussion, lectures, computer labs), the course provides a broad-level overview of the physical processes that underlie Earth's climate system and lead to climate variations at global, regional, and local scales, as well as a survey of contemporary topics in climate change science. Course themes include: Earth's atmosphere and ocean; global energy and water balances; general and secondary circulation; controls on regional climate; climate data collection and interpretation; coupled modes of climate variability and related teleconnections; paleoclimatology; climate change; extreme events; climate modeling frameworks; observed and anticipated climate change impacts.

GEOG 3423. Urban Climatology. (3 cr. ; Student Option; Every Spring)

Urban climatology focuses on how cities modify the local environment. Initial focus is on urban energy balance as the basis of most urban-climate research. The course also explores how atmospheric composition, urban hydrology, and urban ecosystems affect the urban climate, and how urban climates are linked to regional and global climate change.

GEOG 3431. Plant and Animal Geography. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Introduction to biogeography. Focuses on patterns of plant/animal distributions at different scales over time/space. Evolutionary, ecological, and applied biogeography.

Paleobiogeography, vegetation-environment relationships, vegetation dynamics/disturbance ecology, human impact on plants/animals, nature conservation. Discussions, group/individual projects, local field trips.

GEOG 3511. Principles of Cartography. (; 4 cr. ; Student Option; Every Spring)

History and development of US academic cartography, coordinate systems and map projections, data classification and map generalization, methods of thematic symbolization, and cartographic design. A series of computer-based lab exercises will apply conceptual lecture material to the creation of thematic maps. prereq: 3 cr in geog or instr consent

GEOG 3531. Numerical Spatial Analysis. (; 4 cr. ; Student Option; Every Fall & Summer)

"Everything is related to everything else, but near things are more related than distant things." The First Law of Geography proposed by Waldo Tobler implies the complex yet fascinating nature of the geospatial world. Spatial analysis in order to understand geographic numbers is becoming increasingly necessary to support knowledge discovery and decision-making. The objective of this course is to teach the fundamental theory and quantitative methods within the scope of geospatial analysis. The course starts with basic statistics, matrix, the background of spatial analysis, and exploratory spatial data analysis. Then, we will dive into the special nature of our spatial world, with fundamental geographic ideas and theories being introduced. The focus will be on numerical methods and models including descriptive statistics, pattern analysis, interpolation, and regression models. Finally, some advanced topics regarding spatial complexities and spatial networks will be introduced to arouse further interest in this realm. To sum, this is an introductory course that makes use of quantitative analytics such as linear algebra, statistics, and econometrics for spatial data analysis. By taking this course you will: - quantitatively understand critical concepts behind geospatial processes, such as scale, spatial weights, spatial autocorrelation, spatial dependence, spatial pattern. -learn key methods of analyzing spatial data: e.g., point pattern analysis, spatial autocorrelation statistics, spatial prediction, and spatial regression. -examine the lectured methods/models with data from geographic scenarios using Python and related programming packages. prereq: high-school algebra; Basic stats and linear algebra recommended

GEOG 3541. Principles of Geocomputing. (; 3 cr. ; Student Option; Every Spring)

The availability of computing infrastructures such as high-performance and cloud computing, high-speed networks, and rich data has led to a new scientific paradigm using computational approaches, termed computational science. Geocomputation is the "application of a computational science paradigm to study a wide range of problems in geographical and earth systems (the geo contexts)" (Openshaw, 2014). This course will

introduce students to geocomputation as well as related areas including big spatial data, and cyberinfrastructure. Students will engage in hands-on exercises learning principles and best-practices in geocomputing. The ability to program is an essential skill for GIScientists. Learning to program takes time and a lot of practice, and in this course students will learn how to develop programs in the Python programming language to solve geospatial problems.

GEOG 3561. Principles of Geographic Information Science. (; 4 cr. ; Student Option; Every Fall & Spring)

Introduction to study of geographic information systems (GIS) for geography and non-geography students. Topics include GIS application domains, data models and sources, analysis methods and output techniques. Lectures, readings and hands-on experience with GIS software. prereq: Jr or sr

GEOG 3573. Introduction to Digital Mapping: ArcGIS Basis. (2 cr. ; A-F only; Every Fall)

Desktop mapping functions using ArcGIS software. Application of systems to display/analysis of geographical data.

GEOG 3605. Geographic Perspectives on Planning. (; 3 cr. [max 4 cr.] ; Student Option; Every Fall)

The purpose of this course is to introduce the students to the discipline of urban planning, and to the various challenges planning has aimed to respond during its history. How and why did cities come into being before the invention of modern urban planning? What were the challenges that modern urban planning arose to encounter in the late 20th century? How have the planning challenges changed since then, and how have planning tools and planning systems evolved since the early 21st century in different countries? During the course, we will also discuss the role of planning in contemporary society, asking who needs planning and why. How does planning respond to political struggles and conflicts of interests in cities today? Furthermore, we will reflect on the academic status of urban planning and ask: to what extent can planning be based on knowledge and theory? To answer these questions, we will study history of planning, get acquainted with the basics of planning theory, and look at various international examples of planning systems and planning practice drawn from a variety of international settings, the main focus being on US, UK, and mainland Europe.

GEOG 3839. Introduction to Dendrochronology. (; 3 cr. ; Student Option; Every Fall)

Historical development, operational techniques, biological background, and principles of tree ring analysis. Applications of tree-ring data to investigate environmental change and past cultures. prereq: [1403, [BIOL 1001 or BIOL 1009 or equiv]] or instr consent

GEOG 3900. Topics in Geography. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)

Special topics/regions covered by visiting professors in their research fields.

GEOG 3973. Geography of the Twin Cities. (SOCS; 3 cr. ; Student Option; Every Fall & Spring)

Social/physical characteristics of Twin Cities. Their place in U.S. urban network.

GEOG 3991. Geography Capstone. (; 1 cr. ; S-N only; Every Fall & Spring)

The goals of this course are to help you reflect on your path through your Geography BA or BS major, assess the knowledge and skills you developed during your degree program, recognize how your knowledge and skills support your personal and professional interests and goals, and articulate the value of a geographic perspective for tackling complex social and environmental issues. The course is only open to students in their senior year.

GEOG 3992. Directed Reading. (1-8 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Guided individual reading. Prereq-instr consent, dept consent, college consent.

GEOG 3993. Directed Studies. (1-8 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Guided individual study. Prereq-instr consent, dept consent, college consent.

GEOG 3994. Directed Research. (1-8 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Individual guided research. Prereq instr consent, dept consent, college consent.

GEOG 3996. Senior Project Directed Research. (3-4 cr. [max 8 cr.] ; A-F only; Every Fall, Spring & Summer)

Individual guided research course taken in fulfillment of the senior project requirement. Prereq instr consent,dept consent,college consent.

GEOG 3997. Senior Project. (2 cr. [max 4 cr.] ; A-F only; Every Fall, Spring & Summer)

Senior Project add-on credit. Must be taken concurrently with required or elective course related to area of specialization. Prereq instr consent, dept consent, college consent.

GEOG 4001. Modes of Geographic Inquiry. (; 3 cr. ; Student Option; Every Fall & Spring)

Examination of competing approaches to the study of geography. Environmental determinism; regional tradition; scientific revolution; behavioral geography; modeling and quantitative geography; radical geography; interpretive and qualitative approaches; feminist and postmodern geography; ecological thinking and complexity; geographic ethics.

GEOG 4002W. Environmental Thought and Practice. (WI; 3 cr. ; Student Option; Periodic Spring)

Changing conceptions of nature, culture, and environment in Western social/political thought. How our understanding of humans/nonhumans has been transformed by scientific and technological practices. Interdisciplinary, reading intensive. prereq: Jr or sr

GEOG 5385. Globalization and Development: Political Economy. (; 4 cr. ; Student Option; Periodic Fall & Spring)

Nature/scope of modern world system (capitalism), its impact on regional development processes. Roles of state and of international financial institutions. prereq: Sr or grad or instr consent

GEOG 5401W. Geography of Environmental Systems and Global Change. (ENV,WI; 3 cr. [max 4 cr.] ; Student Option; Periodic Fall)

Geographic patterns, dynamics, and interactions of atmospheric, hydrospheric, geomorphic, pedologic, and biologic systems as context for human population, development, and resource use patterns. prereq: grad student or instr consent

GEOG 5426. Climatic Variations. (; 3 cr. ; Student Option; Periodic Fall)

Theories of climatic fluctuations and change at decadal to centuries time scales; analysis of temporal and spatial fluctuations especially during the period of instrumental record. prereq: 1425 or 3401 or instr consent

GEOG 5511. Principles of Cartography. (; 4 cr. ; Student Option; Every Spring)

Topics on data sources for mapping. History of thematic cartography (focused on 19th-century European activity). Multivariate classification/symbolization. Models for cartographic generalization, spatial interpolation, and surface representation. Animated/multimedia cartography.

GEOG 5531. Numerical Spatial Analysis. (; 4 cr. ; Student Option; Every Fall)

Applied/theoretical aspects of geographical quantitative methods for spatial analysis. Emphasizes analysis of geographical data for spatial problem solving in human/physical areas.

GEOG 5541. Principles of Geocomputing. (; 3 cr. ; A-F or Audit; Every Spring)

The availability of computing infrastructures such as high-performance and cloud computing, high-speed networks, and rich data has led to a new scientific paradigm using computational science. Geocomputation is the "application of a computational science paradigm to study a wide range of problems in geographical and earth systems (the geo) contexts" (Openshaw, 2014). This course will introduce students to geocomputation as well as related areas including big spatial data, and cyberinfrastructure. Students will engage in hands-on-exercises learning principles and best-practices in geocomputing. The ability to program is an essential skill for GIScientists. Learning to program takes time and a lot of practice, and in this course students will learn how to develop programs in the Python programming language to solve geospatial problems.

GEOG 5543. Advanced Geocomputing. (3 cr. ; Student Option; Every Fall)

The availability of computing infrastructures such as high-performance and cloud computing, highspeed networks, and rich data has led to a new scientific paradigm using computational approaches, termed computational science. Geocomputation is the "application of a computational science paradigm to study a wide range of problems

in geographical and earth systems (the geo) contexts" (Openshaw, 2014). This course will delve into advanced topics in geocomputation as well as related areas ranging from geographic information and spatial big data to cyberinfrastructure and parallel computation. Students will engage in hands-on exercises learning principles and best practices in geocomputing while using cutting-edge computational infrastructures.

GEOG 5561. Principles of Geographic Information Science. (; 4 cr. ; Student Option; Every Fall & Spring)

Introduction to the study of geographic information systems (GIS) for geography and non-geography students. Topics include GIS application domains, data models and sources, analysis methods and output techniques. Lectures, reading, and hands-on experience with GIS software. prereq: grad

GEOG 5562. GIS Development Practicum. (3 cr. ; Student Option; Periodic Fall)

Algorithms/data structures for digital cartographic data, topological relationships, surface modeling, and interpolation. Map projections, geometric transformations, numerical generalization, raster/vector processing. Hands-on experience with software packages. prereq: GIS 5571 or instr consent

GEOG 5563. Advanced Geographic Information Science. (; 3 cr. ; Student Option; Every Fall & Spring)

Advanced study of geographic information systems (GIS). Topics include spatial data models, topology, data encoding, data quality, database management, spatial analysis tools and visualization techniques. Hands-on experience using an advanced vector GIS package. prereq: B or better in 3561 or 5561 or instr consent

GEOG 5564. Urban Geographic Information Science and Analysis. (; 3 cr. ; Student Option; Periodic Fall)

Core concepts in urban geographic information science including sources for urban geographical and attribute data (including census data), urban data structures (focusing on the TIGER data structure), urban spatial analyses (including location-allocation models), geodemographic analysis, network analysis, and the display of urban data. prereq: 3561 or 5561

GEOG 5588. Advanced Geovisualization. (; 3 cr. ; Student Option; Every Fall)

The generation and use of geographic information has become an integral part of our daily life, science, and technology. This has led to increasing interest in the design and development of interactive maps and dynamic geographic visualizations in 2D, 3D, and Web environments. The Advanced Geovisualization course intends to equip students with the knowledge and advanced technical skills needed to design and implement effective maps and create dynamic and interactive visualizations using geospatial data sets.

GEOG 5900. Topics in Geography. (; 3 cr. [max 9 cr.] ; Student Option; Every Fall & Spring)

Special topics and regions. Course offered by visiting professors in their research fields.

German (GER)

GER 1001. Beginning German. (; 5 cr. ; Student Option; Every Fall, Spring & Summer) Emphasis on working toward novice-intermediate low proficiency in all four language modalities (listening, reading, speaking, writing). Topics include everyday subjects (shopping, directions, family, food, housing, etc.).

GER 1002. Beginning German. (; 5 cr. ; Student Option; Every Fall, Spring & Summer) Listening, reading, speaking, writing. Emphasizes proficiency. Topics include free-time activities, careers, and culture of German-speaking areas. prereq: 1001

GER 1003. Intermediate German. (; 5 cr. ; Student Option; Every Fall, Spring & Summer) Listening, reading, speaking, writing. Contextualized grammar/vocabulary. Authentic readings. Essay assignments. prereq: 1002 or Entrance Proficiency Test

GER 1004. Intermediate German. (; 5 cr. ; Student Option; Every Fall, Spring & Summer) Listening, reading, speaking, writing. Contextualized grammar/vocabulary. Authentic readings. Essay assignments. prereq: 1003 or completion of Entrance Proficiency Test at 1004 level

GER 1022. Beginning German Review. (; 5 cr. ; Student Option; Every Fall & Spring) Intended for students with previous experience in German, primarily those who have studied German in high school or at community colleges, or who are transfer students. Intensive review of all four language modalities (listening, reading, speaking, writing), with a proficiency emphasis to prepare for German 1003. prereq: Placement above 1001

GER 1551. Sustainability in Germany: Recreation, Education, Innovation. (GP; 3 cr. ; Student Option; Every Spring) How has Germany responded to the grand challenge of climate-change? In what ways are perspectives on climate change & sustainability reflected in everyday culture? This course is designed for students to seek answers to these questions by experiencing life in Germany first-hand. During the first part of the course, you will review concepts & vocabulary related to climate change & sustainability, learn about the stages of intercultural development, reflect on your own cultural identity, practice conversational speaking in German, & prepare to immerse yourself in a foreign country. In May, you will apply what you learned as you travel to Freiburg & Munich. There you will see innovative technologies developed to lower CO2 emissions & talk with students, teachers, & business owners to learn about green communities that promote sustainable living. Finally, you will reflect on your own intercultural development as well as how approaches in Germany to climate change differ or are similar to those in your own country. prereq: Ger 1003 or equivalent; may be concurrently enrolled in 1003

GER 1601. Fleeing Hitler: German and Austrian Filmmakers Between Europe and Hollywood. (AH; 3 cr. ; Student Option; Fall Odd Year)

German/American films by famous directors who left Europe in Nazi period. Analysis of films by Fritz Lang, Max Ophuls, Robert Siodmak, Otto Preminger, Billy Wilder, Douglas Sirk, and others. Films as art works and as cultural products of particular social, political, and historical moments.

GER 1912. Oktoberfest: Fact and Fiction. (; 3 cr. ; A-F only; Periodic Fall)

This freshmen seminar examines the Bavarian Volksfest Oktoberfest from its origins to present day. Beyond the images of the American imagination, Oktoberfest is a complicated festival. Students will explore different facets each week including: gender and rape culture, race and "Italian weekend," money, and the impact the festival has on the city itself.

GER 3011W. Conversation and Composition. (WI; 4 cr. ; Student Option; Every Fall & Spring)

Achieving proficiency in professional or academic German. Refinement of oral/written expression. Review of important communicative modes of language. Wide range of topics to develop advanced level of proficiency. prereq: 1004

GER 3012W. Conversation and Composition. (WI; 3 cr. ; Student Option; Periodic Fall & Spring)

Prepares students for upper-level language and content courses in German. Continues the same focus and approach as 3011 with the addition of a larger reading component. prereq: 3011

GER 3014. German Media. (; 3 cr. ; Student Option; Every Spring)

Introduction to German language media. German language newspaper/magazine articles. The Internet. Radio/TV broadcasts. Structure/style of journalistic prose. prereq: 3011

GER 3016. Techniques of Translation. (; 3 cr. ; Student Option; Periodic Spring)

Theory/practice of translation from/to German in various genres. Idiomatics, stylistics, and cross-cultural aspects of translation. prereq: 3011

GER 3021. Business German. (; 3 cr. ; Student Option; Periodic Fall & Spring)

German economy, business culture. Practice of language used in business. Reading/discussion of German business documents. Preparation of formal letters and reports. prereq: 3011 or equiv

GER 3104W. Reading and Analysis of German Literature. (LITR,WI; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Introduction to literary analysis. Readings from drama, prose, and lyric poetry, from 18th century to present. prereq: 3011

GER 3421. 18th-Century German Literature. (; 3 cr. ; Student Option; Periodic Fall & Spring) German literature, 1720-1810, Enlightenment/Weimar classicism in historical/cultural context.

Reading/discussion of literary/philosophical works, aesthetic criticism. prereq: 3011

GER 3431. 19th-Century Literature. (; 3 cr. ; Student Option; Periodic Fall)

Literary/cultural exploration of 19th-century German literature through an investigation of romanticism, realism, and naturalism. Reading/discussion of literary/critical texts. prereq: 3011

GER 3441. 20th-/21st-Century Literature. (; 3 cr. ; Student Option; Periodic Fall)

German literature, from 1890 to present, in historical, political, social, and cultural context. prereq: 3011

GER 3490. Topics in German Literature. (; 3 cr. [max 9 cr.]; Student Option; Every Fall & Spring)

Intensive exploration of specific authors, literary genres, or literary topics not covered in period courses.

GER 3501. Contemporary Germany. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Social, political, and cultural developments in Germany, from 1945 to present. prereq: 3011

GER 3510. Topics in German Studies. (; 3 cr. [max 9 cr.]; Student Option; Every Spring)

One topic in depth dealing with culture or civilization of German-speaking countries. prereq: 3011

GER 3520. Topics in Austrian and Central European Culture. (; 3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring)

Culture, politics, and economy in Austria and Central Europe. Comparative analysis of cultural/political developments. Topics vary. prereq: 3011

GER 3551. Sustainability in Germany: Recreation, Education, Innovation. (GP; 3 cr. ; Student Option; Every Spring)

How has Germany responded to the grand challenge of climate-change? In what ways are perspectives on climate change & sustainability reflected in everyday culture? This course is designed for students to seek answers to these questions by experiencing life in Germany first-hand. During the first part of the course, you will review concepts & vocabulary related to climate change & sustainability, learn about the stages of intercultural development, reflect on your own cultural identity, practice conversational speaking in German, & prepare to immerse yourself in a foreign country. In May, you will apply what you learned as you travel to Freiburg & Munich. There you will see innovative technologies developed to lower CO2 emissions & talk with students, teachers, & business owners to learn about green communities that promote sustainable living. Finally, you will reflect on your own intercultural development as well as how approaches in Germany to climate change differ or are similar to those in your own country. prereq: Ger 3011 or equivalent; may be concurrently enrolled in 3011

GER 3601. German Medieval Literature. (GP,LITR; 3 cr. ; Student Option; Fall Odd, Spring Even Year)

Literary investigation of the greatest works of medieval German poetry. Readings in English.

Majors will be required to write a paper with use of secondary sources in English and German. prereq: No knowledge of German required

GER 3604W. Introduction to German Cinema. (AH,WI,GP; 3 cr. ; Student Option; Fall Even, Spring Odd Year)

An introduction to the study of German cinema, with a focus on the relation between German film and German history, literature, culture, and politics.

GER 3610. German Literature in Translation. (; 3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring)

In-depth study of authors or topics from various periods in German literature. prereq: No knowledge of German required; cr toward major or minor requires reading in German

GER 3631. Jewish and German Writing at the Margins: Multilingualism, Race, Memory. (; 3 cr. ; Student Option; Periodic Fall & Spring)

How are minority stories, novels, and poems constructed at the margins of a majority culture's language? This course addresses this question by exploring the complexity of Jewish culture in modernity, with a focus on 20th and 21st century German and American literature. We will first tackle the open-ended and endlessly productive question of what is meant by Jewish culture. What is a Jewish writer and is there such a thing as Jewish writing? What makes a text "Jewish"? How do Jewish authors challenge the assumptions of majority culture in their work? What role do multilingualism and translation play in the formation of Jewish cultures at the margins? We will trace the lines of affinity between the U.S. and Europe to explore the entangled histories of Germans and Jews, and between German Jews and Turkish Germans, as we look at works that challenge and expand the definition of Jewishness in the 20th century. Additional topics to be considered include how the legacies of American slavery and European colonialism shape our understandings of the Nazi genocide of the Jews, and whether Jewish writing should be understood under the rubric of "whiteness." Moving beyond the approach to German Jewish literary studies anchored in Weimar Germany, we will explore the circulation of Jewish memory between Europe and the U.S. in the aftermath of the Holocaust. We will read works by, among others, Franz Kafka, Paul Celan, Gershon Scholem, Hannah Arendt, Benjamin Stein, Walter Benjamin, Barbara Honigmann, H?l?ne Cixous, Raymond Federman, W.G. Sebald, Allen Ginsberg, Adeena Karasick, Alfred Kazin, Saul Bellow, Philip Roth, Bernard Malamud, Avram Sutzkever, Zafer ?enocak. prereq: No knowledge of German required; some work in German must be done in order to count this course toward a German minor or a German, Scandinavian, Dutch major.

GER 3633. The Holocaust: Memory, Narrative, History. (GP,HIS; 3 cr. ; Student Option; Periodic Fall & Spring)

Decades after the end of the second world war, the Holocaust continues to play a formative

role in public discourse about the past in Germany and Austria. As the event itself recedes into the past, our knowledge about the Holocaust has become increasingly shaped by literary and filmic representations of it. This course has several objectives: first, to deepen students' historical knowledge of the events and experiences of the Holocaust, and at the same time to introduce critical models for examining the relationship between personal experience, historical events, and forms of representation. This class will introduce students to the debates about the politics of memory and the artistic representation of the Holocaust, with special focus on public debates about the complex ways in which Holocaust memory surfaces in contemporary Germany and Austria, and by the accrual of layers of text and discourse about the Holocaust. We will explore the controversies and debates about public Holocaust memorialization in Germany, Austria, and the U.S. We will also explore the complex interplay between documentary and fictional accounts of the Holocaust, with attention paid to literary and film texts that challenge and "remediate" the limits of Holocaust representation. Additional topics will include Holocaust testimony; Holocaust memoirs, and 2nd?and 3rd?generation Holocaust literature, the Historians' Debate of the 1980s. No knowledge of German required.

GER 3634. Women & Nonbinary German Authors: Cultural History & Constructing Selves through Narrative & Media. (; 3 cr. ; Student Option; Periodic Fall)

Examination of narrative texts and media by women and nonbinary German writers against a background of the cultural history of Germany spanning the 18th through the 20th century. Focus on personal narrative texts, both written and visual, and readings in literary and cultural theory and history. All readings in English.

GER 3641. German Folklore. (GP,LITR; 3 cr. ; Student Option; Fall Even, Spring Odd Year)

Literary and cultural investigation of the main folklore genres: charms, legends, folktales, and ballads; their composition, origin, and role in society with a strong emphasis on their international character. Readings in English. Majors required to write a paper with use of secondary sources in English and German. prereq: No knowledge of German required; cr for major or minor by arrangement with instructor

GER 3651. Thinking Environment: Green Culture, German Literature and Global Debates. (ENV,LITR; 3 cr. ; Student Option; Fall Odd, Spring Even Year)

How environmental thinking became social-political force through German literature/culture, with comparisons to global or U.S. developments. Authors include Goethe, Christa Wolf, Enzensberger.

GER 3655. Cultures of Control and Surveillance in Germany and the US. (CIV,HIS; 3 cr. ; Student Option; Fall Odd Year)

Discourses and practices of social control and surveillance in comparative/historical perspective. Explores the central conceptual

condition for modern ethics: the relationship between individual and society. Paintings, manuals, scholarly and philosophical essays, and literary texts including writings by Franz Kafka.

GER 3701. History of the German Language. (; 3 cr. ; Student Option; Periodic Fall)
Change in grammar and lexicon, 750 A.D. to present. prereq: 1004

GER 3702. Beginning Middle High German. (; 3 cr. ; Student Option; Periodic Fall)
Middle High German grammar. Selected literary texts. prereq: 1004

GER 3704. German Dialects. (; 3 cr. ; Student Option; Periodic Fall)
Contemporary regional dialects recorded on tape and written in texts. Synchronic and diachronic analysis. prereq: 1004

GER 3993. Directed Studies. (1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
Guided individual reading or study. Prereq instr consent, dept consent, college consent.

GER 4001. Beginning German for Graduate Research. (; 5 cr. ; Student Option; Every Fall, Spring & Summer)
Emphasis on working toward novice-intermediate low proficiency in all four language modalities (listening, reading, speaking, writing). Topics include everyday subjects (shopping, directions, family, food, housing, etc.). Meets concurrently with 1001. prereq: Grad student

GER 4002. Beginning German for Graduate Research. (; 5 cr. ; Student Option; Every Fall, Spring & Summer)
Listening, reading, speaking, writing. Emphasizes proficiency. Topics include free-time activities, careers, and culture of German-speaking areas. Meets concurrently with 1002. prereq: Grad student

GER 4003. Intermediate German for Graduate Research. (; 5 cr. ; Student Option; Every Fall, Spring & Summer)
Listening, reading, speaking, writing. Contextualized grammar/vocabulary. Authentic readings. Essay assignments. Meets concurrently with 1003. prereq: Grad student

GER 4004. Intermediate German for Graduate Research. (; 5 cr. ; Student Option; Every Fall, Spring & Summer)
Listening, reading, speaking, writing. Contextualized grammar/vocabulary. Authentic readings. Essay assignments. Meets concurrently with 1004. prereq: Grad student

GER 5011. Advanced Conversation and Composition. (; 3 cr. ; Student Option; Fall Odd Year)
Achieving high proficiency in writing/speaking professional/academic German. prereq: 3012, [grad student or adv undergrad]

GER 5410. Topics in German Literature. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)
Topic may focus on a specific author, group of authors, genre, period, or subject matter. Topics specified in Class Schedule.

GER 5510. Topics in Contemporary German Culture. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)
A topic of contemporary German culture explored in depth. prereq: 3011

GER 5610. German Literature in Translation. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)
Study in depth of authors or topics from various periods in German literature. Requires no knowledge of German. prereq: No knowledge of German required; cr toward major or minor requires reading in German

GER 5630. Topics in German Cinema. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Spring)
Topics chosen may focus on specific directors, genres, film production or reception, and/or other formal, theoretical, historical, or political issues. prereq: 3xxx film course or instr consent

GER 5651. Thinking Environment: Green Culture, German Literature and Global Debates. (ENV,LITR; 3 cr. ; Student Option; Fall Odd, Spring Even Year)
How environmental thinking became social-political force through German literature/culture, with comparisons to global or U.S. developments. Authors include Goethe, Christa Wolf, Enzensberger.

GER 5711. History of the German Language I. (; 3 cr. ; Student Option; Fall Even Year)
Historical development of German, from beginnings to 1450. prereq: 3011

GER 5721. Introduction to Middle High German. (; 3 cr. ; Student Option; Fall Odd Year)
Introduction to Middle High German language and literature. Study of grammar through formal description of Middle High German phonology, morphology, and syntax. Normalized MHG texts read.

GER 5734. Old Saxon. (; 3 cr. ; Student Option; Periodic Fall)
Study of the poetry of Old Saxon. Detailed investigation of Old Saxon in comparison with the other Old Germanic languages.

GER 5993. Directed Studies. (1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
Guided individual reading or study. Prereq instr consent, dept consent, college consent.

German, Scandinavian, and Dutch (GSD)

GSD 3451V. Honors Major Project Seminar. (WI; 3 cr. ; A-F or Audit; Every Fall)
Major project under supervision of faculty member. Oral exam based on project. prereq: Honors student

GSD 3451W. Major Project Seminar. (WI; 3 cr. ; A-F or Audit; Every Fall)
Students prepare major project under supervision of faculty member.

GSD 3511W. Vikings, Knights, and Reformers: German and European Culture

and Controversies to 1700. (WI; 3 cr. ; Student Option; Every Fall)
Survey of representative cultural-historical events in Europe (German-speaking countries, Scandinavian, the Netherlands) from early Germanic times to 1700.

GSD 3512W. Imagined Communities: German and European Culture and Controversies, 1700 to Present. (WI; 3 cr. ; Student Option; Every Spring)
Survey of representative cultural-historical events in Europe (German-speaking countries, Scandinavian, the Netherlands) from 1700 to present.

GSD 5103. Teaching of Germanic Languages. (; 3 cr. ; Student Option; Every Fall)
Second language acquisition theory, methods, testing, and technology applicable to teaching of modern Germanic languages.

Gerontology (GERO)

GERO 5100. Topics in Gerontology. (; 0.5-4 cr. [max 10 cr.] ; Student Option; Periodic Fall, Spring & Summer)
Timely topics related to the biology, sociology, and psychology of aging and applied aging services.

GERO 5102. Hot Topics in the Biology of Aging. (1 cr. ; S-N only; Fall Even Year)
The goals of the course include providing the students with an essential understanding of the contemporary issues in biogerontology, including analysis of ethics issues in the field. This course is open to graduate students and post-doctoral fellows involved in the NIA training grant Functional Proteomics of Aging. others may enroll with instr permission.

GERO 5103. Aging and Society. (2 cr. ; Student Option; Every Fall)
Examines the broad range of topics and issues related to aging, and how the process of aging is shaped by social context and relationships in connection with individual factors, including family, the economy, health care, and the political system. Students in Master's or doctoral programs most likely to benefit. Students new to the field of aging studies are recommended to begin with GERO 5105/PubH 6883: Multidisciplinary Perspectives in Aging.

GERO 5105. Multidisciplinary Perspectives on Aging. (; 2 cr. [max 3 cr.] ; Student Option; Every Fall)
Obtain a broad understanding of the multidisciplinary perspectives, theoretical underpinnings, and advancements in the study of aging ("gerontology"), in the inter-related domains of clinical geriatrics, psychology, sociology, and policy as related to aging.

GERO 5111. Studying Aging and Chronic Illness. (; 2 cr. ; Student Option; Every Fall)
Methodological issues unique to studies of older populations. Focuses on measurement of epidemiological characteristics. Health conditions/disorders of older Americans. prereq: Introductory course in epidemiology or instr consent

GERO 5117. Adult Development and Aging. (2 cr. ; Student Option; Every Spring)

This course examines the dynamic interaction of individual development and aging. Students will review the principal theories applied to understand individual development and aging, and explore methodological issues in adult development and aging; cognitive aging; social and health factors that influence developmental trajectories in aging and vice versa; and psychopathological issues in aging. It is recommended that those new to the field of aging students take PubH 6883/GERO 5105: Multidisciplinary Perspectives in Aging prior to taking this course. This course fulfills the Behavioral and Social Sciences concentration area requirement of the Gerontology Minor.

GERO 5125. Gerontology Service Learning. (; 1-3 cr. ; Student Option; Every Fall, Spring & Summer)

At least 100 hours of service to seniors or organizations serving seniors required. Longitudinal one-on-one relationship with at least two seniors. Service activities may include: friendly visiting, escorting seniors to medical appointments, chore services, teaching health education to groups of seniors and staff, participating in social or recreational activities with seniors, assisting with immunization and screening programs, assisting seniors with selection of health plans, or providing volunteer home health aide or nursing assistant services or emergency non-medical response under the supervision of a nurse. Students may use up to 25 percent of their service time for project that benefits the campus as a whole. Reading, monthly class discussions, a term paper and weekly self-reflection

GERO 5191. Independent Study:

Gerontology. (1-4 cr. [max 16 cr.] ; Student Option No Audit; Periodic Fall, Spring & Summer)

Independent study: gerontology. prereq: Approval of [adviser, DGS] for gerontology minor

GERO 5518. Equity and Long-Term Care Quality. (2 cr. ; A-F only; Periodic Spring)

The objective of this course is to help students gain a deeper understanding of long-term care quality with a focus on equity. We will pay particular attention to post-acute care settings, care integration across settings, the role of the workforce, and equity considerations across all these topics. Post-acute care settings reviewed will include home care, assisted living, alternative care arrangements, nursing homes, and hospice. There are no required prerequisites but students are encouraged to take a course on U.S. health care (e.g., PubH 6556, Health and Health Systems) prior to taking the course. Cross-listed with: PubH 6518

Global Studies (GLOS)**GLOS 1015W. Globalization: Issues and Challenges.** (GP,WI; 4 cr. ; Student Option; Every Fall & Spring)

Increased global interconnections over past 50 years. Impact of information revolution on human rights, economic inequality, ecological

challenges, and decolonization. Comparative cases from Asia, Africa, Latin America, or Middle East.

GLOS 1112. Social Justice and Globalization. (GP; 3 cr. ; A-F only; Periodic Fall)

This course focuses on the relationship between two highly charged terms: globalization and social justice. We will explore questions such as: What is social justice, and how is it different from political justice or economic justice? When does the free flow of capital and commodities involved in globalizing processes endanger possibilities for social justice, and how might we check this danger? What about the mass migrations occurring now to Europe and elsewhere? To what extent are these the result of historic injustices, what new social injustices might they create, what new possibilities for social justice might they enable? How and when does the emergence of social media, network technologies and the like assist in the fight for human rights and equality, and thus enable social justice? And under what circumstances do these technologies empower phenomena like authoritarian populism, thus undermining social justice? This course will examine theoretical texts, literature, and empirical studies from the social sciences to investigate these questions.

GLOS 1916. Do the Right Thing: Ethics and You. (; 3 cr. ; A-F only; Periodic Fall & Spring)

This class will examine the struggles we all have in everyday life to "do the right thing." Almost every area of life confronts us with the question, "What should I do here?" "What is the right thing to do?" "What is the good thing to do?" To this extent our class is about ethics, that sphere of philosophy that inquires into the conduct of human beings as they encounter the world. Using different kinds of material--newspaper columns, film, and academic studies--we will examine the dilemmas that people have in making ethical decisions. Our goal is not to define a fixed guide to ethics as much as it is to acquaint students with questions about conduct as they appear in a variety of contexts of everyday life. We will ask what makes some situations clear and others ethically complex. We will also consider what happens when different scales of values confront each other in everyday life. Students will conclude the class able to notice and analyze ethical dilemmas and empowered to sort through them.

GLOS 3105. Exploring the World: The Practice of Interdisciplinary Research. (3 cr. ; Student Option; Every Fall)

This class introduces Global Studies students to some of the major disciplines and methods used to make knowledge about the social world. The course first addresses fascinating philosophical questions, such as how is knowledge a social product? How are knowing and understanding different? How might we think of ignorance, too, as something constructed? We then turn from theory to practice, and to the question, how can we frame our questions, and enact our research in humble and ethically principled ways?

Students will respond to this task by designing collaborative research projects. They will first identify and define a real world issue; they will review different disciplines' methods for defining and approaching the issue, and then they will jointly create a collaborative research design. The course will help Global Studies students understand the interdisciplinary nature of the Global Studies major, and it will help them begin to think about the goals, interests, and methods of their senior projects.

GLOS 3143. Place, Community, Culture. (CIV; 3 cr. ; A-F only; Every Spring)

Students in the Global Studies program study not only the powerful political institutions and economic processes that shape our world, they also acquire the skills to perceive and investigate their own place and identities, and to interpret creative work that express different ways of being. In GLOS 3143 'Place, Community, Culture' students will explore their own locations, identities, and experiences in the context of our fraught and ethically complex times. The emphasis is on practice, on seeing one's own life as something to be enriched by seeing and feeling the world in new ways. Students will encounter a mix of philosophical works, artistic texts (novels, films, poetry, painting, music, and other forms of media) and scholarly texts that together will help students expand their ingrained and conditioned ways of seeing the world. Class themes might include self and other, community and alienation, place and placelessness, home and homelessness. Students will examine the place of ethics and politics in the negotiation of their identities and experiences. Assignments might include essays that ask students to interpret artistic works that present different avenues of insight, or creative assignments that ask you to reflect on your own experiences in relation to course readings and themes. Students will conclude the class more confident of their ability to notice and negotiate the dilemmas they will encounter in their personal and professional lives.

GLOS 3144. Knowledge, Power, and the Politics of Representation in Global Studies. (3 cr. [max 4 cr.] ; A-F only; Every Fall)

This course provides an introductory overview of core theories and concepts that prepare students for successful completion of the Global Studies curriculum. In this half of the Global Studies core course sequence, students will investigate questions pertaining to how representations of the modern world in popular media and academic writing contribute to, reaffirm, and often challenge relations of inequality and division tied to such categories as ethnicity, gender, and race. Drawing on a wide range of interdisciplinary sources including magazines, novels, films, and digital media, these questions may include: How do cultural representations of the Global South reinforce European imperial and colonial projects? What role do mass-market magazines and newspapers have in constructing difference and producing stereotypes that justify imperialist attitudes? How does the development of technologies, from railroads to the internet, affect collective experiences of time and space? How is 'fake

news' and intentional misrepresentation a threat to democracy and to the ecological security of the Earth? Students will meet twice a week for lecture and attend a weekly recitation section, with assignments that include short writing exercises and/or weekly Canvas posts and a midterm and final examination. This course will show how the politics of representation and knowledge production relate to changing formations of power, while giving students the conceptual vocabulary and critical skills to prepare for subsequent Global Studies courses. Prereq: soph, jr, or sr

GLOS 3144H. Honors: Knowledge, Power, and the Politics of Representation in Global Studies. (; 3 cr. ; A-F only; Every Fall)

This course provides an introductory overview of core theories and concepts that prepare students for successful completion of the Global Studies curriculum. In this half of the Global Studies core course sequence, students will investigate questions pertaining to how representations of the modern world in popular media and academic writing contribute to, reaffirm, and often challenge relations of inequality and division tied to such categories as ethnicity, gender, and race. Drawing on a wide range of interdisciplinary sources including magazines, novels, films, and digital media, these questions may include: How do cultural representations of the Global South reinforce European imperial and colonial projects? What role do mass-market magazines and newspapers have in constructing difference and producing stereotypes that justify imperialist attitudes? How does the development of technologies, from railroads to the internet, affect collective experiences of time and space? How is 'fake news' and intentional misrepresentation a threat to democracy and to the ecological security of the Earth? Students will meet twice a week for lecture and attend a weekly recitation section with assignments that include short writing exercises and/or weekly Canvas posts and a midterm and final examination. This course will show how the politics of representation and knowledge production relate to changing formations of power, while giving students the conceptual vocabulary and critical skills to prepare for subsequent Global Studies courses. Prereq: Honors soph, jr, or sr

GLOS 3145. Global Modernity, the Nation-State, and Capitalism. (3 cr. ; A-F only; Every Spring)

This course provides an introductory overview of core theories and concepts that prepare students for successful completion of the Global Studies curriculum. In this half of the Global Studies core course sequence, students will investigate questions pertaining to the emergence of global modernity, capitalism, and the nation-state, with particular focus on theoretical concepts and institutional forms. Drawing on a wide range of interdisciplinary sources including critical theory, philosophy, and texts from the social sciences, these questions may include: How did reason and culture emerge as key concepts in modernity, and how were they associated with

transformations in time and space? How did the nation-state become a dominant political unit in the West, and how do postcolonial African states challenge its structure? What is the relationship between the Western liberal tradition, secularity, and violence? What are the histories and internal dynamics of the capitalist economy? Students will meet twice a week for lecture and attend a weekly recitation section, with assignments that include short writing exercises, a group project, and midterm and final examinations. This course will contextualize and trouble aspects of the global that are easily abstracted and taken for granted, while giving students the conceptual vocabulary and critical skills to prepare for subsequent Global Studies courses. Prereq: soph, jr, or sr Units: 3.00

GLOS 3145H. Honors: Global Modernity, the Nation-State, and Capitalism. (; 3 cr. ; A-F only; Every Spring)

This course provides an introductory overview of core theories and concepts that prepare students for successful completion of the Global Studies curriculum. In this half of the Global Studies core course sequence, students will investigate questions pertaining to the emergence of global modernity, capitalism, and the nation-state, with particular focus on theoretical concepts and institutional forms. Drawing on a wide range of interdisciplinary sources including critical theory, philosophy, and texts from the social sciences, these questions may include: How did reason and culture emerge as key concepts in modernity, and how were they associated with transformations in time and space? How did the nation-state become a dominant political unit in the West, and how do postcolonial African states challenge its structure? What is the relationship between the Western liberal tradition, secularity, and violence? What are the histories and internal dynamics of the capitalist economy? Students will meet twice a week for lecture and attend a weekly recitation section with assignments that include short writing exercises, a group project, and midterm and final examinations. This course will contextualize and trouble aspects of the global that are easily abstracted and taken for granted, while giving students the conceptual vocabulary and critical skills to prepare for subsequent Global Studies courses. Prereq: Honors soph, jr, or sr Units: 3.00

GLOS 3215. Supercapitalism: Labor, Consumption & the Environment in the New Global Economy. (3 cr. ; A-F only; Every Fall)

From the jeans you buy online to the place mats you purchase at Target, most of the items we consume are made somewhere else. Global production networks link consumers of fresh green beans in Britain with growers, pickers, and packers in Zambia. And it isn't only products that move around the globe; so do people. Thanks to immense economic inequalities, wealthy families in the global North enjoy the cheap labor of Eastern European, Filipino, and Honduran nannies, house cleaners, and gardeners. How did this global economy come to be, how has it impacted workers, consumers, and ecosystems, and

what are its ethical and political implications? This course focuses on the changes that have occurred over the last 70 years in the realms of labor, consumption, and the environment. We'll examine the movement away from regulated national economies to an integrated global economy; changing patterns and organization of production, distribution, consumption, and waste disposal; and new forms of capital-labor-state relations. Some of the topics we explore include the global trade in body parts; the rise of shareholder capitalism; the new "platform" economy; the growing insecurity of work; and the environmental changes global capitalism has wrought. We end by considering alternatives to the "business-as-usual" (BAU) economy.

GLOS 3219. History of Capitalism: Uneven Development Since 1500. (; 3 cr. ; Student Option; Fall Odd Year)

Causes of economic inequities in contemporary world. Long-term economic developments in cases taken from Africa, Asia, Europe, and North/South America. Various theoretical approaches to study of economic development. Introduction to key concepts.

GLOS 3225. The Power of the 1%: Global Philanthropy and the Making of a New World. (3 cr. ; Student Option; Periodic Fall & Spring)

Philanthropy has come to play an increasingly important role in the economy and society, on both a national and global level. Americans gave away \$450 billion in 2019, or a little over 2 percent of our country's GDP (Giving USA 2020). A few mega-philanthropists, such as Bill Gates, Warren Buffett, Michael Bloomberg and others donated mind-boggling sums of money. These individuals and their foundations are having a significant impact around the world, changing the way public education is carried out in many countries, how global health priorities are defined, how public policies are made, and how African agricultural systems are organized. Forbes magazine reports that there are 1,645 billionaires in the world today, 80% more than a decade ago. While some observers look positively on this philanthropic outpouring, others suggest it may be eroding democracy. In this course, we study philanthropy from a variety of perspectives, exploring who gives away money and why, how this "gift" impacts givers, receivers, and taxpayers, and what the relationship is between global philanthropy and power. Specific topics include the history of foundations; religion and charity; philanthropy and politics; consumption-based giving (or "brand aid"), and philanthropy and social policy. We'll examine case studies such as the Gates Foundation's role in African agriculture. Students will do "participant observation" in a local charity, and a research project on the philanthropic foundation or giving practice of their choice.

GLOS 3231. Geography of the World Economy. (GP,SOCS; 3 cr. ; Student Option; Every Fall)

Geographical distribution of resources affecting development. Location of agriculture, industry, services. Agglomeration of economic activities, urbanization, regional growth. International

trade. Changing global development inequalities. Impact on nations, regions, cities.

GLOS 3278. Tigers and Dragons: The Rise of the East Asian Economies, 1930-Present. (3 cr. ; Student Option; Spring Odd Year)
Rise of East Asian Economies, 1930-Present.

GLOS 3303. Environment and Development in the Third World. (ENV,SOCS; 3 cr. ; A-F or Audit; Every Spring)

Concepts for analyzing relations between capitalist development and environment in Third World. Historical geography of capitalist development. Case studies. Likelihood of social/environmental sustainability. prereq: Soph or jr or sr

GLOS 3305. Science for Sale: Environment, Capital, and Medicine. (; 3 cr. ; A-F only; Every Fall)

This class uses a social justice lens to explore the interrelations of scientific discoveries, unequal global economies, and commodification. We will look at practices, new technologies, and policies that are trenchant for the negative impacts they have on environments broadly defined, and for human and non-human populations. We will ask how these practices, technologies, and policies - and the social and economic contexts that produce them - variably impact the health, well being, and valuation of particular populations. In a series of interconnected themes, we will examine what factors produce food insecurity and for whom; where and why pollution of resources such as water happens; the history and current state of antibiotic resistance; climate change and its various effects; and how new technologies can be life-saving and life-denying according to the ways national and global policies determine who gains access and who does not. We will also look at the innovative ways grassroots movements tackle issues confronting particular groups, what constitutes positive social change and by whose definition, and potential ways forward. Final projects focus on website construction or policy documents that have application beyond the classroom. Prereq: soph or jr or sr

GLOS 3401W. International Human Rights Law. (GP,WI; 3 cr. ; A-F or Audit; Every Fall)
This course presents an introductory overview of the idea of human rights, its social and legal foundations and contemporary global issues. In the class, students will learn about the laws and procedures designed to protect the human rights of individuals and groups, with a special focus on the United Nations system. The course explores the conceptual underpinnings of human rights such as who is eligible to have rights, where those rights come from and who is responsible for guaranteeing them. Students will learn about how international laws are made and interpreted, and will consider the geo-political context which shapes human rights laws and procedures. Because of the evolving nature of the laws and issues in this field, students are encouraged to think analytically and ethically about how to address the many human rights challenges in the world today. The course will cover current human rights issues, including the right to

health care, housing and other economic and social rights; and the right to life, freedom from torture and other civil and political rights. The course is writing intensive. The required paper for the class is a model complaint to the United Nations about a country and issue of the student's choosing. The class invites discussion and uses class exercises to engage students in the course material by shaping arguments for various legal fora.

GLOS 3407. Global Islamophobia. (3 cr. ; A-F only; Periodic Spring)

Throughout the world, anti-Muslim activists and politicians have been increasingly attacking Muslims and Islam. And, international organizations have reported human rights violations against Muslims worldwide. Recently, in the United States, there have been calls to ban Muslims, as well as register American Muslims. In France, Muslim women are prohibited to wear a headscarf in high school. And in Myanmar, a genocide against Muslim minorities is currently underway. While anti-Islamic discourses have a long history in many societies worldwide (including Muslim-majority countries), the course seeks to explore the global rise of these discourses since September 11, 2001. The course examines the cultural, political, and historical origins of Islamophobic discourses that cast Muslims as "violent," "hateful," and "uncivilized." Class sessions will include some lecture but will be largely discussion based. Assignments will ask students to think and write critically about course concepts, debate and participate in simulation exercises, and reflect on personal thoughts and feelings about course content.

GLOS 3412. What is Equality?. (CIV; 3 cr. ; A-F only; Every Spring)

Course explores debates about equality. Equality has many dimensions--e.g.: economic, social, political. These forms cannot be reconciled. Liberal democracies affirm the principle of political equality but defend, even in principle, social and economic inequalities. Animal rights add another wrinkle: very few of those who fight for these rights would claim political equality for animals.

GLOS 3415W. Global Institutions of Power: World Bank, International Monetary Fund, and World Trade Organization. (GP,WI; 3 cr. ; A-F or Audit; Periodic Fall)

This course will introduce students to some of the world's most powerful global institutions -- such as the World Bank (IBRD), the International Monetary Fund (IMF), the World Trade Organization (WTO), the United Nations, and affiliated agencies such as UNHCR (for refugee support). We will follow their efforts to promote a style of global development practices -- large-scale capital lending and global expertise building -- that has crystallized into a common understanding of how global north-south dynamics should progress. Cases pursued in class may include their lending and debt policies, dam building and energy projects, climate resilience and water loans, and the ways they mediate free trade agreements among competing countries. We will also hear from the multitude of voices, theories, and practices that offer alternative

visions as to how peoples strive to produce a more just, socially equitable, and climate-safe world. We will use books, articles, films, in-class debates, case study exploration, small-group projects, and guest speakers to create a lively discussion-based classroom environment.

GLOS 3602. Other Worlds: Globalization and Culture. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

'Globalization' and 'Culture' are both terms that have been defined and understood in a variety of ways and the significance of which continues to be debated to the present, both inside and outside the academy. Globalization has been talked about both as an irresistible historical force, tending toward the creation of an increasingly interconnected, or, as is sometimes claimed, an increasingly homogeneous world, and as a set of processes, the outcome of which remains open-ended and uncertain, as likely to produce new kinds of differences as universal sameness. Culture meanwhile has been variously defined as that which distinguishes humans from other species (and which all humans therefore share) and as that which divides communities of humans from one another on the basis of different beliefs, customs, values etc. This course reflects on some of the possible meanings of both "Globalization" and "Culture" and asks what we can learn by considering them in relation to one another. How do the phenomena associated with globalization, such as increasing flows of people, capital, goods and information across increasing distances challenge our understandings of culture, including the idea that the world is composed of so many discrete and bounded "cultures"? At the same time, does culture and its associated expressive forms, including narrative fiction, poetry and film, furnish us with new possibilities for thinking about globalization? Does global interconnection produce a single, unified world, or multiple worlds? Are the movements of people, goods, ideas and information across distances associated with new developments caused by contemporary globalization, or have they been going on for centuries or even millennia? Might contemporary debates about climate change and environmental crisis compel us to consider these phenomena in new ways? The course addresses these questions as they have been discussed by scholars from a variety of disciplines and as they have been imagined by artists, poets, novelists and filmmakers. In doing so, it considers whether the distinctiveness of present day globalization is to be sought in part in the new forms of imagining and creative expression to which it has given rise.

GLOS 3609. Novels and Nations. (GP,LITR; 3 cr. ; Student Option; Periodic Fall)

How do emerging and postcolonial nations enlist fiction in their claims to sovereignty and autonomy? How do the novel's literary techniques and strategies perform a unique brand of political and social critique vis a vis nations and nationalisms? We will focus on novels from a variety of national contexts

from the Global North and South to show how literary analysis can be a companion to the social sciences in illuminating the historical and social contexts of the nation-state. In addition, we will consider the function of literature in allowing stateless nations to imagine a shared connection. We will also focus on the inner workings of the novel in order to understand the conventions and mechanisms of the genre and how it interconnects with related forms such as cinema, performance, and the visual arts.

GLOS 3611. Stories, Bodies, Movements. (6 cr. ; A-F only; Periodic Fall & Spring)
For most of us, stories seem to simply 'happen.' We listen to stories, we tell stories, we are moved by stories, and we retell stories. However, every act of telling stories involves making decisions or moves, and each re-telling of a familiar story may either give birth to new meanings, nuances, and affects, or, it may erase their possibility. Thus, each storyteller can be seen as a translator of stories with a responsibility to retell stories ethically. It is precisely through these translational acts that all politics become politics of storytelling. In this course, we will consider the ways in which the politics of the global and the intimate derive their meanings, effects, and affects from the circulation, transaction, and re-tellings of stories within and across borders. We will ask how a praxis of ethical engagement with politics can be imagined as a praxis of receiving and retelling stories. By immersing ourselves in the process of remembering, telling, listening, trimming, interweaving, distilling, and performing stories, we will consider how ethical receiving and retelling of stories involves continuous revising, repositioning, and re-theorizing of such vexed and entangled terrains and terminologies as identity, community, rights, and justice, as well as the contingent meanings of knowledge, truth, and ethics. This course engages this terrain through a mode of active learning in which all the participants will read and reflect, listen and discuss, tell and retell, watch and play, move and perform collectively. By becoming aware of the ways in which our minds-bodies-souls are inserted in the receiving and translation of stories, we will grapple together with the ways in which our bodies--as our embodiments--help to relationally shape not only our own performances but also our responses to the performances of other living and moving bodies around us. We will learn from writings, film, songs, and plays by writers, artists, activists, and thinkers from a range of historical and contemporary locations and struggles. These include: Marie Lily Cerat, W. E. B. Du Bois, Suheir Hamad, Sterlin Harjo, Naeem Inayatullah, June Jordan, AnaLouise Keating, Kauanui, J. Kehaulani, Audre Lorde, Viet Thanh Nguyen, Middle East Research and Information Project, Alok Rai, Nina Simone, Leanne Betasamosake Simpson, Sangtin Writers, Standing Rock Collective, Eve Tuck, Patrick Wolfe, and K. Wayne Yang. Many of the 'Acts' in this course will be co-facilitated with local or international artists and writers. Grading Basis: A/F. The course requires all

the participants to do sustained work and deep reflections, enjoy the process of imagining and creating with peers in a non-competitive environment. prereq: GLOS 3611 is for jr or sr only. People from all kinds of locations and journeys are invited to join us in this collective exploration. For further information, email: nagar@umn.edu.

GLOS 3612. Global Tourism, Ecology, and the Creative Arts in Indonesia. (3 cr. [max 6 cr.] ; Student Option; Periodic Summer)
Students in this course will study cultural traditions, the creative industry and tourism in Indonesia as an important part of the economy of the global south. The course will be held on the sites of dance performances, temples, heritage houses, and other cultural sites. Artists, cultural practitioners, cultural ministry officers, and policy makers for the tourism industry will serve as guest lecturers throughout. The course will be centered on creative intervention through the tourism industry and the arts and the particularity of creative impulse, gender difference, value of tradition, and modernity as a concept in Balinese culture.

GLOS 3613V. Honors: Stuffed and Starved: The Politics of Eating. (GP,WI,SOCS; 3 cr. ; A-F only; Periodic Fall & Spring)
The course takes a cross-cultural, historical, and transnational perspective to the study of the global food system. Themes explored include: different cultural and social meanings attached to food; social class and consumption; the global food economy; global food chains; work in the food sector; the alternative food movement; food justice; environmental consequences of food production. Additional special assignments will be discussed with honors participants who seek to earn honors credit toward the end of our first class session. Students will also be expected to meet as a group and individually with the professor four times during the course semester. Examples of additional requirements may include: - Sign up and prepare 3-4 discussion questions in advance of at least one class session. - Work with professor and TA on other small leadership tasks (class discussion, paper exchange, tour). - Write two brief (1-page) reflection papers on current news or a two-page critique of a class reading - Attend a presentation, workshop, or seminar on a related topic for this class and write a 2-page maximum reflective paper. - Interview a current Sociology/Global Studies graduate student and present briefly in class or write a reflective piece, not more than 2 pages in length, to be submitted to the Professor.

GLOS 3613W. Stuffed and Starved: The Politics of Eating. (GP,WI,SOCS; 3 cr. ; A-F or Audit; Periodic Fall & Spring)
This course takes a cross-cultural, historical, and transnational perspective to the study of the global food system. Themes explored include: different cultural and social meanings attached to food; social class and consumption; the global food economy; global food chains; work in the food sector; the alternative food movement; food justice; environmental consequences of food production.

GLOS 3643. Islam and the West. (; 3 cr. ; Student Option;)
Cultural/intellectual trends that have defined fundamental differences between Islam and the West. Development of historical, philosophical, and intellectual mindset of both spheres. Factors that have contributed and continue to contribute to tension, anxiety, and hatred between the Muslim world and Europe and the United States.

GLOS 3645. Islamic World. (GP,SOCS; 3 cr. ; Student Option; Every Fall)
Foundation of Islam in Arabian Peninsula, its spread to Asia and Africa. Islamic civilization, influence on Europe before rise of capitalism. Rise of Capitalist Europe, colonization of Islamic World Islamic resurgence and post-colonial World. State-society and development. Culture/conflict in Moslem societies. Gender and Islam. Islamic World and the West. Moslems in North America and Europe. Case studies.

GLOS 3681. Gender and the Family in the Islamic World. (; 3 cr. ; A-F only; Periodic Spring)
This course explores the experiences of Muslim women and Muslim families from a historical and comparative perspective. Expanding the discussion on Muslim women's lives and experiences beyond the Middle East, by also centralizing on the experiences of Muslim women and families outside of this geographical area highlights the complex and diverse everyday experiences of Muslim women around the world. This wider lens exposes the limitations intrinsic in the stereotypical representation of Muslims in general and Muslim women in particular. We will explore the intricate web of gender and family power relations, and how these are contested and negotiated in these societies. Some of the themes the course explores include the debates on Muslim women and colonial representations, sexual politics, family, education and health, women and paid work, gender and human rights, and Islamic feminisms debates. prereq: At least soph; 1001 recommended

GLOS 3705. Migrations: People in Motion. (GP; 3 cr. ; A-F or Audit; Periodic Fall & Spring)
Students in this course will tackle debates related to migration from a variety of disciplinary perspectives and will compare and connect diverse migration trends around the world (Asia, Africa, Latin America, and North America). Students will critically engage with various paradigms on the geopolitical, racial, and gender power dynamics that anchor migration processes and outcomes. Why would the movement of individuals from some parts of the world (often from the least developed regions to the highly developed Western nations) create such strong and highly charged debates? How are cross border social and economic relations of individuals and households maintained and perpetuated? What are particular governments doing to either encourage or hinder these movements? How are current migrations different from earlier eras? Is this gendered, and if so, how and

why? The objective of this course is to explore the above questions through academic and policy published literature. prereq: soph, jr, or sr

GLOS 3707. Disposable People?: Surplus Value, Surplus Humanity. (3 cr. ; A-F only; Periodic Fall & Spring)

The world today confronts a volatile scenario shaped by three intertwined political-economic processes: First, growth in surplus value or corporate profits fueled by monopoly capitalism, wage stagnation, and automation-driven improvements in productivity; second, growth in surplus or discarded matter fueled by rising consumerism and planned obsolescence in products and services; and finally, growth in surplus humanity or under-employed, unwanted populations fueled by structural transformations in the world economy with declining opportunities for good quality jobs. The combined result manifests as widening economic inequality between the 'haves' and 'have nots'; a politically volatile situation of racialized polarization in which huge numbers of people in entire regions, countries, or sectors of the globe, have little, declining, or no access to secure waged work; and an ecological crisis where the planet finds itself ill equipped to handle growing quantities of waste matter, including greenhouse gases. Our primary focus in the course will be to understand populations that are "cast out" of society, the forces that produce this condition, the mechanisms of rule by which surplus populations are managed, and the way people live and cope with their superfluity. Class sessions are a combination of lectures, debates, student-led discussions, and audio-visual materials. 60-70 pages of weekly reading, bi-weekly commentaries, take-home midterms, short presentation, and final paper.

GLOS 3896. Global Studies Internship. (; 3 cr. ; A-F or Audit; Every Spring)

Hands-on experience at Twin Cities organizations working at the nexus of the local and the global. Work 100 hours in non-governmental organization. Substantive coursework in Global Studies is required. prereq: dept consent

GLOS 3900. Topics in Global Studies. (; 1-5 cr. [max 15 cr.] ; Student Option; Every Fall & Spring)

Topics vary each semester. See Class Schedule.

GLOS 3961. Culture and Society of India.

(GP,SOCS; 3 cr. ; Student Option; Spring Even Year)

Contemporary society and culture in South Asia from an anthropological perspective with reference to nationalism; postcolonial identities; media and public culture; gender, kinship and politics; religion; ethnicity; and the Indian diaspora.

GLOS 3969. Democracy and popular politics in India. (; 3 cr. ; A-F or Audit; Periodic Fall)

Democracy is not only a political order; it is also a popular culture and politics. This course explores three tumultuous moments of this politics and culture in India: the pluralist nationalism which characterized Gandhian

nonviolence and the Indian constitution, the majoritarianism that was often this pluralism's undertow, and Hindutva or Hindu supremacism, the now dominant populist ideology.

GLOS 3981W. Capstone Seminar. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)

In the Capstone Seminar, students will write a 25-30 page undergraduate thesis on a self-defined topic related to their thematic and/or regional concentration. The course is designed to support academic research and writing in an interdisciplinary field, and to provide students a space to synthesize what they have learned in the classroom, through study abroad, in internships, and from life experiences. Students can expect lecture, class discussion, small-group work and peer review, and one-on-one meetings with the instructor. Prereq: dept consent

GLOS 3985V. Honors Capstone Seminar. (WI; 3 cr. ; A-F only; Every Fall & Spring)

In the Honors Capstone Seminar, students will write a 25-30 page cum laude or magna cum laude honors thesis on a self-defined topic related to their thematic and/or regional concentration. The course is designed to support academic research and writing in an interdisciplinary field, and to provide students a space to synthesize what they have learned in the classroom, through study abroad, in internships, and from life experiences. Students can expect lecture, class discussion, small-group work and peer review, and one-on-one meetings with the instructor. Students interested in summa cum laude honors should not take this class; they should consult the Global Studies advisor. Prereq: dept consent

GLOS 3993. Directed Study. (1-5 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study. Prereq instr consent, dept consent, college consent.

GLOS 4221. Globalize This! Understanding Globalization Through Sociology. (GP; 3 cr. ; A-F or Audit; Periodic Fall)

From the city streets of Bangalore to the high plateaus of La Paz to the trading floors of New York City, people from around the world are becoming increasingly interdependent, creating new and revitalizing old forms of power and opportunity, exploitation and politics, social organizing and social justice. This course offers an overview of the processes that are forcing and encouraging people's lives to intertwine economically, politically, and culturally. prereq: Soc majors/minors must register A-F

GLOS 4311. Power, Justice & the Environment. (DSJ; 3 cr. ; A-F or Audit; Periodic Spring)

This course introduces students to the theoretical and historical foundations of environmental racism and environmental inequality more broadly. We will examine and interrogate both the social scientific evidence concerning these phenomena and the efforts by community residents, activists, workers, and governments to combat it. We will consider the social forces that create environmental inequalities so that we may understand their

causes, consequences, and the possibilities for achieving environmental justice prereq: SOC 1001 recommended

GLOS 4315. Never Again! Memory & Politics after Genocide. (GP; 3 cr. ; A-F or Audit; Spring Odd Year)

Course focuses on the social repercussions and political consequences of large-scale political violence, such as genocide, war crimes and crimes against humanity. Students learn how communities and states balance the demands for justice and memory with the need for peace and reconciliation and addresses cases from around the globe and different historical settings. prereq: SOC 1001 or 1011V recommended, A-F required for Majors/Minors.

GLOS 4319. "Jews will not replace us!" Global Antisemitism from its Origins to the Present. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

This course will explore the topic of antisemitism, its history and cultural logic, and the relation to other forms of exclusion tied to race, religion, and citizenship in modern times. Starting with the history of Jewish emancipation in Europe and the subsequent debates about the "Jewish Question," students will learn to identify the key features of political antisemitism and the ways that antisemitism has been explained by different social theories, including Marxism, Functionalism, and Critical theory. The course will examine the differences and continuities between older theological forms of anti-Judaism and modern antisemitism, the connections between antisemitism, nativism, and xenophobia in the US and globally, and engage with current debates regarding the correlation between anti-Zionism and antisemitism. We will also explore Jewish social, political, and ideological responses to antisemitism in Europe and the US, from the Holocaust to the present. Pre-reqs: sophomore or above.

GLOS 4344. Europe and its Margins. (; 3 cr. ; A-F only; Every Fall)

This course explores some of the forms of human imagining (literary, artistic, political, social scientific) engendered by the notoriously hard to define entity known as "Europe." It does so by focusing on regions and populations that have been thought of at various times as marking Europe's inner and outer cultural and/or geographical limits. Topics addressed include: the relationship between physical geography, cultural memory, and the formation (or subversion) of identity claims; the reconfigured political landscapes of post-socialism and European integration; immigration, refugee flows, and the rise of far-right ethno-nationalisms; and the effects of pandemics past and present. prereq: One course in [ANTH or GLOS]

GLOS 5315. Never Again! Memory & Politics after Genocide. (GP; 3 cr. ; A-F or Audit; Spring Odd Year)

Course focuses on the social repercussions and political consequences of large-scale political violence, such as genocide, war crimes and crimes against humanity. Students learn how communities and states balance the

demands for justice and memory with the need for peace and reconciliation and addresses cases from around the globe and different historical settings. prereq: SOC 1001 or 1011V recommended, A-F required for Majors/Minors.

GLOS 5403. Human Rights Advocacy. (; 3 cr. ; Student Option; Every Fall)

Theoretical basis of human rights movement. Organizations, strategies, tactics, programs. Advocacy: fact-finding, documentation, campaigns, trial observations. Forensic science. Human rights education, medical/psychological treatment. Research project or background for case study. prereq: Grad student

GLOS 5611. Stories, Bodies, Movements. (6 cr. ; A-F only; Periodic Fall & Spring)

For most of us, stories seem to simply 'happen.' We listen to stories, we tell stories, we are moved by stories, and we retell stories. However, every act of telling stories involves making decisions or moves, and each re-telling of a familiar story may either give birth to new meanings, nuances, and affects, or, it may erase their possibility. Thus, each storyteller can be seen as a translator of stories with a responsibility to retell stories ethically. It is precisely through these translational acts that all politics become politics of storytelling. In this course, we will consider the ways in which the politics of the global and the intimate derive their meanings, effects, and affects from the circulation, transaction, and re-tellings of stories within and across borders. We will ask how a praxis of ethical engagement with politics can be imagined as a praxis of receiving and retelling stories. By immersing ourselves in the process of remembering, telling, listening, trimming, interweaving, distilling, and performing stories, we will consider how ethical receiving and retelling of stories involves continuous revising, repositioning, and re-theorizing of such vexed and entangled terrains and terminologies as identity, community, rights, and justice, as well as the contingent meanings of knowledge, truth, and ethics. This course engages this terrain through a mode of active learning in which all the participants will read and reflect, listen and discuss, tell and retell, watch and play, move and perform collectively. By becoming aware of the ways in which our minds-bodies-souls are inserted in the receiving and translation of stories, we will grapple together with the ways in which our bodies--as our embodiments--help to relationally shape not only our own performances but also our responses to the performances of other living and moving bodies around us. We will learn from writings, film, songs, and plays by writers, artists, activists, and thinkers from a range of historical and contemporary locations and struggles. These include: Marie Lily Cerat, W. E. B. Du Bois, Suheir Hammad, Sterlin Harjo, Naeem Inayatullah, June Jordan, AnaLouise Keating, Kauanui, J. Kehaulani, Audre Lorde, Viet Thanh Nguyen, Middle East Research and Information Project, Munshi Premchand, Alok Rai, Nina Simone, Leanne Betasamosake Simpson, Sangtin Writers, Standing Rock

Collective, Eve Tuck, PatriGLOSck Wolfe, and K. Wayne Yang. Many of the 'Acts' in this course will be co-facilitated with local or international artists and writers. Grading Basis: A/F. The course requires all the participants to do sustained work and deep reflections, enjoy the process of imagining and creating with peers in a non-competitive environment. Prereq: For graduate students only, or with instructor consent. People from all kinds of locations and journeys are invited to join us in this collective exploration. For further information, email: nagar@umn.edu.

GLOS 5900. Topics in Global Studies. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Proseminar. Selected issues in global studies. Topics specified in Class Schedule.

GLOS 5993. Directed Studies. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Guided individual reading or study. Open to qualified students for one or more semesters.

GLOS 5994. Directed Research. (1-4 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Qualified students work on a tutorial basis. Prereq instr consent, dept consent, college consent.

Graduate School (GRAD)

GRAD 5102. Preparation for University Teaching for Nonnative English Speakers.

(; 2 cr. ; S-N or Audit; Every Fall & Spring) Theory/practice of teaching in higher education in the United States. Emphasizes clear oral classroom communication and development of presentation skills. Students practice in a simulated instructional setting. prereq: English Language Proficiency Rating of 4; Contact cei@umn.edu for permission number.

GRAD 5105. Practicum in University Teaching for Nonnative English Speakers.

(; 1-2 cr. ; S-N or Audit; Every Fall & Spring) Theory, advanced practice in teaching in higher education for nonnative speakers of English. Emphasizes interactive teaching strategies, awareness of cross-cultural classroom issues, oral classroom presentation skills, and legal/policy issues. prereq: 5102 or English Language Proficiency Rating of 2; Contact cei@umn.edu for permission number.

Graduate Summer Research (GRD)

GRD 4999. Graduate Summer Research. (; 0 cr. ; No Grade Associated; Every Summer) Graduate Summer Research

Grand Challenge Curriculum (GCC)

GCC 1903. Sustainable Development with Environmental Justice. (ENV; 3 cr. ; A-F only; Periodic Fall & Spring)

This freshman seminar will provide a clear knowledge of the grand challenge - sustainable development with environmental justice via the nexus approach. The specific objectives are (1) Discuss sustainable development with environmental justice and an interacting

network. (2) Explain interrelationship among resource (especially water, food and energy ? WFE) utilization, sustainable development, and environmental justice and equity. (3) Compare the currently used ?solitary? approach and the recently developed nexus approach ? theoretical considerations, detection of (un)sustainability, natural and human-based pressures, governance practices and management issues. (4) Discuss application of the nexus approaches to achieve sustainable development with environmental justice. We hypothesize that a nexus approach promotes sustainable development with environmental justice via managing the interlinked resources, enhancing WFE security, increasing efficiency, reducing trade-offs, building synergies and improving governance across sectors.

GCC 1906. Rare Diseases: What it Takes to Be a Medical Orphan. (; 3 cr. ; A-F only; Periodic Fall & Spring)

What if you are born with a condition, which very few people know about and for which there are no cures? Or what if there is a cure, but it is very expensive and you have to take it throughout your life? How can you encourage pharmaceutical industry invest in such cures and have policy makers consider such conditions when they draft new regulations? Rare diseases are not rare. There are 7000 diseases, but in aggregate, these diseases affect 30 million (i.e. 1 in 10) Americans of all ages and additional millions of people globally. Most of these conditions are serious and life-altering and children account for more than 50% of those affected. However, only 5% of all rare diseases have FDA-approved treatments. Thus, there is a large unmet need in this area and one way to address this is to raise awareness about these conditions. In this highly interactive course comprising of weekly seminars and related readings on topics related to the understanding of rare diseases and the economics, regulatory and public policy aspects of development of drugs (orphan products) to treat these conditions in the US and across the globe. Students will learn from and network with researchers, healthcare professionals and business leaders and gain sufficient background to appreciate the scope of this multidisciplinary field. Students will work in teams with a patient advocacy organization to learn firsthand the challenges related to the diagnosis and treatment of a specific rare disease, barriers to research and development and deliver possible solutions to a specific challenge that they have identified.

GCC 1908. Ways of Knowing Science. (DSJ; 3 cr. ; A-F only; Periodic Fall)

Every human society codifies its own unique approach, understanding and experience of the world around it into systems of knowledge. However, until very recently, scientific researchers at large Western universities have paid little attention to this knowledge, in part because much is dismissed as ?unscientific? -- implying inferiority to Western science. In this seminar, we will take a more culturally sensitive ?inside look? at diverse ways of knowing. Experience is often the best teacher. By direct experience and involvement with

another culture, we come to better recognize their cultural worldview and its way of seeing and making sense of the world. In this way, learners will encounter different ways of knowing. Each week, experiential learning is supplemented through reading assignments that include published inquiry by indigenous and academic authors. This is a Grand Challenge Curriculum course.

GCC 1909. Introduction to Ecosystem

Health: Challenges at the Intersection of Human, Animal, and Environmental. (ENV; 3 cr. ; A-F only; Periodic Spring)

Many of the world's most "wicked" and urgent grand challenges occur at the interface of humans, animals, and the environment. For instance, in a given region of the world, how do we manage the effects of climate change, disease emergence, food and water security, gender, and conflict and poverty, to ensure the health of humans and animals? For many grand challenges like this, we observe a common theme: human health depends upon the environment, and the environment depends on the health and sustainability of human communities. These large-scale grand challenges can often become overwhelming, and a solution that considers only one aspect of health often seems daunting and difficult to implement in policy. How can we usefully understand the interactions between these challenges to contribute to solutions? How can one's own discipline and career path relate to these complex grand challenges? How do we build teams and partnerships across disciplines to engage at the scale of the problem? This course introduces Ecosystem Health (ESH) as a framework and practice for developing complex solutions for grand challenges. In particular, the course will: ? focus on the emerging discipline of Ecosystem Health, and associated approaches and technologies that support solutions to grand challenges of health at the interface of humans, animals, and the environment. ? introduce a toolset for approaching, defining, and responding to these grand challenges, including systems thinking, complexity science, and integrative leadership. ? interrogate the conflicts that exist between differing conceptions of health, through the study of several complex cases.

GCC 3003. Seeking Solutions to Global Health Issues. (GP; 3 cr. ; A-F only; Periodic Fall)

Often, the most progress on challenging issues such as health and equity is made when you apply an interdisciplinary perspective. The same is true for global health issues. Whether responding to emerging pandemics, food insecurity, maternal mortality, or civil society collapse during conflict, solutions often lie at the intersection of animal, environmental, and human health. In this course, students will work in teams to examine the fundamental challenges to addressing complex global health problems in East Africa and East African refugee communities here in the Twin Cities. Together we will seek practical solutions that take culture, equity, and sustainability into account. In-field professionals and experts will be available to mentor each team, including

professionals based in Uganda and Somalia. This exploration will help students propose realistic actions that could be taken to resolve these issues. This course will help students gain the understanding and skills necessary for beginning to develop solutions to global health issues. This is a Grand Challenge Curriculum course. GCC courses are open to all students and fulfill an honors experience for University Honors Program students.

GCC 3005. Innovation for Changemakers: Design for a Disrupted World. (GP; 3 cr. ; A-F only; Periodic Fall & Summer)

Do you want to make a difference? We live in a world full of complex challenges, such as COVID-19, racism, economic recession, and environmental collapse, to name a few. Now is the time to use your own skills and passion to make a positive impact in the world. In this project-based course, you will learn how to develop effective and sustainable responses to current social and environmental problems. You'll study a variety of tools, mindsets, and skills that will help you to address any complex grand challenge, as well as engage with case studies of successful grand challenge projects in the past. Your project may address food insecurity, unemployment, housing, environmental impacts, equity, or other issues. Proposed designs for how you might have an impact may take many forms- such as a student group, program intervention with an existing organization, public policy strategy, or for-profit or non-profit venture. but this class will focus on how to make ideas financially sustainable. The primary focus of this (GCC 3005) course is how to identify an appropriate challenge to address. You will use a discovery process, design thinking, and input from field research to develop the scope and scale of the challenge you choose. You will build a model for your idea around input from primary and secondary research, as well as the affected community's culture, needs, and wants. Community members, locally and globally, may serve as mentors and research consultants to teams. External speakers will be brought in to share their stories to serve the common good. Students enrolled will work in interdisciplinary teams of 4-5 on projects developed within the class. This is a Grand Challenge Curriculum course. GCC courses are open to second year undergraduate students and above and graduate students and fulfill an honors experience for University Honors Program students.

GCC 3007. Toward Conquest of Disease.

(ENV; 3 cr. ; A-F only; Every Spring)

Since the rise of civilization, the large predators of humans have been subdued and the most dangerous predators remaining are those unseen--vastly smaller than our bodies. They are the microbial predators that cause disease. Infectious disease has devastated human populations and even caused global population declines. Subduing and managing disease is one of the grand challenges of our time. Through an enormous global effort, we have driven smallpox in humans and Rinderpest in livestock extinct from the natural world, and guinea worm is expected to follow. Other

infectious diseases are in continual decline. In this course we will combine ecological thought and ecological models with historical and future perspectives to understand the fundamental dynamics of our miniscule predators, and relate this to similar miniscule predators of wild and domestic animals, to crops, and to other plants. This is a Grand Challenge Curriculum course. prereq: sophomore, junior, senior

GCC 3011. Pathways to Renewable Energy.

(TS; 3 cr. ; A-F only; Periodic Spring)

This interdisciplinary course will examine obstacles to energy transitions at different scales. It will explore the role of energy in society, the physics of energy, how energy systems were created and how they function, and how the markets, policies, and regulatory frameworks for energy systems in the US developed. The course will closely examine the Realpolitik of energy and the technical, legal, regulatory, and policy underpinnings of renewable energy in the US and Minnesota. Students will learn the drivers that can lead global systems to change despite powerful constraints and how local and institutional action enables broader reform. Students will put their learning into action by developing a proposal and then working on a project to accelerate the energy transition and to ensure that the energy transition benefits people in a just and equitable way. This is a Grand Challenge Curriculum course. prereq: sophomore, junior, senior

GCC 3013. Making Sense of Climate Change - Science, Art, and Agency. (CIV; 3 cr. ; A-F only; Periodic Spring)

The overarching theme of the course is the role of artistic/humanistic ways of knowing as tools for making sense and meaning in the face of "grand challenges." Our culture tends to privilege science, and to isolate it from the "purposive" disciplines--arts and humanities--that help humanity ask and answer difficult questions about what should be done about our grand challenges. In this course, we will examine climate change science, with a particular focus on how climate change is expected to affect key ecological systems such as forests and farms and resources for vital biodiversity such as pollinators. We will study the work of artists who have responded to climate change science through their artistic practice to make sense and meaning of climate change. Finally, students create collaborative public art projects that will become part of local community festivals/events late in the semester.

GCC 3014. The Future of Work and Life in the 21st Century. (TS; 3 cr. ; A-F only; Periodic Fall)

This course seeks solutions to the technological, demographic, and economic forces that challenge taken-for-granted mindsets and existing policies around work, careers, and life. Students will consider positive and negative impacts of the forces that render the conventional education/work/retirement lockstep obsolete. What do these changes mean for men and women of different ages and backgrounds? What are alternative,

sustainable ways of working and living in the 21st century? These questions reflect global challenges that touch the lives of people everywhere. Students will work in teams to begin to address these realities and formulate innovative solutions to better transform learning, working, caring, and community-building in the 21st century. This is a Grand Challenge Curriculum course.

GCC 3016. Science and Society: Working Together to Avoid the Antibiotic Resistance Apocalypse. (TS; 3 cr. ; A-F only; Periodic Spring)

Before the discovery of antibiotics, even a simple thorn prick could lead to life threatening infection. Antibiotics are truly miracle drugs, making most bacterial infections relatively easy to cure. However, this landscape is rapidly changing with the advent of microbes that are resistant to antibiotics. This course will provide an overview of how antibiotic use invoked antibiotic resistance, including in depth discussions of antibiotic resistant microorganisms and the impact of globalization on this exploding problem. Societal and ethical implications associated with antibiotic use and restriction in humans and animals will be discussed, along with global issues of antibiotic regulation and population surveillance.

The class will conclude with discussions of alternative therapeutic approaches that are essential to avoid "antibiotic apocalypse." The course will include lectures by world-renowned experts in various topics, and students will leverage this knowledge with their own presentations on important topics related to issues of personal freedom versus societal needs. This is a Grand Challenge Curriculum course.

GCC 3017. World Food Problems: Agronomics, Economics and Hunger. (GP; 3 cr. ; A-F only; Periodic Fall)

This course provides a multi-disciplinary look at problems (and some of the possible solutions) affecting food production, distribution, and requirements for the seven plus billion inhabitants of this planet. It is co-taught by a plant geneticist (Morrell) and an economist (Runge) who together have worked on international food production and policy issues for the past 40 years. Historical context, the present situation and future scenarios related to the human population and food production are examined. Presentations and discussions cover sometimes conflicting views from multiple perspectives on population growth, use of technology, as well as the ethical and cultural values of people in various parts of the world. The global challenge perspective is reflected in attention to issues of poverty, inequality, gender, the legacy of colonialism, and racial and ethnic prejudice. Emphasis is placed on the need for governments, international assistance agencies, international research and extension centers, as well as the private sector to assist in solving the complex problems associated with malnutrition, undernutrition, obesity, and sustainable food production. Through a better understanding of world food problems, this course enables students to reflect on the shared sense of

responsibility by nations, the international community and ourselves to build and maintain a stronger sense of our roles as historical agents. Throughout the semester students are exposed to issues related to world food problems through the lenses of two instructors from different disciplinary backgrounds.

The core issues of malnutrition and food production are approached simultaneously from a production perspective as well as an economic and policy perspective throughout the semester. This is a Grand Challenge Curriculum course. GCC courses are open to all students and fulfill an honors experience for University Honors Program students.

GCC 3018. What American Dream? Children of the Social Class Divide. (DSJ; 3 cr. ; A-F only; Periodic Fall)

As a result of the increasing and widening social class divide present in the early 21st century, American families and their children are facing more challenges than ever before. In this course, students will identify and confront the barriers to opportunities created by the divide and seek solutions that can be pursued with families, schools, and communities, and public policy to redress these inequities. Because of the complexity of this grand challenge, an interdisciplinary approach to intervention and policy is required. From course instructors' respective vantage points in prevention science, developmental and educational psychology, and family social science, and with the perspectives provided by faculty contributors from economics, law, and pediatrics, students engage with diverse modes of inquiry, epistemologies, and critical lenses by which possible solutions can be generated and implemented. This is a Grand Challenge Curriculum course.

GCC 3021. The Achievement Gap: Who is to Blame?. (DSJ; 3 cr. ; A-F only; Periodic Fall & Spring)

Students in GCC 3021 will start the semester with a review of what unequal schooling looks like in the United States. The course uses the history of Detroit to examine how underinvestment and discrimination positioned minoritized communities to receive inadequate education. School structures--including resources, climate and discipline, academic tracks, and community engagement--will be explored. Students will consider what it means to say that there are "achievement gaps" in our society's schools. Mainstream assumptions and meanings will be questioned and criticized, and alternatives, such as the notion of an "education debt," will be explored. This is a Grand Challenge Curriculum course.

GCC 3025. Seeking the Good Life at the End of the World: Sustainability in the 21st Century. (CIV; 3 cr. ; A-F only; Periodic Fall & Spring)

What does it mean to live "the good life" in a time of rapid climate changes, mass extinction of plant and animal species, and the increasing pollution of our oceans, atmosphere, and soils? Is it possible to live sustainably, as individuals and societies, in what scientists are calling the Anthropocene, or this new epoch of human influence over the planet? Will sustainability

require that we sacrifice the gains humanity has made in our quality of life? Or can we find a way to create a good Anthropocene? This course will attempt to answer these questions in four ways: 1. By providing an overview of sustainability science, both what it says about human and natural systems and how it comes to make these claims 2. By examining various conceptions of the good life, both individual and social, and how they intersect with the findings of sustainability science 3. By exploring the conflicts that exist within and between differing visions of sustainability and the good life through case studies in energy, water, and food 4. By pursuing collaborative research projects that will help students apply their knowledge and skills to current problems in sustainability studies We will read widely in the sciences, social sciences, and humanities to understand a range of historical and contemporary perspectives on these questions, and in doing so we will put abstract ethical principles into conversation with a diversity of specific cultures and environments. By the end of the course, students will have examined their own assumptions about personal and professional happiness, considered how these align with and diverge from societal visions and values, and explored innovative solutions to help sustain our productive economy and our planet. This is a Grand Challenge Curriculum course.

GCC 3026. Stepping Into the Gap: How can you support diversity in STEM?. (DSJ; 3 cr. ; A-F only; Periodic Fall)

The goal of this class is to empower students to alter the cognitive, social, and emotional factors that have led to the underrepresentation of many groups in STEM fields (Science, Technology, Engineering, and Mathematics). In addition to studying research on the psychology of learning and diversity, we will survey literature about scientific communication and learn about the impact of disparities in educational opportunities. We will also engage in discussions about the persistent problems related to equity and access in STEM education. In October, November, and December, the class meets at a local middle school (easily accessible by public transportation). University students lead introductory science demos, stage a science fair so the middle school students have a chance to play judge, and then partner with the middle school students as they invent, execute and present their own science fair projects. During September, and on school holidays in October and November, the class will discuss theories and research that explains the crisis being experienced across America and in particular, in the Twin Cities. They will design evidence-based curriculum materials to address key issues and have hands-on experiences as peer mentor-teachers. Overall, this class will provide experiences that are likely to be transformative in relation to students' views of education, opportunity, and the power of their involvement. This class builds on a partnership between the University of Minnesota and a local middle school. The overarching goal is to support students from groups typically underrepresented in

science as they participate in an advanced science learning opportunity: the science fair. Our engagement with the school science fair process should result in an experience that motivates future participation in STEM opportunities. This is a grand challenge curriculum course.

GCC 3027. Power Systems Journey: Making the Invisible Visible and Actionable. (TS; 3 cr. ; A-F only; Periodic Fall)

An energy revolution is underway, and needs to accelerate to support climate and economic goals. But the general citizenry does not understand our current energy systems, particularly the seemingly invisible phenomena of electricity, and its generation, distribution, and use. Technical knowledge is only half the solution, however. It is through human decisions and behaviors that technical solutions get applied and adopted, and the importance of communication and storytelling is being recognized for its relevance to making change. How can science literacy and behavior-motivating engagement and storytelling be combined to help make systemic change? This course explores the integration of science-based environmental education, with art-led, place-based exploration of landscapes and creative map-making to address this challenge. How do we make electricity visible, understandable, and interesting -- so we can engage citizens in energy conservation with basic literacy about the electric power system so that they can be informed voters, policy advocates, and consumers. In this class, you will take on this challenge, first learning about the electric power systems you use, their cultural and technical history, systems thinking, design thinking, and prior examples of communication and education efforts. With this foundation, you will then apply your learning to create a public education project delivered via online GIS Story maps that use a combination of data, art, and story to help others understand, and act on the power journey we are all on. All will share the common exploration of power systems through field trips, and contribute to a multi-faceted story of power, presented in a group map and individual GIS Story maps. No prior knowledge of GIS story maps or electricity issues is needed. The study of power systems can be a model for learning and communicating about other topics that explore the interaction of technology and society toward sustainability. This is a Grand Challenge Curriculum course. GCC courses are open to all students and fulfill an honors experience for University Honors Program students.

GCC 3028. Harnessing the power of research, community, clinic and policy to build a culture of health. (DSJ; 3 cr. ; A-F only; Periodic Fall & Spring)

Imagine a world where factors such as race, ethnicity, and socioeconomic status had no bearing on a person's health status, quality of life, or longevity--a world where everyone had an equal opportunity to live a long and healthy life. Unfortunately, this is not the case. Despite decades of focused public health efforts, health inequities remain; individuals

from low income and diverse racial/ethnic backgrounds are far more likely to, (1) struggle with chronic health conditions, (2) report lower quality of life, and (3) have a lower life expectancy, than others. Bold and innovative solutions are needed to address this grand challenge. Integration is one such method that can potentially increase the success and sustainability of approaches to reduce health disparities and create a culture of health for all. Integration is an approach to solving complex public health problems that merges academic research, clinical practice, policy and community resources in new ways. This interactive course will challenge students to identify root causes of health, including access to food, housing, transportation and education. Students will also focus on health disparities and barriers to eliminating these existing, disparate, negative outcomes. Students will be introduced to the concept of integration science and practice; will learn about the importance of integration across research, practice, community, and policy domains to address health disparities; and will cultivate the communication skills needed to intentionally and successfully facilitate integration practice. Course instructors with unique vantage points as concerned scientists, health practitioners, and policy wonks will engage students in class discussions and activities, individual writing assignments and small-group work aimed at unveiling the reasons health disparities persist globally--challenging them to consider opportunities for integration to alleviate existing disparities. The semester will culminate in students working in groups to create their own integrated projects aimed at addressing a health disparity.

GCC 3029. Agents of Change: scientific and philosophical perspectives. (CIV; 3 cr. ; A-F only; Periodic Spring)

Grand challenges like structural racism, climate change, gender oppression, and global poverty have to be solved by individual people, acting together, often through institutions. This means that we need good agents of change to address the challenges we face. What does it mean to be a "good agent"? What are the best ways to think about this kind of agency? And how can we foster more of it in ourselves, our friends, our children, and our fellow citizens? This course is taught by a philosopher and a psychologist, and we approach questions like these from both perspectives. Traditionally, many philosophers have thought that we need to cultivate virtues such as compassion and open-mindedness in order to be good people. Some recent psychological work casts doubt on this picture: the social and environmental forces that influence our behavior cannot be overcome with virtuous character! On the other hand, psychological research also shows that some of the good traits we have are ones that develop reliably, from early childhood. Which perspective offers more opportunities for progress? Should we foster good agency by working on individual character or by changing social circumstances? Or, if both are important, what would a combined approach look like? The ultimate goal of the course is to encourage students to apply the

theoretical and scientific ideas about improving agency to specific grand challenges. How do philosophy and psychology help us to define and resolve the challenges that confront people who want to make a difference? To provide a model for this kind of research, we focus on structural racism and white supremacy to expose the ways in which individual and structural forces can impede epistemic and moral agency. Course requirements include active class participation, group projects, and writing assignments designed to foster creative engagement across different fields.

GCC 3031. The Global Climate Challenge: Creating an Empowered Movement for Change. (CIV; 3 cr. ; A-F only; Periodic Spring)

Students will explore ecological and human health consequences of climate change, the psychology of climate inaction, and will be invited to join us in the radical work of discovering not only their own leadership potential but that of others. We will unpack the old story of domination and hierarchy and invite the class to become part of a vibrant new story of human partnership that will not only help humanity deal with the physical threat of climate change but will help us create a world where we have the necessary skills and attitudes to engage the many other grand challenges facing us. Using a strategy of grassroots empowerment, the course will be organized to help us connect to the heart of what we really value; to understand the threat of climate change; to examine how we feel in the light of that threat; and to take powerful action together. Students will work in groups throughout the course to assess the global ecological threat posed by climate change, and they will be part of designing and executing an activity where they empower a community to take action. This is a Grand Challenge Curriculum course. prereq: soph, jr, sr

GCC 3032. Ecosystem Health: Leadership at the Intersection of Humans, Animals, and the Environment. (ENV; 3 cr. ; A-F only; Periodic Fall & Spring)

What are the effects of climate change, disease emergence, food and water security, gender, conflict and poverty, and sustainability of ecosystem services on health, and how do we lead across boundaries for positive change? Unfortunately, these large-scale problems often become overwhelming, making single solution-based progress seem daunting and difficult to implement in policy. Fortunately, the emerging discipline of ecosystem health provides an approach to these problems grounded in trans-disciplinary science. Ecosystem health recognizes the interdependence of human, animal and environmental health, and merges theories and methods of ecological, health and political sciences. It poses that health threats can be prevented, monitored and controlled via a variety of approaches and technologies that guide management action as well as policy. Thus, balancing human and animal health with the management of our ecosystems. In this class, we will focus on the emerging discipline of ecosystem health, and how these theories, methods, and shared leadership approaches

set the stage for solutions to grand challenges of health at the interface of humans, animals, and the environment. We will focus not only on the creation and evaluation of solutions but on their feasibility and implementation in the real world through policy and real-time decision making. This will be taught in the active learning style classroom, requiring pre-class readings to support didactic theory and case-based learning in class. Participation and both individual and group projects (written and oral presentation) will comprise most of the student evaluation. These projects may reflect innovative solutions, discoveries about unknowns, or development of methods useful for ecosystem health challenges. We envision that some of them will lead to peer-review publications, technical reports, or other forms of publication. This is a Grand Challenge Curriculum course.

GCC 3035. Child Labor: Work, Education, and Human Rights in Global Historical Perspective. (GP; 3 cr. ; A-F only; Periodic Spring)

It seems obvious that we should oppose child labor. Or should we? This course challenges students to think critically about the many angles that need to be considered in deciding whether any particular type of children's work should be opposed or permitted. Drawing on contemporary and historical scholarship in the interdisciplinary arena of childhood and youth studies, this course takes on ethical as well as economic analyses; it reflects upon child development and legal perspectives; it examines cases ranging across the globe and across recent centuries. It may very well change the way you think about kids, forever. Historians find evidence of many different kinds of "childhoods," as well as changing notions of what work is appropriate for children. Coming from social-scientific and policy studies approaches, analysts and critics of contemporary global policies affecting child labor argue that the presumed superiority of modern Western childhood? needs rethinking. This course will also look at tensions between the presumption that schooling should be the only or primary occupation of childhood years and competing ideas child labor can be valuable and justifiable in many settings including, for example, American farm families. Looking at child labor from comparative global and historical perspectives will encourage and enable students to address some important questions: What types of work? have children done in various modern historical and contemporary settings? When and how is work arguably bad, or good, for children and their families? Under what conditions is schooling better than work, or vice-versa? Who gets to decide what's best for children?? How should governments intervene, and how does intervention differ when children work for their family as opposed to other employers? What forms of regulatory measures or political activism have changed policies and practices regarding child labor in the past and present? This is a Grand Challenge Curriculum course.

GCC 3036. Seeking Connection through Decolonization: The Power of Indigenous

Lands and Languages. (DSJ; 3 cr. ; A-F only; Periodic Fall & Spring)

Seeking Connection through Decolonization: The Power of Indigenous Languages and Place-Based Knowledge in the Face of Racism How has unequal distribution of power resulted in the decline in Indigenous language and the loss of societal connections to the land? How might we all, from different positionalities, revitalize our relationships to indigenous land and languages, in the face of racism and attempts to perpetuate colonization? In this course students will grapple with ideological roots of the ongoing decline in Indigenous language and place-based knowledge and how their decline has implications for all peoples. To understand the connections, students will participate in Indigenous language learning (Dakota and Ojibwe) as acts of cultural production. Discussion and reading will be supplemented with visits to local sites, for example, Medicine Gardens, Bell Museum, Gibbs Farm, and Bdote to directly interact with the land as pedagogy. Through the course themes, students will experience the interconnectedness of place-based knowledge, language, and human identity, while also seeing the importance of understanding the lands on which one resides and the power of indigenous languages in re-imagining those relationships. This is a Grand Challenge Curriculum course. GCC courses are open to all students and fulfill an honors experience for University Honors Program students.

GCC 3037. Wealth & Inequality: Past, Present, Future. (DSJ; 3 cr. ; A-F only; Periodic Fall)

Fostering just and equitable communities is a grand challenge of our time. The global wealth gap between a handful of elites and the rest of the world's population is increasingly unsustainable. Across the last generation, wealth inequality has spiked more sharply than ever before, and even the elite have come to recognize how concerning rising inequality has become with the World Economic Forum ranking wealth disparity? among the top five risks facing the planet right now. In this course, we will explore how our society came to produce such a severe concentration of wealth in the hands of a privileged few. Our focus is on wealth--the total amount of accumulated assets, broadly defined, in individuals, households, communities, and beyond--because it is precisely these starkly uneven stores of value, reproduced through inheritances across generations, that have accelerated contemporary inequality. We will work to understand the social structures, historical conjunctures, and global processes that perpetuate the inequitable distribution of wealth in our current moment. We will then envision social changes that promise to reduce wealth disparities and create a more just and equitable world. Throughout, we will explore how culture, identity, institutions, economic and political systems, and other social forces are entangled with and constitute the global flows of money and assets. The purview of this course is global, as our attention will focus on the large global and structural processes and historical conjunctures that have long

shaped global wealth inequality. It makes little sense to limit the inquiry to national borders given the unequal distribution of wealth was produced on a global scale. At the same time, we are mindful of the importance to act (and think) locally; as such, many of our examples and readings will focus on the United States. Given that wealth inequality in the U.S. is one of the worst in the world--the richest 1 percent have captured nearly 60 percent of all income gains from 1977 to 2000, and in 2010, the top 20 percent of households owned almost 90 percent of all privately held wealth in the US, while the net worth of the bottom 40 percent was negative-- it will serve as an important case study. Instead of addressing the key causes of inequality, the powerful across the world have seized on these conditions to mobilize an avalanche of discontent among sectors of the downwardly mobile in a way that often obscures the key reasons for their predicament and scapegoats those at the social margins. Given this context, it is imperative to better understand and analyze the histories, cultural assumptions, and hierarchies that have produced contemporary inequalities, locally, regionally, and globally. Developing this shared understanding--as we will do in this course--is critical for our potential to address this and the other interrelated grand challenges facing us. This is a Grand Challenge Curriculum course.

GCC 3038. Human Threats to Ocean Health. (ENV; 3 cr. ; A-F only; Periodic Spring)

Human Threats to Ocean Health This grand challenge course addresses the scope of the anthropogenic alterations in natural biogeochemical cycling (BGCC) of oceans that will help the students to develop strategies to intervene, advocate, and sustain planetary health for all of humanity. The following grand challenge questions will be addressed: (1) How does Ocean Biogeochemical Cycling (BGCC) of nutrients support global ecosystems and biodiversity? (2) What human (anthropogenic) activities disrupt ocean BGCC of nutrients, resulting in depletion of biodiversity, ecosystem health, ecosystem services, and environmental justice for humans? (3) What do humans have to do to protect the future of ocean health and all of humanity? Global recycling of nutrients and metals within the environment (geosphere, hydrosphere and atmosphere) and the biosphere are essential for maintaining biodiversity and ecosystem services on which all of humanity depends. Living organisms extract and transform nutrients for their metabolism, growth, and reproduction, ultimately releasing these nutrients (often in a transformed state) back to the inanimate sphere via biogeochemical cycling (BGCC) driven by energy transformations. In natural environments, BGCC maintains a dynamic equilibrium/homeostasis between abiotic and biotic spheres, a process essential for survival of life on Earth. However, the current human practices have caused massive changes in the BGCC of nutrients, thus disrupting the natural cycling and (i) threatening the biosphere's nutrient availability and (ii) precipitating many of the current environmental problems such as climate change, nitrogen

pollution, ocean acidification, acid rain, mercury deposition, etc. At the current scale of human development, these alterations to the BGCC in the oceans may seriously damage the environment and biodiversity, thus threatening the entire Planet's future. Further, the adverse effects of the loss of ecosystem services may not be shared equally amongst society, whereby access to a healthy environment is increasingly distributed by power, class, and race. An understanding of these inequities and incorporation of environmental justice in eco-centric environmental advocacy will be essential for sustaining the health of our planet. Therefore, the students registering for this course will develop an understanding and the scope of the anthropogenic alterations in natural biogeochemical cycling of oceans that will help them develop strategies to intervene, advocate, and sustain planetary health for all of humanity. The specific aims are following: (1) Describe global and local mechanisms of natural BGCC on Earth and connection to the oceans; (2) Explain human impacts on BGCC, and relationships between abnormal BGCC and nutrient distribution in water, sediment, and air; (3) Determine impact of human-altered ocean nutrient cycling on society, including members disproportionately impacted by environmental issues and underrepresented in environmental movements; (4) Strategize sustainable strategies to mitigate the health and environmental problems associated with abnormal biogeochemical nutrient cycling, bringing environmental justice perspectives to the forefront; and (5) Convince students that positive actions made now can and will impact the future. This course will focus on multiple vectors of inquiry (i.e., chemistry, toxicology, environment science and justice, sustainability and biodiversity), and students' progress through the course will give them powerful tools to confront the Grand Challenges of our age, global change in biogeochemical cycles. This is a Grand Challenge Curriculum course.

GCC 3041. Transition to a Sustainable World: Can Behavior Modification Help Facilitate Global Sustainability?. (ENV; 3 cr. ; A-F only; Periodic Fall)

Despite understanding the consequences of not acting to curb unsustainability, why do people fail to act? Human's behavioral apathy toward sustainability may be due to an inaccurate characterization of sustainability and/or a lack of understanding of cultural diversity and behavior. Therefore, an understanding of the human behavior will contribute greatly to (i) decipher human actions that negatively impact global ecosystems, (ii) slowdown or stop human ecologically destructive trajectory, and (iii) promote sustainable alternatives. The problem is that environmental issues are not generally included in psychology programs, and psychology is not often represented in environmental programs. In the United Nations (UN) Sustainable Development goals 2030 (UN SDG 2030), psychological indices have been conspicuously absent (except for mental health in general terms) even though environmental degradation, social or economic inequity, all are implicated by human behavior.

The UN SDG 2030 is based on the unproven concept that sustainability is an intersection of social, economic and environmental factors, the key pillars of sustainability. Since economic activity and society are subsets of human behavior, psychology should be considered central to unsustainability and/or sustainability. Therefore, we hypothesize that behavioral psychology has a critical role to play in creating a sustainable society. The aim of the proposed GCC is to discuss (un)sustainability using this new paradigm that will allow new approaches to achieve transition from unsustainability to sustainability worldwide. The specific aims of the proposed GCC are following: (i) Describe interaction between sustainability and behavioral psychology as the 4th pillar of sustainability. (ii) Explain the behavioral correlates of cultural differences in terms of transition to sustainability. (iii) Explain the consumption (related to unsustainability) and conservation (related to sustainability) behavior. (iv) Determine the place of Psychology in the UN's Sustainable Development Goals (SDGs) that are mostly based on Sociology, Economy and Environment. (v) Describe humanity's transition from unsustainable to sustainable development. This is a Grand Challenge Curriculum Course. GCC courses are open to all students and fulfill an honors experience for University Honors Program students.

GCC 3042. Just Education: The Role of Higher Education in Disrupting Mass Incarceration. (DSJ; 3 cr. ; A-F only; Periodic Spring)

The United States has the highest incarceration rate in the world. We have just 5% of the world's population, but 25% of its prisoners. Since 1970, the number of incarcerated persons in this country has increased by 700%. Of the 2.3 million people currently in prison or jail, however, just 6 percent have access to higher education. Indeed, contemporary higher education policy and infrastructure disregards incarcerated individuals as potential postsecondary students. Even as colleges and universities across the country champion diversity-driven and inclusivity-oriented mission statements, and look to create viable postsecondary pathways for systemically underserved students, only a handful include incarcerated and justice-impacted individuals in these efforts. The University of Minnesota is not currently among them. This course will explore the intersection of higher education and mass incarceration in the United States with a focus on the role of higher education in disrupting the collateral consequences of incarceration and justice involvement. In particular, we will examine the potential for the University of Minnesota to play a pivotal role in disrupting what we call the 'ripple effect' of incarceration and justice involvement on individuals and communities in Minnesota. Students will have an opportunity to tour local correctional facilities and both hear from and present to experts in the field, including formerly incarcerated people. In addition, students' ideas will directly inform a 'college in prisons' program that is being developed by Professors Moriearty and

Shlafer, in collaboration with other University scholars and administrators, and the Minnesota Department of Corrections. In this way, students' work in this class and their projects will directly and meaningfully inform the real world and the development of the college in prisons program in 'real time.' As a teaching team with expertise in law, juvenile justice, criminal justice, child welfare, psychology, and public health, Professors Moriearty and Shlafer will highlight examples of successful interdisciplinary collaborations from their own research and practice experience. In addition, students will hear from guest lecturers from multiple disciplines and affiliations (including an Assistant Commissioner and educational expert at the Minnesota Department of Corrections and law, public health, arts, information technology, and sociology instructors from the University) and panels of stakeholders, policy-makers and formerly incarcerated/justice impacted individuals. This is a Grand Challenge Curriculum course.

GCC 3043. Regenerative Game Studio: Playing For the Future. (ENV; 3 cr. ; A-F only; Periodic Spring)

Meeting the interrelated UN Sustainable development goals facing humanity will require imagination and emotional labor of unprecedented scale. We must collectively learn to overhaul our extractive systems with regenerative approaches in which humans are in a mutually beneficial relationship with the earth's systems. The task of working across SDGs is a grand challenge in itself. Games are an effective way to engage people in understanding complex problems and collaborating toward solutions. Designing games challenges students to examine systems, identify leverage points, confront trade-offs, and be creative. In doing so, it prepares them to become system teachers, leveraging organizations and networks for change. We invite students from a range of backgrounds to apply their disciplinary expertise and interests in new ways. No prior sustainability knowledge or game design experience is needed. This is a Grand Challenge Curriculum course.

GCC 5003. Seeking Solutions to Global Health Issues. (GP; 3 cr. ; A-F only; Periodic Fall)

Often, the most progress on challenging issues such as health and equity is made when you apply an interdisciplinary perspective. The same is true for global health issues. Whether responding to emerging pandemics, food insecurity, maternal mortality, or civil society collapse during conflict, solutions often lie at the intersection of animal, environmental, and human health. In this course, students will work in teams to examine the fundamental challenges to addressing complex global health problems in East Africa and East African refugee communities here in the Twin Cities. Together we will seek practical solutions that take culture, equity, and sustainability into account. In-field professionals and experts will be available to mentor each team, including professionals based in Uganda and Somalia. This exploration will help students propose

realistic actions that could be taken to resolve these issues. This course will help students gain the understanding and skills necessary for beginning to develop solutions to global health issues. This is a Grand Challenge Curriculum course. GCC courses are open to all students and fulfill an honors experience for University Honors Program students.

GCC 5005. Innovation for Changemakers: Design for a Disrupted World. (GP; 3 cr. ; A-F only; Periodic Fall & Summer)

Do you want to make a difference? We live in a world full of complex challenges, such as COVID-19, racism, economic recession, and environmental collapse, to name a few. Now is the time to use your own skills and passion to make a positive impact in the world. In this project-based course, you will learn how to develop effective and sustainable responses to current social and environmental problems. You'll study a variety of tools, mindsets, and skills that will help you to address any complex grand challenge, as well as engage with case studies of successful grand challenge projects in the past. Your project may address food insecurity, unemployment, housing, environmental impacts, equity, or other issues. Proposed designs for how you might have an impact may take many forms (student group, program intervention with an existing organization, public policy strategy, or for-profit or non-profit venture) but this class will focus on how to make ideas financially sustainable. The primary focus of this (GCC 5005) course is how to develop a pilot project plan that addresses a grand challenge. You will learn business modeling, financial projections, and pitching to potential investors and funders. You will build a model for your idea around input from primary and secondary research, as well as the affected community's culture, needs, and wants. Community members, locally and globally, may serve as mentors and research consultants to teams. External speakers will be brought in to share their stories of how to build and scale innovative efforts to serve the common good. Students enrolled will work either independently, or in small teams, on a project of their own choosing. Ideally, students will apply to take this class with a project in mind. By the end of the class, students will have a well-designed plan to turn their project into an actionable solution if that is of interest. This is a Grand Challenge Curriculum course. GCC courses are open to all students and fulfill an honors experience for University Honors Program students.

GCC 5007. Toward Conquest of Disease. (ENV; 3 cr. ; A-F only; Every Spring)

Since the rise of civilization, the large predators of humans have been subdued and the most dangerous predators remaining are those unseen--vastly smaller than our bodies. They are the microbial predators that cause disease. Infectious disease has devastated human populations and even caused global population declines. Subduing and managing disease is one of the grand challenges of our time. Through an enormous global effort, we have driven smallpox in humans and Rinderpest in livestock extinct from the natural world,

and guinea worm is expected to follow. Other infectious diseases are in continual decline. In this course we will combine ecological thought and ecological models with historical and future perspectives to understand the fundamental dynamics of our minuscule predators, and relate this to similar minuscule predators of wild and domestic animals, to crops, and to other plants. This is a Grand Challenge Curriculum course. prereq: sophomore, junior, senior, graduate student

GCC 5008. Policy and Science of Global Environmental Change. (ENV; 3 cr. ; A-F only; Periodic Spring)

Through readings, lectures, discussions, written assignments, and presentations this course introduces the critical issues underpinning global change and its environmental and social implications. The course examines current literature in exploring evidence for human-induced global change and its potential effects on a wide range of biological processes and examines the social and economic drivers, social and economic consequences, and political processes at local, national, and international scales related to global change. This is a Grand Challenge Curriculum course.

GCC 5011. Pathways to Renewable Energy. (TS; 3 cr. ; A-F only; Periodic Spring)

This interdisciplinary course will examine obstacles to energy transitions at different scales. It will explore the role of energy in society, the physics of energy, how energy systems were created and how they function, and how the markets, policies, and regulatory frameworks for energy systems in the US developed. The course will closely examine the Realpolitik of energy and the technical, legal, regulatory, and policy underpinnings of renewable energy in the US and Minnesota. Students will learn the drivers that can lead global systems to change despite powerful constraints and how local and institutional action enables broader reform. Students will put their learning into action by developing a proposal and then working on a project to accelerate the energy transition and to ensure that the energy transition benefits people in a just and equitable way. This is a Grand Challenge Curriculum course.

GCC 5013. Making Sense of Climate Change - Science, Art, and Agency. (CIV; 3 cr. ; A-F only; Periodic Fall & Spring)

The overarching theme of the course is the role of artistic/humanistic ways of knowing as tools for making sense and meaning in the face of "grand challenges." Our culture tends to privilege science, and to isolate it from the "purposive" disciplines--arts and humanities--that help humanity ask and answer difficult questions about what should be done about our grand challenges. In this course, we will examine climate change science, with a particular focus on how climate change is expected to affect key ecological systems such as forests and farms and resources for vital biodiversity such as pollinators. We will study the work of artists who have responded to climate change science through their artistic

practice to make sense and meaning of climate change. Finally, students create collaborative public art projects that will become part of local community festivals/events late in the semester. This is a Grand Challenge Curriculum course.

GCC 5014. The Future of Work and Life in the 21st Century. (TS; 3 cr. ; A-F only; Periodic Fall)

This course seeks solutions to the technological, demographic, and economic forces that challenge taken-for-granted mindsets and existing policies around work, careers, and life. Students will consider positive and negative impacts of the forces that render the conventional education/work/retirement lockstep obsolete. What do these changes mean for men and women of different ages and backgrounds? What are alternative, sustainable ways of working and living in the 21st century? These questions reflect global challenges that touch the lives of people everywhere. Students will work in teams to begin to address these realities and formulate innovative solutions to better transform learning, working, caring, and community-building in the 21st century. This is a Grand Challenge Curriculum course.

GCC 5016. Science and Society: Working Together to Avoid the Antibiotic Resistance Apocalypse. (TS; 3 cr. ; A-F only; Periodic Spring)

Before the discovery of antibiotics, even a simple thorn prick could lead to life threatening infection. Antibiotics are truly miracle drugs, making most bacterial infections relatively easy to cure. However, this landscape is rapidly changing with the advent of microbes that are resistant to antibiotics. This course will provide an overview of how antibiotic use invoked antibiotic resistance, including in depth discussions of antibiotic resistant microorganisms and the impact of globalization on this exploding problem. Societal and ethical implications associated with antibiotic use and restriction in humans and animals will be discussed, along with global issues of antibiotic regulation and population surveillance. The class will conclude with discussions of alternative therapeutic approaches that are essential to avoid "antibiotic apocalypse." The course will include lectures by world-renowned experts in various topics, and students will leverage this knowledge with their own presentations on important topics related to issues of personal freedom versus societal needs. This is a Grand Challenge Curriculum course.

GCC 5017. World Food Problems: Agronomics, Economics and Hunger. (GP; 3 cr. ; A-F only; Periodic Fall)

This course provides a multi-disciplinary look at problems (and some of the possible solutions) affecting food production, distribution, and requirements for the seven plus billion inhabitants of this planet. It is co-taught by a plant geneticist (Morrell) and an economist (Runge) who together have worked on international food production and policy issues for the past 40 years. Historical context, the

present situation and future scenarios related to the human population and food production are examined. Presentations and discussions cover sometimes conflicting views from multiple perspectives on population growth, use of technology, as well as the ethical and cultural values of people in various parts of the world. The global challenge perspective is reflected in attention to issues of poverty, inequality, gender, the legacy of colonialism, and racial and ethnic prejudice. Emphasis is placed on the need for governments, international assistance agencies, international research and extension centers, as well as the private sector to assist in solving the complex problems associated with malnutrition, undernutrition, obesity, and sustainable food production. Through a better understanding of world food problems, this course enables students to reflect on the shared sense of responsibility by nations, the international community and ourselves to build and maintain a stronger sense of our roles as historical agents. Throughout the semester students are exposed to issues related to world food problems through the lenses of two instructors from different disciplinary backgrounds. The core issues of malnutrition and food production are approached simultaneously from a production perspective as well as an economic and policy perspective throughout the semester. This is a Grand Challenge Curriculum course. GCC courses are open to all students and fulfill an honors experience for University Honors Program students.

GCC 5022. The Human Experience of Sensory Loss: Seeking Equitable and Effective Solutions. (TS; 3 cr. ; A-F only; Periodic Fall & Spring)

This course focuses on the visual, auditory, and other sensory pathways that convey information about the world to mind and brain. Millions of people worldwide experience deficits in sensory function that affect their quality of life. We will focus on the characteristics of healthy sensory functioning as well as how sensory disorders can affect personal identity, impede information processing, and alter brain structure and function. The course will address the demographics and risk factors for sensory disabilities, the implications of these disabilities for activities of daily living, the history of society's response to sensory disability, as well as societal, ethical, and personal attitudes toward sensory disabilities. The course will also explore translational and applied approaches for addressing sensory disabilities. Each class session will be co-taught by a pair of instructors, representing multiple scientific and social perspectives. A major goal of the course is to view sensory function and impairment from multiple perspectives cognitive science, neuroscience, medicine, engineering, society, consumers, ethics and social justice. The course will combine lectures, discussions, and student-led presentations of research papers. The course will include hands-on demonstrations of assistive technology and panel discussions with people with visual and hearing disabilities. During the semester, each student (or pairs of students) will develop a mini research proposal to address a real-

world issue related to sensory impairment. The proposal must be translational in nature, and must include consultation with consumers of the proposed project. The final class session will be devoted to poster presentations of the mini proposals. The proposal report must include consideration of potentially opposing viewpoints about the proposed research. This course addresses two of our University's grand challenges: Advancing Health Through Tailored Solutions, and Just and Equitable Communities. This is a Grand Challenge Curriculum course.

GCC 5027. Power Systems Journey: Making the Invisible Visible and Actionable. (TS; 3 cr. ; A-F only; Periodic Fall)

An energy revolution is underway, and needs to accelerate to support climate and economic goals. But the general citizenry does not understand our current energy systems, particularly the seemingly invisible phenomena of electricity, and its generation, distribution, and use. Technical knowledge is only half the solution, however. It is through human decisions and behaviors that technical solutions get applied and adopted, and the importance of communication and storytelling is being recognized for its relevance to making change. How can science literacy and behavior-motivating engagement and storytelling be combined to help make systemic change? This course explores the integration of science-based environmental education, with art-led, place-based exploration of landscapes and creative map-making to address this challenge. How do we make electricity visible, understandable, and interesting--so we can engage citizens in energy conservation with basic literacy about the electric power system so that they can be informed voters, policy advocates, and consumers. In this class, you will take on this challenge, first learning about the electric power systems you use, their cultural and technical history, systems thinking, design thinking, and prior examples of communication and education efforts. With this foundation, you will then apply your learning to create a public education project delivered via online GIS Story maps that use a combination of data, art, and story to help others understand, and act on the power journey we are all on. All will share the common exploration of power systems through field trips, and contribute to a multi-faceted story of power, presented in a group map and individual GIS Story maps. No prior knowledge of GIS story maps or electricity issues is needed. The study of power systems can be a model for learning and communicating about other topics that explore the interaction of technology and society toward sustainability. This is a Grand Challenge Curriculum course. GCC courses are open to all students and fulfill an honors experience for University Honors Program students.

GCC 5028. Harnessing the Power of Research, Community, Clinic and Policy to Build a Culture of Health. (DSJ; 3 cr. ; A-F only; Periodic Fall)

Imagine a world where factors such as race, ethnicity, and socioeconomic status had no

bearing on a person's health status, quality of life, or longevity--a world where everyone had an equal opportunity to live a long and healthy life. Unfortunately, this is not the case. Despite decades of focused public health efforts, health inequities remain; individuals from low income and diverse racial/ethnic backgrounds are far more likely to, (1) struggle with chronic health conditions, (2) report lower quality of life, and (3) have a lower life expectancy, than others. Bold and innovative solutions are needed to address this grand challenge. Integration is one such method that can potentially increase the success and sustainability of approaches to reduce health disparities and create a culture of health for all. Integration is an approach to solving complex public health problems that merges academic research, clinical practice, policy and community resources in new ways. This interactive course will challenge students to identify root causes of health, including access to food, housing, transportation and education. Students will also focus on health disparities and barriers to eliminating these existing, disparate, negative outcomes. Students will be introduced to the concept of integration science and practice; will learn about the importance of integration across research, practice, community, and policy domains to address health disparities; and will cultivate the communication skills needed to intentionally and successfully facilitate integration practice. Course instructors with unique vantage points as concerned scientists, health practitioners, and policy wonks will engage students in class discussions and activities, individual writing assignments and small-group work aimed at unveiling the reasons health disparities persist globally--challenging them to consider opportunities for integration to alleviate existing disparities. The semester will culminate in students working in groups to create their own integrated projects aimed at addressing a health disparity.

GCC 5029. Agents of Change: scientific and philosophical perspectives. (CIV; 3 cr. ; A-F only; Every Fall)

Grand challenges like structural racism, climate change, gender oppression, and global poverty have to be solved by individual people, acting together, often through institutions. This means that we need good agents of change to address the challenges we face. What does it mean to be a "good agent"? What are the best ways to think about this kind of agency? And how can we foster more of it in ourselves, our friends, our children, and our fellow citizens? This course is taught by a philosopher and a psychologist, and we approach questions like these from both perspectives. Traditionally, many philosophers have thought that we need to cultivate virtues such as compassion and open-mindedness in order to be good people. Some recent psychological work casts doubt on this picture: the social and environmental forces that influence our behavior cannot be overcome with virtuous character! On the other hand, psychological research also shows that some of the good traits we have are ones that develop reliably, from early childhood. Which perspective offers more

opportunities for progress? Should we foster good agency by working on individual character or by changing social circumstances? Or, if both are important, what would a combined approach look like? The ultimate goal of the course is to encourage students to apply the theoretical and scientific ideas about improving agency to specific grand challenges. How do philosophy and psychology help us to define and resolve the challenges that confront people who want to make a difference? To provide a model for this kind of research, we focus on structural racism and white supremacy to expose the ways in which individual and structural forces can impede epistemic and moral agency. Course requirements include active class participation, group projects, and writing assignments designed to foster creative engagement across different fields.

GCC 5031. The Global Climate Challenge: Creating an Empowered Movement for Change. (CIV; 3 cr. ; A-F only; Periodic Spring)

Students will explore ecological and human health consequences of climate change, the psychology of climate inaction, and will be invited to join us in the radical work of discovering not only their own leadership potential but that of others. We will unpack the old story of domination and hierarchy and invite the class to become part of a vibrant new story of human partnership that will not only help humanity deal with the physical threat of climate change but will help us create a world where we have the necessary skills and attitudes to engage the many other grand challenges facing us. Using a strategy of grassroots empowerment, the course will be organized to help us connect to the heart of what we really value; to understand the threat of climate change; to examine how we feel in the light of that threat; and to take powerful action together. Students will work in groups throughout the course to assess the global ecological threat posed by climate change, and they will be part of designing and executing an activity where they empower a community to take action. This is a Grand Challenge Curriculum course. For: so, jr, sr, grad

GCC 5032. Ecosystem Health: Leadership at the intersection of humans, animals and the environment. (ENV; 3 cr. ; A-F only; Periodic Spring)

What are the effects of climate change, disease emergence, food and water security, gender, conflict and poverty, and sustainability of ecosystem services on health? Unfortunately, these large-scale problems often become overwhelming, making single solution-based progress seem daunting and difficult to implement in policy. Fortunately, the emerging discipline of ecosystem health provides an approach to these problems grounded in trans-disciplinary science. Ecosystem health recognizes the interdependence of human, animal and environmental health, and merges theories and methods of ecological, health and political sciences. It poses that health threats can be prevented, monitored and controlled via a variety of approaches and technologies that guide management action as well as policy.

Thus, balancing human and animal health with management of our ecosystems. In this class, we will focus on the emerging discipline of ecosystem health, and how these theories, methods and computational technologies set the stage for solutions to grand challenges of health at the interface of humans, animals and the environment. We will focus not only on the creation and evaluation of solutions, but on their feasibility and implementation in the real world through policy and real time decision making. This will be taught in the active learning style classroom, requiring pre class readings to support didactic theory and case-based learning in class. Participation and both individual and group projects (written and oral presentation) will comprise most of the student evaluation. These projects may reflect innovative solutions, discoveries about unknowns, or development of methods useful for ecosystem health challenges. We envision that some of them will lead to peer-review publications, technical reports or other forms of publication. This is a Grand Challenge Curriculum course.

GCC 5035. Child Labor: Work, Education, and Human Rights in Global Historical Perspective. (GP; 3 cr. ; A-F only; Periodic Spring)

It seems obvious that we should oppose child labor. Or should we? This course challenges students to think critically about the many angles that need to be considered in deciding whether any particular type of children's work should be opposed or permitted. Drawing on contemporary and historical scholarship in the interdisciplinary arena of childhood and youth studies, this course takes on ethical as well as economic analyses; it reflects upon child development and legal perspectives; it examines cases ranging across the globe and across recent centuries. It may very well change the way you think about kids, forever. Historians find evidence of many different kinds of "childhoods," as well as changing notions of what work is appropriate for children. Coming from social-scientific and policy studies approaches, analysts and critics of contemporary global policies affecting child labor argue that the presumed superiority of "modern Western childhood" needs rethinking. This course will also look at tensions between the presumption that schooling should be the only or primary occupation of childhood years and competing ideas child labor can be valuable and justifiable in many settings including, for example, American farm families. Looking at child labor from comparative global and historical perspectives will encourage and enable students to address some important questions: What types of work? have children done in various modern historical and contemporary settings? When and how is work arguably bad, or good, for children and their families? Under what conditions is schooling better than work, or vice-versa? Who gets to decide what's best for children? How should governments intervene, and how does intervention differ when children work for their family as opposed to other employers? What forms of regulatory measures or political activism have changed policies and practices

regarding child labor in the past and present? This is a Grand Challenge Curriculum course.

GCC 5036. Seeking Connection through Decolonization: The Power of Indigenous Lands and Languages. (DSJ; 3 cr. ; A-F only; Periodic Fall & Spring)

Seeking Connection through Decolonization: The Power of Indigenous Languages and Place-Based Knowledge in the Face of Racism How has unequal distribution of power resulted in the decline in Indigenous language and the loss of societal connections to the land? How might we all, from different positionalities, revitalize our relationships to indigenous land and languages, in the face of racism and attempts to perpetuate colonization? In this course students will grapple with ideological roots of the ongoing decline in Indigenous language and place-based knowledge and how their decline has implications for all peoples. To understand the connections, students will participate in Indigenous language learning (Dakota and Ojibwe) as acts of cultural production. Discussion and reading will be supplemented with visits to local sites, for example, Medicine Gardens, Bell Museum, Gibbs Farm, and Bdote to directly interact with the land as pedagogy. Through the course themes, students will experience the interconnectedness of place-based knowledge, language, and human identity, while also seeing the importance of understanding the lands on which one resides and the power of indigenous languages in re-imagining those relationships. This is a Grand Challenge Curriculum (GCC) course. GCC courses are open to all students and fulfill an honors experience for University Honors Program students.

GCC 5041. Transition to a Sustainable World: Can Psychology Help Facilitate Global Sustainability?. (ENV; 3 cr. ; A-F only; Periodic Fall)

Despite understanding the consequences of not acting to curb unsustainability, why do people fail to act? Human's behavioral apathy toward sustainability may be due to an inaccurate characterization of sustainability and/or a lack of understanding of cultural diversity and behavior. Therefore, an understanding of the human behavior will contribute greatly to (i) decipher human actions that negatively impact global ecosystems, (ii) slowdown or stop human ecologically destructive trajectory, and (iii) promote sustainable alternatives. The problem is that environmental issues are not generally included in psychology programs, and psychology is not often represented in environmental programs. In the United Nations (UN) Sustainable Development goals 2030 (UN SDG 2030), psychological indices have been conspicuously absent (except for mental health in general terms) even though environmental degradation, social or economic inequity, all are implicated by human behavior. The UN SDG 2030 is based on the unproven concept that sustainability is an intersection of social, economic and environmental factors, the key pillars of sustainability. Since economic activity and society are subsets

of human behavior, psychology should be considered central to unsustainability and/or sustainability. Therefore, we hypothesize that behavioral psychology has a critical role to play in creating a sustainable society. The aim of the proposed GCC is to discuss (un)sustainability using this new paradigm that will allow new approaches to achieve transition from unsustainability to sustainability worldwide. The specific aims of the proposed GCC are following: (i) Describe interaction between sustainability and behavioral psychology as the 4th pillar of sustainability. (ii) Explain the behavioral correlates of cultural differences in terms of transition to sustainability. (iii) Explain the consumption (related to unsustainability) and conservation (related to sustainability) behavior. (iv) Determine the place of Psychology in the UN's Sustainable Development Goals (SDGs) that are mostly based on Sociology, Economy and Environment. (v) Describe humanity's transition from unsustainable to sustainable development. This is a Grand Challenge Curriculum Course. GCC courses are open to all students and fulfill an honors experience for University Honors Program students.

GCC 5042. Just Education: The Role of Higher Education in Disrupting Mass Incarceration. (DSJ; 3 cr. ; A-F only; Periodic Spring)

The United States has the highest incarceration rate in the world. We have just 5% of the world's population, but 25% of its prisoners. Since 1970, the number of incarcerated persons in this country has increased by 700%. Of the 2.3 million people currently in prison or jail, however, just 6 percent have access to higher education. Indeed, contemporary higher education policy and infrastructure disregards incarcerated individuals as potential postsecondary students. Even as colleges and universities across the country champion diversity-driven and inclusivity-oriented mission statements, and look to create viable postsecondary pathways for systemically underserved students, only a handful include incarcerated and justice-impacted individuals in these efforts. The University of Minnesota is not currently among them. This course will explore the intersection of higher education and mass incarceration in the United States with a focus on the role of higher education in disrupting the collateral consequences of incarceration and justice involvement. In particular, we will examine the potential for the University of Minnesota to play a pivotal role in disrupting what we call the "ripple effect" of incarceration and justice involvement on individuals and communities in Minnesota. Students will have an opportunity to tour local correctional facilities and both hear from and present to experts in the field, including formerly incarcerated people. In addition, students' ideas will directly inform a "college in prisons" program that is being developed by Professors Moriearty and Schlafer, in collaboration with other University scholars and administrators, and the Minnesota Department of Corrections. In this way, students' work in this class and their projects will directly and meaningfully inform the real

world and the development of the college in prisons program in "real time." As a teaching team with expertise in law, juvenile justice, criminal justice, child welfare, psychology, and public health, Professors Moriearty and Schlafer will highlight examples of successful interdisciplinary collaborations from their own research and practice experience. In addition, students will hear from guest lecturers from multiple disciplines and affiliations (including an Assistant Commissioner and educational expert at the Minnesota Department of Corrections and law, public health, arts, information technology and sociology instructors from the University) and panels of stakeholders, policy-makers and formerly incarcerated/justice impacted individuals. This is a Grand Challenge Curriculum course.

GCC 5043. Regenerative Game Studio: Playing For the Future. (ENV; 3 cr. ; A-F only; Periodic Spring)

Meeting the interrelated UN Sustainable development goals facing humanity will require imagination and emotional labor of unprecedented scale. We must collectively learn to overhaul our extractive systems with regenerative approaches in which humans are in a mutually beneficial relationship with the earth's systems. The task of working across SDGs is a grand challenge in itself. Games are an effective way to engage people in understanding complex problems and collaborating toward solutions. Designing games challenges students to examine systems, identify leverage points, confront trade-offs, and be creative. In doing so, it prepares them to become system teachers, leveraging organizations and networks for change. We invite students from a range of backgrounds to apply their disciplinary expertise and interests in new ways. No prior sustainability knowledge or game design experience is needed. This is a Grand Challenge Curriculum course.

GCC 5501. Knowledge to Impact: Creating Action with Your Grand Challenge Project Idea. (; 2 cr. [max 3 cr.] ; A-F only; Periodic Spring)

This course provides an intensive, hands-on experience designing and developing a sustainable intervention to an aspect of a Grand Challenge. In other words, converting knowledge to impact. The target audience is students and student teams who have identified and/or worked on a specific problem in a previous GCC course and wish to dig deeper in developing a project plan. Students should enter the class with a problem statement identifying the challenge they aim to address, a target location or community, and a proposed solution or intervention that they wish to develop. Student solutions should address a problem that is about a broadly defined Grand Challenge; examples of applicable areas include water, immigration and refugees, energy, housing, educational opportunity gap, public health, food and sustainable agriculture. Ideas outside this range are also acceptable. By the end of class, students will create a plausible design and implementation plan for a solution that addresses their self-created

Grand Challenge problem statement. This solution or intervention could take many forms, depending on student interest and problem statement. Business or nonprofit plans, policy and advocacy plans, media and awareness campaigns and activism plans are all possible. Determining the correct path(s) is part of the learning objectives for the course. Students will leave the course with a completed preliminary pitch deck for their plan in order to make the case for initial, or seed stage, support. Throughout this document (and course), the terms solution and intervention will be used somewhat interchangeably. This reflects the fact that different disciplines use different words to describe similar aspects of the overall process covered in this class. Understanding some of those differences is part of the learning objectives for the class. This is a Grand Challenge Curriculum course. GCC courses are open to second year undergraduate students and above and graduate students and fulfill an honors experience for University Honors Program students.

Graphic Design (GDES)

GDES 1311. Foundations: Drawing and Design in Two and Three Dimensions. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

Design elements and principles in context of observational drawing. Integrative approach to two-dimensional design, three-dimensional design, and drawing. Broad conceptual framework for design exploration. Emphasizes perceptual aspects of visual forms.

GDES 1312. Foundations: Color and Design in Two and Three Dimensions. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

Color theory, its application in two- and three-dimensional design. Emphasizes effective use of color by studying traditional color systems, perception, and interaction. Lectures, demonstrations, extensive studio work, and critiques.

GDES 1315. Foundations: The Graphic Studio. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

Graphic design process of problem-solving. Visual communication of ideas and information. Use of design software to compose with words, images, and forms. prereq: Graphic design premajor design minor or instr consent

GDES 2196. Work Experience in Graphic Design. (; 1-4 cr. [max 8 cr.] ; S-N only; Every Fall, Spring & Summer)

Supervised work experience in business, industry, or government, related to student's area of study. Integrative paper or project. prereq: Plan submitted/approved by [adviser, internship supervisor], written approval of supervisor, instr consent

GDES 2342. Web Design. (; 3 cr. ; A-F only; Every Fall & Spring)

Graphic design elements/principles applied to website design. HTML, CSS. Working with interactive media and file formats.

GDES 2345. Typography. (; 4 cr. ; A-F only; Every Fall & Spring)

History of typographic forms, principles of composition, expressive potential of type. Design process from problem-solving through exploration, experimentation, selection, critique, and refinement. Readings, research, exercises, design production.

GDES 2361. Design Process: Photography. (; 3 cr. ; A-F only; Every Fall & Spring)
Photography for graphic designers: digital/film photographic developing/image manipulation, printing.

GDES 2399V. Design and its Discontents: Design, Society, Economy, and Culture. (WI; 3 cr. ; A-F only; Every Fall)

Secret history of modern, postmodern, and contemporary design. Principles and practices of designers who operate outside of main stream. Innovators, activists, cultural gadflies whose work challenges, provokes, and inspires. Context of economy, society, culture, and politics. Lecture, research, studio production. Written project proposals/reflections/blogging.

GDES 2399W. Design and its Discontents: Design, Society, Economy, and Culture. (WI; 3 cr. ; A-F only; Every Fall)

Secret history of modern, postmodern, and contemporary design. Principles and practices of designers who operate outside of main stream. Innovators, activists, cultural gadflies whose work challenges, provokes, and inspires. Context of economy, society, culture, and politics. Lecture, research, studio production. Written project proposals/reflections/blogging.

GDES 3170. Topics in Graphic Design. (; 1-4 cr. [max 32 cr.]; A-F or Audit; Every Fall, Spring & Summer)
In-depth investigation of specific topic.

GDES 3311. Illustration. (3 cr. ; A-F only; Every Spring)

Two aspects of illustration for contemporary graphic designer. Image making, by hand or digitally, for use in design projects. Design development. Mapping ideas/expressing thoughts visually. Not observational drawing course. prereq: GDes 1311 or ArtS 1101 or PDES 3702 or LA 1301 or Arch 3250 or Arch 2301 or instructor permission

GDES 3312. Color and Form in Surface Design. (; 4 cr. ; A-F only; Every Fall & Spring)
Use of color/form representation in two-dimensional surface applications. Historical use of color and of spatial representation in visual communication.

GDES 3351. Text and Image. (; 3 cr. ; A-F or Audit; Every Fall & Spring)
Composition of visual information using grid structures to integrate text/image. Informational/expressive aspects of graphic design, hierarchical relationships of visual elements. Methods of text layout that enhance communication. prereq: [2345 or DHA 2345], graphic design major, pass portfolio review

GDES 3352. Identity and Symbols. (; 3 cr. ; A-F only; Every Fall & Spring)
Representation of abstract ideas through symbols. Development of visual identity

systems. prereq: pass portfolio review, graphic design major

GDES 3352H. Honors: Identity and Symbols. (; 3 cr. ; A-F only; Every Fall & Spring)
Representation of abstract ideas through symbols. Development of visual identity systems.

GDES 3353. Packaging and Display. (; 3 cr. ; A-F only; Every Fall & Spring)
Application of graphic design principles to three-dimensional projects. Principles of three-dimensional design/space applied to labeling, packaging, and display.

GDES 4131W. History of Graphic Design. (WI; 4 cr. ; A-F or Audit; Every Fall & Spring)
Historical analysis of visual communication. Technological, cultural, and aesthetic influences. How historical events are communicated/perceived through graphic presentation/imagery.

GDES 4160H. Honors Capstone Project. (; 2 cr. [max 4 cr.]; A-F only; Every Fall & Spring)
Individualizes honors experience by connecting aspects of major program with special academic interests. prereq: Graphic design honors

GDES 4193. Directed Study in Graphic Design. (; 1-4 cr. [max 8 cr.]; Student Option No Audit; Every Fall, Spring & Summer)
Independent study in Graphic Design under tutorial guidance. prereq: Undergrad, instr consent

GDES 4196. Internship in Graphic Design. (; 1-3 cr. ; S-N or Audit; Every Fall, Spring & Summer)
Supervised work experience relating activity in business, industry, or government to the student's area of study. Integrative paper or project may be required. prereq: Completion of at least one-half of professional sequence, plan submitted/approved in advance by [adviser, internship supervisor], written consent of faculty supervisor, instr consent

GDES 4312. Advanced Graphic Design Print Projects. (3 cr. ; A-F or Audit; Every Fall)
Advanced Graphic Design Print Projects offers an opportunity for students to propose, design, and produce printed graphic design products while expanding upon their experience in surface design and printing. Students will explore graphic design communication through group and individualized projects in a cohort, and under the supervision of graphic design faculty.

GDES 4345. Advanced Typography. (; 4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Expressive visual communication of words. Fundamental legibility of "invisible art," overt expression through type. Students complete extended typographic project. prereq: [[2345 or DHA 2345], 3351, graphic design major] or design grad student or instr consent

GDES 4361V. Honors Thesis Studio and Writing. (WI; 3 cr. ; A-F only; Every Fall & Spring)
Research/design of comprehensive graphic design thesis project. prereq: [Graphic design

major, 2399W or 2399V, 3352 or 3352H, 3353], honors student, or instr consent

GDES 4361W. Thesis Studio and Writing. (WI; 3 cr. [max 4 cr.]; A-F only; Every Fall & Spring)
Research/design of comprehensive graphic design thesis project. prereq: [Graphic design major, 2399W, 3352, 3353] or instr consent

GDES 4362. Senior Thesis and Exhibition. (3 cr. [max 4 cr.]; A-F only; Every Fall & Spring)
Design, production, and exhibition of comprehensive graphic design thesis project.

GDES 4362H. Senior Thesis and Exhibition. (; 3 cr. ; A-F only; Every Fall & Spring)
Design, production, and exhibition of comprehensive graphic design thesis project.

GDES 4363. Graphic Design Portfolio. (3 cr. ; S-N only; Every Fall & Spring)
Preparation of professional portfolio. Graphic design thesis exhibition. Professional issues.

GDES 4371. Data & Information Visualization. (3 cr. ; A-F only; Every Spring)
Visual articulation of data. Expansive research, meticulous gathering of data, analysis. Develop cohesive graphical narratives/build solid foundation in craft of presenting data.

GDES 5193. Directed Study in Graphic Design. (; 1-4 cr. [max 8 cr.]; A-F or Audit; Every Fall, Spring & Summer)
Independent study in graphic design under tutorial guidance. prereq: Jr or sr or grad student

GDES 5311. Illustration. (3 cr. ; A-F only; Every Spring)
Image making by hand or digitally for use in design projects. Design development. Mapping out ideas/expressing thoughts visually. Not observational drawing course. prereq: 1311 or ArtS 1101 or PDes 3702 or LA 1301 or Arch 3250 or Arch 2301 or instr consent

GDES 5341. Interaction Design. (; 3 cr. ; A-F or Audit; Every Fall & Spring)
Design of interactive multimedia projects. Interactive presentations and electronic publishing. Software includes hypermedia, scripting, digital output. prereq: [[2334 or 2342], design minor] or graphic design major or grad student or instr consent

GDES 5342. Advanced Web Design. (3 cr. ; A-F or Audit; Every Spring)
Internet-based design. Static web pages, embedded media, cascading style sheets. Design and usability of interface between humans and technology. Evaluation of visual elements that control and organize dealings with computers to direct work. Students develop designs, do usability testing. prereq: [[2334 or 2342], design minor] or graphic design major or grad student or instr consent

GDES 5371. Data & Information Visualization. (3 cr. ; A-F only; Every Spring)
Visual articulation of data. Expansive research, meticulous gathering of data, analysis. Develop cohesive graphical narratives/build solid foundation in craft of presenting data.

GDES 5383. Digital Illustration and Animation. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Advanced computer design. Integration of design knowledge with Macintosh computer applications. Students use software to create digital illustration and animations. Adobe Illustrator, After Effects, Flash. prereq: [[2334 or 2342], design minor], [graphic design major or [grad student, experience with computer illustration]]] or instr consent

GDES 5386. Fundamentals of Game Design.

(; 3 cr. ; A-F or Audit; Periodic Fall & Spring) Games of all kinds. Theoretical/practical aspects of making games. Investigation of design process. Rules, strategies, methodologies. Interactivity, choice, action, outcome, rules in game design. Social interaction, story telling, meaning/ideology, semiotics. Signs, cultural meaning. prereq: [[2334 or 2342], design minor] or [[4384 or DHA 4384 or 5341 or DHA 5341], [graphic design major or sr or grad student]]] or instr consent

GDES 5388. Graphic Design Research. (; 3 cr. ; A-F or Audit; Periodic Spring)

Experience in Graphic Design research strategies and methods. Applied, theoretical, and human-centered aspects directed at project development. Design prototyping, testing, analysis. prereq: Graphic design major or grad student or instr consent

Greek (GRK)**GRK 1001. Beginning Classical Greek I.** (5 cr. ; Student Option; Every Fall)

Introduction to grammar/vocabulary of classical Greek as written in Athens in 5th/4th centuries BCE. Forms/simple constructions. Some reading of simple, heavily adapted passages from ancient texts.

GRK 1002. Beginning Classical Greek II. (5 cr. ; Student Option; Every Spring)

Continuation of Greek 1001. More complex constructions, including particles, clauses, indirect discourse. Some reading of adapted passages from ancient texts. prereq: Grade of at least C- or S in 1001 or dept consent

GRK 3003. Intermediate Greek Prose. (4 cr. ; Student Option; Every Fall)

Introduction to Athenian prose authors of 5th/4th centuries BCE. Readings of continuous passages of unadapted Greek texts (history, speeches). Review of grammar/vocabulary. Some discussion of major themes/issues in Greek culture as illustrated by texts. prereq: Grade of at least C- or S in 1002 or 5001 or instr consent

GRK 3004. Intermediate Greek Poetry. (4 cr. ; Student Option; Every Spring)

Introduction to Greek epic poetry. Readings of selections from Homer's Iliad and Odyssey. Quantitative meter and poetic devices. Discussion of major themes and issues as developed in Homer's poetry. prereq: dept consent

GRK 3993. Directed Studies. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study. prereq: instr consent

GRK 3994. Directed Research. (; 1-4 cr. ; A-F only; Every Fall & Spring)

Research project pertaining to ancient world, using documents or primary sources along with secondary sources. Students select project in consultation with faculty member. prereq: Course is open to second semester juniors and seniors, major in CNRC, or ReIS Students enrolling in this directed research course will complete the University's common Directed Research contract with the faculty mentor/evaluator. The Faculty member will ensure academic standards are upheld, including: - the work proposed is at the appropriate level for the course, academic in nature, and the student will be involved intellectually in the project. - the project scope is reasonable for one semester and the number of credits specified (42 hours of work per credit) - the faculty mentor is qualified to serve in this role - assessment of student learning and grading criteria are clear and appropriate - the student will be working in a respectful, inclusive environment The contract will include the learning objectives for the course, the methods that will be employed, and how assessment will be conducted by the faculty mentor. The contract must be approved by the DUGS/academic approver of the major before the student can register.

GRK 5003. Intermediate Greek Prose for Graduate Student Research. (; 4 cr. ; Student Option; Every Fall)

Introduction to Athenian prose authors of 5th/4th centuries BCE. Readings of continuous passages of unadapted Greek texts (history, speeches). Review of grammar/vocabulary. Some discussion of major themes/issues in Greek culture as illustrated by texts. prereq: Grade of at least [C- or S] in [1002 or 5001] or [instr consent, grad student]

GRK 5004. Intermediate Greek Poetry for Graduate Student Research. (; 4 cr. ; Student Option; Every Spring)

Introduction to Greek epic poetry. Readings of selections from Homer's Iliad and Odyssey. Quantitative meter and poetic devices. Discussion of major themes and issues as developed in Homer's poetry. prereq: dept consent

GRK 5100. Advanced Reading. (; 3 cr. [max 18 cr.] ; Student Option; Every Fall & Spring)

Reading in Greek texts/authors. Texts/authors vary. prereq: [GRK 3004 or equiv], at least two yrs of college level Greek. Must contact Classical and Near Eastern Studies department for permission to register.

GRK 5200. Advanced Readings in Greek Prose. (; 3 cr. [max 6 cr.] ; Student Option; Fall Even Year)

The primary material for this course will be a selection of readings from three or more different Greek prose authors connected by genre (e.g. historical writing, philosophy, oratory, novel), theme (e.g. medicine, Athenian politics of the 5th /4th centuries, religious innovation), period (e.g. classical period,

Second Sophistic), or the like. Primary readings and critical approach will vary from year to year, making the course repeatable. Some modern secondary reading will be assigned to provide a basis for discussion and a model for student written work. prereq: [GRK 3004 or equiv], at least two yrs of college level Greek. Contact the Classical & Near Eastern Religions & Cultures Department (CNRC) with any questions.

GRK 5701. Prose Composition. (; 3 cr. ; Student Option; Spring Odd Year)

Moving step by step through Ancient Greek grammar, starting with simple sentences and progressing to complex ones. Course ends with students translating short passages of modern English prose into Greek. prereq: Grad student or instr consent

GRK 5705. Introduction to the Historical-Comparative Grammar of Greek and Latin. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Historical/comparative grammar of Greek and Latin from their Proto-Indo-European origins to classical norms.

GRK 5993. Directed Studies. (1-4 cr. [max 18 cr.] ; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study. Prereq: Grad student or instr consent.

GRK 5994. Directed Research. (1-12 cr. [max 18 cr.] ; Student Option; Every Fall & Spring)

Supervised original research on topic chosen by student. Prereq: Grad student or instr consent.

GRK 5996. Directed Instruction. (1-12 cr. [max 20 cr.] ; Student Option; Every Fall & Spring)

Supervised teaching internship. Prereq: Grad student or instr consent.

Health Informatics (HINF)**HINF 5115. Interprofessional Healthcare Informatics.** (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Implications of informatics for practice, including nursing, public health, and healthcare in general. Electronic health record issues. Relates ethical, legislative and political issues informatics. Global and future informatics issues. prereq: Grad student or professional student or instr consent

HINF 5394. Directed Research. (; 1-6 cr. [max 18 cr.] ; Student Option No Audit; Periodic Fall, Spring & Summer)

Directed research arranged with faculty member.

HINF 5430. Foundations of Health Informatics I. (; 3 cr. ; Student Option; Every Fall & Spring)

An introductory survey of health informatics, focusing on foundational concepts. Topics covered include: conceptualizations of data, information, and knowledge; current terminologies, coding, and classification systems for medical information; ethics, privacy, and security; systems analysis,

process and data modeling; human-computer interaction and data visualization. Lectures, readings, and exercises highlight the intersections of these topics with electronic health record systems and other health information technology. prereq: Junior, senior, grad student, professional student, or instr consent

HINF 5431. Foundations of Health Informatics II. (3 cr. ; Student Option; Every Spring)

An introductory survey of health informatics, focusing on applications of informatics concepts and technologies. Topics covered include: health informatics research, literature, and evaluation; precision medicine; decision models; computerized decision support systems; data mining, natural language processing, social media, rule-based system, and other emerging technologies for supporting 'Big Data' applications; security for health care information handling. Lectures, readings, and exercises highlight the intersections of these topics with current information technology for clinical care and research. prereq: Junior, senior, grad student, professional student, or instr consent

HINF 5436. AHC Informatics Grand Rounds. (1 cr. [max 10 cr.] ; A-F or Audit; Every Fall) Presentation/discussion of research problems, current literature/topics of interest in Health Informatics.

HINF 5440. Foundations of Translational Bioinformatics. (3 cr. ; A-F or Audit; Every Spring)

Translational bioinformatics deals with the assaying, computational analysis and knowledge-based interpretation of complex molecular data to better understand, prevent, diagnose and treat disease. This course emphasizes deep DNA sequencing methods that have persistent impact on research related to disease diagnosis and treatment. The course covers sequence analysis, applications to genome sequences, and sequence-function analysis, analysis of modern genomic data, sequence analysis for gene expression/functional genomics analysis, and gene mapping/applied population genetics. Prerequisites: MS, PhD, or MD/PhD student interested in translational bioinformatics

HINF 5450. Foundations of Precision Medicine Informatics. (3 cr. ; Student Option; Periodic Fall)

The course will provide an introduction into the fundamental concepts of Precision Medicine with a focus on informatics-focused applications for clinical data representation, acquisition, decision making and outcomes evaluation. The student will gain an appreciation of fundamental biomedical data representation and its application to genomic, clinical, and population problems.

HINF 5494. Topics in Health Informatics. (1-3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)

Topics in health informatics. prereq: Professional student or grad student or instr consent

HINF 5496. Internship in Health Informatics. (1-6 cr. [max 18 cr.] ; S-N or Audit; Every Fall, Spring & Summer)

Practical industrial experience not directly related to student's normal academic experience. prereq: HINF student or instr consent

HINF 5499. Capstone Project for the Masters of Health Informatics. (3 cr. ; S-N only; Every Fall, Spring & Summer)

Final opportunity to apply newly acquired knowledge/skills to project involving practical problem in health informatics. Submit written project report in lieu of final examination. prereq: second semester MHI student or instr consent

HINF 5501. US Health Care System: Information Challenges in Clinical Care. (1 cr. ; S-N or Audit; Every Fall & Spring)

Health care system/its unique interaction between key health system stakeholders. Relationship between patients, providers, payers, regulatory bodies. Role of information management/challenges of information standardization/exchange. prereq: Junior or senior or professional student or grad student or instr consent

HINF 5502. Python Programming Essentials for the Health Sciences. (1 cr. ; S-N or Audit; Every Fall & Spring)

Computer programming essentials for health sciences/health care applications using Python 3. Intended for students with limited programming background, or students wishing to obtain proficiency in Python programming language. prereq: Junior or senior or grad student or professional student or instr consent

HINF 5510. Applied Health Care Databases: Database Principles and Data Evaluation. (3 cr. ; A-F or Audit; Every Fall)

Principles of database theory, modeling, design, and manipulation of databases will be introduced, taught with a healthcare applications emphasis. Students will gain experience using a relational database management system (RDBMS), and database manipulation will be explored using Structured Query Language (SQL) to compose and execute queries. Students will be able to critically evaluate database query methods and results, and understand their implications for health care. prereq: Junior or senior or grad student or professional student or instr consent

HINF 5520. Informatics Methods for Health Care Quality, Outcomes, and Patient Safety. (2 cr. ; Student Option; Every Spring)

Application/operation of clinical information systems, electronic health records, decision support/application in health care system. Use of clinical information systems/association with health care delivery, payment, quality, outcomes. prereq: Junior or senior or grad student or professional student or instr consent

HINF 5530. Health Care Software Management. (2 cr. ; A-F or Audit; Every Spring)

Health care software and unique interaction between key stakeholders in health care

software development and implementation. Systems analysis, software development, and software life cycle management for health care applications. prereq: HINF student or instr consent

HINF 5531. Health Data Analytics and Data Science. (3 cr. ; A-F or Audit; Every Spring)

Data science methods and techniques for the extraction, preparation, and use of health data in decision making. prereq: Junior or senior or professional student or grad student or instr consent

HINF 5540. Interprofessional Health Informatics. (2 cr. ; A-F only; Every Spring)

Informatics applications in various healthcare professions. Clinical specialties. Informatics tools to improve healthcare services/outcomes through lectures/presentations.

HINF 5610. Foundations of Biomedical Natural Language Processing. (3 cr. ; Student Option; Periodic Fall)

The course will provide a systematic introduction to basic knowledge and methods used in natural language processing (NLP) research. It will introduce biomedical NLP tasks and methods as well as their resources and applications in the biomedical domain. The course will also provide hands-on experience with existing NLP tools and systems. Students will gain basic knowledge and skills in handling with main biomedical NLP tasks. Prerequisites graduate student or instructor consent; Experience with at least one programming language (Python or Perl preferred) Recommended: basic understanding of data mining concepts, basic knowledge of computational linguistics

HINF 5620. Data Visualization for the Health Sciences. (3 cr. ; A-F or Audit; Periodic Spring)

An advanced health informatics course, focusing on theoretical and practical aspects of data and information visualization for health care and the health sciences. Topics include classic and novel visualization types; models of human visual perception and cognition; color, text and typography; maps and diagrams; evaluation and testing; and the aesthetic and cultural aspects of visualization. Examples emphasize health sciences applications for clinicians, patients, researchers, and analysts. Modern programming and commercial tools are discussed, including D3, ggplot2, and Tableau. Students will report on and discuss visualization methods, published studies and books, culminating in a final visualization project of the student's choosing.

HINF 5630. Clinical Data Mining. (3 cr. ; Student Option No Audit; Periodic Fall)

This is a hands-on introductory data mining course specifically focusing on health care applications. Analogously to the relationship between biostatistics and statistics, the data and computational challenges, the experiment design and the model performance requirements towards data mining in the clinical domain differ from those in general applications. This course aims to teach the students the most common data mining

techniques and elaborate on the differences between general and clinical data mining. Specifically, the course will focus on (i) clinical data challenges and preprocessing; (ii) survey of the most common techniques in the clinical domain; (iii) clinical application touching up on experimental design and collaborations with physicians. The class will meet twice a week, one day dedicated to lectures and one day to a hands-on lab component, where students are expected to apply the techniques to health-related data. Some of the models will be evaluated with the involvement of a physician collaborator. Prerequisites: Basic linear algebra (matrix notation), basic optimization (gradient descent) Graduate level introductory statistics (e.g. STAT 5101-5102) or equivalent or instructor consent

HINF 5640. Advanced Translational Bioinformatics Methods. (3 cr. ; A-F or Audit; Every Fall)

This course is designed to introduce the high throughput platforms to students who are interested in the genomics research and genomics data analysis in the basic and clinical medical science field. The course covers history of the genomics platforms, its revolution and the specifics of the data generated by all existing different platforms. The course will also introduce all existing sequencing platforms and applications to biological science, as well the current trends in this field.

HINF 5650. Integrative Genomics and Computational Methods. (3 cr. ; A-F or Audit; Periodic Spring)

Genome-scale high throughput data sets are a central feature of modern biological research and translational clinical study. Experimental, computational biologists and clinical researchers who want to get the most from their data sets need to have a firm grasp and understanding of genomic data structure characteristics, analytical methodology and the intrinsic connection to integrate. This course is designed to build competence in quantitative methods for the analysis of high-throughput genomic data and data integration.

HINF 5660. Applied Causal Discovery. (; 3 cr. ; Student Option; Every Spring)

Which genes cause cancer? Does cholesterol cause heart attacks? Computational causal discovery (especially from observational data) is a recently developed and developing field at the intersection of statistics and machine learning, with numerous and important untapped applications in scientific and medical research. This course provides a foundation for students to go on to apply causal discovery methods to their own data sets. The focus of this course is on developing the students' ability to identify when and why to use computational causal discovery methods, how to determine what methods are appropriate to use in a given context, and how to interpret and report the results. Students in this course will gain hands-on experience applying causal discovery algorithms, develop an understanding of the computational challenges one faces when using causal discovery algorithms, and learn

the best practices for using causal discovery algorithms.

Health Services Management (HSM)

HSM 3040. Dying and Death in Contemporary Society: Implications for Intervention. (; 2 cr. ; Student Option; Every Fall & Spring)

This course provides basic background information on concepts, attitudes, ethics, and lifestyle management related to dying, death, grief, and bereavement. The emphasis is on preparing teachers, community health professionals, and other helping professionals for educational activities in this area. Prerequisite: sophomore

HSM 3051. Career and Internship Skills in Health Services Management. (2 cr. ; A-F or Audit; Every Fall & Spring)

This course is a requirement in the Bachelor of Applied Science major in Health Services Management. It can also be an elective for HSM minor and certificate students, with adviser permission. Its overall goal is to enable students to apply concepts and skills gained in the Health Services Management program and contribute their knowledge of best practices to make a positive impact on the health services management workplace and industry. To successfully complete this class, students will create a career interest statement, resume, cover letter, and LinkedIn profile. They will also apply to at least one health services-related internship or work position, participate in networking opportunities, and create an action plan to successfully obtain an HSM internship and enroll in HSM 4596. Prerequisites: HSM major or premajor; WRIT 1301 or 1401 or equivalent; HSM 3521; HSM 4561.

HSM 3101. Applied Health Economics. (3 cr. ; A-F only; Every Fall & Spring)

Provides a pragmatic, applied understanding of health economics with the specific aim of increasing the effectiveness of management in the health care industry. As effective management requires understanding and application of the economic incentives and choices of the various agents in that industry, this course reviews the health economic principles that drive the behavior of providers, insurers, and patients. It provides an overview of the structure of the hospital, provider, and pharmaceutical and medical device industries and their responses to economic forces given the incentives faced by the various economic agents--patients, providers, payers, and health care manufacturers (i.e., the pharmaceutical and medical device industries). This includes both an examination of private and government insurers and the ways health system actions are influenced by the policies of private and government insurance. Health equity is an issue that applies broadly in the health care industry, and as such, it has implications for its management. Similarly, health care management must prepare for the potential impact of health care reform on the health care industry so that it is positioned to thrive

in a dynamic environment. Accordingly, this course reviews various reform approaches and their implications for the health care industry. Prerequisites: None, but successful completion of a course in introductory microeconomics is strongly recommended.

HSM 3350. Special Topics in Health Services Management. (; 1-3 cr. [max 9 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Timely issues and themes in health services management.

HSM 3521. Health Care Delivery Systems. (; 3 cr. ; A-F or Audit; Every Fall)

Health care (HC) delivery systems, health economics, third-party/public reimbursement, current trends in HC organizations/management/administration. Regulations, standards, quality assurance, accreditation, current ethical issues. Implications for HC providers/professionals, patients/families, communities, international health. prereq: 30 cr

HSM 3621. Health Care Leadership in a Crisis. (; 1 cr. ; A-F or Audit; Every Fall & Spring)

Developing and activating an emergency management plan during a health care crisis takes leadership and management expertise. It's often said, "Leaders are identified in times of crisis." You will learn how to execute many important crisis leadership actions: Detect issues before they reach an emergency level. Apply strategic thinking and decision-making skills in crisis situations through a well-organized, executable plan. Mitigate the safety, financial, and operational effects of a health care emergency. Find opportunities amid the crisis to improve the organization and prevent future crises. Throughout the course, you will hear from experts on how they have led internal and external stakeholders through a crisis, including COVID-19. Prerequisites: None.

HSM 4041. Leadership in Health Services Management. (3 cr. ; A-F or Audit; Every Fall & Spring)

Learning about health care leadership will occur in three ways: exploration of foundational leadership theory with strategies, values, characteristics, and styles (the context); analysis of personal perspectives and beliefs about leadership (interpretation of the context); and examination of evolving health care industry trends. The course will assist students in understanding the most serious challenges facing the health care services market, presenting ways to address these challenges through emerging best practices and tapping existing relevant theories of leadership in health care. Each student will learn about their personal leadership style, and emphasis will be placed on self-awareness, critical thinking skills, culture development, and management of conflict. Case studies will be used to explore up-to-date examples concerning the external environment leaders face as they attempt to deal with what seems like daily change in their redesigned health care organizations. It is a hybrid course with live lectures, group projects, and leadership simulation.

HSM 4043. Project and Program Management in Health Services**Management.** (; 3 cr. ; A-F or Audit; Every Fall & Spring)

This is a hands-on course aimed at providing a practical, holistic perspective on the complexities of evidence-based project and program management within the health care organization. It describes the nature of health care projects, characteristics of project teams, and relevant trends in health care. You will become familiar with multiple project management tools, including Microsoft Project, as well as the necessary leadership, facilitation, and team skills. You will be exposed to case studies, examples, discussions, and readings on the disciplines and tools that professional health care project managers use. Upon completion of this course, you will have experienced the activities required to initiate, plan, execute, monitor, control, and close a successful health care project. Prerequisites: None

HSM 4065. Information Privacy and Security in Health Services Management. (TS; 3 cr. ; A-F or Audit; Every Fall & Spring)

Developing and implementing a security and privacy program in a health care environment. Privacy and security from societal, health care operations, and regulatory perspectives. Final project uses resources in the public domain to design a security and privacy program that supports regulatory compliance requirements and that considers customer/patient concerns and experience, health care provider experience and workflows, operational workflows, and regulatory compliance. Topics include importance of security in health care; risk concepts and value of health information, usability, and security/privacy; federal and state regulations; impact of technology on security; health care operations; what can be learned from other industries; security certifications; and breach response.

HSM 4193. Directed Study. (1-4 cr. [max 12 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Independent project. Topic arranged with and supervised by Health Services Management faculty member. prereq: admitted to HSM major, minor, or certificate; department consent.

HSM 4301. Health Care Quality & Patient Safety Management. (3 cr. ; A-F or Audit; Every Spring)

Principles of health care improvement, quality, and patient safety management from the role of the manager and project leadership in health services management. Overall the course is designed to provide an understanding of the concepts and principles of quality management and tools, patient safety, and related quality and safety management accreditation and regulatory requirements. The course will use an applied, real-world approach to ensure understanding of these important issues in health services management.

HSM 4521. Inclusion and Equity in Health Care Management. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Knowledge and skills needed to create ethical and just health care access, delivery, and outcomes within racially and culturally diverse populations. Through reflection and discussion, the course explores equity, bias, racial disparities, and culture as they relate to health care delivery, outcomes, and leadership. Analysis of case studies, organizational models, and social justice programs will create a foundation to ethically and strategically plan, actively engage in, and promote transformative change that will enable health care managers and leaders to create more inclusive health care delivery models. Prerequisites: None

HSM 4531. Human Resources in Health Care Settings. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Basic understanding of human resources issues within health care organizations--management of human capital to meet organizational objectives, and building and motivating an engaged workforce. Legal principles; labor supply and demand; sourcing, recruitment, selection and orientation; compensation; benefits; diversity; performance management. prereq: 45 cr

HSM 4541. Health Care Finance. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

General principles of financial management for health care industry. Operational knowledge of financial management theory, esp., how hospitals and their departments develop/balance operating/capital budget for business growth/development. Governmental policies, procedures, and ethical issues controlling the health care industry. prereq: Basic accounting knowledge, a course such as ACCT 2050, and knowledge of Microsoft Excel are strongly recommended. HSM pre-majors should wait for major status to take this course.

HSM 4561W. Health Care Administration and Management. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)

Knowledge and skills in the organizational and managerial aspects of health care. Applications of behavioral and organizational theory to health care settings. Topics will include organization models, supervision, employee evaluation, problem solving, productivity management, group leadership, and case studies. As a Writing Intensive course, it will provide management-level communication skills to develop a thoughtful and reflective understanding of the writing (and rewriting) process.

HSM 4572. Gerontology and Geriatrics for Health Services Executives. (3 cr. ; A-F or Audit; Every Spring)

This course helps students understand aging as well as nursing facility operations and functions, administrative structures and responsibilities, and roles of professional and nonprofessional staff. It is designed to meet the National Association of Long Term Care Administrator Boards (NAB) accreditation standards for Health Services Executive (HSE) certification. The NAB has set forth domains of practice for HSEs, which have been adopted by the Minnesota Board of Examiners for nursing home administrators. This course

covers the following NAB domains of practice: resident-centered care and quality of life, environment, leadership and management, and core skills across all domains. Prerequisite: Students must have some basic knowledge of the long term care field. Those without it are encouraged to meet with the instructor prior to registering to explore learning strategies.

HSM 4573. Long Term Care Regulatory Management and Law. (3 cr. ; A-F or Audit; Every Spring)

This course helps students understand policies and laws that dictate the minimum standards for nursing facility operations. It is designed to meet the National Association of Long Term Care Administrator Boards (NAB) accreditation standards for the Health Services Executive (HSE) certification. The NAB set forth domains of practice for Health Services Executives. These domains of practice have been adopted by the Minnesota Board of Examiners for nursing home administrators. This course covers the domains involving regulatory and legal aspects of long term care. Prerequisite: Students must have some basic knowledge of the long term care field. Those without it are encouraged to meet with the instructor prior to registering to explore learning strategies.

HSM 4575. Innovation in Health Services. (3 cr. ; A-F or Audit; Every Fall)

This interactive course will help you understand the theory and practical application of innovation to solve big challenges in the health care system. You will learn and apply multiple approaches and tools for innovation and human-centered design to reshape organizational culture, strategy, structures, and systems.

HSM 4582. Practicum in Long Term Care. (; 1 cr. [max 4 cr.]; A-F or Audit; Every Fall, Spring & Summer)

The Practicum course is the final component of the long term care administrator's education. A broad range of performance parameters are affected by management practices (e.g., employee morale, clinical processes, financial performance, regulatory compliance, quality of life for residents, customer satisfaction, and community/public relations). The course is a transition between the classroom and this executive level of management. Students will undertake a formal practicum project that must be coordinated with 1) the practicum site, 2) a preceptor who is a licensed nursing home administrator at the sponsoring organization, and 3) the course instructor. The intern is expected to make positive contributions to the sponsoring organization. The preceptor functions as a mentor, coach, and tutor. The intern identifies learning objectives and opportunities to meet both short-range goals for gaining work experience and long-range goals for career development through the development of a learning agreement. prereq: Most prelicensure courses completed--at a minimum, HSM 4583/6583-LTC Supports and Services; HSM 4585/6585 -LTC Organizational Management; HSM 4589/6589-LTC Human Resource Management; HSM 4593/6593-Gerontology for Health Care Managers.

HSM 4583. Long Term Care Supports and Services. (2 cr. ; A-F or Audit; Every Spring)

The Minnesota Board of Examiners for Nursing Home Administrators (BENHA) requires applicants for initial licensure to complete accredited postsecondary academic courses covering key competencies. This course covers the organization, operations, functions, services, and programs of long-term care supports and services, including the following: governing and oversight bodies and their relationship to the administrator; administrative responsibilities and structures; operations and functions of each facility department; functions and roles of professional and nonprofessional staff and consulting personnel. Prerequisites: Some basic knowledge of the long-term care field. Students without this knowledge are encouraged to meet with the instructor to explore preparation strategies.

HSM 4584. Long Term Care Health and Medical Needs. (1 cr. ; A-F or Audit; Every Fall)

The Minnesota Board of Examiners for Nursing Home Administrators (BENHA) requires applicants for initial licensure (and those who are licensed in other states but do not meet Minnesota's regulatory requirements for experience or certification) to complete accredited post-secondary academic courses covering key competencies. This course covers the medical and health needs of nursing facility residents and persons living in community-based settings. Topics include: How anatomic and physiologic changes associated with the aging process affect disease processes and clinical needs. Impact and management of common syndromes associated with aging, including vision/hearing impairment, nutrition/malnutrition, and balance and mobility impairment. Prevention and management of common conditions such as pressure ulcers and delirium. Common psychiatric and neurodegenerative disorders such as dementias (including Alzheimer's), depression, anxiety, psychotic disorders, and alcohol and drug abuse. Advance care planning and the role of palliative care and end-of-life care. Basic medical and pharmacological terminology. Innovative medical trends and emergent technologies used in long-term care settings. Prerequisite: Basic knowledge of the long-term care field. Students who do not have this knowledge are encouraged to meet with the instructor to discuss strategies for obtaining it prior to registering for this course.

HSM 4585. Long Term Care Organizational Management. (1 cr. ; A-F or Audit; Every Fall)

The Minnesota Board of Examiners for Nursing Home Administrators (BENHA) requires applicants for initial licensure (and those who are licensed in other states but do not meet Minnesota's regulatory requirements for experience or certification) to complete accredited postsecondary academic courses covering key competencies. HSM 4585 covers the following basic management functions: planning and objective setting; organizing and delegating; and observing, monitoring, and evaluating outcomes. prereq: Basic knowledge of the long term care field. Students without

this knowledge are encouraged to consult with the instructor prior to registering to explore preparatory strategies.

HSM 4586. Management in Assisted Living and Senior Care Settings. (; 3 cr. ; A-F or Audit; Every Spring)

Assisted living directors increasingly lead complex organizations that provide many different types of services to residents and their families. This course helps students understand aging as well as the operations and functions of assisted living communities, governance and leadership, administrative structures and responsibilities, and the roles of professional and nonprofessional staff. In 2019, the Minnesota State Legislature passed historic regulatory reform in assisted living, culminating in a new facility license and a new director license. State statute sets forth domains of practice for assisted living directors. Education in these domains is required prior to licensure. This course is designed to meet the Assisted Living Director license requirements of the State of Minnesota Board of Examiners for Long Term Services and Supports. Prerequisites: While there are no formal prerequisites, the successful student must have some basic knowledge of aging services and/or the long term care field. Students who are unfamiliar with this field are encouraged to meet with the instructor prior to registering for this course.

HSM 4587. Long Term Care Regulatory Management. (1 cr. ; A-F or Audit; Every Fall)

The Minnesota Board of Examiners for Nursing Home Administrators (BENHA) requires applicants for initial licensure (and those who are licensed in other states but do not meet Minnesota's regulatory requirements for experience or certification) to complete accredited post-secondary academic courses covering key competencies. This course is one of those areas. It covers regulatory and funding provisions and requirements governing operation of long-term care services and related health care programs. Topics include Resident rights, resident choice/ resident risk and protection from maltreatment; Guardianship and conservatorship; Health and safety codes including OSHA and National Life Safety Code; Medicare and Medicaid, standards for managed care and sub-acute care, and third-party payer requirements and reimbursement; Federal and state nursing home survey and compliance regulations and processes; Requirements affecting the quality of care and life of residents; Resident acuity and assessment methodology; Quality assurance and performance improvement. prereq: Basic knowledge of the long term care field. Students without this knowledge are encouraged to meet with the instructor prior to registering to discuss options.

HSM 4588. Long Term Care Quality Management and Performance Improvement. (2 cr. ; A-F or Audit; Every Fall)

This course integrates competencies, knowledge, and skills from three interrelated areas to support evidence-based management decision making in long term care. These

areas include 1) problem-solving skills, 2) quality management and quality improvement practices, and 3) data analytics. Classwork consists of preclass readings, online preclass discussion, face-to-face one-day seminar, one-day comprehensive Excel homework assignment, and homework assignments. Prerequisites: Basic knowledge of the long term care field. Students without this knowledge are encouraged to meet with the instructor prior to registering to discuss ways of acquiring it. Skill with Excel is strongly recommended.

HSM 4589. Long Term Care Human Resources Management. (; 2 cr. ; A-F or Audit; Every Fall)

Long term care organizations operate within a dynamic environment of changing care demands, regulatory requirements, and financial constraints. This course is designed to provide students with an overview of leadership principles; organizational governance and change management; advocacy and public relations; and strategic business planning within the context of nursing homes. This course meets national and state requirements for licensure as a nursing home administrator. Prerequisites: None, but knowledge of the long-term care field is very helpful. Students without this knowledge are encouraged to meet with the director of the LTC program prior to registering to discuss strategies for acquiring it.

HSM 4591. Health Care Law and Ethics. (3 cr. ; A-F or Audit; Every Fall & Spring)

Introduction to the major legal and ethical aspects and principles as applied in health services management. Topics include organization and governance of healthcare organizations; regulation; healthcare fraud and abuse; professional licensing and credentialing; compliance, quality and risk management; privacy and security of individually identifiable health information; healthcare decision-making; professional liability and malpractice. Other topics include legal and ethical issues surrounding healthcare technologies, medical research, and medical breakthroughs.

HSM 4592. Long Term Care Health Care Law. (1 cr. ; A-F or Audit; Every Fall)

The Minnesota Board of Examiners for Nursing Home Administrators (BENHA) requires applicants for initial licensure (and those who are licensed in other states but do not meet Minnesota's regulatory requirements for experience or certification) to complete accredited post-secondary academic courses covering key competencies. HSM 4592 covers legal and regulatory issues, ethical perspectives, public policy advocacy and professional reporting requirements related to the operation of long-term care service delivery organizations. The following topics are covered: Professional and biomedical ethics; Liability, negligence, and malpractice; Data confidentiality, privacy and practices; Professional licensing, certification and reporting for staff and consulting personnel; and Advocacy for public policies. Prerequisites: Knowledge of the long-term care field. Students who do not have this knowledge are

encouraged to meet with the instructor prior to registering to discuss strategies for gaining this knowledge.

HSM 4593. Gerontology for Health Care Managers. (1 cr. ; A-F or Audit; Every Fall)
The Minnesota Board of Examiners for Nursing Home Administrators (BENHA) requires applicants for initial licensure (and those who are licensed in other states but do not meet Minnesota's regulatory requirements for experience or certification) to complete accredited post-secondary academic courses covering key competencies. This course covers the requirement related to Gerontology. HSM 4593 covers the following: Issues of cultural diversity and human relationships between and among employees and residents of nursing facilities and their family members. Physical, biological, social and psychological aspects of the aging process. Policies and programs designed to meet the needs of a rapidly aging population. Therapeutic programs for individuals with cognitive impairments. Services to support the needs of family caregivers. Prerequisites: Knowledge of the long-term care field. Students without this knowledge are encouraged to meet with the instructor prior to registering to discuss strategies for acquiring it.

HSM 4596. Health Services Management Internship. (; 1 cr. [max 3 cr.] ; A-F only; Every Fall, Spring & Summer)
This course serves as a requirement in the Bachelor of Applied Science degree in Health Services Management. Students will apply coursework in the health services management area and contribute knowledge of best practices to make a positive impact on the health services management workplace and industry. Students will participate in career development activities, a challenge project, and networking. prereq: HSM major; dept. consent. Permission to enroll will be granted only upon completion of HSM 3051, 3521, 4531, 4541, 4561W, & 4591. Highly recommended: HSM 4043 & 4301 (and HINF 5430 for HSM technology internships).

HSM 4682. Long Term Care, Services, and Supports. (; 3 cr. ; A-F or Audit; Every Fall & Spring)
Long term care organizations provide housing, services, and supports to older adults and others with complex medical and health care needs. Part health care facility and part home, skilled nursing facilities need administrators with a core understanding of gerontology and geriatrics. This course is designed to provide an overview of the biological, psychological, and sociological aspects of aging and, in turn, how long term care responds to needs through services and supports. This course meets national and state requirements for licensure as a nursing home administrator. Prerequisites: None.

HSM 4683. Long Term Care Environment and Quality. (; 3 cr. ; A-F or Audit; Every Fall & Spring)
Long term care organizations must continue to evolve based on consumer demand and regulatory frameworks. To achieve continuous quality improvement, administrators must

understand the fundamentals of quality as well as how the regulatory environment impacts quality. This course is designed to explore the regulatory framework in which skilled nursing facilities operate as well as the concept of quality. It meets national and state requirements for licensure as a nursing home administrator. Prerequisites: None.

HSM 4684. Long Term Care Leadership and Strategy. (; 2 cr. [max 3 cr.] ; A-F or Audit; Every Fall & Spring)
Long term care organizations operate within a dynamic environment of changing care demands, regulatory requirements, and financial constraints. This course is designed to provide students with an overview of leadership principles, organizational governance and change management, advocacy and public relations, and strategic business planning within the context of nursing homes. This course meets national and state requirements for licensure as a nursing home administrator. Prerequisites: None.

HSM 4861. Leadership and Business Planning in Health Care: Capstone. (3 cr. ; A-F only; Every Fall & Spring)
The course is a core requirement in the HSM major and allows students to synthesize and integrate lessons from previous courses. It covers theory and practice of leadership skills needed for high-performing health care organizations in changing and turbulent times. It emphasizes a four-phase approach: environmental assessment, planning, strategy and innovation, and implementation/measurement. Students will be prepared to embrace innovation and lead business plans through to successful implementation. They will learn to integrate a wide range of management tools through collaborative development of a strategic business plan. prereq: HSM 3521, 4531, 4541, 4561, 4591. HSM major. Final year status required.

Hebrew (HEBR)

HEBR 1001. Beginning Hebrew I. (; 5 cr. ; Student Option; Every Fall)
For beginners whose goal is biblical or post-biblical Jewish studies or modern Israeli Hebrew. Leads to speaking, listening comprehension, and reading and writing Hebrew. Emphasizes communication proficiency. Cultural materials are incorporated.

HEBR 1002. Beginning Hebrew II. (; 5 cr. ; Student Option; Periodic Fall & Spring)
Continuation of 1001. Leads to speaking, listening comprehension, reading, and writing Hebrew. Emphasizes communication proficiency. Cultural materials. prereq: Grade of at least [C- or S] in [1001 or 4001] or instr consent

HEBR 1101. Beginning Biblical Hebrew I. (; 5 cr. ; Student Option; Periodic Fall)
The Hebrew Bible is one of the most important literary texts in world history, and one of the most culturally and morally influential in the development of western civilization. Most of this influence, however, has been via translation. Have you ever wondered if you

can trust the translation? Does the Adam and Eve story really say what you think it does? Does the Hebrew Bible really include all the strict moral pronouncements and prohibitions that are attributed to it? This course offers the tools you need to read simple narrative texts in the Bible for yourself, while also introducing you to multiple approaches in biblical scholarship. Biblical Hebrew also satisfies the CLA Language requirement.

HEBR 1102. Beginning Biblical Hebrew II. (; 5 cr. ; Student Option; Spring Even Year)
Progression to more sophisticated reading of narrative, prophetic, and legal texts. Presentation/discussion of multiple approaches to problems/issues in biblical scholarship. prereq: Grade of at least [C- or S] in [1101 or 4104] or instr consent

HEBR 3011. Intermediate Hebrew I. (; 5 cr. ; Student Option; Every Fall)
Prepares students for CLA language requirement. Speaking, reading, writing, and comprehension of modern Hebrew. Students read/discuss prose, poetry, news, and film. Important features of biblical/classical Hebrew. Taught primarily in Hebrew. prereq: Grade of at least [C- or S] in [1002 or 4002] or instr consent

HEBR 3012. Intermediate Hebrew II. (; 5 cr. ; Student Option; Every Spring)
Extensive reading of simplified modern Hebrew prose selections. Students discuss poetry, newspaper, film, and TV in Hebrew. Israeli cultural experiences. Hone composition, listening comprehension, and speaking skills to prepare for proficiency exams. Biblical prose, simple poetic texts. Taught in Hebrew. Meets with 4012. prereq: Grade of at least [C- or S] in in 3011 or instr consent

HEBR 3090. Advanced Modern Hebrew. (; 3 cr. [max 18 cr.] ; Student Option; Every Fall)
Preparation to read various kinds of authentic Hebrew texts and to develop higher levels of comprehension/speaking. Conducted entirely in Hebrew. Emphasizes Modern Israeli Hebrew. Introduction to earlier genres. Grammar, widening vocabulary. Contemporary short fiction, essays, articles on cultural topics, films, Hebrew Internet sites, TV. prereq: 3012 or instr consent

HEBR 3101. Intermediate Biblical Hebrew I. (; 4 cr. ; Student Option; Fall Odd Year)
Text of Hebrew Bible. Basic research tools/commentaries. Close reading of narrative biblical texts. Reading fluency, methods of research in biblical studies. prereq: Grade of at least [C- or S] in [1102 or 4105] or instr consent

HEBR 3102. Intermediate Biblical Hebrew II. (; 4 cr. ; Student Option; Spring Odd Year)
Text of Hebrew Bible, basic research tools and commentaries. Close reading of narrative biblical texts. Reading fluency, methods of research in biblical studies. Meets with 4107. prereq: Grade of at least [C- or S] in 3101 or instr consent

HEBR 3951W. Major Project. (WI; 4 cr. ; Student Option; Every Fall & Spring)
Research project using primary and secondary sources. Students select project in consultation with a faculty member, who directs the

research/writing. prereq: [Hebr major, three 3xxx Hebrew courses], instr consent, dept consent

HEBR 3980. Directed Instruction. (1-4 cr. ; Student Option; Every Fall & Spring)
Students observe/discuss classes. Gradually increased participation in preparing/presenting instructional materials to a beginning Hebrew class. Evaluation of materials, teaching techniques. Seminars on language teaching issues. Prereq college consent.

HEBR 3993. Directed Studies. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)
Guided individual reading or study. prereq: instr consent

HEBR 4001. Beginning Hebrew I for Graduate Student Research. (; 5 cr. ; Student Option; Every Fall)
For beginners whose goal is biblical or post-biblical Jewish studies or modern Israeli Hebrew. Leads to speaking, listening comprehension, and reading and writing Hebrew. Emphasizes communication proficiency. Cultural materials are incorporated. Meets concurrently with 1001. prereq: grad student

HEBR 4002. Beginning Hebrew II for Graduate Student Research. (; 5 cr. ; Student Option; Periodic Fall & Spring)
Continuation of 4001. Leads to speaking, listening comprehension, reading, and writing Hebrew. Emphasizes communication proficiency. Cultural materials. Meets with 1002. prereq: Grade of at least [C- or S] in [1001 or 4001] or instr consent

HEBR 4011. Intermediate Hebrew I. (; 5 cr. ; Student Option; Every Fall)
Prepares students for CLA language requirement. Speaking, reading, writing, and comprehension of modern Hebrew. Students read and discuss prose, poetry, news, and film. Taught primarily in Hebrew. prereq: Grade of at least [C- or S] in [1002 or 4002] or instr consent

HEBR 4012. Intermediate Hebrew II for Graduate Student Research. (; 5 cr. ; Student Option; Every Spring)
Extensive reading of simplified modern Hebrew prose selections. Students discuss poetry, newspaper, film, and TV in Hebrew. Israeli cultural experiences. Hone composition, listening comprehension, and speaking skills to prepare for proficiency exams. Biblical prose, simple poetic texts. Taught in Hebrew. Meets with 3012.

HEBR 4104. Beginning Biblical Hebrew I for Graduate Student Research. (; 5 cr. ; Student Option; Periodic Fall)
The Hebrew Bible is one of the most important literary texts in world history, and one of the most culturally and morally influential in the development of western civilization. Most of this influence, however, has been via translation. Have you ever wondered if you can trust the translation? Does the Adam and Eve story really say what you think it does? Does the Hebrew Bible really include all the strict moral pronouncements and prohibitions that are attributed to it? This course offers the tools you need to read simple narrative

texts in the Bible for yourself, while also introducing you to multiple approaches in biblical scholarship. Biblical Hebrew also satisfies the CLA Language requirement.

HEBR 4105. Beginning Biblical Hebrew II for Graduate Student Research. (; 5 cr. ; Student Option; Spring Even Year)
Progression to more sophisticated reading of narrative, prophetic, and legal texts. Presentation and discussion of multiple approaches to problems and issues in biblical scholarship. Meets with 1102. prereq: Grade of at least [C- or S] in [1101 or 4104] or instr consent

HEBR 4106. Intermediate Biblical Hebrew I. (; 3 cr. ; Student Option; Every Fall)
Text of Hebrew Bible. Basic research tools/commentaries. Close reading of narrative biblical texts. Reading fluency, methods of research in biblical studies. Meets with 3101. prereq: Grade of at least [C- or S] in [1102 or 4105] or [instr consent, grad student]

HEBR 4107. Intermediate Biblical Hebrew II for Graduate Student Research. (; 4 cr. ; Student Option; Spring Odd Year)
Text of Hebrew Bible, basic research tools and commentaries. Close reading of narrative biblical texts. Reading fluency, methods of research in biblical studies. Meets with 3102. prereq: Grade of at least [C- or S] in 3101 or instr consent

HEBR 5090. Advanced Modern Hebrew. (; 3 cr. [max 18 cr.] ; Student Option; Every Fall)
Various authentic Hebrew texts. Comprehension/speaking. Conducted entirely in Hebrew. Emphasizes Modern Israeli Hebrew. Grammar, widening vocabulary. Contemporary short fiction, essays, articles on cultural topics, films, Hebrew Internet sites, TV.

HEBR 5200. Advanced Classical Hebrew. (; 3 cr. [max 12 cr.] ; Student Option; Periodic Fall & Spring)
In-depth reading, analysis, and discussion of classical Hebrew texts. Grammar, syntax. Introduction to text-criticism, history of scholarship, and scholarly tools. Format varies between survey of themes (e.g., law, wisdom, poetry) and extended concentration upon specific classical texts.

HEBR 5300. Post-Biblical Hebrew: Second Temple Period. (; 3 cr. [max 18 cr.] ; Student Option; Periodic Spring)
Readings in late-/post-biblical Hebrew literature of Persian, Hellenistic, and early Roman periods (e.g., Chronicles, Ezra-Nehemiah, Ecclesiastes, Daniel, Dead Sea Scrolls, apocrypha, pseudepigrapha). Focuses on historical development of Hebrew language and literature in relation to earlier biblical sources. prereq: Grad student or instr consent

HEBR 5992. Directed Readings. (1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
Guided individual reading or study. Prereq instr consent, dept consent, college consent.

Heritage Studies & Public Hist (HSPH)

HSPH 5001. Disability Justice and Cultural Heritage. (; 3 cr. ; A-F or Audit; Periodic Fall)
This course is designed to prepare advanced undergraduates and graduate students to more effectively engage issues of disability in public history. This class is rooted in activism, taking an intersectional approach, which will push students to reflect on the numerous ways other forms of identity intersect and have been classified as disability. This class is organized as a workshop where students from multiple disciplines will focus on strategies for increasing public awareness and understanding of disability histories as expressed in American buildings and landscapes. The class will be grounded in scholarly and activist perspectives on disability justice connected with various aspects of public history: historic preservation, archival practices, community-engaged work, and exhibition design, among others.

Hindi (HNDI)

HNDI 1011. Beginning Hindi I. (; 5 cr. ; Student Option No Audit; Every Fall)
Basic listening, speaking, reading, and writing skills. Emphasis on the development of communicative competence.

HNDI 1012. Beginning Hindi II. (; 5 cr. ; Student Option No Audit; Every Spring)
Basic listening, speaking, reading, and writing skills. Emphasizes communicative competence.

HNDI 1015. Accelerated Beginning Hindi. (; 5 cr. ; Student Option No Audit; Periodic Fall)
Aspects of linguistic performance: speaking, reading, writing, listening. Cultural/linguistic literacy about South Asia and, in particular, India. Emphasizes individual learning styles/preferences for students to understand/retain information.

HNDI 3016. Accelerated Intermediate Hindi. (; 5 cr. ; Student Option No Audit; Every Spring)
Conversational aspect of Hindi. Interactive group activities, video/lab sessions. Engaging in reasonably fluent discourse. Formal grammar. Advanced reading, writing, and comprehension. Different genres/styles of spoken/written Hindi. Taught mainly in Hindi.

HNDI 3021. Intermediate Hindi I. (; 5 cr. ; Student Option No Audit; Every Fall)
Development of reading, writing, speaking, and listening skills. Grammar review, some basic compositions and oral presentations.

HNDI 3022. Intermediate Hindi II. (; 5 cr. ; Student Option No Audit; Every Spring)
Development of reading, writing speaking, and listening skills. Grammar review, some basic compositions and oral presentations.

HNDI 3031. Advanced Hindi I. (4 cr. ; Student Option No Audit; Every Fall)
Continued emphasis on development of communication skills, ability to comprehend both written/spoken texts. Speak, read, write in Hindi beyond intermediate level. prereq: 3022 or instr consent

HNDI 3032. Advanced Hindi II. (4 cr. ; Student Option No Audit; Every Spring)

This course is the second half of the Advanced Hindi course sequence. Continued emphasis on development of communication skills, ability to comprehend both written/spoken texts. Speak, read, write in Hindi beyond intermediate level. prereq: HNDI 3031 or instr consent

HNDI 4001. Beginning Hindi I for Graduate Student Research. (; 5 cr. ; Student Option No Audit; Every Fall)

Basic listening, speaking, reading, and writing skills. Emphasis on the development of communicative competence. Meets with 1011.

HNDI 4002. Beginning Hindi II for Graduate Student Research. (; 5 cr. ; Student Option No Audit; Every Spring)

Basic listening, speaking, reading, and writing skills. Emphasizes communicative competence. Meets with 1012.

HNDI 4003. Intermediate Hindi I for Graduate Student Research. (; 5 cr. ; Student Option No Audit; Every Fall)

Development of reading, writing, speaking, and listening skills. Grammar review, some basic compositions and oral presentations. Meets concurrently with 3021.

HNDI 4004. Intermediate Hindi II for Graduate Student Research. (; 5 cr. ; Student Option No Audit; Every Spring)

Development of reading, writing speaking, and listening skills. Grammar review, some basic compositions and oral presentations. Meets concurrently with 3022.

HNDI 4005. Advanced Hindi I for Graduate Research. (4 cr. ; Student Option No Audit; Every Fall)

Continued emphasis on development of communication skills, ability to comprehend both written/spoken texts. Speak, read, write in Hindi beyond intermediate level. Meets with HNDI 3031. prereq: 4004 or instr consent

HNDI 4006. Advanced Hindi II for Graduate Research. (4 cr. ; Student Option No Audit; Every Spring)

Continued emphasis on development of communication skills, ability to comprehend both written/spoken texts. Speak, read, write in Hindi beyond intermediate level. Meets with HNDI 3032. prereq: 4005 or instr consent

HNDI 4015. Accelerated Beginning Hindi for Graduate Research. (5 cr. ; Student Option No Audit; Periodic Fall)

Aspects of linguistic performance: speaking, reading, writing, listening. Cultural/linguistic literacy about South Asia and, in particular, India. Emphasizes individual learning styles/preferences for students to understand/retain information.

HNDI 4016. Accelerated Intermediate Hindi for Graduate Research. (5 cr. ; Student Option No Audit; Periodic Spring)

Conversational aspect of Hindi. Interactive group activities, video/lab sessions. Engaging in reasonably fluent discourse. Formal grammar. Advanced reading, writing, and comprehension. Different genres/styles of spoken/written Hindi. Taught mainly in Hindi.

HNDI 5040. Readings in Hindi Texts. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)

Read authentic materials of various types to improve reading/speaking ability.

HNDI 5993. Directed Study. (1-5 cr. [max 15 cr.] ; Student Option; Every Fall & Spring) Guided individual reading or study of modern Hindi-Urdu texts. Prereq instr consent, dept consent, college consent.

Hindi-Urdu (HNUR)

HNUR 1011. Beginning Hindi-Urdu I. (5 cr. ; Student Option No Audit; Every Fall) Listening, speaking, reading, writing. Development of communicative competence.

HNUR 3021. Intermediate Hindi-Urdu I. (5 cr. ; Student Option No Audit; Every Fall) Reading, writing, speaking, listening skills. Grammar review, basic compositions, oral presentations. prereq: 1012 or instr consent

HNUR 3290. Hindi-Urdu Language Teaching Tutorial. (; 1 cr. [max 2 cr.] ; S-N only; Every Fall & Spring)

Students tutor beginning students of Hindi-Urdu and are part of department's Hindi-Urdu language team. prereq: Grade of A in HNDI 4162

HNUR 4001. Beginning Hindi-Urdu I for Graduate Student Research. (5 cr. ; Student Option No Audit; Every Fall) Listening, speaking, reading, writing. Development of communicative competence.

HNUR 4003. Intermediate Hindi-Urdu I for Graduate Student Research. (5 cr. ; Student Option No Audit; Every Fall) Reading, writing, speaking, listening skills. Grammar review, basic compositions, oral presentations. prereq: 4002 or instr consent

HNUR 4005. Advanced Hindi-Urdu I for Graduate Student Research. (4 cr. ; Student Option No Audit; Every Fall) Continued emphasis on development of communication skills, ability to comprehend both written/spoken texts. speak, read, write in Hindi-Urdu beyond intermediate level. prereq: 4004 or instr consent

History (HIST)

HIST 1000. New Topics in History. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall & Spring)

Courses on new topics in history, historical topics related to current events, and other special subjects. Contact the History department for current listings.

HIST 1011W. Civilization and the Environment: World History to 1500.

(ENV,WI,HIS; 4 cr. ; Student Option; Every Fall, Spring & Summer) Sweep of history, from first prehistoric societies to dawn of modern world circa 1500. Forces that pushed humans to continually explore new environments and develop higher levels of social organization and cross-cultural interaction. prereq: Fr or soph or non-hist major

HIST 1012W. The Age of Global Contact. (GP,WI,HIS; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Five centuries of globalization. How the modern, interconnected world came into being. Changing material life (food, clothes, petroleum) and ideologies/beliefs. Analysis of primary documents to show how historical knowledge is produced. prereq: Fr or soph or non-hist major

HIST 1015W. Globalization: Issues and Challenges. (GP,WI; 4 cr. ; A-F or Audit; Every Fall & Spring)

Increased global interconnections over past 50 years. Impact of information revolution on human rights, economic inequality, ecological challenges, and decolonization. Cases in Asia, Africa, Latin America, or Middle East. prereq: Fr or soph or non-hist major

HIST 1031W. Europe and the World: Expansion, Encounter, and Exchange to 1500. (GP,WI,HIS; 4 cr. ; Student Option; Every Fall)

Europe, from Hammurabi to Columbus. Heyday of ancient Near East, Late Middle Ages. Culture, European interactions with wider world through religion, conquest, and trade. Beginning of the age of discoveries. prereq: Fr or soph or non-hist major

HIST 1032W. Europe and the World: Expansion, Encounter, and Exchange from 1500 to Present. (GP,WI,HIS; 4 cr. ; Student Option; Every Spring)

Emergence of a Europe of nations/empires. Transformations through revolutions, wars, and encounters with world regions. prereq: Fr or soph or non-hist major

HIST 1081W. Martyrs, Monks, Crusaders: World Christianity, 100-1400. (GP,WI,HIS; 4 cr. ; Student Option; Fall Odd, Spring Even Year)

This course surveys the history of Christianity from its status as a persecuted minority religion of the Roman Empire to its dominant role in medieval Europe and Byzantium. We study Christian traditions in Asia and Africa as well as Europe with special attention to the relationship between Christianity and culture in the ancient and medieval world.

HIST 1082. Jesus in History, Art & Culture. (HIS; 3 cr. ; Student Option; Every Spring)

Who was Jesus? While there has been some basic consistency in the depictions of Jesus throughout history, there has also been lots of variety. We will look at the stories and writings of the New Testament. We will look at ancient and medieval art and music. We will look at modern literature, film, and music. We will learn about how cultures and social groups from around the world have portrayed Jesus in their own contexts and for their own purposes. Students will leave the course with a sense of the diversity of depictions of Jesus and how this diversity correlates with the peoples that portray him and with the cultural and historical moments in which he is portrayed. Come and grapple with the question of who Jesus really was for ancient peoples and who he is for many today. Intended as a course of interest to undergraduates in all colleges of the TC campus. Students of any, all, or no religious background are welcome.

HIST 1102. Medieval Tales and their Modern Echoes. (GP,LITR; 3 cr. ; Student Option; Every Spring)

Knights of Round Table, dragon-slayers, magic djinn, pilgrims in Hell. How stories have been retold in modern fiction, film, arts. Texts from Europe/other regions of globe.

HIST 1301W. Authority and Rebellion: American History to 1865. (DSJ,WI,HIS; 4 cr. ; Student Option; Every Fall)

Conflict/change, from colonial era through Civil War. colonization/resistance, slavery, nation-building, westward expansion, gender roles, religion, reform, race/ethnicity, immigration, industrialization, class relations. Students use primary sources, historical scholarship. prereq: Fr or soph or non-hist major

HIST 1302W. Global America: U.S. History Since 1865. (DSJ,WI,HIS; 4 cr. ; Student Option; Every Spring)

U.S. history since Civil War, in global context. Emancipation. Forms of labor. Immigration. Citizenship. Conceptions of race/gender. Hot/cold wars. Reform/rights movements. Globalization. State power. Students use primary sources, historical scholarship. prereq: Fr or soph or non-hist major

HIST 1307. Authority and Rebellion: American History to 1865. (HIS; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)

Conflict/change, from colonial era through Civil War. Colonization/resistance, slavery, nation-building, westward expansion, gender roles, religion, reform, race/ethnicity, immigration, industrialization, class relations. Students use primary sources, historical scholarship.

HIST 1308. Global America: U.S. History Since 1865. (HIS; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)

U.S. history since Civil War, in global context. Emancipation. Forms of labor. Immigration. Citizenship. Changing conceptions of race/gender. Hot/cold wars. Reform/rights movements. Globalization. State power. Students use primary sources, historical scholarship.

HIST 1361W. World War I: A Global History. (HIS,WI,TS; 3 cr. ; A-F only; Every Fall)

This class takes a global approach to the examination of World War One's causes and consequences. We will look at how the war unfolded in Europe, Africa, and the Middle East. We will also explore the war's impact on North America and Australasia, areas drawn into the conflict because of their unique relationships with Britain and France. We will consider the special role played by the U.S. in restoring world peace and analyze the lasting social and political cleavages occasioned by the war. We will get at the heart of how the war was fought and how it is remembered for all of its triumphs and tragedies.

HIST 1362. Global History of World War II. (HIS; 3 cr. ; Student Option; Every Spring)

This course examines 1) how different countries remember WWII and how memories of the war have been shaped by domestic and international contexts of each country

and 2) how WWII changed the world in areas of human rights, the government-society relations, and ethical use of science and technology. Various faculty members with different geographical and thematic expertise come to the class as guest lecturers throughout the semester.

HIST 1364. Introduction to Global Environmental History. (ENV,HIS; 3 cr. ; Student Option; Fall Even Year)

This introductory course focuses on human environment interaction and the role of environmental factors in shaping of world history from the early medieval period, roughly 1000 C.E. to the present day. Beginning with the idea of environmental history and its broad themes, including climate, volcanic eruptions, landscape, plants, crops, animals, insects, disease, pestilence, energy, and technology, the course will enable students not only to understand the complex relationship between human societies and non-human species but also the changing nature and structure of this relationship throughout history.

HIST 1365. Global Tourism and the Environment from the late 18th Century to the Present. (ENV,HIS; 3 cr. ; Student Option; Every Fall)

This course focuses on tourism and travel. Spanning the period from the late 18th century to the present, it examines the ways in which these phenomena impact how we live, work, interact with our natural environment and other people, and conceive of the world and global forces

HIST 1534. Introduction to Jewish History and Cultures. (HIS; 3 cr. ; Student Option; Every Fall)

This course traces the development of Judaism and Jewish civilizations from their beginnings to the present. With over three millennia as its subject, the course must of necessity be a general survey. Together we will explore the mythic structures, significant documents, historical experiences, narratives, practices, beliefs, and worldviews of the Jewish people. The course begins by examining the roots of Judaism in the Hebrew Bible and the history of ancient Israel but quickly focuses on the creative forces that developed within Judaism as a national narrative confronted the forces of history, especially in the forms of the Persian, Greek, and Roman empires. Rabbinic Judaism becomes the most dominant creative force and will receive our greatest attention, both in its formative years and as it encounters the rise of Christianity and Islam. After studying the Jewish experience in the medieval world, we will turn to Judaism's encounter with the enlightenment and modernity. The historical survey concludes by attending to the transformations within Judaism and Jewish life of the last 150 years, including a confrontation with the experience of the Holocaust. Woven throughout this historical survey will be repeated engagements with core questions: ?Who is a Jew?? ?What do Jews believe?? ?What do Jews do?? ?What do we mean by ?religion??? ?How do Jews read texts within their tradition?? And perhaps most

importantly, ?How many answers are there to a Jewish question?? Students in this course can expect to come away with some knowledge of the Bible in Judaism, rabbinic literature and law, Jewish mysticism and philosophy, Jewish nationalism and Zionism, Jewish culture, ritual, and worship in the synagogue, the home, and the community, and Jewish celebrations of life cycle events and the festivals.

HIST 1809. The Presidency: Power, Politics, and Policy in the United States. (CIV,HIS; 3 cr. ; Student Option; Fall Even Year)

This course explores the emergence, meaning, and evolution of the American presidency. We will examine the nature of presidential power and ask how and why those powers have changed over time. We will explore the impact of politics and political parties on the American presidency. We will consider how presidents shape policy and analyze the relationship between power, politics, and policy.

HIST 1811. The Sixties: History & Memory. (DSJ,HIS; 3 cr. ; Student Option; Every Fall)

The Sixties was an incredibly dynamic decade in the United States and around the world. It was a decade of powerful social movements from the Civil Rights and Black, Brown, Yellow and Red Power movements to the countercultural, student/campus, anti-war, feminist, and environmental movements. It was also marked by the rise of a series of New Right movements from the rise of the Barry Goldwater to the election of Richard Nixon and the transformation of both the Democratic and Republican parties. Major immigration reform, transformations in the nation's educational and health care systems, along side new patterns of consumption and new forms of media were also products of the Sixties. From the Cold War to the Vietnam War, from anti-imperialism and anti-colonialism to third world revolutions, Americans transformed the world and the US was transformed by the world in the sixties. Fifty years removed from the sixties, the idea of the sixties remains alive in the American imagination. It remains alive and in tension with the new movements, like Black Lives Matters, and in political thought, as, for example, in Donald Trump's repeated invocation of the "silent majority." Students will explore a wealth of primary sources and be introduced to the dynamic historiography of the 1960s. As a class, we will also consider how the sixties continues to serve as a powerful trope that organizes political and social thought in the 21st century.

HIST 1911. A History of the Drug Wars. (; 3 cr. ; A-F only; Periodic Fall)

When and how did some drugs become a social problem? Why is cocaine illegal in the United States? Who is winning the war on drugs? These questions and others are at the heart of this seminar. We will examine the longer history of controlled substances throughout the Western Hemisphere, focusing in particular on the scope of the so-called war on drugs of the past 30 years. We will read books, articles, and websites dealing with illegal drugs, and we will watch documentary and full-length films dealing with drug use, drug

markets, and the violence surrounding drugs. Our study of the past is intended to help us understand the present context and to allow us to imagine a different future regarding these complicated issues.

HIST 1923. Politics of Hunger: Food, Aid, and Globalization after WWII. (; 3 cr. ; A-F only; Periodic Fall & Spring)

Food is a basic part of our everyday life, but it is difficult to see macro-level political economy behind food and hunger. This seminar gives a basic understanding of how "hunger" came to be understood and dealt with globally after WWII, how Cold-War geopolitics affected food shortage and surplus, how the global food system has gotten us where we are, and what new options are being pursued now. In all these stages, the US has played a central role in shaping the politics of food and hunger. The first part of the course exposes you to important concepts and issues related to politics around world hunger, American food aid, and multi-national agribusiness; students learn how to read texts closely and how to connect American food aid to global politics. The second part of the course helps you acquire research and communication skills; students learn how to conduct independent research and how to use a digital humanities tool called StoryMap. The course is composed of lectures, discussions, documentary film viewing, and research/StoryMap creation.

HIST 1927. Radical Ecology in the Early United States. (; 3 cr. ; A-F only; Periodic Fall)

Our current climate crisis calls for a rethinking of the way humans interact with the environment, but such efforts are not new: already in the nineteenth century, people warned about ecological destruction and called for a change in behavior toward the natural world. This first-year seminar explores how different groups of people have understood and responded to environmental degradation in North America. The focus will be on those who made urgent calls for a change in human behavior toward nature, from Indigenous peoples past and present to ecocentrist groups like Greenpeace and Earth First! Topics include protests against ecological damage and loss, experiments in minimalism, the call for preservation and national parks, environmental racism and the environmental justice movement, and various forms of environmental activism. Students will develop historically informed positions about an array of ecological options, experiments, viewpoints that preceded and shaped current forms of environmentalism.

HIST 1928. The Bright Ages: Reimagining the Middle Ages. (; 3 cr. ; A-F only; Periodic Fall)

There is no such thing as the Dark Ages. Medieval European history is a thousand years long and contains all the complexity, the mess, and the human capacity for good and evil as any other place and time. And yet this period of history remains haunted by the ghosts of the Renaissance, the age of Imperialism, and even today's TV shows like Vikings or Game of Thrones. How do historians craft new and more

persuasive narratives about the past? How do we shape what people remember? In this class, students will work on how we tell stories about big periods in the past, focusing first on the battle against the so-called Dark Ages, but then looking at the ways ongoing battles about how to tell our stories from antiquity to now play out in the classroom, our political arenas, in our entertainments, and beyond.

HIST 1929. History of and Through Board Games. (; 3 cr. ; A-F only; Periodic Fall)

When pandemic lockdowns and restrictions forced people to stay at home beginning in 2020, sales of board games soared in the United States; they are still having something of a "moment" in our zeitgeist. This course uses board games—from the medieval game of chess, beloved by shahs and emperors alike, to the "family game night" classics like Monopoly, to complex and intricate strategy games of the 21st century—as tools to view and study the past and to reflect on the present. The first third of the course engages with global and social history with a grounding in historical methods and theory. The second third plunges students directly into practical gameplaying and analysis, where they will learn the salient aspects of modern board gaming. They will also connect with a local board game company, one of the nation's leading game makers, to understand the burgeoning business and make connections with industry innovators. In the final part of class, students will culminate their learning by designing, testing, producing, a game of their own, based on a careful reading and understanding of primary and secondary source material.

HIST 1929. History of and Through Board Games. (; 3 cr. ; A-F only; Periodic Fall)

When pandemic lockdowns and restrictions forced people to stay at home beginning in 2020, sales of board games soared in the United States; they are still having something of a "moment" in our zeitgeist. This course uses board games—from the medieval game of chess, beloved by shahs and emperors alike, to the "family game night" classics like Monopoly, to complex and intricate strategy games of the 21st century—as tools to view and study the past and to reflect on the present. The first third of the course engages with global and social history with a grounding in historical methods and theory. The second third plunges students directly into practical gameplaying and analysis, where they will learn the salient aspects of modern board gaming. They will also connect with a local board game company, one of the nation's leading game makers, to understand the burgeoning business and make connections with industry innovators. HIST 3000. New Topics in History. (; 3 cr. [max 6 cr.] ; Student Option; Periodic Fall & Spring)

Courses on new topics in history, historical topics related to current events, and other

special subjects. Contact the History department for current listings.

HIST 3001. Public History. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Interpretations of collective past as produced in public venues, including museum exhibitions, films, theme parks, websites. Intellectual and political issues in history produced for public audiences. Career opportunities.

HIST 3020. Hands-On History Topics: Methods and Practices. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall & Spring)

Selected topics for the practice of Methods and Practices in History not covered in regular courses.

HIST 3021. Hands-On History: Global Apartheid. (3 cr. ; A-F only; Periodic Fall & Spring)

The years 1989 and 1990 saw the fall of the Berlin Wall and the release of Nelson Mandela from prison, respectively. These events are emblematic of a changing world order which saw the dismantling of apartheid even as racialized separation, oppression, and exploitation went global. In a world increasingly characterized by separations and divisions (made visible in the proliferation of physical walls and the hardening of borders) between rich and poor, between the privileged and the disenfranchised, between those whose lives matter and those who are understood to be entirely expendable, this course asks students to think about historical constructions of difference (such as race and gender), and about the past and History in relationship to the challenges of the present and towards a future yet to come. This course will introduce history majors to the methods and practices of historical knowledge production and to the philosophy of history. While attending to the work of history, and historiography, this course will also ask what history is for and what the historian does in research (as the detective and the archivist), in writing (as the storyteller and the analyst), and in (critical) thought (as the teacher and the philosopher).

HIST 3022. Hands-On History: The 1960s: A Decade of Change. (3 cr. ; A-F only; Periodic Fall & Spring)

The 1960s was a decade of hope, fear and incredible change. These years witnessed the rise of race, youth, gender, and anti-war movements in the wake of a hot Cold War and a series of anticolonial revolutions. The course offers students a deep introduction to this fascinating decade in US history. This methods and skills course also fulfills a departmental requirement for all History majors. Through the study of the 1960s, students will be introduced to the methods and skills historians have used to write this history. This course also offers students an opportunity to think deeply about the purpose, meaning, significance, and work of history. Students will leave this course with a deeper understanding of a significant moment in US history and a fuller understanding of the exciting and powerful work of history.

HIST 3051. Ancient Civilization: Near East and Egypt. (HIS; 3-4 cr. ; Student Option; Periodic Fall)

A broad survey of ancient Near Eastern and Egyptian history and culture from the prehistoric to the rise of Persia around 550 B.C.

HIST 3052. Ancient Civilization: Greece. (GP,HIS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

A broad survey of ancient Greek culture and history from the third millennium B.C. to the death of Alexander the Great in 323 B.C.

HIST 3053. Ancient Civilization: Rome. (HIS; 3 cr. ; Student Option; Every Spring & Summer)
A broad survey of the culture and history of Rome from its origins to the decline and fall of the Roman Empire in the third and fourth centuries A.D.

HIST 3054. Ancient Egypt and its Neighbors. (; 3 cr. ; Student Option; Fall Even Year)

Ancient Egypt exerts fascination upon modern societies, as it did upon its ancient contemporaries. The decipherment of the hieroglyphic script, in the early 19th century CE, opened the way to recovering its history all the way back to the invention of the writing system more than 5,000 years ago. Ancient Egypt has meanwhile been a special focus of racialized interpretations of civilization, from the birth of modern Egyptology onward. Europeans of the colonial age saw Egyptian civilization as an anomaly in Africa, measured excavated skulls to prove its extraneous origins, and segregated it from its geographic context.

HIST 3061. "Bread and Circuses": Spectacles and Mass Culture in Antiquity. (CIV,HIS; 3 cr. ; Student Option; Fall Odd, Spring Even Year)

Development of large-scale public entertainments in ancient Mediterranean world, from athletic contests of Olympia and dramatic festivals of Athens to chariot races and gladiatorial games of Roman Empire. Wider significance of these spectacles in their impact on political, social, and economic life of the societies that supported them.

HIST 3066. Prehistoric Pathways to World Civilization. (HIS; 3 cr. ; Student Option; Every Spring)

How did complex urban societies first develop? This course addresses this question in ten regions of the world, including Maya Mesoamerica, Inca South America, Sumerian Near East, Shang Civilization in East Asia and early Greece and Rome.

HIST 3067W. Archaeology of Prehistoric Europe. (HIS,WI; 3 cr. ; Student Option; Every Fall)

How archaeologists analyze/interpret artifacts to develop knowledge about formation of European society, from earliest evidence of human occupation to Roman period.

HIST 3081W. Martyrs, Monks, Crusaders: World Christianity, 100-1400. (GP,WI,HIS; 4 cr. ; Student Option; Fall Odd, Spring Even Year)

This course surveys the history of Christianity from its status as a persecuted minority religion of the Roman Empire to its dominant role in medieval Europe and Byzantium. We study Christian traditions in Asia and Africa as well as Europe with special attention to the relationship

between Christianity and culture in the ancient and medieval world.

HIST 3082. History of Christianity II: From the Middle Ages to the Enlightenment. (3 cr. ; Student Option; Spring Odd Year)

The course examines the history of Christianity from the 13th century to the end of the 18th century. It begins with the Latin church at the height of its power before moving on to a consideration of the disastrous 14th century, the revolts of the 15th and the Reformations of the 16th centuries. The course closes by considering new challenges facing the church in an age of Enlightenment and Revolution.

HIST 3092. Jesus in History, Art & Culture. (HIS; 3 cr. ; Student Option; Every Spring)

Who was Jesus? While there has been some basic consistency in the depictions of Jesus throughout history, there has also been lots of variety. We will look at the stories and writings of the New Testament. We will look at ancient and medieval art and music. We will look at modern literature, film, and music. We will learn about how cultures and social groups from around the world have portrayed Jesus in their own contexts and for their own purposes. Students will leave the course with a sense of the diversity of depictions of Jesus and how this diversity correlates with the peoples that portray him and with the cultural and historical moments in which he is portrayed. Come and grapple with the question of who Jesus really was for ancient peoples and who he is for many today. Intended as a course of interest to undergraduates in all colleges of the TC campus. Students of any, all, or no religious background are welcome.

HIST 3101. Introduction to Medieval History. (GP,HIS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Europe from decline of Rome to early Renaissance. Politics, institutions, society, economy, and culture of Middle Ages.

HIST 3102. Medieval Tales and their Modern Echoes. (GP,LITR; 3 cr. ; Student Option; Every Spring)

Knights of Round Table, dragon-slayers, magic djinn, pilgrims in Hell. How stories have been retold in modern fiction, film, arts. Texts from Europe/other regions of globe.

HIST 3151W. British History to the 17th Century. (GP,WI,HIS; 4 cr. ; Student Option; Every Fall)

The making of the English nation: Anglo-Saxons and Normans; development of English law and Parliament; Reformation and constitutional crisis; early Wales, Scotland, and Ireland.

HIST 3152. British History From the Seventeenth Century. (GP,HIS; 3 cr. ; Student Option; Every Spring)

Civil War, Revolution, and constitutional settlement. Industrialization and growth of democracy. Rise/decline of British Empire.

HIST 3211. History of Sexuality in Europe. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

History of sexuality in Europe, from ancient Greece to present. Plato's philosophy of love, St. Augustine's conception of sin,

prostitution in 15th century, sexual science of Enlightenment. Industrial revolution and homosexual subcultures. Rape scares and imperialism. Eugenics and Nazi Germany.

HIST 3212. Dissident Sexualities in U.S. History. (3 cr. ; A-F or Audit; Every Fall)

History of sexuality in United States. Emphasizes sexualities that have challenged dominant social/cultural norms. Development of transgender, bisexual, lesbian, gay identities/communities. Politics of sex across lines of race/ethnicity. Historical debates over controversial practices, including sex work.

HIST 3244. History of Eastern Europe. (GP,HIS; 3 cr. ; Student Option; Spring Odd Year)

History of the peoples of the region from their origins to modern times, culture and society in the Middle Ages; Golden Age of Eastern Europe; loss of independence; nationalism and formation of national states; fascism and World War II, Jews in Eastern Europe; communist and post-communist periods.

HIST 3264. Imperial Russia: Formation and Expansion of the Russian Empire in the 18th and 19th Centuries. (3 cr. ; Student Option; Every Fall)

Interaction with Europe/Asia. Attempts at modernization/ reform. Emancipation of serfs/ rise of revolutionary movements.

HIST 3265. 20th-Century Russia: The Collapse of Imperial Russia, the Revolutions, and the Soviet Regime. (3 cr. ; Student Option; Every Spring)

Analysis of factors that led to collapse of tsarist regime. 1917 revolution. Evolution of Soviet regime/collapse of Soviet communism. Emphasis on role of nationalities/rise of Commonwealth of independent states.

HIST 3271. The Viking World: Story, History, and Archaeology. (; 3 cr. ; Student Option;)

Viking society and expansion of Viking influence abroad. Viking impact on Western Europe; interactions with Slavic lands; settlement of North Atlantic islands; and Western Europe's impact on Scandinavian lands. Analyzes archaeological, historical, linguistic, and numismatic evidence.

HIST 3281. European Intellectual History: The Early Modern Period, Antiquity to 1750. (3 cr. ; Student Option; Periodic Fall)

First of a two-semester course. European thought in its historical/cultural context. Emphasizes development of philosophical/scientific thought, its relation to thinking about the individual and the community. Readings from original sources.

HIST 3282. European Intellectual History: The Modern Period, 1750-Present. (3 cr. ; Student Option; Periodic Spring)

Second of a two-semester course. European thought in its historical/cultural context. Emphasizes development of philosophical/scientific thought, its relation to thinking about the individual and the community. Readings are from original sources.

HIST 3283. Marx, Capital, and History: An Introduction to Marxist Theory and History. (3 cr. ; Student Option; Spring Even Year)

Explore Marx's understanding of capitalism/its history. Marx's argument regarding historical specificity of capitalism as economic/social condition.

HIST 3284W. History through Memoir.

(HIS,WI; 3 cr. ; A-F only; Every Fall)

Memoirs--non-fictional life stories--offer an intriguing lens into the past. Memoirs vividly portray a person's experiences, but they also raise questions about the reliability of the narrator. What kinds of histories are memoirs? We will read memoirs about experiences of race, class, gender in America. Students write their own short memoir.

HIST 3285. Magic and Medicine. (3 cr. ; Student Option; Spring Odd Year)

Course examines how the line between magic and medicine has changed over time. From accusations of witchcraft to proclamations of scientific breakthrough, we will examine the relationship between the supernatural and the natural from the early modern period to today. Specific topics include the practice of exorcism, the concept of the "four humors," the persecution of witches, the development of "voodoo," the effectiveness of placebos, and the professionalization of medicine. Throughout, we will ask how gender, class, and race have affected the construction of "magic" and "medicine."

HIST 3286. Galileo and the Beginnings of Modern Science. (3 cr. ; A-F or Audit; Periodic Fall)

The life and work of Galileo Galilei (1564-1642), often called the "founder of modern science." Topics: the Renaissance Italian context for Galileo's work; the arrangements of authoritative knowledge that prevailed in 16th-century Tuscany and Venice, the role that universities, the Catholic church, learned academies, and the state played in disciplining knowledge. We consider the episodes of Galileo's career and read his seminal texts with secondary commentaries upon them. Topics: his telescopic observations of 1609-10; his battles with Aristotelian natural philosophy; his experiments and arguments on behalf of experimental and mathematical physics; his defense of Copernican "heliocentric" cosmology and his trial and condemnation by the Roman Catholic Church for heresy; and his work in mathematics and mathematical physics that paved the way for Newton and Einstein. The goal will be to understand the achievements of Galileo in their specific historical and cultural context and to use these reflections for thinking about the nature of the modern science that he helped to initiate.

HIST 3287. Seeing History through Comics: New Perspectives on the Contentious Past. (CIV,HIS; 3 cr. ; Student Option; Periodic Spring)

Comic-form histories offer new perspectives on the past. Focusing on cases of contentious history, this course will examine how varying perspectives (shaped by class, gender, race, or geo-political position) appear in comic histories. We will compare comic accounts with more traditional forms of historical analysis of select

contentious events of modern U.S., European, African and East Asian history.

HIST 3348. Women and Gender in Modern America. (; 3-4 cr. ; Student Option; Every Spring)

This course covers how gender and gender inequality have mattered to the US economy, politics, and cultural life. Themes include: femininity and masculinity as disciplining people, the intersection of gender with whiteness and race, the significance of paid and unpaid labor in women's lives, and diversity within the category of women.

HIST 3349. U.S. Women's Legal History. (DSJ,HIS; 3 cr. ; A-F or Audit; Fall Odd Year)

Women's legal status, from colonial era through 20th century. Women's citizenship, civil rights. Marriage, divorce, and child custody. Reproductive/physical autonomy/integrity. Economic/educational equality. prereq: Soph or jr or sr

HIST 3361W. World War I: A Global History. (HIS,WI,TS; 3 cr. ; A-F only; Every Fall)

This class takes a global approach to the examination of the causes and consequences of World War I. We will look at how the war unfolded in Europe, Africa, and the Middle East. We will also explore the war's impact on North America and Australasia, areas drawn into the conflict because of their unique relationships with Britain and France. We will consider the special role played by the U.S. in restoring world peace and analyze the lasting social and political cleavages occasioned by the war. We will get at the heart of how the war was fought and how it is remembered for all of its triumphs and tragedies.

HIST 3362. Global History of World War II. (HIS; 3 cr. ; Student Option; Every Spring)

This course examines 1) how different countries remember World War II and how memories of the war have been shaped by domestic and international contexts of each country, and 2) how WWII changed the world in areas of human rights, the government-society relations, and ethical use of science and technology. Various faculty members with different geographical and thematic expertise come to the class as guest lecturers throughout the semester.

HIST 3363. Global History of the Cold War. (3 cr. ; A-F or Audit; Fall Even Year)

This course examines the origins, unfolding, and end of the Cold War, with emphasis on both geopolitical conflict and its social and cultural expressions. It begins with an examination of the ideological tensions between the USSR and USA and then turns to the end of European hegemony and de-colonization across Asia and Africa. It examines the expansion of the American empire and the appearance of new communist nations in Asia, Africa, and Latin America. While we will spend time on wars, insurgencies, and alliances, we will also examine how competing blocs and their members bound themselves through trade and economic interdependencies and how they represented themselves, their ideals, and the cold war itself in the sports, music, literature

and film. The course ends with the collapse of the Soviet Union and a survey of Cold War traces in the fields of geopolitics and culture.

HIST 3401V. Honors Early Latin America to 1825. (GP,WI,HIS; 4 cr. ; A-F only; Every Fall & Spring)

Societies of Americas, Spain, and Portugal before contact. Interactions among Native Americans, African slaves, and Europeans, from colonization through independence. Religion, resistance, labor, gender, race. Primary sources, historical scholarship.

HIST 3401W. Early Latin America to 1825. (GP,WI,HIS; 4 cr. ; A-F or Audit; Every Fall & Spring)

Societies of Americas, Spain, and Portugal before contact. Interactions among Native Americans, African slaves, and Europeans, from colonization through independence. Religion, resistance, labor, gender, race. Primary sources, historical scholarship.

HIST 3402W. Modern Latin America 1825 to Present. (GP,WI,HIS; 4 cr. ; Student Option; Every Fall, Spring & Summer)

National and contemporary period 1825 to present, with emphasis on social, cultural, political, and economic change.

HIST 3412. Soccer: Around the World with the Beautiful Game. (CIV,HIS; 3 cr. ; Student Option; Spring Odd Year)

How did a kicking game played in a few English schools in the mid-nineteenth century go on to become the most popular organized pastime the world has ever known? In this class, we chart soccer's unlikely rise to global prominence and explore what it can tell us about people, games, and ethics all around the world today.

HIST 3413. War in History: Preparing and Making War in World History. (HIS; 3 cr. ; Student Option; Every Fall)

War has been a standard tool for organizing societies, settling disputes, and securing resources. The means and meaning of war have changed in important ways over time and we see very different historical outcomes across different societies. This course exams differences in war making across many societies in Europe, Asia, the Americas, and Africa from 10,000 BC to now.

HIST 3416. Imperialism and its Critics: Ethical Issues, Literary Representations. (CIV,LITR; 3 cr. ; A-F only; Fall Even Year)

Significant episodes of several imperial nations to underscore themes of ethics/literature.

HIST 3417W. Food in History. (ENV,WI,HIS; 3 cr. ; Student Option; Fall Odd, Spring Even Year)

Significance of food in society, from earliest times to present. Why we eat what we eat. How foods have been "globalized." Dietary effects of industrial modernity. Material culture, social beliefs. Examples from around world.

HIST 3418. Drink in History. (HIS; 3 cr. ; Student Option; Fall Even, Spring Odd Year)

Significance of alcohol and stimulating beverages. Interdisciplinary study of alcohol/prohibition regimes throughout history.

HIST 3419. History of Capitalism: Uneven Development Since 1500. (3 cr. ; Student Option; Periodic Fall & Spring)

Causes of economic inequities in contemporary world. Long-term economic developments in cases taken from Africa, Asia, Europe, and North/South America. Various theoretical approaches to study of economic development. Introduction to key concepts.

HIST 3423. Central American Revolutions. (3 cr. ; Student Option; Periodic Fall)

Social, political and economic issues that have shaped Central American history for nearly two centuries. Focuses on influences of colonial histories, capitalist development, ethnic/racial conflict, foreign intervention, Catholic Church, civil war throughout region. Readings cover events in Guatemala, Honduras, El Salvador, Nicaragua, Costa Rica, Panama.

HIST 3424. Women and Gender in Latin American History. (GP,HIS; 3 cr. ; Student Option; Spring Odd Year)

Changing gender norms in Latin America over time as compared with lives of women and men of diverse classes and ethnic groups. How women responded to their position in society, on a continuum from accommodation to resistance.

HIST 3425. History of Modern Mexico. (3 cr. ; Student Option; Every Fall & Summer)

Mexico from independence to the present: struggles for land, liberty, and equality; ethnicity, gender, and class; economic growth, nationalism, and globalization; urbanization, immigration, demographic transition.

HIST 3426. Piracy in the Mediterranean: The World of Merchants and Pirates. (GP,HIS; 3 cr. ; Student Option No Audit; Spring Odd Year)

This course will use the vehicle of piracy and privateering in the Mediterranean world to explore issues of cross-cultural interaction, global connections, and identity from earliest times when people took to the sea to the Middle Ages through the early modern era, 500-1800. Wherever there was trade, wherever there was movement on the seas, there was piracy. Recent scholarship on the Mediterranean has focused on connectivities, micro-environments, the uniqueness of islands, and various climatic spheres in a geographic tradition that follows the path-breaking work of Fernand Braudel. This course will consider the urban and rural dimensions of the Mediterranean region as they relate to the history of merchants and pirates. Finally, the political and military aspects of Mediterranean history will be examined. There was a continuum from piracy to privateering to war. Students should gain a deeper understanding of a region that continues to fascinate us today.

HIST 3429. Latin American History in Film and Text. (AH,GP; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)

Cinematic representations of Latin America in context of other historical/literary narratives. Experiences of Latinos in Hollywood. U.S. films compared with those produced in Latin America. Themes vary (e.g., women, revolution, colonialism).

HIST 3431. Early Africa and Its Global Connections. (GP,HIS; 3 cr. [max 4 cr.] ; Student Option; Every Fall & Spring)

Survey of African history from earliest times to 1800. Focuses on socioeconomic, political, and cultural development in pre-colonial Africa from ancient Egypt through the era of the trans-Atlantic slave trade.

HIST 3432. Modern Africa in a Changing World. (GP,HIS; 3-4 cr. ; Student Option; Every Fall, Spring & Summer)

Survey of modern African history from early 19th century to present. Focuses on socioeconomic, political, and cultural development in Africa, from abolition of trans-Atlantic slave trade through postcolonial era.

HIST 3433. Images of Africa. (GP,HIS; 3 cr. ; Student Option; Periodic Fall & Spring)

Major themes in African history, from early human development to present. History of western "knowledge" about Africa. Assumptions that have influenced production of African history. Extent to which African history is "packaged" for public consumption inside/outside Africa. How history is used to support modern political agendas.

HIST 3435. History of South Africa from 1910: Anti-Racism, Youth Politics, Pandemics & Gender (Based Violence). (GP,HIS; 3 cr. ; Student Option; Periodic Fall)

We are all living in extraordinary times. But what does that mean? In South Africa, we have seen the COVID-19 pandemic and the measures implemented to control it causing massive social upheaval and personal distress. It has forced the people in the country to confront issues that life prior to the pandemic had made easy to turn away from. Misogyny, gender based violence and sexual violence? a long-standing emergency in the south of Africa? have been forced into our vision once again. It was not the pandemic that created this violence. Nor was it the first time people had been outraged by a lack of action to address it. In the years approaching 2020, calls, protests and demonstrations were increasingly demanding the culture of impunity in gender based violence be ended; sometime with violent outcomes against the protestors themselves. Over those same years, nationwide protests have rocked South Africa's university campuses. The student movements known as #RhodesMustFall, #FeesMustFall and #RURReferenceList highlight the contrasts and disappointments of the recent past in South Africa, confront the legacy of racism and misogyny in its institutions and knowledge systems, and resonate with a history of anti-racism and struggle that now, in turn, similarly fuel the on-going Black Lives Matter and #MeToo movements worldwide.

HIST 3436. Fighting for History: Historical Roots of Contemporary Crises in Africa. (3 cr. ; Student Option; Periodic Fall)

Open any newspaper and there is almost certain to be one or more articles about crises or chaos in Africa. Journalistic accounts highlight famines, tribalism, failed states, ethnic cleansing, the plight of refugees and the AIDS pandemic. There rarely, if ever, is a

serious discussion of the underlying causes of this instability. Instead, it is implicitly assumed that this is the natural order of events in the Dark Continent.? This course challenges the racially inspired cultural arrogance which underlies assumptions about Africa and explores it with the long-term structural and historical roots of the crises which confront many parts of Africa. It is a course about Africans and how they responded to the challenges and legacies that date back to the colonial period and before. Throughout this course we will be concerned with African initiatives in a rapidly changing political, economic, social, and ideological context and the changing ways that the Global North has represented Africa. In doing so we will be fighting for a more accurate history of Africa.

HIST 3444. Chicana and Chicano History I. (DSJ,HIS; 3 cr. ; Student Option; Every Fall)

Experiences of people of Mexican descent in the United States. Important eras in histories of Mexico, the United States, and Mexican Americans. Central role of Chicana/os in U.S. history, culture, and politics. Topics include race, ethnicity, gender, sexuality, immigration, migration.

HIST 3446. Chicana and Chicano History II: WWII, El Movimiento, and the New Millennium. (DSJ,HIS; 3 cr. ; Student Option; Every Spring)

Experiences of people of Mexican descent in U.S. Notions of citizenship from WWII. Chicano civil rights movement. Impact of immigration patterns/legislation. Cultural wars, demographics. Social, economic, political changes. Meaning of racialized "Mexican" identity. How different groups of Mexicans have understood their relationships to other Americans/other Latino groups.

HIST 3454. West African History: Early Times to 1800. (GP; 3 cr. ; Student Option; Every Fall)

West Africa from late early times to establishment/histories of states. Relations with North African, Mediterranean, Asian, American worlds. Non-centralized political authority.

HIST 3455. West African History: 1800 to Present. (GP; 3 cr. ; Student Option; Every Spring)

West African history from late-18th century to present. Themes include study of continuities with past. Profound changes including new 19th century state formation, European colonialism, post-colonial issues.

HIST 3456. Social and Intellectual Movements in the African Diaspora. (GP,HIS; 3 cr. ; Student Option; Every Fall)

Political, cultural, historical linkages between Africans, African-Americans, African-Caribbeans. Socio-political movements/radical intellectual trends in late 19th/20th centuries within African Diaspora. Resistance in Suriname, Guyana, Caribbean. Protest organizations, intellectual discourses, radical movements in United States/Europe.

HIST 3461. Introduction to East Asia I: The Imperial Age. (3-4 cr. ; Student Option; Every Fall)

Comparative survey of early history of China, Japan, Korea, and Vietnam. Early Chinese thought. Diffusion of Confucianism, Buddhism, and other values throughout East Asia. Political and social history of region to 1600.

HIST 3462. From Subjects to Citizens: The History of East Asia From 1500 to the Present. (GP,HIS; 3-4 cr. ; Student Option; Every Spring)

How Asian states, societies, economies, and cultures linked with one another and with European powers. How period's historical effects still resonate. Covers India, China, Japan, Korea, and Indochina.

HIST 3462H. Honors: From Subjects to Citizens: The History of East Asia from 1500 to the Present. (GP,HIS; 3-4 cr. ; A-F only; Every Spring)

How Asian states, societies, economies, cultures linked with one another/European powers. Historical effects. Covers India, China, Japan, Korea, Indochina.

HIST 3466. Religion and Society in Imperial China. (HIS; 3 cr. ; Student Option; Periodic Fall & Spring)

Varieties of religious experience in imperial China. Religion as lived practices. Textual traditions. Buddhism, Daoism, Confucianism, relations among them. Western missionary enterprise in China.

HIST 3468. Social Change in Modern China. (; 3 cr. ; Student Option; Every Fall)

Opium War and opening of Treaty Ports in 19th century. Missionary activity and cultural influence. Changes in education system. Women's movement. Early industrialization. Socialism/collectivization after 1949. Industrialization of Taiwan. PRC's entry into world trading system.

HIST 3469. History of Women and Family in China, 1600-2000. (3 cr. ; Student Option; Fall Even, Spring Odd Year)

Marriage/family life, foot binding, cult of women's chastity. Women in nationalist/communist revolutions. Gender relations in post-socialist China. Effect of ideologies (Confucianism, nationalism, socialism) on women/family life. Differences between ideology/social practice.

HIST 3471. Modern Japan, Meiji to the Present (1868-2000). (HIS; 3 cr. ; Student Option; Every Fall & Spring)

Japan's early development as industrial/imperial power after Meiji Restoration of 1868. Political developments in Taisho years: social, cultural, economic trends that supported them. Militarization/mobilization for war in 1930s. Japan's war with China, Pacific War with the United States. American Occupation. Postwar economic recovery, high growth. Changing political/popular culture of 1980s, '90s.

HIST 3476. War and Peace in Japan Through Popular Culture. (; 4 cr. ; A-F or Audit; Periodic Fall & Spring)

War-related issues in Japan. Animation films, comics from 1940s to 1990s. Mobilization of culture for WWII. Conflict between constitutional pacifism and national security.

Japan's role in cold war and post-cold war worlds.

HIST 3477. Samurai, Geisha, and How They Became Japanese. (3 cr. ; A-F or Audit; Periodic Spring)

How samurai, geisha, and Zen Buddhism came to be considered as the quintessential Japanese tradition in 20th century. Modernity, nationalism, orientalism, international politics, globalization.

HIST 3478. Tigers and Dragons: The Rise of the East Asian Economies, 1930-Present. (3 cr. ; Student Option; Spring Odd Year)

Rise of East Asian Economies, 1930-Present.

HIST 3483. Hmong History Across the Globe. (; 3 cr. ; Student Option; Fall Odd, Spring Even Year)

Hmong interaction with lowland Southeast Asian states (Laos, Vietnam) and Western colonial powers (French, American) since 19th century. Changes to religious, social, political, and gender institutions. Aspirations for political autonomy.

HIST 3485. History of Southeast Asia. (GP; 3 cr. ; A-F or Audit; Every Fall & Spring)

Origins of civilization/indigenous states. Impact of world religions and Western colonialism on gender, social, political, and economic structures. Nationalism. Establishment of Vietnam, Thailand, Indonesia, and the Philippines.

HIST 3486. Hmong Refugees from the Secret War: Becoming Americans. (3 cr. ; Student Option; Spring Odd Year)

Socio-economic, political, gender, cultural/religious changes in Hmong American community during last three decades. How Hmong are racialized in American society. Impact to first/second generations.

HIST 3487. The Vietnam Wars: French Colonialism and U.S. Intervention in Indochina. (3 cr. ; Student Option; Fall Odd, Spring Even Year)

French conquest. Colonial bureaucratic/economic transformations. Nationalist responses. First Indochina War. Emergence of nation-state. U.S. intervention. Impact of Vietnam War on current politics of Laos, Cambodia, and Thailand, and on Southeast Asia.

HIST 3489. Democracy and popular politics in India. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

Democracy is not only a political order; it is also a popular culture and politics. This course explores three tumultuous moments of this politics and culture in India: the pluralist nationalism which characterized Gandhian nonviolence and the Indian constitution, the majoritarianism that was often this pluralism's undertow, and Hindutva or Hindu supremacism, the now dominant populist ideology.

HIST 3492. Hinduism: Traditions, Texts, Politics. (CIV; 3 cr. ; Student Option; Periodic Fall & Spring)

Development of Hinduism focusing on sectarian trends, modern religious practices, myths/rituals, pilgrimage patterns/religious

festivals. Interrelationship between Indian social structure/Hinduism.

HIST 3493. Islam: Religion and Culture. (; 3 cr. ; Student Option; Every Fall)

This course is a brief survey of the religion and civilization of Islam. It introduces students to 1) Islamic history from its inception in the seventh century CE to the present, with emphasis on the life of the Prophet Muhammad and the early Caliphate; 2) The authoritative texts of Islam, i.e. the Quran and Prophetic traditions (Hadith); 3) The institutions and discourses characteristic of Islamic civilization; and 4) The transformation of Muslim life and thought in the modern period. By taking this course, students become familiar with the chief ideas, characters, narratives, rites, localities, and movements associated with Islam. prereq: Soph or jr or sr

HIST 3494W. Christ in Islamic Thought. (WI; 3 cr. ; Student Option; Periodic Spring)

Course examines the history of the figure of Christ in Islamic thought, from the beginnings of Islam in the Qur'an and the Hadith to the recent 2013 book by Reza Aslan, *Zealot*. The course is based on close reading of primary sources from regions extending from Spain to Iran, and in various languages (in translation): Arabic, Greek, French, Farsi, and Italian. Course demonstrates how much the interpretation of the figure of Christ in Islamic thought belonged to specific historical contexts. prereq: None

HIST 3502W. Ancient Israel: From Conquest to Exile. (WI; 3 cr. ; Student Option; Periodic Spring)

Israel and Judah were not states of great importance in the ancient Near East. Their population and territory were small, and they could not resist conquest by larger, more powerful states like Assyria and Rome. Yet their ancient history matters greatly today, out of proportion to its insignificance during the periods in which it transpired. The historical experiences of the people of Israel and Judah were accorded religious meaning and literary articulation in the Hebrew Bible (the Old Testament), which became a foundational text for Judaism, Christianity, and Islam. Essential features of Western as well as Islamic civilization are predicated on some element of Israel's ancient past, as mediated through the Bible; therefore it behooves us to understand that past. But the Bible is a religious work, not a transcript of events, and the history of ancient Israel is not derived merely from reading the biblical accounts of it. Archaeological excavations have revealed the physical remains of the cultures of Israel and neighboring lands, as well as bringing to light inscriptions, documents, and literary works produced by those cultures. These sources, which complement and sometimes contradict the accounts conveyed in the Bible, provide the basis for reconstructing a comprehensive history of ancient Israel. This course covers the history of Israel and Judah from the Late Bronze Age (c. 1550-1200 BCE), by the end of which Israel had emerged as a distinct ethnic entity, to the period of Roman rule (63

BCE-330 CE), which saw the final extinction of ancient Israel, represented by the kingdom of Judea, as a political entity. Knowledge of this history is based on archaeological, epigraphic, and literary sources, including the Hebrew Bible. N.B.: Students should be aware that the study of history, like all the human and natural sciences, is predicated on inquiry, not a priori judgments. Accordingly, the Bible is not privileged as an intrinsically true or authoritative record. No text is presumed inerrant, and all sources are subject to scrutiny, in the context of scholarly discourse. Biblical texts are treated just like all other texts, as the products of human beings embedded in a historical context, and as the subject of analysis and interpretation. Persons of all faiths and of no faith are equally welcome to participate in such scholarly discourse. However, students who feel that their own religious beliefs require an understanding of the Bible that is antithetical to the foregoing statements are cautioned that they may find themselves uncomfortable with this course.

HIST 3504. The Cultures of the Silk Road. (3 cr. ; Student Option; Every Fall & Spring)
Past/present state of the cultures that flourished in Central Asia (present-day CA republics, Iran, Afghanistan) after Alexander the Great and declined with opening of sea routes.

HIST 3505. Survey of the Modern Middle East. (GP; 3 cr. ; Student Option; Every Fall)
Political history of Middle East in modern era. Socio-economic/intellectual issues. Decline of Ottoman Empire. Imperialism. Nationalism, rise/development of states. Political Islam.

HIST 3507. History of Modern Egypt. (; 3 cr. ; A-F only; Fall Odd, Spring Even Year)
Main political events. Underlying social, economic, and intellectual issues. Impact of Egypt on region. Developments in Egypt compared with those of other leading Arab states.

HIST 3509. Approaches to the Study of the Middle East. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)
Intensive reading/discussion course. Ways in which historians/social scientists have studied Middle East. Problems they have encountered. Paradigms, issues, and debates in Middle Eastern Studies.

HIST 3511. Muslims and Jews: Conflict and Co-existence in the Middle East and North Africa since 1700. (GP,HIS; 3 cr. ; Student Option; Fall Odd Year)
Diversity of social/cultural interactions between Muslims and Jews and between Islam and Judaism since 1700. What enabled the two religious communities to peacefully coexist? What were causes of conflict? Why is history of Muslim-Jewish relations such a contested issue?

HIST 3512. History of Modern Israel/Palestine: Society, Culture, and Politics. (GP; 3 cr. ; Student Option; Fall Odd Year)
History of Zionism/Israel. Arab-Jewish conflict, tensions between religious/secular Jews. Relationships between Mizrahi, Ashkenazi,

Russian, Ethiopian, Arab citizens. Israeli cultural imagery. Newsreels, political posters, television shows, films, popular music.

HIST 3513. North Africa since 1500: Islam, Colonialism, and Independence. (3 cr. ; Student Option; Spring Odd Year)
History of Maghrib (Morocco, Algeria, Tunisia, Libya, disputed territories of Western Sahara) from time of Ottoman expansion/Sharifian dynasties (Sa'dian/Alawid) in 16th/17th Centuries to end of 20th century. Focus on encounter of Islamic cultures/societies of Maghrib with Africa/Europe.

HIST 3514W. Water and Oil: An Environmental History of the Middle East. (ENV,WI,HIS; 3 cr. ; Student Option; Periodic Fall & Spring)
Water and Oil focuses on the far-reaching impacts of environmental change upon Middle Eastern societies, culture, politics, economic development or underdevelopment, and violence. It offers a narrative of the Middle Eastern past that is not framed by a specific place, ethnic group, religion, or intellectual tradition. The course is designed to enable students to think deeply about technology and the environment across the Middle East, and the region's development as shaped by local practices, global politics, economic interests, and the struggle for resource management.

HIST 3534. Introduction to Jewish History and Cultures. (HIS; 3 cr. ; Student Option; Every Fall)
This course traces the development of Judaism and Jewish civilizations from their beginnings to the present. With over three millennia as its subject, the course must of necessity be a general survey. Together we will explore the mythic structures, significant documents, historical experiences, narratives, practices, beliefs, and worldviews of the Jewish people. The course begins by examining the roots of Judaism in the Hebrew Bible and the history of ancient Israel but quickly focuses on the creative forces that developed within Judaism as a national narrative confronted the forces of history, especially in the forms of the Persian, Greek, and Roman empires. Rabbinic Judaism becomes the most dominant creative force and will receive our greatest attention, both in its formative years and as it encounters the rise of Christianity and Islam. After studying the Jewish experience in the medieval world, we will turn to Judaism's encounter with the enlightenment and modernity. The historical survey concludes by attending to the transformations within Judaism and Jewish life of the last 150 years, including a confrontation with the experience of the Holocaust. Woven throughout this historical survey will be repeated engagements with core questions: ?Who is a Jew?? ?What do Jews believe?? ?What do Jews do?? ?What do we mean by ?religion?? ?How do Jews read texts within their tradition?? And perhaps most importantly, ?How many answers are there to a Jewish question?? Students in this course can expect to come away with some knowledge of the Bible in Judaism, rabbinic literature and law, Jewish mysticism and philosophy, Jewish

nationalism and Zionism, Jewish culture, ritual, and worship in the synagogue, the home, and the community, and Jewish celebrations of life cycle events and the festivals.

HIST 3546. Islam and the West. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Cultural/intellectual trends that have defined fundamental differences between Islam and the West. Development of historical, philosophical, and intellectual mindset of both spheres. Factors in tension, anxiety, and hatred between Muslim world and Europe and the United States.

HIST 3547. The Ottoman Empire. (GP,HIS; 3 cr. ; Student Option; Every Fall & Spring)
Survey of Islam's most successful empire, from its founding circa 1300 to its demise in 1923. Lands, institutions, peoples, historical legacy.

HIST 3606. Christians, Muslims, and Jews in the Middle Ages. (GP,HIS; 3 cr. ; Student Option; Fall Even, Spring Odd Year)
A Pew Research survey of the global religious landscape in 2010 found 2.2 billion Christians (31.5% of the world's population), 1.6 billion Muslims (23.2%), and 14 million Jews (.2%). In this class, we explore how the histories of these religious communities became deeply entangled in an age of diplomacy, trade, jihad, and crusade.

HIST 3609. Military History of Premodern Europe. (; 3 cr. ; Student Option; Periodic Fall & Spring)
How changes in European warfare shaped society from the late Roman Empire to the Military Revolution and rise of the nation-state, 300-1800 CE. Topics include styles of warfare and perceptions of war; the relationship between war and society; the roles of religious belief and technology in the practice of war. What produces a military revolution?

HIST 3611. Medieval Cities of Europe: 500-1500. (GP,HIS; 3 cr. ; Student Option No Audit; Every Fall & Spring)
European cities changed from Roman times through the urban nadir of the Early Middle Ages to the flowering of cities in the High and Late Middle Ages. We explore planned towns, ad hoc developments, revived Roman sites, and economic, political, cultural, and sensory elements of city life. Students design a medieval city using Arc.GIS and StoryMap. Contact the instructor for more information.

HIST 3613. History of the Crusades. (GP,HIS; 3 cr. ; Student Option; Every Fall, Spring & Summer)
Crusading spirit in Europe. Results of classic medieval crusades ca 1095-1285. States established by crusaders in Near East. Internal European crusades. Chronological prolongation of crusading phenomenon.

HIST 3615W. Women in European History: 1500 to the Present. (GP,WI,HIS; 3 cr. ; Student Option; Periodic Spring)
History of women in Western Europe from early modern period to present. Changes crucial to women's lives. Family/kinship structure, control over property, organization of work, religious ideas/practices, education, politics, beliefs/attitudes about female body.

HIST 3616. The Hundred Years War: France and England in the Middle Ages. (HIS; 3 cr. ; Student Option No Audit; Periodic Fall)
Politics, society, and culture in medieval France from the end of the Carolingians to the end of the Hundred Years War.

HIST 3617. Pagans, Christians, Barbarians: The World of Late Antiquity. (GP,HIS; 3 cr. ; A-F or Audit; Fall Odd Year)

Between classical and medieval, pagan and Christian, Roman and barbarian, the late antique world was a dynamic age. This course will focus on the Mediterranean region from the 2nd to the mid-7th century exploring such topics as the conversion of Constantine, the fall of Rome, barbarian invasions, the spread of Christianity, and the rise of Islam.

HIST 3621. Creating the Modern World in Medieval Europe: The Renaissance, 1200-1600. (3 cr. ; Student Option; Periodic Fall)

Political/cultural history of city-states of northern/central Italy, 1200-1550. Emphasizes Florence/Venice. Readings include Dante, Machiavelli. prereq: Intro course in European history before 1500 recommended

HIST 3623W. The Age of Reformation. (WI; 3 cr. ; Student Option; Fall Even Year)

This course will examine the great religious convulsion that gripped Europe in the sixteenth and seventeenth centuries. Chronologically, however, we will begin in the late medieval period as we consider important changes that were occurring in European culture and society culminating with Europe's first Reformation, not in Germany but in Bohemia. Geographically, we begin with Europe but our scope eventually widens out to consider developments also in Asia and the Americas. We conclude by considering the relaxation of religious tensions in the late seventeenth century and concurrent growth of toleration and skepticism. Throughout the course we will consider religion as a dynamic that has had a broad impact on society affecting not only personal belief but also the politics, social patterns, and intellectual and cultural production of the early modern world.

HIST 3632. History of Germany; Reformation to Unification: 1500-1871. (; 3 cr. ; Student Option; Periodic Spring)

The Reformation era; warfare and demographic catastrophe of the early 1600s; life in town and country; absolutism; Baroque culture; family life and its transformation; economic crisis; Revolution of 1848; the military path to unification.

HIST 3637. Modern Russia: From Peter the Great to the Present. (; 3 cr. ; Student Option; Every Fall)

Political, social, and cultural forces which have shaped modern Russia. Emphasis will be on modernization, attempts at reforms in the imperial and Soviet period, and the dissolution of empires.

HIST 3652. Early Modern Britain. (; 3 cr. ; Student Option; Periodic Fall & Spring)

British society/culture during early modern era, especially 16th and 17th centuries. May include

themes related to political developments, economy/social structure, gender, religion, literature, or interaction with other world regions.

HIST 3681. Irish History. (; 3 cr. ; Student Option; Every Fall)

History of Ireland, primarily modern, with emphasis on politics and Anglo-Irish relations.

HIST 3691W. The British Empire. (WI; 3 cr. ; A-F or Audit;)

Gain/loss of colonies in Ireland, America, India, Africa. Development of racism, multicultural composition of British society, debates about economic motives for empire, resistance of colonized peoples to conquest/domination.

HIST 3704W. Daily Life in Europe:

1300-1800. (GP,WI,HIS; 3 cr. ; Student Option; Fall Even, Spring Odd Year)
Living conditions and daily life in Europe before the Industrial Revolution. Topics include marriage and family, life at court, nobles, peasants, disease, farming, livestock-raising, urban life, the middle classes, manufacturing, trade, piracy, witchcraft, war, crime, and social deviance.

HIST 3708. The Age of Curiosity: Art, Science & Technology in Europe, 1400-1800. (AH,TS; 3 cr. ; Student Option; Periodic Fall & Spring)

Diverse ways in which making of art and scientific knowledge intersected in early modern Europe. Connections between scientific curiosity and visual arts in major artists (e.g., da Vinci, Durer, Vermeer, Rembrandt). Artfulness of scientific imagery/diagrams, geographical maps, cabinets of curiosities, and new visual technologies, such as the telescope and microscope.

HIST 3711. Cognitive History. (3 cr. ; Student Option No Audit; Periodic Spring)

Cognitive History will examine how research in cognitive neuroscience provides historians with new knowledge and methods for asking questions about the past. It is not a course on the history of the cognitive sciences. Instead, it is about practicing history in the cognitive age, a period that began more than fifty years ago, and an approach to explaining how humans think and act that has been adopted within fields across our universities. The course will combine broad readings and discussions in ? Big History? and the shift from behaviorism to cognition with more specific studies about memory, narrative, aesthetics, the body, and violence. Students will have an opportunity to apply a cognitive history approach to a specific topic that emphasizes one of the following topics: Evolution, Behaviorism, Cognitive Cultural Studies, Memory, Narrative, Aesthetics, the Body, and Violence. Students will help guide discussions for the relevant class sessions on these topics and write an essay on the selected theme.

HIST 3721. Studies in 20th-Century Europe From the Turn of the Century to the End of World War II: 1900-45. (; 3 cr. ; Student Option; Every Fall & Summer)

Social, political, and cultural changes/conflicts. Background to WWI, its impact. Revolution,

failure of interwar stability. Fascism. WWII, its consequences.

HIST 3722. Studies in 20th-Century Europe From the End of World War II to the End of the Cold War: 1945-91. (GP,HIS; 3 cr. ; Student Option; Every Fall, Spring & Summer)
Social, economic, political, and cultural impacts of WWII upon Europe. Division of Europe. Communist regimes in Eastern Europe, cooperation in Western Europe. Impacts of modernization. End of Cold War.

HIST 3726W. The Century of Refugees: A Global History of Forced Migration, 1900s-2000s. (GP,WI,HIS; 3 cr. ; Student Option; Periodic Fall & Spring)

This course examines the world-historical events that structured global flows of refugees in the Twentieth Century (and beyond), the evolution of refugee protection systems that emerged in response, and the rise of the ? refugee? as a legal/political/cultural subject and as an agent of historical change.

HIST 3727. History of the Holocaust. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Study of 1933-1945 extermination of six million Jews and others by Nazi Germany on basis of race. European anti-Semitism. Implications of social Darwinism and race theory. Perpetrators, victims, onlookers, resistance. Theological responses of Jews and Christians.

HIST 3728. The History of Human Rights. (; 3 cr. ; A-F or Audit; Periodic Fall)

What are human rights? How and when did they originate? How were such rights promoted, protected, and contested at different historical junctures, and by whom? In this course, we will examine the historical processes through which human rights have been conceptualized, codified, violated, and vindicated. Throughout the semester, we will travel across the globe and trace events that span from the eighteenth century to the present day. Our search will take us through the multiple histories that have shaped what we nowadays recognize as the human rights framework ? its institutions, products, and norms. Integrating perspectives and readings from the humanities, social sciences and legal studies, this course explores how meanings of human rights have fluctuated in response to historical developments, and how human rights have come to gain their prominent role in contemporary politics, law, and culture.

HIST 3729. Nazi Germany and Hitler's Europe. (3 cr. ; Student Option; Periodic Fall & Spring)

Comprehensive exploration of Third Reich. Students will examine How the Nazis came to power, transformations of 1930s, imposition of racial politics against Jews/others, nature of total war. Students read historical accounts, memoirs, state documents, view films.

HIST 3731. Modern France and Its Empire: Identity, Citizenship and the State 1780 to the Present. (GP,HIS; 3 cr. ; Student Option; Fall Even, Spring Odd Year)

History of citizen/state in France from French Revolution to present.

HIST 3732. Revolution and Human Rights: The French Revolution and its Legacy.

(AH,CIV; 3 cr. ; Student Option; Spring Even Year)

What role did the French Revolution play in shaping how we think about the possibility of massive social change, justice, and rights today? How especially did 18th-century philosophy, culture, politics, and economics influence the development of what we call universal individual "human rights" We also ask: could we have done better? To do so, we will play "Rousseau, Burke, and Revolution in France, 1791," a Reacting to the Past flipped-classroom role-playing game. Working individually and in teams, students will prepare speeches, produce pamphlets and newspapers, not only to learn about the stakes of this historical turning point and the philosophical debates surrounding it, but also to imagine changing it. We will also seek out and document the legacy of this Revolution in our lives and around the world today. This class offers students the knowledge and skills to participate in substantive debate aimed at solving problems collectively, to effect change aligning with their beliefs and philosophies, and to reflect critically on historical legacy No prerequisites. All materials for Fren 3732 are in English, and students in all programs are welcome!

HIST 3735. Politics of Ideas: European Thought in 20th Century Contexts. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Development of political ideas/ideologies in 20th century. How to understand ideas in various contexts of their production, dissemination, and appropriation. Students read primarily original political/social philosophical texts that have shaped social, cultural, and political landscape.

HIST 3746. Game of Thrones: Emperors, Knights and Witches in Central Europe. (HIS; 3 cr. ; Student Option; Fall Odd, Spring Even Year)

This course traces the rise and fortunes of the Habsburg family from their emergence in the late 13th century to the end of the Holy Roman Empire in 1806. We use the family to explore key themes of the period including the Black Death, Hussite wars and peasant revolts, the new print culture, developments of the Reformation, European expansion and Enlightenment culture. prereq: None

HIST 3749. Central and Eastern European Migrants in Minnesota. (CIV,HIS; 3 cr. ; Student Option; Periodic Spring)

In this class, we will use Minnesota, particularly the Twin Cities, as a lens through which to examine the history of Central and Eastern European migration to the United States (U.S.) from the late 19th century to the present. Moving chronologically and from the global to the local, this class will first examine the complex and intertwined reasons that prompted people to settle (either temporarily or permanently) in the U.S. in the late 19th and early 20th centuries. We will explore the communalities and differences between the Poles, Ukrainians, Germans, Czechs,

Slovaks, Jews, Hungarians, Slovenes, Croats, and Serbs who made up this initial wave of migration, and assess how these migrants shaped the urban and social fabric both in the United States, and in St. Paul and Minneapolis. Second, the class will examine how these communities evolved over the course in the 20th century by a) exploring topics such as ethnic identity maintenance, inter-generational relations, return migration, xenophobia and antisemitism, the relationship between migrants and the host society, and institutions (churches and synagogues, fraternal organizations, learned societies, archives, museums and libraries, etc.) established by migrants in the U.S., and b) assessing the impacts of later migration waves from Europe to the U.S., caused by the Holocaust and the Second World War, the 1956 Hungarian uprising, the 1968 Prague Spring, Soviet emigration policies, the fall of the Berlin Wall, and the civil wars in Yugoslavia. Keeping in mind the pressing ethical questions that subtend migration (both historical and contemporary), this class will also ask what it means to be a descendant of Central and Eastern European migrants in present-day Minnesota?not just of those who arrived over a century ago, but also more recent migrants, e.g., Russians, or Muslims from Bosnia-Herzegovina. To this end, we will enrich our classroom by extending it into the metro area with visits to relevant sites and meetings with representatives of some of these communities in order to understand their current lives, work, and challenges. This class will thus draw on numerous local resources: archives, buildings such as religious sites and community centers, museums, etc.

HIST 3767. Eastern Orthodoxy: History and Culture. (3 cr. ; Student Option;)

Development of the orthodox church in Byzantium, the Islamic Near East, the Slavic world and in the diaspora; impact of orthodoxy on political and cultural institutions, interaction with other Christian and non-Christian communities; orthodox spirituality and aesthetics.

HIST 3797. History of Population.

(GP,SOCS; 3 cr. ; Student Option; Every Spring)

History of births, deaths, migration, population size, and population characteristics. Evidence from Europe, the United States, and Latin America with comparative material from Africa and Asia. Methods of historical population analysis and research of historical population data.

HIST 3802. Religious Encounters in Early America. (3 cr. ; Student Option; Periodic Fall & Spring)

The United States is home to an astonishing array of religious beliefs and institutions, yet mutual toleration has historically been harder to achieve. This upper-level course, which is run as a discussion seminar, uses case studies to investigate how people of differing faiths perceived, reacted to, and changed each other, between the arrival of Jesuits and Puritans in the early 17th century and the US-Dakota War of 1862. People who hailed from North

America, Europe, and Africa had divergent ideas about the divine and its presence on Earth, about life and life after death, about religious rituals and relations of authority. Their struggles with one another were partly struggles over religiously inflected ways of being in the world. The course explores how religion shaped people's responses to European colonization, the growing slave-labor system, industrialization, immigration, and westward expansion. A religious lens onto American history reveals religion as an element of struggle and shows that freedom of conscience has been continually contested rather than easily assured. prereq: Non-fr or instr consent

HIST 3804. Religion and the American Culture Wars. (HIS; 3 cr. ; Student Option; Every Fall)

Thomas Jefferson, Benjamin Franklin, James Madison, Thomas Paine, George Washington, and John Adams on religion, faith, and religion in politics. Deism. Enlightenment-era discussions about rational religion. Rise of evangelicalism. Separation of church/state, framers' original intent for first amendment. Religious Right.

HIST 3804H. Religion and the American Culture Wars. (; 3 cr. ; A-F only; Periodic Fall & Spring)

Thomas Jefferson, Benjamin Franklin, James Madison, Thomas Paine, George Washington, and John Adams on religion, faith, and religion in politics. Deism. Enlightenment-era discussions about rational religion. Rise of evangelicalism. Separation of church/state, framers' original intent for first amendment. Religious Right.

HIST 3809. The Peoples of Revolutionary America. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Culture/structure of late colonial politics. Regionalism. Connections between society and politics. Imperial crisis and independence. Military history of the Revolution. Origins of national politics and the constitution.

HIST 3811. Antebellum America: Slavery, Expansion and the Development of a Divided Nation. (3 cr. ; Student Option; Periodic Fall & Spring)

This course examines the history of the U.S. between the War of 1812 and the outbreak of the Civil War in 1861. We will examine the dramatic expansion in population and territory; violent growth of slavery; onset of transportation, communications, and industrial revolutions; forced removal of Native Americans; movements for social reform; transformations in popular culture, family life, and religious experience; maturation of political parties; and the coming of the Civil War.

HIST 3812. The Civil War and Reconstruction. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

United States from 1848 to 1877. Causes of sectional crisis; Southern secession; Lincoln and emancipation; military history; impact of war North and South; Reconstruction efforts to change the Southern life and transform the status of African Americans.

HIST 3813W. Slavery and the Making of America. (DSJ,WI,HIS; 3 cr. ; Student Option; Periodic Fall & Spring)

This course examines American racial slavery and its centrality to U.S. history. The course teaches students to consider the experiences of enslaved people, observe how the institution of slavery operated, and understand its far-reaching influence across social, political, cultural, economic, legal, environmental, and intellectual domains.

HIST 3821. United States in the 20th Century to 1945. (HIS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

American politics and society in the progressive era, the 1920's, the Great Depression and World War II. Economic reform at home, the challenges of world war abroad, and social change affecting the status of women and racial minorities.

HIST 3822. Making America Modern: 1945 to Present. (3 cr. ; Student Option; Every Fall, Spring & Summer)

American politics and society in the postwar era, the diplomacy of the Cold War, the civil rights movement, the Vietnam War, cultural clashes in the 1960's, Watergate, the conservative resurgence, and the end of the Cold War.

HIST 3834. Law in American Life, Colonial Era to Civil War. (; 3 cr. ; A-F or Audit;)

Understandings of law/property held by colonists, Indians. Conceptions of relationships among family, community, state held in colonial America; conceptions held today. Law of slavery in colonial era. American Revolution/Constitution. Law, industrialization. Legal legitimacy, federalism, Civil War as constitutional crisis.

HIST 3835. Law in American Life: 1865 to Present. (; 3 cr. ; Student Option;)

Centralization of state power, rise of individual rights. Constitutionalization of American law. Passage, promise, abrogation, rediscovery of 13th, 14th, 15th Amendments. Expansion of federal administrative state. Origins of civil liberties. Law and the welfare state. Civil Rights Revolution of 1950s, '60s, '70s. Product liability law. Second half of two-semester survey. May be taken independently.

HIST 3852. Work and Workers in the United States. (DSJ,HIS; 3 cr. ; Student Option; Periodic Fall)

Why do Americans work, and what do we expect in exchange? This course explores how the answers to those questions have changed overtime, from the colonial era to the present, and how the past shapes our approach to work today.

HIST 3853. Black Protest in Twentieth Century America. (CIV,HIS; 3 cr. ; A-F only; Periodic Fall, Spring & Summer)

This course gets at the heart of why/how African Americans have been fighting for social and political equality throughout the 20th Century. We explore various ways that African Americans have articulated their political demands and affirmed their citizenship rights using youth and grassroots organizations,

workers' rights, feminism, education, the courts and laws as tools for political advancement.

HIST 3854. Race and Sport. (DSJ,HIS; 3 cr. ; A-F only; Periodic Fall)

This class examines how race, gender, and sport intersect as sites of resistance and reform in twentieth century American life. With the intensification of Jim Crow coinciding with the professionalization and commercialization of sports, athletes of color became central to American debates about science, citizenship, class, ethnicity, sexuality, social mobility, belonging, culture, and entitlement. This seminar will be particularly interested in how athletes of color forced a place for themselves in sports like baseball, boxing, football, golf, and basketball by exercising different models of political protest, citing an urgent need for social justice reforms that spread beyond the realm of sport.

HIST 3856. The Civil Rights and Black Power Movement, 1954-1984. (3 cr. ; Student Option; Every Fall)

Modern black civil rights struggle in U.S. Second reconstruction. Failure of reconstruction, abdication of black civil rights in 19th century. Assault on white supremacy via courts, state, grassroots southern movement in 1950s/1960s. Black struggle in north/west.

HIST 3857. Race: The History of An Idea in North America. (DSJ,SOCS; 3 cr. ; A-F only; Periodic Fall)

This seminar explores the roots and rationales presented when constructing and upholding the idea of race. This class examines processes of racial formation in science, law, history, immigration policy, education, leisure, adoption, marriage, and medicine. We will look at how race has been used to pathologize, eroticize, criminalize, vilify, and medicalize purported ? problem people, ? like immigrants, the poor, and the sick. Using memoirs, legal cases, history of medicine, laws, photographs, oral histories, and secondary source readings, this class traces the history of America's fascination with race and how race came to define so many aspects of American life during the twentieth century.

HIST 3862. American Immigration History. (DSJ,HIS; 3 cr. ; Student Option; Spring Odd Year)

Global migrations to U.S. from Europe, Asia, Latin America, and Africa, from early 19th century to present. Causes/cultures of migration. Migrant communities, work, and families. Xenophobia, assimilation/integration, citizenship, ethnicity, race relations. Debates over immigration. Place of immigration in America's national identity.

HIST 3864. African American History: 1619-1865. (CIV,HIS; 3 cr. [max 4 cr.]; A-F or Audit; Periodic Fall & Spring)

Importance of dynamics of class, gender, region, and political ideology. Changing nature of race/racism.

HIST 3865. African American History, 1865 to Present. (3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

History of African American men and women from the beginning of the 20th century to the

present. Discussion of internal migrations, industrialization and unionization, The Great Depression, world wars, and large scale movements for social and political change.

HIST 3868W. Race, War, and Race Wars in American History. (CIV,WI; 3 cr. ; A-F or Audit; Fall Odd Year)

Role that race has played in American war history. Impact that wars have had on race and race relations in the United States and the world. Literature, film.

HIST 3871. American Indian History: Pre-Contact to 1830. (DSJ,HIS; 3 cr. ; Student Option; Every Fall & Spring)

Introduction to American Indian history from ancient native America to the removal era. Focuses on the social, cultural, political, and economic diversity of Native American peoples and Native American experiences with European colonialism.

HIST 3872. American Indian History: 1830 to the Present. (DSJ,HIS; 3 cr. ; Student Option; Every Fall & Spring)

Focus on the impact of federal Indian policy on American Indian cultures and societies, and on American Indian culture change.

HIST 3875W. Comparative Race and Ethnicity in US History. (DSJ,WI,HIS; 3 cr. [max 4 cr.]; A-F or Audit; Periodic Fall & Spring)

This writing-intensive course examines the racial history of modern America to learn from and engage with what historians enmeshed in ethnic studies do. These historians examine the systematic and coordinated exercises of power called race in the American past and make legible how racially aggrieved groups responded to this shaping power. Thus, throughout, we ask, "What did racial subjects do with what was done to them by the American system forged out of settler colonialism, slavery, racism, and other forms of injustice, exclusion, and violence?" This question issues an intellectual challenge to do all that needs to be done to capture community life, the politics of difference, and the dynamism of social identities in all their richness, fullness, and complexity. In other words, we study and write about the racial history of modern America, including its ugly past and arc of justice, to consider what it would take to transcend this racial past.

HIST 3877. Asian American History, 1850-Present. (DSJ,HIS; 3 cr. ; Student Option; Every Fall & Spring)

Asian American history and contemporary issues, from 1850 to the present. Immigration, labor, anti-Asian movements, women/families, impact of World War Two, new immigrant/refugee communities, civil rights, Asian American identity/culture.

HIST 3886. The Age of Atlantic Revolutions, 1765-1830. (; 3 cr. ; Student Option; Fall Even Year)

Thinking about the rebellions that rocked the Atlantic world during the late eighteenth and early nineteenth centuries, we will compare and contrast the diverse political, economic, and social elements surrounding the following

conflicts: the American Revolution, the French Revolution, the Haitian Revolution, and the Latin American Wars of Independence.

HIST 3896. Internship for Academic Credit. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)

An applied learning experience in an agreed-upon, short-term, supervised workplace activity, with defined goals, which may be related to a student's major field or area of interest. The work can be full or part time, paid or unpaid, primarily in off-campus environments. Internships integrate classroom knowledge and theory with practical application and skill development in professional or community settings. The skills and knowledge learned should be transferable to other employment settings and not simply to advance the operations of the employer. Typically the student's work is supervised and evaluated by a site coordinator or instructor.

HIST 3960. Topics in History. (; 1-4 cr. [max 16 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Selected history topics not covered in regular courses.

HIST 3980W. Supplemental Writing in History. (WI; 1 cr. [max 4 cr.] ; Student Option; Every Fall & Spring)

May be attached, by agreement of instructor and students, to any 3xxx or 5xxx course to make a writing-intensive experience. prereq: instr consent; must take a 3-cr 3xxx or 5xxx course taken concurrently

HIST 3993. Directed Study. (1-16 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Guided individual reading or study. Open to qualified students for one or more semesters. Prereq instr consent, dept consent, college consent.

HIST 3994. Directed Research. (1-16 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Qualified students work on a tutorial basis. Prereq instr consent, dept consent, college consent. prereq: instr consent, dept consent, college consent

HIST 4011V. Honors: Capstone Research. (WI; 4 cr. ; A-F only; Every Fall & Spring)

The capstone research course helps students prepare and complete their writing intensive research paper that satisfies the capstone requirement of the History Major. Class readings and exercises help students define a research question that fits within the thematic frame of the course, conceptualize the project, identify and analyze primary sources, craft a paper outline, revise drafts, and produce a final version of the Major Paper in History. Topics in 4011W/V will vary by semester and will be printed in the class schedule. prereq: Jr or sr history major, honors, or instr consent

HIST 4011W. Capstone Research. (WI; 4 cr. ; A-F only; Every Fall & Spring)

The capstone research course helps students prepare and complete their writing intensive research paper that satisfies the capstone requirement of the History Major. Class readings and exercises help students define a research question that fits within the thematic

frame of the course, conceptualize the project, identify and analyze primary sources, craft a paper outline, revise drafts, and produce a final version of the Major Paper in History. Topics in 4011W/V will vary by semester and will be printed in the class schedule. prereq: Jr or Sr history major or instr consent

HIST 4961V. Honors: Major Paper. (WI; 4 cr. ; A-F only; Every Fall, Spring & Summer)

Research paper on topic of student's choice. Work largely with primary sources. Faculty guidance. prereq: dept consent, instr consent; sign up in Undergraduate Studies Office two sem in advance

HIST 4961W. Major Paper. (WI; 4 cr. ; A-F or Audit; Every Fall & Spring)

Research paper on topic of student's choice. Work largely with primary sources. Faculty guidance. prereq: dept consent, instr consent; sign up in Undergraduate Studies Office two sem in advance

HIST 4970. History Day Mentorship. (; 1 cr. [max 4 cr.] ; Student Option; Every Fall & Spring)

HIST 4970 is a course designed to engage students in local grades 6-12 education through the National History Day in Minnesota program. This class requires that students complete at least 100 hours of mentoring work in History Day schools in the Twin Cities. While the focus of these hours will be in the classroom, some hours may be fulfilled through participation in other History Day support services and/or assistance with events. In addition to their commitments to their assigned school, students must participate in regular seminar meetings, complete assigned course work, and fulfill final project requirements. Following the start of the class, students will have been assigned to a school, received preliminary History Day training, meet participating teacher(s), and develop a schedule for school visits. Most of all, this course is about connections. The University is looking for civic engagement opportunities through its ?Grand Challenges? curriculum that demonstrate the relevance of the institution and the contributions of its students to the citizens of the state. The College of Liberal Arts ?roadmap? also places specific emphasis on connecting its majors to the structures of education in Minnesota. Furthermore, the connections you make in applied learning situations (internships and/or service learning) can be a determining factor in shaping future career paths or graduate education. The History Day mentor program is a unique opportunity to apply your academic skills in a real-world educational environment. Your efforts will assist teachers on the frontlines of education, and you will help build pathways to higher education for inner-city students. The instructors appreciate the interest in service learning that has brought you to this course, and it is our hope that this opportunity proves to be a highlight of your undergraduate experience.

HIST 5051. Before Herodotus: History and Historiography of Mesopotamia and the Ancient Near East. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Historical method/sources for ancient Near Eastern history. Historical traditions. Historiographic texts of Mesopotamia and neighboring regions of the ancient Near East, secondary emphasis on their relationship to works of classical historians such as Herodotus. Use of these sources in modern historiography of ancient Near East. prereq: Prev coursework in ancient Near Eastern history recommended

HIST 5053. Doing Roman History: Sources, Methods, and Trends. (; 3 cr. ; Student Option; Fall Even, Spring Odd Year)

Survey of major scholarship in field of Roman history since Mommsen. Political, cultural, social, military, and economic history. Focuses on methodological problems posed by evidence. Ways in which these issues shape research. prereq: Grad student or instr consent

HIST 5264. Imperial Russia: Formation and Expansion of the Russian Empire in the 18th and 19th Centuries. (3 cr. [max 4 cr.] ; Student Option; Every Fall & Spring)

Interaction with Europe and Asia; attempts at modernization and reform; emancipation of the serfs and rise of revolutionary movements.

HIST 5265. 20th-Century Russia: The Collapse of Imperial Russia, the Revolutions, and the Soviet Regime. (3 cr. ; Student Option; Every Spring)

Analysis of the factors that led to the collapse of the tsarist regime; discussion of the 1917 revolution, the evolution of the Soviet regime and the collapse of Soviet communism. Emphasis on the role of nationalities and the rise of the Commonwealth of independent states.

HIST 5271. The Viking World: Story, History, and Archaeology. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Viking society and expansion of Viking influence abroad. Viking impact on Western Europe, interactions with Slavic lands, settlement of North Atlantic islands, Western Europe's impact on Scandinavian lands. Analyzes archaeological, historical, linguistic, and numismatic evidence.

HIST 5283. Marx, Capital and History: An Introduction to Marxist Theory and History. (3 cr. ; Student Option; Spring Even Year)

Explore Marx's understanding of capitalism and its history. Marx's argument regarding historical specificity of capitalism as economic/social condition

HIST 5286. Galileo and the Beginnings of Modern Science. (3 cr. ; A-F only; Periodic Fall)

The life and work of Galileo Galilei (1564-1642), often called the ?founder of modern science.? Topics: the Renaissance Italian context for Galileo?s work; the arrangements of authoritative knowledge that prevailed in 16th-century Tuscany and Venice; the role that universities, the Catholic church, learned academies, and the state played in disciplining knowledge. We consider the episodes of Galileo?s career and read his seminal texts with secondary commentaries upon them. His telescopic

observations of 1609-10; his battles with Aristotelian natural philosophy; his experiments and arguments on behalf of experimental and mathematical physics; his defense of Copernican ?heliocentric? cosmology and his trial and condemnation by the Roman Catholic Church for heresy; and his work in mathematics and mathematical physics that paved the way for Newton and Einstein. The goal will be to understand the achievements of Galileo in their specific historical and cultural context and to use these reflections for thinking about the nature of the modern science that he helped to initiate.

HIST 5461. Introduction to East Asia I: The Imperial Age. (3 cr. ; Student Option; Every Fall)

Comparative survey of early history of China, Japan, Korea, and Vietnam. Early Chinese thought. Diffusion of Confucianism, Buddhism, and other values throughout East Asia. Political and social history of region to 1600.

HIST 5462. From Subjects to Citizens: The History of East Asia From 1500 to the Present. (3 cr. ; Student Option; Every Spring)

How Asian states, societies, economies, and cultures linked with one another and with European powers. How period's historical effects still resonate. Covers India, China, Japan, Korea, and Indochina.

HIST 5468. Social Change in Modern China. (; 3 cr. ; Student Option; Every Fall)

Opium War and opening of Treaty Ports in 19th century; missionary activity and cultural influence; changes in education system; women's movement; early industrialization; socialism and collectivization after 1949; industrialization of Taiwan; PRC's entry into the world trading system.

HIST 5478. Tigers and Dragons: The Rise of the East Asian Economies, 1930-Present. (3 cr. ; Student Option; Spring Odd Year)

Rise of East Asian Economies, 1930-Present. prereq: Grad student

HIST 5513. North Africa since 1500: Islam, Colonialism, and Independence. (3 cr. ; Student Option; Spring Odd Year)

History of the Maghrib (Morocco, Algeria, Tunisia, Libya and disputed territories of Western Sahara from time of Ottoman expansion/Sharifian dynasties [Sa'dian/Alawid]) in 16th/17th Centuries to end of 20th century. Focus on encounter of Islamic cultures/societies of Maghrib and Africa/Europe

HIST 5547. Empire and Nations in the Middle East. (3 cr. ; Student Option; Periodic Fall & Spring)

Modernity in non-Western imperial context. Identity, ideology, economy, environment, language. prereq: Grad student or instr consent

HIST 5708. The Age of Curiosity: Art, Science & Technology in Europe, 1400-1800. (AH,TS; 3 cr. ; Student Option; Periodic Fall & Spring)

Diverse ways in which making of art and scientific knowledge intersected in early modern Europe. Connections between scientific curiosity and visual arts in major artists (e.g., da Vinci, Durer, Vermeer,

Rembrandt). Artfulness of scientific imagery/diagrams, geographical maps, cabinets of curiosities, and new visual technologies, such as the telescope and microscope.

HIST 5711. Cognitive History. (3 cr. ; Student Option No Audit; Periodic Spring)

Cognitive History will examine how research in cognitive neuroscience provides historians with new knowledge and methods for asking questions about the past. It is not a course on the history of the cognitive sciences. Instead, it is about practicing history in the cognitive age, a period that began more than fifty years ago, and an approach to explaining how humans think and act that has been adopted within fields across our universities. The course will combine broad readings and discussions in "Big History" and the shift from behaviorism to cognition with more specific studies about memory, narrative, aesthetics, the body, and violence. Students will have an opportunity to apply a cognitive history approach to a specific topic that emphasizes one of the following topics: Evolution, Behaviorism, Cognitive Cultural Studies, Memory, Narrative, Aesthetics, the Body, and Violence. Students will help guide discussions for the relevant class sessions on these topics and write an essay on the selected theme

HIST 5728. The History of Human Rights. (3 cr. ; Student Option; Periodic Fall)

What are human rights? How and when did they originate? How were such rights promoted, protected and contested at different historical junctures, and by whom? In this course, we will examine the historical processes through which human rights have been conceptualized, codified, violated, and vindicated. Throughout the semester, we will travel across the globe and trace events that span from the eighteenth century to the present day. Our search will take us through the multiple histories that have shaped what we nowadays recognize as the human rights framework ? its institutions, products and norms. Integrating perspectives and readings from the humanities, social sciences and legal studies, this course explores how meanings of human rights have fluctuated in response to historical developments, and how human rights have come to gain their prominent role in contemporary politics, law and culture.

HIST 5797. Methods of Population History.

(; 3 cr. ; A-F or Audit; Periodic Fall & Spring) Standard methods of population analysis. Focuses on methods widely used for historical population research.

HIST 5801. Seminar in Early American History. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

Introduction to literature of early American history. Readings selected from some of best scholarship in field. Questions of colonial historians. Theories, methods, sources used in pursuit of those questions.

HIST 5802. Readings in American History, 1848-Present. (3 cr. ; A-F or Audit; Every Fall & Spring)

Readings-intensive course. U.S. history from Mexican-American War to present.

HIST 5831. Cultural Fallout: The Cold War and Its Legacy: Readings. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Culture of the Cold War, its legacy. How it affected/reflected domestic politics, public policies, civic life, gender expectations, sexuality, class relations, racial justice, and civil rights. Impact of domestic anti-communism and of American cultural politics abroad.

HIST 5877. Asian American History. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

Introduction to key issues, theoretical frameworks, research, and methodologies of Asian American history. Seminal texts that defined the field. Recent scholarship in history and in related disciplines. Emphasis field's comparative/transnational linkages to ethnic studies, Asian studies, and the Americas.

HIST 5890. Readings in American Indian and Indigenous History. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

Students in this course will read recently published scholarship in American Indian and Indigenous history that takes up pressing research questions, promises to push inquiry in new directions, and that theorizes important interventions in our thinking to understand where the field is situated and moving. Reflecting the instinctively interdisciplinary nature of American Indian and Indigenous history, readings will be drawn not just from the discipline of history but across other disciplines such as Anthropology, American Studies, Geography, Literature, Political Science, and Legal Studies. As well, readings will include scholarship that reaches out to embrace the Global Indigenous studies turn. prereq: Advanced undergrad with instr consent or grad student

HIST 5891. American Indian and Indigenous Studies Workshop. (1.5 cr. [max 12 cr.] ; S-N or Audit; Every Fall & Spring)

The American Indian and Indigenous Studies Workshop brings graduate and advanced undergraduate students and faculty together to read and provide intensive feedback (written and oral) on their works in progress. As an interdisciplinary field, AIIS students stand to benefit from ongoing and engaged conversations about that work that will deepen and enhance their professionalization in the field. The readings for the workshop are submissions from the membership of the workshop (which will include participants who are not formally enrolled in the workshop). We read and consider two submissions per week (sometimes more if the submissions are shorter) that are pre-circulated to all participants via the workshop's listserv. Readings under consideration include research papers, dissertation chapters, article manuscripts, research proposals, conference papers, and other submissions that will benefit from intensive engagement with the members and will deepen the knowledge of all of the participants. Students will gain experience with the research, writing, and revision process as well as scholarly conversations about original research and writing. The overarching aim of the workshop is to develop research, writing,

revision, and scholarly discussion skills as well as community-building in American Indian and Indigenous Studies and professionalization in an increasingly interdisciplinary and global field of study

HIST 5901. Latin America Proseminar: Colonial. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Introduces beginning graduate and advanced undergraduate students to major historical writings on various Latin American themes. prereq: instr consent

HIST 5902. Latin America Proseminar: Modern. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Introduces beginning graduate and advanced undergraduate students to major historical writings on various Latin American themes. prereq: instr consent

HIST 5910. Topics in U.S. History. (; 1-4 cr. [max 20 cr.] ; Student Option; Every Fall & Spring)

Selected topics in U.S. history not covered in regular courses. Taught as staffing permits. prereq: Grad or advanced undergrad student with instr consent

HIST 5932. The Production of Knowledge, Negotiating the Past, and the Writing of African Histories. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

Recent scholarship on social history of Africa. Focuses on new literature on daily lives of ordinary people in their workplaces, communities, households.

HIST 5960. Topics in History. (; 1-4 cr. [max 16 cr.] ; Student Option; Every Fall & Spring)

Selected topics in history not covered in regular courses. Taught as staffing permits. prereq: [advanced undergrad with instr consent]

HIST 5993. Directed Study. (1-16 cr. [max 20 cr.] ; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study. Prereq [Grad student or sr], instr consent, dept consent, college consent.

HIST 5994. Directed Research. (1-16 cr. ; Student Option; Every Fall, Spring & Summer)

Work on a tutorial basis. Prereq [Grad student or sr], instr consent, dept consent, college consent.

History of Medicine (HMED)

HMED 3001W. Health, Disease, and Healing I. (HIS,WI; 4 cr. ; Student Option; Every Fall)

Introduction to intellectual/social history of European/American medicine, health care from classical antiquity through 18th century.

HMED 3002W. Health Care in History II. (HIS,WI; 4 cr. ; Student Option; Every Spring)

Introduction to intellectual/social history of European/American medicine, health care in 19th/20th centuries.

HMED 3035. Sex and Gender in US Medicine: Queering the Medical Model. (3 cr. ; A-F only; Periodic Spring & Summer)

Queering the Medical Model addresses homosexual, transgender, and intersex history

of medicine in the United States from 1800 to the present along three intersecting themes. First, the course charts scientific constructs of sex, sexuality, and gender from the 19th to the 20th centuries. Second, it explores how sex and gender became entangled with the so-called medical model, from the role of medical jurisprudence in leveraging a two-sex system for legal claims, sex and sexual disorder research in the early 20th century, the development of hormonal and surgical technologies to manipulate gender morphology in the later 20th century, and the impact of the medical model on medical access historically and in the present. Finally, it identifies how queer and gender non-conforming people resisted, dodged, and mobilized changing scientific constructs, medical possibilities, and social opportunities. This course combines lectures, discussions, and guided engagement with historical materials from several archival holdings, alongside with relevant readings from history and other disciplines.

HMED 3040. Human Health, Disease, and the Environment in History. (HIS; 3 cr. ; Student Option; Every Spring & Summer)

Introduction to historical relationship of human health and the environment. How natural/human-induced environmental changes have, over time, altered our experiences with disease and our prospects for health.

HMED 3055. Women, Health, and History. (DSJ,HIS; 3 cr. ; A-F only; Periodic Fall & Spring)

Women's historical roles as healers, patients, research subjects, health activists. Biological determinism, reproduction, mental health, nursing, women physicians, public health reformers, alternative practitioners. Gender disparities in diagnosis, treatment, research, careers. Assignments allow students to explore individual interests.

HMED 3065. Body, Soul, and Spirit in Medieval and Renaissance European Medicine. (; 3 cr. ; A-F or Audit; Every Spring)

Body/soul in medieval theology/cosmology. Religious conceptions of body/soul. Medical conceptions in medieval world. Medieval/renaissance psychology. Medical astrology and its consequences. Medical normal/abnormal body. Medicine of reproduction and sexual identity. Death, burial, dissection, and resurrection in medical/religious perspective. Macrocosmic/microcosmic body. Limits to human power/authority over body. Anatomical/chemical body/spirit.

HMED 3075. Technology and Medicine in Modern America. (HIS,TS; 3 cr. ; Student Option; Every Fall & Spring)

How technology came to medicine's center-stage. Impact on production of medical knowledge, professionalization, development of institutions/industry, health policy, and gender/race disparities in health care.

HMED 3315. Early Modern Medicine in the Arts and Literature. (AH; 3 cr. ; Student Option; Periodic Fall & Spring)

What did the arts offer to medicine, and what did medicine offer to the arts in early modern

time? How did the representation of the human being in poetry, drama, and figurative arts interplay with the new medical culture and practices at that time? This course will examine the dynamic interchange and engagement of Western Renaissance medical culture (before 1800) in relation to literary, visual and performing arts, approaching questions that cross disciplinary, geographical, and social boundaries. Topics to be addressed include historical questions related to the intersection between the late European medieval university's programs of medicine and arts, humanistic culture, and medical charlatanism. Moreover, we will focus on the ephemeral rituals of medical and performative practices and the visual culture in works of art and scientific illustrated treatises of life, death, and the afterlife. Finally, we will explore the embodiments in poetry and drama of illness and metaphor, gender conflicts, and medical, spiritual, and philosophical views of what it meant to be human. By exploring the value of humanistic study and medical ethical concerns in Renaissance humanism, students will understand the historical sources of a modern humanistic formation and be informed about the importance of ethics to citizenship, reconsidering the present vision of a humanistic education and imagining the future in the academic humanities and in our society. The course will culminate in a digital project involving students in the creation of a virtual exhibit on the course topics, by using the New Builder StoryMaps software proposed by DASH/U-Spatial. This is an introductory-level course.

HMED 3940. Topics in History of Medicine. (; 1-3 cr. [max 9 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Selected history of medicine topics not covered in regular courses.

HMED 3993. Directed Study. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study.

HMED 4965W. Senior Research in Medical History. (WI; 3 cr. ; A-F only; Every Fall & Spring)

Seminar. Reading/discussion, individual directed research project with oral presentation. Students meet in peer groups and with instructor. prereq: Sr, instr consent

HMED 5075. Technology and Medicine in Modern America. (; 3 cr. ; A-F or Audit; Fall Odd, Spring Even Year)

How technology came to medicine's center-stage. Impact on medical practice, institutions, consumers, production of medical knowledge, professionalization, health policy, gender/race disparities in health care. prereq: instr consent

HMED 5940. Topics in the History of Medicine. (; 3 cr. [max 15 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Selected history of medicine topics not covered in regular courses.

History of Science and Tech (HSCI)

HSCI 1011. Digital World. (HIS,TS; 3 cr. ; Student Option; Every Spring)

Essential knowledge and critical perspective to understand today's Digital World. The history and social impact of the digital revolution, including security, surveillance, "virtual reality," and the future of the Internet.

HSCI 1212. Life on Earth: Origins, Evolution & Ecology. (ENV,HIS; 4 cr. ; Student Option; Every Spring)

How have people explained where life came from and how it has developed over time? We examine controversies over life's origins, the Holocene extinction, human population growth, the Dust Bowl and soil conservation, DDT and falcon repatriation, and disease and responses to pandemics. Evolution, natural theology. Ecosystems.

HSCI 1585. Mammoths, Minerals, Monoculture: History of Earth and Environmental Science. (HIS; 3 cr. [max 4 cr.] ; Student Option; Every Fall)

This course investigates the many ways people across the globe have sought to understand the environment and the earth from antiquity to the present. We will study the context in which the modern earth and environmental sciences emerged, asking throughout the semester what knowledge traditions contributed to the development of the sciences we know today. We will investigate the historical perspectives that shaped three intersecting themes throughout the semester: the questions of geological time and of change in the study of the earth; human use of natural resources in industry and agriculture; and understandings of the earth and environment as a global system. We will examine secondary historical scholarship and primary sources from North and South America, Africa, Europe, and Asia in order to better understand the religious and philosophical stakes of earth and environmental science, the role of empire and state building in the development of geoscience, and the interrelationship of science and industry.

HSCI 1714. Stone Tools to Steam Engines: Technology and History to 1750. (HIS,TS; 3-4 cr. ; Student Option; Every Fall & Spring)

Technology is an enormous force in our society, and has become so important that in many ways it seems to have a life of its own. This course uses historical case studies to demonstrate that technology is not autonomous, but a human activity, and that people and societies made choices about the technologies they developed and used. It asks how technological differences between nations influenced their different courses of development, and why some societies seemed to advance while others did not. We ask how technological choices can bring about consequences greater than people expected, and how we might use this knowledge in making our own technological choices. In particular, we explore the historical background, development, and character of the most widespread technological systems the world has known, from prehistoric stone tool societies, through Egypt and the pyramids,

ancient Greece and Rome, the explosion of Islam, and the dynamic and often violent technologies of medieval Europe.

HSCI 1715. History of Modern Technology: Waterwheels to the Web. (HIS,TS; 3-4 cr. ; Student Option; Every Fall & Spring)

This course explores the many technological systems that have come to span our globe, alongside the widespread persistence of traditional technologies. We start with the earliest glimmerings of modernity and industrialization, and move on in time to the building of global technological networks. How have people changed their worlds through technologies like steam engines and electronics? Is it a paradox that many traditional agricultural and household technologies have persisted? How have technologies of war remade the global landscape? We ask how business and government have affected technological entrepreneurs, from railroads to technologies of global finance. We end by considering the tension between technologies that threaten our global environment and technologies that offer us hopes of a new world.

HSCI 1814. Revolutions in Science: The Babylonians to Newton. (GP,HIS; 3-4 cr. ; Student Option; Every Fall & Spring)

Development and changing nature of sciences in their cultural context. Babylonian/Greek science. Decline/transmission of Greek science. Scientific Revolution (1500-1700) from Copernicus to Newton.

HSCI 1815. Making Modern Science: Atoms, Genes and Quanta. (GP,HIS; 3-4 cr. ; Student Option; Periodic Fall, Spring & Summer)

How scientists like Darwin and Einstein taught us to think about nature; everything from space, time and matter to rocks, plants, and animals.

HSCI 2333V. Honors Course: A Century of Science in Modern America. (CIV,WI,HIS; 3 cr. ; A-F only; Every Fall)

Science and technology influence nearly every aspect of our daily lives as well as the communities in which we live, both locally and globally. How did science and technology become such ubiquitous and powerful aspects of American industry, government policy, public life, and international negotiation? What are the responsibilities of scientists and engineers who play a critical role in creating and maintaining these elements? How can the broader public position itself to provide encouragement, insight and critique of the research and applications of science and technology? This course is intended to examine these questions by exploring historical case studies that highlight ethical, political, and social issues that give meaning to, and in turn, are shaped by science and technology. Beginning with the role of scientists as professional experts in the Progressive era, we consider how ideals of scientific management impacted animal lives and workers = bodies. Ethical choices frame the application of expertise and require attention and specific decision-making. Using eugenics as an example, we will reflect upon the interplay between the often na?ve

understanding of heredity and public policy and continue discussion into the application of contemporary genetic testing. Ethics are framed in social and political settings, and we will follow sometimes surprisingly comparable developments in Russia and the United States, with particular attention to large-scale engineering projects in the 1920s and 1930s and the space race in the 1950s and 1960s in order to understand how these reflected, or failed to reflect, risk and human life. This course meets the Historical Perspectives, Civic Life and Ethics, and Writing Intensive requirements as defined by the Council on Liberal Education. Along with Student Learning Outcomes, these requirements will help you continue to build critical tools for your work at the university as well as ways to evaluate and create knowledge in and beyond your intended career area.

HSCI 3211. Biology and Culture in the 19th and 20th Centuries. (CIV,HIS; 3 cr. ; Student Option; Every Fall & Spring)

Changing conceptions of life and aims and methods of biology; changing relationships between biology and the physical and social sciences; broader intellectual and cultural dimensions of developments in biology.

HSCI 3242. Navigating a Darwinian World. (HIS; 3 cr. ; Student Option; Every Fall)

In this course we grapple with the impact of Darwin's theory of evolution in the scientific community and beyond. We'll examine and engage the controversies that have surrounded this theory from its inception in the 19th century through its applications in the 21st. What made Darwin a Victorian celebrity, a religious scourge, an economic sage and a scientific hero? We'll look closely at the early intellectual influences on theory development; study the changing and dynamic relationship between science and religion; and critically analyze the application of Darwin's theory to questions of human nature and behavior.

HSCI 3244. Nature's History: Science, Humans, and the Environment. (ENV,HIS; 3 cr. ; Student Option; Every Fall)

We examine environmental ideas, sustainability, conservation history; critique of the human impact on nature; empire and power in the Anthropocene; how the science of ecology has developed; and modern environmental movements around the globe. Case studies include repatriation of endangered species; ecology and evolutionary theory; ecology of disease; and climate change.

HSCI 3246. History of (Un)Natural Disasters. (ENV,HIS; 3 cr. ; Student Option; Periodic Spring)

Earthquakes, hurricanes, tsunamis, wildfires, epidemic disease, and technological failures? This course will examine large scale natural events in American and world history, the social, technological, and environmental conditions that underlie them, and their historical consequences. Human societies have long been embedded in physical landscapes where they are subject to specific environmental conditions and physical risks:

eight thousand-year-old wall paintings in Turkey depict the eruption of Hasan Dag volcano over the city of Catal Huyuk, for example. But then and now, it takes a certain combination of social conditions and environmental events to create a natural disaster. In this course, we will use historical natural disasters to explore the interconnections between the structures and ideas of human society and environmental forces. Humans have not been simply the random victims of natural disasters; where and how they chose to live influenced the impact of any disastrous event. Examining these events in a historical context will help us see the social, technological, scientific, and environmental systems that have been constantly interacting, but which are normally taken for granted until they break down.

HSCI 3331. Technology and American Culture. (HIS,TS; 3 cr. ; Student Option; Every Fall & Spring)

American culture(s) and technology, pre-Columbian times to present. Artisanal, biological, chemical, communications, energy, environment, electronic, industrial, military, space and transportation technologies explained in terms of economic, social, political and scientific causes/effects.

HSCI 3332. Science in the Shaping of America. (DSJ,HIS; 3 cr. ; Student Option; Periodic Spring)

Science played a central role in taking scattered imperial colonies in North America to world power in just four centuries. This course investigates people, policies, and knowledge-making in a culture whose diversity was a critical part of its expanding capacities. It begins by examining the differences in ways of knowing as well as shared knowledge between Native Americans and Europeans and concludes by discussing how a powerful nation's science and technology shaped international relations. Class, race, ethnicity, and gender provided for a range of perspectives that contributed to science alongside social and economic developments. Online assignments, films and images, along with primary and secondary source readings provide the basis for class discussion.

HSCI 3401. Ethics in Science and Technology. (CIV,HIS; 3 cr. ; Student Option; Periodic Fall)

In addition to examining the idea of ethics itself, this course will examine the ethical questions embodied in specific historical events, technological systems, and scientific enterprises. Commonly, technology is assumed to be the best engineered solution for a particular goal and (good) science is supposed to be objective; however, this is never truly the case, values and moral choices underlie all of our systems for understanding and interacting with the world around us. These values and choices are almost always contentious. Through a series of historical case studies we will grapple with the big issues of right and wrong and the role of morality in a technological world. Our goal will be to learn to question and think critically about the things we

create, the tools we use, and the ideology and practice of science.

HSCI 3421. Engineering Ethics. (CIV,HIS; 3 cr. ; Student Option; Every Fall & Spring)

Ethical issues in engineering research and engineers' public responsibility/practice, using historical cases; historical development of engineering as a vocation/profession; ethical implications of advanced engineering systems such as nuclear weaponry and networked communications.

HSCI 3611. Enlightenment, Revolution, and the Rise of Modern Science. (GP,HIS; 3 cr. ; Student Option; Periodic Spring)

Understanding the origins of our own culture of Modern Science in the Enlightenment of the eighteenth century. Newton's ambiguous legacy; science as wonder and spectacle; automata and monsters; early theories of sex and gender; empire and scientific expeditions; reshaping the environment; inventing human sciences; Frankenstein and the limits of science and reason.

HSCI 3714. Stone Tools to Steam Engines: Technology and History to 1750. (HIS,TS; 3-4 cr. ; Student Option; Every Fall & Spring)

Technology is an enormous force in our society, and has become so important that in many ways it seems to have a life of its own. This course uses historical case studies to demonstrate that technology is not autonomous, but a human activity, and that people and societies made choices about the technologies they developed and used. It asks how technological differences between nations influenced their different courses of development, and why some societies seemed to advance while others did not. We ask how technological choices can bring about consequences greater than people expected, and how we might use this knowledge in making our own technological choices. In particular, we explore the historical background, development, and character of the most widespread technological systems the world has known, from prehistoric stone tool societies, through Egypt and the pyramids, ancient Greece and Rome, the explosion of Islam, and the dynamic and often violent technologies of medieval Europe.

HSCI 3715. History of Modern Technology: Waterwheels to the Web. (HIS,TS; 3-4 cr. ; Student Option; Every Fall & Spring)

This course explores the many technological systems that have come to span our globe, alongside the widespread persistence of traditional technologies. We start with the earliest glimmerings of modernity and industrialization, and move on in time to the building of global technological networks. How have people changed their worlds through technologies like steam engines and electronics? Is it a paradox that many traditional agricultural and household technologies have persisted? How have technologies of war remade the global landscape? We ask how business and government have affected technological entrepreneurs, from railroads to technologies of global finance. We end by considering the

tension between technologies that threaten our global environment and technologies that offer us hopes of a new world.

HSCI 3814. Revolutions in Science: The Babylonians to Newton. (GP,HIS; 3-4 cr. ; Student Option; Every Fall & Spring)

Development and changing nature of sciences in their cultural context. Babylonian/Greek science. Decline/transmission of Greek science. Scientific Revolution (1500-1700) from Copernicus to Newton.

HSCI 3815. Making Modern Science: Atoms, Genes and Quanta. (GP,HIS; 3-4 cr. ; Student Option; Periodic Fall, Spring & Summer)

How scientists like Darwin and Einstein taught us to think about nature; everything from space, time and matter to rocks, plants, and animals.

HSCI 4060. Special Topics in History of Technology. (; 3 cr. ; Student Option; Periodic Spring)

Topics specified in Class Schedule

HSCI 4121W. History of 20th-Century Physics. (WI; 3 cr. ; Student Option; Periodic Spring)

The transition from classical to modern physics (relativity, quantum) and its architects (from Planck and Einstein to Heisenberg and Schrödinger). The WWII bomb projects in the US and in Germany. Post-war developments (solid state, particle physics).

HSCI 4321. History of Computing. (HIS,TS; 3 cr. ; Student Option; Fall Even, Spring Odd Year)

Developments in the last 150 years; evolution of hardware and software; growth of computer and semiconductor industries and their relation to other business areas; changing relationships resulting from new data-gathering and analysis techniques; automation; social and ethical issues.

HSCI 4455. Women, Gender, and Science. (DSJ,HIS; 3 cr. ; Student Option; Every Fall & Spring)

Three intersecting themes analyzed from 1700s to the present: women in science, sexual and gendered concepts in modern sciences, and impact of science on conceptions of sexuality and gender in society.

HSCI 5211. Biology and Culture in the 19th and 20th Centuries. (CIV; 3 cr. ; Student Option; Every Fall & Spring)

Changing conceptions of life and aims and methods of biology; changing relationships between biology and the physical and social sciences; broader intellectual and cultural dimensions of developments in biology.

HSCI 5242. Navigating a Darwinian World. (; 3 cr. ; Student Option; Every Spring)

In this course we grapple with the impact of Darwin's theory of evolution in the scientific community and beyond. We'll examine and engage the controversies that have surrounded this theory from its inception in the 19th century through its applications in the 21st. What made Darwin a Victorian celebrity, a religious scourge, an economic sage and a scientific hero? We'll look closely at the early intellectual influences on theory development; study the

changing and dynamic relationship between science and religion; and critically analyze the application of Darwin's theory to questions of human nature and behavior.

HSCI 5244. Nature's History: Science, Humans, and the Environment. (; 3 cr. ; Student Option; Every Fall)

We examine environmental ideas, sustainability, conservation history; critique of the human impact on nature; empire and power in the Anthropocene; how the science of ecology has developed; and modern environmental movements around the globe. Case studies include repatriation of endangered species; ecology and evolutionary theory; ecology of disease; and climate change.

HSCI 5246. History of (Un)Natural Disasters. (3 cr. ; Student Option; Periodic Spring)

Earthquakes, hurricanes, tsunamis, wildfires, epidemic disease, and technological failures. This course will examine large scale natural events in American and world history, the social, technological, and environmental conditions that underlie them, and their historical consequences. Human societies have long been embedded in physical landscapes where they are subject to specific environmental conditions and physical risks: eight thousand-year-old wall paintings in Turkey depict the eruption of Hasan Dag volcano over the city of Catal Huyuk, for example. But then and now, it takes a certain combination of social conditions and environmental events to create a natural disaster. In this course, we will use historical natural disasters to explore the interconnections between the structures and ideas of human society and environmental forces. Humans have not been simply the random victims of natural disasters; where and how they chose to live influenced the impact of any disastrous event. Examining these events in a historical context will help us see the social, technological, scientific, and environmental systems that have been constantly interacting, but which are normally taken for granted until they break down.

HSCI 5331. Technology and American Culture. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Development of American technology in its cultural/intellectual context from 1790 to present. Transfer of technology to America. Establishment of an infrastructure promoting economic growth. Social response to technological developments.

HSCI 5332. Science in the Shaping of America. (; 3 cr. ; Student Option; Periodic Spring)

The British colonies of North America were founded in precisely the same centuries as a revolution in European's understanding of nature, transformed by the ideas of Galileo, Newton, and Linnaeus and by the technologies of the industrial revolution. Native Americans and African Americans had their own knowledge of nature, and their close understanding intersected with the increasingly scientific techniques brought with European

settlers and enhanced the survival and intellectual capacities of the newcomers. By demonstrating the diversity of scientists in the ever changing demographics of an immigrant nation, the course argues that this diversity and the capacities of newcomers contributed to the national success in science and engineering. The engagement with science at points were used to try to limit access by women or African-Americans, but sciences was also used to discredit false theories through ever expanding emphasis on empiricism as well as attention to the social and economic consequences of innovation. The goal is to demonstrate those historical linkages in particular places and institutions as they influenced and reinforced specific scientific work, while, at the same time, being attentive to how scientific ideas and practices were shaped by American culture.

HSCI 5401. Ethics in Science and Technology. (; 3 cr. ; Student Option; Periodic Fall)

Historical issues involving ethics in science. Ethical problems posed by modern science/technology, including nuclear energy, chemical industry, and information technologies.

HSCI 5421. Engineering Ethics. (; 3 cr. ; Student Option; Every Fall & Spring)

Engineering ethics in historical context, including the rise of professional engineering societies; ethical problems in engineering research and engineers' public responsibility; ethical implications of advanced engineering systems such as the production of nuclear weapons; development of codes of ethics in engineering.

HSCI 5611. Enlightenment, Revolution, and the Rise of Modern Science. (3 cr. ; Student Option; Periodic Spring)

Understanding the origins of our own culture of Modern Science in the Enlightenment of the eighteenth century. Newton's ambiguous legacy; science as wonder and spectacle; automata and monsters; early theories of sex and gender; empire and scientific expeditions; reshaping the environment; inventing human sciences; Frankenstein and the limits of science and reason.

HSCI 5993. Directed Studies. (; 1-15 cr. ; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study. prereq: instr consent

Hmong (HMNG)

HMNG 1011. Beginning Hmong I. (; 5 cr. ; Student Option No Audit; Every Fall)

Listening, speaking, reading, writing skills. Emphasizes development of communicative competence.

HMNG 1012. Beginning Hmong II. (5 cr. ; Student Option No Audit; Every Spring)

Continuation of 1011. Listening, speaking, reading, writing skills. Development of communicative competence. prereq: HMNG 1001 or 1011

HMNG 1013. Medical Hmong. (; 3 cr. ; Student Option No Audit; Periodic Fall & Spring)

This online course is designed for students and working professionals interested in learning the Hmong language in relation to the medical field, including but not limited to: 1. General phrases of greetings and introductions used in interpersonal settings. 2. Conversational Hmong, geared towards medical topics. 3. Medical terminology and cultural expressions relating to health and culture. No prior Hmong language background is required and there are no course prerequisites. While effective communication is essential in all fields of work, it is especially vital in the medical field. This online medical Hmong language course provides opportunities for students to learn and understand Hmong. Emphasis will be on key phrases, vocabulary, and cultural nuances related to the medical field. The course will provide a foundation for speaking, reading, writing, and listening comprehension for individuals interested in working with Hmong-speaking patients, clients, and others in the medical field. Students will have opportunities to learn and apply materials to real-world case scenarios and situations in the medical field.

HMNG 1015. Accelerated Beginning Hmong. (; 5 cr. ; Student Option No Audit; Every Fall & Summer)

Review of grammar/usage, practice in reading/writing. Introduction to Hmong literature and formal writing. Topics in Hmong culture. prereq: Ability in basic spoken Hmong

HMNG 3016. Accelerated Intermediate Hmong. (5 cr. ; Student Option No Audit; Every Spring)

Review of grammar/usage, continued practice in reading/writing. Expanded introduction to Hmong literature/formal writing. Selected topics in Hmong culture. prereq: [1011 and 1012] or 1015 or instr consent

HMNG 3021. Intermediate Hmong I. (5 cr. ; Student Option No Audit; Every Fall)

Listening, speaking, reading, writing. Grammar review/elaboration. Authentic texts, cultural readings, basic compositions, oral presentations. prereq: Hmng 1002 or Hmng 1012 or Hmng 1015

HMNG 3022. Intermediate Hmong II. (5 cr. ; Student Option No Audit; Every Spring)

Continuation of 3021. Listening, speaking, reading, writing. Grammar review/elaboration. Authentic texts, cultural readings, basic compositions, oral presentations. prereq: Hmng 3021

HMNG 3031. Advanced Hmong I. (4 cr. ; Student Option; Every Fall)

Speaking, listening, reading, writing. Complex vocabularies, sentence structures from Hmong newspapers, magazine, folktales, folk songs, novels, poetry, proverbs, riddles. Concepts/terms from social/ritual settings. Idioms, slang, classifiers. prereq: 3022 or equiv or instr consent

HMNG 3290. Hmong Language Teaching Tutorial. (; 1 cr. [max 2 cr.] ; S-N only; Every Fall & Spring)

Students tutor beginning students of Hmong and are part of department's Hmong language team. prereq: Grade of A in 3022

HMNG 3993. Directed Studies. (1-5 cr. [max 15 cr.]; Student Option No Audit; Periodic Fall & Spring)

Guided individual study of Hmong language or linguistics. prereq: instr consent, dept consent, college consent

HMNG 4001. Beginning Hmong I for Graduate Student Research. (; 5 cr. ; Student Option No Audit; Every Fall)

Listening, speaking, reading, writing skills. Emphasizes development of communicative competence. Meets with 1011.

HMNG 4002. Beginning Hmong II for Graduate Student Research. (5 cr. ; Student Option No Audit; Every Spring)

Continuation of 4001. Listening, speaking, reading, writing skills. Development of communicative competence. Meets with 1012. prereq: 4001

HMNG 4003. Intermediate Hmong I for Graduate Student Research. (5 cr. ; Student Option No Audit; Every Fall)

Listening, speaking, reading, writing. Grammar review/elaboration. Authentic texts, cultural readings, basic compositions, oral presentations. Meets with 3021. prereq: 4002

HMNG 4004. Intermediate Hmong II for Graduate Student Research. (5 cr. ; Student Option No Audit; Every Spring)

Continuation of 4003. Listening, speaking, reading, writing. Grammar review/elaboration. Authentic texts, cultural readings, basic compositions, oral presentations. Meets with 3022. prereq: 4003

HMNG 4005. Accelerated Beginning Hmong for Graduate Research. (5 cr. ; Student Option No Audit; Every Fall & Summer)

Review of grammar/usage, practice in reading/writing. Introduction to Hmong literature and formal writing. Topics in Hmong culture. prereq: Ability in basic spoken Hmong

HMNG 4006. Accelerated Intermediate Hmong for Graduate Student Research. (5 cr. ; Student Option No Audit; Every Spring)

Review of proper grammar/usage, practice in reading/writing. Expanded introduction to Hmong literature/formal writing. Topics on Hmong culture. prereq: [4001 and 4002] or 4005

HMNG 4007. Advanced Hmong I for Graduate Student Research. (4 cr. ; Student Option; Every Fall)

Speaking, listening, reading, writing. Complex vocabularies, sentence structures from Hmong newspapers, magazine, folktales, folk songs, novels, poetry, proverbs, riddles. Concepts/terms from social/ritual settings. Idioms, slang, classifiers. prereq: 4004 or equiv or instr consent

HMNG 4008. Advanced Hmong II for Graduate Student Research. (4 cr. ; Student Option; Every Spring)

Speaking, listening, reading, writing. Complex vocabularies, sentence structures from Hmong newspapers, magazine, folktales, folk songs,

novels, poetry, proverbs, riddles. Concepts/terms from social/ritual settings. Idioms, slang, classifiers. prereq: 4007 or equiv or instr consent

HMNG 4102. Introduction to Hmong Language II for Graduate Student Research.

(5 cr. ; Student Option; Every Summer) Continuation of HMNG 4101. Foundations of learning Hmong. Speaking, reading, writing, listening. Communication/interaction, supplemented with grammatical details. Hmong community/culture. Meets with 1002.

HMNG 5040. Readings in Hmong Texts. (; 3-4 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring)

Comprehensive, multidimensional overview of Hmong oral forms/traditions. Hmong legends, mythology, folksongs, birth, marriage/funeral rites. History, social/cultural anthropology. Values, life ways of traditional village society. Societal changes resulting from emigration to U.S.

HMNG 5041. Readings in Hmong Social and Cultural Experience. (3 cr. ; Student Option No Audit; Every Spring)

Students read a variety of authentic texts in Hmong, ranging from traditional folklore, folksongs, stories, research, news articles, and more. Utilizing these authentic texts, students will have in-depth discussions on Hmong literature, vocabulary, language applications and social/cultural structures. In-class discussions focus on language use, social interpretations of texts, and social applications. Class is conducted 80% Hmong, and 20% English. prereq: HMNG 3031 or instructor consent

HMNG 5993. Directed Studies. (1-5 cr. [max 15 cr.]; Student Option No Audit; Every Fall & Spring)

Guided individual study of Hmong language or linguistics. prereq: instr consent, dept consent, college consent

Honors Colloquia (HCOL)

HCOL 3101H. The Honors Thesis - Development. (; 1 cr. ; A-F only; Every Spring)

This course provides a classroom-support format to assist Honors students with developing a firm foundation for research in advance of their final year of study. Most thesis writing will be done under the direction of the thesis advisor and committee, hence assignments in HCOL 3101H are structured to prompt students toward engaging best practices?generically, and in their specific field of study?in preparing to complete thesis work. The course?s ultimate objective is to provide context, structure, third-party scholarly guidance, and a supportive community of peers to promote excellence and expediency in fulfilling the final requirement for graduation with Latin Honors.

HCOL 3102H. The Honors Thesis - Writing. (; 1 cr. ; A-F only; Every Fall)

This course provides a classroom-support format to assist Honors students with the completion of the Honors thesis during their

final year of study. Most thesis writing will be done under the direction of the thesis advisor and committee, hence assignments in HCOL 3102H are structured to prompt students toward engaging best practices? generically, and in their specific field of study? in completing thesis work. The course?s ultimate objective is to provide context, structure, third-party scholarly guidance, and a supportive community of peers to promote excellence and expediency in fulfilling the final requirement for graduation with Latin Honors.

HCOL 3103V. The Honors Thesis?Writing and Revision. (WI; 1 cr. ; A-F only; Every Spring)

This course provides a structured format and outside supervision to assist Honors students and their faculty advisors in drafting and editing the prose of the Honors thesis. Specifically, students are asked to regularly solicit their thesis advisor for specific kinds of feedback on draft writing samples, meet with the faculty member to go over this feedback, and then write up a plan for incorporating the feedback into subsequent drafts. HCOL3103V assumes that the bulk of the work devoted to developing a thesis topic, consulting secondary sources, collecting data, doing analysis, and producing creative output has already been completed. Hence, assignments in HCOL3103V prompt students and thesis advisors to meet regularly in service of crafting prose appropriate for their discipline and project. The final assignment comprises the submission of the completed thesis draft to the full thesis committee. [This is an optional course for students seeking a Writing Intensive requirement while completing their Honors Thesis. UHP students must still take the required thesis support coursework -- either HCOL 3101H, HCOL 3102H, or the required thesis course in their department. Students are encouraged to complete HCOL 3101H or their approved departmental thesis course prior to this course.]

HCOL 3996H. Honors: Research Internship. (; 1-3 cr. [max 9 cr.]; A-F only; Every Fall, Spring & Summer)

Supervised research-based internship with a University Honors Program community partner. prereq: Honors student

Honors Seminar (HSEM)

HSEM 2009H. Contemporary Art and Politics: From Marcel Duchamp to Ai Weiwei. (GP; 3 cr. ; A-F only; Periodic Fall)

This course will discuss the subject matters and practices of major contemporary artists all over the world - including Marcel Duchamp, Joseph Beuys, Christo and Jeanne-Claude, Jeff Koons, Andy Warhol, Yoko Ono, Ilya Kabakov, Jasper Johns, Jean-Michel Basquiat, Ai Weiwei, Shirin Neshat, Marina Abramovic, Kara Walker, etc. ? whose creative work frequently intertwines with commentaries on contemporary politics. As a strategy of being, these contemporary artists seem to use art to engage their audiences in a dynamic dialogue concerning certain aspects of contemporary life. These and other artists want to interpret political reality in order to change

it; that is, to bring about social and political transformation through aesthetic means. This course will provide an overview of the ideas, strategies, and work of the artists as a critical lens for viewing the changing cultural and political landscape of an increasingly technological and globalized world. This course will take a comparative studies approach to the development of contemporary art in its historical, its social and political contexts, the increasing influence of the Western art in Asia, Africa, and other parts of the world, and the cross-cultural communication customs and protocols of international art practice and art criticism. Methodologically, this course first aims at integrating four major disciplinary approaches in discussing art history from post-WWII to the present day: historical studies, sociological studies, psychoanalytic studies and cultural studies. Such an integrated approach will provide a framework and a reference point for us to describe and understand contemporary art in certain historical and political contexts.

HSEM 2018H. The American Quest for Security. (CIV,HIS; 3 cr. ; A-F only; Periodic Spring)

For more than half a century, Americans have been concerned about security--national security as well as personal security. What do Americans mean when they talk about security? What are they worried about, and how do they try to keep themselves safe and secure? The quest for national security has taken shape at the level of foreign policy and military engagement. At the same time, Americans have endeavored to achieve their own safety and security through political and personal efforts. This seminar examines the various ways that citizens have addressed the issue of security in their own lives, whether their fears have been justified, and whether their efforts have kept them safe. The goal is for students to understand the issue of security in a historical context, and to enable them to be effective citizens in a world that often feels dangerous.

HSEM 2026V. The Watershed Workshops. (AH,WI; 3 cr. ; A-F only; Periodic Spring)

We are made of water. We are connected to each other by water. A watershed is a community of living being held together by the water that flows through them. In this class we explore many ways of knowing water, and we will experiment with ways of writing about ourselves, our relationships, and our communities. In this class you will learn how to write creatively in conversation with scientists, conservationists, cultural critics, and many other types of experts.

HSEM 2039H. IAS Thursdays: Across the University & Beyond. (; 3 cr. ; A-F only; Periodic Spring)

In this seminar the best of the University's research and creative work is brought to you. Every Thursday afternoon, the Institute for Advanced Study offers a presentation, a lecture, discussion, and performances by leading scholars and artists from around the world and within the University. Seminar

participants will attend the Thursdays at Four series and meet on Tuesdays to discuss the presentations, which will draw upon disciplines across the University. Students will do supplemental readings related to the presentations and talk with presenters as their schedules allow. This is the perfect seminar to introduce students to the rich variety of work done at the University.

HSEM 2041H. Greece and the Eternal Questions of the Liberal Arts. (CIV; 3 cr. ; A-F only; Periodic Spring)

Throughout history, communities have grappled with the same questions: how do we govern the community? What stories do we tell about ourselves that give meaning to our lives? How do we persuade each other? How do we express our values and identity? Are there roles proper to men and women? Does life have meaning after life ends? Ancient Greek society was a particularly intense location for considering those questions. These are questions fundamental to the liberal arts and fundamental to being a contributing citizen of a democracy in a globalized world. This class examines and critiques the ancient Greek answers in order to gain perspective on how to answer those questions for our own lives and our community.

HSEM 2042H. Jewish Humor: Seriously Funny from Text to Stage to Screen. (DSJ; 3 cr. ; A-F only; Periodic Spring)

This course on Jewish humor, in addition to introducing students to various theoretical frameworks for approaching humor and comedy, will by way of the joke introduce students to a range of classical Jewish texts, including the Torah and Talmud, before moving to an examination of Jewish contributions to the comedy industry and to popular culture from the 19th century until today, especially in the United States. In the U.S. the comic world has been so dominated by Jewish writers and performers that the "People of the Book" have come to be known as the "People of the Joke," and the 2013 Pew Research poll showed that for American Jews a sense of humor is essential to their Jewish identity--more important than ritual and the observance of traditional religious commandments. While surveying a broad range of humor in print, on stage, and in films, students will also learn about the historical and cultural contexts that make such humor not only possible but existentially necessary? a serious business indeed. And we will accomplish all this while laughing hysterically. No prior knowledge of Jewish history and culture is required or assumed.

HSEM 2043H. Finding the "Corporate Soul": Corporate advocacy, social responsibility, and community engagement. (; 3 cr. ; A-F only; Periodic Fall)

As the corporation has replaced government and the church as the dominant social institution in the industrialized world, the use of organizational advocacy as a means of persuasion has predictably increased. One reason for this increase is that stakeholders expect and demand corporations act in

accordance with social and cultural norms. Advocacy messages provide organizations with a tool for promoting change, forming attitudes, and furthering dialogue about substantive issues. By engaging in advocacy, organizations enter into a public dialogue about issues that it views as significant in the realization of its goals and objectives. This seminar seeks to answer questions such as: What contribution does organizational advocacy make to public dialogue? How does corporate advocacy represent the goals and needs of the organization and society? What are the social implications of organizational advocacy? Our goal is to understand organizational advocacy beyond a single issue, campaign, or corporation. To achieve our goal, we will examine a variety of communication theories and international, national, and Minnesota-based campaigns.

HSEM 2044H. Enemies of the People? Journalism & Democracy in the United States. (HIS; 3 cr. ; A-F only; Periodic Spring)

This seminar explores the evolution of journalism's role in the democratic process? from the nation's founding through today's contentious relationship between President Trump and the press. Students will examine critical questions confronting journalism and democracy in the digital age: the growth of partisan news and decline in original reporting; the role of social media in facilitating propaganda and ?fake news?; and concerns about over-commercialization. At the same time, students will place these issues in historical context and consider a number of normative and critical theories concerning journalism's proper role in our civic life. At a time when trust in both journalism and government are at an all-time low, this seminar explores how we arrived at this point and where we might be heading.

HSEM 2053H. The Psychology of Paranormal Phenomena. (; 3 cr. ; A-F only; Periodic Fall)

Research has shown that most Americans hold one or more supernatural, paranormal, or pseudoscientific beliefs. These include beliefs in mind reading, fortune telling, psychokinesis, remote viewing, therapeutic touch, out-of-body experiences, alien abduction, and cryptozoology (Bigfoot, the Loch Ness Monster, etc.). This course has two goals: The first is to introduce students to critical thinking and behavioral research methods. The second is to critically evaluate the evidence for a variety of supernatural, paranormal and pseudoscientific claims. Students will design and carry out their own experimental tests of these claims. The course will also include a guest lecture and demonstration by a local psychic. Reading per week: 40 Pages. Three written papers (3-5 pages each), one group presentation, and 4 quizzes.

HSEM 2055V. Biology and Society: How Evolution Shapes Our Lives. (WI; 3 cr. ; A-F only; Periodic Fall)

Evolution is a contested idea in our society. However, in a very real sense, evolution shapes our lives. In order to understand both

the controversy surrounding evolution and its impact on individuals and society, this course explores a variety of themes at the intersection of biology and philosophy and is co-taught by a biologist and philosopher of biology. We will investigate various dimensions of human evolution and applications of different evolutionary ideas to understanding ourselves with a special focus on health and disease. Then we turn to how humans alter or control the evolutionary process through domestication, conservation of species, and climate change. Finally, we look at the intersection of evolution and religion in the public sphere, the evolution of ideas about the human species (including questions about biological race realism), and how both culture and language evolve. We close the course by reflecting on what the future of human evolution might look like.

HSEM 2064H. Sex, Gender, and the Digital Body. (; 3 cr. ; A-F only; Periodic Spring)

Our online lives are marked by different kinds of gender performance: social media selfies, texting, gaming, and YouTube vlogging, are among the digital genres in which we embody personas that have a gendered component. This course examines the relationship between digital technology and gender embodiment, to trace how concepts of gender evolve across platforms. Drawing examples from Egypt, Iran, the United States, India, and Europe, we see how digital platforms and networks build provide spaces for performance in different cultural contexts.

HSEM 2065H. Making Museums. (; 3 cr. ; A-F only; Periodic Fall)

Museums are a significant, international growth industry. Where museums of the past sought simply to educate their visitors, today's museums also promise to entertain, move, and provoke them, to express identities, unsettle certainties, question histories, and consolidate communities. How do museums follow through on that promise? What techniques do curators use to shape visitor experience? And when do museums' ambitions to create culture also court controversy?

HSEM 2069H. Film as Art: Global Practices. (; 3 cr. ; A-F only; Periodic Spring)

?Film as Art? offers a selective overview of the most influential Non-Anglo-American ?film authors? in post WWII art film history: Federico Fellini, Luchino Visconti, Roberto Rossellini, Michelangelo Antonioni, Vittorio De Sica, Pier Paolo Pasolini, Bernardo Bertolucci, Giuseppe Tornatore (Italy); Fran?ois Truffaut, Jean-Luc Godard, Alain Resnais, Claude Chabrol, Costa-Gavras (France); Ingmar Bergman (Sweden); Rainer Werner Fassbinder, Werner Herzog, Volker Schl?ndorff, Wim Wenders (Germany); Andrei Tarkovsky (Russia); Luis Bu?uel, Pedro Almodovar (Spain); Krzysztof Kieslowski (Poland); Theodoros Angelopoulos (Greece); Abbas Kiarostami (Iran); Yasuji?#333; Ozu, Shind?#333; Kaneto, Akira Kurosawa (Japan); and Hou Hsiao-hsien (Taiwan). Throughout the course, we will learn the definitions of ? art film? and ?film author?, filmmaking as high art practice, major art film movements

in the world: Italian New-Realism, French New Wave, New German Cinema, New Taiwanese Cinema, etc. and their influence on the American filmmaking. We will develop a historical appreciation of art film based on cinematic traditions contained within narrative, documentary, and experimental forms, and acquire a critical, technical, and aesthetic vocabulary relating to particular filmmakers. In particular, we will examine and evaluate the importance of genre and the legacy of individual ?auteurs? throughout the history of post-war cinema. We will study the individuality of the filmmakers and their contribution to our understandings of politics, society, and human relationship.

HSEM 2081V. Modernism in Mexico.

(AH,WI,GP; 3 cr. ; A-F only; Periodic Spring) 'The Mexican Revolution' transformed the country's politics and society. Developments in art and architecture in Mexico during the first half of the twentieth century were equally dramatic. This course will explore the artists and works of art at the heart of this extraordinary cultural achievement. Among the figures to be studied will be the painters Diego Rivera and Frida Kahlo, the architect Luis Barragan, the filmmakers Emilio Fernandez and Luis Bunuel, and the photographers Manuel Alvarez Bravo and Tina Modotti. On a trip to Mexico City during Spring Break, we will be able to view in person many of the most important creations of Mexican modernism, including not only those in museums, but murals and works of architecture. We will also visit such special sites as Kahlo's famous Casa Azul (Blue House) and, for historical background, the great Museum of Anthropology and the pre-Columbian city of Teotihuacan.

HSEM 2207H. Visual and Critical Thinking. (; 3 cr. ; A-F only; Periodic Fall)

This course will examine two forms of thought processes, Visual Thinking and Critical Thinking, and integrate their use and development. Visual Thinking strategies focus on the use of evidentiary reasoning. Based on structured series of exercises of observation and fine art, it develops the ability to examine art, objects, and environments. Critical thinking will focus on the organization of the mind for critical thinking and examines the structures and assumptions we make in our everyday lives. The class will focus on practice, not on lecture.

HSEM 2208H. Housing Matters. (DSJ; 3 cr. [max 6 cr.] ; A-F only; Periodic Spring)

Housing directly affects our physical and mental health, children's educational attainment, our economic opportunities, our transportation patterns and dependencies, and the environment. However, not all people are able to achieve the same levels of well-being because of disparities due to race, ethnicity, and class as they seek to obtain stable, secure, and affordable housing in supportive neighborhoods and communities. We will explore issues of power and privilege that contribute to those disparities. Public policy at the local and national levels will be

examined as it both creates and minimizes social inequities in housing.

HSEM 2242H. Einstein's Universe. (; 3 cr. ; A-F only; Periodic Fall)

In this seminar, we examine the life and work of Albert Einstein (1879?1955). I will have you read the biography of Einstein by Walter Isaacson and watch the season of the TV series Genius based on it. In this course, you will explore several topics covered in the book and the TV series in greater depth. Class time will be divided about equally between discussing various aspects of Einstein?s personal life and learning about Einstein?s fundamental contributions to physics. In the former category, we will look at, for instance, his attitude toward Judaism and Zionism, his view of God, his pacifism, and the relationship with his first wife, fellow student Mileva Maric. In the latter category, the goal is to provide you with a thorough understanding of the basic ideas behind special relativity, general relativity, and quantum mechanics. To achieve this goal we will only need a modest amount of mathematics, which I will develop without presupposing more than the most basic high-school algebra and geometry. Since this material, however, calls into question deeply entrenched ideas about space and time and the nature of physical reality, you should be prepared to challenge yourself, conceptually and mathematically. Your reward will be a much deeper appreciation than you may have thought possible for a non-physics/non-math major of some famous parts of Einstein?s science, including time dilation, the twin paradox, $E=mc^2$, Minkowski space-time, curved space-time, black holes, gravitational waves, the expanding universe, cosmological constant, and quantum entanglement. By the end of the course, you should have a solid understanding of some of Einstein?s most revolutionary ideas, of how he arrived at them, at what personal price, and in what broader socio-political and cultural context.

HSEM 2325H. Fantasy: A Ghastly, Wicked Introduction. (GP; 3 cr. ; A-F only; Periodic Spring)

This seminar is a ghastly wicked ride through main genres and formats of fantasy literature for adolescents and young adults. Fantasy is explored as a literature of possibilities and empowerment. The focus is on eight principal genres and on the role of fantasy in nurturing moral imagination, creative thinking, and the human potential.

HSEM 2413H. Insights, Ideas, and Innovation. (; 3 cr. ; A-F only; Periodic Fall)

This course is designed to introduce students to techniques for discovering everyday problems and fashioning potential solutions to those problems. Because the course material deals with ideas and idea generation, it is designed to be helpful to many future careers and callings by unlocking individual creative thinking skills. During the semester we will explore the genesis of ideas and the relationship between deep insight, empathy, consumer problems, ideas, and innovation. Specific topics to be covered during

the semester include the role of insights, ethnography, and discovery techniques; individual and group creativity; the creative process and where ideas come from; innovation and the value thereof; and effective communication of ideas. This course seeks to provide students with the skills, tools, and mindsets to enable them to discover other people's problems from which potential solutions might be built. These solutions include services, products, and potential businesses.

HSEM 2512H. The Mathematics of Elections and Social Choice. (MATH; 3 cr. ; A-F only; Periodic Fall)

This course will focus on the mathematics behind Voting Theory, apportionment, and fair division. Whether it is choosing a student association representative or ranking NCAA sports teams, there are a variety of selection methods that could be employed, but which is best? This course will use mathematics to study the strengths and weaknesses of different ways to tally votes or hold an election. Voting methods to be studied include single ballot vs instant-runoff (also known as a ranked-choice), as well as point-based rankings. This course will also explore the mathematics behind apportionment (and how it can lead to paradoxes), and how mathematics is used to evaluate the fairness of congressional districts in the context of gerrymandering. Finally, we will investigate ways to measure power differences between coalitions, and how to approach problems of fair-division like rent-sharing.

HSEM 2515H. Experiencing Local Environmental Solutions. (; 2 cr. ; A-F only; Periodic Fall)

This is a topical, field-trip-based course. This seminar will address some of the solutions to the environmental problems that affect our society by examining the science and by experiencing the solutions that are used on campus or in the neighboring community. Each week will focus on a solution to a different environmental issue (see schedule below). We will visit the places designed as environmental solutions, hear from the experts, and discuss the engineering and human aspects of these solutions. We will go to areas of campus that you would normally not visit or be able to visit. The field-trip destinations are accessible by campus bus, city bus, or train. The class will involve weekly reading and writing assignments. There will also be a semester-long, hands-on project to devise a realistic, potential solution to an environmental issue.

HSEM 2516H. Slow Death by Rubber Duck: Chemicals We Use and Their Effects on the Environment and Us. (; 2 cr. [max 3 cr.] ; A-F only; Periodic Spring)

We use chemicals every day. We bathe in chemicals. We apply chemicals to our lawn. Chemicals are sprayed to control insects. While chemicals are an important part of modern life, these chemicals wind up in the environment and in our bodies. This seminar will examine how our use of chemicals drives our exposures

and ultimately, where these chemicals wind up in the environment and what their impacts are. This seminar is designed for you to look at how you use chemicals in your daily life and how this influences your exposure to chemicals, environmental releases of chemicals, and the impact of chemicals on humans and the environment.

HSEM 2528H. The Quantum Century. (; 3 cr. ; A-F only; Periodic Fall)

This seminar has a STEM and a humanities component. The STEM component consists of a rigorous but algebra-based introduction to the basic formalism of quantum mechanics. This formalism is much easier to learn than most of its applications in physics (which typically require a fair amount of calculus). And mastering this basic formalism suffices to understand some of the key ideas behind such exciting recent applications as quantum computing and quantum cryptography (which will also be addressed in this seminar). The humanities component consists of a critical review of the history of the debates over the foundations of quantum mechanics from the late 1920s to the present. The seminar thus has two main objectives. The first is to introduce students with a wide variety of backgrounds to an exciting area at the intersection of physics, mathematics, and computer science challenging our understanding of the physical world but at the same time suggesting new ways of harnessing nature for our purposes. The second is to combat simplistic views of "The Scientific Method" by tracing in a concrete and engaging example how science is actually done?warts and all.

HSEM 2529H. Explanation and Evidence in Crime Fiction and in Science. (; 3 cr. ; A-F only; Periodic Fall)

Sherlock Holmes, in solving his cases, is relying on a pattern of reasoning known as Inference to the Best Explanation (acronym: IBE). Holmes's explanation of how some crime was committed tends to be so convincing that it counts as evidence that it was actually committed that way. Although our use of it is seldom as clever as Holmes's, we rely on IBE all the time in everyday life. So do scientists. In science, however, IBE tends to be less reliable. That a theory explains a range of phenomena does not make that theory true. In other words, we cannot simply take a theory's explanatory power as evidence for it. Yet, scientists tend to put great emphasis on their theories' explanatory power if they want to convince others of it. Which raises the question: What exactly is the relation between explanation and evidence in science? In this seminar, we will examine this relation, using examples from everyday life, crime fiction and the history of science (involving such luminaries as Copernicus, Newton, Darwin and Einstein). To improve our understanding of IBE we will contrast it with a probabilistic account of evaluating evidence known as Bayesianism.

HSEM 2540H. Understanding the Russian Land. (ENV,HIS; 3 cr. ; A-F only; Periodic Spring)

Encompassing more than 6.5 million square miles, Russia is an immense and ecologically diverse country. The environment of the frigid and heavily forested heartland of early Russian civilization, as well as that of the "wild field" (the Eurasian steppe) on its border, have posed a series of challenges to Russians and have left an indelible mark on modern Russian culture. In this interdisciplinary seminar, we will study how Russians have conceived of and used nature from the medieval period to the dissolution of the Soviet Union. Articulating a particular approach to nature has been integral to several ideological and cultural projects in Russian history, including the formation of a literary tradition, the establishment of a multi-ethnic empire encompassing several biomes, and the development of a vision of Soviet science conquering and reshaping nature and the world. In the period we will study (the fifteenth century to 1991 Russia) underwent several profound epistemological shifts, and a particular focus of this course will be how the ways Russians created natural knowledge changed over time. Knowledge is power, and we will study how natural knowledge was used to strengthen and expand the state in the medieval, imperial, and Soviet periods. Another major focus of this course is the ravages that nature and humankind have inflicted on one another, and we will study how the environment influenced the development of Russia's form of agricultural slavery, serfdom, as well as the history of environmental degradation, including deforestation, the establishment of heavy industry, and nuclear disaster.

HSEM 2541V. Campus Obscura: A University of Minnesota Cabinet of Curiosity. (HIS,WI; 3 cr. ; A-F only; Periodic Fall)

This course examines the history of science, technology, and medicine through physical objects - maps, rare books, artifacts, instruments, specimens, manuscripts and considers how they are used to write history, produce public exhibits, and create identities. Short readings will introduce ideas about how experts have used these materials to write history, to produce public exhibits, and to create identities, and the focus of the course will be on objects themselves and having students do research that facilitates their understanding of historical context. The University of Minnesota has many significant collections of artifacts and other items that are rich resources for the exploration of historically significant material culture, and continue to shape the University of Minnesota. Students will visit the Wangensteen Historical Library of Biology and Medicine, the Goldstein Museum of Design, the University Archives, the Weisman Art Museum, and the College of Biological Science's Conservatory, among other sites.

HSEM 2621H. Environmental Futures: Climate Change Impacts and Strategies for Building Resilience. (; 2 cr. ; A-F only; Periodic Fall)

?Climate change is the most serious challenge that humanity has ever faced,? (Amitav Ghosh). This seminar will focus on the future

of climate change, its emerging and far-reaching impacts on social and ecological systems, and the development of innovative strategies to address this challenge. The multidimensional problem of climate change will be examined through a variety of lenses, including the natural sciences, social sciences, and humanities, and the perspectives of indigenous peoples, environmental justice, and future generations. The emphasis is on the human dimensions of climate change. Throughout the course, a variety of techniques and exercises developed by futurists will be used to explore possible, plausible, and preferable environmental futures and develop environmental foresight expertise among attendees. Students will be challenged to build robust, agile and resilient policy options to achieve valued climate change outcomes. The purpose of this course is to prepare students to anticipate and design alternative climate change futures and create effective decisions and policies to achieve them.

HSEM 2623H. Biopiracy and seed for the post apocalypse: Genebanks, Genetic Diversity, and Identity. (TS; 3 cr. ; A-F only; Periodic Spring)

Our world food supply faces a variety of threats: changing climates, precipitation, and disease pressures; evolving pathogens; depleted soils; even nuclear war. Our best methods for responding to these threats involve making use of crop biodiversity. To that end, genebanks collect and preserve diverse crop accessions. In order to be effective, genebank curators have to make decisions about what to preserve. Those decisions are both scientific and cultural and like any such decisions have their critics and detractors. We will discuss genetic markers and measures for population diversity and how such tools can be leveraged to gain knowledge about crop diversity, make management decisions, and create improved varieties. However, food is cultural, and for many our relationship to crops is central to identity. Therefore, we will also examine who is privileged and left out of dominant narratives, and explore alternate ways of understanding crop diversity and preservation. Finally, we will explore two case studies. The first is Seed Savers in Decorah Iowa and its ties to Midwest Agrarianism. The second is two related Peruvian organizations: The International Potato Center and Parque de la Papa. Both of these organizations preserve Peruvian native potatoes, one as part of an international NGO using the latest genetic techniques and one using traditional agricultural practices in six associated Quechua communities.

HSEM 2624H. "Reality 101" - A Survey of the Human Predicament. (; 4 cr. ; A-F only; Periodic Fall)

How is the economy like a hurricane? Where does money come from? Will economic growth last forever? What is wealth? How many hours would it take you to generate the same amount of energy in a gallon of gasoline? Why are you so confident in your own beliefs? Why do you spend so much time on social media? Why do we want 'more' than our neighbors? What do all of these questions have to do with the

environment? With your future? And what if our most popular societal beliefs about these issues turn out to be myths? Reality 101 will delve into these questions and unify them as they apply to the major challenges humanity faces this century, among them: slow economic growth, poverty, inequality, addiction, pollution, ocean acidification, biodiversity loss, and war. The course will provide students with a broad exposure to the foundational principles central to addressing these interrelated issues. The readings and lectures will cover literature in systems ecology, energy and natural resources, thermodynamics, history, anthropology, human behavior, neuroscience, environmental science, sociology, economics, globalization/trade, and finance/debt with an overarching goal to give students a general understanding of how our human ecosystem functions as a whole. Such a systems overview is necessary to view the opportunities and constraints relevant to our future from a realistic starting point. Though the hard science relating to sustainability will be surveyed, few answers will be presented and it is hoped that creativity and group dialogue will lead to emergent ideas on how these big themes fit together. While the class material is daunting and intense (reflecting our world situation), the course itself will be enlightening and deeply informative, with an open, engaging, and entertaining class atmosphere.

HSEM 2635H. Germs and Civilization. (; 2 cr. ; A-F only; Periodic Fall)

This course explores the interaction of human, animals, and microbes and examines how microbes, pathogenic microbes in particular, have influenced human evolution and civilization. The course expects to expose students to the thinking from a historic and interdisciplinary perspective that microbes, especially those causing pandemics and epidemic for centuries, may have played critical roles in influencing human history and shaping modern civilization, although social, cultural, technical, and other factors have been major players. Emphasis will be placed on a few microbes, such as plague, smallpox, yellow fever, malaria, tuberculosis, retrovirus, and influenza and their impacts on important events in human history. Microbes may also impact human evolution as a fraction of human genome is from retrovirus and some genetic diseases including cystic fibrosis in humans may arise from resistance to epidemics of deadly microbes. Knowledge of general microbiology will be introduced but is not a requirement.

HSEM 2637H. Small but Impactful: Insects and the Environment. (ENV; 3 cr. ; A-F only; Periodic Spring)

Harvard biologist E. O. Wilson referred to insects and other invertebrates as the "little things that run the world". Insects may be small but are numerous, diverse and present almost everywhere ? as humans we encounter them not matter where we are and what we do! In this course, Honors students and the Instructor will jointly explore influences of insects as pollinators, ?recyclers?, and as invasive species that lead to environmental

pollution; adaptations that enable insects to handle diverse environmental conditions including climate change; and impacts on humans of insects on planet earth. The course will include brief interactive lectures, select readings and videos for providing background and context related to a specific topic. Students will then explore each topic by engaging in open conversations, small/large discussions using active learning approaches such as think-pair-share, jigsaw discussion groups, and debates for sharing their perspectives based on individual backgrounds/major/interests.

HSEM 2707H. Battling the Bugs: Anthrax, Ebola, and Everyday Life - PubH Strategies for Prevention & Control. (; 3 cr. ; A-F only; Periodic Fall)

We share the planet with a myriad of living things. The smallest of those are the ones that may impact our lives the most. These creatures are in the news nearly every day: Ebola virus in Western Africa, measles outbreak among visitors to Disneyland, foodborne outbreaks on cruise ships, Zika virus precautions for pregnant women. This course will focus on the importance of infectious disease prevention, control, and treatment to the health and well-being of the global community. Students will explore the many facets of public health response operations and decision-making which are often behind the scenes and not well understood by the general public.

HSEM 2709H. Climate Change: Indisputable Science, Unprecedented Consequences, and Transformative Responses. (; 3 cr. ; A-F only; Periodic Spring)

Climate change presents an almost unimaginable crisis to our existence. Its profoundness is coupled with an urgency to find solutions that contribute to collective and transformative actions. There is scientific consensus that the existence of human beings (and many other species) on the planet is in danger because of fossil fuel emissions. Human activity has led to increasing greenhouse gases (especially carbon dioxide) and a warming planet. A warming planet has negative consequences in terms of environmental degradation, extreme weather events, and social disruption?all of which have health and economic consequences. While the basic problem is acknowledged by scientists in diverse fields, many of the proposed responses to the current and projected climate-related changes are contrary to powerful political, cultural, industrial, and economic interests. The challenges posed by these interests, as well as the complexity (and sometimes imprecision and uncertainty) of the science, make it difficult for individuals to clearly understand the threats and the opportunities that must be addressed in the next several decades if the earth is to remain habitable for almost 9 billion species. Hearts and minds must change quickly. Public and professional educational efforts must be massive, with clear messages of hope, urgency, and direction. Local, national, and global adaptation and mitigation responses must thus be palatable and accessible to diverse communities as well as to powerful economic and political

entities. Policies, programs, services, and educational efforts must necessarily be created by multidisciplinary teams using community-focused approaches. These efforts must reach all affected individuals and entities, especially those who are most vulnerable to the negative sequelae of climate change. They must also effectively address the many political, social, and cultural barriers to the kind of transformative actions that are necessary to maintain the habitability of the planet. The course will take a multidisciplinary perspective to encourage students to learn and critically evaluate information about three major content areas: (1) the science of climate change and its public health contextualization; (2) the existing, and projected, consequences of climate change to the environment, to human health, and to institutions and infrastructures that affect public health; and (3) public health mitigation and adaptation responses for industries, governments, communities, and individuals.

HSEM 2716V. Social Justice and Health. (DSJ,WI; 3 cr. ; A-F only; Periodic Spring)

This seminar explores matters of social justice related to health. Class sessions predominantly focus on discussion of specific practical issues such as the promotion of race-specific therapies as an approach to ameliorating health disparities, the inclusion of homeless persons in research providing free access to health care, and the allocation of HIV medications in impoverished developing countries. Readings from multiple disciplinary perspectives ground examination these social justice issues. Discussions incorporate consideration of these issues? institutional and broader social contexts.

HSEM 2719H. Mass Incarceration and Public Health: An American Crisis. (; 3 cr. ; A-F only; Periodic Fall)

Mass incarceration is one of the major public health challenges facing the United States. Each year, millions of people cycle through the criminal justice system. Justice-involved people experience far higher rates of chronic health problems, substance use, and mental illness than the general population. Further, our country's prisons and jails are often ill-equipped to handle these complex health conditions, perpetuating health inequities. Mass incarceration contributes to powerful health disparities in the United States, affecting the health of entire communities and across generations. This course will examine the intersections of mass incarceration and public health. We will explore individual and community-level health impacts of incarceration, with a focus on the relationship between mass incarceration and health disparities, particularly in communities of color. This course will consider specific populations at particularly high risk, including detained youth, pregnant incarcerated women, and the elderly. Students will have an opportunity to tour local correctional facilities and hear directly from experts in the field, including formerly incarcerated people.

HSEM 2719V. Mass Incarceration and Public Health: An American Crisis. (WI; 3 cr. ; A-F only; Periodic Fall)

Mass incarceration is one of the major public health challenges facing the United States. Each year, millions of people cycle through the criminal justice system. Justice-involved people experience far higher rates of chronic health problems, substance use, and mental illness than the general population. Further, our country's prisons and jails are often ill-equipped to handle these complex health conditions, perpetuating health inequities. Mass incarceration contributes to powerful health disparities in the United States, affecting the health of entire communities and across generations. This course will examine the intersections of mass incarceration and public health. We will explore individual and community-level health impacts of incarceration, with a focus on the relationship between mass incarceration and health disparities, particularly in communities of color. This course will consider specific populations at particularly high risk, including detained youth, pregnant incarcerated women, and the elderly. Students will have an opportunity to tour local correctional facilities and hear directly from experts in the field, including formerly incarcerated people.

HSEM 2721H. Introduction to Medicine. (; 2 cr. ; A-F only; Periodic Fall)

This is a course designed for undergraduate students who are interested in medicine. Students will get a broad introduction to the field of medicine via core lectures, book reading, movies, and interactive group discussion, group presentation, and writing a review paper on pain medicine. Emphasis will be placed on pros of cons of medicine as a career, medical school admission requirement, research projects, simulation lab visit, hand on ultrasound experience, understanding the life of a physician and medical student, and practice opportunities in various specialties. Students will meet with medical students, physicians, and clinical scientists who will share their experiences. In addition, the student will have opportunities to explore research in a medical research laboratory. NOTE: Course is taught First Half of Term only

HSEM 2722H. Human Disease Influenced by Environmental Factors. (; 3 cr. ; A-F only; Periodic Fall)

This seminar aims at understanding whole organisms and cellular functions in response to various macro-environmental events, i.e. radiation, food carcinogens, global warming, pollution etc., that promote the disease process. Cells are consistently exposed to changing conditions, and they are programmed to effectively respond to diverse stimuli or insults under normal physiological condition. However, when such conditions exceed cell's inner capacity, cells can undergo apoptosis, or become senescent or in some cases, they can acquire pathological properties, which lead to the progression of various human diseases. In particular, environmental changes such as climate change caused by human activities can significantly affect human health and ecosystems, and there are growing concerns about emerging new disease that is a threat to human health.

HSEM 2724V. The Sex Talk You Should Have Had: Controversies in Sexual Health.

(CIV,WI; 3 cr. ; A-F only; Periodic Spring)
Reproductive and sexual health is an increasingly important topic in community settings. Pharmacists can play a vital role in promoting safe and healthy practices that will improve the health of their communities and are an important source of reproductive and sexual health information and advice. This course is designed to expand and enhance community-based reproductive and sexual health knowledge and skills while preparing students to be informed and active participants in ethics driven debates surrounding reproductive and sexual health. The Sex Talk You Should Have Had covers three important sections in sexual health that interface in the community pharmacy setting. These topics include the HPV vaccine, contraception, and Sexually Transmitted Infection/Disease (STI/STD) testing and treatment options. Each of these sections is addressed in weekly modules that provide thorough introduction to the topic, an overview of how the treatments or medications work, and related contemporary topics of debate. This is a hybrid course with extensive online discussion with limited in-class meetings.

HSEM 2725H. Zombies and their Souls: Philosophy, Bioethics and the Undead. (; 3 cr. ; A-F or Audit; Periodic Spring)

We want money, love and fame. They want brains. Who is to say that our values are superior? This seminar will use zombie movies as a way of exploring fundamental issues in bioethics, the philosophy of mind and the philosophy of psychology. Are zombies conscious? Do they have free will? Should they have rights? If zombies could be safely controlled, would it be unethical to make them slaves or pets? What about experimenting on them, or using their organs for transplantation? If I were to become a zombie, would I still be me, or would I be something else?

HSEM 2801H. Think Like a Lawyer: The Art and Adventure of Torts. (CIV; 3 cr. ; A-F only; Periodic Fall)

Law is the foundation of modern society. The ability to understand our legal system is invaluable in any profession, ranging from business and health to science or art. This seminar offers an introduction into legal thinking: Not merely what the laws are, but why we have them and, more importantly, how we come up with them. As a focus, we will be grounding ourselves in torts, a fundamental area of legal education that covers the civil wrongs. Students will have an opportunity to get a feeling for the law school experience as we use the case method, along with some Socratic method and ample discussion. We will focus on the basics of legal analysis, and learn how to apply that to critical thinking. Students successfully completing this seminar will be mentally armed and dangerous.

HSEM 2802H. Cinematic Representations of American Law. (DSJ; 3 cr. ; A-F only; Periodic Spring)

Representations of American law in 20th century American films offer unique

perspectives that help us understand the larger context in which the legal system operates-- and offer a visual supplement to traditional ways--case law and statutory interpretation of reading the law. This course will discuss how cinematic interpretations of American law have been perceived and accepted inside and outside Hollywood, inside and outside the legal community, and inside and outside the United States. The course will begin by teaching and discussing some fundamentals of American law, using legal films to illustrate the doctrinal concepts and processes involved in civil procedure, criminal law and procedure, jury trials, evidence, contracts, torts, constitutional law, the First Amendment, legal ethics, professional responsibility, etc. Using clips from of cinematic masterpieces, we will visualize and discuss sophisticated legal concepts. This interdisciplinary approach-teaching law through film-- will engage students visually, to help them better understand and discuss legal concepts. It will also help students appreciate the broader humanities and arts context in which legal discourse evolves, especially in a today's global era. Course readings will include statutes, legal cases, historical documents, novels, and commentaries. Viewings will include classic legal films.

HSEM 2803H. Making Your Voice Heard on Climate Change. (; 3 cr. ; A-F only; Periodic Fall)

Climate change will be a part of the rest of your life. No matter where you live, climate change will have an impact. No matter your career, adapting to a new climate will be part of it. How can you make your voice heard to help your community and workplace adapt to, and mitigate, the effects of climate change and associated Grand Challenges? And how can you do so in a fair and equitable manner? Everyone is aware of young activists like Greta Thunberg. Whether you want to be organizing large activism campaigns or become an effective advocate for local issues, this course will go over some of the basic frameworks for advocacy and change-making. Basics of climate change will be covered. The course will feature guest speakers from various campaigns and organizations. Students develop their own advocacy campaigns as a way to center theoretical learning. The focus of this class is on climate change but these basic tools and frameworks are useful for any issue.

HSEM 3013H. Caravaggio: Bad Boy of the Baroque. (AH; 3 cr. ; A-F only; Periodic Spring)

This seminar examines the life and art of Michelangelo Merisi da Caravaggio (1571-1610), one of the most arresting and controversial painters in the history of art. Our examination will range from issues of self-fashioning and self-portraiture to questions of biography, patronage, and iconography, and will include a viewing of Simon Schama's 2006 film, *Caravaggio*. Special emphasis will be given to problems of methodology and to various ways of "reading" and viewing his complex and provocative works. During Spring Break the seminar will incorporate a Study Abroad component in Rome, where we will

be able to see some of his most important paintings, in context, as well as works by many other Baroque masters.

HSEM 3023H. Race: The History of an Idea in North America. (DSJ,SOCS; 3 cr. ; A-F only; Periodic Fall)

This Honors seminar explores the roots and rationales presented when constructing and upholding the idea of race. This class examines processes of racial formation in science, law, history, immigration policy, education, leisure, adoption, marriage, and medicine. The course investigates how Americans came to mythologize, understand, identify, and codify the importance of race since the mid-nineteenth century. Racial formations and classifications shift according to political climates, such that immigration debates, changing gender norms and concerns over interracial marriage transform how we imagine racial groups. We will also look at how race has been used to pathologize, eroticize, vilify, fetishize, and medicalize purported ? problem people, ? like immigrants, the poor, and the sick. For instance, seeing people of color as particular hazards during pandemics, like the 1918 Influenza or 2020 COVID-19 crises, has deep roots in longstanding racial theories. Using memoirs, legal cases, history of medicine, laws, photographs, oral histories, and secondary source readings, this class traces the history of America's fascination with race and how race came to define so many aspects of American life during the twentieth century.

HSEM 3031H. Art, Power, and Politics: Bernini and His Transformation of Baroque Rome. (AH; 3 cr. ; A-F only; Periodic Spring)

This seminar explores the transformation of Rome in the seventeenth century. Our lens for understanding the remaking of the Baroque city will be the works of Gian Lorenzo Bernini (1598-1680), one of the most remarkable, influential, and powerful artists in the history of Western art. Our examination will focus on Bernini's sculpture and architecture that he carried out on behalf of popes and cardinals, with special emphasis given to their political, religious, and social meanings. We will also explore Bernini's biography and examine the style and iconography of his sculpture, architecture, and painting. We will view Simon Schama's 2006 film, *Bernini*, and, during the Spring break, have the extraordinary opportunity to study Bernini's works first-hand in Rome.

HSEM 3054H. Minds, Brains, and Innovation. (; 3 cr. [max 6 cr.]; A-F only; Periodic Spring)

This seminar course will examine recent research findings from psychology and cognitive neuroscience to arrive at a better understanding of the conditions that foster, or impede, flexible thinking or 'mental agility.' Two key questions will be examined throughout. First, what are the relative roles of predominantly controlled or deliberate modes of cognitive processing versus more automatic (or spontaneous) processes in enabling and sustaining creatively adaptive thinking?

Second, how do mental representations at differing levels of specificity highly abstract versus highly specific contribute to flexible thinking?

HSEM 3056H. Malignant Political Aggression, Heroic Resistance, and Trumpism. (; 3 cr. ; A-F only; Periodic Fall)

This seminar begins with an examination of the role of conformity, denial, and obedience in perpetrating malignant political aggression. We will examine personal and situational forces, social dynamics of small group norms and behaviors, and broader social and institutional arrangements, which interact to induce individuals and groups to participate in various forms of malignant political aggression. We will examine the role of dehumanization, compartmentalized thinking, and perception, personality predispositions, etc. To counterbalance the pessimism inherent in this focus, we will also examine political heroism and altruism, which often arise in response to malignant political aggression. Are these resisters ordinary or extraordinary people, and how do they differ from perpetrators? How many ethical 'kudos' do they deserve and why? What is their role in instantiating the larger norms of ethical conduct in our political system? In examining these more general forces, we will rely on specific examples such as the holocaust, the massacre at My Lai, the rescuers of Le Chambon, and several others. Finally, through the lens developed in this seminar, we will assess U.S. government actions, and resistance to those actions, of the last four years.

HSEM 3064H. Historians Write Autobiography. (; 3 cr. ; A-F only; Periodic Fall)

Historians who write autobiography face some obstinate challenges. As professional historians they know their sources are necessarily selective and incomplete, and that every perspective brings its own bias. Their own flawed memory tells them as much. Yet they intend to capture something about their own lived experience that, when recounted with as much candor as possible, will illuminate their personal past in ways that speak to others. When historians bring their skills of critical historical analysis to their own lives, what kinds of autobiographies do they produce? How is their understanding of the craft of history, its methods and its limitations, reflected in their personal life stories? We will explore how historians have engaged in what can be called a writing of the self, with a focus on the second half of the 20th century. We will examine how they place themselves into particular social and political contexts as historical figures with a valuable perspective on their life and times. Students will research and write their own short autobiographical pieces.

HSEM 3065H. Trust, Technology and Human Communication. (; 3 cr. ; A-F only; Periodic Fall)

Trust is a central component of our lives. Without trust, we could not function as individuals, and we would not have functioning social and civic systems. How and why

do humans trust? Whether face-to-face or mediated by technology, one-on-one or in groups, the basis for how we build trustworthy, durable relationships is our communication. For millennia, this communication took place with our bodies: via gestures, facial expressions, sounds, movements, and eventually, through spoken language. Later, writing and its technologies supplanted earlier forms, creating new opportunities for trust. In this seminar, we will explore the relationship between trust, technologies, and human communication by a) reviewing research from sociology, rhetoric, psychology, and other fields to understand the nature of trust; b) exploring the history of communication technology, from the oral cultures to the first forms of writing to the printing press to the Internet; c) investigating trust, technology, and communication in specific contexts, with a focus on social media and the Internet and key features such as the confirmation bias and the changing nature of expertise. These contexts will include medical/health communication; social actions; online communities; political and scientific reporting.

HSEM 3066H. The Tale of Genji: A View of Aristocratic Culture in Early Japan. (; 3 cr. ; A-F only; Periodic Fall)

The early eleventh-century novel *The Tale of Genji* by the Japanese court lady Murasaki Shikibu is thought by many to be the first novel in world history and the first major work by a known woman author. In this class, we will read the entire work in Royall Tyler's English translation and explore its literary qualities, its ways of representing character, and its methods of plot construction. Can this book be treated as a modern novel, or can it only be understood as a product of its times? Does the existence of a large community of writing women at this point allow us to explore a distinctive female perspective on this period? How did women and men express themselves and communicate through literature, and how did gender difference express itself in what they wrote?

HSEM 3069H. Literature and Medicine. (; 3 cr. ; A-F only; Periodic Fall)

The sign carved above the door to the ancient Library at Thebes read: "Medicine for the Soul." This course focuses on the intersection of literature and medicine, both from the point of view of the medical field and from a literary standpoint—medicine in literature, but also literature in medicine. For example, both narrative and storytelling are essential components of literature but they can also help doctors understand patients' stories. Likewise, the recent documentary *Still Dreaming* tells the story of a production of Shakespeare's *A Midsummer Night's Dream* by residents in a nursing home, revealing the benefits of the literary arts for health and happiness. Throughout the semester, we will examine works that connect the world of science with the long history of recorded human experiences in the literature of illness, the body, and death. Through analysis of novels, short stories, memoirs, poetry, drama, film and television, we will explore the intersection of literary works, narrative studies, and medical

narratives to address the healing power of words. This course should interest students who care about how literature makes a difference in the world, and who are curious about how medicine is related to the arts. The course may include guest speakers as well as a visit to the Center for Humanities in Medicine at the Mayo Clinic.

HSEM 3071H. People, Pines, and Fire: Shaping the forested landscapes of Minnesota and the Great Lakes. (ENV; 3 cr. ; A-F only; Periodic Fall)

Wildland fire as an agent of renewal, vegetation change, and maintenance has been a critical process in the pine forests of the Upper Great Lakes. The vast pineries, so sought after by settler-colonialists as a commodity evolved over millennia with fire. Fires were both natural, ignited by lightning strikes, and fire was applied judiciously by Native American groups to manage landscapes and improve resources. It was an act of reciprocity: carefully tending the land to keep it healthy, while utilizing resources in return. However, the advent of effective fire suppression to protect forests first as a commodity and later for recreational enjoyment has led to substantial changes in forest communities while at the same time erasing an important cultural activity from the landscape. This seminar course explores the deep connections between fire and the emergence of Great Lakes forests, as well as the cultural use of fire as a tool. In this course, we will explore the development of effective fire suppression, the emergence of fortress-ecology/conservation, and the impacts of reduced fire activity on forest resilience. We will also discuss the concept of wilderness and traditional ecological knowledge and the relationship with fire management today, particularly within the framework of a changing climate. This course is meant to merge interdisciplinary topics in ecology, climatology, and geography to explore the important connections between humans and their physical environment in the Upper Great Lakes pine landscapes. The course will be discussion based with frequent visits from resource professionals and the instructor's Indigenous research collaborators.

HSEM 3075H. Humans and Rights in Historical Perspective. (CIV; 3 cr. ; A-F only; Periodic Fall)

In the second half of the twentieth century, in the wake of World War II and decolonization, a language of human rights developed that emphasized rights as individual and universal. Many of us now take this particular notion of human rights as a given. In this seminar, we will explore the complicated and multi-faceted history of how societies in different parts of the world have defined what it is to be human, the treatment owed to humans, and various kinds of rights. Some of these philosophies are grounded in religion and others in secularism. Some identify the nation-state as the adjudicator of rights, while others would empower international organizations or grassroots movements. For some, the individual is sacrosanct, while for others, persons are inextricably embedded in social

webs. We will study how these concepts have changed over time as the globe has become increasingly interconnected and consider their relevance and application in our contemporary society. The semester will be divided into five mini units. In the first, we will explore concepts of the human and of rights in major faith traditions. In the second, we will examine the debates that emerged from European colonialism in the Atlantic world. In the third, we will study the emergences of an explicit language of human rights after World War II. In the fourth, we will look at human rights issues in the United States. And in the final unit, you will pursue your own research and collaborate in small groups to make presentations and facilitate discussion around common themes.

HSEM 3076H. Children and Cinema: The Child's Mind, the Child's Eye, and the Moving Image. (; 3 cr. ; A-F only; Periodic Fall)

We often think that children perceive the world differently from adults. In cinema, this perceived difference has led, on the one hand, to anxiety about film's effects on youth. On the other hand, it has led to a search for cinematic forms that respond to children's visual and cognitive uniqueness. Indeed, throughout the world, childhood vision has long served as impetus and metaphor for re-envisioning cinema: for honing what it looks like, how it is produced, and how it is circulated and exhibited. This seminar examines these provocative and fruitful intersections between childhood and cinema. We will ask how the child viewer has been understood cognitively, politically, and socially, and analyze films made for children or inspired by understandings of children's minds and eyes. We will also explore how childhood and youth have sparked institutional developments in cinema, and influenced film and media studies as a discipline. Our subjects include, among others, research on children and the movies (e.g., the interwar Payne Fund Studies); the intersections between developmental psychology and children's films; childhood perception, the avant-garde, and animation; youth and postwar new waves; and children's film studios as pedagogical spaces for filmmakers. Films and readings are drawn from the United States, United Kingdom, Eastern and Western Europe, the Middle East, Africa, and Asia.

HSEM 3076V. Children and Cinema: The Child's Mind, the Child's Eye, and the Moving Image. (WI; 3 cr. ; A-F only; Periodic Fall)

We often think that children perceive the world differently from adults. In cinema, this perceived difference has led, on the one hand, to anxiety about film's effects on youth. On the other hand, it has led to a search for cinematic forms that respond to children's visual and cognitive "uniqueness." Indeed, throughout the world, childhood vision has long served as impetus and metaphor for re-envisioning cinema: for honing what it looks like, how it is produced, and how it is circulated and exhibited. This seminar examines these provocative and fruitful intersections between childhood and cinema. We will ask how the

child viewer has been understood cognitively, politically, and socially, and analyze films made for children or inspired by understandings of children's minds and eyes. We will also explore how childhood and youth have sparked institutional developments in cinema, and influenced film and media studies as a discipline. Our subjects include, among others, research on children and the movies (e.g., the interwar Payne Fund Studies); the intersections between developmental psychology and children's films; childhood perception, the avant-garde, and animation; youth and postwar "new waves;" and children's film studios as pedagogical spaces for filmmakers. Films and readings are drawn from the United States, United Kingdom, Eastern and Western Europe, the Middle East, Africa, and Asia.

HSEM 3077H. Myths and Legends of the Polar North. (LITR; 3 cr. ; A-F only; Periodic Fall)

This course is a global comparative investigation of the traditional myths, legends, and folktales that have been produced by diverse communities ringing the northern polar regions; we will draw a circle around the top of the world (approximately the 58th or 60th parallel) and see what we find. Thus, we will study many cultures and their literatures and beliefs that are not often combined: the indigenous cultures of North America and beyond; the Russian and Baltic regions; the Scandinavian countries and Finland; Ireland, England, Scotland, and Wales. We will draw attention to similarities and differences in these literatures and cultures; we will examine the phenomenon of cultural contact and the migration of stories and beliefs across cultures; we will explore the world of traditional oral folktales and poetry. We will also survey a broad time span: although some of our tales were only first written down and recorded in the nineteenth and twentieth centuries, much of our material reaches back into the premodern past.

HSEM 3079V. Art and Revolution.

(AH,WI,GP; 3 cr. ; A-F only; Periodic Fall)
This class will explore the relationship between political revolution and artistic expression. The primary focus will be on the Soviet Union and Mexico, both famous for the dramatic artistic developments that accompanied their radical political transformation. As secondary points of comparison, the class will also study the art arising from other revolutions in other countries, including the United States, France, Cuba, and Algeria. The main concern will be with the visual arts, especially cinema and painting, although some consideration will be given to sculpture, printmaking, architecture, and design, as well as to literature. To frame the overall topic, we will also do some readings that address the historical and conceptual issues associated with the idea of revolution.

HSEM 3081V. Anthropology of Place and Displacement in the Contemporary World. (GP,WI; 3 cr. ; A-F only; Periodic Fall)

This course asks questions about the meaning of place, the relationship of space to place, the relationship of identity to place, and the relationship of place to environmental change in the event of industrial pollution, development

projects, natural disasters and climate change. Theories of and ethnographic accounts of space and place in Cultural Anthropology and Geography will be discussed. In addition to foundational texts in the topic, we will also read contemporary accounts of non-western places.

HSEM 3082H. Race and Sport. (DSJ; 3 cr. ; A-F only; Periodic Spring)

This class examines how race, gender, and sport intersect as sites of resistance and reform in twentieth-century American life. With the intensification of Jim Crow coinciding with the professionalization and commercialization of sports, athletes of color became central to American debates about science, citizenship, class, ethnicity, sexuality, social mobility, belonging, culture, and entitlement. This seminar will be particularly interested in how athletes of color forced a place for themselves in sports like baseball, boxing, football, golf, and basketball by exercising different models of political protest, citing an urgent need for social justice reforms that spread beyond the realm of sport.

HSEM 3083H. Language and Food. (; 3 cr. ; A-F only; Periodic Spring)

What could be more central to our lives than language and food? We learn language (together with gesture) and the tastes (textures, smells, visual features, and sounds) that we associate with food early in our lives, and both form an important part of our identities. In this course, we will address the following questions: 1) How do we organize our language and bodies around food, i.e., how do we use them to get to and from the table and to proceed in a meal (e.g., at a sushi restaurant)? 2) How do we use language to taste, identify and assess food, and how do these fine distinctions and discriminations define us as people and relate to our identity? 3) How do we talk about our experience of food and tell stories about food? 4) What metaphors do we have for food? 5) How does language relate to gender in the context of food? 6) How is language used to socialize children around food? We will explore the relation between language and food by analyzing actual conversations among people eating a variety of foods. The conversations will be in a variety of languages (including English, Japanese, Chinese, Lao, Kri, Eegimaa, Wolof, Italian, Persian, German, Danish, French, Russian, Swedish, Dutch and Spanish). The class will be most rewarding for students who like to cook/eat, talk about food, and educate their palate.

HSEM 3087H. History through Memoir. (; 3 cr. ; A-F only; Periodic Fall)

This honors seminar uses memoirs "non-fictional life stories narrated in the first person?" as a lens into the past and, just as importantly, as a way to investigate what counts as "history" itself. The relationship between personal narratives and professionally produced histories is often fraught or confused, even though both can reasonably be understood as forms of creative non-fiction. Is the memoirist responsible to the historical record in the same way as an historian? Does the historian know how to assess and appreciate the power of personal memory? What kinds of memoirs do

historians write? We will examine a range of memoirs that speak variously about historical and emotional truths, about memory and identity and place, about the ability of individual experience to illuminate a broader social and political history. We will attend to the narrator's voice and explore how certain kinds of writing enable (even produce) certain kinds of discoveries. Throughout, we will discuss the gains and the limitations of using personal stories to understand past experience. A note of clarification: while autobiographies tend to be chronological narratives of most of a person's life (without the ending, of course), memoirs focus more selectively--and often without regard to linear chronology--on crucial moments or themes in the narrator's experience. This course prioritizes memoirs over autobiographies, and it takes most of its examples from the boom in memoir writing over the last three decades. It does not offer a history of memoir as a genre. In particular, it features memoirs that go beyond the experiences of an individual narrator to reveal broader social and political contexts.

HSEM 3087V. History through Memoir. (WI; 3 cr. ; A-F only; Periodic Fall)

Memoirs?non-fictional life stories?offer an intriguing lens into the past. They vividly portray personal experiences, but they also raise questions about the reliability of the narrator. What kinds of histories are memoirs? Is the memoirist responsible to the historical record in the same way as a professional historian? What kinds of memoirs do historians write? We will examine memoirs written in the last two decades that explore ethnicity, identity, migration, memory, and belonging, and that use individual experience to illuminate a broader social and political history in the United States. We will attend to the narrator's voice and writing strategies. In addition to writing short analytical and reflective pieces, you will research and write your own (8-10 page) personal narrative, placing a personal experience into its historical context and creating a sense of specific time and place. Seeing history through the lens of memoir shows how lives are shaped by specific historical circumstances, even as people make choices about how to frame and narrate their experiences.

HSEM 3092H. Music, Revolution, War. (; 3 cr. ; A-F only; Periodic Spring)

From Beethoven to Woodstock, from the French Revolution to the protests that brought down Communist regimes at the end of the 1980s, music has played a central role in inspiring political and social change. In an even longer tradition, music has summoned soldiers to risk their lives, even as it likewise, whether in a sacred ceremony or on the political stage, has inspired mass action in peace. This course will proceed historically, examining moments when revolution, ideological conflict, or war suggested vast changes were underway in society and culture, reflected in, but also instigated by music.

HSEM 3092V. Music, Revolution, War: From Napoleon to Trump. (AH,WI,CIV; 3 cr. ; A-F only; Periodic Spring)

From Beethoven to Woodstock, from the French Revolution to the protests that brought down Communist regimes at the end of the 1980s, music has played a central role in inspiring political and social change. In an even longer tradition, music has summoned soldiers to risk their lives, even as it likewise, whether in sacred ceremony or on the political stage, has inspired mass action in peace. This course will proceed historically, examining moments when revolution, ideological conflict, or war suggested vast changes were underway in society and culture, reflected in, but also instigated by music. No prerequisites and no musical background assumed.

HSEM 3203H. An Understanding of Place: Historic, Cultural, and Personal Investigations. (; 3 cr. ; A-F only; Periodic Spring)

Who we are as designers and planners is a culmination of personal experiences, historical and cultural influences. Many times these influences interact in ways that guide our thoughts and designs without our reflection on the impact they can have on us and without an understanding of the implicit bias they can extend and impart to our work. The goal of this class is to use personal reflection essays, combined with explorations of cultural influences on our understanding of place to help reveal the lenses through which we evaluate the world and that guide our efforts and expectations as place-makers.

HSEM 3205H. Environmental Justice and Climate Futures: the Mississippi River Corridor. (; 3 cr. [max 6 cr.] ; A-F only; Periodic Spring)

The urgent pressures for equity and justice, and for a response to the changing climate, are complex, intertwined, "wicked problems." The Mississippi River, a storied part of the American landscape that is literally and figuratively the center of the North American continent, provides a profound space to explore how the river and American society have shaped each other. The seminar uses an Environmental Justice lens to examine the past, present, and potential futures of the river's biological, physical, and socio-cultural systems in a changing climate. The seminar will bring together knowledge from a number of academic disciplines, as well as community and cross-sector professional and agency perspectives.

HSEM 3308V. Incarceration and the Family. (WI; 3 cr. ; A-F only; Periodic Spring)

It is now estimated that more than 2.7 million children have a parent currently behind bars, and more than 5 million children have experienced a parent's incarceration in their lifetime. When parents are incarcerated, there are collateral consequences for children, families, communities, and society. Children of incarcerated parents are at risk for a number of adverse outcomes, including behavior problems, academic difficulties, substance abuse, and criminal activity. As a liberal education course with an explicit focus on Diversity and Social Justice in the United States, we will use an interdisciplinary

perspective to explore the issue of mass incarceration, focusing on the impact of incarceration on children and families. This class will include opportunities to visit local correctional facilities and engage with community-based programs serving families impacted by incarceration. Topics will include parent-child contact during incarceration, intersections between incarceration and child welfare, systemic disparities by race and class, and intergenerational cycles of incarceration. prereq: [Jr or sr] honors student

HSEM 3327H. Resilience in Children and Youth: Global Perspectives on Overcoming Trauma and Disaster. (; 3 cr. ; A-F only; Periodic Fall)

How do children overcome hazardous experiences to succeed in life? What do we know about the processes that reduce risk and promote resilience in young people confronted with the increasing hazards of war, disaster, migration, homelessness, and other extreme adversities around the world? This course examines the global literature on resilience in children and youth, highlighting the origins, methods, findings, controversies, and implications of resilience science for intervention, policy, and humanitarian action to prepare and protect young people against adversity.

HSEM 3413H. The Corporation in Question. (; 3 cr. ; A-F only; Periodic Fall)

In the wake of the financial crisis of 2008, anti-corporate rhetoric in the U.S. reached a crescendo. Corporations ? especially financial corporations ? were blamed for the crisis and the misery it left in its trail. But this anger was just a spike in a long tradition of distrust and suspicion of corporations. Their legitimacy has always been in question. One of the legacies of this tradition is the rich lode of epithets applied by Americans to corporations and their bosses including robber barons, trusts, economic royalists, malefactors of great wealth, merchants of death. The portrayal of corporations in popular entertainment ? take Hollywood, for example -- is uniformly negative. The news media's relations with corporations are predominantly adversarial. Running against corporations is a well-established way of running for elected public office. One of the events that did the most to crystallize public anger was the U.S. Supreme Court's decision in Citizens United v. FEC (2010) that overturned limits on corporate spending to influence elections to federal office. In that case, a pro-business Court was widely seen as having used an arcane legal doctrine ? about legal personhood -- to hand a victory to corporate interests. Perhaps mistakenly, the issue became defined as whether corporate persons qualified for the same constitutional Free Speech rights as natural persons. A bumper sticker at the time read: ?I'll believe a corporation is a person when the state of Texas executes one.? And presidential candidate Mitt Romney was greeted with derision when he told an audience at the Iowa State Fair that ?Corporations are people, my friend.? ? Of course they are,? he said. ?Everything corporations earn ultimately goes to people.

Where do you think it goes?? The case offers an opportunity to examine both the nature of the corporation and the sources of the hostility to it. This Honors seminar will try to solve is ? why in America?? Why is it that, in probably the most thoroughly capitalist nation in the world, corporations are the most reviled? Of course, that the critics of corporations might answer that that is precisely the point. Is it because it is in the United States that corporations have been left most free to plunder? The privileges in question are said to have enabled corporations to accumulate wealth. They include (1) limited liability, (2) legal personhood, (3) perpetual life, and (4) the free transferability of interests. You can see where these arguments are leading. If corporations owe their very existence to government and/or if corporations' wealth is made possible by special privileges, then in return (it can be argued) society has the right to demand that corporations put the public interest ahead of the private interests of its shareholders. This is just a sampling of the controversies that swirl around the corporation. By studying these controversies, you will gain a far deeper and more multilayered understanding of the nature of the corporation and its place in our economy and society. But the debate(s) over the corporation will also shine a light on ourselves ? and our fears and hopes -- by means of our reactions to corporations.

HSEM 3414H. "Was the \$84,000 price tag for a cure to hepatitis C corporate greed or a humanitarian triumph?". (; 2 cr. ; A-F only; Periodic Fall)

In the 1930s, antiwar activists used the epithet ?merchants of death? to denounce armaments manufacturers and their financiers. In a curious twist, today it is the turn of what might be called ?merchants of life? ? for-profit drug companies which have saved hundreds of millions of lives ? to be a pariah industry. The rage against drug companies is bipartisan. In the 2016 Presidential race, Trump said that drug companies were getting away with murder and Clinton charged that they were making a fortune out of people's misfortune. The main complaint against drug companies is, of course, that they are price gougers. They abuse their government-enforced monopolies to charge extortionate prices that deny some Americans access to treatment for life-threatening illnesses, bankrupt middle-class Americans, and place intolerable strains on state budgets. This seminar will use a cure for hepatitis C (Sovaldi) to evaluate the claim that drug companies charge exorbitant prices and (optimistically?) to try to answer the question of what is a just price for a life-saving drug. Or, in other words, how should we price priceless goods? Note: In fall 2022, this course will be offered as an A-Term 2 credit course.

HSEM 3415H. Are corporations persons? Can they pray? Controversial Supreme Court Cases. (CIV; 3 cr. [max 6 cr.] ; A-F only; Periodic Fall)

Alexis de Tocqueville noted in 1835 that "[s]carcely any political question arises in the United States that is not resolved, sooner

or later, into a judicial question." Rightly or wrongly, in the US many highly-charged issues ultimately get resolved in the Supreme Court. This seminar uses the courts as a lens through which to examine the relationship between business and society. It employs recent Court opinions in business cases like *Citizens United* and *Masterpiece Cakeshop* (ruling expected in summer 2018)--supplemented by transcripts of oral arguments, commentary in law reviews and legal blogs. The seminar should be of interest to pre-law students and all students who wish to gain a better understanding of the place of business in our society.

HSEM 3511H. Science Court: Strengthening Democracy through Rational Discourse.

(CIV; 3 cr. ; A-F only; Periodic Fall)
Science Court is a mock trial system designed to promote democratic norms by investigating controversial societal issues, based on facts and sound scientific research, in front of a judge and jury of citizens. Students work together in three teams (Science, Legal and Media) to plan, research, execute, and report a SciCourt case.

HSEM 3636H. On Vaccines and Vaccinations: Needleless Needles?. (; 3 cr. ; A-F only; Periodic Spring)

Human and animal health has been significantly advanced by the creation and application of vaccines to control infectious diseases. Nevertheless, there remain impactful diseases that cannot be controlled by vaccination for a variety of reasons, and global geopolitical factors often complicate public health initiatives. Further, vaccines have become controversial in some western societies, and debates have raged regarding potential negative aspects of routine vaccinations, scientific misconduct, and individual rights. This course will provide a scientific and historical background on immunity as a prelude to interdisciplinary discussion of vaccines and vaccinations. Seminars will combine didactic lectures with structured peer-to-peer interactions and debates. Students will consume both print and electronic media from multiple perspectives in order to reach their own conclusions regarding vaccines and vaccine safety. A final term paper will also inform peers as to various biological, public health, economic, regulatory, or cultural aspect of vaccines.

HSEM 3701H. Exercise is Medicine. (; 2 cr. ; A-F only; Periodic Spring)

Regular exercise is essential for good health and is important in the prevention and treatment of many diseases. The benefits of exercise and fitness, however, are frequently overlooked and under-emphasized in American health care delivery. Similar to other medical interventions, exercise has indications, contraindications, and potential complications and side effects. This seminar will explore these issues as well as related ones such as musculoskeletal concerns, nutrition, and sedentary physiology. Seminar format will include lectures, assigned readings, discussions, tests, and participant presentations. All seminar participants will

research a different pre-approved aspect of exercise as medicine and present their findings at the seminar.

HSEM 3705H. Nanotechnology: A Blessing or Curse to Society. (ENV; 3 cr. ; A-F only; Periodic Fall)

Despite extensive commercial applications, a clear understanding of the adverse effects of Engineered Nanoparticles (ENPs) is lacking. A survey of the literature indicated the available information to be incomplete, independently unverified, and some may have been over-interpreted. Deep uncertainties currently pervade every step of the risk assessment of ENPs, making the procedure incapable of properly serving its purpose. The current conventional risk assessment strategies are not applicable for ENPs because of their unique properties and toxicity that may not conform to the norms of classic toxicology laws. Therefore, implementing some non-conventional tools in the risk assessment framework may be needed to reduce uncertainties and deliver accurate risk characterization of ENPs. This would enable current regulation to adequately reflect the risks of ENPs and protect the environment and the community. Therefore, the students registered for this seminar will learn some general features of ENPs, how the general public might be exposed to ENPs, and their potential health effects so that they can make an informed decision regarding the safe use of ENPs. With a serious information gap regarding ENPs safety, whether ENPs are a blessing or a curse is debatable.

HSEM 3715H. Doctors Behaving Badly: The Causes and Consequences of Medical Research Scandals. (; 3 cr. ; A-F only; Periodic Fall)

This course will take students on a tour of the deadliest and most controversial research scandals in recent medical history. Some of these episodes are well-known, such as the exploitation of poor African American men with syphilis in Tuskegee, Alabama, and the injection of the hepatitis A virus into mentally disabled children at the Willowbrook State School in New York. But such well-known cases represent only a small fraction of ethically contentious medical research. In the 1960s, for example, at the world-renowned Allen Memorial Institute at McGill University, the CIA paid psychiatric researchers to use mentally ill subjects in "mind control" experiments involving LSD, intensive electroconvulsive therapy, and drug-induced comas for up to three months at a time. In 1996, during a meningitis epidemic in Nigeria, researchers for the pharmaceutical company Pfizer conducted a study of an unapproved antibiotic on children without the informed consent of their parents, resulting in eleven deaths. In 2013, two neurosurgeons at the University of California-Davis were forced to resign after authorities discovered that they had intentionally implanted bacteria in the brains of cancer patients. Today, the University of Minnesota itself is under investigation after for the case of Dan Markingson, a mentally ill young man who nearly decapitated himself after allegedly being coerced into

an AstraZeneca-funded psychiatric study. In this course, we will explore questions such as: What cultural and institutional forces allowed the scandals to occur? What were the best ethical arguments in favor of allowing the research to proceed? How were the scandals exposed? What was the role of investigative reporters, regulatory authorities, and whistleblowers? Should we have confidence that research abuse is not occurring today?

HSEM 3718H. Women's Reproduction: History, Policy, and the Health Care System. (DSJ; 3 cr. ; A-F only; Periodic Spring)

Understanding women's reproductive health requires consideration of the intersections of gender, race, class, culture, geography, economic status, and nation within a historical and sociopolitical context. This course will build upon our current understanding of major conditions affecting the reproductive health of women, e.g. pregnancy, parenting, reproductive control, and menopause by raising challenges from a feminist perspective and encouraging expanded models that address the complexity of women's reproductive health in today's society.

HSEM 3801H. Modern China: Law, History, and Culture. (GP; 3 cr. ; A-F only; Periodic Fall)

This course will provide a comprehensive overview of law and politics of 20th and 21st-century China, in their historical and cultural contexts. It will introduce undergraduate students to distinctive paradigms and discursive patterns of law and politics in China, with the intention of fostering comparative analysis and critical thinking. The course will focus on high profile legal cases and major political events in the People's Republic of China today. The course will conclude by examining current issues in Chinese law from both sides, and by looking into China's argument for the "Beijing Consensus," essentially a new type of capitalism, without Western-style rule of law. The classes will progress by way of interactive discussion and critical readings of historical documents and legal texts. This course is designed to break through the traditional Chinese learning/western learning dichotomy and interpret legal cases, political events, and cultural phenomena from a comparative perspective. It will bring to light the hidden rationales underscoring historical and ideological narratives, and will explain how frequent misunderstandings can occur when comparing cultures. Students will be encouraged to use critical thinking to argue, to test whether the incommensurability of paradigms can be reconciled, and to explore how different political systems and cultures can communicate with each other and exchange ideas effectively.

HSEM 3803H. The Politics of Legal Policy. (; 3 cr. ; A-F only; Periodic Fall)

The Politics of Legal Policy seminar will focus on several controversial issues involving courts and/or the types of issues they deal with. Class discussions will focus on five policy issues involving either the use and role of courts or areas in which the courts

play a major role in policy administration: access to legal services, medical malpractice, scientific expert testimony, sexual predators, and judicial selection. Beyond these specific topics, students will select a specific policy issue to delve into on their own, and produce two papers: a short background memo on the nature of the issue and what is known about the facts that may make it an area in need of change, and a policy memo suggesting and advocating for possible changes. During the last three weeks, students will present their policy briefs to the seminar. The goal of the course is to understand the factual reality behind some major issues confronting the courts and the challenges of making policy changes to address these issues. Each of the five topics will be dealt with over two sessions of the seminar with the first session examining the issue from a policy perspective and the second session examining the issue from the perspective of differing political interests. Some of the sessions on policy change will involve students in the seminar debating the issue drawing upon the policy discussions from the previous week as well as their own research into the issue; other sessions may involve a guest speaker.

HSEM 3804H. Women who Rock (the Boat): Leadership and the Nobel Peace Prize. (GP; 3 cr. ; A-F only; Periodic Spring)

Lawyers, nuns, social workers, and schoolgirls have won the Nobel Peace Prize. In achieving this distinction, they hone their leadership skills to a fine art. They face personal danger, inner conflicts, social challenges, and pointed criticism. Succeeding despite their flaws, their ability to inspire courageous, innovative action cuts across age-groups, decades, borders, and nationality. Students in this Honors Seminar will touch and experience that inspiration. Students will intensively study several extraordinary women from different cultures who have won the Prize; e.g., Aung San Suu Kyi, Leymah Gbowee, Sharin Ebadi, Mother Teresa, and Malala Yousafzai. What characterizes their leadership? What have they accomplished and at what price? How do they survive their successes, failures, and controversies? How applicable are their approaches to a student's everyday life and future? This highly interactive class will examine these questions through biographies, videos, lectures, writing, student presentations, and group discussions.

HSEM 3805H. Revolutionary Paris since 1789. (; 3 cr. ; A-F only; Periodic Spring)

This seminar looks at issues of political and military conflicts in which France has been engaged. What constitutes the culture and society that may be seen in Paris; issues of French identity, including the diversity of the city of Paris, traditions of rebellion and resistance, the architectural monuments in the French capital, and spatial transformations that have come to Paris over the years since the French Revolution.

HSEM 3807H. Understanding Police Use of Force. (; 3 cr. ; A-F only; Periodic Fall)

Police use of force incidents are at the forefront of contemporary discussions of law, politics, and culture in the United States

and in Minnesota. In this course we will examine legal and cultural issues related to the use of force by police in the United States both from a historical perspective and by examining present-day cases and events nationally and in Minnesota. We will learn and discuss law enforcement use of force decision making through the lenses of the United States Constitution and the cases that have interpreted its meaning. Because all uses of force by law enforcement officers against free citizens is governed by 4th Amendment standards, we will begin with an understanding of 4th Amendment applicability and how it relates to policy, training, supervision, the decision to use force, and the evaluation that takes place thereafter by the courts and law enforcement policy makers. We will learn about the use of force investigative process and the litigation process that oftentimes results from a law enforcement use of force incident, particularly those incidents that result in death. Analysis of specific cases will involve the review of public law enforcement data which will include police body worn camera video of graphic and violent incidents as well as relevant events occurring in the aftermath of use of force incidents.

HSEM 3941H. The Nature of the Cosmos. (; 3 cr. ; A-F only; Periodic Spring)

One of the defining features of every human civilization is its collective understanding of how the natural phenomena present to all earth dwellers ? stars, planets, the earth and its transformations, plant, animal, and human life, etc. ? are conceptualized into systems of knowing. ?Cosmology? is the term we use to describe these shared understandings, and this interdisciplinary course proposes a comparative study of different cosmologies in different civilizations and historical periods. We will explore the nature of the cosmos by first examining the category itself and what is involved in trying to study cosmology comparatively with sensitivity to cultural difference. We will then look at some different understandings of the nature of the cosmos (i.e. cosmologies) offered by different peoples in the past and around the world. We will start with two ancient, non-Western cosmologies: the Sanskrit Hindu and Buddhist traditions and the traditions of the native peoples of North America. We will then examine the history of Western cosmological thinking by looking at Greco-Roman Antiquity, Medieval Christian and Islamic cosmology, and the birth of modern, scientific cosmology in the Scientific Revolution (Galileo, Newton, etc.). Our overall goal will not be to establish a single, absolute, and universal understanding of the cosmos, but, rather, to develop an understanding of the value and power of each of the different cosmologies we will encounter and the consequences that follow from accepting one or the other of them as our point of view. Ultimately this course should help you to think more deeply, reflectively, and humanistically about the cosmologies present in our own modern globalized society today.

HSEM 3953H. History and Science of Eating. (; 3 cr. ; A-F only; Periodic Fall)

Eating is both an everyday, mundane activity and a complex act that is linked to internal and external factors. Using the lenses of the humanities and sciences, we will explore topics from the full continuum of human eating. We move from hunger, starvation, and dieting to food choice and obesity, to eating's relationship to contemporary politics, culture, and racial diversity. Overarching these topics are common themes of gender roles and changing cultural norms. We will investigate how and why diets vary as well as how food has emerged as a central political problem. Students will leave this class better able to judge evidence used in diet advice and with more understanding of their own beliefs about what they should eat.

Horticultural Science (HORT)

HORT 1001. Plant Propagation. (BIOL; 4 cr. ; Student Option; Every Fall & Spring)

Principles and techniques of propagating plants by seeds, cuttings, grafts, buds, layers, and division. Lectures on principles; labs on practice of various propagating techniques.

HORT 1003. Organic Gardening: From Balconies to Backyards. (; 3 cr. ; Student Option; Every Spring)

This fully online course focuses on the principles and practices of growing fruits, vegetables, and herbs with an ecological approach. You'll explore basic botany, soils and compost, species and variety selection, planning and design, container gardening, pest management, season extension, and more so you can approach your gardening projects with confidence. This introductory course focuses on the principles and practices of growing fruits, vegetables, and herbs with an ecological approach. You'll explore basic botany, soils and compost, species and variety selection, planning and design, container gardening, pest management, season extension, and more so you can approach your gardening projects with confidence. We will begin by taking a look at the fundamentals of organic gardening, then move on to an overview of basic plant science principles. Following this introduction, course content will focus on how these principles can be applied practically in the planning and management of an organic garden, whether that be in your yard, on your patio, or at a school or community site. This course isn't so much about memorizing facts as it is about you becoming a well-informed gardener who can make educated decisions and seek out reliable answers to questions or problems that might come up. The course is presented entirely online and makes extensive use of discussions, interactive activities, worksheets, and multimedia projects that get you immersed in a host of gardening topics. Short video segments in each module highlight key topics and provide information to guide you as you work through the readings, activities, and assignments.

HORT 1014. The Edible Landscape. (TS; 3 cr. ; Student Option No Audit; Every Fall)

Tracing our relationship with edible landscapes traces to our hunting-gathering origins.

Technological/social changes that have distanced us from our food. Integrating food plants into pleasing, sustainable, and edible landscapes in yards, neighborhoods, and cities.

HORT 1015. Plant Families for Plant People.

(; 4 cr. ; Student Option No Audit; Every Fall)
The most recent surveys reveal there are 347,298 vascular plant species in the world! During this course, you will acquire the skills that will allow you to identify many plants you encounter day-to-day in Minnesota and around the world. By the end of the term, you will have been introduced to over 150 woody and herbaceous plants and learned the key distinguishing features for identifying some of the most important ones. You will be introduced to plant families that are important from a human perspective, where in the world they are most commonly found, some of the problems they can experience or create, and some of the ways they are used by humans.

HORT 1031. Vines and Wines: Introduction to Viticulture and Enology. (; 3 cr. ; Student Option; Periodic Fall & Spring)

This course is an introduction to the principles of growing grapes (viticulture), making wine (enology), and an appreciation of the historical, geographical, and sensory diversity of wine. The course is taught in part with 20-50 minute online lectures; usually 2 or 3 of these are covered each week. The class also meets once a week for a combination lecture and wine tasting/sensory session. Guest lecturers will be involved to explore certain aspects of the course including grape vine biology, morphology, genetics and breeding, as well as sensory evaluation and wine components, and the subject of soils and so-call "terroir" or regional identity, including the relation between grape cultivar, soil, climate, and cultural practices. Prerequisite: Enrollees must be 21 yrs of age by date of 1st class meeting Enrollment Restrictions: Open enrollment to undergraduate students ONLY; graduate students, masters students, and others will need instructor permission.

HORT 1061. The Sustainable Lawn. (; 3 cr. ; Student Option; Every Fall)

Common turfgrasses. How to manage home lawn in sustainable way. Maintaining quality turf areas with reduced inputs.

HORT 1090. Topics In Horticulture. (; 1-4 cr. [max 14 cr.] ; Student Option; Every Fall, Spring & Summer)

Topics vary with instructor. prereq: instr consent or department permission

HORT 1113. Floral Design. (; 3 cr. ; Student Option; Every Fall & Spring)

Design for use in commercial flower shops and at home. Principles and elements of design. Wedding arrangements. Corsages. Decorative use of dried materials.

HORT 2121. Agricultural Biochemistry. (; 3 cr. ; A-F only; Every Fall)

Chemical/biochemical foundation for agricultural disciplines. Concepts in organic, analytical, and biological chemistry. Chemistry, metabolism, and development of plants. Prerequisites: [CHEM 1015, CHEM 1017] or

[CHEM 1061, CHEM 1065] *Note for those students considering graduate school - We highly recommend you consult your academic advisor for appropriate chemistry coursework.

HORT 3093. Directed Study. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

HORT 3094. Directed Research. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

HORT 3131. Student Organic Farm Planning, Growing, and Marketing. (3 cr. ; Student Option; Every Fall)

Organic fruit and vegetable production has been one of the fastest growing segments of the US economy for almost two decades, stimulating an overwhelming number of biological and ecological innovations to produce food using organic approaches. This course aims to increase student's knowledge of ecological concepts as applied to managing organic systems, with an emphasis on soil nutrient cycles and plant-soil-microbe interactions that serve as the cornerstone of organic systems. Students in this course will learn tools needed to manage an organic diversified vegetable operation. The course consists of two components. The lecture session is designed to help students think about concepts and principles that are useful in planning and managing production strategies on organic farms. We spend a significant amount of our time reviewing soil nutrient cycling and its critical importance for organic farms, including how to effectively use soil and organic nutrient inputs such as cover crops, manure and fertilizers, to provide vegetable crops with the nutrients they need to grow. We also learn about successful marketing strategies for organic produce. Finally, near the end of the semester we will discuss pest management, including both weeds and disease/insect pests, and compare different tillage options available to organic producers. What we learn is then applied to planning

next year's season of the UMN student organic farm. Throughout, we will use case studies, guest speakers, games, and active learning discussion approaches to move these classroom sessions "beyond the lecture" and allow students to engage with the material in a meaningful way. The lab is designed to allow a space to put into action some of the concepts students learn in lecture, including soil organic matter analysis, microgreen propagation, calculation of organic fertilizer rates, and operation of driven and walk-behind tractors.

HORT 3480. Topics in Sustainable Horticulture. (; 1-4 cr. [max 24 cr.] ; Student Option; Every Fall, Spring & Summer)
Various topics

HORT 4061W. Turfgrass Management. (WI; 3 cr. ; A-F only; Fall Even Year)
Biology of turfgrasses, ecology of landscape systems. Installation, management, and culture of turfgrass communities and landscape plant systems. Sod production, industrial grounds, lawn care, park/recreation areas, athletic field/business management. Case studies. prereq: 1001 or instr consent

HORT 4062. Turfgrass Weed and Disease Science. (; 3 cr. ; A-F only; Fall Odd Year)
Turfgrass weed/disease problems. How to deal with these problems using an integrated approach. Biology, identifying features, and management strategies for several turfgrass diseases/weeds. How to apply IPM principles to turfgrass weed/disease problems.

HORT 4063. Turfgrass Science. (; 3 cr. ; A-F only; Periodic Fall & Spring)
Ecology, physiology, and theory of turf population dynamics. Specialized management situations such as golf course, commercial sod production, and fine turf athletic settings. prereq: 4061

HORT 4071W. Applications of Biotechnology to Plant Improvement. (WI; 3 cr. [max 4 cr.] ; A-F or Audit; Spring Odd Year)
This online course with required synchronous meetings is designed to provide a foundation in the theory and application of plant biotechnology used in crop improvement. The online lecture meets twice per week to introduce and discuss the basic concepts of plant genetics, molecular biology, DNA manipulation, plant tissue culture, gene introduction, and analysis of gene expression. The diversity of perspectives surrounding the application of biotechnology to plant improvement will be discussed. Course content consists of lecture, reading assignments, practice writing, peer review, discussions, and group work. prereq: [Biol 1009 or equiv or grad student], instr consent

HORT 4096W. Professional Experience Internship. (WI; 1 cr. [max 2 cr.] ; A-F only; Every Fall)

This course provides an opportunity for professional experience in plant science and food systems achieved through a supervised practical experience. Students must complete a non-credit prerequisite Canvas module on pre-and reflection during the summer internship experience. Upon successful completion of this

prerequisite, students will receive a permission number to register for HORT 4096W in the fall. In 4096W, students will produce a final publication that is focused on writing for lay audiences. This writing project will start toward the end of the internship and end at the conclusion of the 7-week online fall course. prereq: CFANS undergrad

HORT 4110. Spring Flowering Bulbs. (1 cr. ; A-F only; Spring Odd Year)

Geophytes are early harbingers of spring. In this course we will examine the variety of herbaceous perennial spring-flowering crops with underground storage organs (geophytes). As spring progresses, different genera and species predominate in the flowering landscape. In contrast, greenhouse production of potted plant and cut flower geophytic crops can be simultaneous rather than sequential. This course will consist of hands-on taxonomic identification of geophyte crops, their uses in landscape design, and production essentials. The laboratory will be hands-on, experiential learning with many visits of outdoor landscape, gardens, production greenhouses, and interiorscapes.

HORT 4112. Flowering Trees and Shrubs. (1 cr. ; A-F only; Periodic Spring)

Need an excuse to spend a few hours outside at the height of the spring flowering season? Want to spend more time amidst the expansive and beautiful University of Minnesota Landscape Arboretum plant collections? Do you want to be able to identify more woody landscape plants, in flower? Here's your chance to expand your plant identification skills and learn the names and flowering characteristics for approximately 150 woody landscape plants. Flowering Trees and Shrubs is a practitioners course, designed to give you a hands-on opportunity to learn to identify woody landscape trees, shrubs, ground covers, and vines, including the common and scientific names for each. We will study the plants as family assemblages, noting features common to each family which will assist you in identifying unknown plants in Minnesota and other geographical locations in the future. In addition to identification; common landscape uses, cultural specificities, problems, and notable cultivars will be highlighted.

HORT 4141W. Scheduling Crops for Protected Environments. (WI; 4 cr. ; A-F only; Every Spring)

The purpose of this course is to acquaint students with the identification, scheduling, and cultural requirements of commercially produced vegetables, herbs, ornamental flowers, and foliage plants, gain experience in growing them, and conduct experiments to understand current problems. The course builds on knowledge obtained in Hort 1001 or Hort 1015, by adding in additional factors of plant growth coupled with scheduling and growing of crops which commercial growers would experience. The role of ornamental plants in the human environment will be discussed, with special emphasis on future issues. Writing is an integral component of this course; one major paper is revised and

expanded multiple times plus other course writing fulfill the writing intensive requirement. Through the use of interactive learning, field trips, written assignments, and in-class discussions students learn crop requirements and the interactions between the marketing distribution system of breeders, producers, distributors, growers, retailers, and consumers. Prerequisites: HORT 1001/6011 Additional Preferred Courses: HORT 1015

HORT 4461. Horticultural Marketing. (3 cr. ; A-F only; Every Spring)

Major areas in horticultural marketing. Difference between horticultural products and commercial commodities. Core marketing components that should be used by every small horticultural business. Approaches to consumer research.

HORT 5007. Advanced Plant Propagation.

(3 cr. ; Student Option; Spring Odd Year) Control of growth/development in sexual/asexual reproduction of plants. Effects of environment, plant growth substances. Protocols on dormancy, origin, development of adventitious structures. Specialized propagation techniques. Lecture, lab. prereq: 1001 or BIOL 2022

HORT 5023. Public Garden Management. (2 cr. ; Student Option; Every Spring)

Overview of knowledge/skills necessary to manage a public garden. History of public gardens. Development of mission and vision. Planning and design. Operations. Education and research. Fund raising, business management, personnel, marketing, conservation.

HORT 5031. Fruit Production and Viticulture for Local and Organic Markets. (3 cr. ; A-F or Audit; Fall Odd Year)

Principles of fruit production. Temperature fruit crops. Integrated management of fruit cropping systems. Site selection, cultural management practices, taxonomic classification, physiological/environmental control of plant development. Writing. prereq: [1001, 3005] or instr consent

HORT 5033. Growing Fruit & Vegetables for Local and Organic Markets. (4 cr. ; A-F or Audit; Every Spring)

This course will focus on production of fruits and vegetables for local and organic markets in the Upper Midwest. Most fruit and vegetable growers in Minnesota operate diversified production systems for local and organic markets (fresh market--not processing), and so we explore production within this specific framework, although examples from large-scale systems will be highlighted in order to compare and contrast different production features and challenges. During the first two weeks, we will explore the specialty crop industry, trends, consumer behavior, and marketing, including organic regulations and certification programs. We will make distinctions between annual and perennial crop production and climatic considerations-- with an emphasis on the upper Midwest and cold climates. We will explore fruit and vegetable production within the framework of sustainable

agriculture, which encompasses agricultural productivity, economic viability, environmental conservation, and social equity, and how this relates to the regulatory framework supporting organic certification. Farms are very diverse, and we will compare and contrast aspects of sustainability within these systems and recognize current challenges in improving sustainability. The systems involved in developing, producing, and marketing fruit and vegetable crops are neither static nor independent?rather, quite dynamic in their relationships. This should be considered as we progress through the various study areas so that you can integrate and explore the connections between them. For example: site selection, land preparation, environmental interaction, specialized equipment, plant reproductive biology and plant genetics, seed selection and seed saving, cultural management practices during crop growth and development, water management, control of insects, diseases and weeds, post-harvest handling and food safety, marketing and commodity use will all be explored. The format of this class is 70% discussion, 30% lecture. prereq: SOIL 2125 and [HORT 1001 or AGRO 1101 or BIOL 1009 or BIOL 1001 or another applicable biological science equivalent]

HORT 5071. Ecological Restoration. (4 cr. ; Student Option; Every Fall)

Each ecosystem restoration is the product of a myriad of decisions made in response to existing site conditions (biotic and abiotic), anticipated effects from the surrounding landscape, predictions about future events, logistical realities, and, of course, desired conditions. During this course, you will learn about the ecological and social factors that affect ecosystem recovery and how people intervene to reverse ecosystem degradation. The course includes examples from ecosystems around the world, with emphasis on those found in the Midwestern US. Field trips. PREREQUISITES: This course presumes previous courses in basic ecology and plant science.

HORT 5093. Directed Study. (1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

HORT 5094. Directed Research. (1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable

credit and special permission is needed for enrollment. Students enrolling in a directed research will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

HORT 5114. Knowing and Naming the Plants We Eat. (; 1 cr. ; A-F only; Every Fall)
The 1-credit course HORT 5114 ?Knowing and naming the plants we eat? focuses on identification, taxonomy and characteristics of plants, and plant parts commonly contributing to human diets. Course modules emphasize culinary fruits, vegetables and herbs plus grains, pulses and oilseeds grown for food use. This online course meets synchronously for lecture and discussion on Wednesdays from 5pm to 6pm. Weekly lectures are posted online for asynchronous study. Students develop a portfolio of their course work where they document and reflect upon characteristics and taxonomic relationships among the plants addressed in this course. As a 5xxx-level course, students with less than 60 credits completed in their program (typically underclassmen) will need to request a permission number to enroll. prereqs: junior or senior; Biol 1001 or Biol 1009 or HORT 1001 or HORT 1015

HORT 5131. Student Organic Farm Planning, Growing, and Marketing. (; 3 cr. ; Student Option; Every Fall)
Students plan/implement cropping/marketing strategies for organic produce/flowers from Student Organic Farm on St. Paul campus. prereq: 1001 or AGRO 1101 or AGRO 1103 or BIOL 1001 or BIOL 1009 or instr consent

HORT 5480. Topics in Horticultural Science. (; 1-4 cr. [max 24 cr.] ; Student Option; Every Fall, Spring & Summer)
Topics vary.

Housing Studies (HSG)

HSG 3462. Housing and Community Development. (; 3 cr. ; A-F or Audit; Every Fall)
Meaning/significance of neighborhood/community, residential neighborhood change, impact of housing on neighborhood conditions. Gentrification, displacement, racial segregation, suburbanization, community-based revitalization.

HSG 4193. Directed Study in Housing Studies. (; 1-4 cr. [max 8 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Independent study in Housing Studies under tutorial guidance. prereq: Undergrad, instr consent

HSG 4196. Internship in Housing Studies. (; 1-4 cr. ; S-N or Audit; Every Fall, Spring & Summer)
Supervised work experience relating activity in business, industry, or government to the student's area of study. Integrative paper or project may be required. prereq: Completion of at least one-half of professional sequence, plan

submitted/approved in advance by [adviser, internship supervisor], written consent of faculty supervisor, instr consent

HSG 4461. Housing Development and Management. (; 4 cr. ; A-F or Audit; Every Spring)
Housing development process/financing. Management of multifamily housing. Emphasizes housing for low-income families/specific populations (e.g., older residents).

HSG 4465. Housing in a Global Perspective. (; 3 cr. ; A-F or Audit; Spring Odd Year)
Demographic changes, economic connections, and public policies for housing around the world. Sustainable development, rural-to-urban migration, land distribution, economic globalization, and civil conflict and war.

HSG 4467W. Housing and the Social Environment. (WI; 4 cr. ; A-F or Audit; Every Fall)
Housing choices in context of social environment. Emphasizes special needs of elderly, disabled, minorities, large families, female-headed households, and low-income households. Students conduct a post-occupancy evaluation of housing.

HSG 5193. Directed Study in Housing Studies. (; 1-4 cr. [max 8 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Independent study in Housing Studies under tutorial guidance. prereq: Jr or sr or grad student

HSG 5462. Housing and Community Development. (3 cr. ; A-F only; Every Fall)
An examination of the linkages between housing and community development. The process of residential neighborhood change and the impact of housing on neighborhood conditions is explored. The course considers theories of neighborhood change, trends in residential development, and concepts of community building in the built environment. Private sector, community-based, and governmental efforts at neighborhood revitalization and their effectiveness will be studied. Related issues such as racial discrimination in housing, gentrification and the displacement of low-income residents are discussed. Course includes an engaged group project to access housing and amenities in a specified neighborhood.

HSG 5463. Housing Policy. (; 3 cr. ; A-F or Audit; Every Spring)
Institutional/environmental settings that make up housing policy in the United States. Competing ideas about solving housing problems through public intervention in the market. Federal/local public sector responses to housing problems. prereq: [[2401 or DHA 2401], [2463 or DHA 2463]] or instr consent

HSG 5467. Housing and the Social Environment. (; 4 cr. ; A-F or Audit; Every Fall)
Housing choices in context of social environment. Emphasizes special needs of elderly, disabled, minorities, large families, female-headed households, and low-income households. Students conduct a post-occupancy evaluation of housing.

Human Factors (HUMF)

HUMF 5001. Foundations of Human Factors/Ergonomics. (3 cr. ; A-F or Audit; Periodic Fall)
Variability in human performance influenced by interaction with designs of machines/tools, computers/software, complex technological systems, jobs/working conditions, organizations, sociotechnical institutions.

Conceptual, empirical, practical aspects of human factors/ergonomics. prereq: Grad HumF major or minor or instr consent

HUMF 5193. Directed Study in Human Factors and Ergonomics. (1-4 cr. [max 8 cr.] ; A-F only; Every Fall, Spring & Summer)
Independent study in human factors/ergonomics under tutorial guidance. prereq: instr consent

HUMF 5211. Human Factors and Work Analysis. (; 4 cr. ; A-F or Audit; Every Fall)
Human factors engineering (ergonomics), methods engineering, work measurement. Displays, controls, instrument layout, supervisory control. Anthropometry, work physiology, biomechanics. Noise, illumination, toxicology. Operations analysis, motion study, time standards.

HUMF 5874. Human Centered Design to Improve Complex Systems. (4 cr. ; A-F or Audit; Every Spring)
Class participants will work together using design thinking frameworks to discover, define, develop, and propose solutions to help solve complex system problems. The class will use cognitive design methods and research to guide in developing prototypes that foster improved experiences in information delivery, processes of systems, and technology. Teams will tackle complex real-world problems. Projects may focus on a variety of areas ranging from retail to health care. Coursework will primarily focus on team-based projects. Participants will immerse themselves the following activities while working towards remediating their chosen problems. ? insights gathering/research methods ? cognitive design methods and principles ? identifying strengths/weaknesses in actual vs. proposed systems ? implementation (prototyping) considerations/strategies The course will be highly interactive with little lecture. It will strive to foster critical thinking and will offer an environment where creativity can thrive. Students are expected to come to class fully prepared to interact during class time with the readings and research consumed outside class. Material from course readings will focus on cognitive design, systems thinking principles and will be interwoven during the discussions and class activities. This course is designed for students from a variety of backgrounds and programs, including students from Human Factors, the Academic Health Center, Graphic Design, Product Design, Retail, Interior Design, Landscape Architecture, Architecture, Biomedical Engineering, Mechanical Engineering, Industrial Engineering, and the Carlson School. Human Factors students

working toward a Plan C Master's degree may use this course as one of the two courses required to be 50% project-based.

Human Resources/Indus Rel (HRIR)

HRIR 3021. Human Capital Management. (3 cr. ; A-F only; Every Fall, Spring & Summer) This course will focus on the people side of business. We will look at how, through managing and leading people, we can create an engaged, productive workforce in order to achieve organizational strategic objectives. The content of this course is complementary to any major or minor. Major topics in this course: - Managing people in an ethical, legal way that is aligned with corporate strategy and helps organizations reach their goals; - Successfully attracting, recruiting, and selecting talented people; - Creating interesting, engaging jobs and giving meaningful feedback in order to retain great employees; - Rewarding and motivating people through intrinsic and extrinsic methods to encourage the most effective and "right" kind of employee behaviors to create an engaged, productive workforce through people strategies and practices.

HRIR 3021H. Honors: Human Resource Management and Strategy. (3 cr. ; A-F only; Every Spring)

Human capital is an essential role in today's organizations. If you plan to be a manager or organizational leader, or if you plan to major or minor in HR, this course is an essential introduction to the role of human resource management in organizations. In this class you will learn: How to recruit and select the best people. How to evaluate performance and give employees feedback. How to help individuals improve when their performance is subpar, and how to conduct terminations when those efforts do not work. Methods that are used to develop individuals so they can move into higher leadership roles. How to examine turnover problems and retain employees. How large companies set pay levels to ensure internal and external equity. Recent issues around worker rights and unions. The basics of employment law. Contemporary human resources issues that employers are dealing with, such as labor market shortages and sexual harassment policies. This class is for honor's students only. prereq: ECON 1101, ECON 1102, PSY 1001

HRIR 3031. Staffing and Selection: Strategic and Operational Concerns. (2 cr. ; Student Option; Every Spring)

Introduction to theory/practice of staffing decisions. Recruitment, selection, promotion, demotion, transfer, dismissal, layoff, retirement. Staffing analyzed from strategic/operational perspectives. Legal issues.

HRIR 3032. Training and Development. (2 cr. ; Student Option; Every Spring)

Introduction to theory/research/practice of design/implementation/evaluation of employee training/development programs. Training as process for influencing individual/organizational outcomes.

HRIR 3041. The Individual and the Organization. (2 cr. ; Student Option; Every Fall)

The purpose of this course is to understand both the impact and experience of the individual in an organizational setting. We will discuss the influence that individual differences and behaviors play within an organization, focusing on the employee as the key factor through which organizations function and grow. An employer's success is largely attributable to the motivation and performance of those they employ. The factors that influence both their motivation and performance will be the focus of our content. We will explore topics such as personality, values, perceptions, and diversity among others. Each topic covered will enrich our understanding of the complex relationship between the individual and the organization. Recommended prerequisite: HRIR 3021

HRIR 3042. Organizational Behavior: Groups and Teams. (2 cr. ; Student Option; Every Fall)

The purpose of this course is to understand both the impact and experience of the individual, leaders, and teams in an organizational setting. We will discuss the influence that individual differences and behaviors play within work teams, and how leadership may shape team experiences, focusing on the team as the key factor through which organizations function and grow. An employer's success is largely attributable to the motivation and performance of those they employ. The factors that influence group, team, and organizational performance will be the focus of this class. We will explore topics such as communication, conflict, negotiation, leadership, organizational structure and change, among others. Each topic covered will enrich our understanding of the complex relationship between the individual, team, and the organization. Recommended prerequisite: HRIR 3021

HRIR 3051. Compensation: Theory and Practice. (2 cr. ; Student Option; Every Fall)

Introduction to compensation/reward programs in employing organizations. Theories of organizational/employee behavior used in design/implementation of pay programs. Design, implementation, job evaluation, salary surveys, skill-based pay, merit-based pay, other compensation programs.

HRIR 3071. Union Organizing and Labor Relations. (2 cr. ; Student Option; Every Spring)

Analysis of labor unions, employee associations, collective bargaining within framework of contemporary American legislation/policy. Forming/organizing labor unions. Management strategies/responsibilities, historical influences on policy/practice in private/public sectors.

HRIR 3072. Collective Bargaining and Dispute Resolution. (2 cr. ; Student Option; Every Spring)

Collective bargaining, contract administration, grievance processing, interest/rights arbitration, strikes, related policies/practices of employers,

workers, labor unions in private/public sectors. Impact/transfer of practices to non-union sector.

HRIR 3111. Human Resource Analytics. (2 cr. ; A-F only; Every Spring)

This course is designed to provide students with opportunities to develop data manipulation, analysis, and visualization skills using Excel and Tableau by taking a data driven approach to core HR areas, including recruitment, compensation, talent development, and turnover. In the course students will get exposure to working with a variety of data sources, including administrative records, survey, and text-based data from resumes and interviews as well as an introduction to predictive analytics tools. Emphasis will be placed on data visualization and communication of findings to practitioners. Prerequisites: HRIR3021 or HRIR3021H or IBUS 3021 and SCO 2550 or equivalent statistics course

HRIR 4100W. HRIR Capstone: Personal and Organizational Leadership. (WI; 4 cr. ; A-F only; Every Spring)

This course is a writing intensive capstone course for undergraduates majoring in HR. Given the emphasis of the Society for Human Resource Management (SHRM) on the critical need for HR professionals to both be leaders and understand leadership development, we focus this capstone class on the topic of leadership within the context of the SHRM competency model. The first part of the course provides students with a solid understanding of leadership needs within organizations and current tools, vendors, and techniques that can be used to develop leadership bench strength and capability within companies. The second part of the course features guest speakers from different areas of HR and student presentations based on the SHRM competency model. The course will help students reflect upon the extreme importance of leadership, how to develop organizational leaders, and will provide means to develop their own first level leadership and human resources competencies. prereq: 3021, 6 HRIR credits, [senior status or dept consent]

HRIR 5000. Topics in HRIR. (2 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Topics in human resources/industrial relations. HRIR MA student must register A-F, 3021, [CSOM or HRD junior or senior or dept consent]

HRIR 5222. Creating and Managing Diversity and Inclusion. (2 cr. ; Student Option; Every Fall & Spring)

This course covers the challenges and rewards associated with managing today's increasingly diverse workforce. Diversity has the potential to benefit employees and organizations alike, yet the benefits of diversity are only realized in organizations with effective diversity management practices. In this course, we will discuss the power of inclusion as it relates to the employee experience. We will study effective strategies for building diverse and inclusive companies, and will address the

barriers that can often exist. We will look at approaches to organizational design that limit unconscious bias and produce more objective decisions across the employee experience? from engaging and hiring candidates to retaining employees and helping them thrive. Finally, we will dive into how to create inclusive cultures and a sense of belonging, across local and global contexts. Student engagement and willingness to share diverse perspectives are critical to the success of this course. prereq: HRIR MA student must register A-F, 3021, [CSOM or HRD junior or senior or dept consent]

HRIR 5252. Employment and Labor Law for the HRIR Professional. (2 cr. ; Student Option; Every Fall & Spring)

Application of statutes/case law to work settings. Civil rights/equal opportunity. Discrimination/harassment. Compensation/benefits. Employee protection/privacy. Labor relations. Emphasizes application/ability to recognize legal aspects of HRIR issues. prereq: HRIR MA student must register A-F, 3021, [CSOM or HRD junior or senior or dept consent]

HRIR 5442. Employee Performance Management: Strategies, Systems, and Skills. (2 cr. ; Student Option; Every Fall)

Performance management strategies. Components of effective performance management systems. Alignment with HR strategy. Integration with HR practices. Measurement/appraisal. Feedback, coaching. Legal issues. prereq: HRIR MA student must register A-F, 3021, [CSOM or HRD junior or senior or dept consent]

HRIR 5443. Principles of Effective Coaching. (2 cr. ; A-F only; Every Fall)

Skills/competencies required to coach, mentor, develop employees/leaders. Managing coaching process. Planning coaching relationship. Coaching as leadership development strategy. Coaching executives. prereq: HRIR MA student must register A-F, [CSOM or HRD junior or senior or dept consent] with HRIR 3021

HRIR 5450. Change in the Workplace. (; 2 cr. ; A-F only; Every Spring)

Change is the only constant in our world today. This course focuses on how to lead in a VUCA world of Volatility, Uncertainty, Complexity, and Ambiguity. Specifically, this course covers models & frameworks, strategies, best practices, and challenges to leading change management. We will discuss preparing and planning for change, implementing change, communicating change, and sustaining & reinforcing change. We will also explore how to apply these concepts in various personal & professional situations.

HRIR 5655. Public Policies on Work and Pay. (3 cr. ; Student Option; Every Spring)

Analysis of public policies regarding employment, unions, labor markets. Public programs affecting wages, unemployment, training, worker mobility, security, quality of work life. Policy implications of changing nature of work. prereq: HRIR MA student must register

A-F, ECON 1101, [CSOM or HRD junior or senior or dept consent]

HRIR 5662. Personnel Economics. (2 cr. ; Student Option; Every Fall & Spring)

Application of economic tools to issues in human resources/industrial relations. Incentives/imperfect information. Incentive-based pay. Promotions/tournaments. Human capital/training. Screening/signaling. Applications/limitations. prereq: Prereq-HRIR MA student must register A-F, ECON 1101, [CSOM or HRD junior or senior or dept consent]

HRIR 5992. Independent Study in Human Resources and Industrial Relations. (1-8 cr. ; Student Option; Every Fall, Spring & Summer)

Individual readings or research topics. prereq: dept consent or instr consent

Human Sexuality (HSEX)

HSEX 4950. Topics in Sexuality and Sex Education. (; 1-3 cr. [max 12 cr.] ; A-F only; Periodic Fall, Spring & Summer)

Topics in Sexuality and Sex Education

Industrial Engineering (IE)

IE 1101. Foundations of Industrial and Systems Engineering. (4 cr. ; A-F only; Every Fall)

This course will provide you with an introduction to Industrial and Systems Engineering with an emphasis on models and solution methods used in system design, planning, and operation. The course will also provide you with an introduction to important problems Industrial and Systems Engineers solve in systems arising in supply chains, transportation, manufacturing, retail, and healthcare delivery, among others. Additional emphasis will be given to various relevant emerging technologies, business practices, and government regulations. CSE student

IE 2021. Engineering Economics. (4 cr. ; A-F only; Every Fall)

Cost/design process, cost estimation models, cash flow analysis, interest rate models, time value of money, evaluation of projects, internal rate of return, depreciation/income taxes, price changes/inflation, capital budgeting, decision making under uncertainty. prereq: [MATH 1372 or equiv], CSE student

IE 3011. Optimization Models and Methods. (4 cr. ; A-F only; Every Fall)

Linear, nonlinear, integer, and network optimization models and their tractability; Sensitivity analysis; Solution with software; Introduction to solution methods; Simplex method and Dijkstra's algorithm. prereq: MATH 2374, MATH 2142, or equivalent, Upper Division CSE

IE 3013. Optimization for Machine Learning. (4 cr. ; A-F only; Every Fall)

Machine learning has been widely used in areas such as computer vision, search engines, speech recognition, robotics, recommendation systems, bioinformatics, social networks, and finance. It has become

an important tool in prediction and data analysis. This course introduces some fundamental solution methods for solving various optimization models arising in the context of machine learning.

IE 3521. Statistics, Quality, and Reliability. (4 cr. ; Student Option; Every Fall, Spring & Summer)

Random variables/probability distributions, statistical sampling/measurement, statistical inference, confidence intervals, hypothesis testing, single/multivariate regression, design of experiments. Applications to statistical quality control and reliability. prereq: MATH 1372 or equiv

IE 3522. Quality Engineering and Six Sigma. (4 cr. ; A-F only; Every Spring)

Methods for Quality Engineering and Six Sigma, including Statistical Process Control, DMAIC improvement framework, Control Charts, Process Capability, Measurement System Capability, Designed Experiments, and FMEA. prereq: MATH 2374, MATH 2142 or MATH 2373 or equivalent , 3521 or Stat 3021, CSE Upper Division

IE 3553. Simulation. (4 cr. ; A-F only; Every Fall)

This course is an introduction to Monte Carlo and Discrete Event Simulation. Student will learn fundamentals of simulation modeling, including generation of pseudo-random numbers, generation of random variables, input probability distributions, variance reduction techniques, analysis of simulation output, and comparison of system configurations using experimental design. Students will implement simulation models using a software package such as Simio. Applications to problems in manufacturing, service operations, healthcare, finance, and transportation. prereq: CSCI 1133, IE 3521 or equivalent, CSE Upper Division

IE 4011. Stochastic Models. (4 cr. ; A-F only; Every Spring)

Models for describing/evaluating random systems. Formulating/analyzing stochastic models for business. Discrete-time/continuous-time Markov chains. Poisson processes. Markovian/non-Markovian queueing theory. Inventory management, manufacturing, reliability. prereq: MATH 2374, MATH 2142 or MATH 2373 or equivalent, 3521 or Stat 3021, CSE Upper Division

IE 4041W. Senior Design. (WI; 4 cr. ; A-F only; Every Spring)

Students work in small teams to address open-ended problems in Industrial and Systems Engineering. Each team works with a faculty advisory and industry mentor. prereq: IE 1101, 2021, 3011, 3521, 3522, 3553, 4011, 4511, 4541W, 4551, ISyE senior

IE 4043W. Industrial Assignment II. (WI; 4 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Solution of system design problems that require developing criteria, evaluating alternatives, and generating a preliminary design. Final report emphasizes design communication and describes design decision process, analysis, and final recommendations. prereq: 3041

IE 4044. Industrial Assignment III. (2 cr. ; A-F only; Every Fall, Spring & Summer)
Industrial work assignment in engineering co-op program. Evaluation based on student's formal written report covering semester work assignment. prereq: IE 4043, registration in ME co-op program

IE 4091. Independent Study. (1-4 cr. [max 12 cr.] ; A-F only; Every Fall, Spring & Summer)
Independent study of topic(s) involving industrial and systems engineering and operations research.

IE 4094. Directed Research. (1-4 cr. [max 12 cr.] ; A-F only; Every Fall, Spring & Summer)
Research with faculty adviser on a topic in industrial and systems engineering or operations research. Student contacts adviser to develop project description prior to registering for course.

IE 4096. Curricular Practical Training. (1 cr. [max 3 cr.] ; S-N only; Every Fall, Spring & Summer)
Industrial work assignment in engineering intern program. Evaluation based on student's formal written report covering semester's work assignment.

IE 4511. Human Factors. (4 cr. ; A-F only; Every Fall)
Human factors engineering (ergonomics), methods engineering, work measurement. Human-machine interface: displays, controls, instrument layout, supervisory control. Anthropometry, work physiology/biomechanics. Work environmental factors. Methods engineering. prereq: CSE Upper Division

IE 4541W. Project Management. (WI; 4 cr. ; A-F only; Every Fall)
Introduction to engineering project management. Analytical methods of selecting, organizing, budgeting, scheduling, and controlling projects. Risk management, team leadership, program management. prereq: ISyE senior

IE 4551. Production, Inventory, and Service Operations. (4 cr. ; A-F only; Every Spring)
Methods for managing production, inventory, supply chain, and service operations. Demand forecasting, inventory control, production planning/scheduling, supply chain coordination, manufacturing flow analysis, and service waiting line management. Implications of emerging technologies, business practices, and government regulations. prereq: MATH 2374, MATH 2142, or MATH 2373 or equivalent, 3521 or STAT 3021, CSE Upper Division

IE 4894. Directed Senior Honors Thesis. (2 cr. ; A-F only; Every Fall, Spring & Summer)
Writing thesis under direction of ISyE faculty member.

IE 5012. Discrete Optimization Methods and Applications. (4 cr. ; A-F only; Every Spring)
Discrete and combinatorial optimization techniques; heuristics; dynamic programming; handling uncertainty in optimization models. Applications in logistics, healthcare, data analysis. (Previously offered as IE 3012.) prereq: (i) MATH 2374, MATH 2142 or MATH 2373 or equivalent, (ii) Upper Division CSE, (iii) CSCI 1133 or equivalent

IE 5080. Topics in Industrial Engineering. (; 1-4 cr. [max 8 cr.] ; Student Option; Periodic Fall & Spring)
Topics vary each semester.

IE 5111. Systems Engineering I. (; 2 cr. ; A-F or Audit; Every Fall)
Overview of systems-level thinking/techniques in context of an integrated, design-oriented framework. Elements of systems engineering process, including lifecycle, concurrent, and global engineering. Framework for engineering large-scale, complex systems. How specific techniques fit into framework. prereq: CSE upper div or grad student

IE 5113. Systems Engineering II. (; 4 cr. ; A-F or Audit; Every Spring)
Systems engineering thinking/techniques presented in 5111. Hands-on techniques applied to specific problems. Topics pertinent to effectiveness of design process. Practices and organizational/reward structure to support collaborative, globally distributed design team.

IE 5441. Financial Decision Making. (4 cr. ; A-F only; Every Fall, Spring & Summer)
Cash flow streams, interest rates, fixed income securities. Evaluating investment alternatives, capital budgeting, dynamic cash flow process. Mean-variance portfolio selection, Capital Asset Pricing Model, utility maximization, risk aversion. Derivative securities, asset dynamics, basic option pricing theory. prereq: CSE upper div or grad student

IE 5511. Human Factors and Work Analysis. (; 4 cr. ; A-F or Audit; Every Fall)
Human factors engineering (ergonomics), methods engineering, and work measurement. Human-machine interface: displays, controls, instrument layout, and supervisory control. Anthropometry, work physiology and biomechanics. Work environmental factors: noise, illumination, toxicology. Methods engineering, including operations analysis, motion study, and time standards. prereq: Upper div CSE or grad student

IE 5513. Engineering Safety. (; 4 cr. ; A-F or Audit; Every Fall & Spring)
Occupational, health, and product safety. Standards, laws, and regulations. Hazards and their engineering control, including general principles, tools and machines, mechanics and structures, electrical safety, materials handling, fire safety, and chemicals. Human behavior and safety, procedures and training, warnings and instructions. prereq: Upper div CSE or grad student

IE 5522. Quality Engineering and Reliability. (; 4 cr. ; Student Option; Periodic Fall & Spring)
Quality engineering/management, economics of quality, statistical process control design of experiments, reliability, maintainability, availability. prereq: [4521 or equiv], [upper div or grad student or CNR]

IE 5524. Process Transformation through Lean Tools. (2 cr. ; A-F only; Every Fall)
Lean is a systematic methodology that improves processes by identifying and removing sources of waste in an organization. Lean tools, such as value stream mapping,

Kaizen, kanban systems, visual systems, and 5S, improve processes by identifying and removing sources of waste. In this course, you will learn and utilize key Industrial Engineering methodologies to identify opportunities, prioritize these opportunities, develop solutions and create cost models of the solutions effectiveness. Applications of lean process improvement in areas such as manufacturing, healthcare, service operations, and business processes will be considered.

IE 5531. Engineering Optimization I. (; 4 cr. ; Student Option; Every Fall)
Linear programming, simplex method, duality theory, sensitivity analysis, interior point methods, integer programming, branch/bound/dynamic programming. Emphasizes applications in production/logistics, including resource allocation, transportation, facility location, networks/flows, scheduling, production planning. prereq: Upper div or grad student or CNR

IE 5532. Stochastic Models. (4 cr. ; Student Option; Every Fall)
Introduction to stochastic modeling and stochastic processes. Probability review, random variables, discrete- and continuous-time Markov chains, queueing systems, simulation. Applications to industrial and systems engineering including production and inventory control. prereq: Undergraduate probability and statistics. Familiarity with computer programming in a high level language.

IE 5533. Operations Research for Data Science. (3 cr. ; A-F only; Periodic Fall)
This course combines data, modeling, and decision-making to provide students with experience solving practical problems in a variety of application areas, including healthcare and medical decision-making, supply chains and e-commerce, and finance and revenue management. To this end, case studies will be used to illustrate the sequence of problem definition, data analysis, model building, and decision support. The example problems are realistic in terms of size and complexity and the data sets are realistic in that the quality of the data is less-than-perfect. The first part of the course focuses on deterministic models while the second part of the course covers stochastic models. A high-level programming language such as R is used for data manipulation and for predictive analytics. An algebraic modeling language such as AMPL is used for models that require linear/integer programming. The solutions and their sensitivity to changes in parameters are interpreted to aid decision-makers. Throughout the course, the methodologies are kept in perspective with the overall goal of making better decisions.

IE 5541. Project Management. (; 4 cr. ; A-F only; Every Fall & Spring)
Introduction to engineering project management. Analytical methods of selecting, organizing, budgeting, scheduling, and controlling projects, including risk management, team leadership, and program management. prereq: Upper div or grad student

IE 5545. Decision Analysis. (; 4 cr. ; Student Option; Periodic Fall & Spring)
Single-person and group decision problems. Structuring of decision problems arising in personal, business, and public policy contexts. Decision-making under uncertainty, value of information, games of complete information and Nash equilibrium, Bayesian games, group decision-making and distributed consensus, basics of mechanism design. prereq: 3521 or equiv

IE 5551. Production and Inventory Systems. (; 4 cr. ; Student Option; Every Spring)
Inventory control, supply chain management, demand forecasting, capacity planning, aggregate production and material requirement planning, operations scheduling, and shop floor control. Quantitative models used to support decisions. Implications of emerging information technologies and of electronic commerce for supply chain management and factory operation. prereq: CNR or upper div or grad student

IE 5553. Simulation. (; 4 cr. ; Student Option; Periodic Fall & Spring)
Discrete event simulation. Using integrated simulation/animation environment to create, analyze, and evaluate realistic models for various industry settings, including manufacturing/service operations and systems engineering. Experimental design for simulation. Selecting input distributions, evaluating simulation output. prereq: Upper div or grad student; familiarity with probability/statistics recommended

IE 5561. Analytics and Data-Driven Decision Making. (4 cr. ; Student Option; Every Spring)
Hands-on experience with modern methods for analytics and data-driven decision making. Methodologies such as linear and integer optimization and supervised and unsupervised learning will be brought together to address problems in a variety of areas such as healthcare, agriculture, sports, energy, and finance. Students will learn how to manipulate data, build and solve models, and interpret and visualize results using a high-level, dynamic programming language. Prerequisites: IE 3521 or equivalent; IE 3011 or IE 5531 or equivalent; proficiency with a programming language such as R, Python, or C.

IE 5571. Reinforcement Learning and Dynamic Programming. (4 cr. ; Student Option; Fall Odd Year)
Topics are methods for solving problems in sequential decision making. We will introduce the modeling framework of Markov Decision Processes (MDP), and the classic solution approach of dynamic programming. We will discuss the traditional solution approaches to dynamic programming of value and policy iteration. We will then move onto model free methods of finding optimal policies for MDPs such as Monte Carlo and Temporal Difference methods. We will discuss the extension of these methods to problems with large state spaces where it is necessary to introduce parametric approximations such as deep neural networks. Examples will be drawn from problems in navigation, medicine, game

play, and others. Prerequisites: Knowledge of probability, optimization, and linear algebra at the undergraduate level.

IE 5773. Practice-focused Seminar. (1 cr. ; S-N or Audit; Every Fall)
Industry and academic speakers, topics relevant to analytics practice.

IE 5801. Capstone Project. (4 cr. ; A-F only; Every Fall)
Students work on ISyE Analytics Track capstone project in small teams of two or three. Projects are supervised by industry mentor and faculty adviser. Projects involve application of techniques from Analytics Track curriculum. Prerequisites: ISyE Analytics Track MS Student; IE 5531; IE 5561; Stat 5302; CSci 5521 or 5523.

Information Networking (INET)

INET 1001. Survey of Information Technology. (1 cr. ; A-F or Audit; Every Fall & Spring)
Major classifications of information technology (IT). Business uses with focus on data, systems, networks. IT as career, including degrees, certifications, trends, opportunities, lifelong learning.

INET 3011W. Social Impact of Information Technology. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)
Information and Communication Technology (ICT) has a profound impact on society in many different ways. Some of these ways -- for example, in a business or in terms of specific employment activities -- you will study in other courses; INET 3011W asks you to think about the ethical decision-making that goes into ICT activities and their impact within and beyond the ICT world. What ethical choices must individuals make when designing new software or applications? What sorts of problems and competing interests can arise during work in organizational teams or across an industry, and how can they be resolved? More fundamentally, what impact does ICT, along with the ethical decisions made by those working in the field, have on the larger world -- the communities in which it is deployed, the environment on which it operates, and the governments and economies in which it plays an ever-increasing role? To address these and related questions, INET 3011W will require you to examine ICT's impact from three different perspectives: (1) the individual decision-maker; (2) the team or organizational dynamic; and (3) the stakeholders at the social, and even global, level. prereq: None

INET 3101. C Programming: Language and Applications. (; 2 cr. ; A-F or Audit; Every Fall)
Syntax of C language. How other languages use C to interact with operating system. Debugging. Assignments build upon real-world programming examples to demonstrate how/where to use C. Scripting using languages such as UNIX shell and Perl. prereq: Programming experience or completed coursework in [Java or C+ or similar programming language]

INET 3102. Web Infrastructure. (; 2 cr. ; A-F or Audit; Every Fall)
Infrastructure of the web, from its fundamental protocol (HTTP) to the organization and use of large-scale components and services. Cloud offerings (compute, storage, queuing) and platforms (AWS, Google Apps, Heroku). prereq: [3101, CSCI 2021] or equiv IT experience

INET 4001. Foundations of Operating Systems. (4 cr. ; A-F or Audit; Every Fall)
Although the concept of an operating system has some core components, such as I/O, storage, CPU scheduling, process, and synchronization, the ways we use computing devices are radically changing. With the advent of concepts like IoT (internet of things), we need to not just simply take a single concept of a computer (PC or server) as de facto standard, we must adapt and understand how the core components that make up an operating system change how we need to use these components. We also have the ability to consume OS resources via networking like never before. What is commonly called "cloud computing" has now stretched what we think of a compute device across the globe as a connected system of services/processes. This course will start from the beginning of computing (briefly) to ground what we are actually trying to do with compute devices. From here, we'll understand the foundation of operating system components, but not just from a single platform. An introduction to cloud computing is essential as well, as there are many components we consume via compute devices that are across a WAN circuit as a "service." Prerequisites: CSci 2021 or EE 2361

INET 4002. Foundations of Networking. (3 cr. ; A-F or Audit; Every Fall & Spring)
Basics of data communications and computer networks. Foundations of network protocols, data communications models, networking devices, and network types. Local area, wide area, and wireless networks and their uses in business applications. Network monitoring, troubleshooting, security, and management fundamentals, including their application in enterprise networking. 3 credits. No prerequisites, but basic knowledge of computer architecture and operating systems is recommended. Note that credit will be granted for either INet 4002 or CSci 4211, but not both.

INET 4007. Security II: Cyber Security. (4 cr. ; A-F only; Every Fall)
An exploration of information security, how it applies to current networking technologies, and ways these technologies are used and consumed. New authentication methods for securing user data, such as telemetry, biometrics, and N factor authentication, will be surveyed. The course will also look at recent instances of information breaches that have put a spotlight on security, especially as they relate to cloud services, virtual environments, and Internet standards. No prerequisites. Basic knowledge of security issues and processes (detection, risk assessment, technology, secure design, business continuity, forensics, and legal aspects) is recommended. If you have

taken INet 4165, you will be well prepared. If you are unsure about whether your knowledge is sufficient for success in this class, contact the instructor.

INET 4011. Networking I: Network

Administration. (4 cr. ; A-F or Audit; Every Fall)

A combination of networking theory (lecture and expert guest speakers) and application (lab work). Topics include network architecture, switching, routing, algorithms, protocols, infrastructure hardware, cable plant, security, and network management. prereq: CSCI 4211-Introduction to Computer Networks or equivalent networking knowledge and understanding.

INET 4021. Dev Ops I: Network

Programming. (; 4 cr. ; A-F or Audit; Every Spring)

Network and distributed programming concepts. Design using C, Java, and other higher-level programming languages. Sockets, TCP/IP, RPC, streaming, CORBA, .NET, and SOAP. Labs use UNIX/Linux and MS Windows operating systems. prereq: major admission requirements completed.

INET 4031. Introduction to Systems. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

Overview of systems administration. Integration of hardware, software, and operational practice. Role of a systems administrator in today's infrastructure world, the environment within which the administrator operates, and various components that influence decision-making criteria. Ways these technologies are implemented in practice are conveyed through industry speakers, tours, and demonstrations. Hands-on labs when possible. prereq: Secure knowledge of operating systems, such as provided by INet 4001 or CSci 4061.

INET 4032. Systems I: Storage. (4 cr. ; A-F or Audit; Every Fall)

Information is one of the most valuable commodities of the 21st century. This course deals with the proper care and handling of enterprise data, whether the ?enterprise? is a large multinational corporation, a family home, or something in between. Topics include storage network architecture and storage system design. We will examine data storage technology; local, network, and distributed storage; storage history; data protection policy and implementation (including redundancy, replication, backup, and archive storage); security; compression and encryption; and emerging technologies like Big Data, Cloud storage, AWS, Google, and vCloud Air. prereq: Fundamental understanding of an operating system such as Microsoft Windows, Linux, or Apple OSX, in the areas of file systems, I/O, computer architecture, and basic administration.

INET 4041. Networking II: Emerging

Technologies. (; 4 cr. ; A-F or Audit; Every Fall)

Emerging networking concepts, technologies, and applications. Topics will evolve to reflect current trends and expertise of the faculty, such as high speed networking, ATM, network security, wireless networks, multimedia, and

electronic commerce. Each technology is considered for the underlying theory; the driving technological and business needs; the applications; the competing alternative technologies; and the design, implementation, and configuration of such systems. Case studies may be used to identify and analyze strategic issues and problems. Concepts and tools from this and previous ITI courses are applied to solve these problems and design realistic programs of action. Hands-on labs are included when possible. Industry speakers, tours, and demonstrations show practical applications. prereq: CSci 4211 or equivalent, or professional experience, to comprise a basic understanding and knowledge of operating systems, computer architecture, and probability theory. Senior status preferred.

INET 4051. IT Infrastructure Operations:

Capstone. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Comprehensive review of major aspects of IT infrastructure and operations: networks, databases, servers, storage, project management, governance, compliance, monitoring, and more. This course merges these discrete disciplines into an operational pattern, preparing you to quickly integrate yourself into a productive working IT environment.. You'll learn how to map and develop processes, collect and analyze operational metrics, plan tactically and strategically, plan for capacity, secure the infrastructure, and scale the topics to fit an organization's size. Because IT infrastructure operations are almost always the function of a team, there will be two case study assignments that will challenge you and your group members to use your knowledge about the course material against a current industry issue. prereq: INet 4002 or CSci 4211 or instructor consent, Senior.

INET 4061. Data Science I: Fundamentals.

(4 cr. ; A-F or Audit; Every Fall & Spring) Introduction to data science. Design strategies for business analytics: statistics for machine learning, core data mining models, data pipeline, visualization. Hands-on labs with data mining, statistics, and in-memory analytics software. prereq: Basic statistics and programming skills, laptop

INET 4082W. IT Infrastructure Projects and Processes. (WI; 3 cr. ; A-F or Audit; Every Fall)

This course presents an IT management perspective on business partnerships, project management and lifecycles, methodologies, processes, and organizational structures. It covers scope definition, resource estimating of time and cost, quality considerations, and metrics and risk analysis. Project management best practices are emphasized. All the concepts will be tied together with project simulation assignments. As a writing intensive designated course, it will spend significant time focusing on the writing process. Writing is crucial to this discipline because clear, accurate, and professional communication is essential to each element in the process of project management. The inability to write well,

clearly, and in terms of specified audiences can, in the professional world, lead to not only miscommunication between team members but also, and more largely, to a failure of projects and the companies and employees they represent. prereq: 45 cr recommended

INET 4083W. Systems II: Analysis and

Design. (WI; 3 cr. ; A-F or Audit; Every Spring) Requirements management, analysis, and design of computer system solutions that meet business objectives. Materials and resources are intended to prepare students to be effective business analysts and systems analysts. Topics include the systems development life cycle, analysis and design tools and techniques, and communication strategies. As a writing intensive course, INET 4083W focuses especially on writing in information technology and the writing process and uses a case study and in-class exercises to develop analytical, technical, and communication skills. Students can expect to spend significant time in and out of class developing writing skills, thinking through the writing process, and drafting and revising written work. Prereq: INet 4082W (or equivalent project management experience) is recommended.

INET 4121. DevOps II: Development

Strategies. (4 cr. ; A-F or Audit; Every Fall)

DevOps (Development and Operations) is the term used to describe the collaboration of software engineers with the quality assurance and operations teams who test, deploy, and operate new systems. Its goal is to generate better and more continuous feedback regarding what is being developed, consumed, and operated, in order to increase delivery and deployment speed while maintaining system stability. Topics include configuration management, application deployment, monitoring of application and infrastructure performance, version control, and testing and building systems. Professional software engineering tools for the continuous integration tool chain are surveyed, and the Python language, combined with operating system and web functions, is used to develop tools for automating DevOps practices. (Though assignments are in Python, students with only Java or C++ should be able to learn Python quickly.) prereqs: CSCI 4061 or operating system knowledge, basic knowledge of Python

INET 4153. Introduction to Security: Policy and Regulation. (; 4 cr. ; A-F or Audit; Every Fall)

Explores the significant domestic and international regulatory demands faced by information technology management (IT) in business and industry, with attention to the effects of those regulations on IT Infrastructure policy, technology management, and decision making. Several major U.S. and international regulatory documents will be studied. IT governance, risk and compliance management frameworks, best practices, and common approaches used to meet today's regulatory challenges and support common business functions will be examined, as well as IT policies, procedures, and processes in highly regulated business sectors. prereq: experience with Windows/Internet; 45 semester credits

INET 4165. Security I: Principles. (3 cr. ; A-F or Audit; Every Spring)

An in-depth look at the information security profession. Focuses on real-world IT security issues and processes rather than any particular technology or product solution. Topics include risk assessments/pen testing, ethics, malicious code, preservation of business continuity/disaster recovery, security policies and procedures, security awareness, encryption, privacy and legal issues, intruder detection, forensics, secure web design, incident response, vulnerability assessment, and security audits. prereq: CSCI 4061 or equiv experience with operating systems

INET 4193. Directed Study. (; 1-4 cr. [max 12 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Independent project. Topic arranged with and supervised by ITI faculty. prereq: ITI student, dept consent

INET 4596. Internship. (; 1 cr. [max 3 cr.] ; A-F only; Every Fall, Spring & Summer)

Provides students with the opportunity to gain hands-on experience working in a professional IT setting and get an insider's view of information technology applications in the workplace. In consultation with a faculty adviser, students apply classroom learning, contribute to knowledge of best practices, and prepare for the transition from school to full-time employment in the IT field. Students seeking credit for the internship are expected to find employment that primarily draws upon the intern's academic knowledge in field-relevant level tasks and allows for new learning in these areas. prereq: [ITI major or certificate student], [jr or sr], dept consent

INET 4707. Introduction to Databases. (; 4 cr. ; A-F or Audit; Every Fall)

Overview of relational database and big data (NoSQL) technologies. Topics include entity relation modeling, relational databases, SQL, data warehouse, transaction and recovery, data security, distributed databases, key-value and column family, distributed transaction management, document databases, graph databases, Hadoop, and polyglot persistence. Case studies present a real-world perspective. The course provides enough background into the functions, advantages, and disadvantages of each technology to enable an understanding of which technology or combination of technologies is appropriate for implementing a given business system. prereq: INet 4001 or CSci 4061, at least 45 cr completed; CSci majors contact CSci Dept before registering.

INET 4709. Data Management I: Fundamentals. (3 cr. ; A-F or Audit; Every Spring)

This course provides insight into concepts and techniques for installing and managing highly scalable relational databases: storage, protection, structure, tuning, and access. Students will learn how to integrate business requirements into specific database policies and procedures. Topics include selection of hardware and software components, backup and disaster recovery, performance metrics, high availability, and monitoring techniques.

Hands-on lab exercises will utilize core concepts covered in lecture: installation of MySQL, backup and recovery, import and export, security, transaction management, data partitioning, and database replication. prereq: INet/CSci 4707 and CSci 4061, or professional experience with SQL and basic operating systems.

INET 4710. Data Science II: Big Data Analytics. (4 cr. ; A-F or Audit; Every Spring)

Scales machine learning models and data analysis to a Big Data platform. Map Reduce and Spark frameworks are introduced as approaches to parallel algorithm development. Hands-on labs. Prerequisites: Basic programming knowledge (Java, Python, R). Linear algebra strongly recommended, especially matrix operations (e.g., MATH 2243, Linear Algebra and Differential Equations)

INET 4711. Data Management II: Distributed Systems. (4 cr. ; A-F or Audit; Every Fall)

Introduction to distributed programming and systems concepts in high-scale environments with a focus on application to commercial systems in the data center. Discussion of key protocols and algorithms as well as best-practice implementations on platforms commonly associated with big data in the enterprise. Hands-on experience in the design and engineering of distributed systems on cloud-oriented technologies. prereq: INET 4031 and 4707 or consent of instructor.

Information and Decision Sci (IDSC)

IDSC 3001. Information Systems & Digital Transformation. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Digital transformation through new technologies such as artificial intelligence, enterprise systems, electronic commerce, Internet of things, social media; IT strategy and data-driven decision making; privacy and security issues related to the Internet; a must take for students who want to be prepared for the rapidly changing technological landscape as successful professionals

IDSC 3001H. Honors: Information Systems for Business Processes and Management.

(; 3 cr. ; A-F or Audit; Every Fall) Digital transformation through new technologies such as artificial intelligence, enterprise systems, electronic commerce, Internet of things, social media; IT strategy and data-driven decision making; privacy and security issues related to the Internet; a must take for Honors students who want to be prepared for the rapidly changing technological landscape as successful professionals.

IDSC 3101. Introduction to Programming. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Introduction to Programming introduces students to a number of fundamental programming concepts, including: variables, decision structures, programming functions, and repetition structures. These concepts, which are widely applicable to different programming languages, are introduced using Python.

IDSC 3102. Intermediate Programming. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Programming concepts to develop large, full-featured applications. Object-oriented programming, database applications, Web applications. Style, performance, UI design.

IDSC 3103. Data Modeling and Databases. (; 2 cr. ; A-F only; Every Fall & Spring)

Concepts for designing, using, and implementing database systems. Normalization techniques. Structured Query Language (SQL). Analyzing a business situation. Building a database application.

IDSC 3104. Enterprise Systems. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Management aspects of Enterprise Systems. Vendor/vendor management options. Technologies, organizational readiness. Hands-on access to software solutions from ERP software provider. End-to-end processes. Measurement of key performance indicators. Analytics, workflow. prereq: 3001

IDSC 3202. Analysis and Modeling of Business Systems. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

Improving/automating key business processes in manufacturing and service industries. Roles of business management and MIS. Selecting business process opportunities, business process analysis, process modeling of work/data flow, decomposition, software tools. Traditional/object analysis methods. prereq: 3001

IDSC 3511. Pitching Business Strategy. (2 cr. ; A-F only; Every Fall)

Contemporary business strategy drives growth across industries and geographies. Thus, effectively selling an approach to an ambiguous business situation is an important skill for those entering the business world - either as a consultant or a staff member wishing to sell ideas to senior management. You will learn how to approach an opportunity and how to communicate your approach and an action plan to management with appropriate emphasis and structure. The class consists of a series of hands-on workshops and real-world, global business cases (which serve as proxies for real-life consulting and staff experiences). Prereq: IDSc 3001 or I-Core (completed or concurrent), or Instructor permission.

IDSC 4110. Data Engineering for Business Analytics. (2 cr. ; A-F only; Every Fall)

Modern organizations increasingly base their decisions on data which is becoming more abundant by each day. The first step of using data for decision making is to prepare data in a suitable format for analysis, a step commonly known as data engineering. Typical data engineering tasks may include data acquisition, parsing, handling missing data, summarization, augmenting, transformation, subsetting, sampling, aggregation, and merging. Data engineers also frequently use basic data visualization tools to detect and fix data issues. Most recently, there is increasing demand for data engineers to handle big data and unstructured data. A good data engineering process ensures quality, reliability, and usability

of data. In fact, data engineering is such a critical and time-consuming step of data-driven decision making that many data scientists and analysts spend more than 60% of their time doing data engineering related tasks.

IDSC 4161. Python for Business

Applications. (2 cr. ; A-F only; Every Spring) According to recent industry surveys, Python is a highly popular tool used by organizations for business tasks. This course is designed for students who already have an intermediate programming background such as IDSC 3101/3102 (or equivalent Computer Science programming courses) and would like to explore using Python for tasks such as text processing, data analysis, and website scraping. This course focuses on business-oriented applications of Python without requiring students to learn formal computing concepts. Participants will then learn how to apply functionality from powerful and popular libraries. We will spend most of our class time completing practical hands-on exercises.

IDSC 4204W. Strategic Information

Technology Management. (WI; 4 cr. ; A-F or Audit; Every Fall & Spring) Information services as service function. Investing resources to support strategy. Managing IS resources. Project Management, Human Capital Management, Infrastructure Management. Emphasis on cloud/big data infrastructures, outsourcing.

IDSC 4210. Interactive Data Visualization for Business Analytics. (2 cr. ; A-F only; Every Fall)

IDSC 4210 is an elective course for the undergraduate Business Analytics minor at the Carlson School of Management. It focuses on the fundamental and widely used exploratory data analysis technique of interactive visualization that is integral to modern business analytics. The key goal of this course is to prepare students for the rapidly changing digital environment faced by companies as it pertains to data-driven decisions. The students will also have hands-on experience with interactive data visualization using modern, state-of-the-art software on real-world datasets.

IDSC 4301. MIS in Action: A Capstone

Course. (2 cr. ; A-F only; Every Fall & Spring) The course is designed for students to integrate a large number of concepts they have studied in previous course work within the department and school. The class uses a live-case/project-based design that requires students to identify and develop a detailed managerial analysis of an information technology and/or management information system (IT, MIS) project for a local corporation.

IDSC 4310. Prescriptive Analytics. (2 cr. ; A-F only; Every Spring)

Prescriptive Analytics answer the question "What should I do?" This class of analytical techniques focuses on moving beyond simply analyzing the data to providing an optimal action plan. Prescriptive techniques combine learnings from the descriptive and predictive disciplines with a new layer of insight and computer algorithms that suggests an action plan rather than just describing the data or

predicting what might happen. prereq: IDSc 4110 & 4210 recommended.

IDSC 4401. Information Security. (; 2 cr. ; A-F only; Every Spring)

Concepts/issues of security and data integrity threats that undermine utility, robustness, and confidence in electronic technologies in facilitating business transactions. prereq: 3001

IDSC 4411. Information Technology Governance and Assurance. (; 2 cr. ; A-F only; Every Fall)

Information technology audit function, internal control, audit process, smart operations, network security, systems development life cycle, enterprise resource planning risk, compliance issues. IT governance, business continuity, frameworks/methodologies. Lectures, case studies, real-world examples. prereq: 3001

IDSC 4441. Electronic Commerce. (; 2 cr. ; A-F or Audit; Periodic Fall, Spring & Summer)

Issues/trends in applying e-commerce initiatives. Technological infrastructure, revenue models, web marketing, business-to-business strategies, online auctions, legal and ethical aspects, hardware/software, payment systems, security. Conceiving, planning, building, and managing e-commerce initiatives. prereq: 3001

IDSC 4444. Descriptive and Predictive

Analytics. (; 2 cr. ; A-F only; Every Spring) Descriptive and Predictive Analytics exposes students to a number of data mining and machine learning methods, including: exploratory methods (such as association rules and cluster analysis), predictive methods (such as K-NN and decision trees), and text mining methods. The course combines theoretical lectures with lab lectures, where the methods are practically implemented using the software R. prereqs: IDSC 3001; non-MIS majors also need IDSC 4110

IDSC 4455. Web 2.0: The Business of Social Media. (; 2 cr. ; A-F only; Every Fall)

Business use of social media technologies. Blogs, wikis, online social networks. Readings, forum discussion, case analyses. How technologies engage consumers, market products or services, benefit from open innovation, foster collaboration among employees. prereq: 3001

IDSC 4471. Agile Methods. (2 cr. ; A-F only; Every Spring)

With the changing landscape of MIS methodologies, it is important to prepare for the future. This course will cover modern lightweight, and interactive IT development practices. Topics will include methodologies (RUP, Scrum, Kanban, and others); requirements gathering processes (Epics, User Stories); tools (burn-down chart, Kanban visualization); and leadership concepts (Scrum master, team member, sponsor). This class is appropriate for those with project-oriented career goals, in IT organizations as well as consulting roles.

IDSC 4490. Information Systems Special Topics. (; 2 cr. [max 10 cr.]; A-F or Audit; Periodic Fall & Spring)

Discussion and analysis of current topics and developments in information systems.

IDSC 4491. Independent Study in Information Systems. (; 1-4 cr. [max 8 cr.]; A-F only; Periodic Fall, Spring & Summer) Independent study in information systems. prereq: instr consent

IDSC 4493. Directed Study. (1-4 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer)

Student-initiated project or directed study to be completed with a faculty member. prereq: Instructor consent

IDSC 4590. Business Analytics Special Topics. (; 2 cr. [max 6 cr.]; A-F only; Every Spring)

Discussion and analysis of current topics and developments in business analytics.

Insurance and Risk Management (INS)

INS 4101. Employee Benefits. (; 2 cr. ; Student Option; Every Fall)

Design/administration of employee benefit plans/pension. Health insurance, disability plans. Salary reduction/deferred compensation programs. Multiple employer trusts. Alternative funding methods, including self-insurance. Ethical issues, legal liability, compliance.

INS 4105. Corporate Risk Management. (; 2 cr. ; Student Option; Every Fall & Spring)

Theory applied to corporate risk management and insurance practices. Identification, measurement, and treatment of an organization's financial risks integrated with its property, liability, workers compensation, and human resource risks. Selection and application of risk control and risk financing tools: risk retention, reduction and transfer, including insurance.

INS 4200. Insurance Theory and Practice. (; 2 cr. ; Student Option; Every Spring)

Risk theory is applied to practices in health, liability, life, property, and workers compensation insurance. Insurance marketing, pricing, underwriting, and claims administration, with adverse selection and moral hazard effects. Policy issues of tort versus no-fault compensation systems. Self-insurance and integrated risk financing methods.

Inter-College Program (ICP)

ICP 3000. Career Skills in the Professional Environment. (; 2 cr. ; Student Option; Every Spring & Summer)

Career planning and job search processes appropriate to business/professional careers in corporate culture. prereq: 60 cr

ICP 3093. Directed Study. (1-15 cr. ; A-F only; Every Fall, Spring & Summer)

Independent, directed study. prereq: instr consent

ICP 3101W. Proposal Development. (WI; 2 cr. ; A-F only; Every Fall & Spring)

A required course for Inter-College Program (ICP) and Health and Wellbeing Sciences

(HWS) students. Provides the opportunity to explore together the three sections of the individualized degree proposal: Goals, Background, and Course of Study. Students will derive content for the proposal, select curriculum, and prepare developmental drafts and a final draft for program/departmental review. Peer review, discussion, and writing exercises will enhance the proposal development process and the final product. prereq: Admission to the Inter-College Program or Health and Wellbeing Sciences major

ICP 3201. Career and Internship

Preparation. (; 1 cr. ; A-F only; Every Fall & Spring)

Self exploration, networking, industry research, job/internship search, resumes, cover letters, interviewing, salary negotiation, goal setting. prereq: Soph or jr or sr or grad student

Interior Design (IDES)

IDES 1601. Interior Design Studio I. (4 cr. ; A-F or Audit; Every Fall)

Theories used to solve interior design problems related to human behavior. Design process. Communication skills that are required for interior design profession. prereq: Interior design pre-major or interior environments minor

IDES 1602. Interior Design Studio II. (4 cr. ; A-F only; Every Spring)

Introduction to interior design programming as method for understanding behaviors/requirements of humans in spaces. Use of color in three-dimensional environments. Developing communication skills. Problem-solving. prereq: [1601 or DHA 1601] with grade of at least C-, interior design pre-major

IDES 2196. Work Experience in Interior Design. (; 1-4 cr. [max 8 cr.]; S-N only; Every Fall, Spring & Summer)

Supervised work experience in business, industry, or government, related to student's area of study. prereq: Plan submitted/approved by [adviser, internship supervisor], written approval of supervisor, instr consent

IDES 2603. Interior Design Studio III. (; 4 cr. ; A-F only; Every Fall)

Expanding presentation skills, visual communication of design process. Design of interior environment as influenced by neighborhood, adjacent structures, regional context, diverse cultures. prereq: [1602 or DHA 1602] with grade of at least C-, pass portfolio review, interior design major

IDES 2604. Interior Design Studio IV. (4 cr. ; A-F or Audit; Every Spring)

Relationship between exterior/interior design as it pertains to building construction. Methods/materials, principles of structure, building systems, construction details. Interface of electrical, HVAC, plumbing systems in buildings. prereq: [2603 or DHA 2603], 2613

IDES 2612. Interior Materials and Specifications. (ENV; 4 cr. ; A-F or Audit; Every Spring)

Environmental issues, from global to interior spaces. Effect of building codes/legislation,

social awareness. Functional/aesthetic relation of materials/resources to interior design.

prereq: [Pass portfolio review, interior design major] or interior environments minor or design minor or instr consent

IDES 2613. Interior Structures, Systems, and Life Safety. (4 cr. ; A-F only; Every Fall)

Codes, standards, regulations, and guidelines that govern design of interior space and support life safety. Integration of building systems. Structures for non-residential/residential occupancy. Building/energy codes. Lectures, guest speakers, field trips.

IDES 2622. Computer Applications I. (; 2 cr. ; A-F only; Every Spring)

Computer-aided design, its role in interior design. Use of software applications for construction drawings, two-/three-dimensional representation. Modeling for interior design problem-solving/presentation. prereq: Interior design major

IDES 3161. History of Interiors and Furnishings: Ancient to 1750. (GP; 4 cr. ; A-F or Audit; Every Fall)

Study of European and American interiors and furnishings, including furniture, textiles, and decorative objects.

IDES 3162. History of Interiors and Furnishings: 1750 to Present. (HIS; 4 cr. ; A-F or Audit; Every Spring)

European/American interiors/furnishings, including furniture, textiles, and decorative objects.

IDES 3196. Field Study: National or International. (; 1-4 cr. [max 10 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Faculty-directed field study in national or international setting. prereq: instr consent

IDES 3605. Interior Design Studio V. (; 4 cr. ; A-F only; Every Spring)

Advanced interior design problems dealing with small to medium scale spaces. Emphasizes special-needs populations.

IDES 3606. Interior Design Studio VI. (; 4 cr. ; A-F only; Every Fall)

Interior design problems dealing with medium-scale spaces. Focuses on medium office design. prereq: IDes 3605

IDES 3612. Lighting Design. (3 cr. ; A-F only; Every Fall)

Lighting as dynamic design element. Psychological aspects of light color/quality/sources. Photometrics, codes, daylighting, energy conservation. How lighting impacts health/well-being. Integrating lighting with interior/architectural elements. Lighting/fixture design. Computer visualization. Lecture, assignments, projects.

IDES 3614. Interior Design Ethics and Professional Practice. (CIV; 4 cr. ; A-F only; Every Fall)

Business of interior design, professional ethics, and responsible design. Ethical theory/conduct. Responsibility to business, clients, colleagues, and community at large and globally. prereq: 2604 or DHA 2604; or Interior Environments Minor

IDES 3622. Computer Applications II. (2 cr. ; A-F only; Every Fall)

Advanced concepts/terms in computer modeling. Computer graphics, three-dimensional modeling, rendering, animation to provide representation strategies for interior design problem-solving/presentation. Applications such as Autodesk Revit, AutoCAD, Autodesk 3ds Max Design. prereq: 2622

IDES 4193. Directed Study in Interior Design. (; 1-4 cr. [max 8 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Independent study in interior design under tutorial guidance. prereq: Undergrad, instr consent

IDES 4196. Internship in Interior Design. (; 1 cr. ; S-N only; Every Fall, Spring & Summer)

Supervised work experience relating activity in business, industry, or government to student's area of study. Integrative paper or project may be required. prereq: 4607, instr consent

IDES 4607. Interior Design Studio VII. (4 cr. ; A-F only; Every Fall)

Advanced interior design problems dealing with large scale spaces. Historic precedent, adaptive use, renovation. prereq: [IDes 2604] or [DHA 2604] with grade of at least C-

IDES 4608. Interior Design Thesis. (; 4 cr. ; A-F only; Every Spring)

Comprehensive independent interior design project developed from student-conducted research/program developed in 4615W. prereq: [4615W or DHA 4615W], [4607 or DHA 4607] with grade of at least C-

IDES 4615W. Interior Design Research. (WI; 3 cr. ; A-F only; Every Fall)

Research methods for programming interior design solutions. Developing comprehensive program. Issues that affect interior design research/practices. prereq: 3605 or DHA 3605

IDES 4616. Sustainable Commercial Interior Design. (; 3 cr. ; A-F or Audit; Periodic Fall, Spring & Summer)

Intent, requirements, submittals, technologies/strategies to achieve LEED CI standards in existing, new construction, or tenant improvement projects.

IDES 4617. Lighting Design Innovations and Technological Advances. (; 3 cr. ; A-F only; Every Spring)

This course deepens students' understanding of the relationship between interior and architectural lighting design issues, strategies, and methods in contemporary practice. It investigates an integrated approach to lighting design to consider lighting innovations and emerging trends in health and comfort, smart technologies, energy and performance, metrics and standards, and assessment processes and tools. Assignments incrementally introduce students to related lighting issues to enable students to gain hands-on knowledge and application of related design issues through a small design project. Field studies and guest lectures provide insights into innovations in industry and professional perspectives on emerging technologies and systems integration.

IDES 5193. Directed Study in Interior

Design. (; 1-4 cr. [max 8 cr.]; A-F or Audit; Every Fall, Spring & Summer)
Independent study in interior design under tutorial guidance. prereq: Jr or sr or grad student

IDES 5196. Work experience (lighting internship).

(3 cr. [max 10 cr.]; A-F or Audit; Every Fall, Spring & Summer)
Faculty-directed internship

IDES 5612. Lighting Design.

(3 cr. ; A-F only; Every Fall)
Lighting as dynamic design element. Psychological aspects of light color/quality/sources. Photometrics, codes, daylighting, energy conservation. How lighting impacts health/well-being. Integrating lighting with interior/architectural elements. Lighting/fixture design. Computer visualization. Lecture, assignments, projects.

IDES 5616. Sustainable Commercial Interior Design.

(3 cr. ; A-F or Audit; Every Spring)
Intent, requirements, submittals, technologies/strategies to achieve LEED CI standards in existing, new construction, or tenant improvement projects.

IDES 5617. Lighting Design Innovations and Technological Advances.

(; 3 cr. ; A-F only; Every Spring)
This course deepens students' understanding of the relationship between interior and architectural lighting design issues, strategies, and methods in contemporary practice. It investigates an integrated approach to lighting design to consider lighting innovations and emerging trends in health and comfort, smart technologies, energy and performance, metrics and standards, and assessment processes and tools. Assignments incrementally introduce students to related lighting issues to enable students to gain hands-on knowledge and application of related design issues through a small design project. Field studies and guest lectures provide insights into innovations in industry and professional perspectives on emerging technologies and systems integration.

International Business (IBUS)**IBUS 1400. International Programs Elective.**

(1-4 cr. [max 8 cr.]; S-N only; Every Fall, Spring & Summer)
Education abroad program elective.

IBUS 3002. Strategic Management

Accounting. (4 cr. ; A-F only; Every Fall)
Costing techniques, including activity-based costing. Applying costing methods to determine costs of products, services, and production processes. Use of costs in operating/strategic decisions. This education abroad course provides an overview of managerial accounting concepts with a lens towards how different cultural contexts might influence the decisions that managers make around the world or in within different organizational cultures. prereq: ACCT 2051 or 2050

IBUS 3004. International Internship:

Personal and Professional Development

in the Global Workplace. (; 1 cr. ; S-N only; Every Summer)

This course offers the opportunity for students to observe and explore the business culture of your host country through their full-time internship placement. Students will develop intercultural communication and leadership skills through observation and structured reflection. Students in this course are participating on a Carlson education abroad program where they intern with a company, organization, or government agency related to their academic discipline of interest (e.g. marketing, finance, human resources, supply chain, MIS, etc.). Students intern at their placement about 40 hours per week for 8 weeks. prereq: Acceptance in Business Internship Program through the Carlson Global Institute

IBUS 3006. Global Career Skills.

(2 cr. ; A-F only; Every Spring)
The focus of this education abroad course is to increase your awareness, knowledge and skills associated with the career and job search process both domestically and globally. The course includes career exploration and discovery, as well as the tactical pieces of a job search. You will be exposed to a variety of individuals, organizations, and cultures in Minnesota and internationally who will give you different perspectives on the process such as recruiters from multi-national organizations, students who have completed an internship, and presenters abroad. You will also learn to use the Carlson School of Management Undergraduate Business Career Center (UBCC), On Campus Recruiting, and GoldPASS Powered by Handshake. This development will increase your ability to undertake a successful career and job search during college and beyond. This course is designed to be taken prior to or concurrent with enrollment in I-CORE. Prereq: an approved education abroad application and CSOM BSB students only.

IBUS 3010. Introduction to Global Entrepreneurship.

(4 cr. [max 12 cr.]; A-F only; Every Spring)
This course is an introduction to the fundamentals of entrepreneurship. Students will learn entrepreneurship concepts and apply them to opportunities in a variety of global contexts including China, Cuba, Brazil, and others. Students will interact virtually with global entrepreneurs and leaders. After engaging with international entrepreneurs students will apply their experience to future entrepreneurship opportunities.

IBUS 3019. Striving for Equity in International Business.

(4 cr. ; A-F only; Every Fall)
This course addresses gender in the workplace, including the complex reasons for the lack of representation of women in senior leadership positions?within the United States and in the larger global context? ?gendered? communication at work, and work-life effectiveness for both women and men. Other topics that we will touch on include gender-based differences in negotiation, teamwork,

communication, conflict management, and leadership. Historical and cross-cultural perspectives are integrated into the course.

IBUS 3021. Human Capital Management.

(4 cr. ; A-F only; Every Spring)
This course will look at how, through managing and leading people, we can achieve organizational strategic objectives. The class will learn about managing people in an ethical, legal way that is aligned with organizational strategy and helps organizations reach their goals through recruiting, selecting, training, rewarding, coaching, motivating, and developing the people within the organization. Overall the course will prepare the students to be managers and leaders in an increasingly complex, global business environment.

IBUS 3033W. Business Communication in a Global Context.

(WI; 4 cr. ; A-F only; Every Spring)
Written/oral communication skills for effective participation in contemporary organizations. From basic principles to communication strategy. Communication technology. Cases, simulations of "real-world" situations in a domestic and global context. Global perspectives of focus have included India, Spain, South Korea and Japan. prereq: Fr composition, CSOM upper-div, at least 60 cr

IBUS 3055. Innovating with Technology: Global IT Entrepreneurship in Action.

(4 cr. ; A-F only; Every Spring)
This course provides state-of-the-art knowledge about information technologies and fundamentals of entrepreneurship with an international perspective. It also provides a comprehensive overview of current and emerging technologies in several different areas of IT, focusing on the needs of the modern net-enhanced organizations and IT adaptation to local markets. In particular, the course covers basics of consumer electronics, Internet and mobile communications, web technologies, cloud computing, cyber-security, social network, etc. Students will be trained to use sprints to evaluate ideas, risk, costs, and culturalization needs of IT solution for local markets. We will look at how technology leaders/entrepreneurs in the rest of the world are addressing these opportunities. This class will teach students to use sprints to answer pressing business questions. First, students will map out the problem and pick an important place to focus. Second, they will sketch competing IT solutions on paper. Third, they will need to make decisions and turn their ideas into testable hypothesis. Fourth, they will develop a real or conceptual model for a prototype. Lastly, they will prepare to test out the ideas or pitch them to the partner companies.

IBUS 3081. Sustainability and Corporate Social Responsibility in Costa Rica.

(4 cr. ; A-F only; Every Fall)
Study abroad course focused on sustainability and corporate social responsibility. This course will utilize these constructs to introduce students to an overview of emerging approaches to business and its relationship with the environment. CSR and corporate

approaches to sustainability will be explored from a global perspective.

IBUS 3090. International Business Special Topics. (; 2-4 cr. [max 12 cr.] ; A-F only; Periodic Fall, Spring & Summer)

Discussion, analysis, site visits, and experiential learning of current topics and developments in international business. Topics will vary.

IBUS 3092. Understanding International Business. (2 cr. ; A-F only; Every Fall & Spring)

This course is an experiential introduction to global business. This course focuses on how international organizations innovate their business models to adapt to new markets and how global entrepreneurs launch businesses. Students will seek to understand diverse philosophies and cultures within and across societies and understand the role of creativity, innovation, discovery, and expression. They will deepen their own cultural awareness through the CQ Assessment. Students will interact virtually with South American business leaders to conduct their own research and experiential projects. prereq: Carlson School undergraduate students with at least 90 cumulative credits

IBUS 3101. Undergraduate Semester: CIMBA (Consortium of Universities for International Studies). (0-18 cr. [max 54 cr.] ; Student Option; Every Fall & Spring)

Semester of study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. For current offerings, contact Carlson Global Institute. prereq: 60 cr

IBUS 3400. International Programs Elective. (1-4 cr. [max 8 cr.] ; S-N only; Every Fall, Spring & Summer)

Elective course for education abroad.

IBUS 3401. International Programs Elective. (1-4 cr. [max 8 cr.] ; S-N only; Every Fall, Spring & Summer)

Elective course for education abroad.

IBUS 3402. International Programs Elective. (1-4 cr. [max 8 cr.] ; S-N only; Every Fall, Spring & Summer)

Elective course for education abroad.

IBUS 3500. International Business: Undergraduate Exchange - BLOCK. (0-18 cr. [max 90 cr.] ; S-N or Audit; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 3501. International Business: Undergraduate Exchange. (0-18 cr. [max 90 cr.] ; Student Option; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 3502. International Business: Undergraduate Exchange. (0-18 cr. [max 90 cr.] ; Student Option; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 3503. International Business: Undergraduate Exchange. (0-18 cr. [max 90 cr.] ; Student Option; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 3504. International Business: Undergraduate Exchange. (0-18 cr. [max 90 cr.] ; Student Option; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 3505. International Business: Undergraduate Exchange. (0-18 cr. [max 90 cr.] ; Student Option; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 3506. International Business: Undergraduate Exchange. (0-18 cr. [max 90 cr.] ; Student Option; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 3507. International Business: Undergraduate Exchange. (0-18 cr. [max 90 cr.] ; Student Option; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 3508. International Business: Undergraduate Exchange. (0-18 cr. [max 90 cr.] ; Student Option; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 3509. International Business: Undergraduate Exchange. (0-18 cr. [max 90 cr.] ; Student Option; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 3510. International Business: Undergraduate Exchange. (0-18 cr. [max 90 cr.] ; Student Option; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 3601. Undergraduate Summer Exchange. (0-4 cr. ; S-N only; Every Summer)

Summer study abroad exchange to one of Carlson Global Institute's partner universities.

IBUS 3602. Undergraduate Summer Exchange. (0-4 cr. ; S-N only; Every Summer)

Summer study abroad exchange to one of Carlson Global Institute's partner universities.

IBUS 3603. Undergraduate Summer Exchange. (0-4 cr. ; S-N only; Every Summer)

Summer study abroad exchange to one of Carlson Global Institute's partner universities.

IBUS 3700. London School of Economics Summer Program. (0-18 cr. ; S-N only; Every Summer)

Summer study abroad at London School of Economics. Students select one or two sessions based on their academic needs/interests.

IBUS 3701. Vienna Summer Program in International Business (Undergraduate). (0-18 cr. ; S-N only; Every Summer)

Summer study abroad at one of Carlson's School's international exchange partner universities, Vienna University of Economics/ Business Administration. Students select intensive/enrichment courses based on academic needs/interests.

IBUS 3702. Copenhagen Summer Program in International Business (Undergraduate). (0-18 cr. ; S-N or Audit; Every Fall, Spring & Summer)

Summer study abroad at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. For current offerings, contact Carlson International Programs. prereq: 60 cr

IBUS 3703. Norway Summer Program in International Business (Undergraduate). (0-18 cr. ; S-N only; Every Summer)

Summer study abroad at one of Carlson School's international exchange partner universities, BI Norwegian School of Management. Three-week program. Focuses on Scandinavian management/Norwegian life/society.

IBUS 3704. Shanghai Summer Program in International Business (Undergrad). (0-18 cr. ; S-N only; Every Summer)

Summer study abroad at one of Carlson School's international exchange partner universities, Antai College of Economics and Management. This is a three week summer program integrating intense business education in China context with corporate experience.

IBUS 3800. CIMBA Summer Program. (0-18 cr. ; Student Option; Every Summer)

Consortium Institute of Management/Business Analysis (CIMBA) Summer Program in Italy. Four-week program.

IBUS 3999. Self-Designed International Research Experience. (1 cr. ; S-N only; Every Fall, Spring & Summer)

In meeting the international experience requirement through a self-design students will develop reflective research component. Through this course, students are expected to gain meaningful exposure to an international setting that allows for cultural interaction, in-depth study, research, and reflection. This experience would serve as a catalyst for students to attain a broader mindset and to gain deeper understanding of cultural norms and expectations of others. Contact the Carlson Global Institute (cgi@umn.edu)

to discuss the application process. prereq: approved proposal and dept consent.

IBUS 4050. Management of Innovation and Change. (4 cr. ; A-F only; Every Fall)

Applying theories/research on how new organizational programs, products, technologies are developed/implemented. Diagnostic skills. How innovation unfolds. prereq: [Mgmt 1001 or 3001 or 3010], approved application

IBUS 4082W. Brand Management. (WI; 4 cr. ; A-F only; Every Spring)

How do firms build great brands, such as Apple and Nike? How do firms leverage their popular brands to expand into new markets, new products, and new countries? This course focuses on questions like these to help students understand how to use brand strategies to successfully build, measure, and manage brands. Students participate in a course-long project to research and evaluate brand strategies used by a brand of their choosing. The course includes lectures, cases, and project check-ins between group members and their instructor. prereq: MKTG 3010 and MKTG 3040

IBUS 4125. Global Banking: A Survey of Regulatory and Competitive Developments Post Financial Crisis. (4 cr. ; A-F only; Every Fall)

This course provides students with an understanding of the functions of large, global banking organizations. We will start with a review of the impact of the financial crisis on the regulatory landscape, and identify some of the key differences between US, European, and global regulatory frameworks; discuss the different business models adopted by banks in Europe compared to the United States. We will look at how those different business models are reflected in financial statements, and learn how to interpret bank financial statements through ratio analysis. Finally, we will discuss the impact of digital disruption, and how it is forcing banks to consider new strategic directions. prereq: FINA 4121

IBUS 5090. Study Abroad Independent Study. (1-4 cr. [max 6 cr.] ; A-F only; Every Fall & Spring)

Independent study coordinated by faculty member.

IBUS 5091. Shanghai Summer Program in International Business (Graduate). (0-18 cr. ; S-N only; Every Summer)

Summer study abroad at one of Carlson School's international exchange partner universities, Antai College of Economics and Management. This is a three week summer program integrating intense business education in China context with corporate experience.

IBUS 5110. Business and the Environment in Costa Rica. (4 cr. ; A-F only; Every Fall & Spring)

How businesses maintain/increase profits by taking care of environment. Sustainable development, environmental strategy. Travel to Costa Rica to join students from INCAE (partner school) for series of courses. Case studies, site visits, field trips. Taught in English. prereq: Sr or grad student

IBUS 5120. Global Business Practicum in Central and Eastern Europe. (4 cr. ; A-F only; Every Spring & Summer)

Rapidly changing business environment of Central/Eastern Europe. Students work in teams with students from WU-Vienna University of Economics/Business for two weeks in May/June in Central/Eastern Europe. prereq: Carlson grad student

IBUS 5130. France Seminar: Doing Business in the European Union (Graduate). (4 cr. ; S-N only; Every Fall, Spring & Summer)

Two-week study abroad program at Universite Jean-Moulin Lyon 3 in Lyon, France. Includes courses taught by international faculty, site visits, cultural excursions. prereq: Carlson grad student

IBUS 5140. Vienna Summer Program in International Business (Graduate). (0-18 cr. ; S-N only; Every Summer)

Summer study abroad program at Europe's largest business school (WU-Vienna). Students take three business classes, plus German language. Program participants from Europe, Asia, Latin America, United States. prereq: Carlson grad student

IBUS 5150. IBUS 5150: Building on Frugal Innovations to Complete in a Global Environment. (4 cr. [max 8 cr.] ; A-F only; Every Fall)

On this program, students will be exposed to concepts related to developing a global managerial mindset, with a particular focus on understanding global product/market innovation. A variety of successful examples highlights the potential of frugal innovation - the term used to describe cost-effective innovations devised to solve local problems in resource constrained markets - as being a very powerful source of ideas for new products and services. Products of frugal innovation, once proven locally, can be subsequently integrated into the broader R&D and product innovation processes within firms and become the base platforms for global products targeted at markets across the world. Students will choose an industry or domain of focus in class sessions and be exposed to global R&D practices in large local firms and then interact with startups and innovators working on frugal innovation projects on the ground in India. This is an education abroad program. Contact the Carlson Global Institute at cgi@umn.edu with questions. Prereq: approved application

IBUS 5160. Cologne Summer Program: European Management (Grad). (8 cr. [max 24 cr.] ; S-N only; Every Summer)

Summer study abroad at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interest. prereq: Carlson grad student

IBUS 5200. International Business: Undergraduate Exchange. (0-16 cr. [max 160 cr.] ; S-N or Audit; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 5201. International Business: Undergraduate Exchange. (1-6 cr. [max 60 cr.] ; S-N or Audit; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 5202. International Business: Undergraduate Exchange. (1-6 cr. [max 60 cr.] ; S-N or Audit; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests.

IBUS 5203. International Business: Undergraduate Exchange. (0.5-6 cr. [max 60 cr.] ; S-N or Audit; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 5204. International Business: Undergraduate Exchange. (1-6 cr. [max 60 cr.] ; S-N or Audit; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 5205. International Business: Undergraduate Exchange. (1-6 cr. [max 60 cr.] ; S-N or Audit; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 5206. International Business: Undergraduate Exchange. (1-6 cr. [max 60 cr.] ; S-N or Audit; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr, Carlson School International Programs consent

IBUS 5207. International Business: Undergraduate Exchange. (1-6 cr. [max 60 cr.] ; S-N or Audit; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Student's select courses based on academic needs/interests. prereq: 60 cr

IBUS 5208. International Business: Undergraduate Exchange. (1-6 cr. [max 60 cr.] ; S-N or Audit; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Student's select courses based on academic needs/interests. prereq: 60 cr

IBUS 5209. International Business: Undergraduate Exchange. (1-6 cr. [max 60 cr.] ; S-N or Audit; Every Fall & Spring)

Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: 60 cr

IBUS 5260. Sustainability: The New Management Paradigm. (4 cr. ; A-F only; Every Spring)

View of integrated reporting (sustainability reporting) as it relates to various fields of

business. Site visits, meetings with business executives/governmental agencies. Two weeks in the United Kingdom following commencement week, preceded by Spring B Term classes.

IBUS 5300. International Business:

Graduate Exchange BLOCK. (0-18 cr. [max 54 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. For current offerings, contact Carlson International Programs. prereq: Carlson grad student

IBUS 5301. Graduate Exchange in

International Business - BLOCK. (0-18 cr. [max 54 cr.]; S-N only; Every Summer) Summer study abroad at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: Carlson grad student

IBUS 5302. International Business:

Graduate Exchange. (0-18 cr. [max 180 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: Carlson grad student

IBUS 5303. International Business:

Graduate Exchange. (0-18 cr. [max 180 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: Carlson grad student

IBUS 5304. International Business:

Graduate Exchange. (0-18 cr. [max 180 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: Carlson grad student

IBUS 5305. International Business:

Graduate Exchange. (0-18 cr. [max 180 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: Carlson grad student

IBUS 5306. International Business:

Graduate Exchange. (0-18 cr. [max 180 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: Carlson grad student

IBUS 5307. International Business:

Graduate Exchange. (0-18 cr. [max 180 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: Carlson grad student

IBUS 5308. International Business:

Graduate Exchange. (0-18 cr. [max 180 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select

courses based on academic needs/interests. prereq: Carlson grad student

IBUS 5309. International Business:

Graduate Exchange. (0-18 cr. [max 180 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: Carlson grad student

IBUS 5310. International Business:

Graduate Exchange. (0-18 cr. [max 72 cr.]; S-N or Audit; Every Fall & Spring) Study at one of Carlson School's international exchange partner universities. Students select courses based on academic needs/interests. prereq: Carlson grad student

IBUS 5400. Global Business Practicum. (4 cr. [max 12 cr.]; A-F only; Every Spring)

This course is an experiential learning model designed to provide student with an opportunity to apply global business knowledge and hone cross-cultural skills through a live international business project. This is an education abroad program. Contact the Carlson Global Institute with questions. Prereq: approved application

IBUS 5600. Graduate Summer Exchange.

(0-4 cr. ; S-N only; Every Summer) Summer study abroad exchange to one of Carlson Global Institute's partner universities.

IBUS 5601. Graduate Summer Exchange.

(0-4 cr. ; S-N only; Every Summer) Summer study abroad exchange to one of Carlson Global Institute's partner universities.

IBUS 5602. Graduate Summer Exchange.

(0-4 cr. ; S-N only; Every Summer) Summer study abroad exchange to one of Carlson Global Institute's partner universities.

IBUS 5603. Graduate Summer Exchange.

(0-4 cr. ; S-N only; Every Summer) Summer study abroad exchange to one of Carlson Global Institute's partner universities.

IBUS 5604. Graduate Summer Exchange.

(0-4 cr. ; S-N only; Every Summer) Summer study abroad exchange to one of Carlson Global Institute's partner universities.

IBUS 5605. Shanghai Summer Program in International Business (Graduate). (0-18 cr. ; S-N only; Every Summer)

Summer study abroad at one of Carlson School's international exchange partner universities, Antai College of Economics and Management. This is a three week summer program integrating intense business education in China context with corporate experience.

Introduced Species, Genotypes (ISG)

ISG 5010. Risk Analysis for Introduced Species and Genotypes. (; 3 cr. ; A-F only; Every Fall)

Analytic-deliberative model of Ecological Risk Assessment (ERA). Components of ERA. Risk characterization. Evaluation of risk management decision processes. Use-risk communication, multi-stakeholder deliberation techniques. Cases. prereq: Grad student or [sr, instr consent]

Italian (ITAL)

ITAL 1001. Beginning Italian I. (; 5 cr. ;

Student Option; Every Fall & Spring) Ciao! Join us in learning Italian, the language of Dante, DaVinci, and la dolce vita! This melodic language spoken throughout the world in fields including music, fashion, cuisine, and fast automobiles will enrich you as a citizen of the world and allow you access to some of the most amazing art and culture on the planet! Beginning Italian, Italian 1001, is a proficiency-based course designed for students with little or no knowledge of the Italian language focusing on developing your intercultural, reading, listening, speaking, and writing skills. Preparatory activities designed to encourage students to analyze grammatical points in question need to be completed before class so class time can be primarily devoted to meaningful interactions in Italian. To further increase your confidence in communicating in Italian, you will also participate in several one-to-one online exchange with native speakers of Italian throughout the semester. Upon successful completion of this course, you will be able to enroll in Italian 1002. Expect an average of 1.5 hours of outside preparation for each class session hour.

ITAL 1002. Beginning Italian II. (; 5 cr. ;

Student Option; Every Fall & Spring) Bentornati! Ready to embark on a new journey to further develop your knowledge of our beautiful romance language, Italian? If you passed Italian 1001 or you have obtained DLI's consent, this course is for you! You will further develop your skills in Italian as you examine topics such as haute couture or alta moda and the phenomenon of Made in Italy, as well as music, from opera to hip hop. You will also learn about holidays, cultural celebration, and differences and similarities between the scholastic and healthcare systems in Italy and the US. Throughout the semester your learning will be continually enhanced by regular conversations with your Tandem partner in Italy. Preparatory activities designed to encourage students to analyze grammatical points in question need to be completed before class so class time can be primarily devoted to meaningful interactions in Italian. Italian 1002 is a five-credit course, so you should plan to spend an additional 10-15 hours a week on coursework outside the classroom. Upon successful completion of this course you will be able to enroll in Italian 1003. prereq: 1001 or instr consent

ITAL 1003. Intermediate Italian I. (; 5 cr. ;

Student Option; Every Fall, Spring & Summer) BENVENUTI AL 3° SEMESTRE D'ITALIANO! Throughout the semester in Italian 1003, you will be able to consider your own point of view while learning about various Italian perspectives as we examine topics ranging from housing and historical and contemporary urban design to responsible tourism, linguistic variety, and social problems. Upon completion of this course, you will be able to use Italian to communicate in everyday situations to share personal information about yourself,

express your opinions, wishes and desires, make suggestions and give advice, as well as appropriately use active vocabulary. You will continue to acquire basic cross-cultural pragmatic information to help you manage conversations in a culturally appropriate manner, and once again, you will expand your cultural knowledge by talking face to face with your Italian Tandem partner several times over the semester. As with other Italian language course, preparatory activities designed to encourage you to analyze grammatical points in question need to be completed before class so class time can be primarily devoted to meaningful interactions in Italian. Upon successful completion of this course you will be able to enroll in Italian 1004.

ITAL 1004. Intermediate Italian II. (; 5 cr. ; Student Option; Every Fall & Spring)
Benvenuti! We invite you to join us in learning the language spoken by one of the most beloved countries and leading destinations for learning abroad in the world! Italy, the cradle of the Renaissance and home to some of the most beautiful art and architecture on earth, boasts the world's seventh largest economy, a renowned creative design and fashion industry, as well as a rich and diverse history and heritage. In this course, you will engage directly with Italian culture and society through a variety of learning portals, including authentic short films and literature, in-class debates and presentations, and an array of assessment methods. Throughout the semester, vital current issues such the impact of technology, justice and politics, and changing inter-generational and interpersonal dynamics will be discussed within a comparative lens, inviting you to reflect on how your own experiences contrast with a sample of those within the Italian culture (Italy). The fourth semester of Italian is designed using a proficiency-based approach to help you develop the ability to communicate effectively in Italian in everyday situations that have real world relevance. Listening, reading, speaking, and writing are integrated into all activities and assessments. By means of self-study preparatory activities designed to encourage students to analyze grammatical points in question before class, so class time can be devoted to meaningful, dynamic interactions with classmates and your teacher in Italian. To further increase your confidence in communicating in Italian, you will also be able to participate in several one-to-one online exchanges with native speakers of Italian throughout the semester. You may end up with a lifelong friend in Italy! Upon successful completion of this course students will be able to demonstrate proficiency by successful completion of the Italian Language Proficiency Exam (LPE) and/or enroll in Italian 3015. prereq: ITAL 1003

ITAL 1022. Accelerated Beginning Italian. (; 5 cr. ; Student Option; Periodic Fall & Spring)
This is a fast-paced course that covers the first two semesters of Italian in one semester. Students will be able to move more quickly toward proficiency in Italian to fulfill requirements and/or enroll in advanced Italian courses or expand research options. At the end

of this course, you will be able to communicate about topics such as past times, food, family, school, health, sports and much more.

ITAL 1837. Imagining Italy: Italian and Italian-American Culture, History, and Society through Film. (AH,GP; 4 cr. ; Student Option; Every Fall)
Weekly guest lectures and critical readings expand from different disciplinary perspectives upon issues raised by films. Urban life, religion, nationalism, opera, violence, leisure, food, fascism, terrorism, family, emigration/immigration, ethnicity, Mediterranean culture.

ITAL 1912. Rome at the Movies from Fascism to Netflix. (; 3 cr. ; A-F only; Periodic Fall)
In this seminar, we will have the privilege to explore Rome through the gaze of Italy's most impactful directors and show-runners. Our cinematic explorations through the city of la dolce vita will be guided by recurring questions: How does visual culture shape place? In which ways do the moving images influence complex urban realities? How do they create connections between people from diverse backgrounds, while also establishing borders within public spaces and hierarchies regarding whom the city belongs to? By exposing unseen and unheard stories, can films and documentaries favor political change, inclusivity, and diversity? We will answer these questions through virtual site visits, screenings, readings, workshops, and guest lectures by filmmakers. By the end of the course you will have learned how to film the complex reality of a city in a way that is conducive to social justice and political progress. If the conditions allow, as final project for this course students will create a short documentary about the Twin Cities under the supervision of a local filmmaker.

ITAL 3015. Reading, Conversation, and Composition. (; 4 cr. ; Student Option; Every Fall & Spring)
How can a society manage an aging population? What steps can be taken to promote integration and overcome differences? Is technology helping or hindering our interpersonal relationship? Is history doomed to repeat itself? CONGRATULATION! You are about to embark into a rewarding journey to further deepen your Italian experience while developing your critical thinking skills. This class will increase your appreciation of Italian culture through engagement with articles, short films and literary extracts (of authors such as Nobel's prize Dario Fo, Salgari, Buzzati and Ginzburg) on contemporary cultural topics ranging from social problems to the use and misuse of technology to the impact of historical events on people's everyday lives. You will also have the opportunity to interact face to face online with Italian students to improve your language skills as well as expand your cultural knowledge while drawing comparisons and reflecting on the U.S. societal views of those topics. This intensive, intermediate course is designed for students who have passed Italian 1004 and have mastered basic Italian grammar. The course will include preparatory

activities that are designed to encourage students to analyze grammatical points in question. prereq: 1004

ITAL 3201. Reading Italian Texts: Poetics, Rhetoric, Theory. (; 3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring)
A basic course in understanding the rhetorical and poetic aspects of language and literature; interpretive methods and theoretical concepts. prereq: 3015

ITAL 3203. Italian Travelers: Borders and Travelers. (; 3 cr. [max 12 cr.]; Student Option; Periodic Fall)
Examines literary representations of travel, migration, immigration, exile, and tourism in Italy from the Enlightenment to the present. Taught in English

ITAL 3305. Staging the Self: Theater and Drama in Modern Italy. (; 3 cr. [max 12 cr.]; Student Option; Periodic Fall)
Theatrical representations of the self in modern Italy. Particular attention given to issues of identity, gender, and class in theatrical works ranging from Alfieri's *Mirra*, Pirandello's *Enrico IV* to Dacia Maraini's *Clytemnestra*. prereq: 3015

ITAL 3459W. Senior Project. (WI; 2 cr. ; Student Option; Every Fall & Spring)
Research/writing on issue/theme in Italian studies. Projects range from scholarly paper to artistic/creative writing or musical composition, photography, poetry, or fiction. Research/analytical component. prereq: completion of pre-requisite for major (3015) and eight electives for the sum of 30 credits

ITAL 3502. Making of Modern Italy: From the Enlightenment to the Present.. (; 3 cr. [max 12 cr.]; Student Option; Periodic Spring)
Italian literary, cultural, and symbolic practices from the Enlightenment to the present. prereq: 3015

ITAL 3550. Topics in 19th Century Italy. (; 3 cr. [max 12 cr.]; Student Option; Fall Odd Year)
Literature/culture of Italy in 19th century. Content varies depending on instructor. Literary, critical, cultural, historical, or social issues. Specific author, genre, or topic of interest. Readings. Specific content posted in department/listed in Course Guide. prereq: 3015 or instr consent

ITAL 3640. Topics in Italian Studies. (; 3 cr. [max 12 cr.]; Student Option; Periodic Spring)
Topics of interest in studies of Italian or Italian American culture of 20th century. Literary, critical, cultural, historical, or social issues, a specific author, a genre, or other topic. Content varies by instructor, see Course Guide. prereq: 3015 or instr consent

ITAL 3647. Urban Transformation in Italy. (GP; 3 cr. ; A-F only; Every Summer)
Building on our study of urban living, neighborhood cultures and traditions, and the decentralized nature of Italian geopolitics in ITAL 1003 and 1004, this global seminar will further explore the history, politics, aesthetics, and current status of urban revitalization, Italian-style, providing a lens through which we can understand the diversity of Italian

culture today. While concentrated largely on residential neighborhoods within the Capital, Rome, the seminar includes a three-day excursion to Matera and Alberobello, the former in the central-southern region of Basilicata and the latter in southeastern Puglia, enabling students to consider the implications of two Southern Italian local economies largely dependent on tourism for survival and ponder the sustainability of each area. The seminar culminates in an extended day-long excursions to Naples, which contains the only continually inhabited city center in Italy, and will present a counter-example to the processes of revitalization and neighborhood transition witnessed in Rome and elsewhere, as well as provide an opportunity to synthesize information gathered thus far and apply it in a different context.

ITAL 3837. Imagining Italy: Italian and Italian-American Culture, History, and Society through Film. (AH,GP; 4 cr. ; Student Option; Every Fall)

Weekly guest lectures and critical readings expand from different disciplinary perspectives upon issues raised by films. Urban life, religion, nationalism, opera, violence, leisure, food, fascism, terrorism, family, emigration/immigration, ethnicity, Mediterranean culture.

ITAL 3896. Internship for Academic Credit. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)

An applied learning experience in an agreed-upon, short-term, supervised workplace activity, with defined goals, which may be related to a student's major field or area of interest. The work can be full or part time, paid or unpaid, primarily in off-campus environments. Internships integrate classroom knowledge and theory with practical application and skill development in professional or community settings. The skills and knowledge learned should be transferable to other employment settings and not simply to advance the operations of the employer. Typically the student's work is supervised and evaluated by a site coordinator or instructor.

ITAL 4001. Beginning Italian for Graduate Research I. (; 5 cr. ; Student Option; Every Fall & Spring)

Ciao! Join us in learning Italian, the language of Dante, DaVinci, and la dolce vita! This melodic language spoken throughout the world in fields including music, fashion, cuisine, and fast automobiles will enrich you as a citizen of the world and allow you access to some of the most amazing art and culture on the planet! Beginning Italian, Italian 4001, is a proficiency-based course designed for students with little or no knowledge of the Italian language focusing on developing your intercultural, reading, listening, speaking, and writing skills. Preparatory activities designed to encourage students to analyze grammatical points in question need to be completed before class so class time can be primarily devoted to meaningful interactions in Italian. To further increase your confidence in communicating in Italian, you will also participate in several one-to-one online exchange with native speakers

of Italian throughout the semester. Upon successful completion of this course, you will be able to enroll in Italian 4002. Expect an average of 1.5 hours of outside preparation for each class session hour. prereq: instr consent

ITAL 4002. Beginning Italian for Graduate Research II. (; 5 cr. ; Student Option; Every Fall & Spring)

Bentornati! Ready to embark on a new journey to further develop your knowledge of our beautiful romance language, Italian? If you passed Italian 1001 or you have obtained DLI's consent, this course is for you! You will further develop your skills in Italian as you examine topics such as haute couture or alta moda and the phenomenon of Made in Italy, as well as music, from opera to hip hop. ITAL 4022. Accelerated Beginning Italian for Graduate Research. (; 5 cr. ; Student Option; Periodic Fall & Spring)

This is a fast-paced course that covers the first two semesters of Italian in one semester. Students will be able to move more quickly toward proficiency in Italian to fulfill requirements and/or enroll in advanced Italian courses or expand research options. At the end of this course, you will be able to communicate about topics such as past times, food, family, school, health, sports and much more.

ITAL 4307. Novellistica. (3 cr. ; Student Option; Periodic Fall & Spring)

Introduction to historical, formal and theoretical study of the Italian novella genre (including such alternative forms as the ?racconto?) and the impact of this genre on world literature. The study of the birth and development of the novella genre in Italian. Readings from and discussion of novellas and tales from: The Novellino, Boccaccio, Sacchetti, Bandello, Bigolini, Basile, Verga, Deledda, Moravia, Morante, Calvino, Ferrante prereq: 3015, 3201 or permission from the Italian DUS

ITAL 4993. Directed Study. (; 1-4 cr. [max 16 cr.] ; Student Option; Every Fall, Spring & Summer)

Meets unique requirements decided on by faculty member and student. Individual contracts list contact hours, number of credits, written and other work required. prereq: instr consent

ITAL 5289. The Narrow Door: Women Writers and Feminist Practices in Italian Literature and Culture. (4 cr. [max 16 cr.] ; Student Option; Periodic Fall & Spring)
Focuses on issues of gender, sexual difference, equality, and emancipation raised by Italian women writers and thinkers from the 19th century to the present.

ITAL 5502. Making of Modern Italy: From the Enlightenment to the Present. (; 3 cr. [max 12 cr.] ; Student Option; Periodic Spring)
Italian literary, cultural, and symbolic practices, from Enlightenment to present. prereq: grad student or instr consent

ITAL 5640. Topics in Italian Studies. (; 3 cr. [max 12 cr.] ; Student Option; Every Fall)
Topics of interest in studies of Italian and/or Italian American culture of the 20th century. Topics and readings may include literary, critical, cultural, historical, and/or social issues, a specific author, a genre, or other topics . Content varies by instructor. Specific content posted in the department and in the Course Guide. prereq: Ital 3015

ITAL 5970. Directed Readings. (; 1-4 cr. [max 16 cr.] ; Student Option; Every Fall & Spring)
Meets unique requirements decided on by faculty member and student. Individual contracts list contact hours, number of credits, written and other work required. prereq: instr consent

Japanese (JPN)

JPN 1011. Beginning Japanese I. (; 5 cr. [max 6 cr.] ; Student Option No Audit; Every Fall & Summer)
Introduction to speaking, reading, writing Japanese.

JPN 1012. Beginning Japanese II. (; 5 cr. ; Student Option No Audit; Every Spring & Summer)
Introduction to speaking, reading, writing Japanese. prereq: 1011

JPN 3021. Intermediate Japanese I. (; 5 cr. ; Student Option No Audit; Every Fall)
Intermediate speaking, reading, writing in Japanese. prereq: 1012 or instr consent

JPN 3022. Intermediate Japanese II. (5 cr. ; Student Option No Audit; Every Spring)
Intermediate speaking, reading, writing in Japanese. prereq: 3021 or instr consent

JPN 3031. Third Year Japanese I. (4 cr. ; Student Option No Audit; Every Fall)
Advanced intermediate-level instruction in speaking, reading, writing Japanese. Development of reading proficiency in modern Japanese prose. prereq: 3022 or instr consent

JPN 3032. Third Year Japanese II. (4 cr. ; Student Option No Audit; Every Spring)
Advanced intermediate-level instruction in speaking, reading, writing Japanese.

Development of reading proficiency in modern Japanese prose. prereq: 3031 or instr consent

JPN 3290. Japanese Language Teaching Tutorial. (; 1 cr. [max 2 cr.] ; S-N only; Every Fall & Spring)
Students tutor beginning students of Japanese and are part of department's Japanese language team. prereq: Grade of A in 4042

JPN 4001. Beginning Japanese I for Graduate Student Research. (; 5 cr. ; Student Option No Audit; Every Fall & Summer)
Introduction to speaking, reading, writing Japanese. Meets with 1011.

JPN 4002. Beginning Japanese II for Graduate Student Research. (; 5 cr. ; Student Option No Audit; Every Spring & Summer)
Introduction to speaking, reading, writing Japanese. Meets with 1012. prereq: 4001

JPN 4003. Intermediate Japanese I for Graduate Student Research. (; 5 cr. ; Student Option No Audit; Every Fall)
Intermediate speaking, reading, writing in Japanese. Meets with 3021. prereq: 4002

JPN 4004. Intermediate Japanese II for Graduate Student Research. (5 cr. ; Student Option No Audit; Every Spring)
Intermediate speaking, reading, writing in Japanese. Meets with 3022. prereq: 4003

JPN 4005. Third Year Japanese I for Graduate Student Research. (4 cr. ; Student Option No Audit; Every Fall)
Advanced intermediate-level instruction in speaking, reading, writing Japanese. Development of reading proficiency in modern Japanese prose. Meets with 3031. prereq: 4004

JPN 4006. Third Year Japanese II for Graduate Student Research. (4 cr. ; Student Option No Audit; Every Spring)
Advanced intermediate-level instruction in speaking, reading, writing Japanese. Development of reading proficiency in modern Japanese prose. prereq: 4005

JPN 4041. Advanced Japanese Conversation and Composition I. (4 cr. ; Student Option; Every Fall)
Practice in advanced spoken/written Japanese. Assignments include essays, summaries, formal interviews in Japanese. prereq: 3032 or instr consent

JPN 4042. Advanced Japanese Conversation and Composition II. (4 cr. ; Student Option; Every Spring)
Practice in advanced spoken/written Japanese. Typical assignments include essays, summaries, formal interviews in Japanese. prereq: 4041 or instr consent

JPN 5040. Readings in Japanese Texts. (; 3 cr. [max 9 cr.] ; A-F or Audit; Every Fall)
Students read authentic materials of various types to increase reading and speaking ability. Topics specified in Class Schedule. prereq: 4042 or equiv or instr consent

JPN 5041. Reading Japanese Texts: Literature and Culture. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

This course is conducted 100% in modern Japanese, including course materials, lectures, and discussions. Close reading of texts written in modern Japanese, including a recent novel, essays on social phenomena, critical essays on Japanese society, and/or academic papers. Read and translate these texts accurately and critically; discuss them in Japanese, and/or compose an essay entirely in modern Japanese. Pre-requisite: JPN 4042 or equivalent or instructor consent.

JPN 5211. Introductory Classical Chinese I. (3 cr. ; Student Option; Periodic Fall)
Reading excerpts from canonical Chinese texts. Transnational nature of Classical Chinese/its importance in study of East Asian cultures. Taught in English. prereq: Two years of an East Asian language (Chinese, Japanese, Korean) or equivalent or instr consent

JPN 5993. Directed Studies in Japanese. (1-15 cr. ; Student Option; Every Fall & Spring)
Individual study with guidance of a faculty member. Prereq instr consent, dept consent, college consent.

Jewish Studies (JWST)

JWST 1034. Introduction to Jewish History and Cultures. (HIS; 3 cr. ; Student Option; Every Fall)
This course traces the development of Judaism and Jewish civilizations from their beginnings to the present. With over three millennia as its subject, the course must of necessity be a general survey. Together we will explore the mythic structures, significant documents, historical experiences, narratives, practices, beliefs, and worldviews of the Jewish people. The course begins by examining the roots of Judaism in the Hebrew Bible and the history of ancient Israel but quickly focuses on the creative forces that developed within Judaism as a national narrative confronted the forces of history, especially in the forms of the Persian, Greek, and Roman empires. Rabbinic Judaism becomes the most dominant creative force and will receive our greatest attention, both in its formative years and as it encounters the rise of Christianity and Islam. After studying the Jewish experience in the medieval world, we will turn to Judaism's encounter with the enlightenment and modernity. The historical survey concludes by attending to the transformations within Judaism and Jewish life of the last 150 years, including a confrontation with the experience of the Holocaust. Woven throughout this historical survey will be repeated engagements with core questions: ?Who is a Jew?? ?What do Jews believe?? ?What do Jews do?? ?What do we mean by ?religion??? ?How do Jews read texts within their tradition?? And perhaps most importantly, ?How many answers are there to a Jewish question?? Students in this course can expect to come away with some knowledge of the Bible in Judaism, rabbinic literature and law, Jewish mysticism and philosophy, Jewish nationalism and Zionism, Jewish culture, ritual, and worship in the synagogue, the home, and

the community, and Jewish celebrations of life cycle events and the festivals.

JWST 1201. The Bible: Context and Interpretation, World of the Hebrew Bible.

(LITR; 3 cr. ; Student Option; Every Fall)
The Hebrew Bible and Old Testament are literary collections that modern Jewish and Christian traditions maintain as important, but these collections were initially produced by ancient Israelite scribes who composed and/or compiled the biblical texts at particular time periods in the ancient Near East. This course will introduce the academic study of biblical texts, which demands critical analysis of the literature and an openness to reading the literature from the perspective of ancient Israelite writers (who lived in a world far different from today). The course will spend considerable time on the literary (and scribal) composition of biblical prose texts; time will also be spent on the historical circumstances of biblical prophets and other writers of the biblical texts. This course will only address the ancient setting of the biblical texts and not re-interpretations in Jewish or Christian traditions. Given the scope of the course, modern interpretations of the biblical literature will not be discussed; we will only focus on this literature in its ancient setting. prereq: Knowledge of Hebrew not required

JWST 3011. Jewish American Literature: Religion, Culture, and the Immigrant Experience. (DSJ,HIS; 3 cr. ; Student Option; Every Spring)

Immigrant? Jewish? American? What do these labels mean, why are they applied, and do they ever cease to be applicable? Can we distinguish religion from culture, and what are the implications when we try? Why is it frequently asked whether Saul Bellow was really? a Jewish writer, but it is impossible to read Philip Roth as anything other than that? How does Grace Paley's ?Jewishness? come through even when she is writing about non-Jewish characters? We will address these issues and others as we explore the literature growing out of the Jewish immigrant experience in America, as well as the literature by Jewish writers more firmly, though still sometimes anxiously, rooted in American soil. In this course we will engage in a highly contextualized and historicized study of Jewish American literature from the 19th century to today. We will discover in these texts how inherited Jewish culture and literary imaginings, developed over centuries of interaction between Jewish communities and the ? outside world,? get reexamined, questioned, rejected, reimagined, reintegrated, and transformed within the crucible of American experience. The discussions that ensue will also provide a framework for engaging with the creative energies and cultural productivity of more recent immigrant communities in the United States and beyond. Immigration and the experience of immigrant communities continues to be at the forefront of American consciousness, as immigrants work to create new meanings and new narratives for their lives, and as those who immigrated before them provide contested meanings for the

impact of immigration on their own narratives. This course, though grounded in Jewish narratives, will therefore provide students with an expanded vocabulary and perspective for engaging in this central and very current debate within the American experience.

JWST 3013W. Biblical Law and Jewish Ethics. (WI; 3 cr. ; Student Option; Periodic Fall & Spring)

This course introduces students to the original meaning and significance of religious law and ethics within Judaism. Law is the single most important part of Jewish history and identity. At the same time, law is also the least understood part of Judaism and has often been the source of criticism and hatred. We shall therefore confront one of the most important parts of Jewish civilization and seek to understand it on its own terms. In demonstrating how law becomes a fundamental religious and ethical ideal, the course will focus on the biblical and Rabbinic periods but spans the entire history of Judaism. Consistent with the First Amendment, the approach taken is secular. There are no prerequisites: the course is open to all qualified students. The course begins with ideas of law in ancient Babylon and then studies the ongoing history of those ideas. The biblical idea that a covenant binds Israel to God, along with its implications for human worth - including the view of woman as person - will be examined. Comparative cultural issues include the reinterpretations of covenant within Christianity and Islam. The course investigates the rabbinic concept of oral law, the use of law to maintain the civil and religious stability of the Jewish people, and the kabbalistic transformation of law. The course concludes with contemporary Jewish thinkers who return to the Bible while seeking to establish a modern system of universal ethics. The premise of the course is the discipline of academic religious studies. The assumptions of the course are therefore academic and secular, as required by the First Amendment. All texts and all religious traditions will be examined analytically and critically. Students are expected to understand and master this approach, which includes questioning conventional cultural assumptions about the composition and authorship of the Bible. Willingness to ask such questions and openness to new ways of thinking are essential to success in the course.

JWST 3034. Introduction to Jewish History and Cultures. (HIS; 3 cr. ; Student Option; Every Fall)

This course traces the development of Judaism and Jewish civilizations from their beginnings to the present. With over three millennia as its subject, the course must of necessity be a general survey. Together we will explore the mythic structures, significant documents, historical experiences, narratives, practices, beliefs, and worldviews of the Jewish people. The course begins by examining the roots of Judaism in the Hebrew Bible and the history of ancient Israel but quickly focuses on the creative forces that developed within Judaism as a national narrative confronted the forces of history, especially in the forms of the Persian, Greek, and Roman empires.

Rabbinic Judaism becomes the most dominant creative force and will receive our greatest attention, both in its formative years and as it encounters the rise of Christianity and Islam. After studying the Jewish experience in the medieval world, we will turn to Judaism's encounter with the enlightenment and modernity. The historical survey concludes by attending to the transformations within Judaism and Jewish life of the last 150 years, including a confrontation with the experience of the Holocaust. Woven throughout this historical survey will be repeated engagements with core questions: ?Who is a Jew?? ?What do Jews believe?? ?What do Jews do?? ?What do we mean by ?religion??? ?How do Jews read texts within their tradition?? And perhaps most importantly, ?How many answers are there to a Jewish question?? Students in this course can expect to come away with some knowledge of the Bible in Judaism, rabbinic literature and law, Jewish mysticism and philosophy, Jewish nationalism and Zionism, Jewish culture, ritual, and worship in the synagogue, the home, and the community, and Jewish celebrations of life cycle events and the festivals.

JWST 3115. Midrash: Reading and Retelling the Hebrew Bible. (; 3 cr. ; Student Option; Periodic Fall & Spring)

How did the Jews of the first seven centuries of the common era read and understand the Hebrew Bible? What were the problems they faced -- interpretive, historical, theological -- in trying to apply their holy scriptures? This course explores key issues that led to the development of a new form of Judaism in late antiquity, rabbinic Judaism, and its methods of scriptural interpretation. The course's study will focus on the forms and practices of rabbinic scriptural interpretation (midrash) as it developed in Roman Palestine and Sasanian Babylonia, focusing on key narrative and legal passages in the Five Books of Moses (Torah). A main focus of the course will be on the ways the rabbis adapted the Hebrew Bible to express their own core concerns.

JWST 3201. The Bible: Context and Interpretation, World of the Hebrew Bible.

(LITR; 3 cr. ; Student Option; Every Fall)
The Hebrew Bible and Old Testament are literary collections that modern Jewish and Christian traditions maintain as important, but these collections were initially produced by ancient Israelite scribes who composed and/or compiled the biblical texts at particular time periods in the ancient Near East. This course will introduce the academic study of biblical texts, which demands critical analysis of the literature and an openness to reading the literature from the perspective of ancient Israelite writers (who lived in a world far different from today). The course will spend considerable time on the literary (and scribal) composition of biblical prose texts; time will also be spent on the historical circumstances of biblical prophets and other writers of the biblical texts. This course will only address the ancient setting of the biblical texts and not re-interpretations in Jewish or Christian traditions. Given the scope of the course, modern interpretations of the biblical literature

will not be discussed; we will only focus on this literature in its ancient setting. prereq: Knowledge of Hebrew not required

JWST 3205. Women, Gender, and the Hebrew Bible. (AH; 3 cr. ; Student Option; Spring Odd Year)

How men, women, gender, sexuality is portrayed in Hebrew Bible. Social/religious roles/status of women in ancient Israel. Read biblical texts from academic point of view.

JWST 3206. Sex, Murder, and Bodily Discharges: Purity and Pollution in the Ancient World. (3 cr. ; Student Option; Every Spring)

"Dirt is dangerous" wrote Mary Douglas more than 50 years ago in her groundbreaking study, *Purity and Danger: An Analysis of Concept of Pollution and Taboo*. Her work has been influential in ancient Near Eastern and Mediterranean studies when dealing with issues of sacred/profane, purity/pollution, and ritual sacrifice and purification. Douglas' work provides a framework within which to understand ancients' thinking about these concepts that range from the sacredness of space and of bodies to perceived pollutions caused by bodily leakage or liminal stages of life and death. In this course, we will examine Douglas' theory in light of ancient evidence, with special attention to ancient Israelite literature (the Tanakh or Old Testament) and ancient Jewish literature (the Dead Sea Scrolls), but we will also analyze other ancient Near Eastern and Mediterranean examples of purity and pollution (from epigraphical and documentary evidence).

JWST 3502W. Ancient Israel: From Conquest to Exile. (WI; 3 cr. ; Student Option; Periodic Spring)

Israel and Judah were not states of great importance in the ancient Near East. Their population and territory were small, and they could not resist conquest by larger, more powerful states like Assyria and Rome. Yet their ancient history matters greatly today, out of proportion to its insignificance during the periods in which it transpired. The historical experiences of the people of Israel and Judah were accorded religious meaning and literary articulation in the Hebrew Bible (the Old Testament), which became a foundational text for Judaism, Christianity, and Islam. Essential features of Western as well as Islamic civilization are predicated on some element of Israel's ancient past, as mediated through the Bible; therefore it behooves us to understand that past. But the Bible is a religious work, not a transcript of events, and the history of ancient Israel is not derived merely from reading the biblical accounts of it. Archaeological excavations have revealed the physical remains of the cultures of Israel and neighboring lands, as well as bringing to light inscriptions, documents, and literary works produced by those cultures. These sources, which complement and sometimes contradict the accounts conveyed in the Bible, provide the basis for reconstructing a comprehensive history of ancient Israel. This course covers the history of Israel and Judah from the Late Bronze Age (c. 1550-1200 BCE), by the end

of which Israel had emerged as a distinct ethnic entity, to the period of Roman rule (63 BCE-330 CE), which saw the final extinction of ancient Israel, represented by the kingdom of Judea, as a political entity. Knowledge of this history is based on archaeological, epigraphic, and literary sources, including the Hebrew Bible. N.B.: Students should be aware that the study of history, like all the human and natural sciences, is predicated on inquiry, not a priori judgments. Accordingly, the Bible is not privileged as an intrinsically true or authoritative record. No text is presumed inerrant, and all sources are subject to scrutiny, in the context of scholarly discourse. Biblical texts are treated just like all other texts, as the products of human beings embedded in a historical context, and as the subject of analysis and interpretation. Persons of all faiths and of no faith are equally welcome to participate in such scholarly discourse. However, students who feel that their own religious beliefs require an understanding of the Bible that is antithetical to the foregoing statements are cautioned that they may find themselves uncomfortable with this course.

JWST 3504. Apocalypticism, Cosmic Warfare, and the Maccabees: Jewish Strategies of Resistance in Antiquity. (3 cr. ; Student Option; Periodic Spring)

The rise of Hellenistic kingdoms in the ancient Mediterranean and Near East created a variety of responses from local, subjugated peoples, and some of the most documented cases are those of Jewish populations in Koele-Syria/Palestine. The main objective of this course is to analyze Jewish responses to imperial rule and military conflict during the Hellenistic and early Roman periods (c. 300 B.C.E. - 150 C.E.), but we will also spend time examining the broader picture of how local, ancestral groups fared under foreign rule. Along with discussing pertinent archaeological evidence, we will discuss Jewish literature and documentary material from this period, including the sectarian documents of the Dead Sea Scrolls, the Book of Judith (a Jewish "novel"), the Books of Daniel and the Maccabees (all of which provide historical information about the Maccabean revolt and rise of the Hasmoneans), and the writings of Josephus (a Jewish writer who witnessed the Roman takeover of Palestine in the first century C.E.). This course will stay within the confines of the ancient evidence and not examine later interpretations when analyzing each historical period; it will begin with Ptolemaic control of the region and conclude with the Bar Kokhba revolt, its aftermath, and the resilience of Jewish populations in northern Palestine. Topics that will be examined in depth are messianism and apocalypticism, the Jerusalem Temple, Jewish ancestral traditions (which include biblical literature), and theoretical models used by scholars to analyze power relationships in antiquity.

JWST 3506. The Israeli Mossad in Film and Literature: History, Narrative, and Ethics.

(GP; 3 cr. ; Student Option; Periodic Spring)
This course will look at Mossad's activities and their perceptions in Israeli culture through

lenses of collective memory and national identity. Students will examine primary and secondary sources to understand the historic background and the various narratives, shaping the Israeli culture. Students will conduct discussions pertaining to the place of Mossad in Israeli culture expressing opinions about the ethical component of Mossad's activities.

JWST 3511. Muslims and Jews: Conflict and Co-existence in the Middle East and North Africa since 1700. (GP,HIS; 3 cr. ; Student Option; Fall Odd Year)

Diversity of social/cultural interactions between Muslims and Jews and between Islam and Judaism since 1700. What enabled the two religious communities to peacefully coexist? What were causes of conflict? Why is history of Muslim-Jewish relations such a contested issue?

JWST 3512. History of Modern Israel/Palestine: Society, Culture, and Politics. (GP; 3 cr. ; Student Option; Fall Odd Year)

History of Zionism/Israel. Arab-Jewish conflict, tensions between religious/Jews. Relationships between Mizrahi, Ashkenazi, Russian, Ethiopian, Arab citizens. Israeli cultural imagery. Newsreels, political posters, television shows, films, popular music.

JWST 3515. Multiculturalism in Modern Israel: how communities, ideologies, and identities intersect. (GP; 3 cr. ; Student Option; Periodic Spring)

This course focuses on the way various cultural groups in Israel attempt to achieve cultural recognition. Students will learn how various ethnic and religious groups shape their identities through process of acculturation and struggle. Students will learn about several Israeli cultures by reading literature, book chapters and case-studies, and watching movies, all of which center on these debates. Students will examine various case studies centered on these multicultural issues in Israel and will discuss and reflect on the implications of the issues raised by the course material for the international community, the United States, and for their own lives.

JWST 3520. History of the Holocaust. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Study of 1933-1945 extermination of six million Jews and others by Nazi Germany on basis of race. European anti-Semitism. Implications of social Darwinism and race theory. Perpetrators, victims, onlookers, resistance. Theological responses of Jews and Christians.

JWST 3601. Fleeing Hitler: German and Austrian Filmmakers Between Europe and Hollywood. (AH; 3 cr. ; Student Option; Fall Odd Year)

German/American films by famous directors who left Europe in Nazi period. Analysis of films by Fritz Lang, Max Ophuls, Robert Siodmak, Otto Preminger, Billy Wilder, Douglas Sirk, and others. Films as art works and as cultural products of particular social, political, and historical moments.

JWST 3606. Christians, Muslims, and Jews in the Middle Ages. (GP,HIS; 3 cr. ; Student Option; Fall Even, Spring Odd Year)

A Pew Research survey of the global religious landscape in 2010 found 2.2 billion Christians (31.5% of the world's population), 1.6 billion Muslims (23.2%), and 14 million Jews (.2%). In this class, we explore how the histories of these religious communities became deeply entangled in an age of diplomacy, trade, jihad, and crusade.

JWST 3631. Jewish and German Writing at the Margins: Multilingualism, Race, Memory. (; 3 cr. ; Student Option; Periodic Fall & Spring)

How are minority stories, novels, and poems constructed at the margins of a majority culture's language? This course addresses this question by exploring the complexity of Jewish culture in modernity, with a focus on 20th and 21st century German and American literature. We will first tackle the open-ended and endlessly productive question of what is meant by Jewish culture. What is a Jewish writer and is there such a thing as Jewish writing? What makes a text "Jewish"? How do Jewish authors challenge the assumptions of majority culture in their work? What role do multilingualism and translation play in the formation of Jewish cultures at the margins? We will trace the lines of affinity between the U.S. and Europe to explore the entangled histories of Germans and Jews, and between German Jews and Turkish Germans, as we look at works that challenge and expand the definition of Jewishness in the 20th century. Additional topics to be considered include how the legacies of American slavery and European colonialism shape our understandings of the Nazi genocide of the Jews, and whether Jewish writing should be understood under the rubric of "whiteness." Moving beyond the approach to German Jewish literary studies anchored in Weimar Germany, we will explore the circulation of Jewish memory between Europe and the U.S. in the aftermath of the Holocaust. We will read works by, among others, Franz Kafka, Paul Celan, Gershon Scholem, Hannah Arendt, Benjamin Stein, Walter Benjamin, Barbara Honigmann, H?I? ne Cixous, Raymond Federman, W.G. Sebald, Allen Ginsberg, Adeena Karasick, Alfred Kazin, Saul Bellow, Philip Roth, Bernard Malamud, Avram Sutzkever, Zafer Senocak. prereq: No knowledge of German required; some work in German must be done in order to count this course toward a German minor or a German, Scandinavian, Dutch major.

JWST 3633. The Holocaust: Memory, Narrative, History. (GP,HIS; 3 cr. ; Student Option; Periodic Fall & Spring)

Decades after the end of the second world war, the Holocaust continues to play a formative role in public discourse about the past in Germany and Austria. As the event itself recedes into the past, our knowledge about the Holocaust has become increasingly shaped by literary and filmic representations of it. This course has several objectives: first, to deepen students' historical knowledge of the events and experiences of the Holocaust, and at the same time to introduce critical models for examining the relationship between personal experience, historical events, and forms

of representation. This class will introduce students to the debates about the politics of memory and the artistic representation of the Holocaust, with special focus on public debates about the complex ways in which Holocaust memory surfaces in contemporary Germany and Austria, and by the accrual of layers of text and discourse about the Holocaust. We will explore the controversies and debates about public Holocaust memorialization in Germany, Austria, and the U.S. We will also explore the complex interplay between documentary and fictional accounts of the Holocaust, with attention paid to literary and film texts that challenge and "remediate" the limits of Holocaust representation. Additional topics will include Holocaust testimony; Holocaust memoirs, and 2nd and 3rd generation Holocaust literature, the Historians' Debate of the 1980s. No knowledge of German required.

JWST 3729. Nazi Germany and Hitler's Europe. (3 cr. ; Student Option; Periodic Fall & Spring)

Comprehensive exploration of Third Reich. How Nazis came to power, transformations of 1930s, imposition of racial politics against Jews/others, nature of total war. Historical accounts, memoirs, state documents, view films.

JWST 3837. Orienting Hebrew Literature. (GP,LITR; 3 cr. ; A-F only; Periodic Fall & Spring)

An introductory survey of Modern Hebrew Literature and its journey from Eastern Europe through Ottoman/British Palestine to the State of Israel. The class centers on the manner in which Hebrew literature has envisioned the Middle East or "the Orient," reflecting, manipulating, or challenging orientalist paradigms. The first part of the course focuses on Hebrew literature written by Eastern European writers, their fantasies of the East as well as their engagements with orientalist or anti-Semite prejudices. The second part examines Hebrew literature's attempts to "nativize" in Palestine. Finally, we will read a series of texts by Ashkenazi, Mizrahi, and Palestinian Israeli writers that complicate any attempt to position Hebrew within an Orient/Occident dichotomy. No prior familiarity with Hebrew literature is necessary. All texts will be read in English.

JWST 3896. Jewish Studies Internship for Academic Credit. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)

The Jewish Studies Internship is intended to support an applied learning experience in an agreed-upon, short-term, supervised workplace activity, with defined goals which are related to the field of Jewish studies. The work can be full or part time, paid or unpaid, primarily in off-campus environments. Internships integrate knowledge and theories gained previously within the classroom context with practical application and skill development in professional or community settings, alongside academic assignments intended to reflect upon, inform, and reinforce the workplace experiences. The skills and knowledge learned within the workplace setting should

be transferable to other employment settings and not simply to advance the operations of the employer. Typically the student's work is supervised and evaluated by a site coordinator or instructor, and the instructor is responsible for evaluating the specifically academic component of the internship course. Academic credit reflects academic learning, with the understanding that such learning may also take place within the workplace environment.

JWST 3993. Directed Study. (1-4 cr. [max 8 cr.] ; A-F only; Every Fall, Spring & Summer) Guided individual reading or study. Prereq: instr consent

JWST 4000W. Final Project, Writing Intensive. (WI; 4 cr. ; A-F or Audit; Periodic Fall & Spring)

Independent research/writing under supervision of a faculty sponsor. A student may approach any JwSt faculty member to develop a program of independent research/writing in an area of student's choosing. prereq: JwSt major, permission of dir of undergrad studies

JWST 4001W. Final Project, Writing Intensive. (WI; 1 cr. ; A-F or Audit; Every Fall & Spring)

Independent research and writing, under supervision of a faculty sponsor. Student makes a contract with instructor to write an in-depth research paper, or comparable project, to be completed in conjunction with a JwSt 5xxx course. prereq: concurrent registration is required (or allowed) in 5xxx, JwSt major, permission of dir of undergrad studies

JWST 4315. Never Again! Memory & Politics after Genocide. (GP; 3 cr. ; A-F or Audit; Spring Odd Year)

Course focuses on the social repercussions and political consequences of large-scale political violence, such as genocide, war crimes, and crimes against humanity. Students learn how communities and states balance the demands for justice and memory with the need for peace and reconciliation and addresses cases from around the globe and different historical settings. prereq: SOC 1001 or 1011V recommended, A-F required for Majors/Minors.

JWST 4319. "Jews will not replace us!" Global Antisemitism from its Origins to the Present. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

This course will explore the topic of antisemitism, its history and cultural logic, and the relation to other forms of exclusion tied to race, religion, and citizenship in modern times. Starting with the history of Jewish emancipation in Europe and the subsequent debates about the "Jewish Question," students will learn to identify the key features of political antisemitism and the ways that antisemitism has been explained by different social theories, including Marxism, Functionalism, and Critical theory. The course will examine the differences and continuities between older theological forms of anti-Judaism and modern antisemitism, the connections between antisemitism, nativism, and xenophobia in the US and globally, and engage with current debates regarding the correlation between anti-Zionism and antisemitism. We will also

explore Jewish social, political, and ideological responses to antisemitism in Europe and the US, from the Holocaust to the present. Pre-reqs: sophomore or above; Soc 3701 recommended; soc majors/minors must register A-F

JWST 5013W. Biblical Law and Jewish Ethics. (WI; 3 cr. ; Student Option; Periodic Fall & Spring)

This course introduces students to the original meaning and significance of religious law and ethics within Judaism. Law is the single most important part of Jewish history and identity. At the same time, law is also the least understood part of Judaism and has often been the source of criticism and hatred. We shall therefore confront one of the most important parts of Jewish civilization and seek to understand it on its own terms. In demonstrating how law becomes a fundamental religious and ethical ideal, the course will focus on the biblical and Rabbinic periods but spans the entire history of Judaism. Consistent with the First Amendment, the approach taken is secular. There are no prerequisites: the course is open to all qualified students. The course begins with ideas of law in ancient Babylon and then studies the ongoing history of those ideas. The biblical idea that a covenant binds Israel to God, along with its implications for human worth - including the view of woman as person - will be examined. Comparative cultural issues include the reinterpretations of covenant within Christianity and Islam. The course investigates the rabbinic concept of oral law, the use of law to maintain the civil and religious stability of the Jewish people, and the kabbalistic transformation of law. The course concludes with contemporary Jewish thinkers who return to the Bible while seeking to establish a modern system of universal ethics. The premise of the course is the discipline of academic religious studies. The assumptions of the course are therefore academic and secular, as required by the First Amendment. All texts and all religious traditions will be examined analytically and critically. Students are expected to understand and master this approach, which includes questioning conventional cultural assumptions about the composition and authorship of the Bible. Willingness to ask such questions and openness to new ways of thinking are essential to success in the course.

JWST 5115. Midrash: Reading and Retelling the Hebrew Bible. (; 3 cr. ; Student Option; Periodic Fall & Spring)

How did the Jews of the first seven centuries of the common era read and understand the Hebrew Bible? What were the problems they faced -- interpretive, historical, theological -- in trying to apply their holy scriptures? This course explores key issues that led to the development of a new form of Judaism in late antiquity, rabbinic Judaism, and its methods of scriptural interpretation. The course's study will focus on the forms and practices of rabbinic scriptural interpretation (midrash) as it developed in Roman Palestine and Sasanian Babylonia, focusing on key narrative and legal passages in the Five Books of Moses (Torah). A main focus of the course will be on the ways

the rabbis adapted the Hebrew Bible to express their own core concerns.

JWST 5204. The Dead Sea Scrolls. (; 3 cr. ; Student Option; Periodic Fall & Spring) Introduction to Dead Sea Scrolls and Qumran. Contents of Dead Sea Scrolls, significance for understanding development of the Bible. Background of Judaism and Christianity. Archaeological site of Qumran. Open to graduate students across the college; knowledge of classical Hebrew will not be required. The course is open to upper level undergraduate students with permission of the instructor.

JWST 5992. Directed Readings. (; 1-12 cr. ; Student Option; Every Fall, Spring & Summer) Guided individual reading or study. prereq: instr consent

Journalism & Mass Communicat (JOUR)

JOUR 1001. Media in a Changing World. (SOCS,TS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

In an era when almost everybody's a content creator and just about every company is connected with media, what makes mass communication different from other forms of message exchange? We'll examine journalism, advertising, public relations, video gaming, music recording, music and more. We'll think about issues like free speech, "fake news," censorship, social media, demographics, psychographics and graphic content. Hear from mass media professionals who provide real-world, real-time material for discussion and debate. This class covers ground that is shifting by the day and uses current cases to help you apply what you learn and sharpen your own media literacy skills.

JOUR 1001H. Media in a Changing World. (SOCS,TS; 3 cr. ; A-F or Audit; Every Fall)

In an era when almost everybody's a content creator and just about every company is connected with media, what makes mass communication different from other forms of message exchange? We'll examine journalism, advertising, public relations, video gaming, music recording, music and more. We'll think about issues like free speech, fake news, censorship, social media, demographics, psychographics and graphic content. Hear from mass media professionals who provide real-world, real-time material for discussion and debate. This class covers ground that is shifting by the day and uses current cases to help you apply what you learn and sharpen your own media literacy skills.

JOUR 1501. Digital Games and Society. (AH,TS; 3 cr. ; Student Option; Every Fall & Spring)

Digital games have a wide-ranging impact on our culture and society and are one of the fastest-growing sectors of the entertainment media industry, generating enormous profits for the game companies. In this course, you will: (1) be introduced to the academic study of video games; (2) examine digital games as forms of communication and interactive

storytelling, as well as games of entertainment, commerce, social activism, professional training, and education; (3) consider the impact of mobile media, particularly for games and gameplay; (4) discuss next-generation virtual reality technology that may change the way we think about immersive media experiences; and (5) study the history, ethics, and socio-cultural impact of digital games and related technologies.

JOUR 1912. Winning People Over: The Art and Science of Persuasion. (; 3 cr. [max 6 cr.]; A-F only; Every Fall & Spring)

Seven days a week, everywhere in the world, people are busily trying to persuade other people. Students want their professors to accept late work. Professors want students to throw themselves into their coursework. Advertisers want consumers to buy their products. PR practitioners want people to think more highly of their clients. Newspaper editorialists want readers to change their minds. Defense lawyers want juries to acquit their clients. And politicians want constituents to vote for them. Some of these people are very effective persuaders; others less so. In this course, we will search out the best techniques for persuading different kinds of people to do various things. We'll study really good textbooks, meet top-quality professional persuaders, and search out real-life instances of good and bad persuasive efforts. And we'll try our hands at persuading someone to do something that's important to us. All the while we will be trying to build our own theories of persuasion and maybe have some fun!

JOUR 1914. Real News, Fake News: Confronting Misinformation. (; 3 cr. ; A-F only; Periodic Spring)

Various forms of misleading information? including online rumors, political propaganda, and media manipulation?has become part of contemporary media and politics. These forms of misleading information can be destructive for the fabric of society as well as erode public trust in the media, politics, businesses, and other institutions. Misleading information can also intensify political and ideological polarization, and shape individual and collective attitudes. This course considers the role of actors including journalists, malignant players, and social media platforms, as well as the socio-political contexts that underlie the problem of misinformation. Through discussion, students will learn about key concepts related to the contemporary information disorder ranging from misinformation, infodemic, and publicity and propaganda. And students will discuss and learn how to critically evaluate content using various verification techniques used in media organizations worldwide.

JOUR 3004. Information for Mass Communication. (; 3 cr. [max 6 cr.]; A-F only; Every Fall, Spring & Summer)

The ability to acquire, evaluate, and use different information sources are essential skills for professional communicators and citizens. This course teaches the process of information gathering, evaluation, and implications through the lens of mass communication. A case

study is used to study this process in depth throughout the semester. prereq: Jour major, Strat Comm major, Mass Comm major or Mass Comm minor or approved BIS/IDIM/ICP program

JOUR 3004H. Information for Mass Communication. (; 3 cr. [max 6 cr.]; A-F only; Every Spring)

The ability to acquire, evaluate, and use different information sources are essential skills for professional communicators and citizens. This course teaches the process of information gathering, evaluation, and implications through the lens of mass communication. A case study is used to study this process in depth throughout the semester. prereq: Honors [Jour major, Strat Comm major, Mass Comm major or Mass Comm minor or approved BIS/IDIM/ICP program]

JOUR 3005. Media Effects. (SOCS; 3 cr. ; Student Option; Every Fall & Spring)

Does the media cause social problems, or just reflect them? Why and how have mass media been feared, bemoaned, used, and dismissed as tools to change public beliefs, attitudes, and behavior? This course explores a century's worth of thinking as to how and when media might have such effects. We examine media influence in a range of contexts, including political advertising, health campaigns, video game violence, pornography, and educational television. We approach the topic largely from a social science perspective (for example, by reviewing experimental tests of the effects of media violence) but we will address some of the advantages and limitations inherent in looking for effects in that way. Although our focus is on mass media, interpersonal and digital media sources will be considered as well.

JOUR 3006. Visual Communication. (3 cr. ; Student Option; Every Fall & Spring)

From Instagram to YouTube to memes—we live in a visual culture. How can we interpret this flood of images? Learn how to analyze advertisements, photographs, television, and social media from multiple perspectives. Historical, cultural, and ethical approaches unearth the changing role of visual media in society. You'll actively interpret current images to learn how to effectively communicate with visuals.

JOUR 3007. The Media in American History and Law: Case Studies. (HIS; 3 cr. ; Student Option; Every Fall)

In this class, you'll study news media and their social, cultural, and political impact during a specific historical time period, based on the instructor's expertise and area of research. Examples include: Journalism during the Civil War; Mass media and the African American struggle for civil rights; the Sixties and rise of the New Journalism. Instructors of the course may vary from term to term and students may wish to contact the instructor for information on the specific focus of his or her section.

JOUR 3101W. News Reporting and Writing. (WI; 3 cr. ; A-F only; Every Fall & Spring)

This course is the foundation for training as a working journalist—students will learn how

to write and report news accurately, quickly, fairly and with a clear, informative style that reflects today's news demands. Its main focus is on news writing. Students will be expected to model proper journalistic forms and style, for a variety of platforms, as well as demonstrate proper English usage, grammar, spelling and style. Students will also be asked to think about ? and analyze ? news and the varying ways it is presented in today's media world. At the end of the course, students must demonstrate the ability to write clearly, report accurately, adhere to AP style, meet deadlines and judge what is newsworthy. prereq: [Jour 3004 or 3004H or concurrent registration], [Jour major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 3102. Multimedia Production and Storytelling. (3 cr. ; A-F only; Every Fall & Spring)

This course is an introduction to photography, video, audio and slideshow storytelling and production; understanding the differences in content for different media; and understanding content management. Students will learn basic skills in understanding the differences in content for different platforms (Web, print, radio, mobile and television), in identifying, writing and producing different story forms for video, audio and social media and in understanding content management. Students will tell stories using a variety of technologies to gather, edit and disseminate information for journalism and strategic communication messages. We'll work to understand how each technology has a particular audience or application, apply visual principles, and use the principles of visual grammar. Students will gain a basic proficiency in still and video camera operation, in video, audio and mixed media writing and production, in creating images for a video and social media or other mixed media story. They will also learn to manage and publish content in an organized manner. prereq: [Jour 3004 or 3004H or concurrent registration], [Jour 3101 or concurrent registration or Jour 3279 or concurrent registration or Jour 3241 or concurrent registration], [Jour major, Strat Comm major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 3103. Interactive and Data Journalism. (3 cr. ; A-F only; Every Fall & Spring)

This course teaches concepts, tools, and techniques for effective data journalism storytelling on digital platforms. Students will develop ways to display stories through the most important emerging tools for using structured information in journalism, including learning the fundamentals of gathering data and performing analyses to find stories and creating visualizations to illustrate trends and patterns. Students will use maintain a blog to curate their work, learning how to use what they build in one of the most common content management systems. Students will rely on open-source tools, but will also learn basic coding to customize those tools for more effective digital presentation. Students will also learn about and critique other digital storytelling

formats, user experience concepts and web analytics. prereq: [Jour 3004 or 3004H], Jour 3101, [Jour major, Strat Comm major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 3121. Intermediate News Reporting. (3 cr. ; A-F only; Every Fall & Spring)

This course is a skills-based course designed to teach journalism students how to report and write the types of stories that are central to the basic beats in most newsrooms. The course expands upon the competencies learned in JOUR 3101, but requires more in-depth records searches, interviewing and writing. Students also learn the basics of such subjects as libel law, public records law and media ethics. Students will learn in this course how to find news that matters to people, and how to write it so that readers understand it. Whether a student is planning a career in newspapers, television or other media, they will learn enough to get started as a reporter and to understand how things work (or don't work) in a real newsroom . prereq: [Jour 3004 or 3004H], Jour 3101, [Jour major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 3155. Editing for Print and Digital Audiences. (3 cr. ; A-F only; Every Spring)

In this course, students will learn the fundamentals of editing for print and digital publications. Students will learn to edit copy, to exercise news judgment and to improve the flow and accuracy of stories. The course will also cover how to write search-engine friendly headlines, to utilize online tools for fact-checking and to execute compelling visual designs for digital and print. Successful students will develop an excellent understanding of AP style, hone their ability to improve copy and learn to navigate legal, ethical and production challenges. These skills are particularly important in the modern newsroom ? where economic pressures have removed some layers of fact-checking and editing and forced traditional roles to shift and expand. prereq: [Jour 3004 or 3004H], Jour 3101, [Jour major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 3173W. Magazine & Feature Writing. (WI; 3 cr. ; A-F only; Every Fall & Spring)

This course is about writing feature stories for magazines. You'll learn how that enterprise differs from newspaper writing. You'll also learn about the various types of magazines that exist as well as what constitutes a magazine in this digital age. We will focus on niche ? on the importance of writing for the magazine's audience. You'll learn how to sell your work to different markets and platforms. You'll also discover, if you don't already know it, that the best magazine writing is rooted in solid reporting. You'll be doing more interviewing, fact-finding, and field work than you may have imagined, all of which will improve your writing. prereq: [Jour 3004 or 3004H], Jour 3101, [Jour major, Strat Comm major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 3201. Principles of Strategic Communication. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

So, you have declared your journalism major and selected the strategic communication track? Or maybe, you are studying something completely different, but you have heard that advertising and public relations are great fields to work in? In this class, we will foster career exploration as you learn about key areas of advertising and public relations (history, theory, ethics, etc). In the second half of the class, you will take a journey from media consumer to strategic planner as you create a strategic communication campaign as part of a project that will start off your strategic communication portfolio. prereq: [Jour 3004 or 3004H or concurrent registration], [Jour major, Strat Comm major, Mass Comm major or Mass Comm minor or approved BIS/IDIM/ICP program]

JOUR 3241W. Advertising Strategy and Creative Development. (WI; 3 cr. ; A-F only; Every Fall & Spring)

This course is focused on giving strategic communications students the tools needed to better understand how the creative process works to help solve business problems. We will accomplish this by studying successful advertising campaigns (current and past) and by creating concepts for campaigns. Advertising today is more than just the development of a traditional TV or print ad. Creative concepts include the traditional advertising platforms of TV, Radio, Print and Outdoor along with the vast array of digital platforms. The strategic and creative development experiences and discussions from this class will help aid students in the development of decision-making and concept development skills that are needed to pursue a career in this field. prereq: [Jour 3004W or 3004V], Jour 3201, [Strat Comm major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 3251. Strategic Communication Research and Analytics. (; 3 cr. ; A-F only; Every Fall & Spring)

This course is designed to teach strategic communication students the fundamentals of research used by communication and marketing research professionals to evaluate the effectiveness of campaigns. Students will be exposed to various data collection and analysis methods with particular emphasis on quantitative research methods (e.g., surveys, experiments, digital analytics) commonly used to collect data to aid strategic communication decision making. prereq: [Jour 3004 or 3004H], Jour 3201, [Strat Comm major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 3253. Account Planning. (; 3 cr. ; A-F only; Every Fall & Spring)

This course examines the role of account planning in integrated marketing communications development in today's complex cultural and media environments. It is designed to teach students how to use research and analytic tools to identify strategic insights about target consumers. These insights will then be used to develop effective brand positions and message strategies. Students will develop an awareness and

understanding of the skills needed to become an account planner and an opportunity to apply those skills in various situations and settings. Although account planners conduct both formative and evaluative research using both primary and secondary research approaches throughout a campaign, the emphasis in this course will be on qualitative formative research, brand planning, positioning and message development. prereq: [Jour 3004W or 3004V], Jour 3201, [Strat Comm major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 3261. Media Planning. (3 cr. ; A-F only; Every Fall & Spring)

The objective of the course is to provide a basic understanding of the media strategy, planning, and selection process within the context of the broader marketing communications process. The course will cover paid, owned and earned media across advertising, digital (including social), and direct marketing disciplines. The media planning process incorporates subjective decision making after reviewing significant amounts of objective data. The development of recommendations with supporting rationale is the basis for the process. Students are introduced to this process focusing on the prioritization of strategies and media selection within a fixed budget. Marketing and media examples covering number industries to help students grasp theoretical concepts. The media selection process incorporates the demographic media consumption patterns of the American consumer. Students will also be exposed to the measurement methodologies for all major media. The course will cover the strengths and weaknesses of various media and how they are applied to accomplish marketing communication objectives. Students will garner hands on experience with data and planning resources. prereq: [Jour 3004W or 3004V], Jour 3201, [Strat Comm major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 3275. Digital Strategy in Strategic Communication. (; 3 cr. ; A-F only; Every Fall & Spring)

This course is designed to provide a basic understanding of digital communications and strategy development. The course covers the digital communications planning process and emphasizes how to develop effective communications strategies in today's digital-centric environment. The digital revolution of the last fifteen years makes it imperative for communications professionals to understand how to evaluate and select digital marketing channels to best achieve business goals. This course is designed to assist students to build the professional skills they need to compete in a digital world. This course teaches students how to develop a digital communications plan from start to finish. Students will increase their understanding of how digital communications relate to more traditional marketing and PR tactics. Students will move through a discovery process learning to analyze consumers' digital marketing behavior, their demand for content, the effectiveness of various social media channels including website performance. The

course will review current digital tools, trends and tactics; weighing the difference between what is 'hot?' versus which channels can best be used to achieve a brand's communications goals. Students will leave the course with an increased knowledge of digital communications and ability to evaluate and strategically apply digital marketing techniques in a real-world communications environment. prereq: [Jour 3004W or 3004V], Jour 3201, [Strat Comm major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 3279W. Professional Writing for Strategic Communication. (WI; 3 cr. ; A-F only; Every Fall & Spring)

This course is designed to develop writing expertise for public relations and advertising agency work, corporate and non-profit strategic communication and development of tactical thinking and publicity techniques. The course focuses on developing the essential writing capabilities needed to complete a wide variety of projects in public relations and related strategic communication professions. It is designed to help students gain experience in researching, interviewing, writing, and producing materials used by strategic communication professionals. These include biographies, press releases, fact sheets, backgrounders, newsletters, brochures, speeches, A/V scripts and other materials for broadcast. Discussion of public relations tactics, the role of public relations and advertising agencies and various media channels is integrated into the course so that students should develop a strong understanding of the many aspects of the strategic communication profession. Theories of persuasion, social influence and compliance gaining are interwoven into class discussions. prereq: [Jour 3004W or 3004V], Jour 3201, [Strat Comm major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 3321. Media Design. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

This course will introduce students to basic skills in visual communication through hands-on projects, observation, discussion, and collaboration. Students will learn the vocabulary necessary to communicate effectively about graphic design processes. Students will develop a sense of their own design aesthetic and be able to talk about their solutions to design communication challenges by producing and presenting the projects assigned in the course. They also will learn to provide and receive constructive criticism and encouragement with their peers through both process and final class project critiques. Students will become familiar with the tools and processes necessary to execute simple design projects, from concept through production. Course projects will facilitate diversity through projects that reflect each students interests and research. prereq: [Jour 3004 or 3004H or concurrent registration], [Jour major, Strat Comm major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 3451. TV, Radio and Digital News Reporting. (3 cr. ; A-F only; Every Fall & Spring)

This course is the introductory broadcast and digital writing and reporting course. It is the student's introduction to writing in broadcast and digital style, video photojournalism and digital video editing. This is not a production class. It will apply journalism to the production techniques learned in JOUR 3102. Also included: source and story development, ethical decision-making, audio storytelling and vocal and on-camera delivery. prereq: [Jour 3004 or 3004H], Jour 3101, Jour 3102, [Jour major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 3551. The Business of Digital Media: Innovation, Disruption, and Adaptation.

(TS; 3 cr. ; Student Option; Every Spring)
Digital media enterprises have uprooted many established industries and continue to be among the most important factors shaping our economy and society today. Where do these innovations come from? Why do some startups prosper while others fail? How do legacy firms respond to disruptions to their business models? What makes adaptations possible? What makes them risky? Learn to analyze and evaluate the economic strategies of existing digital media firms across various sectors of society including news, entertainment, social media, mobile, and retail. Assess their impacts on cultural and civic life for better and for worse. Use these skills to incubate your own ideas for the next great media innovations of the future.

JOUR 3552. Technology, Communication & Global Society. (GP; 3 cr. ; Student Option; Every Fall)

This course examines the various ways in which technology continues to evolve, and to have a role in ongoing societal changes. The course focuses on unpacking the specific ways in which technology are evolving, and connecting those changes to impacts on communication and media. A variety of theories or perspectives relevant or related to technology use and global communication will be considered to help make sense of the interplay between the technology use and societies in a global setting. The course is divided into three main parts: first, understanding of the specifics of relevant technology; second, connecting the technical features to theoretical views of technology; third, examining global patterns of technology use in media and communication. The readings and discussions place special emphasis on specific forms of technology, including mobile phones, Web, and social media. Grounded in a global context, we will investigate the political, cultural, social, technological, and economic conditions that shape and are shaped by the presence of the Internet at the national and cross-national levels; the effects of technology use on the form and content of mass communication at the global level; and the implications of technology use for human and social relations across national borders.

JOUR 3553. Mobile Communication. (TS; 3 cr. ; Student Option; Every Spring)

In the past 20 years, mobile communication has emerged as a rapidly-growing, popular,

and economically and socially significant mode of communication around the world. First as voice-only devices intended for business use, mobile devices have proliferated and gained new functionalities. Smartphones are now the most common means of internet access in many countries, and mobile devices have brought together the capabilities of watches, computers, GPS trackers, and many other specialized tools. Today, two-thirds of the world's population has reliable mobile phone access, and there are more mobile devices in existence than there are people on earth. In light of these rapid developments, this course introduces students to scholarly analysis of mass mobile phone communication in the United States and globally. Beginning with a set of foundational discussions about mobile communication, the course moves through a series of thematic units examining mobile crowdsourcing, social movements, social life, development, media, and the future of mobile communication. Throughout, the course explores how mobile devices have been put to use and what new possibilities and risks lie ahead.

JOUR 3590. Special Topics in Mass

Communication: Context. (; 3 cr. [max 6 cr.] ; A-F or Audit; Periodic Fall & Spring)
Context course not regularly offered. Topics specified in Class Schedule.

JOUR 3614. History of Media

Communication. (HIS,TS; 3 cr. ; Student Option; Every Spring)
In the history of humankind, there have been five major changes in how we communicate and we're in the middle of the latest revolution. This class helps you make sense of these uncharted waters by exploring how humanity adopted, and adapted to, past disruptions. From the alphabet to the internet and social media, learn how technological innovations in the media have changed not only how people share information and values but also what people have communicated throughout history. We will learn about these five phases in mediated communication over 5,000 years, and how they relate to major changes in politics, society and culture. And then we'll use history's lessons to peek into the future: When presidents tweet and everyone's foodie photos are on Instagram, how does the world communicate?

JOUR 3615. History of the Documentary. (3 cr. ; Student Option; Every Fall)

Invention of photographic media. Truth-value of factual versus fictive representations. Influence of political/economic contexts on form/content. Convergence of distinct realms of media practice. Role of media maker. Documentary photography/film. Screenings of landmark films, photographs.

JOUR 3741. Diversity and Media. (DSJ; 3 cr. ; Student Option; Every Fall)

How are our perceptions of crime been influenced by the news? How do social movements use media to share their messages? What can we as audiences do? Social media, news and entertainment media help shape our ideas about identity and

differences. Learn how representation and inclusion have been negotiated through media with a particular focus on local case studies. Topics include race, ethnicity, social class, physical ability, and gender. Students will learn how to use media literacy to build a just and equitable society.

JOUR 3745. Media and Popular Culture. (AH,DSJ; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Popular culture is everywhere. Social media, film, music, video games, television, websites, and news bring popular culture into our daily lives. In this class, we will examine popular culture in modern and historical contexts through various mass communication, sociological, and cultural theories. Is popular culture of the people? or dictated by corporate interests? What social and commercial pressures result in stereotypes, misrepresentation and exclusion in popular culture? Does popular culture mirror or shape social reality? This course will provide you with the tools to become active and thoughtful consumers of media and popular culture.

JOUR 3751. Digital Media and Culture.

(AH,TS; 3 cr. ; Student Option; Every Fall, Spring & Summer)
How have digital media innovations like social media, mobile phones, artificial intelligence, drones and games shaped and been shaped by a culture and society globally? Learn to critically examine the function of digital media in your life. Take away a socio-historical understanding of digital media innovation, and the social, political, and economical impact of new media in creativity, industry, and culture from a cross-disciplinary perspective. Topics range from the concept of branding in an online context, to the varied uses of digital media in the context of journalism, social mobilization, law and privacy, business, globalization, content creation, and beyond. You will read, discuss, and debate cutting edge material from documentaries, podcasts, popular press, and academic literature. This course balances local contexts with global perspectives, and provides details into the practicalities of working and living in a new media environment.

JOUR 3757. Principles of Health Communication Strategy. (3 cr. ; Student Option; Every Fall)

Health information is in the news, nearly every corner of the internet, on your favorite television show, and advertising campaigns. Using principles of mass communication, public health, sociology, and psychology this course explores how mediated health content impacts students' lives at both micro- and macro-levels. We will explore questions such as: how do individuals use media to achieve health-related goals? What role does media and health literacy play in achieving these goals? What effect does health information in entertainment media or strategic public health campaigns, for example, effect your own health-related beliefs and behaviors? To what extent do media portrayals of health and illness impact society's understanding of complex

health issues such as mental health, substance use disorder, or cancers? What influence does news coverage of health issues have on health policy and health reform?

JOUR 3771. Media Ethics. (CIV; 3 cr. ; Student Option; Every Fall & Spring)
Citizens expect journalists to separate fact from falsehoods, opinion and propaganda. But is it possible for journalists to be unbiased and objective? Advertisers are expected to push products. But is it acceptable to mislead by exaggerating what the product can do? Public relations professionals must protect a company's brand. But what should they do when a company becomes entangled in a scandal? This course examines the ethical and unethical ways that communicators respond to such challenges, and uses real-life examples to identify values and principles that can lead to sound, ethical decisions under the most difficult circumstances. Learn about ethical communication on all platforms, from television to social media to newspapers and magazines. Build a solid foundation for your own ethical thinking that can guide you as a student and as a professional communicator.

JOUR 3775. Strategic Communication Law. (CIV; 3 cr. ; Student Option; Every Spring)
Learn practical legal skills and ethics as they pertain to marketing, public relations and advertising by focusing on the actions of the Federal Trade Commission, the Federal Communications, and the Federal Elections Commission. Learn about the administrative process including adjudication and rule making. Learn through a range of legal, policy and ethics discussions ranging from the First Amendment, the regulation of commercial speech, advertising deception, substantiation of material claims, digital privacy, contesting, political advertising, and controls on native advertising and social media influencers.

JOUR 3776. Media Law. (3 cr. ; A-F only; Every Fall & Spring)
The First Amendment protects the freedom of speech, and of the press. Does that mean that journalists can write anything they want, broadcast any video images they choose, or go wherever they like in order to gather news? In this course, we will examine significant court decisions that have defined the legal rights and privileges of journalists. We will look at statutes like the Freedom of Information Act and journalist 'shield laws.' We will consider how new technology raises questions, and challenges, about how to balance First Amendment freedoms with other interests, like privacy and national security. Learn legal rules and principles, and apply them in classroom debate and discussion and in written exercises and examinations. The goal is to understand how the First Amendment and other laws protect the rights of freedom of expression, not just for journalists, but for all of us.

JOUR 3776H. Media Law. (; 3 cr. ; A-F only; Every Fall & Spring)
The First Amendment protects the freedom of speech, and of the press. Does that mean that journalists can write anything they want, broadcast any video images they choose, or

go wherever they like in order to gather news? In this course, we will examine significant court decisions that have defined the legal rights and privileges of journalists. We will look at statutes like the Freedom of Information Act and journalist "shield laws." We will consider how new technology raises questions, and challenges, about how to balance First Amendment freedoms with other interests, like privacy and national security. Learn legal rules and principles, and apply them in classroom debate and discussion and in written exercises and examinations. The goal is to understand how the First Amendment and other laws protect the rights of freedom of expression, not just for journalists, but for all of us. prereq: Honors

JOUR 3786. Media and Politics. (3 cr. ; Student Option; Every Fall)
Do facts matter anymore? Is press freedom under threat? Are audiences trapped in filter bubbles? Why do people hate the media, and how can the news be improved to better serve citizens? Explore the historical and contemporary dynamics that shape the relationship between professionals in the media, the mass public, and political actors across different parts of government. Study major forms of mass media, including television and newspapers, alongside new forms such as digital and social media. Look at specific reporting rituals and practices, as well as issues involving media ownership, regulation, ethics, and press freedom. We will study politicians' efforts to craft messages, advertise strategically, and target select audiences for political gain. The course will focus primarily, but not exclusively, on the United States, and you will be asked to engage with current events and the role of communication technologies in political and civic life.

JOUR 3790. Special Topics in Strategic Communication Skills. (; 3 cr. [max 6 cr.] ; A-F only; Periodic Fall & Spring)
Strategic Communication professional skills course not regularly offered. ?Topics and prerequisites specified in Class Schedule. ? Students must be Strategic Communication majors and meet the prerequisites for the specific course offering.

JOUR 3896. Directed Internship. (; 1 cr. [max 3 cr.] ; S-N only; Every Fall & Spring)
This is an independent study internship practicum. Students obtain an internship with the organization of their choice, such as a TV station, advertising agency, magazine, corporation or non-profit organization, to gain real-world professional experience. The internship should be in students' field of concentration and improve their professional skills; the internship should be guided by a person already working in their chosen field. The course will assist students to examine, reflect on and construct meaning from their internship experience and will encourage them to examine what it means to be a professional and to operate within professional environments. A student may only earn credit for a given internship through one course at a time. prereq: Jour major, dept consent

JOUR 3993. Directed Study. (1-3 cr. [max 6 cr.] ; Student Option No Audit; Every Fall, Spring & Summer)
Directed study, projects. Prereq [Jour major or jour minor or approved IDIM major or ICP major or BIS major], instr consent, dept consent, college consent. Students enrolling in this directed study/research course will complete the University's common Directed Study/Research contract with the faculty mentor/evaluator. The Faculty member will ensure academic standards are upheld, including: the work proposed is at the appropriate level for the course, academic in nature, and the student will be involved intellectually in the project. the project scope is reasonable for one semester and the number of credits specified (42 hours of work per credit) the faculty mentor is qualified to serve in this role assessment of student learning and grading criteria are clear and appropriate the student will be working in a respectful, inclusive environment

JOUR 4171. Covering the Arts. (3 cr. ; A-F only; Every Fall)
As arts journalism continues to migrate from print to online media, the distinctions between entertainment and art have begun to merge, and the boundaries between professional journalism and promotion have blurred. Yet the task of the arts journalist remains an important independent voice for developing arts literacy on print and digital platforms. This course will not only develop practical and critical thinking needed to write about the arts as a journalist but will also do so via digital approaches to arts coverage. Accordingly, students will be immersed and engaged on a variety of platforms to produce relevant journalism about a wide variety of arts for 21st century readers. prereq: [Jour 3004 or 3004H], Jour 3101, [Jour major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 4172. Sports Reporting. (3 cr. ; A-F only; Every Spring)
This course will cover game-story writing, multimedia/digital storytelling, interview/press conference techniques, sports-business reportage, data-driven journalism, effective use of social media and opinion/column writing. Top sports media professionals and other local sports personalities will come in periodically to tell their stories and teach students some of what they know about good sports journalism. The aim of this course is to provide first steps toward working in today's sports media environment. Some possible sports career destinations include becoming: an authoritative sports blogger; TV sports anchor, reporter or sideline analyst; beat reporter or sports editor for a newspaper (and its website); team sports information director; writer of long, beautiful prose for a national magazine or website. prereq: [Jour 3004 or 3004H], Jour 3101, Jour 3121 or instructor permission, [Jour major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 4173. Podcast Production and Storytelling. (3 cr. ; A-F only; Every Fall)
Nieman Journalism lab declared Podcasting the last mass medium. WNYC invested \$15

million in development on podcasts last year alone with the New York Times, the LA Times and now the Washington Post not far behind. Whether it's for news and information, strategic communication messaging or pure entertainment, podcasting has changed how the world seeks and delivers information. This class will take the mystery out of audio: what makes it different, where its challenges lie, and what makes it such an enticing medium to work in. Students will learn the basics of narrative audio storytelling, which is used extensively in some of the most influential podcasts including Serial, This American Life, Caliphate, Dirty John to podcasts like Target's Coffee and Crayons (produced in partnership with Slate Studios) and the Trader Joe's podcast Inside Trader Joe's. Audio has the power to involve the listeners, to make them a part of the story ? whether it's buying crayons or explaining an Islamic insurgency ? the tools are the same: real voices, sound, and conversational writing. Students will learn how to harness sound, to use it to develop a narrative and tell stories with scope, sound, and texture. prereq: [Jour 3004 or 3004H], Jour 3101, Jour 3102, [Jour major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 4175. Brovald-Sim Community Journalism Practicum. (; 3 cr. ; A-F only; Every Spring)

Community journalism is arguably the most relevant source of news and information for our citizenry, whether in urban, suburban or rural settings. That's still true today, but the nature of what we call community journalism is changing. For decades, community journalism has been defined by its geographical boundaries, concerning chiefly the institutions ? schools, churches, businesses or government ? within those borders. While that traditional community journalism is certainly still alive today, the reach of digital journalism and social media has transformed the notion of community. New communities can define themselves beyond geography, a shift that creates opportunities for journalists to cover a broader sense of ?where? people live. This course will explore this shift through practical, hands-on experience and thoughtful consideration of the journalist's role in covering diverse communities. Through readings, lectures and discussions with professionals who do the work, students will consider the notion of community journalism and the best practices for it. Students will target a community in and around the University of Minnesota and develop cover that community on the student-run website AccessU. The goal is for those teams to publish relevant stories about the community on that site in text, photos, video and visualizations. prereq: [Jour 3004 or 3004H], Jour 3101, [Jour 3103 or Jour 3121 or Jour 3155 or Jour 3173 or Jour 4302], [Jour major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 4242. Advertising Portfolio Development. (3 cr. ; A-F only; Every Fall & Spring)

This course improves students' creative development and conceptual thinking. Students

will develop creative ideas based on sound strategies, with emphasis on developing ideas for current and evolving creative media opportunities. At the end of the term, students will be able to apply strategic and insightful creativity to advertising ideas and will have a basic understanding of how to put a book together for the field of advertising. prereq: [Jour 3004W or 3004V], Jour 3201, Jour 3241, [Strat Comm major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 4243. Digital Content Development and Production for Brand Communications. (3 cr. ; A-F only; Every Fall & Spring)

This course focuses on the conceptual and practical skills necessary for strategic communication practitioners, especially those focused on careers in public relations, corporate communications, and sponsored content generation, to create, produce, publish, and distribute content for brands. The course addresses new technologies for branded storytelling including various forms of online video, longer form digital content such as blogs and web sites, and social media community content created for social platforms. The course also incorporates elements of user experience and graphic design and the skills necessary to adapt and modify content in an iterative process after analyzing audience data. Discussion of professional ethics in the creation of branded content is incorporated throughout. prereq: [Jour 3004 or 3004H], Jour 3201, [Jour 3241 or Jour 3279], [Strat Comm major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 4244. Crisis Communication. (3 cr. ; A-F only; Every Spring)

This course teaches the concepts and strategies of effective crisis communication. Crisis communication is an important and integral part of an organization's strategic communication repertoire. Effective crisis communication can save lives, reduce negative outcomes, and protect an organization's employees, reputation, and brand image. Topics taught in this course include crisis type identification and evaluation, forming a crisis management team, planning and execution of crisis communication strategies, and post crisis communication evaluation. Case studies will be used to teach and analyze crisis communication concepts. Students will participate in a crisis communication simulation to gain experience planning and executing the concepts and strategies learned in this course. prereq: [Jour 3004W or 3004V], Jour 3201, any 32xx skills course, [Strat Comm major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 4251. Psychology of Advertising. (; 3 cr. ; Student Option; Every Fall & Spring)

Ever wonder what your brain does when you see an advertisement? Ever wonder why advertisements work? And why sometimes they don't? How does advertising compel you to buy things you don't need and what strategies do you use to resist these messages? In this course we explore a range of theories that explain how advertisements

influence memory, attitudes, emotions, and behaviors and how humans actively process and resist persuasive messages.

JOUR 4258. Corporate Social Responsibility Communication. (3 cr. ; A-F only; Every Spring)

This course seeks to provide the knowledge and skills needed to research, plan, and implement communication campaigns for corporate social responsibility (CSR) practices. In response to increasing social demand, corporations today make significant efforts to integrate CSR initiatives into all aspects of their business. Strategic communication of CSR has a vital role to play in maximizing its business impact, but also creating a more responsible and sustainable society. Effective CSR initiatives and communication must be deliberate, planned, and evaluated. This course examines theories and practices related to CSR in order to understand the business environment in which public relations/ advertising operate and apply them to developing and evaluating communication campaigns. Specifically, this course provides an overview of CSR, its evolution, and theories in management and psychology that underlay strategic approaches and consumer behavior. This course also covers the planning and integration of media into strategic CSR communication programs. Students will learn to set objectives, develop CSR campaign plans, integrate traditional and social media into overall communication plans, measure program results, utilize digital media technologies, and about the macro-environmental issues affecting CSR governance.

JOUR 4259. Strategic Communication Case Analysis. (3 cr. ; A-F only; Every Fall & Spring)

This course explores a wide range of strategic communications campaigns in a case study setting. Students will explore real-life situations and analyze them from a strategic, integrated communications point of view. The cases will focus on building relationships with key stakeholder groups, using strategic communication in today's global environment, and critically analyzing ethical and legal issues. The course objective is to provide students with opportunities to apply their analytical skills when identifying communication opportunities and problems, evaluating the cost and benefits of alternative communication strategies, and evaluating the outcomes of communication campaign decisions. Students will learn how quantitative and qualitative evidence can be used to support strategic decisions, recommendations, and campaign evaluation. Campaigns are drawn from the business, nonprofit, government, and political sectors, and they focus on communication issues addressed through strategic communication, including public relations, advertising, marketing, and/or social media. Students also examine cases involving crisis communication, media relations, and multicultural communication. The case study approach will prepare students to develop their decision-making skills based on best practices learned through the critical evaluation of past

and present campaigns. prereq: [Jour 3004 or 3004H], Jour 3201, any 32xx skills course, [Strat Comm major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 4262. Management for Strategic Communication. (3 cr. ; A-F only; Every Fall & Spring)

This course teaches the concepts and methods for effective management by placing them in the context of organizations in the field of strategic communication. These organizations are diverse in their scale of operations and in the products and services they produce. They are highly responsive to the latest developments in digital media technology, conditions in the local and global economy, and trends in society. They include advertising agencies, public relations firms, media organizations, digital media agencies, brand content developers, and communication departments in client organizations, both for profit and nonprofit businesses. The topics taught in this course include strategic business planning, budgeting, understanding fundamental financial concepts, leadership skills, human resource management, project management and marketing, and selling skills. The concepts, skills and perspectives covered in this course apply to both working within organizations and to understanding the business circumstances of clients and competitors. The course also serves to awaken students to the potential, when opportunities arise, to propose and develop new business ideas of their own. prereq: [Jour 3004 or 3004H], Jour 3201, any 32xx skills course, [Strat Comm major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 4263. Strategic Communication Campaigns. (3 cr. ; A-F or Audit; Every Fall & Spring)

This course provides an in-depth look at all aspects of strategic communications culminating in the development of a strategically sound communications campaign. Emphasis is on ?real-life? examples of campaigns, their creation and development. All essentials of developing a strategic campaign are covered, including advertising strategy, positioning, developing creative, consumer research, planning and setting objectives, media strategies, budgeting, public relations programs, and promotion. This course is designed to bring together all aspects of communications planning that students have gained from previous classes. The class will focus on the integration of various techniques and elements available to most effectively create a strategic communications campaign. This course will simulate the teamwork involved in working in a strategic communications agency. Case studies will be used extensively to apply the theory to the practice in a meaningful, memorable way. prereq: [Jour 3004 or 3004H], Jour 3201, any 32xx skills course, [any 4/5xxx skills course or Flor 3007 or concurrent registration], [Strat Comm major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 4272. Digital Advertising: Theory and Practice. (3 cr. ; A-F or Audit; Every Spring)

This course introduces you to the fascinating and ever-changing world of digital advertising and marketing. Learn its history and evolution, current trends, future possibilities, and legal/ethical issues. We'll study the innovative research and theories explaining the practice and effects of various forms, including social media, search marketing, gaming, native, viral, online video advertising, online behavioral advertising, and mobile. Through a combination of lectures, in-class discussions, and guest presentations by industry professionals, you'll learn the basic theories for developing effective and socially-responsible digital advertising campaigns in the increasingly diverse and global media environment.

JOUR 4274W. Advertising in Society. (WI; 3 cr. ; Student Option; Every Fall & Spring)

Advertising in Society asks students to think about the ways that advertising intersects with cultural and political life in the 21st century, examining the influence of advertising from many perspectives?legal, constitutional, social and ethical. This course tackles a variety of current topics in advertising, including the many other powerful social institutions that advertising underpins (such as journalism and entertainment content), the role of American political advertising, the way advertising depicts gender and sexuality, the obligations of advertisers toward vulnerable audiences, and the ethics and impact of increasingly pervasive personalized hyper-niche ads on Twitter, Facebook and Instagram. This course helps students learn how to conduct thorough analyses of issues, develop positions on issues, and present coherent and convincing arguments for the positions they have taken.

JOUR 4302. Photojournalism. (3 cr. ; A-F or Audit; Every Fall)

Students in this course can expect to learn skills in understanding convergence journalism and visual roles and responsibilities in newsrooms, understanding basic video news production using a DSLR, and using those to create a portfolio of still images with significant journalistic content. Students will study some concept and theory, plus approaches in covering story events and using a variety of technologies to gather, edit and disseminate stories. Students will look at ways to tailor stories for print, broadcast, web and mobile reporting, and talk about the differences in audience and will study ethics all along the way, too. Students will get photo-nerdy. They will learn production skills that include visual grammar and application, how to use a DSLR camera for both still and video images, and how to use light and color to tell news and feature stories. Plus, students will learn to edit photos and video for great images and for great stories. prereq: [Jour 3004 or 3004H], Jour 3101, Jour 3102, [Jour major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 4303. Advanced Visual Storytelling. (3 cr. ; A-F only; Every Spring)

Students produce in-depth multimedia stories, using photography, audio, video, text and infographics, working both individually and in groups. Students will produce and participate in a completed multimedia project (with at least

three story forms) by the end of the semester. Students examine the implications of differing approaches to multimedia production and consider ethical issues raised by it. Exemplary work of multimedia journalism is regularly presented and reviewed. prereq: [Jour 3004 or 3004H], Jour 3101, Jour 3102, [Jour major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 4451. Long-form Video Reporting. (3 cr. ; A-F only; Every Fall)

Emphasis in this course is on longer-form storytelling using video, audio, graphics and still photography, edited into multimedia presentations for journalistic and persuasive messages. Story conceptualization, enterprise, source development, access, narrative approaches and related issues will be addressed. Ethical and legal implications of multimedia storytelling in journalistic and strategic communications settings will be reviewed. prereq: [Jour 3004 or 3004H], Jour 3101, Jour 3102, Jour 3451 [Jour major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 4452. Newscast Producing. (3 cr. ; A-F only; Every Spring)

The emphasis of the course is planning, writing, producing and presenting live TV newscasts. Students will produce University Report newscasts during the semester. Much of the class will also be spent writing broadcast news copy. Students will also generate their own stories as needed and anchor newscasts or segments. prereq: [Jour 3004 or 3004H], Jour 3101, Jour 3102, Jour 3451, [Jour 3121 or concurrent registration], [Jour major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 4590. Special Topics in Mass Communication: Context. (; 3 cr. [max 6 cr.] ; A-F or Audit; Periodic Fall & Spring)

Special context topics not regularly offered. Topics specified in Class Schedule.

JOUR 4690. Special Topics in Journalism Skills. (; 3 cr. [max 6 cr.] ; A-F only; Periodic Fall & Spring)

Journalism professional skills course not regularly offered. ?Topics and prerequisites specified in Class Schedule. ?Students must be Journalism majors and meet the prerequisites for the specific course offering.

JOUR 4721. Mass Media and U.S. Society. (DSJ,SOCS; 3 cr. ; Student Option; Every Spring)

Are the news media doing a good job? How can you tell? Does it matter? Is The Daily Show the best news program on television? Why or why not? Most people seem to have an opinion about all of these questions. Most discussions seem to center on one of four themes: 1) who owns the media and what they care about; 2) whether the news media are becoming more or less credible and/or biased; 3) whether entertainment is replacing or enhancing information in news programming; and 4) how much, if at all, is the Internet changing everything about the way the media work, including who we think of as a journalist. Mass Media and U.S. Society explores the validity

and importance of these themes in terms of what roles can the media play in society, what roles does it play, and how have those roles have changed over time. The course draws on ideas from various social sciences to develop tools for discussing a number of specific issues related to these themes.

JOUR 4721H. Mass Media and U.S. Society. (DSJ,SOCS; 3 cr. ; A-F only; Every Spring)

Are the news media doing a good job? How can you tell? Does it matter? Is The Daily Show the best news program on television? Why or why not? Most people seem to have an opinion about all of these questions. Most discussions seem to center on one of four themes: 1) who owns the media and what they care about; 2) whether the news media are becoming more or less credible and/or biased; 3) whether entertainment is replacing or enhancing information in news programming; and 4) how much, if at all, is the Internet changing everything about the way the media work, including who we think of as a journalist. Mass Media and U.S. Society explores the validity and importance of these themes in terms of what roles can the media play in society, what roles does it play, and how have those roles have changed over time. The course draws on ideas from various social sciences to develop tools for discussing a number of specific issues related to these themes. prereq: honors

JOUR 4733V. Honors Thesis Seminar. (WI; 3 cr. ; A-F only; Every Fall)

The Honors Thesis Seminar is designed to help students write a thesis to earn a degree with Honors. By carrying out an individual's thesis work with a set of other students doing the same thing, students will receive support, as well as feedback and ideas, from their peers. We will meet as a class and with subgroups who share a particular research need (e.g., how to develop an on-line survey or experiment, developing a content analysis coding system, learning how to carry out a quantitative data analysis). You will receive and give peer feedback. In addition to our seminar, you will have the chance to meet with the instructor to talk about your thesis, discuss ideas, research methods, and data analysis plans, and receive feedback on thesis drafts. The regular class meetings and outside meetings with the instructors are meant to hold you accountable to yourself and to the instructor for making progress towards completing a thesis on time. prereq: Honors, [Jour major, Strat Comm major, Mass Comm major, or Media and Information major]

JOUR 4790. Special Topics in Strategic Communication Skills - Execution. (; 3 cr. [max 6 cr.]; A-F only; Periodic Fall & Spring)

Strategic Communication professional skills execution course not regularly offered. ? Topics and prerequisites specified in Class Schedule. ?Students must be Strategic Communication majors and meet the prerequisites for the specific course offering.

JOUR 4801. Global Communication. (3 cr. ; Student Option; Every Spring)

How does communication affect international affairs? That's literally a question of war and

peace, and this class guides you through the big theories and the real life stories of how news, information and entertainment travels around the world. Analyze the role of communication in globalization, addressing possible interpretations ranging from cultural imperialism to democratic development.

Examine how different media cover foreign countries. What does it take to cover the world, historically and at a time of unprecedented challenges for professional journalism? What are the practices that have made international news what it is for the last century? Through theory and case studies from journalists and diplomats, examine the possible effects of international communication on international relations and policy making.

JOUR 4890. Special Topics in Strategic Communication Skills - Planning. (; 3 cr. [max 6 cr.]; A-F only; Periodic Fall & Spring)

Strategic Communication professional skills planning course not regularly offered. ? Topics and prerequisites specified in Class Schedule. ?Students must be Strategic Communication majors and meet the prerequisites for the specific course offering.

JOUR 4999. Capstone. (; 1 cr. ; S-N only; Every Fall & Spring)

The purpose of this course is to round out professional career competencies for Hubbard School of Journalism and Mass Communication majors. It is designed to complement and provide capstone reflection on a student's development through HSJMC's curriculum in the professional journalism, strategic communication and mass communication programs. This course has four parts: career competency reflections of previously taken JOUR courses using CLA's RATE tool; a networking unit; a written reflection of the students' HSJMC experiences projecting to career readiness; and an assessment of context course learning outcomes. Students enroll in this course along with an advanced skills or context course during their last semester.

JOUR 5131. In-Depth Reporting. (3 cr. ; A-F only; Every Fall)

The approach to the class is dual: First, there is an academic component ? studying the best examples in-depth reporting from muckrakers to yesterday's New York Times. This part of the course will be presented in a seminar style with a high-expectation for student involvement. Second, there is a hands-on component ? giving students the opportunity to exercise what they learn in this class and elsewhere in their journalism program. This part of the course will require students to identify appropriate stories for in-depth reporting, outline the proposed stories to the instructor, thoroughly report the stories and go through the editing process. Students will also produce graphics and photographs, and might consider various multi-media possibilities. The class topics will be organized around essential social issues, such as health care, politics, poverty, business or other topics. During some semesters, students will produce news stories for publication at a professional news organization, such as MinnPost.com. Such

opportunities in past classes have allowed students to work with professional reporters and editors and get bylines stories read by thousands. prereq: [Jour 3004 or 3004H], Jour 3101, Jour 3121, [Jour major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 5174. Magazine Editing and Production. (3 cr. ; A-F only; Every Spring)

This course focuses on magazine and web writing, editing, photography, graphic design, and production. Students will study concepts of magazine and web communication with a special concern for how words, pictures, multimedia and design can be combined effectively. Over the semester, the class will create and produce a professional quality single-theme magazine and website. During this process, students will experience firsthand the organization and working of an editorial and production staff, and the implications of specific divisions of labor and working relationships. All students will write an article and/or produce web content as well as hold a staff job. prereq: [Jour 3004 or 3004H], [Jour 3101 and [Jour 3155 or Jour 3173 or Jour 3321 or Jour 4171 or Jour 4302]] or Jour 3279 , [Jour major, Strat Comm major, Mass Comm major or approved BIS/IDIM/ICP program]

JOUR 5196. Field Based Practicum. (; 3 cr. [max 6 cr.]; A-F only; Every Fall & Spring)

This class will teach advanced reporting skills through hands-on experience, professional oversight and thoughtful discussions with working journalists. Classes will be held at news organizations, where students will also work directly with editors to produce news, features or other content. That work experience will be complemented in weekly sessions by readings, projects and discussions and with journalists. Students apply to this course and completion of Jour 3121 is encouraged. Applications are available in the HSJMC student services office about a month before registration begins. prereq: Jour major and instructor permission

JOUR 5251. Strategic Communication Theory. (; 3 cr. ; Student Option; Every Spring)

This course is an introduction to psychologically-grounded concepts, theories and research and their applications for strategic communication. The course objectives involve comprehension and application of a range of psychological concepts and theories related to attitude development, susceptibility to message influence, and opinion formation and change. The course will provide opportunities to apply theoretical concepts to critically evaluate strategic communications (advertising, public relations, brand marketing, etc.) and to use psychological theory and research to inform the development of communication strategies. The course will examine how these theories help us understand communication processes in digital media environments, as well as how they inform relationship-building areas of strategic communication such as reputation and crisis management. The course will provide opportunities for students to apply concepts and theories to potential research for graduate degree capstone projects.

JOUR 5252. Issue Management Communication and Brand Advocacy. (3 cr. ; Student Option; Every Spring)

Advocacy and issue management communication provides organizations with a tool for promoting change, forming attitudes, and furthering dialogue about substantive issues. This course examines how advocacy and issue management communication creates dialogue that represents the goals of the organization and society, and the persuasive and media tactics used in advocacy and issue management communication. Typical class sessions will include a lecture and case discussion. Prerequisite: Strategic Communication MA student or instructor permission.

JOUR 5253. Content Strategy and Development. (3 cr. ; Student Option; Every Fall)

In today's disruptive world of digital and social communications, brands/organizations have found it necessary to become content publishers. This course will expose students to evolving, highly dynamic best practices in content strategy and brand journalism. The course will consider how editorial strategies, emerging technologies and digital delivery platforms can lead to more effective content creation, distribution, audience engagement and measurement. Students will learn the various stages of content development, from organizing the brand's storyline and mapping it to the customer's brand journey, to the processes of planning, implementing and auditing an organization's content strategy. The course includes weekly readings and case studies for each topic; guest lecturers who are experts in their area of content strategy; as well as a semester-long class project that aligns with each stage of the content development process. prereq: Strategic Communication MA student or instructor permission

JOUR 5501. Communication, Public Opinion, and Social Media. (3 cr. ; Student Option; Every Fall)

Sharpen your understanding of public opinion and its role in political and civic life: What does it mean? Where does it come from? How is it measured? What impact does it have? How are the public's preferences shaped by the larger communications environment and the strategic messages of politicians, interest groups, and other actors in society? What are polls really measuring, and why do they seem so unreliable sometimes? How are social media technologies giving voice to new segments and dimensions of public opinion? But how are they vulnerable to manipulation from bots and other efforts designed to alter perceptions of collective opinions? Examine the theories of communication, psychology, political science, and sociology that underlie these dynamic questions. We'll consider cutting edge approaches used by market researchers, political analysts, and data scientists to harness new forms of data about what the public thinks. We investigate theories that explain how people form their opinions, deliberate with others, change their minds, and reveal their preferences, and we apply these frameworks to

understand contemporary public opinion issues and campaigns.

JOUR 5541. Mass Communication and Public Health. (3 cr. ; Student Option; Every Fall)

This course provides an overview of theory and research that lies at the intersection of mass communication and public health. We examine the potential for media exposure to influence public health outcomes, both as a product of people's everyday interactions with media and the strategic use of media messages to accomplish public health goals. To this end, we will explore large-scale public health campaigns in the context of tobacco, obesity, and cancer screening. We also will explore news media coverage of controversial health issues, such as the human papillomavirus (HPV) vaccine, and health information in entertainment media, such as smoking in movies. This course seeks to understand whether media messages have had intended and/or unintended effects on public attitudes and behavior. Although our focus is on mass media, interpersonal, medical, and digital media sources will be considered as well.

JOUR 5542. Theory-based Health Message Design. (3 cr. ; Student Option; Every Spring)

This course is designed to provide an overview of theory and research relevant for the design of health messages, and specifically focuses on how such theory and research informs message design. It builds on social and behavioral science approaches to public health communication and media effects with the primary objective to better understand issues and strategies related to the design of media health messages. Prerequisites: Jour 3005 or Jour 3757 or Jour 5541

JOUR 5543. Programs for Social Good: Design and Evaluation. (3 cr. ; A-F or Audit; Every Spring)

Despite the amount of money spent on (and the faith placed in) campaigns and other programs for social good, we often cannot answer basic questions about how these programs worked and the impact they had. There are methodological, programmatic, practical, and political reasons for this?all of which we will address in this course. In so doing, we will identify the key components of program design and evaluation, drawing on examples from domains including the environment, public health, and social justice. The overarching goal of this course is to give students the skills they need to understand and assess the effectiveness of campaigns and other programs for social good, whether as consumers or producers of such content. prereq: [Jour 3004W or 3004V], Jour 3201, any 32xx skills course, [Strat Comm major, Mass Comm major or approved BIS/DIM/ICP program]

JOUR 5552. Law of Internet Communication. (3 cr. ; A-F or Audit; Every Spring)

Digital communication technologies continue to raise a variety of legal issues, including whether and how (and which) traditional media and regulatory laws will apply, and how policy should be applied through regulatory law to

enhance and regulate that communication. This course is conducted as a seminar, with an open discussion of legal precedent and the influence of policy on internet and digital communications. This course covers the First Amendment as it applies in a digital era as well as regulatory topics like net neutrality, broadband access, privacy, and copyright.

JOUR 5601W. History of Journalism. (WI; 3 cr. ; Student Option; Every Spring)

What is (real/fake) news? Who's a journalist? What is journalism? How did we get to where we are today regarding journalism both as a profession and as an essential tool of democracy? Learn the fundamental chronology of the development of journalism in the United States from the Revolution to today, and then delve into the big quandaries: How free has journalism been? What have been its professional standards? How has journalism affected a diverse audience? What are the challenges of international journalism? And how have new communication technologies interacted with journalism?

JOUR 5606W. Literary Aspects of Journalism. (WI; 3 cr. ; Student Option; Every Spring)

Journalism isn't fiction. Yet the relationship between what is true and what is artfully constructed toward a "larger truth" -- beyond the facts -- has a complex and intriguing history. This writing-intensive course explores that relationship through close readings of some of the best writers of long-form nonfiction, starting with the birth of the novel from journalistic roots in the 18th century and ending with postmodern forms that challenge the notion of what we can ever know. Discover the literary devices used by Stephen Crane's reported street scenes or Nellie Bly's first-hand investigations into conditions for the mentally ill in the 19th century, and, later, Truman Capote's nonfiction novel about a Kansas farm family's murder. Readings include works by pivotal 20th-century writers such as John Hersey, Joseph Mitchell, Lillian Ross, Michael Herr, Norman Mailer, Gay Talese, Joan Didion, Tom Wolfe, and Hunter S. Thompson, and will trace how their pioneering methods influenced contemporary journalism as well as the documentary films of Errol Morris and contemporary nonfiction writers expanding into new forms.

JOUR 5725. Management of Media Organizations. (3 cr. ; Student Option; Every Fall)

The modern media industry is marked by complexity as new entrants compete for consumers, industry mainstays struggle to survive, and disruptions continue. Consumers are increasingly more educated and proactive about their media consumption, and organizations face a complex array of marketing and advertising decisions. This course introduces students to the organizational structure of media organizations, and of organizations at large. The course focuses on the business aspects of media and prepares students to navigate the complexities of working in modern organizations. The course is designed to expose journalism and strategic

communication majors and other interested students to core concepts and principles of managerial and organizational theory as they apply to these organizations. Students will learn about the key management challenges facing media organizations today in the modern technological landscape. A variety of theories or perspectives relevant or related to management, communication, and technology will be considered to help make sense of the modern media organization's structure and competitive landscape.

JOUR 5777. Contemporary Problems in Freedom of Speech and Press. (3 cr. ; A-F only; Every Fall)

Most of us use devices like Smartphones, GPS, streaming services, or hands-free speakers like Amazon's Echo that connect to online voice services like Alexa without thinking about them very much. But, what kind of information are they collecting? Are merchants allowed to gather your shopping history and use it to send you targeted advertising, or to sell it to other companies for profit? Should other people be able to post your personal information or photos online without your consent? Can the government read your emails, track your online browsing, or intercept your text messages? This course considers how growing concerns about privacy and national security affect the First Amendment and the rights of journalists to gather and report the news. We will read significant court decisions and take a look at current statutory and regulatory initiatives both in the United States and abroad. You can expect lively debates and discussion, and the opportunity to explore a privacy or national security issue in depth in a substantial research paper. prereq: Jour major, Strat Comm major, Mass Comm major or Mass Comm minor or approved BIS/IDIM/ICP program or graduate or law student status. Course is open to students have previously taken a relevant law course - contact instructor for permission.

JOUR 5993. Directed Study. (1-3 cr. [max 6 cr.] ; Student Option No Audit; Every Fall, Spring & Summer)

Directed study/projects. Prereq [Jour major or jour minor or approved IDIM major or ICP major or BIS major], GPA of at least 3.00, college consent, dept consent, instr consent. Students enrolling in this directed study/research course will complete the University's common Directed Study/Research contract with the faculty mentor/evaluator. The Faculty member will ensure academic standards are upheld, including: the work proposed is at the appropriate level for the course, academic in nature, and the student will be involved intellectually in the project. the project scope is reasonable for one semester and the number of credits specified (42 hours of work per credit) the faculty mentor is qualified to serve in this role assessment of student learning and grading criteria are clear and appropriate the student will be working in a respectful, inclusive environment

Kenya (KNYA)

KNYA 1221. Beginning Swahili I. (4 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

KNYA 1222. Beginning Swahili II. (4 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

KNYA 3001. Engineering in the Developing World. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer) Study abroad course

KNYA 3002. Intercultural Perspectives on Work. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer) Study abroad course

KNYA 3225. Intermediate Swahili I. (4 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

KNYA 3226. Intermediate Swahili II. (4 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

KNYA 3231. Advanced Swahili. (4 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

Kinesiology (KIN)

KIN 1871. Survey of Kinesiology, Recreation, and Sport. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Professional practice and disciplinary dimensions of kinesiology, recreation, and sport. Subdisciplines, relevant issues, practical applications.

KIN 1904. An Olympic Impact on the World. (GP; 3 cr. [max 6 cr.] ; A-F only; Periodic Fall)

In the late nineteenth century, Baron Pierre de Coubertin, a French aristocrat, worked tirelessly to revive the Olympic Games from Greek history. Through Baron de Coubertin's efforts the first Olympic Games of the modern era took place in 1896 in Athens, Greece. From a small sporting event that hosted a little over 300 athletes from 13 countries the Olympic Games have grown over the last 120 years to one of the most viewed sporting events in the world. Today, the Olympic Games hosts over 10,000 athletes from over 200 countries. The International Olympic Committee (IOC), which runs the Olympic Games, is now one of the most powerful and richest sporting organizations in the world. The Olympic Games have had a profound impact on the world we live in and they provide us with a platform for examining changes in the world's cultural, economic, social and political processes over the last 120 years. This course explores the impact of the Olympic Games on the world's cultural, social and political processes. In addition, this course will explore the impact of hosting the Olympic Games on that host city and the country's economy. Finally, this course will explore the changes in sport that have occurred during this time span.

KIN 3001. Lifetime Health and Wellness. (SOCS; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Overview of health/wellness. Physical, emotional, intellectual, spiritual, social, environmental, and financial health. Influence

of societal changes on general health/wellness of diverse populations.

KIN 3027. Human Anatomy for Kinesiology, Physical Activity, and Health Promotion.

(; 4 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Kinesiology 3027 is a 4-credit introduction to human anatomy with two 50-min lectures and one 100-min lab per week. Upon completing this course, students will be able to use proper anatomical terminology and identify the majority of the human anatomical structures and their functions. The lecture series is organized around an organ systems approach and currently follows the text of Human Anatomy. The lectures are divided into basic anatomy and human development principles and the major anatomical systems: skin, musculoskeletal, cardiovascular, respiratory, renal, neurological, endocrine, immune, and digestive. Each section proceeds an anatomic description from the microscopic or cellular level to the key features of tissues that aggregate into organ anatomy (bottom up). The kinetic anatomy perspective describes organ systems' dynamic and functional characteristics based on their component organ anatomy and interactions (top-down). The context for course material covered will reflect a kinesiology focus on human movement in exercise and sports. This will better prepare students for graduate school courses in the health sciences, movement sciences, and Athletic Training. In addition, students will be encouraged to learn their anatomy as a health and preventive medicine skill. The laboratory component is divided into two; one identifies cells, tissues, and bones and the different bone parts. These activities are performed in the Human Performance Teaching Laboratory (HPTL) in Mariucci Arena 141. Laboratory activities include using light microscopes to identify cells and tissues and working with individual bones and intact skeletons. The second component is the cadaver lab at the Anatomy Bequest Program. Students will have the opportunity to visualize and identify anatomical structures in cadavers and cadavers specimens during these labs. The cadaver labs provide students with the three-dimensional organization of the human anatomy and the association with neighboring anatomical structures. The instructors will demonstrate the functional anatomical aspects and clinical anatomical correlations. Students are able to further complement their understanding of human anatomy by using anatomy and physiology virtual labs.

KIN 3112. Introduction to Biomechanics. (; 4 cr. ; A-F only; Every Fall, Spring & Summer)

This course introduces basic concepts about the mechanics of human movement. The first part of the course will introduce students to various aspects of functional anatomy and provide an overview of the major neural systems that control the human body and its movement. The second part introduces principles of the physics of human movement, while the final part provides examples of how this knowledge can be applied for the rehabilitation, engineering, and sport

sciences. The lecture portion of the course is accompanied by a weekly lab that provides tutorials as well as hands-on experiences in small groups where students learn to collect biomechanical data such as motion capture or electromyographic recordings. Prior to the start of class, students must be Kinesiology B.S. majors and have successfully completed human anatomy and physics with a lab. It is preferred, not required, that students have also completed human physiology. To request a permission number, contact the Kinesiology B.S. advisor. prereq: [PHYS 1101W or PHYS 1201W or PHYS 1221 or PHYS 1301W or PHYS 1401V or 1107], [3027 or 3111 or ANAT 3001 or ANAT 3601 or ANAT 3611 or INMD 3001 or INMD 3601]; 3385 recommended

KIN 3114. Prevention and Care of Athletic Injuries. (3 cr. ; A-F only; Every Fall & Spring) Principles in athletic training for prevention/care of injury. Taping/bracing techniques. Lab. prereq: [3027 or ANAT 3001 or ANAT 3601 or ANAT 3611 or equiv], [CEHD student or instr consent]

KIN 3126W. Sport and Exercise Psychology. (WI; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer) Thoughts, feelings, and behaviors of people in physical activity contexts. Foundations approach to theory/research in sport and exercise psychology. prereq: Kin major or instr consent

KIN 3131W. History and Philosophy of Sport. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring) Introductory description and interpretation of the historical and philosophical development of physical education and sport from primitive societies to 20th century civilization. prereq: Kin major or instr consent

KIN 3132. Introduction to Motor Development Across the Lifespan. (; 3 cr. ; A-F only; Every Fall & Spring) Developmental aspects of human movement behavior/learning. Life span change of motor skills. prereq: Kin major or instr consent

KIN 3135. Introduction to Motor Learning and Control. (; 3 cr. ; A-F or Audit; Every Fall & Spring) Main theoretical ideas/research that have advanced motor control/learning over last three decades.

KIN 3136. Mental Skills Training for Sport. (; 3 cr. ; A-F only; Periodic Fall & Spring) Experientially-based course. Using mental skills training strategies (e.g., imagery, goal setting, relaxation, cognitive restructuring, motivation) for enhancing sport performance and personal growth of athletes.

KIN 3254. Empowering Kenyan Youth Through Physical Activity and Sport. (3 cr. ; Student Option; Periodic Summer) This is a non-embedded study abroad course that takes place in Kenya during the May or Summer term. Regular participation in physical activity and sport is essential for positive health outcomes and is a tool readily utilized to empower youth. However, cultural and environmental circumstances can either facilitate or challenge opportunities and efforts

among youth. This study abroad global seminar will explore first-hand the Kenyan culture and the unique chances for physical activity and movement made available to Kenyan youth, both males and females. Students will be introduced to different individual and community organizations' efforts to provide activity opportunities to youth. They will interact with these organizations to learn how physical activity and sport extends beyond just bodily movement and exercise, but provides long-term opportunities for youth. Students will actively learn about the myriad of personal, social, cultural, and environmental challenges that face Kenyan youth to engage in sports and physical activity and how youth navigate these challenges. Students will engage in several service projects and discuss activity in the context of Kenyan culture, while remaining cognizant of their own American culture. All of this work will be completed in the context of exploring the distinctive and specific elements of the Kenyan culture compared to the US culture. Students enrolled in the course will travel throughout Kenya (capital city of Nairobi to rural, mountainous Iten to centrally-located Mt. Kenya to the coastal area of Mombasa) to experience physical activity and sport from various perspectives including: primary aged children engaged in ballet and football (soccer); high school aged students recruited to participate in sport at prestigious boarding schools; adult athletes who have been engaged in activity since childhood and now handling family life with the love of their sport; and elite runners whose lives revolve around eating, sleeping, and training;

KIN 3327. Teaching Physical Education in the Elementary School. (; 2 cr. ; A-F only; Every Fall & Spring)

KIN 3327 addresses inquiry, research, and reflection through class projects, reading assignments, discussions, and team-teaching. Inquiry is addressed as classroom teachers review several sources in order to formulate a philosophy about physical education and its importance in the lives of the students they teach. Research takes place as students delve into current curriculum practices, methodology and strategies as well as knowledge of age level characteristics and developmentally appropriate activities. Reflection is twofold as student's team-teach a variety of lessons. Students must present post reflective comments on their own teaching as well as offering positive comment as peers present physical education lessons. This course is activity based and is designed to give the classroom teacher the ability to teach elementary physical education with age appropriate, energizing activities. We will be utilizing the classroom and the gymnasium for instruction and team-teaching. Gymnasium classes will be active, experiencing current curriculum ideas and methodology. As classroom teachers, please realize the importance of physical education to the total school curriculum including the health, social, and emotional benefits for the child.

KIN 3385. Human Physiology. (; 4 cr. ; A-F or Audit; Every Fall, Spring & Summer)

This four-credit course is divided into two weekly 75-minute lectures and one 60 minute lab session once per week. Upon completion of this course, the student will be able to describe the function of the different organs and systems in the body, explain the biophysical mechanisms and describe the interactions and feedback processes to achieve a steady-state. This course provides the biological principles for how the body works, from the function of intracellular organelles to the interactions between systems and the role of each organ. It explains the relationship between structure and function and describes the development of diseases when the physiological systems become impaired. This course in human physiology builds on knowledge obtained using the basic sciences of math, chemistry, and physics. Thus, understanding some of these sciences' basic principles is essential to fully understanding the physiological principles during this course. The lab component of this course takes place at the Human Performance Teaching Laboratory (HPTL). Lab activities are an interactive component of the course. During labs, students will perform a series of experiments, record data, and will provide a physiological interpretation for the results. The combination of lecture material and laboratory experience will allow students to understand disease mechanisms, comprehend the strategies to prevent and treat the most frequent medical conditions, and live a healthy life. The instructor's goal is not just to teach the most up-to-date knowledge on human physiology but also to arouse your curiosity so you continue learning beyond this course. prereq: [[Kin 3027 or Anat 3001 or Anat 3601 or Anat 3611], Kin or Physical Activity and Health Promotion Major] or instr consent

KIN 3505. Intro to Human-Centered Design. (; 3 cr. ; Student Option; Periodic Fall) Application of design to meet human needs. Design of fabricated products, tools/machines, software/hardware interfaces, art/culture, living environments, and complex sociotechnical systems.

KIN 3696. Supervised Practical Experience. (; 1-10 cr. ; S-N only; Every Fall, Spring & Summer) On-the-job supervised practical experience in the fields of sport and exercise under a specialist in a particular area of study or emphasis. prereq: instr consent

KIN 3720. International Studies in Kinesiology. (; 2-4 cr. [max 12 cr.] ; Student Option; Periodic Fall, Spring & Summer) Topics from research exploration, to academic and engagement activities. Delivered in an international setting. Course requirements are determined by instructor(s) and reflect advanced undergraduate rigor. prereq: instr consent

KIN 3982. Research Methods in Kinesiology, Physical Activity, Health Promotion + Sport. (; 3 cr. ; A-F or Audit; Every Fall & Spring) This course is designed to prepare students to read, understand, interpret, evaluate, and critique research with a specific emphasis on research in the kinesiology discipline and

relevance of research methods in students' everyday lives. The course will cover reviewing research articles and their relation to study design and methods. Other topics include ethical considerations in research, quantitative and qualitative design, sampling, measurement validity and reliability and basic statistics for analyzing research questions. Students will write a literature review on a topic of interest and design a research study. prereq: Kinesiology Major or Physical Activity and Health Promotion Major or Sport Management Major

KIN 3993. Directed Study in Kinesiology. (; 1-10 cr. ; A-F only; Every Fall, Spring & Summer)

Students have the opportunity to earn credit while working in a lab or field research setting to carry out scholarly or creative activities while under the guidance of kinesiology faculty members. Students can assist with faculty scholarship or carry out projects of their own. To earn credit in this course, students must talk with the faculty member and then fill out a Directed Activity Contract (z.umn.edu/Directed_Activity) online. This contract is an agreement between the student and faculty member and should establish expectations, credits, and the grading basis for the work.

KIN 4001H. Honors Seminar in KIN, PAHP, + SMGT. (; 3 cr. [max 6 cr.]; A-F only; Every Fall & Spring)

Students will learn how to critically review research articles and how to write a thesis literature review, methods, results, and discussion section. Students will choose to write a systematic literature review or conduct a research study under the guidance of their adviser. Students will write and provide peer reviews for the thesis literature reviews and methods sections. Instruction regarding writing a results and discussion section will be provided. Students are encouraged to register for this course the semester before their expected graduation term. Prerequisites: Honors student and Kinesiology major, PAHP major, or SMGT major

KIN 4028. The Impact of the Olympic Games on Los Angeles. (3 cr. ; A-F only; Every Spring)

This course is an upper-level undergraduate course designed for students to examine the impact of the Olympic Games on Los Angeles, California, and the United States. The city of Los Angeles, California is about to host the Summer Olympic Games for the third time (e.g., 1932, 1984 & 2028). The first Los Angeles Olympic Games were held in 1932 and Los Angeles was just starting to be a city of influence in the United States. A number of countries voiced an objection to the Olympic Games being held in Los Angeles. However, the 1932 Los Angeles Summer Olympic Games proved to be a success. These Olympic Games proved that Los Angeles was an emerging city not only in the United States but in the world. The second Los Angeles Summer Olympics were held in 1984 and followed the 1980 Moscow Summer Olympics, which the United States and other countries boycotted. In retaliation, the Soviet Union as

well as other communist countries boycotted the 1984 Los Angeles Summer Olympics. Even with the boycott the 1984 Los Angeles Summer Olympic Games were a huge success. They demonstrated that the Olympic Games could be hosted and not create a financial calamity for the hosting city, but actually create a legacy for the hosting city to build upon. In 2028 Los Angeles will host the Summer Olympic Games for a third time, joining London, England and Paris, France as the only cities to host the Summer Olympics three times. What will happen to Los Angeles and the United States after they host the 2028 Summer Olympic Games? Will the 2028 Summer Olympic Games be as successful as the previous two Los Angeles Summer Olympic Games? This course will explore the impact of each of these Summer Olympic Games as well as contributions that these Olympic Games have had not only on society in the United States but also the world. In addition, this course will explore the changes in sport that have occurred during this time span in the United States as well as the world.

KIN 4133. Perceptual-Motor Control and Learning. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Concepts/principles of coordination/control of perceptually guided movement. Constraints imposed by properties of environment, body (including the nervous system), and goals of behavior. Why we move the way that we do. prereq: [3112, 3132, 3135, KIN major] or instr consent

KIN 4134. The Aging Motor System. (3 cr. ; A-F only; Periodic Fall & Spring)

Impact of aging on the motor system and its influence on activities of daily living (ADL); posture, falls, participation in physical activity, performance operating personal transportation systems. Effects of aging (behavioral and biological) on coordination/control and its related perceptual-cognitive correlates. prereq: [3132, 3135, Kin major] or instr consent

KIN 4136. Embodied Cognition. (3 cr. ; A-F only; Periodic Fall & Spring)

Introduction to relations between physical behavior/mental activity. Cognitive, emotional, social aspects. Concepts of embodied cognition, their relation to traditional concepts of mind/body. Lifespan development, empirical research. prereq: 3132 or 3135 or instr consent

KIN 4214. Health Promotion. (3 cr. ; A-F only; Every Fall & Spring)

This course is an introduction to the professional and academic field of health promotion and is designed to give students a working knowledge of health promotion concepts and methods and their application to health and health behaviors. Special emphasis will be placed on the philosophical and theoretical foundations of health promotion, specific theories of health promotion, and select health habits and the individual and environmental forces related to these behaviors. Students will also establish a foundation for developing health promotion programs for disease prevention and will focus on the process involved in developing

and evaluating health promotion programs. Examples of prevention programs will be presented and evaluated including various aspects of physical activity (i.e., intrapersonal, interpersonal, community, environmental). Topics in the course focus not only on evidence-based strategies but also on key approaches to program development, implementation, and evaluation. This course is designed for declared Kinesiology B.S. and Health and Wellness Promotion Minor students in their third or fourth year of study.

KIN 4385. Exercise Physiology. (; 4 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Information and learning experiences presented in this class will cover specific areas within the discipline of Exercise Physiology. This course is designed for the advanced undergraduate student in Kinesiology, as well as advanced students in such complementary areas as public health, nutrition, physiology, biology, biochemistry, or any sport? related areas. It creates a great opportunity to combine the science of biological, biochemistry, physics and physiology with the study of health, fitness, wellness, human performance, and sport. Emphasis is placed on basic human physiological systems and the responses of those systems to the challenge of physical activity: from moderate to extreme intensities. The biochemical bases of these responses will be presented. Historical, psychological, sociological, and philosophical implications of these topics will be integrated into many of the lecture/discussions. In addition to lecture information, students will be provided a "hands on," small group laboratory experience that is carefully orchestrated to track lecture material and presentations. prereq: KIN 3385 or PHSL 3051 and Kinesiology Major or Physical Activity and Health Promotion Major

KIN 4441. Movement Neuroscience. (3 cr. [max 6 cr.]; A-F only; Periodic Fall & Spring)

Neural basis of human motor function. Neuroanatomy and neurophysiology of motor control and learning. Seminar for students in kinesiology, neuroscience, physical therapy, physiology, psychology, bioengineering, and human movement science. prereq: 3135 or instr consent

KIN 4520. Current Topics in Kinesiology. (; 2-4 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring)

Issues in kinesiology or in areas not normally available through regular curriculum offerings. prereq: Upper div in KIN or REC or SMGT or coaching or instr consent

KIN 4641. Training Theory & Analytics I for Exercise & Sport Performance. (3 cr. ; A-F or Audit; Every Fall & Spring)

This course prepares students to understand and systematically design training & conditioning programs for health and/or performance. The course addresses general training principles, such as periodization, adaptation, accommodation, specificity, and overload, and explores how an understanding of the 3 energy systems responsible for producing energy for exercise (the aerobic, anaerobic glycolytic, and ATP-PCr systems)

can be applied to training and conditioning. Additional topics include the muscular and neuromuscular systems, physiological, and performance adaptations, repeated sprint ability, energy system interaction, measurement and evaluation of fitness, and strategies for maximizing adaptation to training. Students will gain an understanding of physiological adaptations and apply them to improving health and performance in sport and physical fitness. Enforced prereq: Enrolled in Kinesiology Major, Physical Activity and Health Promotion Major, Sports Coaching Minor, Physical Activity and Promotion Minor, Sport and Exercise Science M.Ed, Physical Activity and Health M.Ed, or Integrated Degree Program

KIN 4687. Principles and Theory of Sports Coaching. (3 cr. ; A-F only; Every Fall & Spring)

This course introduces students to theoretical and applied aspects of sports coaching. Through active participation students will learn how to create a positive sporting environment by utilizing athlete-centered coaching strategies. Students will also learn how to evaluate and improve their own coaching performance by applying reflective and evaluative skills. Topics covered include coaching, training and management principles, coaching pedagogy, coaching science, planning, skill learning and sports psychology. At the completion of this course student will be more confident and knowledgeable in their coaching practice and have a foundation of a personal coaching philosophy. In summary, the approach in this course is toward teaching the student the theory, principles, concepts, and practices that can be applied in the dynamic, ever changing, challenging, and rewarding field of coaching.

KIN 4741. Training Theory & Analytics 2 for Sport Performance. (3 cr. ; A-F only; Every Spring)

Course prepares students to systematically design training & conditioning programs for performance, specific to speed, power, reaction & agility. This course utilizes periodization models with expected physiological & neuromuscular adaptations to maximize human performance in sport, dance, public safety and military elites. prereq: KIN 4641, [upper level undergrad or M.Ed. or grad student]

KIN 5001. Foundations of Human Factors/ Ergonomics. (; 3 cr. ; A-F or Audit; Every Fall)

Variability in human performance as influenced by interaction with designs of machines and tools, computers and software, complex technological systems, jobs and working conditions, organizations, and sociotechnical institutions. Emphasizes conceptual, empirical, practical aspects of human factors/ergonomic science.

KIN 5104. Physical Activities for Persons with Disabilities. (3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Different approaches to providing physical education service and related movement interventions for persons with disabilities. Topics: movement behavior foundations,

movement skill progressions, unique considerations for specific impairments, and sport for persons with disabilities

KIN 5111. Sports Facilities. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Steps in planning/building facilities for athletics, physical education, and sport for college, professional, and public use. prereq: Kin or Rec grad student or MEd student

KIN 5115. Event Management in Sport. (; 3 cr. ; A-F or Audit; Every Spring & Summer)

Techniques/principles of planning, funding, and managing sport events. Collegiate championships, non-profit events, benefits, professional events. prereq: Grad student, instr consent

KIN 5122. Applied Exercise Physiology. (; 3 cr. ; A-F or Audit; Periodic Fall)

Mechanisms of cardiorespiratory and muscular responses to exercise; application of exercise physiology to assessment of work capacity, athletic conditioning, and requirements of human powered vehicles; low to moderate exercise as an intervention in lowering risk for common health problems. prereq: 4385 or equiv or instr consent

KIN 5123. Motivational Interventions in Physical Activity. (; 3 cr. ; A-F only; Every Spring & Summer)

This course prepares students to critically evaluate theory, motivational interventions, and psychological principles related to physical activity. Environmental and policy influences on physical activity behavior and intervention components, design, and evaluation will be discussed. The influence of physical activity on mental health, self-perceptions, stress, anxiety, depression, emotional well-being, cognitive function, and health-related quality of life will be reviewed. This course will help students to better understand and modify exercise behavior and review the most commonly studied psychosocial influences and consequences of physical activity. This class integrates theoretical principles and the latest research with intervention strategies that students can apply in real-world settings.

KIN 5125. Advances in Physical Activity and Health. (; 3 cr. ; A-F only; Every Spring & Summer)

This course exposes students with accurate and up-to-date information regarding physical activity as it relates to health in the United States. It is intended to enhance students' ability to identify important issues pertinent to physical activity and health, as well as develop and maintain a physically active lifestyle.

KIN 5126. Social Psychology of Sport & Physical Activity. (3 cr. ; A-F only; Every Fall & Spring)

Theory/research on social influences, individual differences, motivational processes. How sport/physical activity contribute to psycho-social development. Social psychological factors influencing physical activity beliefs/behaviors. prereq: 3126W or equiv or grad student or instr consent

KIN 5136. Psychology of Coaching. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Psychological dimensions of coaching across age levels, including coaching philosophy, leadership, communication skills, motivation, and mental skills training for performance enhancement.

KIN 5141. Nutrition and Exercise for Health Promotion and Disease Prevention. (3 cr. ; A-F only; Every Fall)

Requirements/physiologic roles of nutrients/physical activity in promotion of health. Assessment of energy requirements. RDAs, food composition/safety, weight management. Prevention of chronic diseases. Coronary heart disease. prereq: FScN 1112 or equiv

KIN 5142. Applied Nutrition for Sport Performance and Optimal Health. (3 cr. ; A-F only; Every Spring)

This course is designed for students interested in nutrition as it relates to health, exercise and athletic training. Evidenced based information is used to apply current nutrition concepts to improve health, physical and athletic performance. Case studies as well as personal data are employed throughout course to support concepts of lecture.

KIN 5181. Understanding Kinesiology Research. (; 3 cr. ; A-F only; Every Fall)

Prepares students to critically analyze research specific to kinesiology. Ethics, measurement, experimental and qualitative design, and physical activity epidemiology research will be reviewed. The application of research to practice will be emphasized. This course is designed for School of Kinesiology M.Ed Students. Undergraduates, M.S. M.A., and Ph.D. students should consult with their academic advisor before registering for this course. Recommended prerequisite: introductory statistics

KIN 5202. Current Issues in Health. (; 2 cr. ; A-F only; Every Summer)

Critical thinking for health issues in research/media. Issues specific to conflict, stress, public policy, and communication. Projects, debates.

KIN 5203. Health Media, Consumerism, and Communication. (; 2 cr. ; A-F only; Every Spring)

Effects of media, consumerism, technology, and health related issues. Students form/defend opinions on positive/negative aspects of how health information is disseminated and how individual health decisions are made.

KIN 5235. Advanced Biomechanics II: Kinetics. (; 3 cr. ; A-F or Audit; Spring Odd Year)

Kinetic aspects of human movement (single/multi-joint torques, simple inverted pendulum models, mass-spring systems). Analysis of experimental data and of computer simulations. Lectures, seminars, lab. prereq: [3112 or equiv], PMed 5135, undergrad college physics, intro calculus

KIN 5328. International Sport: The Impact of the Olympic Games. (GP,HIS; 3 cr. ; A-F only; Periodic Fall, Spring & Summer)

In the late nineteenth century, Baron Pierre de Coubertin, a French aristocrat, worked tirelessly to revive the Olympic Games from Greek history. Through Baron de Coubertin's

efforts, the first Olympic Games of the modern era took place in 1896 in Athens, Greece. From a small sporting event that hosted a little over 300 athletes from 13 countries the Olympic Games have grown over the last 120 years to one of the most viewed sporting events in the world. Today, the Olympic Games hosts over 10,000 athletes from over 200 countries. The International Olympic Committee (IOC), which runs the Olympic Games, is now one of the most powerful and richest sporting organizations in the world. The Olympic Games have had a profound impact on the world we live in and they provide us with a platform for examining changes in the world's cultural, economic, social and political processes over the last 120 years. This course explores the impact of a specific Olympic Game(s) held on that host city's culture, economy and political landscape. In addition, this course will explore that Olympic Games(s) impact on the world's cultural, social and political processes.

KIN 5371. Sport and Society. (3 cr. ; A-F or Audit; Every Spring)

Sport, sporting processes, social influences, systems. Structures that have effected and exist within/among societies, nations, and cultures. Contemporary issues such as social differentiation, violence, and honesty. prereq: [3126W, grad student] or instr consent

KIN 5385. Exercise for Healthy Aging & Disease Prevention and Management. (3 cr. ; A-F only; Every Spring)

Exercise testing/prescription with modifications required because of special considerations associated with aging, gender differences, or presence of medical conditions. prereq: Physiology or biology undergrad

KIN 5421. Sport Finance. (3 cr. ; A-F or Audit; Every Fall & Summer)

Introduction to financial analysis in sport. Cash flow statements, budgeting issues, traditional/innovative revenue producing strategies available to sport organizations. Discussion, practical analysis of current market. prereq: Grad student or instr consent

KIN 5435. Advanced Theory and Techniques of Exercise Science. (3 cr. ; A-F only; Every Spring)

Theoretical constructs, in-depth description of procedures used in exercise science research and clinical settings. Laboratory exercises, lectures. prereq: [3385, 4385, Kin major] or instr consent

KIN 5441. Applied Sport Science Research. (3 cr. ; A-F only; Every Fall, Spring & Summer)

Introduction to varied contributions of sport sciences to athletic performance. Evaluation of historical research's contributions toward modern day research questions.

KIN 5461. Issues in the Sport Industry. (3 cr. ; A-F only; Every Fall)

Critical analysis of management issues within sport industry. Strategic management, corporate social responsibility, human resource management/diversity, governance, sport globalization, sport development. prereq: postbac or grad student or instr consent

KIN 5485. Exercise Testing and Prescription. (3 cr. ; A-F only; Every Fall)

This course will provide an introduction to exercise testing and prescription including basic placement of EKG placement and interpretation of an electrocardiogram. Students will also learn the basics of gas exchange and fitness test and the use of this information in the prescription of exercise in a variety of populations as well as use of electrocardiogram in clinical exercise testing and exercise prescription. prereq: [3385, 4385] or instr consent

KIN 5505. Human-Centered Design - Principles and Applications. (3 cr. ; A-F only; Every Fall)

Application of design to meet human needs. Design of fabricated products, tools/machines, software/hardware interfaces, art/culture, living environments, and complex sociotechnical systems.

KIN 5511. Sport and Gender. (3 cr. ; A-F only; Every Fall)

Critically examines women's involvement in/ contributions to sport, physical activity, and leisure.

KIN 5585. Pediatric Physiology and Health: Concepts and Applications. (2 cr. ; A-F only; Periodic Fall)

Current understanding of pediatric medicine and exercise physiology. Use of physical activity and weight management in the treatment of various diseases (i.e. obesity) that affect children and adolescents. prereq: 3385 or 4385

KIN 5601. Sport Management Ethics and Policy. (3 cr. ; A-F or Audit; Every Spring)

How to critically analyze ethical concepts that underpin or inform sport policies and evaluate sport policies from a normative point of view. Selected sport policy issues are used to illustrate relevance of ethical considerations in policy development and to explore the ethical implications of sport policy. prereq: MED or grad student or instr consent

KIN 5631. Programming and Promotion in Sport. (3 cr. ; A-F or Audit; Every Fall & Spring)

Introduction to marketing concepts as they apply to sport industry. Consumer behavior, market research, marketing mix, corporate sponsorship, licensing. Discussion, practical application. prereq: Kin or Rec grad student or instr consent

KIN 5641. Scientific Theory and Application of Training and Conditioning in Sport. (3 cr. ; A-F only; Every Spring & Summer)

Current scientific literature on physiological adaptation through training/conditioning for sport. Applying methods in research journals to improve physiological adaptation through training/conditioning with sport specificity. prereq: 4385 or SPST 3641 or SPST 4641 or exercise physiology course or instr consent

KIN 5643. Applied Motion Capture and Movement Analysis Technology. (3 cr. ; A-F only; Every Fall)

Course provides students with the knowledge and tools to effectively analyze human

movement patterns in a wide variety of field-based settings, such as assessing sport skill performance or measuring movement deficits after injury. Students will comprehend the basic, underlying components of movement and movement deficits. It is strongly suggested students have taken Physics, Biomechanics, and Human Anatomy. Credit will not be received if taken KIN 5720: Special Topics in Kinesiology with the topic title, Sport Movement Analysis.

KIN 5696. Practicum in Kinesiology. (1-6 cr. ; S-N only; Every Fall, Spring & Summer)

Practical experience in kinesiology under supervision of a University faculty member and an agency supervisor. prereq: [KIN MEd or grad student], instr consent

KIN 5720. Special Topics in Kinesiology. (2-4 cr. [max 12 cr.] ; A-F only; Every Fall, Spring & Summer)

Current issues in the broad field and subfields in kinesiology, or related coursework in areas not normally available through regular offerings.

KIN 5723. Psychology of Sport Injury and Rehabilitation. (3 cr. ; A-F only; Every Fall)

Psychosocial bases of risk factors preceding sport injury, responses to the occurrence of sport injury, and the rehabilitation process. Lecture, discussion, guest lecture, interviews, and presentation experience. prereq: Intro psych course

KIN 5725. Organization and Management of Physical Education and Sport. (3 cr. ; A-F only; Every Spring & Summer)

Comprehensive analysis of organization and management of physical education and sport in educational settings. Focus on management and planning processes, management skills, functions, roles, decision making, leadership, shared systems, and organizational motivation. For physical education teachers, coaches, community sport administrators. prereq: Grad/initial licensure or instr consent

KIN 5801. Legal Aspects of Sport and Physical Activity. (4 cr. ; A-F only; Every Fall & Spring)

Legal issues related to sport and physical activity settings and facilities in public/private sectors

KIN 5804. National Collegiate Athletic Association (NCAA) Compliance. (2 cr. ; A-F only; Every Spring)

Governance structure, policies, and procedures in intercollegiate athletics. Careers in college athletics as coach, administrator, athletic trainer, counselor, etc. prereq: [Upper div undergrad or grad student] in KIN, instr consent

KIN 5841. Elite Performance and Environmental Considerations. (3 cr. ; A-F only; Periodic Fall)

An examination of elite athletic performance and the effects of environmental conditions on sport performance. Topics include altitude, heat and humidity, cold, wind, and other high stress environments. Students will investigate strategies such as nutrition/dehydration, training, and acclimatization. prereq: KIN 4385 or 4641 or instr consent suggested

KIN 5941. Clinical Movement Neuroscience. (3 cr. ; A-F only; Periodic Spring)
Various neural subsystems involved in controlling human motor function. How injury and disease of the nervous system affects motor behavior. Possibilities for rehabilitation and treatment. Lectures, seminars, class presentations. prereq: [3027 or ANAT 3001 or ANAT 3601 or ANAT 3611 or equiv], [PHSL 3051 or equiv], [4441]

KIN 5981. Research Methodology in Kinesiology and Sport Management. (3 cr. ; A-F only; Every Fall)
Defines/reviews various types of research in exercise/sport science, and physical education. Qualitative research, field studies, and methods of introspection as alternative research strategies to traditional scientific paradigm.

KIN 5987. Professional Skills and Grant Writing for Health Sciences. (2 cr. ; Student Option No Audit; Spring Odd Year)
Introduction to structure/function of different organizations (e.g., NIH, AHA). Writing/reviewing grants/manuscripts. Preparing for a job in academia. prereq: Grad student

KIN 5992. Readings in Kinesiology. (1-9 cr. ; A-F only; Every Fall, Spring & Summer)
Independent study under tutorial guidance. prereq: [KIN upper div undergrad or MEd or grad student], instr consent

KIN 5995. Research Problems in Applied Kinesiology. (1-6 cr. ; A-F only; Every Fall, Spring & Summer)
Selected topics in physical activity and human performance. prereq: [Kin upper div undergrad or MEd or grad student], 15 cr of major coursework [including 4981 or 5981], instr consent

Korean (KOR)

KOR 1011. Beginning Korean I. (5 cr. ; Student Option No Audit; Every Fall)
Basic grammatical structure, vocabulary, expressions of modern colloquial Korean. Introduces Korean writing system.

KOR 1012. Beginning Korean II. (5 cr. ; Student Option No Audit; Every Spring)
Basic grammatical structure, vocabulary, expressions of modern colloquial Korean. prereq: 1011

KOR 3021. Intermediate Korean I. (5 cr. ; Student Option No Audit; Every Fall)
Speaking, reading, writing at intermediate level in modern colloquial Korean. Simple narration/written reports. Some basic Chinese characters may be introduced. prereq: 1012

KOR 3022. Intermediate Korean II. (5 cr. ; Student Option No Audit; Every Spring)
Speaking, reading, writing at intermediate level in modern colloquial Korean. Narration/written reports. Introduction of additional basic Chinese characters. prereq: 3021

KOR 3031. Third Year Korean I. (4 cr. ; Student Option No Audit; Every Fall)
Speaking, reading, writing at advanced level in modern colloquial Korean. Narration, written

reports. Further Chinese characters introduced. prereq: 3022

KOR 3032. Third Year Korean II. (4 cr. ; Student Option No Audit; Every Spring)
Speaking, reading, writing at advanced level in modern colloquial Korean. Narration, written reports. Further Chinese characters introduced. prereq: 3031

KOR 3290. Korean Language Teaching Tutorial. (1 cr. [max 2 cr.] ; S-N only; Every Fall & Spring)
Students tutor beginning students of Korean and are part of department's Korean language team. prereq: Grade of A in 3032

KOR 3993. Directed Studies. (1-3 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)
Directed study in topics of Korean literature, culture, language, or linguistics. Prereq instr consent, dept consent, college consent.

KOR 4001. Beginning Korean I for Graduate Student Research. (5 cr. ; Student Option No Audit; Every Fall)
Basic grammatical structure, vocabulary, expressions of modern colloquial Korean. Introduces Korean writing system. Meets with 1011.

KOR 4002. Beginning Korean II for Graduate Student Research. (5 cr. ; Student Option No Audit; Every Spring)
Basic grammatical structure, vocabulary, expressions of modern colloquial Korean. Meets with 1012. prereq: 4001

KOR 4003. Intermediate Korean I for Graduate Student Research. (5 cr. ; Student Option No Audit; Every Fall)
Speaking, reading, writing in modern colloquial Korean. Simple narration/written reports. Basic Chinese characters may be introduced. Meets with 3021. prereq: 4002, grad student

KOR 4004. Intermediate Korean II for Graduate Student Research. (5 cr. ; Student Option No Audit; Every Spring)
Speaking, reading, writing at intermediate level in modern colloquial Korean. Narration/written reports. Introduction of additional basic Chinese characters. Meets with 3022. prereq: 4003

KOR 4005. Third Year Korean I for Graduate Student Research. (4 cr. ; Student Option No Audit; Every Fall)
Speaking, reading, writing in modern colloquial Korean. Narration, written reports. Further Chinese characters. Meets with 3031. prereq: 4004

KOR 4006. Third Year Korean II for Graduate Student Research. (4 cr. ; Student Option No Audit; Every Spring)
Speaking, reading, writing at advanced level in modern colloquial Korean. Narration, written reports. Further Chinese characters introduced. prereq: 4005

KOR 4041. Advanced Readings in Modern Korean I. (4 cr. ; Student Option; Every Fall)
Speaking, listening, reading, writing. Content/task-based course. Study vocabulary/read novels, journals, selections from Korean history/arts. Writing summaries, reports, simple

reaction papers. prereq: 3032 or equiv or instr consent

KOR 4042. Advanced Readings in Modern Korean II. (4 cr. ; Student Option; Every Spring)
Speaking, listening, reading, writing. Content/task-based course. Study vocabulary/read novels, journals, selections from Korean history/arts. Writing summaries, reports, simple reaction papers. prereq: 4041 or equiv or instr consent

KOR 5040. Readings in Korean Texts: North Korean Dialect. (3 cr. [max 9 cr.] ; Student Option No Audit; Periodic Fall & Spring)
Expose advanced students of Korean to various North Korean contexts. Improve ability to understand North Korean literary work. Various authentic texts from North Korea. Mostly taught in Korean. prereq: 3022 or intermediate level of Korean proficiency

KOR 5140. Readings in Sino-Korean Texts. (3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)
Sino-Korean vocabulary/characters necessary for advanced and superior level of knowledge in Korean. Students conduct research projects based on specialized readings in their own fields of study. prereq: 3032 or equiv or instr consent

KOR 5211. Introductory Classical Chinese I. (3 cr. ; Student Option; Periodic Fall)
Reading excerpts from canonical Chinese texts. Transnational nature of Classical Chinese/its importance in study of East Asian cultures. Taught in English. prereq: Two years of an East Asian language (Chinese, Japanese, Korean) or equivalent or instr consent

KOR 5993. Directed Studies. (1-5 cr. [max 15 cr.] ; Student Option No Audit; Every Fall & Spring)
Guided individual study of Korean language or linguistics. prereq: instr consent, dept consent, college consent

Laboratory Medicine and Path (LAMP)

LAMP 4177. Nature of Disease: Pathology for Allied Health Students. (3 cr. ; Student Option; Every Spring & Summer)
Human disease as alteration of normal structure/function of anatomy/physiology. Variety of lecturers cover their area of expertise. Grade based on five unit exams. Offered online in spring and summer. prereq: One anatomy course, one physiology course, or instr consent

Land and Atmospheric Science (LAAS)

LAAS 5050. Integrated Topics in Land & Atmospheric Science. (3 cr. ; A-F or Audit; Every Fall)
Earth system science. Interactions between the land and atmosphere. Biogeochemistry, human-environment

interactions, environmental biophysics, and global environmental change.

LAAS 5051. Thesis Proposal Writing for Land & Atmospheric Science. (; 2 cr. ; A-F or Audit; Every Spring)

Grant proposals, including proposal formats of various funding sources, how to develop a significance statement, hypotheses and objectives, background, methods, project summary, time line, and budget. Critique proposal samples/discuss other aspects of seeking funding for research. Discuss LAAS graduate program prelim exam process.

LAAS 5311. Soil Chemistry and Mineralogy.

(; 3 cr. ; Student Option; Every Fall & Spring) Structural chemistry, origin/identification of crystalline soil clay minerals. Structure of soil organic matter. Chemical processes in soil: solubility, adsorption/desorption, ion exchange, oxidation/reduction, acidity, alkalinity. Solution of problems related to environmental degradation, plant nutrition, and soil genesis. prereq: [[Chem 1022 or equiv], Phys 1102, grad] or instr consent

LAAS 5416. Precision Agriculture and Nutrient Management. (3 cr. ; Student Option; Every Fall)

Precision Agriculture is an integrated information- and technology-based modern agricultural management system, with the intent to manage the spatial and temporal variability associated with all important aspects of agricultural production to achieve optimum yield, quality, efficiency and profitability, protection of the environment and sustainable development. It is an important direction of future agriculture. The focus of this course is on the concept, principles and technologies of precision agriculture and their applications in nutrient resource management. The specific topics include concept and development of precision agriculture and nutrient management, key supporting technologies, soil spatial variability and analysis, yield data analysis, remote sensing-based precision nutrient management, management zone delineation and application, crop growth modeling, combining crop growth modeling and remote sensing for precision nutrient management, and the challenges and future directions of precision agriculture and nutrient management. Precision agriculture and nutrient management is data intensive and the students will also learn basic agro-informatics through hands-on experiences and computer exercises. This course will involve background knowledge and technologies from multi-disciplines, which will facilitate multi-disciplinary integration and innovation. The class will include both lectures and activities such as case studies, group discussion and presentation, problem-solving, and hands-on exercises. This course is intended for graduate students and upper-level undergraduate students whose major is related to agriculture, environmental science and sustainability. This course is equivalent to LAAS 5480 (001) in Fall of 2018 only. This course was taught one semester as a topic course and is only equivalent to that particular course and semester.

LAAS 5425. Atmospheric Processes I: Thermodynamics and Dynamics of the Atmosphere. (; 3 cr. ; A-F or Audit; Fall Odd Year)

Basic laws governing atmospheric motion through analysis of atmospheric dynamics and thermodynamics at the micro, synoptic, and global scales. Fundamental thermodynamic and dynamical processes/equations governing the behavior of the atmosphere/apply to larger-scale geophysical situations. prereq: One yr college-level [calculus, physics]

LAAS 5426. Atmospheric Processes II: Radiation, Composition, and Climate. (; 3 cr. ; A-F or Audit; Spring Odd Year)

Atmospheric radiation, composition/chemistry, climate change. Radiative transfer in Earth's atmosphere. Changing chemical makeup of troposphere/stratosphere. Interplay between natural processes and human activities in air pollution, stratospheric ozone depletion, and chemical forcing of climate. Anthropogenic contribution to climate change/role of land-atmosphere feedbacks affecting atmosphere's energy budget and cycling of greenhouse gases. Application to numerical modeling. prereq: [one yr college-level [calculus, physics, chemistry]]; LAAS 5425 recommended

LAAS 5480. Special Topics in Land and Atmospheric Science. (; 1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Lectures by visiting scholar or regular staff member. Topics specified in Class Schedule. prereq: grad student or instr consent

LAAS 5515. Soil Formation: Earth Surface Processes and Biogeochemistry. (; 3 cr. ; A-F or Audit; Every Fall)

Basic soil morphology, soil profile descriptions. Pedogenic processes, models of soil development. Soil geomorphology, hydrology, hillslope processes. Digital spatial analysis. Soil classification. Soil surveys, land use. Soil geography. prereq: 2125 or instr consent

LAAS 5621. Environmental Genomics and Microbiomes. (3 cr. ; Student Option; Every Fall)

This course deals with molecular and genomic approaches to answer ecological questions related to environmental sciences. The course focuses on microbial community analysis and (meta)genomics, but also covers transcriptomics and other omics approaches. It includes hands-on computer exercises to learn basic bioinformatics with python and R. prereq: college-level courses in microbiology

Landscape Architecture (LA)

LA 1201. Learning from the Landscape. (AH,DSJ; 3 cr. ; A-F or Audit; Every Fall & Spring)

This course is about the ordinary landscape: the objects, spaces, sites, and stories that are the stage for our everyday lives. But the landscape is not just a neutral stage. The landscape influences our lives and we construct and shape the landscape. This course examines the landscape through lenses of race, equity, justice, and climate change,

taking an environmental justice framing in our investigations.

LA 1301. Introduction to Landscape Architecture Drawing. (AH; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Development of basic skills in perceiving/representing material environment. Sketching/drawing conventions of visual phenomena/forms.

LA 1401. The Designed Environment. (AH; 3 cr. ; A-F or Audit; Every Fall & Spring)

Examination of relationships between place and space, and realms of the ideal and real, public and private. Survey of how the fields of architecture, landscape architecture, and urban design have explored those issues.

LA 1601. Design and Equity. (AH,DSJ; 3 cr. ; A-F or Audit; Every Spring)

Investigate world from new perspectives. Spaces of everyday life that reflect/shape values. Meets with LA 3601.

LA 2301. Mixed Analog and Digital Representation Methods. (; 3 cr. ; Student Option; Every Fall)

Explore multimedia rendering techniques using analog (hand sketching/drawing) and digital techniques for raster and vector image generation used to illustrate landscape architecture analysis and design processes. prereq: LA 1301 OR GDES 1311 OR instructor consent

LA 2302. Computer-Aided Representation for Environmental Design. (; 3 cr. ; Student Option; Every Spring)

Use of computer-aided design (CAD) technologies in developing, representing, and communicating environmental design ideas. Adobe Creative Suite, Autodesk AutoCAD, DynaSCAPE, ESRI ArcMap, etc. Integration of images generated from various computer and hand-rendered technologies.

LA 3001. Understanding and Creating Landscape Space. (; 4 cr. ; A-F or Audit; Every Fall)

The subject of this course is Landscape Architecture. In this class we investigate its principles, focusing on the discipline's distinct fusion of both the arts and sciences to create useful and meaningful outdoor spaces to meet specific environmental and social needs. Class periods alternate between lectures and 'studio' work periods in which students actively work on projects (site analysis, representation, modeling and oral presentation). Over the course of the semester student receive feedback (instructor, guests and peer review) and participate in class discussion. Students receive additional assignments including critical literature review, site analysis and infrastructure research.

LA 3002. Informants of Creating Landscape Space. (; 4 cr. ; A-F or Audit; Every Spring)

In this course, you will analyze and design specific projects, considering both their physical and conceptual connection to the larger context in which they are located. The aim is for you to gain an understanding of the relationship of landscape to architecture

at the site and urban scales; consider the effects of construction and ground manipulation on the perception and experience of space; and explore the possibilities of layering and transparency, enclosure and adjacencies, in between spaces and connectors. Ultimately, the course will investigate the intersection of physical, biological, and cultural attributes, the opportunities and constraints they produce, the design of space based upon these features, and the [re]presentation of these designs. We will also be building the soft skills that help us grow to be more empathetic and understanding of our client's needs and desired outcomes and practice them throughout the workshop in order to translate experience and input into program + design.

LA 3003. Climate Change Adaptation. (; 3 cr. ; Student Option; Every Fall)

This course will study nations, regions, cities, and communities that have adapted or are undergoing adaptation to climate change. The course will examine different approaches in planning, policy, economics, infrastructure, and building design that increase the adaptive capacity of human settlements. These approaches will vary in scale from the construction of new neighborhoods to the implementation of storm water gardens. The course will emphasize multi-functional strategies which couple climate change adaptation with other urban improvements. Learning Objectives: To understand role of climate adaptation in the reconfiguration of human settlements. To apply design thinking to the issue of climate adaptation in the context of an urban society. To apply knowledge to challenge-based coursework on managing climate risk, decreasing climate vulnerability, and building resilience to climate change.

LA 3004. Regional Environmental Landscape Planning. (4 cr. ; Student Option; Every Spring)

An exploration of critical regional landscape parameters affecting the growth and development of metropolitan areas. Students assess these parameters and prepare a multifunctional land use plan for a defined locale. prereq: prereq FR 3131 or Concurrent registration is required (or allowed) in FR 3131 or GEOG 3561 or Concurrent registration is required (or allowed) in GEOG 3561, or equivalent

LA 3204. Holistic Landscape Ecology and Bioregional Practice. (; 3 cr. ; A-F or Audit; Every Spring)

Bioregional practice, how it responds to landscape ecology of great bioregions. Scientific/cultural basis for bioregional design and landscape sustainability.

LA 3413. Introduction to Landscape Architectural History. (GP,HIS; 3 cr. ; A-F or Audit; Every Fall)

Study of landscape architecture's roots by examining the creation of landscapes over time. Influences of ecological and environmental issues as well as political, economic, and social contexts on the cultural construction of landscape ideas and meaning and creation of landscape architectural works.

LA 3501. Environmental Design and Its Biological and Physical Context. (ENV; 3 cr. ; A-F or Audit; Every Spring & Summer) Dynamic relationships between environmentally designed places and biological/physical contexts. Integration of created place and biological/physical contexts. Case studies, student design.

LA 3514. Making the Mississippi. (CIV; 3 cr. ; A-F or Audit; Every Spring)

Environmental parameters affecting growth/development of metropolitan areas. Students assess these parameters and prepare a multi-functional land use plan for a defined locale.

LA 3571. Landscape Construction: Site Systems and Engineering. (; 3 cr. ; A-F or Audit; Every Fall)

Theory applications of landform systems for design. Landform typology, representation methods, manipulation techniques, use of land survey data, earthwork construction issues. Spatial accommodation of vehicles in landscape architecture, including road design. prereq: BED major or BED minor or instr consent

LA 3601. Design and Equity. (AH,DSJ; 3 cr. ; A-F or Audit; Every Spring)

Investigate world from new perspectives. Spaces of everyday life that reflect/shape values. Meets with LA 1601.

LA 3801. Finding Order: An Introduction to Garden Design. (3 cr. ; Student Option; Periodic Summer)

The course explores local gardens and classical gardens and offers students opportunities to learn and practice garden design by engaging students in the first hand observational analysis of extant garden spaces across the Twin Cities.

LA 4001. Sustainable Landscape Design and Planning Practices Studio. (; 4 cr. ; Student Option; Every Fall)

Applications of sustainable landscape design and planning practices. Examination of the systemic, formal, and spatial relationships across the integration of these practices and quantitative and qualitative changes in biodiversity, quality of the earth's air, soil, and water resources, development and consumption of energy resources and climate change. Development of design processes for selection, deployment, and management of sustainable practices to create evocative and meaningful landscape in the context of cultural change. prereq: LA 2302 and LA 3002 or instructor consent.

LA 4002. Design of Urban Landscapes. (; 4 cr. ; A-F only; Every Spring)

LA 4002 will provide an in-depth look at the urban environment. The studio will explore the forces that shape the city and how the city will potentially meet the challenges exerted upon it by a changing climate, reorganized populations, and the technologies of the future. prereq: LA 2302, LA 3002

LA 4096. Internship in Landscape Design and Planning. (; 1 cr. ; S-N only; Every Fall, Spring & Summer)

Supervised professional experience in environmental design firms or government agencies. Students perform professional services and relate these experiences to their education in environmental design. prereq: 1301, 2301, 2302, 3001, 3002, 3003

LA 4160H. Thesis/Capstone Project. (; 2 cr. [max 4 cr.]; A-F only; Every Fall & Spring)

Individualizes honors experience by connecting aspects of major program with special academic interests.

LA 4755. Infrastructure, Natural Systems, and Space of Inhabited Landscapes. (TS; 3 cr. ; A-F or Audit; Every Fall)

Seminar, cross-disciplinary. Urban infrastructural solutions to mitigate/reverse anthropogenic impacts on Earth. Design of sustainable urban infrastructure systems. Policy options, technologies. Criteria, design methods. prereq: Jr or sr

LA 5001. Sustainable Landscape Design and Planning Practices. (; 3 cr. ; Student Option; Every Fall)

Systemic, formal and spatial relationships. Quantitative and qualitative changes in global biodiversity, quality of the earth's air, soil, and water resources, development and consumption of energy resources and climate change. Development of design processes for selection, deployment, and management of sustainable practices. prereq: 5201, 5203

LA 5003. Climate Change Adaptation. (; 3 cr. ; Student Option; Every Fall)

This course will study nations, regions, cities, and communities that have adapted or are undergoing adaptation to climate change. The course will examine different approaches in planning, policy, economics, infrastructure, and building design that increase the adaptive capacity of human settlements. These approaches will vary in scale from the construction of new neighborhoods to the implementation of storm water gardens. The course will emphasize multi-functional strategies which couple climate change adaptation with other urban improvements. Learning Objectives: ? To understand role of climate adaptation in the reconfiguration of human settlements. ? To apply design thinking to the issue of climate adaptation in the context of an urban society. ? To apply knowledge to challenge-based coursework on managing climate risk, decreasing climate vulnerability, and building resilience to climate change.

LA 5004. Regional Environmental Landscape Planning. (4 cr. ; Student Option; Every Spring)

An exploration of critical regional landscape parameters affecting the growth and development of metropolitan areas. Students assess these parameters and prepare a multifunctional land use plan for a defined locale. prereq: PA 5271 or LA 5131 or FR 3131 or GEOG 3561 or GEOG 5561 or equivalent

LA 5096. Internship for Master of Landscape Architecture Students. (1-3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer) Students will receive supervised professional experience in a landscape architectural

design firm in order to gain employment experience related to the field as well as receiving graduate credit. As a requirement of the course, students will submit a reflection paper relating the professional experiences to their education. Must have director of graduate studies (DGS) approval of the internship to register.

LA 5100. Topics: Landscape Architecture. (; 1-3 cr. [max 6 cr.]; Student Option; Periodic Fall, Spring & Summer)

Current and emerging topics in the field of landscape architecture. Taught by regular or visiting faculty in their areas of specialization.

LA 5131. Geospatial Data Analysis and Design. (3 cr. ; A-F only; Every Fall)

Introduction to geospatial data analysis/application in landscape architectural, environmental design research/practice. prereq: Master of Landscape Architecture Student or instr consent

LA 5201. Making Landscape Spaces and Types. (; 6 cr. ; A-F or Audit; Every Fall)

Design exploration using 3-D models and historical precedent studies to create outdoor spaces for human habitation and use. Application of the basic landscape palette of landform, plants, and structures to give physical, emotional, cognitive, and social definition to created places. prereq: B.E.D accelerated status or LA grad or instr consent

LA 5202. Landscape Analysis Workshop. (; 1 cr. ; S-N only; Every Fall)

Introduction to field techniques for site analysis, including vegetation, soil, and landform description. One-week session, before fall term, at lake Itasca Forestry and Biological Station.

LA 5203. Ecological Dimensions of Space Making. (; 6 cr. ; A-F or Audit; Every Spring)

Design studio experience drawing on ecological, cultural, aesthetic influences to explore development of design ideas responsive to ecological issues and human experience. prereq: LA major or instr consent; recommended for both BED and Grad students

LA 5204. Metropolitan Landscape Ecology. (; 3 cr. ; A-F only; Every Fall & Spring)

Theories/principles of holistic landscape ecology. People, nature, and environmental stewardship in metropolitan landscapes. Urban areas, rural areas that provide food, water, energy, and recreation. prereq: BED accelerated status or LA grad student or instr consent

LA 5376. Representation I. (4 cr. [max 8 cr.]; A-F only; Every Fall)

Strengthen freehand sketching ability. Develop observation skills. Develop ability to communicate ideas clearly through visual expression. Learn/explore conventions of landscape architectural drawing. Basic tools/techniques associated with Adobe Photoshop CS6. Promote fluidity between analog/digital media. Create drawing personality/graphic style. prereq: Master of Landscape Architecture (MLA) or Accelerated Bachelor of Environmental Design.

LA 5377. Representation II. (4 cr. [max 8 cr.]; A-F only; Every Spring)

Explore multi-media rendering techniques. Increase knowledge of art materials/graphic programs. Increase hand-drawing ability. Color theory, contemporary graphic styles. Layout, grid systems/type. Increase speed of drawing/producing renderings. Create or strengthen graphic style. prereq: Master of Landscape Architecture (MLA) or Accelerated Bachelor of Environmental Design

LA 5381. The City in Visual Culture. (3 cr. ; A-F only; Every Spring)

Visual culture is not just that we see the way we do because we are social animals, but also that our social arrangements take the forms they do because we are seeing animals. The social arrangements of the city, the buildings and public spaces, are concretized expressions of power and culture. The course will, through multiple drawings, attempt to critically examine these social arrangements as they have evolved over time (history) by re-presenting the city (as human experience and aesthetic form). The course will be structured around on-site work sessions, critical readings, on- and off-site lectures, and weekly drawing assignments.

LA 5400. Topics in Landscape Architecture. (; 1-3 cr. [max 12 cr.]; Student Option; Periodic Fall, Spring & Summer)

Current topics in landscape architecture. Taught by regular or visiting faculty in their areas of specialization.

LA 5401. Directed Studies in Emerging Areas of Landscape Architecture. (; 1-3 cr. [max 12 cr.]; Student Option; Every Fall & Spring)

tbd prereq: instr consent

LA 5402. Directed Studies in Landscape Architecture History and Theory. (; 1-6 cr. [max 12 cr.]; Student Option; Every Fall & Spring)

Independent studies under the direction of landscape architecture faculty. prereq: instr consent

LA 5403. Directed Studies in Landscape Architecture Technology. (; 1-6 cr. [max 12 cr.]; Student Option; Every Fall & Spring)

Independent studies under the direction of landscape architecture faculty. prereq: instr consent

LA 5404. Directed Studies in Landscape Architecture Design. (; 1-6 cr. [max 12 cr.]; Student Option; Every Fall & Spring)

Independent studies under the direction of landscape architecture faculty. prereq: instr consent

LA 5405. Interdisciplinary Studies in Landscape Architecture. (; 1-6 cr. [max 12 cr.]; A-F or Audit; Every Fall & Spring)

Research, planning, or design projects. Topics vary. prereq: instr consent

LA 5408. Landscape Architecture, Architecture, and Planning. (; 3-4 cr. ; A-F or Audit; Every Fall & Spring)

Methods and theories in urban design and human behavior. Students develop urban

design journal as tool for experiencing, analyzing, and recording the urban landscape, its fabric, spatial elements, and individual components, and for analyzing design solutions. prereq: Admitted to Denmark International Study Program co-sponsored by the University; given in Denmark

LA 5413. Introduction to Landscape Architectural History. (3 cr. ; A-F or Audit; Every Fall)

Introductory course examines the multiple roots of landscape architecture by examining the making of types of landscapes over time. Emphasis on ecological and environmental issues, and issues related to political, economic, and social contexts of landscape architectural works. prereq: One course in history at 1xxx or higher

LA 5414. Study Abroad: History and Culture. (0-3 cr. ; A-F only; Every Spring)

This is a history course aimed at investigating the rich urban, landscape and architectural legacy of Spain, tracing the multiple histories of the Spain through the ceremonial and quotidian spaces of Madrid as it developed as the capital city of the Catholic monarchy and the monuments of Al-Andalus, the Islamic caliphate in Southern Spain. The course is structured so that each week there will be an in-class lecture and a walking tour of Madrid. There will also be several field trips to historic sites.

LA 5514. Making the Mississippi. (; 3 cr. ; A-F or Audit; Every Spring)

Critical environmental parameters affecting growth/development of metropolitan areas. Students assess these parameters and prepare a multi-functional land use plan for a defined locale.

LA 5576. Ecological Restoration Project Planning and Management. (3 cr. ; A-F only; Every Fall)

Applied practice of ecological restoration of landscapes. Grasslands, wetlands, forests, disturbed agricultural sites, former industrial parcels. Restoration management, skills needed to lead successful projects. prereq: [MLA student, senior B.E.D.] or senior or grad with one college course in ecology/one college course in plant science or botany or instr consent

LA 5755. Infrastructure, Natural Systems and the Space of Inhabited Landscapes. (; 3 cr. ; A-F or Audit; Every Fall)

Cross-disciplinary exploration of urban infrastructural solutions to mitigate/reverse anthropogenic impacts on Earth. Design of sustainable urban infrastructure systems, policy options, available technologies, criteria, design methods. prereq: Grad student

LA 5761. Infrastructure + Culture. (3 cr. ; A-F only; Every Spring)

As attitudes about ecology and nature are shifting and as the threats from climate change are becoming more pronounced, new infrastructure works in the Netherlands are caught a a double bind of responding to ecological concerns and protection of the land. This course will explore both historic and

modern water management infrastructures as cultural and engineering constructs through visual representation as a form of critique. The course will be structured around study trips, preparatory readings, on-site lectures, and will be supplemented by the participation of several guest speakers.

LA 5771. Landscape Infrastructure and Systems I. (3 cr. [max 6 cr.]; A-F only; Every Fall)

Basic principles, techniques, skills of creating infrastructures of built landscapes. Basic concepts of simple plant taxonomy, plant community structure, earthwork, water management, landscape structures. Small site scale design development. prereq: Master of Landscape Architecture Student, [Accelerated Track B.E.D or instr consent]

LA 5772. Landscape Infrastructure Systems II. (3 cr. [max 6 cr.]; A-F only; Every Spring)

Principles, techniques, skills of creating ecological infrastructures of built landscapes systems. Builds on basic concepts taught in LA 5771. Focuses on ecological connections among plants, landscape structure, earthwork techniques, water management, landscape structural systems. prereq: Master of Landscape Architecture Student, [Accelerated BED Student or instr consent]

Lang, Teaching, and Technology (LGTT)

LGTT 5110. Technology in the Second Language Classroom. (; 2 cr. ; Student Option; Every Spring & Summer)

Examine, evaluate, and use technology in language teaching. Theoretical background, demonstration, hands-on exploration.

LGTT 5111. Using the Web for Communicative Language Learning. (; 2 cr. ; Student Option; Every Summer)

This is a fully online course that is intended for K-16 second language instructors who are looking for ways to increase their knowledge of web applications and ways to incorporate them into their second language curriculum to encourage student communication and collaboration. Participants can expect to learn effective ways to incorporate current web technology into their curriculum to promote written and spoken language comprehension and production, and interpersonal communication. The course will address lesson planning, implementation, and assessment issues related to using these tools in second language learning.

LGTT 5710. Special Topics in Language Teaching and Technology. (; 2 cr. [max 6 cr.]; Student Option; Periodic Fall & Summer)

Examine, evaluate, apply specific area of technology to K-higher education, second/foreign language teaching/learning in classroom, independent study, distance education environments.

Language Centr CLA CourseShare (LANG)

LANG 1021. Beginning Czech I. (4 cr. ; Student Option; Every Fall)
CourseShare course hosted by Indiana University. Received via video conferencing. Received via video conferencing. Email the CLA Language Center at elsie@umn.edu for more information.

LANG 1022. Beginning Czech II. (; 4 cr. ; Student Option; Every Spring)
Beginning Czech II is a Big Ten Academic Alliance CourseShare course. The instructor is at Indiana University, but you enroll and receive credit for it at the University of Minnesota. This is an online course. It is intended for students who completed Beginning Czech I. Heritage speakers and those with prior knowledge of Czech should contact the Language Center at elsie@umn.edu or 612-626-6017 for placement assistance.

LANG 1031. Beginning Danish I. (4 cr. ; Student Option No Audit; Every Fall)
CourseShare course hosted by the University of Wisconsin-Madison. Received via video conferencing. Please email the Language Center at elsie@umn.edu for more information.

LANG 1032. Beginning Danish II. (; 4 cr. ; Student Option No Audit; Every Spring)
LANG 1032 - Beginning Danish II is a Big Ten Academic Alliance CourseShare course. The instructor is at the university of Wisconsin-Madison, but you enroll and receive credit for it at the University of Minnesota. This course is received online. If is intended for students who have completed Beginning I. Heritage speakers and those with prior knowledge of Danish should contact the Language Center at elsie@umn.edu or 612-626-6017 for placement assistance.

LANG 1051. Beginning Indonesian I. (; 4 cr. ; Student Option; Every Fall)
LANG 1051 - Beginning Indonesian I is a Big Ten Academic Alliance CourseShare course. The instructor is at the University of Wisconsin-Madison, but you enroll and receive credit for it at the University of Minnesota. This course is received online. It is intended for beginners. Heritage speakers and those with prior knowledge of Indonesian should contact the Language Center at elsie@umn.edu or 612-626-6017 for placement assistance.

LANG 1061. Beginning Persian I. (4 cr. ; Student Option No Audit; Every Fall)
Beginning Persian I is a Big Ten Academic Alliance CourseShare course. The instructor is at Rutgers University, but you enroll and receive credit for it at the University of Minnesota. This is a hybrid course partially received via video conferencing. It is intended for beginners. Heritage speakers and those with prior knowledge of Persian should contact the Language Center at elsie@umn.edu or 612-626-6017 for placement assistance.

LANG 1062. Beginning Persian II. (; 4 cr. ; Student Option; Every Spring)
Beginning Persian II is a Big Ten Academic Alliance CourseShare course. The instructor is at Rutgers University, but you enroll and receive credit for it at the University of Minnesota. This is a hybrid course partially

received via video conferencing. It is intended for students who completed the previous course. Heritage speakers and those with prior knowledge of Persian should contact the Language Center at elsie@umn.edu or 612-626-6017 for placement assistance.

LANG 1071. Beginning Polish I. (4 cr. ; Student Option No Audit; Every Fall)
Beginning Polish I is a Big Ten Academic Alliance CourseShare course. The instructor is at Indiana University, but you enroll and receive credit for it at the University of Minnesota. This course is received via video conferencing. It is intended for beginners. Heritage speakers and those with prior knowledge of Polish should contact the Language Center at elsie@umn.edu or 612-626-6017 for placement assistance.

LANG 1072. Beginning Polish II. (; 4 cr. ; Student Option; Every Spring)
Beginning Polish II is a Big Ten Academic Alliance CourseShare course. The instructor is at Indiana University, but you enroll and receive credit for it at the University of Minnesota. This is an online course. It is intended for students who completed Beginning Polish I. Heritage speakers and those with prior knowledge of Polish should contact the Language Center at elsie@umn.edu or 612-626-6017 for placement assistance.

LANG 1073. Beginning Polish I. (2 cr. ; Student Option No Audit; Every Fall)
CourseShare course hosted by the University of Chicago. Received via video conferencing. Email the CLA Language Center at elsie@umn.edu for more information.

LANG 1074. Beginning Polish II. (2 cr. ; Student Option; Every Spring)
Beginning Polish II is a Big Ten Academic Alliance CourseShare course. The instructor is at the University of Chicago but you enroll and receive credit for it at the University of Minnesota. This course is received via video conferencing. If is intended for students who have completed LANG 1073. Heritage speakers and those with prior knowledge of Polish should contact the Language Center at elsie@umn.edu or 612-626-6017 for placement assistance.

LANG 1075. Beginning Polish III. (2 cr. ; Student Option; Every Spring)
Beginning Polish III is a Big Ten Academic Alliance CourseShare course. The instructor is at the University of Chicago but you enroll and receive credit for it at the University of Minnesota. This course is received via video conferencing. It is intended for students who have completed LANG 1074. Heritage speakers and those with prior knowledge of Polish should contact the Language Center at elsie@umn.edu or 612-626-6017 for placement assistance.

LANG 1081. Beginning Sanskrit I. (; 2 cr. ; Student Option; Every Fall)
Beginning Sanskrit I is a Big Ten Academic Alliance CourseShare course. The instructor is at the University of Chicago but you enroll and receive credit for it at the University of Minnesota. This course is received online.

It is intended for beginners. Students with prior knowledge of Sanskrit should contact the Language Center at elsie@umn.edu or 612-626-6017 for placement assistance.

LANG 1101. Beginning Modern Tibetan I. (4 cr. ; Student Option No Audit; Every Fall) CourseShare course hosted by the University of Wisconsin-Madison. Received via video conferencing. Please email the CLA Language Center at elsie@umn.edu for more information.

LANG 1102. Beginning Modern Tibetan II. (4 cr. ; Student Option; Every Spring) CourseShare course hosted by the University of Wisconsin-Madison. Received via video conferencing. Please email the CLA Language Center at elsie@umn.edu for more information.

LANG 1111. Beginning Turkish I. (; 4 cr. ; Student Option; Every Fall) Beginning Turkish I is a Big Ten Academic Alliance CourseShare course. The instructor is at Rutgers University but you enroll and receive credit for it at the University of Minnesota. This course is received online. It is intended for beginners. Heritage learners or students with prior experience with Turkish should contact the Language Center at elsie@umn.edu or 612-626-6017 for placement assistance.

LANG 1112. Beginning Turkish II. (; 4 cr. ; Student Option; Every Spring) Beginning Turkish II is a Big Ten Academic Alliance CourseShare course. The instructor is at Rutgers University but you enroll and receive credit for it at the University of Minnesota. This course is received online. It is intended for students who completed the previous course. Heritage learners or students with prior experience with Turkish should contact the Language Center at elsie@umn.edu or 612-626-6017 for placement assistance.

LANG 1112. Beginning Turkish II. (4 cr. ; Student Option;) Beginning Turkish II is a Big Ten Academic Alliance CourseShare course. The instructor is at the University of Wisconsin-Madison, but you enroll and receive credit for it at the University of Minnesota. This course connects via video conferencing technology, and there is a fixed time and location. It is intended for students who completed Beginning Turkish I. Contact the Classical & Near Eastern Religions & Cultures department (CNRC) with any questions.

LAT 5701. Latin Prose Composition. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Latin grammar, syntax, diction, and prose style. Graduated exercises in prose composition. prereq: Grad student or instr consent

LAT 5703. Epigraphy. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Practical/theoretical introduction to Latin epigraphy (study/interpretation of inscriptions). Readings/discussion of epigraphic texts. Their value as historical documents, as evidence for development of Latin language, and as literary texts. prereq: Grad student or instr consent

LAT 5993. Directed Studies. (; 1-4 cr. [max 18 cr.] ; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study. prereq: instr consent, dept consent

LAT 5994. Directed Research. (; 1-12 cr. [max 20 cr.] ; Student Option; Every Fall & Spring)
Guided research on original topic chosen by student. prereq: Grad student or instr consent

LAT 5996. Directed Instruction. (; 1-12 cr. [max 20 cr.] ; Student Option; Every Fall & Spring)
Supervised teaching internship. prereq: Grad student or instr consent

Latin American Studies (LAS)

LAS 3401V. Honors Early Latin America to 1825. (GP,WI,HIS; 4 cr. ; A-F only; Every Fall & Spring)

Societies of Americas, Spain, and Portugal before contact. Interactions among Native Americans, African slaves, and Europeans, from colonization through independence. Religion, resistance, labor, gender, race. Primary sources, historical scholarship.

LAS 3401W. Early Latin America to 1825. (GP,WI,HIS; 4 cr. ; A-F or Audit; Every Fall & Spring)

Societies of Americas, Spain, and Portugal before contact. Interactions among Native Americans, African slaves, and Europeans, from colonization through independence. Religion, resistance, labor, gender, race. Primary sources, historical scholarship.

LAS 3402W. Modern Latin America 1825 to Present. (GP,WI,HIS; 4 cr. ; Student Option; Every Fall, Spring & Summer)

National and contemporary period 1825 to present. Social, cultural, political, and economic change.

LAS 3429. Latin American History in Film and Text. (AH,GP; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)

Cinematic representations of Latin America in the context of other historical and literary narratives. Experiences of Latinos in Hollywood. Compare U.S. films with those produced in Latin America. Specific themes vary by term (e.g., women, revolution, colonialism).

Law School (LAW)

LAW 3000. Introduction to American Law and Legal Reasoning. (3 cr. ; A-F only; Every Fall & Spring)

Law pervades all areas of modern life. Yet it remains mysterious to those without legal training. This course will equip you to better answer such questions by exploring the tools that lawyers use to interpret and apply the law. Students will learn to think like lawyers through a series of contemporary case studies that require reading, writing, thinking, and problem solving like a lawyer. Cases will be drawn from topics such as contracts, torts, civil procedure, property, business law, criminal law, sports law, privacy, and law and science.

LAW 3050. Law of Business Organizations. (3 cr. ; A-F only; Every Spring)

This course surveys the leading forms of legal business association governing the formation of business entities, including the laws of agency, partnerships, limited liability companies, and corporations. Emphasis is put on the methods lawyers use to interpret statutes and cases.

LAW 5000. Introduction to American Law and Legal Reasoning. (3 cr. ; A-F only; Every Fall)

Law pervades all areas of modern life. Yet it remains mysterious to those without legal training. This course will equip you to better answer such questions by exploring the tools that lawyers use to interpret and apply the law. Students will learn to think like lawyers through a series of contemporary case studies that require reading, writing, thinking, and problem solving like a lawyer. Cases will be drawn from topics such as contracts, torts, civil procedure, property, business law, criminal law, sports law, privacy, and law and science.

LAW 5001. Introduction to the American Legal System. (2 cr. ; A-F only; Every Fall)

This is an introductory course in American law, providing an overview of a wide variety of constitutional, statutory and common law legal issues. A primary focus will be on American constitutional law: legislative, judicial, and executive powers; the legal structure of ? checks and balances? among the three national governmental powers; the distribution of powers between the national government and state governments (federalism); and the constitutional rights of individuals (including rights of free speech, freedom of religion, due process, and equal protection). We will also examine the American system of litigation: the structure of the court system, the jurisdiction of federal (national) and state courts, and the litigation process. We will also address some common law substantive topics in American law including torts and contracts. Students will have the opportunity to learn how to read and interpret American legal materials, to do legal research within the legal system, and to write an analytical legal memorandum.

LAW 5002. MSPL Legal Research and Writing. (1 cr. ; S-N only; Every Fall)

This course covers the process of communicating about the law. Our goal is to teach students the building blocks of legal communication through multiple practice exercises so that students can repeat the process on their own after successful completion of the course. In the fall (one credit), we begin at orientation with a short exercise, then move on to email, letter, and office memorandum exercises written in an objective/predictive mode.

LAW 5025. Patent Law In Practice. (; 1 cr. ; S-N only; Every Spring)

The field of patents extends across the boundaries of business, technology, innovation, and law. In this course, students will be introduced to a broad range of patent related topics presented by leading practitioners working at the intersection of law and technology. The course is designed to provide an overview of patent law topics, for example:

Patents Now and the Future; Strategic Patents; Patent Analytics; Patent Firm Business Model; Patent Agent/Attorney Roles; Global Patent Procurement; Inventors and Inventions; Claiming Inventions; Patentable Subject Matter; Patent Litigation; Patents Appeals and Trials. Leading practitioners lead a discussion for each of these topics. Subject matter experts may include corporate and law firm lawyers, patent agents, intellectual asset managers, consultants, tech transfer officers, and business owners. Open to graduate students, open to undergraduate juniors or seniors in CSE or CBS, open to other undergraduates with instructor permission

LAW 5026. Intellectual Property In Practice. (1 cr. ; S-N only; Every Fall)

The field of intellectual property extends across the boundaries of business, technology, innovation, and law. In this course, students will be introduced to a broad range of IP related topics presented by leading practitioners working at the intersection of law and technology. Topics may include trade secrets, copyrights, trademarks, patents, IP transactions, IP litigation, emerging technologies, intellectual asset management, IP valuation, and commercialization. Lecturers may include corporate general counsels, firm lawyers, transactional lawyers, litigators, consultants, tech transfer officers, R&D Leaders, and CTO. Open to graduate students, open to undergraduate juniors or seniors in CSE or CBS, open to other undergraduates with instructor permission.

LAW 5050. Law of Business Organizations. (3 cr. ; A-F only; Every Spring)

This course surveys the leading forms of legal business association governing the formation of business entities, including the laws of agency, partnerships, limited liability companies, and corporations. Emphasis is put on the methods lawyers use to interpret statutes and cases.

LAW 5051. Business Associations/ Corporations. (4 cr. ; Student Option; Every Fall & Spring)

The initial part of this course is an introduction to the general law of multi-person unincorporated business organizations, principally partnerships, limited partnerships and limited liability companies. Matters covered include the procedures for forming such organizations and the rights and obligations of the participants as among themselves and with respect to third persons. The remaining class hours constitute the first portion of the basic Corporations course, and will cover such matters as corporate organization; the distribution of powers among the corporate board of directors, its officers and its stockholders; the proxy system; control devices in the close corporation; and the fiduciary duties of directors, officers and controlling shareholders. Matters dealing with "corporate finance" (issuance of shares, payment of dividends, and corporate reorganizations) are covered in Advanced Corporate Law.

LAW 5062. Energy Law. (3 cr. ; Student Option; Every Fall)

This course provides an introduction to U.S. energy law. The first portion of the course introduces the nation's sources of energy: coal, oil, biofuels, natural gas, hydropower, nuclear, wind, solar, geothermal energy, and energy efficiency. In doing so, it explores the physical, market, and legal structures within which these energy sources are extracted, transported, and converted into energy. The second portion of the course turns to the two major sectors of our energy economy--electricity and transportation--and the full range of federal and state regulation of each sector. The third portion of the course explores case studies of hot topics in energy law and policy that highlight the complex transitions taking place in the energy system. These topics include electric grid modernization, electric vehicles, risks and benefits associated with hydraulic fracturing and deepwater drilling for oil and gas, the development of offshore wind energy, and the continued role of nuclear energy. In addition to traditional textbook reading and class discussion, the course will include industry, government, and nonprofit guest speaker presentations. Grading will be based on a final exam given at the end of the semester as well as class discussion and weekly written postings on Canvas for the course.

LAW 5075. Ethics for Patent Agents. (1 cr. ; A-F only; Every Spring)

This course is designed to provide students with an introduction and understanding of the ethics and rules of professional responsibility and the unauthorized practice of law. Scope: This course covers ethics and professional responsibility for lawyers, ethics and professional responsibility for patent agents and patent attorney's and the unauthorized practice of law. Goals: This course will provide students with the framework that will guide their actions and conduct as future patent professionals by introducing them to various scenarios that they are likely to encounter in their professional career. By the end of the course, students will understand the principles behind the ethics and rules of professional responsibility and the unauthorized practice of law as it applies to nonlawyers. prereq: Master of Science Patent Law Students.

LAW 5076. Essentials of Business for Lawyers. (3 cr. ; Student Option; Every Fall & Spring)

This course will teach you how to: (1) Understand basic accounting principles; (2) Read an annual report and analyze financial statements; (3) Look beyond numbers to gauge the financial performance and strength of an entity; (4) Employ cash flow analysis to value a business or determine the potential financial rewards of an investment opportunity; and (5) Understand the strategic questions that business managers must confront in governing their companies. The course surveys foundational concepts, analytical techniques and practices related to finance, accounting and strategic management issues lawyers confront when working with business executives either as an outside consulting attorney or as an inside corporate counsel.

It may also consider other concepts used by business executives, including organizational behavior, marketing and quantitative analysis. The aim of the course is to help law students better appreciate the broader business context of legal decision-making so that they can contribute more effectively as a member of a firm's top management team or as outside counsel.

LAW 5078. Legislation and Regulation. (3 cr. ; Student Option; Every Fall)

This course explores lawmaking in the administrative state. Topics include: the legislative process, delegation of legislative authority to administrative agencies, the rulemaking process, statutory interpretation by courts and agencies, and judicial review of agency decisions. The course will focus on how statutes structure and constrain judicial and administrative decisionmaking.

LAW 5100. Taxation I. (3 cr. ; A-F only; Periodic Fall & Spring)

This basic course in federal income taxation introduces the student to the Internal Revenue Code and the income taxation of individuals through the following topics: definition of income, relevant accounting concepts, exclusions, deductions, income splitting, sales and dispositions of property, amortization, capital losses, and current issues of tax policy.

LAW 5102. Mergers and Acquisitions. (3 cr. ; Student Option; Periodic Fall & Spring)

This class will cover the theory behind, the Federal and state law governing, and the practice of, mergers and acquisitions. Our main focus will be what a transactional lawyer would want and need to know as to why mergers and acquisitions might occur and how and why companies or shareholders would embrace or disfavor them, how the transactions are documented and how disclosure requirements are met, and what the present cases say.

LAW 5103. Data Privacy Law. (3 cr. ; A-F only; Periodic Fall & Spring)

Every single day, the newspaper contains stories?plural intended?about data privacy and security. Whether they concern the National Security Agency, Facebook, or a data breach at a small business, the handling of personal information has become a central concern of our time. In response, a complex law of data privacy has emerged, and now it is a fast growing area of legal practice. This course will equip students to counsel clients about an array of federal, state, and international legal requirements?while also analyzing them critically and thinking about the societal challenges posed by new information technology. Assessment will include group projects and a take-home final.

LAW 5109. Creditors Remedies/Secured Transactions. (3 cr. ; Student Option; Periodic Fall & Spring)

The course covers primarily Article 9 of the Uniform Commercial Code--among the most significant commercial statutes in the world. Article 9 governs transactions in which a borrower borrows money from a lender and gives that lender an interest in some

of the borrower's property as collateral to make the lender more secure with respect to repayment. Transactions large and small are covered by Article 9: whether a person borrows money to buy a car, a manufacturer borrows money to buy its raw materials, a department store chain borrows money to purchase its inventory, or a credit card issuer sells its receivables to investors, Article 9 applies. Secured transactions are of central importance to consumer and commercial loans, mergers and acquisitions, securitizations and to bankruptcy. In addition to secured transactions, during this course we will address the remedies of unsecured creditors, statutes and procedures on levies of execution, attachment, garnishment, replevin, and receiverships. We will also address the exemptions and procedural rights available to debtors.

LAW 5127. Patent Drafting and Oral Advocacy Competition Team. (1 cr. [max 2 cr.]; A-F only; Every Fall)
This Competition team furthers students' patent research, patent drafting, and oral advocacy. In the Competition's Regional stage, the team prepares a written patent application and defends it before a judges panel. In the Competition's contingent National stage, the team amends the application and defends it before another judges panel. The course is open to 8 students (i.e., two teams of up to 4 JD and MS students). JD students should add themselves to the waitlist, share their resumes with the instructor, and request enrollment in the course. prereq or co-req one of the following: Law 5224 Patents, Law 5231 Patent Prosecution I, Law 5243 Patent Research & Writing, or Director of Patent Law Programs permission

LAW 5207. Antitrust. (3 cr. ; Student Option; Periodic Spring)
The course provides an overview of U.S. antitrust (competition) law. It covers the historical development of antitrust, the role of economic analysis in contemporary antitrust law, and the principal areas of substantive antitrust including horizontal restraints (between competitors), vertical restraints (franchise or distributional restrictions), monopolization, and mergers.

LAW 5211. Federal Securities Regulation. (3 cr. ; Student Option; Every Spring)
This course covers concepts and problems in the regulation of securities transactions under the Securities Act of 1933, the basic federal statute governing rights, duties, and remedies in connection with the financing of business operations through the distribution of securities to the public. Topics covered will include the definition of a security and the exemptions from federal registration (crucial knowledge for the small business advisor), the registration process, the contents of the prospectus, civil liabilities, and the applicability of the 1933 Act to secondary transactions (sales of securities by persons other than the issuing entity). Because of the expansive scope of federal securities law and the draconian nature of the penalties imposed even for 'innocent' violations, knowledge of this material

is vital not only for business lawyers who advise large corporations but also those whose business clients are closely held. The course will not focus, however, on litigation strategy or technique. Classes are problem-oriented. Recommended prereq: Law 5050 or 3050

LAW 5214. Insurance Law. (3 cr. ; Student Option; Every Fall)
Insurance is omnipresent in the practice of law because insurance is the primary means by which companies and individuals deal with risks. Lawyers, of course, often make a living either by counseling clients about how to plan for risks or by serving clients whose risks have developed into losses. This course will introduce students to fundamental principles of insurance law and regulation. It will survey the nature and function of insurance, insurance contract formation and meanings, and insurance regulation. We will also look at specific legal issues relating to different lines of insurance, such as property, life, health, and liability insurance.

LAW 5224. Patents. (; 3 cr. ; A-F only; Every Fall)
This course offers an overview of patent law, both for students intending to specialize in patent prosecution and those whose general practice may include patent litigation and licensing. Topics to be covered include patentable subject matter; novelty, utility, and nonobviousness; statutory bars; enablement and written description; direct and vicarious patent infringement; claim interpretation; and administrative review of patent validity.

LAW 5231. Patent Prosecution Practice I. (2 cr. ; A-F only; Every Fall)
Patent Prosecution Practice I is recommended for all students interested in intellectual property and patent law, including students considering practicing in the areas of patent prosecution, litigation, licensing, technology commercialization, and patent portfolio management. The course focuses on US patent practice and is designed to extensively develop the student's skills. Throughout the semester each student will complete two projects: (1) formulate and draft patent claims for a number of different inventions in view of prior art, (2) develop strategies for responding to a patent examiner according to rules of the U.S. Patent Office, arguing patentability and allowance of a patent application over cited prior art. Each student will be paired with a senior practicing attorney who will act as a mentor, including reviewing drafts and providing candid feedback to the student. Lectures and discussion topics include: - Organization and structure of the U.S. Patent Office, -The US patent process including the entire life cycle of a patent from application preparation and filing through examination and grant, -Formulating patent claims in view of prior art and potential infringers, -Architecting patent portfolios including all types of US patent applications, such as provisionals, utilities, continuations and divisionals, - Examination of patent applications including responding to Office Actions issued by the US Patent Office; -Inventorship and ownership

determination and legal ramifications flowing therefrom, and -US law and regulations governing patent prosecution practice. A technical background is not required to take this course.

LAW 5232. Patent Prosecution Practice II. (3 cr. ; A-F only; Every Spring)
Patent Prosecution Practice II is recommended for all students interested in intellectual property and, in particular, students interested in advancing their skills and understanding of patent law and practice. Throughout the semester each student will complete three practical and diverse assignments designed to develop the student's skills. Each student will be paired with a senior practicing attorney who will act as a mentor, including reviewing drafts and providing candid feedback to the student. Specifically, in this class, each student will: (1) prepare a complete US Patent Application based on a real invention, (2) write an appeal brief according to rules of the US Patent Trial and Appeal Board, arguing patentability and reversal of the patent examiner in view of an examination history by the US Patent Office, and (3) provide clearance counseling to a client about to launch a new product, including reviewing issued US patents and developing a full non-infringement / invalidity opinion for the client. The course grade is primarily based on these three projects in lieu of a final exam. Lectures and discussion topics throughout the semester include: -skills and strategies for writing patent applications, - appeal practice including brief writing before the Patent Trial and Appeals Board (PTAB) at the US Patent Office, -clearance analysis including invalidity and non-infringement counseling and opinions, -foreign practice including national filings in foreign countries and international filings using the Patent Cooperation Treaty (PCT), including leveraging patent prosecution highways for accelerated examination, -eligible subject matter issues including recent case law and claim drafting tips, -accelerated examination procedures within the US Patent and Trademark Office, -legal and practical considerations of infringement counseling including formulating invalidity and non-infringement opinions, - post grant review and other mechanisms for challenging issued patents before the US Patent and Trademark Office, -patent prosecution related considerations that arise in relation to participation in industry standards organizations, -patent prosecution related considerations that arise in the context of universities and technology licensing organizations, and -design patents. prereq: Master of Science Patent Law Students only.

LAW 5243. Patent Research and Writing. (2 cr. ; A-F only; Every Fall)
Patent lawyers and agents spend their entire professional careers communicating (with clients, patent examiners, judges, colleagues) no matter what their individual career paths may be. This course is about the process of research and communicating about patents. In other words, the goal of the course is to teach the building blocks of patent research and communication through

multiple practice exercises so the student may repeat the process independently after successful completion of this course. This course leverages free, patent office, and commercial research tools. Deliverables and works include: patent landscape search and report, patentability search and opinion, patent risk search and assessment, patent invalidity search and opinion. Recommended prereq: Patents (5224), Patent Prosecution Practice I (5231) or Patent Portfolio Management (5250)

LAW 5250. Patent Portfolio Management. (2 cr. ; A-F only; Every Fall)

Patent portfolio management is the art of aligning patent strategy with business objectives. In general, the successful portfolio manager must have the ability to transform complex patent information into actionable insights that provide decision-making value to a wide variety of stakeholders. This course introduces students to the various practices and skills that go into building, implementing, and managing a patent portfolio whether from the point of view of a small, innovative, start-up company or a Fortune 500 company in a highly competitive market space.

LAW 5290. Patent Law Capstone: Innovation. (3 cr. ; A-F only; Every Spring)

This capstone course introduces students to the principles of successful innovation and the integral role of patents in this process. This is a course in innovation. There are no right or wrong answers. Large companies with very smart people often launch products that fail. Venture capitalists seeking to invest in winners more-often-than-not end up investing in losers. Innovation is an art not a science. There is no "secret formula" that guarantees success. There are simply different tools, skills, methods of analysis and approaches that may or may not work better than others. We will explore the art of innovation and the integral role that patents play in turning an idea into an innovation. Goals: Students will learn how to research complex subject matter across the intersecting domains of business, finance, marketing, science, technology and intellectual property. Students will then develop the ability to present their findings in a clear and concise manner that is understandable to and can be acted upon by a cross-functional audience of high-level decision makers.

LAW 5601. International Business Transactions. (3 cr. ; Student Option; Periodic Fall & Spring)

International Business Transactions is a three-credit course whose main focus of discussion and study is the private law aspects pertaining to international business transactions, rather than issues of national and international trade regulation. Thus, the course is primarily concerned with private international business law. We examine three basic methods of doing business abroad, namely, the sales of goods (export transaction, licensing and franchising, and foreign direct investment. The course materials touch upon substantive law in areas as diverse as commercial transactions and the uniform commercial code, antitrust, intellectual property, conflict of laws, civil

procedure, contracts, bankruptcy, taxation, and international law. While knowledge or background in these areas is certainly helpful it is not necessary for success in the course and for dealing with the issues raised in the readings or in class.

LAW 5608. Trademarks. (3 cr. ; Student Option; Periodic Fall & Spring)

This course will consider how marketers secure and enforce trademark rights. Trademarks are the indicators that consumers rely upon to determine the origin of goods and services. The course will focus on U.S. federal trademark law, but will also look at state and international trademark law as well as related areas such as false advertising, publicity rights, and cybersquatting. This course will provide a solid foundation for students interested in practicing trademark law (application, enforcement, licensing, or litigation) or more general intellectual property law. It will also be useful to attorneys who do any work with trademark-dependent industries such as retail sales, advertising, or media and entertainment. Finally and more generally, trademark law offers excellent case studies of the interaction between law, culture, and technology, and of the evolution of traditional doctrine under pressure from rapid changes in surrounding circumstances.

LAW 5613. Copyright. (3 cr. ; Student Option; Periodic Fall & Spring)

Copyright subsists in original works of authorship, including literary works, music, and works of visual art. This course provides an overview of U.S. copyright law, including the requirements for copyright protection; authorship and ownership; copyright owner rights; exceptions to copyright liability, including the fair use doctrine; and duration and terminations of transfer.

LAW 5629. Patent Field Placement. (1-3 cr. ; S-N only; Every Fall, Spring & Summer)

This course provides an opportunity for students to work with and learn from lawyers and patent professionals in industry and law firms. The instructor and student will work together to find an appropriate placement that matches the student's interests and host's needs. Enrollment occurs through an application outside of the lottery process. If you are interested in participating, please contact the instructor by email as early as possible with a short explanation of: (1) why you are interested in pursuing a patent field placement; (2) the kind of work that interests you; and (3) whether you have an interest in and/or relationships with a specific potential host organization. Prereq or co-req one of the following: Law 5224 Patents, Law 5231 Patent Prosecution I, Law 5243 Patent Research & Writing, or Director of Patent Law Programs permission.

LAW 5707. Intellectual Property Transactions. (2 cr. ; A-F only; Every Spring)

Intellectual property rights have been described as a "sword and shield." Rights holders are thought to act offensively by suing or threatening to sue infringers and seeking money damages, irrespective of the holders'

marketing and product sales programs. Or they act defensively to protect their current or future market positions by having federal courts enjoin competitors. This course considers a third way: intellectual property rights are also valuable intangible assets that may be bought and sold. In this course, we will explore the principal theories and practices of intellectual property transactions. We will be considering closely the doctrines regulating the assigning and licensing of patent, copyright, trademark and other intellectual property rights, and we will be questioning critically whether these laws and practices encourage or inhibit commercial activity and innovation. While studying specific transactions in the course, we will be examining the practical uses of intellectual property law to meet commercial objectives.

LAW 5836. Trade Secret Law. (2 cr. ; Student Option; Every Spring)

This course is an exploration of perhaps the least studied of the legal regimes protecting commercially valuable information, trade secret law. Patents and copyrights receive considerably more attention, at least as studied disciplines. But the importance of trade secrets and laws protecting them are no less important, and increasingly businesses are recognizing this reality. The focus of this course will be the ways trade secrets come to exist, how they are used, and how they can be protected, and the enforcement mechanisms used to achieve that protection. We will explore the sources of state-based trade secret law, the common law and statutes, and seek an understanding of relevant federal law and the interplay of state and federal law. Because a true understanding of trade secrets only can be obtained by understanding their relation to and differences from inventions covered by patents, we also will make sure to contrast these regimes throughout the course.

LAW 5908. Independent Research and Writing. (1-2 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Students may earn 1 or 2 credits (and in exceptional circumstances, 3 credits) for researching and writing a note, article, memo, or other paper on a legal topic. At least 3,750 words are required for one credit, at least 7,500 for two credits, and at least 11,250 for three credits. To register, the student should confer with a supervising faculty member, draft a description of the proposed project, and complete the online Independent Research form. LAW 5908 is for students who are not enrolled in the Law School, as well as MSPL candidates. Other law school degree candidates should enroll in LAW 7606 or LAW 7608 instead of LAW 5908.

LAW 5909. Independent Field Placement. (1-3 cr. ; S-N only; Every Fall, Spring & Summer)

Students may earn up to three credits in a semester for work in a patent practice setting under the supervision of a qualified field supervisor and a faculty advisor. At least 50 hours of patent-related activities are required per credit. The student is responsible for

identifying a field placement setting and supervisor, finding a faculty advisor, and submitting the Independent Field Placement Enrollment Form for approval by the Associate Dean of Academic Affairs prior to enrollment.

Leadership Education (LEAD)

LEAD 1030. Connection, Identity, and Leadership. (; 1 cr. ; Student Option No Audit; Every Fall & Spring)

This course is intended to engage students in a concentrated study on identity, culture, and leadership through a digital lens. We will use reflective storytelling through our own personal experiences and the critical impact that connection has on shaping us as leaders.

LEAD 1961V. Personal Leadership in the University. (CIV,WI; 3 cr. ; A-F only; Every Fall & Spring)

Examine personal views of leadership, differences between personal/positional leadership, leadership ethics/values, personal leadership strengths/skills.

LEAD 1961W. Personal Leadership in the University. (CIV,WI; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Examine personal views of leadership, differences between personal/positional leadership, leadership ethics/values, personal leadership strengths/skills.

LEAD 3961. Leadership, You, and Your Community. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

How do effective leaders create positive systemic change within complex systems? What is community and how does it shape the work of leadership? Students examine leadership from a multi-dimensional and multicultural perspective and critically examine leadership theories in authentic, complex community settings.

LEAD 3971. Leadership Minor: Field Experience. (; 3 cr. ; A-F only; Every Fall & Spring)

Students apply and integrate leadership theory in a community experience, think critically about their positional leadership roles, extrapolate the experience to future leadership issues within their specific fields, and work through challenges of positional leadership.

LEAD 3972. Field Experience: Intercultural Internship. (; 3 cr. ; A-F only; Every Summer)

Internship-based course focused on leadership principles and intercultural values that impact the work environment. Possible internship locations include New York City, San Francisco, and Minneapolis. For students in the undergraduate Leadership Minor, this is the opportunity to apply what they have learned in a real-life setting. Prior to departure for the on-site internship in the city location, students spend a week in class at the University studying the theoretical frameworks that will provide the foundation for the 6-week internship, reflection process, and living experience. The composition of the class cohort will include international and domestic students, which provides the opportunity to

experience and reflect upon the internship and the designated city living experience through an intercultural lens. Upon completion of the internship, the class cohort will return to the University to complete a final week of class on campus.

LEAD 4481. Leadership and Social Change in Ireland. (GP; 3 cr. ; A-F only; Spring Even Year)

Learn how ordinary individuals and communities can inspire, mobilize, and engage with others to make a difference and to tackle what might appear to be an impossible public problem. The city of Belfast, Northern Ireland will provide a rich context for students to learn about the role that ordinary citizens, informal leaders, and public officials played in facilitating a reconciliation of a long-standing conflict (The Troubles), which still remains ever present. Despite public perception that Northern Ireland has moved forward from the Troubles, more walls have gone up since the peace agreement was signed, and there is still significant segregation between Protestants and Catholics. Learn how ordinary individuals and communities can inspire, mobilize, and engage with others to make a difference and to tackle what might appear to be an impossible public problem. The city of Belfast, Northern Ireland will provide a rich context for students to learn about the role that ordinary citizens, informal leaders, and public officials played in facilitating a reconciliation of a long-standing conflict (The Troubles), which still remains ever present. Despite public perception that Northern Ireland has moved forward from the Troubles, more walls have gone up since the peace agreement was signed, and there is still significant segregation between Protestants and Catholics. In addition to analyzing leadership and social change in the context of Ireland, students will simultaneously reflect on their own capacities for leadership and cultural competence, and the role that they might play in a social issue when they return to the US.

LEAD 4484. Cross-Cultural Leadership Bali. (3 cr. [max 9 cr.] ; A-F only; Every Summer)

This 4000-level study abroad course explores leadership development as related to global citizenship. It is designed for students who are interested in exploring topics and themes of leadership, globalization and happiness in a different cultural context. Specifically, this course will take students to Bali, Indonesia, and utilize the history, sites, people and agencies of Tabanan, Ubud, Sanur, and Denpasar, to explore and learn about those communities as well as how culture affects leadership and the social constructs of happiness. Students will use their knowledge of leadership?particularly the notions of community, intercultural leadership, and social constructs of happiness? to examine the current opportunities and challenges the Balinese face. Students will interact with local community leaders who are working to make change, as well as citizens in the community. In this course, students will: 1. Understand the ways in which different cultural norms and values can change the manner in which leadership skills and initiatives

are utilized to create change. 2. Explore the role that particular social, environmental, and spiritual belief systems can play in the practice of community leadership. 3. Gain knowledge about global issues in Bali and, more specifically, how different individuals can use their experiences, knowledge, and practice to make a difference. 4. Continue personal development growth through awareness of the history of Bali, as well as the cultural context of Tabanan, Ubud, Bedulu, and Denpasar, its people, and its surrounding areas. 5. Explore the intersections of culture and happiness in the Balinese context and contrast that with their own cultural understanding of happiness.

LEAD 4961W. Leadership for Global Citizenship. (GP,WI; 3 cr. ; A-F only; Every Fall, Spring & Summer)

In this final, writing intensive capstone course, students pull together the threads of leadership theory and practice worked with over the course of the Leadership Minor. In addition, students gain experience working with diverse leaders from around the world, mapping political contexts, and planning their own global leadership path within their specific field.

LEAD 4971. Directed Study, Leadership Minor. (1-4 cr. [max 12 cr.] ; A-F only; Every Fall, Spring & Summer)

Design/carry out study project under direction of leadership minor instructors/faculty. To apply, please create a contract here: <https://goo.gl/forms/K8s9ZhrY6Vp5oRGf2> Please note: The UMN's Credit policy can be found here: <https://policy.umn.edu/education/studentwork>. One credit represents, for the average University undergraduate student, three hours of academic work per week, averaged over the semester, in order to complete the work of the course to achieve an average grade. One credit equals 42 to 45 hours of work over the course of the semester (1 credit x 3 hours of work per week x 14 or 15 weeks in a semester equals 42 to 45 hours of academic work). Students should keep the above policy in mind while determining their project and the amount of credits for enrollment. The amount of enrolled credits also proportionally influences the amount of instructor contact hours/week.

LEAD 4972. Directed Research, Leadership Minor. (1-4 cr. [max 12 cr.] ; A-F only; Every Fall, Spring & Summer)

Students complete individually arranged research project with Leadership Minor instructor. Contact Leadership Minor office for registration requirements. *Please note - The University of Minnesota's Credit policy can be found here: <https://policy.umn.edu/education/studentwork>. One credit represents, for the average University undergraduate student, three hours of academic work per week, averaged over the semester, in order to complete the work of the course to achieve an average grade. One credit equals 42 to 45 hours of work over the course of the semester (1 credit x 3 hours of work per week x 14 or 15 weeks in a semester equals 42 to 45 hours of academic work). Students should keep the above policy in mind while determining

their project and the amount of credits for enrollment. The amount of enrolled credits also proportionally influences the amount of instructor contact hours/week. prereq: instr consent Contract URL: <https://goo.gl/forms/iw89wCSrPN30HbAz2>

Linguistics (LING)

LING 1701. Language and Society. (DSJ; 4 cr. ; Student Option; Every Fall & Spring) Role of language in human social interaction; linguistic indicators of social status and attitudes; language and sex roles; linguistic ecology; language planning for multilingual communities; implications for education and public policy.

LING 1705W. World Englishes: The Linguistics of English-based varieties around the globe. (GP,WI,SOCS; 4 cr. ; Student Option; Periodic Fall & Spring) In this course, we will explore the linguistic questions that arise concerning the many varieties of English that are spoken around the globe. Our overarching concern will be what we can learn about humans and the human mind by studying the variation found across English varieties. Our investigation will focus on three primary threads of linguistic research: methods of data collection and analysis, tools of formal grammatical analysis, and critical analysis of sociopolitical contexts of language use. By approaching the global landscape of Englishes and English-based creoles in this way, we will tackle a number of questions, including: Who is a native speaker? What is a standard? What value judgments do people ascribe to different varieties of English? What sorts of (linguistic and extra-linguistic) relationships exist between different varieties of English and their speakers? What role does English play in an increasingly globalized world? How has its role changed over time and from place to place? Through this course, students will gain an understanding of how English is situated in the global linguistic landscape, an ability to critically read linguistics articles and other media relating to language use, experience in analyzing linguistic data to understand patterns and variation, and an ability to communicate their findings and analyses effectively.

LING 1800. Topics in Linguistics. (; 1-4 cr. [max 20 cr.] ; Student Option; Periodic Fall & Spring) Topics vary. See Class Schedule.

LING 1913. Words at Work. (; 3 cr. ; A-F only; Every Fall) This course is a guided tour through the vocabulary of English, one of the largest and most varied in any of the world's languages. Among the questions it will address are: Why does English have so many (and so many different kinds of) words? Where did these words come from? Why do they mean what they mean? How are they put together? What do they tell us about history, social organization, culture and human psychology? One practical advantage of learning the answers to these and other questions is that it helps in vocabulary building and

in demystifying specialized and technical terminology. The course is also a portal into linguistics, the study of the nature of language.

LING 3001. Introduction to Linguistics. (SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer)

The ability to acquire and use language is a biological trait of the human species. This capacity for language manifests itself as thousands of particular languages spoken around the world in communities large and small. But what is language? What does it mean for a human to know? a particular language? How do children acquire this knowledge? How do we use language to communicate? These are some of the important questions addressed by the field of linguistics, the scientific study of the human capacity for language in its physiological, cognitive, historical, and social manifestations. This course introduces some of the essential findings of linguistics: first and foremost, that all varieties of all languages are intricately structured at multiple distinct but related levels. Second, that this intricate structure can be described in terms that are not only precise, but which apply to all human languages. We will work to replicate some of these findings by deploying simple analytical methods on data from a variety of languages. These methods allow us to answer questions about the different structural components of language: phonology (how do speech sounds pattern?), morphology (what are possible words and how are they built?), and syntax (what is the hierarchical structure underlying sequences of words?). In all instances these methods require that we pay attention to basic notions of semantics, from which more complex conceptions of meaning will emerge. Having characterized language as an intricately-structured system of knowledge, we will then possess the tools to ask a number of additional questions about language and cognition. How does such complex knowledge play into the actual task of sentence production or comprehension? What do we know about the neural implementation of this knowledge in human brains? How does child language acquisition proceed, and what makes it so much more robust than language acquisition later in life? Do animals have languages of their own? Can they learn human languages? Finally, we will turn our attention to variation in language patterns observed over the passage of time, across geographical space, and within social systems. How and why do languages change over historical time? What can we know about languages spoken before the invention of writing? What distinctions exist between languages spoken in different places, and how can we tell whether similarities are due to genealogical relationships? How do new languages emerge? How do languages disappear? How does language use vary between individuals from the same place or the same community? How do socioeconomic class, ethnicity, and gender relate to the linguistic behavior of individuals? How does language policy affect educational outcomes? What about social cohesion and conflict? Although we will find that most of these

questions lack definitive answers, we will develop an understanding of what it takes to ask them meaningfully and precisely. In particular, we will be able to eliminate false or misleading answers, especially when they fail to take into account the observable and describable properties of the human capacity for language.

LING 3001H. Honors: Introduction to Linguistics. (SOCS; 4 cr. ; A-F only; Every Spring)

Scientific study of human language. Methods, questions, findings, and perspectives of modern linguistics. Components of the language system (phonetics/phonology, syntax, semantics/pragmatics); language acquisition; language and social variables; language and cognition; language change; language processing; language and public policy. prereq: Honors student or instr consent

LING 3052V. Honors: Thesis. (WI; 3 cr. ; A-F only; Every Spring) Supervised research, writing, and revision for honors thesis begun in LING 3051H.

LING 3093. Directed Studies Honors Thesis. (; 3 cr. ; A-F only; Every Fall & Spring) Supervised planning and research for thesis under direction of Linguistics advisor. Students enrolling in this directed study/research course will complete the University's common Directed Study/Research contract with the faculty mentor/evaluator. The Faculty member will ensure academic standards are upheld, including: - the work proposed is at the appropriate level for the course, academic in nature, and the student will be involved intellectually in the project. - the project scope is reasonable for one semester and the number of credits specified (42 hours of work per credit) - the faculty mentor is qualified to serve in this role - assessment of student learning and grading criteria are clear and appropriate - the student will be working in a respectful, inclusive environment prereq: Linguistics honors candidate, instr consent.

LING 3101W. Languages of the World. (WI; 3 cr. ; Student Option; Every Fall) Survey of language families of the world. Classifying languages genetically/typologically. Historical relationships among languages. prereq: 3001 or 3001H or 5001 or instr consent

LING 3601. Historical Linguistics. (; 3 cr. ; Student Option; Every Spring) Historical change in phonology, syntax, semantics, and lexicon. Linguistic reconstruction. Genetic relationship among languages. prereq: 3001 or instr consent

LING 3900. Topics in Linguistics. (; 3 cr. [max 15 cr.] ; Student Option; Periodic Fall & Spring) Topics vary. See Class Schedule.

LING 4201. Syntax I. (; 3 cr. ; Student Option; Every Spring) How words are organized into phrases/sentences. Basic units of a sentence. How these units are structured. How languages may be the same, or different, in syntax. prereq: 3001 or 3001H or 5001 or instr consent

LING 4202. Syntax II. (; 3 cr. ; Student Option; Every Fall)

Syntactic theory. Principles and Parameters (P&P) approach to grammar. Focuses on Minimalist Program (MP). prereq: 4201 or 5201

LING 4302W. Phonology I. (WI; 3 cr. ; Student Option; Every Spring)

How sounds are organized/patterned in human languages. Foundation in phonological theory/problem-solving for advanced work in phonology and other fields in linguistics. Analyzing data, presenting written solutions. prereq: 3001 or 3001H or 5001 or instr consent

LING 4303. Phonology II. (; 3 cr. ; Student Option; Every Fall)

Continues work of LING 4302W with emphasis on critical reading of current phonological literature. Phonological phenomena in the context of new developments in the field. Optimality Theory and the phonology-morphology interface. prereq: Ling 4302W

LING 4901W. Capstone Seminar in Linguistics. (WI; 3 cr. ; S-N only; Every Fall & Spring)

Revision/expansion of a paper completed for a linguistics course. prereq: Ling major, [jr or sr]

LING 5001. Introduction to Linguistics. (4 cr. ; Student Option; Every Fall, Spring & Summer)

Scientific study of human language. Methods, questions, findings, and perspectives of modern linguistics. Components of the language system (phonetics/phonology, syntax, semantics/pragmatics); language acquisition; language and social variables; language and cognition; language change; language processing; language and public policy; language and cognition.

LING 5105. Field Methods in Linguistics I. (; 4 cr. ; Student Option; Every Fall)

Techniques for obtaining/analyzing linguistic data from unfamiliar languages through direct interaction with native speaker. prereq: [[4201 or 5201], [4302W or 5302]] or instr consent

LING 5106. Field Methods in Linguistics II. (4 cr. ; Student Option; Every Spring)

Techniques for obtaining/analyzing linguistic data from unfamiliar languages through direct interaction with a native speaker. prereq: [5105, grad major] or instr consent

LING 5201. Syntactic Theory I. (3 cr. ; Student Option; Every Fall)

Concepts/issues in current syntactic theory. prereq: Ling 5001 and graduate student or honors student, or instructor consent

LING 5202. Syntactic Theory II. (3 cr. ; Student Option; Every Spring)

Modern syntactic theory. Syntactic phenomena in various languages. Syntactic argumentation, development of constraints on grammar formalisms. prereq: 5201 or instructor consent. LING 5201 is directed towards honors students and graduate students.

LING 5205. Semantics. (; 3 cr. ; Student Option; Every Fall & Spring)

Analysis of sentence meaning. Semantic properties. Relations such as analyticity, entailment, quantification, and genericity.

Philosophical background, formal techniques of semantic analysis, how sentence meaning depends on word meaning, syntax, and context. The role of semantics in grammatical theory. prereq: [4201 or 5201] or instr consent

LING 5206. Linguistic Pragmatics. (; 3 cr. ; Student Option; Every Spring)

Analysis of linguistic phenomena in relation to beliefs and intentions of language users; speech act theory, conversational implicature, presupposition, information structure, relevance theory, discourse coherence. prereq: [4201 or 5201] or instr consent

LING 5207. Advanced Semantics. (3 cr. ; A-F only; Every Fall)

In this course, we will explore some semi-advanced to advanced topics in the field of natural language semantics. Broadly construed, natural language semanticists study how human beings process complexity in meaning in language, with the building blocks being how small units of meaning compose together to form larger and larger units, all of which are produced and understood in milliseconds. Building on the fundamental foundations of semantic theory learnt in Semantics, Advanced Semantics is geared towards providing expansive knowledge on several vital topics that current vibrant research in the field is concerned with. The array of topics include quantifier scope, definiteness and indefiniteness, plurals and mass/count nouns, attitude predicates and attitude ascription, event semantics, tense and aspect, modality and conditionals, questions, focus and alternative semantics, and imperatives. As we make our way through the critical last few decades of formal semantics through these vast and diverse topics, we will balance empirical coverage and formalism with development of intuition and methodology. Prerequisites: LING 5205 - Semantics I

LING 5302. Phonological Theory I. (3 cr. ; Student Option; Every Fall)

How sounds are organized/patterned in human languages. Phonological theory/problem-solving for advanced work in linguistics. Analyzing data. Presenting written solutions to problem sets. prereq: 5001 or honors student or instructor consent. LING 5302 is directed towards honors students and graduate students.

LING 5303. Phonological Theory II. (3 cr. ; Student Option; Every Spring)

Phonology of human languages. Reading papers in the literature. Doing research in phonology. prereq: 5302 or instr consent. LING 5303 is directed towards honors and graduate students.

LING 5461. Conversation Analysis. (; 3 cr. ; Student Option; Periodic Fall)

Discourse processes. Application of concepts through conversation analysis. prereq: 3001 or 3001H or 5001 or instr consent

LING 5462. Field Research in Spoken Language. (; 3 cr. ; Student Option; Periodic Spring)

Transcribing/analyzing talk and movement related to talk. Applying concepts to recorded

conversations. prereq: 3001 or 3001H or 5001 or instr consent

LING 5601. Historical Linguistics. (; 3 cr. ; Student Option; Every Spring)

Historical change in phonology, syntax, semantics, and lexicon. Linguistic reconstruction. Genetic relationship among languages. prereq: 3001 or 3011H or 5001

LING 5801. Introduction to Computational Linguistics. (; 3 cr. ; Student Option; Spring Odd Year)

Methods/issues in computer understanding of natural language. Programming languages, their linguistic applications. Lab projects. prereq: [4201 or 5201] or programming experience or instr consent

LING 5900. Topics in Linguistics. (; 3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring)

Topics vary. See Class Schedule.

LING 5993. Directed Study. (1-3 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer)

Directed study for Linguistics. Prereq instr consent, dept consent, college consent.

MN Studies in Intl Devel Prog (MSID)

MSID 4001. International Development: Critical Perspectives on Theory and Practice. (; 4 cr. ; Student Option; Every Fall & Spring)

Explore a wide variety of perspectives on international development, with the host country as a case study. This course begins with 20 hours of common discussion on international development. The remaining course is divided into sections, and you select from the following sections in order to prepare for your internship or research project: (see track descriptions in syllabus for more information).

MSID 4002. MSID Country Analysis. (; 4 cr. [max 8 cr.]; A-F only; Every Fall & Spring)

Study abroad course.

MSID 4003. Community Engagement in the Global South. (; 4 cr. ; Student Option; Every Fall & Spring)

An internship or research project with a host-country development agency or project provides an unparalleled opportunity to study community characteristics, development strategies and problems, organizational structure and culture, and cross-cultural communication issues. The length of the internship or research project is 6 weeks during the first semester. You typically spend approximately 25 to 30 hours each week at your internship or research site, although this may vary depending on the specific site and project. A list of sample past internships and research projects is available. Written assignments help link experiences to theories and issues raised in the classroom. A program faculty member or the on-site director visits you at least once at your internship or research site during the internship/research period. At

the end of each semester, you gather in the host city or a retreat site for a seminar, which helps integrate your experiences and newly acquired knowledge. 12 contact hours of this course are incorporated into the classroom phase and provide specific training on research methodology to prepare students for their research or internship project.

MSID 4004. Case Studies in International Development. (; 4 cr. [max 8 cr.] ; A-F only; Every Fall & Spring)
Study abroad course.

MSID 4005. Advanced International Development Internship. (; 4 cr. [max 8 cr.] ; Student Option; Every Fall & Spring)
Engage in an extended internship with a nongovernmental organization throughout spring semester in order to gain practical hands-on experience in a grassroots community setting.

MSID 4006. Applied Field Methods. (; 4 cr. [max 8 cr.] ; A-F only; Every Fall & Spring)
Study abroad course.

MSID 4007. MSID Directed Research. (; 4 cr. [max 8 cr.] ; A-F only; Every Fall & Spring)
Study abroad course.

MSID 5001. International Development: Critical Perspectives on Theory and Practice. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall & Spring)
Study abroad course.

MSID Program in Thailand (THAI)

THAI 1001. Beginning Thai I. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

THAI 1002. Beginning Thai II. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

THAI 3001. Intermediate Thai I. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

THAI 3002. Intermediate Thai II. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

THAI 4001. International Development: Human Rights & Marginalized Communities. (SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer)
This course will focus on human rights broadly defined, including social work as well as other efforts to educate and work with vulnerable populations. The course will look at the roles of local people, nonprofits, government agencies, and intergovernmental entities in determining how to best work with and serve vulnerable populations and how these different stakeholders collaborate while addressing complex, often sensitive situations. Course content will focus on citizenship and orphan/vulnerable children, as well as human trafficking, disabilities, migrant workers, and

LGBT issues in the Thai context, as well as minority issues, especially with the hill tribes of Northern Thailand. Students in this course will utilize the content learned in this collaborative classroom setting and apply it individually toward a specific internship placement or research topic during the second half of the semester. This course encourages students to think critically about development theories and practices. For the majority of examples and reading, the course will draw on case studies from Thailand and links to global development issues. We will explore ? development? as a contested value and process on multiple scales?local, national, and global. We will place special emphasis on the practice of development: What does it mean to actually ?do? development in a cross-cultural international setting? We will examine the roles of outsiders and facilitators and how local communities and organizations can be empowered through the development process.

THAI 4002. International Development: Entrepreneurship & Sustainable Food Systems. (SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer)
Food systems and sustainability are critical environmental and economic issues in understanding development. This course focuses on two connected issues: food production and agriculturally based entrepreneurship, including but not limited to coffee growing and production, sustainable and organic food production, and related topics. A key part of the course will be understanding the natural interconnectedness between the environment, where crops are cultivated, and the business of selling these crops on a local and/or international scale. The course will examine agricultural commodity production (coffee) from bean to cup, examining the growing, production, selling, and business of coffee as both a local production process, international commodity, and local consumption. We will further explore spaces for innovation in sustainable food production, in particular around community-supported sustainable and organic agriculture, and the role of small-scale production in ensuring the resilience and sustainability of the global food supply. This course encourages students to think critically about development theories and practices. A majority of examples and reading will be drawn on case studies from Thailand and their links to global development issues. ?Development? as a contested value and process will be explored in multiple scales? local, national, and global. Special emphasis will be on the practice of development: What does it mean to actually ?do? development in a cross-cultural international setting? We will examine the roles of outsiders and facilitators and how local communities and organizations can be empowered through the development process.

THAI 4003. International Development: OneHealth: Humans, Animals, & Environment. (SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer)
This course will focus on the concept of ?One Health??integrating the health sciences so

that health is understood as a broader concept rather than a narrow disciplinary focus. Issues related to this topic will include public health, community education about health, veterinary, and animal care issues and organizations (and how human and animal health are linked), clinics, local hospitals, and traditional medicine. Special emphasis will be placed on contemporary issues in Thailand, especially success with public health and family planning, as well as issues around HIV/AIDS education and prevention, zoonotic disease such as COVID-19, and related issues. Students in this course will utilize the content learned in this collaborative classroom setting and apply it individually toward a specific internship placement or research topic during that second half of the semester. This course encourages students to think critically about development theories and practices. A majority of examples and reading will be drawn on case studies from Thailand and their links to global development issues. ?Development? as a contested value and process will be explored in multiple scales? local, national, and global. Special emphasis will be on the practice of development: What does it mean to actually ?do? development in a cross-cultural international setting? We will examine the roles of outsiders and facilitators and how local communities and organizations can be empowered through the development process.

THAI 4004. International Development: Sustainable Architecture & Design. (SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer)
This course will examine sustainable design, including vernacular architecture, sustainable product design, urban planning, alternative (green) power (wind/solar/hydro), sustainable engineering, and sustainable and alternative architecture. It will focus on how design can be used in development to support sustainability, especially in the built and manufactured environment, drawing on culturally and ecologically appropriate design principles. This course encourages students to think critically about development theories and practices. A majority of examples and reading will be drawn on case studies from Thailand and their links to global development issues. ?Development? as a contested value and process will be explored in multiple scales?local, national, and global. Special emphasis will be on the practice of development: What does it mean to actually ?do? development in a cross-cultural international setting? We will examine the roles of outsiders and facilitators and how local communities and organizations can be empowered through the development process.

THAI 4101. Historical & Political Context of Thailand. (4 cr. ; Student Option; Every Fall, Spring & Summer)
This course explores the history of modernization, conditions of social transition, and current issues that characterize Thailand and influence relationships among various social groups. Students will enhance their understanding of the process of modernization and multi-level adjustment of Thai society in different historical contexts. Cultural diversity,

political transition, and economic development are integral in analyzing and understanding these topics. Thailand is unique in southeast Asia for its lack of colonization. It also has a long history of development in southeast Asia, serving as a regional hub for international development. This course will examine the development process in Thailand, its political and social history, and especially the current struggles of modernity and as an emerging economy in southeast Asia. While many of the basic issues of development have been successfully dealt with (literacy is high, clean water and basic needs are met, etc.), Thailand is now dealing with growing inequality, challenges of post-modernity, and increasing demand for popular participation in politics within a patron-client-based society.

THAI 4201. Research in Thailand. (4 cr. ; Student Option; Every Fall, Spring & Summer) In this course, the MSID student will learn about various research concepts and practices; make decisions involved in research, including selecting a topic and title for their study, developing statements of problems, and choosing ethical research questions and appropriate research design; learn about issues related to research ethics; and develop their skills in choosing data collection instruments and analysis of the data they collect for their research. The course does this by introducing various topics in the research cycle and providing a forum in which students can share with one another their research experience at each stage of the process. Through the course students will develop, defend, and challenge their own values and beliefs. Research projects in this course are ideally projects that fit with the development agency's goals and activities; therefore, the student's research interests must blend with what is realistically happening at the development agency. Students must have approved proposals before proceeding onto their research sites to allow them to collect necessary data and complete data analysis before heading back to Chiang Mai at the end of the six-week field period. It is likely that students will participate in field activities, meetings, and other forms of engagement that will be indirectly related to and could inform their research projects. This course also includes an optional 10 hours of Thai language instruction as needed.

THAI 4896. Internship in Thailand. (4 cr. ; Student Option; Every Fall, Spring & Summer) This course provides a cross-cultural experience of working on various development issues with a regional nonprofit organization. The course focuses on guiding students to understand their own identity as they integrate theory with reality by participating in local development sites. Students are prepared for entering into their community work through discussions on stakeholder and agency analysis, culture-specific gender and diversity context, ethics, and power and privilege. Through the course students will develop, defend, and challenge their own values and beliefs. The mentoring continues while students are at their internship placement

as they come in contact with social actors, community organizations, and local and national authorities in various regions of Chiang Mai province at the marginal urban and rural levels. The students are urged to play an active role in their internships by providing suggestions and solutions, discussing alternatives, and investigating all areas of their internship placement to garner a holistic view of the realities of development work. Through practical internship experiences as well as readings, discussions, and written assignments, students will deepen their understanding of the host-country cultural context and development work from an international perspective, as well as critically examine their own worldview. This course also includes an optional 10 hours of Thai language instruction as needed.

Madrid Learning Abroad Program (MADR)

MADR 1002. Beginning Spanish. (5 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

MADR 1003. Intermediate Spanish III. (5 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

MADR 1004. Intermediate Spanish IV. (5 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

MADR 1401. Carlos III University of Madrid Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern Abroad in Madrid study abroad program to represent a course taken at Carlos III University of Madrid. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MADR 1402. Carlos III University of Madrid Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern Abroad in Madrid study abroad program to represent a course taken at Carlos III University of Madrid. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MADR 1403. Carlos III University of Madrid Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern Abroad in Madrid study abroad program to represent a course taken at Carlos III University of Madrid. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MADR 1404. Carlos III University of Madrid Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern Abroad in Madrid study abroad program to represent a course taken at Carlos

III University of Madrid. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MADR 1405. Carlos III University of Madrid Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern Abroad in Madrid study abroad program to represent a course taken at Carlos III University of Madrid. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MADR 3001. Financial Management. (3 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

MADR 3002. Ecology of Spain. (3 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

MADR 3003. Philosophy of Religion. (3 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

MADR 3004. Management and Organizational Behavior. (3 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

MADR 3005. Management and Ethics in a Cross-Cultural Context. (3 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

MADR 3006. World Religions. (3 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

MADR 3007. Contemporary Moral Problems: Ethics. (3 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

MADR 3008. Fundamentals of Marketing. (3 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

MADR 3009. Political History of Contemporary Spain. (3 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

MADR 3011. International Media. (3 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

MADR 3012. Internships in Spain. (3-6 cr. ; Student Option; Every Fall, Spring & Summer) Study abroad course.

MADR 3013. Spanish Civilization. (3 cr. ; Student Option; Every Fall, Spring & Summer) This course aims to offer a general view of Spanish culture and society through readings, lectures, and cultural activities. This semester will focus on a few topics portraying the transformations experienced in the country during the last years: the political system, social and economic problems, multi-ethnic society, new role of women, new family models, and present image of Spain. We will combine lectures, PowerPoint presentations, videos, discussions of required readings, and group debates. Being in Spain gives you a

great opportunity to widen your approach to culture through language, and one of the aims of this class is to help you achieve this goal. All students are expected to come to all sessions prepared, with all indicated assignments completed beforehand.

MADR 3014. Corporate Social Responsibility. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

MADR 3015. Modern Masters: Goya, Picasso, Miro and Dali. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
study abroad course

MADR 3016. Topics in International Marketing. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

MADR 3017. Spanish Conversation. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

MADR 3018. Introduction to Biological Psychology. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

MADR 3019. Culture, Globalization & Media. (3 cr. ; Student Option; Every Fall, Spring & Summer)
The aim of this course is to introduce the notion of "culture" as the set of mental, socially mediated constructs employed by individuals and groups to interpret reality. From that basis, this course examines the set of conflicts currently underway both within Western societies?as seen, for instance, in the "Culture Wars" as well as in the latest US presidential election?as well as the tensions between the Western and non-Western cultures?such as those of India, China, and the Arab worlds?with an emphasis in the role played by the media and the cultural industries.

MADR 3021. Art at the Prado Museum. (AH; 3 cr. ; Student Option; Every Fall, Spring & Summer)
The aim of this course is to make students familiar with the most relevant and internationally outstanding Spanish and European artists within the Prado Museum Permanent Collections. The course will help students to fully understand and assimilate art history fundamental concepts and movements such as Renaissance, Baroque, and Neoclassicism, with a specific concentration on Spanish masters such as El Greco, Velázquez, and Goya. Simultaneously, it will help students confront Spain's and Europe most controversial history: from the dark Medieval Ages to the beginning of the 19th Century. Two observations will be fundamental to our investigations. The first is that art history involves the study not simply of formal concepts. A work of art has a physical presence that is offered by the artist but his/her ideas, convictions, and claims are shaped in large measure by specific social circumstances. The relevance of the latter are those that turn an artwork into a masterpiece.

Thus, techniques and styles of representation are just the beginning of art history research. The second observation has to do with the relationship between art and culture: Art does not simply (or passively) reflect a given culture, but rather actively participates in its formation and development. A work of art, then, is the deepest expression of a social, religious, political, as well as intellectual context. Thus, thorough the artworks' analysis, students will develop critical and intellectual thinking by the means of observation, research, and interpretation.

MADR 3022. Spanish Civilization - ENG. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This course aims to offer a general view of Spanish culture and society through readings, lectures and cultural activities. This semester we will focus on a few topics portraying the transformations experienced in the country during the last years: the political system, the social and economic problems, the multi-ethnic society, the new role of women, the new family models and the present image of Spain. We will combine lectures, power point presentations, videos, discussions of required readings, group debates. Being in Spain gives the student a great opportunity to widen his/her approach to culture through language and one of the aims of this class is to help them to achieve this goal. All students are expected to come to all sessions prepared for them. All indicated assignments are to be completed beforehand.

MADR 3023. Human Neuroanatomy. (GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course provides a broad introduction to the nervous system with an emphasis on the human nervous system. It will introduce the structure and function of neurons, the main anatomical units of the nervous system, and the main functional systems. We will approach functional systems through an understanding of the anatomical circuitry. We will study the fundamental concepts of neural communication early in the course and re-examine them later in the course relative to specific functional systems. Although the major focus will be the normal nervous system, we will introduce common diseases for each main topic. Students will gain an understanding of the nature of many common neurological diseases, which will provide further insight into how the normal nervous system functions. Through the assigned readings, lectures, and exercises, students are expected to gain an understanding of the neural circuitry and information processing responsible for the diverse range of human behaviors.

MADR 3024. Spanish for the Workplace. (GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course is designed and customized for students during their academic stay abroad in the city of Madrid. The course is specifically designed to improve students' oral and written business communication skills through language immersion and study of the local

cultural and work environment. In addition to academic study, the course will provide an overview of Spanish social culture as it applies to the professional workplace, focusing on specific fields of expertise that are of interest to the students.

MADR 3025. Modern Masters: Goya, Picasso, Dalí & Mir. (AH,GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

The aim of this course is to make students familiar with the most relevant and internationally outstanding Spanish Modern artists: Goya, Picasso, Dalí & Mir. With a specific concentration on these Spanish masters, the course will bring students to fully understand and assimilate such fundamental concepts and movements of art history as Impressionism, Cubism, Surrealism, Abstraction, and Minimalism. Simultaneously, it will explore one of the most controversial periods of Spanish and European history, from the 19th through the dawn of the 20th Century. Two observations will be fundamental to our investigations. The first is that art history involves the study of more than simply formal concepts. A work of art has a physical presence that is offered by the artist, but his/her ideas, convictions, and claims are shaped in large measure by specific social circumstances. The relevance of the latter are those that turn an artwork into a masterpiece. Thus, techniques and styles of representation are just the beginning of art history research. The second observation has to do with the relationship between art and culture. Art does not simply (or passively) reflect a given culture, but rather actively participates in its formation and development. A work of art, then, is the deepest expression of a social, religious, political, and intellectual context. Thus, through the analysis of works of art, students will develop critical and intellectual thinking by the means of observation, research, and interpretation.

MADR 3026. 100% Made in Spain: Design and Quality. (GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course focuses on the aesthetic and cultural changes in consumers and the ability of the Made in Spain managers to fine tune their marketing, communications, branding, and retailing efforts to an increasingly fast-paced environment. The course provides students with an extensive preparation on what are the most important asset of Made in Spain products: their ability to represent a paradigm shift. The course explores the evolutionary phenomena of the four F's (fashion and footwear, food and wines, furniture and building materials, and fabricated metal products and machinery) as well as design, renewable energy, railway construction, e-commerce, and other industrial sectors. The course will lead students to understand the evolutionary strategic Made in Spain management and philosophy. The Spain Brand has appreciably revalued in the last four years (Repsol, Telefónica, Acciona, Endesa), thanks above all to the presence of Spanish products throughout the world and in all areas of activity, of which we lead in at least

a dozen. The internationalization accomplished by Spanish companies has allowed them to have a leading position (among the first ten countries in the world) in the food industry, fashion, gastronomy, technology, research, renewable energy, railway construction, organ transplantation, and sports. From Antoni Gaudí to the Culdesac studio, including Oscar Tusquets and Nani Marquina, Spain has always been a benchmark for quality design with international projection. This course looks at Made in Spain from both an economic and business point of view and shows a brief tour of the world of national designers and some of its most emblematic pieces. The Spanish fashion industry plays a fundamental role in economic development, with around 19,500 companies that make a contribution to GDP of 2.8%, and in the context of a highly competitive globalized market. As a result, Spain achieves the fifth place in importance in Europe after Italy, Germany, the United Kingdom, and France, both in production volume and in employment. This is due in large part to the design of products with high added value, leather and footwear accessories, and the use of modern marketing and distribution techniques that have revolutionized the sector.

MADR 3027. Contemporary Spanish History through Film. (GP,HIS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Spanish cinema provides an excellent route for understanding social and political change throughout the 20th and 21st Centuries. As the most important artistic medium of modernity, cinema allows one to construct and deconstruct many myths and identities. This course will analyze the most relevant Spanish film productions primarily as socio-historical documents (content). Topics in Spain may include the Republic and Civil War (Fernán Gmez and Buñuel), the '60s comic criticism of dictatorship (García Berlanga), and censorship (Lazaga), the transition to democracy (García and Almodóvar), and the new '90s cinema (Amenábar, de la Iglesia, Medem, Coixet, and Bollaín).

MADR 3031. Introduction to Sensation and Perception. (3 cr. ; Student Option; Every Fall, Spring & Summer)

To develop an understanding of the psychological, biological, and physical bases of sensory experience in humans and animals. First we will consider the philosophical questions that humans have long posed about perception, and study the methods and techniques scientists use to try to answer them. We will study the sensory pathways, fundamental perceptual processing, and higher-level meaning-making, emphasizing the senses of vision and hearing. We will more briefly consider the orienting senses, skin senses, chemical senses (smell and taste), and the perception of time. Students must have successfully completed an introductory psychology course as a prerequisite.

MADR 3032. Learning and Behavior. (3 cr. ; Student Option; Every Fall, Spring & Summer) This course will cover methods and findings of research on learning and behavioral change.

Additionally, students will learn about twentieth-century theoretical perspectives, including contemporary models. There will be an emphasis on animal learning behavior and behavioral psychology.

MADR 3206. Health Psychology. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Recent advances in psychological, medical, and physiological research have led to a new way of thinking about health and illness and understanding that our health is not only the product of biological processes but also of psychological, behavioral and social processes. Health psychology is a relatively young field of study that examines the relationship between psychology and health. The course highlights differences between health psychology and the biomedical model and examines the kinds of questions asked by health psychologists like: How our personality may affect our health? What does stress do to our health? What psychological and social factors cause people to behave in unhealthy ways? What can psychologists do to help cure illness? Are there ethnic and gender variations in health? Does it matter how your doctor talks to you?

MADR 3301. Cross-Cultural Psychology. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This course's aim is to understand how cultural factors influence human behavior and development. Additionally, the course may discuss interaction between different cultures and how to solve the difficulties that may arise during the acculturation process. The course studies the vision and treatment of mental disorders in different cultures, especially the differences and similarities between Spanish and North American cultures. It will also analyze and compare mental health systems of both countries.

MADR 3401. Carlos III University of Madrid Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern Abroad in Madrid study abroad program to represent a course taken at Carlos III University of Madrid. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MADR 3402. Carlos III University of Madrid Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern Abroad in Madrid study abroad program to represent a course taken at Carlos III University of Madrid. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MADR 3403. Carlos III University of Madrid Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern Abroad in Madrid study abroad program to represent a course taken at Carlos III University of Madrid. The specific course title will appear for each student in the Notes

field directly underneath this course on their transcript.

MADR 3404. Carlos III University of Madrid Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern Abroad in Madrid study abroad program to represent a course taken at Carlos III University of Madrid. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MADR 3405. Carlos III University of Madrid Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern Abroad in Madrid study abroad program to represent a course taken at Carlos III University of Madrid. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MADR 3604. Introduction to Abnormal Psychology. (3 cr. ; Student Option; Every Fall, Spring & Summer)

The purpose of this course is to give the student an opportunity to explore current issues in understanding and treating abnormal behavior. The course will provide an initial overview of history, perspectives, assessment (DSM), diagnosis, and treatment, followed by an in-depth look at several disorders from a combined biological, developmental, and cultural approach. The focus will be to achieve an understanding of the various ways that human behavior can be compromised and the various factors that affect our ability to adapt.

MADR 3711. Psychology in the Workplace. (GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Application of psychological theory/research to recruitment, personnel selection, training/development, job design, work group design, work motivation, leadership, performance assessment, job satisfaction measurement Industrial / Organizational Psychology is the application of the scientific study of human behavior and thinking to work organizations. I/O Psychology is both an academic discipline and a professional discipline; thus, in this class we focus on both research and the application of research findings to practical problems in the workplace. I/O Psychologists are concerned with the recruitment, selection, training, motivation, and job performance of individual at work. They are also involved in issues such as teamwork, leadership, and job attitudes.

MADR 4901. Research Laboratory in Psychology. (3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer) Study abroad course

Management (MGMT)

MGMT 1001H. Honors: Contemporary Management. (3 cr. ; A-F only; Every Fall & Spring)

How/why organizations differ in their forms/purposes in relation to complex/changing

environments/technologies. Challenges related to international management and social responsibility. Models of effective leadership/teamwork. prereq: [Fr or soph] honors

MGMT 3001. Fundamentals of Management. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

This course is about the foundational principles of management, encompassing disciplinary and topical boundaries. We will look at these principles from the perspective of how they guide action, specifically: planning, organizing, leading and controlling. By the end of the course, students will know the basics of how to set up organizations to be effective and innovative, and not just efficient. During the course, you will engage with the material in the course and understand how management frameworks can be used to choose the right internal structures and processes that can best react to your particular industry context and general business environment.

MGMT 3004. Strategic Management. (; 3 cr. ; A-F only; Every Fall & Spring)

Business strategy. How business firms set and pursue their goals. Key categories of strategic issues and concepts/frameworks managers use to analyze and address those issues. Attention to specific firms and situations. prereq: CSOM, soph or jr

MGMT 3015. Introduction to Entrepreneurship. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

Fundamentals of entrepreneurship. Career paths, including new business start-ups, franchising, acquisitions (including family business succession), corporate venturing, and entre-preneurial services. Legal structures for new business formation. Aspects of business law/ethics.

MGMT 3039. Intercultural Business Communication. (GP; 3 cr. ; A-F only; Every Spring)

This course teaches students how to create culturally aware messages in business settings. Students will learn to recognize the cultural dimensions and communication patterns of various social identities that form at the intersection of nationality, religion, race, ethnicity, and gender. Through intercultural development assessments, case studies, simulations, business writing assignments, and discussions, students will: 1) reflect on their own cultural identities and worldview, 2) recognize how different cultural values can impact business success, and 3) engage in debates about the complex ethical, political, and social issues that arise from cross-cultural exchange.

MGMT 3045. Understanding the International Environment of Firms: International Business. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Theories, frameworks, tools, and facts for understanding the environment of firms in international competition. Main world-level economic flows (trade, investment, finance). How country-/industry-level economic, political, and sociocultural factors influence behavior/

functions of firms in international competition. prereq: MGMT 3001 or 3004

MGMT 3061. Leadership in Practice: Everyday Moments of Leadership. (2 cr. ; A-F only; Every Spring)

Every day, life gives us opportunities to practice leadership: experiencing group conflicts, recognizing the achievements of a classmate, overhearing an offensive joke, observing microaggressions, sharing innovative ideas with your team. In this course, you will learn how to investigate and respond to these moments of leadership using fundamental leadership science and frameworks based on leadership theory and empirical evidence. These moments provide an opportunity to become something, to do something different, usually through understanding complex issues, navigating change, empathy, and influencing others. The course will expose you to fundamental leadership science and frameworks backed by leadership theory and empirical evidence. You will focus on understanding personal leadership strengths and vulnerabilities through assessments, reflection, and feedback. To improve your leadership capabilities, you must know from what point you are starting. Throughout the class, there will be reflection exercises and assessments that will help you understand your values, default traits, and work styles as you navigate everyday moments of leadership. Leadership skills are best learned by integrating and applying evidence-based theoretical concepts to practical situations. These skills are difficult to meaningfully assess with exams and typical assignments. Thus, we will learn with practical exercises and the application of course materials to your life as a leader. The experiential learning of the class will allow you to navigate leadership moments and bring the course concepts to life. PREREQUISITE: Carlson School Centennial Scholar or by instructor approval

MGMT 3090. Topics in Leadership. (; 2-4 cr. ; Student Option; Periodic Fall & Spring) Topics Vary

MGMT 4001. Social Venturing in Action. (; 4 cr. ; A-F only; Every Spring)

Capstone course. Students choose projects with nonprofit organizations in local communities. Readings/discussions tie managerial theory to experiences. The focus of this course is on sectors of the economy that provide goods and services with motivation beyond generating profits for investors. The non-profit sector and impact-related for-profit organizations are a large, growing, and increasingly entrepreneurial part of our economy. Non-profit administration and social entrepreneurship require knowledge of subjects unique to this sector. This class will provide a basis of knowledge about these issues from the standpoint of practitioners and researchers. Because the landscape of the non-profit and impact-related for-profit world is broad, one seminar course cannot possibly cover all of the important and interesting issues in this field. In this course, we will focus our attention by exploring a number of issues that involve the

intersection of the for-profit and the not-for-profit economies. prereq: Senior standing

MGMT 4008. Entrepreneurial Management. (; 4 cr. ; A-F only; Every Fall & Spring)

Management of a new venture after founding. Internal/external challenges of managing a startup organization. Working with resource constraints and understanding how business models may change over time. prereq: MGMT 3015 or MGMT 3010 or IBUS 3010

MGMT 4031. Industry Analysis in a Global Context. (2 cr. [max 3 cr.] ; A-F only; Every Fall & Spring)

This course covers concepts and tools required to devise strategies that enable a global business to create superior value for customers and to capture a sufficient share of that value. It will offer perspectives on analyzing competitive situations and identifying and evaluating strategic options. In particular, it focuses on: - Applying fundamental concepts of strategic management--including strategy identification, the relationship of strategy and organization, industry analysis, competitor analysis, firm and industry evolution--coupled with economic theory and quantitative analysis to evaluate competitive strategies in a global context; - Developing an awareness of the impact of external environmental forces and of strategic actions by the firm and its rivals on business strategy. - Integrating knowledge gained in previous and concurrent core courses with a focus on understanding applying analytical concepts that are most useful to business analysts and managers. prereq: Mgmt 3004

MGMT 4032. Corporate Strategy. (2 cr. ; A-F only; Every Fall & Spring)

This course examines issues of corporate strategy, i.e., issues associated with creating and managing a firm that operates in multiple businesses. Some of the key questions we shall seek to address through this course are: ? What are the drivers of corporate scope? How should a firm choose the activities/businesses it participates in? ? What are the sources of value for a firm from being diversified across multiple businesses? ? What are the challenges associated with managing across multiple businesses and markets? ? How are these challenges best dealt with? What structures and processes enable successful corporate diversification over time? The learning objective of this course is to help you learn to identify and define successful corporate strategies and offer solutions for the common problems that diversified firms face. The course not only introduces you to core concepts around corporate strategy, but it also seeks to develop your ability to critically evaluate the strategies of multi-business firms, through the extensive use of case discussions. prereq: Mgmt 3004

MGMT 4033. Strategy Implementation. (2 cr. ; A-F only; Every Spring)

This course focuses on implementing and executing strategy at both the organizational and functional level. It will focus on the relationship between strategy formulation and execution, the systematic and structural problems with implementing strategy,

and various methods to minimize these problems. The course is designed both as a standalone topic and to deepen the student's understanding of the other strategic concepts covered in the strategy minor. prereq: Mgmt 3004 or 3001.

MGMT 4034. Technology Strategy. (2 cr. ; A-F only; Every Spring)

This course addresses challenges and opportunities in the strategic management of technology and innovation. The course will equip students with the conceptual frameworks, tools, and language for analyzing and managing businesses in environments of technological change. We will examine how new technologies transform industries and create new markets, strategies for addressing technological change, and approaches for managers to shape and/or respond to new technologies. Because innovating or responding to new technologies often involves strategic and organizational change, we will also discuss how organizations change in response to new technologies. We will use a combination of readings, lectures, case discussions, and simulations. The final team project provides an opportunity to explore in-depth the technology strategy and innovation challenges of a particular organization. The class is heavily discussion-based, which means that all students must read the material and be prepared to contribute to the learning process. prereq: Mgmt 3004 or 3001

MGMT 4035. Mergers & Acquisitions Strategy. (2 cr. ; A-F only; Every Spring)

This course focuses on the strategic use of mergers and acquisitions (M&A) as a means of new market entry and growth. It covers such questions as: when should one pursue an acquisition? What are the sources of value from an acquisition? What are the common challenges acquirers face? What should acquirers look for in a potential target? How should they integrate a target post-acquisition? It also considers the sell-side strategies for firms looking to exit businesses through divestiture. The learning objective of this course is to help you learn to identify and define successful mergers and acquisitions, and offer solutions for the common problems that firms face when undertaking acquisitions. The course not only introduces you to core concepts around M&A, it also seeks to develop your ability to critically evaluate firms' M&A choices, and to effectively communicate your assessment of these choices to a business audience. prereq: Mgmt 4032

MGMT 4044. Negotiation Strategies. (; 4 cr. ; A-F only; Every Fall)

This course is an introduction to the theory and practice of negotiation as the art and science of securing agreements between two or more interdependent parties seeking to maximize their own outcomes. The concepts you learn and the skills you develop in this class will apply to both your work and personal negotiations. At the heart of this class is the idea that the best way to learn to negotiate is by engaging in negotiation and then rigorously analyzing your experience. Therefore, this

course is designed to be a highly interactive learning experience. The role of the course instructor is to help you get the most out of this experience by selecting relevant and compelling exercises and readings, as well as by facilitating engaging and meaningful discussion of class negotiations, negotiation research and best practices.

MGMT 4055. Managing Innovation and Change In Action. (2 cr. ; A-F or Audit; Every Fall & Spring)

This course focuses on how business organizations innovate and change. The course covers foundational topics and combines both theoretical insights and practical knowledge based on cases and hands-on exercises. The class topics address the following questions: ? What are the sources, types and patterns of innovation? ? What are the characteristics of an organization's innovation ecosystem? ? How do organizations compete and collaborate in innovation ecosystems? ? What are some external forces shaping organizational innovations? ? How do organizations adapt to these external forces? By the end of this course, students will: Learn the key principles of success and failure of innovation and change in business organizations across different products, services and geographies. Apply course concepts to real organizational cases, diagnose problems and recommend solutions. Use clear written, verbal and online communication skills. Collaborate to create novel solutions to tasks and problems. Demonstrate the use of a wide range of qualitative and quantitative sources to support conclusions and recommendations. prereq: MGMT 3001 or MGMT 3004 or MGMT 3010 or MGMT 3015

MGMT 4080W. Applied Technology Entrepreneurship. (WI; 4 cr. ; Student Option; Every Spring)

Team projects based on commercializable technologies or innovations. Teams present their ideas to investors and industry professionals. Students are encouraged to submit their business plans to Minnesota Cup.

MGMT 4100. Topics in Management. (; 2-4 cr. [max 8 cr.] ; Student Option; Every Fall & Spring)

Topics vary for each offering.

MGMT 4101. Independent Study in Strategic Management and Organization. (; 1-4 cr. [max 8 cr.] ; Student Option; Periodic Fall & Spring)

Students contract with faculty on independent studies. prereq: instr consent or dept consent

MGMT 4171W. Entrepreneurship in Action I. (WI; 4 cr. ; A-F only; Every Fall)

Two-semester course. In fall, students identify a business opportunity, develop concept, determine resources required, and launch the business. In spring, students implement business plan, manage business, and determine exit strategy. prereq: 3010, [4008 or concurrent registration is required (or allowed) in 4008], completed coursework in business core, CSOM upper division, approved application

MGMT 4172. Entrepreneurship in Action II. (; 4 cr. ; A-F only; Every Spring)

Second of two-semester sequence. In fall, students identify business opportunity, develop concept, determine resources required, and launch business. In spring, students implement business plan, manage business, and determine exit strategy. prereq: 4171

MGMT 4173. New Venture Financing & Seed Stage Investing. (2-4 cr. ; Student Option No Audit; Every Fall & Spring)

This experiential course is offered to University undergraduate students interested in learning about new venture financing through the operation of an independent angel investment fund. It serves as an introduction to the subject matter, while providing a forum for the students to review investment opportunities, connect with members from the entrepreneurial and investor communities, and learn about startup fundraising through direct participation in the investment process. This course is being offered to complement a student-owned private venture capital fund in collaboration with individual accredited investors, which was initially formed in April of 2018. In addition to the ongoing management of the fund operations and reporting, the students will be responsible for ongoing capital raising. Final authority for all investment decisions rests with the students.

MGMT 4175W. New Business Feasibility and Planning. (WI; 4 cr. ; A-F only; Every Fall & Spring)

The purpose of this course is to provide students with the following insights into ? Techniques for developing and screening business ideas ? Criteria for properly assessing idea feasibility ? Equipping yourself with the necessary information and analysis to develop a useful business plan ? Preparing an effective business plan ? Effectively pitching the plan to stakeholders, primarily prospective investors The class makes use of lecture, videos, articles, cases, class exercises, assignments, and quizzes to help develop depth of understanding amongst students of the relevant subject matter of this course. prereq: MGMT 3010 or MGMT 3015 or IBUS 3010

MGMT 4505. Senior Seminar in International Business. (2 cr. ; A-F only; Every Fall & Spring)

Globalization and the technological developments of the digital age have created exciting new opportunities for managers who seek growth and profits by accessing resources and serving markets worldwide. At the same time, managing across cultures and nations in a world where foreign companies are not always viewed in a positive light, poses its own challenges. This course will address the global context and then focus on the strategic and cultural challenges involved in managing activities across borders, in an increasingly interconnected world. It will build on the concepts introduced in MGMT 3040, as well as the student's ?Study abroad? experience (if any, given recent travel restrictions). Our course is taking place in the midst of an unprecedented (peace-time) world-wide

threat. The pandemic has created a host of paradoxes. Countries have closed their borders and yet, have never depended so much on each other to deal with the common threat. We are acutely aware that one country's failure is every country's failure when one single item is on top of everyone's agenda. Even though these are challenging times for all of us, they also provide an extremely rich context within which we can discuss the topics on our syllabus. prereq: CSOM sr, completed semester abroad, IB major or minor

MGMT 5018. Philanthropy & Fundraising Strategy. (2 cr. ; A-F only; Every Spring)

This brief experiential course explores the evolving world of philanthropy and provides an opportunity to directly influence a real-life nonprofit's funding strategies. It shows students how, despite resource constraints, nonprofit organizations can effectively build meaningful engagement and financial support around society's most pressing needs. It provides an immersive experience supported by a professional ecosystem where students can learn, be inspired and leave this class more driven (and capable) to be a force for good. By the end of this course, students will have gained hands-on consulting experience in partnership with nonprofit organizational leaders, active consultants and major philanthropists. They will have devised and presented implementable strategies at the virtuous nexus between potential donors and their client's organizational needs - solutions which increase engagement and promote lasting symbiotic relationships between the private and nonprofit sectors. They will be well-positioned to make a significant positive impact throughout their careers in the Twin Cities and beyond.

MGMT 5102. StartUp: Customer Development and Testing. (2 cr. ; A-F only; Every Fall & Spring)

Provides a structured process with faculty and mentor oversight for students at any level and from any college at the University to learn the initial process of customer development by testing market acceptance of a specific new business concept. Students primarily take this course individually and must have an idea or technology that they are interested in pursuing. The goal of the course is to teach the process to quickly and efficiently test the value and market fit for a new concept.

Management of Technology (MOT)

MOT 4001. Leadership, Professionalism and Business Basics for Engineers. (; 2 cr. ; A-F only; Every Fall & Spring)

Elements of business, environment in which technology/business operate. Classes of 15 to 20 students.

MOT 4002. Technically Speaking Leadership Lecture Series. (1 cr. ; A-F only; Every Fall & Spring)

The course features a selection of highly accomplished industry speakers, including UMN alumni, who share their unique insights on industry developments, leadership, and

innovation accumulated through experience in their careers. The lecture series serves as a discovery course for topics at the intersection of technology innovation and entrepreneurship.

MOT 4002. Technically Speaking Leadership Lecture Series. (1 cr. ; A-F only; Every Fall & Spring)

The course features a selection of highly accomplished industry speakers, including UMN alumni, who share their unique insights on industry developments, leadership, and innovation accumulated through experience in their careers. The lecture series serves as a discovery course for topics at the intersection of technology innovation and entrepreneurship.

MOT 5001. Technological Business Fundamentals. (2 cr. ; A-F only; Every Fall)

Basics of operations, strategy, decision-making in technology-driven business. Market opportunity assessment, finance/financial decision-making, organizational roles. Work in teams to analyze aspects of business opportunity. prereq: Degree seeking or non-degree graduate students

MOT 5002. Creating Technological Innovation. (2 cr. ; A-F or Audit; Every Spring)

Course provides students with techniques to create new ideas, and lead an organization to bring them successfully to market. It will include examples of the dynamics of technological industries, and technology strategies. Topics include effective practices to generate ideas, processes to move them to market, and intellectual property. Students will work in teams to develop a strategy to commercialize a new technology. prereq: Degree seeking or non-degree graduate students.

MOT 5003. Technological Business Planning Workshop. (1 cr. [max 2 cr.] ; A-F only; Every Fall & Spring)

Applies lessons of 5001 or 5002 directly to technology of the student's choosing, possibly thesis topic. Aspects of strategic technology plan or business plan, culminating in presentation of plan. Must be taken in parallel with 5001 or 5002. prereq: Degree seeking or non-degree graduate students. Student must also enroll for MOT 5001 or MOT 5002.

MOT 5101. Introduction to Electrification. (3 cr. ; A-F or Audit; Every Fall)

Introduction to Electrification is the first in a series of electrification courses intended to prepare technologists, engineers, scientists, and technically minded managers for the migration to an electric future. It will cover electrification trends in the industry, the current state of the art, and a survey of core technologies and safety procedures key to the electrification process. There will be lecture and hands-on components.

MOT 5991. MOT Independent Study. (; 1-3 cr. [max 1 cr.] ; S-N or Audit; Periodic Fall)

Independent study in MOT-related topic. prereq: MOT grad student

Managerial Communications (MCOM)

MCOM 5400. Managerial Communications for the HR Professional. (; 2 cr. ; A-F only; Every Fall & Spring)

Memo writing, oral presentations, and team communication required of HR professional. Emphasizes hands-on, experiential learning, including videotaping. prereq: HRIR student

MCOM 5500. Enhancing Your Executive Image in Business Communications. (2 cr. [max 4 cr.] ; A-F only; Every Fall)

Techniques to project executive presence in all business communications. prereq: MBA student

MCOM 5515. Persuasive Writing in Business. (; 2 cr. ; A-F only; Periodic Fall)

Writing to motivate/affect change. Form/content. Techniques of persuasion. Producing polished text. Writing with power. prereq: MBA student

MCOM 5535. Strategies and Skills for Managerial Presentations. (; 2 cr. ; A-F only; Periodic Fall)

Delivering key messages with clarity/confidence, regardless of audience or setting. Maximizing impact as a speaker, seated/standing. Personal communication style and audience. Tailoring message. Handling questions/answers. Using audio/visual tools. Presenting as a team. prereq: MBA or Mgmt Science MBA student

Manufacturing Operations Mgmt (MM)

MM 3001W. Manufacturing in the Global Economy. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)

In this course, you'll find out just how innovative, strategic, and creative manufacturing is. The course is a great elective for students seeking a better understanding of the core sector in both U.S. and international economies. The overall objective of MM 3001W is to explore different facets of manufacturing in today's global economy, and the three dimensions of the high-performance manufacturing organization (HPMO) model-- leadership, product quality, and innovation--are paramount in that exploration. You'll take a look at past and current Minnesota manufacturing companies (3M and Red Wing Shoes, for example) that are surviving and thriving in today's economy, and also learn why some of those Minnesota companies have failed. As a writing intensive course, MM 3001W also prepares students to be successful writers, both in their coursework at the University of Minnesota and in their future careers, as special attention will be paid to real-world writing applications, skills, and processes. Prerequisites: None.

MM 3205. Engineering for Manufacturing Operations. (; 3 cr. ; A-F or Audit; Every Fall)

What makes a factory run? In this course, you'll learn all about those intricacies and gain the tools and skills required to create high-output systems that can reliably function day in, day out. You will do most of your learning through creative exercises. For example,

you'll take apart a flashlight to create the tools needed for manufacturing, and you'll validate a piece of equipment while toasting a loaf of bread. Your final project will be designing and manufacturing your own holiday card. Since the best learning happens when there's flexibility to fail, the instructor creates assignments that have a little ambiguity to them. (Students can even turn in homework twice to improve their grade, if needed.) By the end of this course, you'll have the confidence to work effectively across silos, and you'll have a wealth of career advice from an instructor with over 20 years' experience leading teams at Fortune 500 companies. Prerequisite: None

MM 3305. Advanced 3D Printing for Innovative Business Practices. (3 cr. ; A-F or Audit; Every Fall & Spring)

Revolutionize your world with speed and creativity. Three-D printing and additive manufacturing are changing how we work and how manufacturing itself happens. In this course, you'll hone the ability to innovate and to lead others in discovery. The first half of the semester is spent learning how to use additive technology and the second half how it can be applied to real-world industries. By the end of the course, you'll use computer-aided design and the U of M's 3D printing lab to build your own solution to a problem. Join this community of forward-thinking makers and tap some of the most high-tech resources at the U. Prerequisites: None

MM 4011. Virtual Reality and Simulation in Manufacturing. (3 cr. ; A-F or Audit; Every Spring)

Virtual reality meets manufacturing in this course for creative problem solvers. By mastering the use of simulation software (Simio), you'll be able to assess product flow along an assembly line and suggest sequences that dramatically improve efficiency, thereby cutting costs. The skill set students acquire in this course has opened innumerable doors for job seekers because visual representations provide hard evidence that certain models will be successful. Learn how to simulate many different processes at once and be introduced to augmented and virtual reality, new technologies that are being introduced to speed up the development of manufacturing lines. This course will enhance any career path that involves operations and efficiency. Prerequisite: None

MM 4012. Advanced Manufacturing: Applied Process and Technology. (3 cr. ; A-F or Audit; Every Spring)

Prepare to take a deep dive into the nitty-gritty as well as the art of manufacturing. You will study the myriad details that comprise the manufacturing process, tracing how raw materials are transformed into sophisticated devices in the most efficient ways. You will learn three important things that can be applied directly to any job: 1) how to deconstruct the value-added steps of a manufacturing assembly, 2) how to construct a process flow diagram, and 3) how to perform a process capability study. If you want to gain expertise in how factory work is planned, measured,

studied, improved, and optimized, then you've come to the right place. Beyond this, you will also walk away with an understanding that manufacturers are true artisans whose expertise shapes our world in countless ways. prereq: A course such as MM 3001W, or relevant manufacturing experience.

MM 4035. Global Supply Chain

Management. (3 cr. ; A-F or Audit; Every Fall)

A supply chain is the process that ensures that any particular thing gets made and distributed efficiently and with high quality. It comprises diverse suppliers, all of whom have a different role to play. You will learn about the complex ballet that ties these suppliers together into a larger system and schedule a supply chain. Through weekly online group work and real-life case study analysis, you will come to understand the value of interrelationships between product development, purchasing, manufacturing, customer service, and distribution. Your subject matter will be the real-world function of supply chains for familiar products, and by the end of the course, you will know how to think about effective supply chains. You'll also have opportunities to do a complete analysis of a real organization as well as interview a professional who works with supply chains on a daily basis. prereq: None.

MM 4039. The Science of Sourcing: Partnerships for Success. (3 cr. ; A-F or Audit; Every Spring)

Learn how to maneuver with ease inside the complex network of global manufacturing and outsourcing. The Science of Sourcing is all about setting up a sourcing strategy that hinges on two things: core competencies of your business and, of course, customer satisfaction. By the end of this course, you'll be able to do three things really well: 1) identify which products or processes should be outsourced, 2) perform estimates for cost and comparison of outsourcing options, and finally, 3) execute step-by-step outsourcing as you choose suppliers. You'll also be exposed to the art of managing an outsourced manufacturer relationship, which includes contracts and performance metrics. It's all about upholding quality and value. Prerequisite: A course such as MM 3001W, or relevant manufacturing experience.

MM 4045. The Product Life Cycle in a Regulated Industry. (3 cr. ; A-F or Audit; Every Spring)

There's much to learn when it comes to designing, developing, manufacturing, and selling something, but this course skillfully covers it all while teaching how to successfully commercialize a product. Students will delve into real-world analysis of product regulation of any kind—from a box of cereal to a medical device. After this course, you'll be able to a) improve efficiency in any part of a product's life cycle, b) develop soft skills needed to clearly communicate your ideas for improvement, and c) fully wrap your brain around human factors and customer requirements that must be considered before the product's development is complete. This material has

endless applications in the workplace. prereq: None.

MM 4102. Optimizing Operations

Management. (3 cr. ; A-F or Audit; Every Fall)

In this course, students learn how to put the pieces of the manufacturing puzzle together—they delve into the details of an organization's operations strategy and develop an understanding of how the system works, from product concept to finished reality. Emphasis is placed on learning valuable techniques for improving organizational performance, which include computer-enhanced problem solving and decision making. You will develop critical thinking skills that allow you to think holistically about how to create order out of chaos in an operations unit. Through weekly online group work assignments; opportunities to give dynamic multimedia group presentations; interviewing a real-world operations manager; and mastering the stages of forming, storming, norming, and performing, you will leave feeling prepared to take on whatever operations management challenges come your way. prerequisite: None.

MM 4193. Capstone Directed Study. (3 cr. ; A-F or Audit; Periodic Fall, Spring & Summer)

You've learned a lot so far in the Manufacturing Operations Management program. Now it's time to use all that hard-earned knowledge as you embark on your capstone project. A culminating experience using all the skills and concepts you're familiar with, the capstone is an opportunity for you to identify a specific problem, question, or course of study pertaining to manufacturing operations. This will be your primary focus over the length of the course. Working with your capstone adviser, you will develop a project requiring 135 hours or more of research and work. You will then generate data and use appropriate models to create comprehensive reports and solutions to the project you've chosen, and you will present your findings at the end of the semester. The capstone course is a great option for students who are already employed full-time and wish to select a project that's somehow connected to their employment. prereq: MM major or minor or certificate, departmental approval

MM 4201. Quality Engineering and Management. (3 cr. ; A-F or Audit; Every Fall)

Quality makes or breaks an organization. Without continuous quality improvement, performance fails, sales drop, and organizations die. This course delves into three essential truths: 1) the customer is the ultimate judge of quality; 2) every process has variation, which must be fully understood before it can be improved; and 3) a lean, mean, structured plan will make problem solving a cinch when it comes to process improvement. Students will learn more than just the technical aspects of quality management; they will also learn the history and modern application of quality, quality management tool interfaces, and what it takes to be a leader in quality as a profession. prereq: none, but knowledge of statistics will be very helpful.

MM 4311. Sustainable Lean Manufacturing: Eliminating the Waste. (3 cr. ; A-F or Audit; Every Spring)

One of the most important skills you can cultivate in manufacturing (or really any line of work) is the ability to clear away the clutter and streamline the process. Sustainable Lean Manufacturing teaches students three things: 1) wasted time, effort, and money exist in every process involving a product or service; 2) it's possible to clearly see and identify where waste occurs; and 3) there's a surefire set of tools and techniques to make a process less wasteful and more efficient. Bottom line: students leave this course viewing everyday life with a different perspective, knowing there's always room for improvement in workflow. prereq: None

MM 4596. Internship. (1 cr. [max 3 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

An MM internship provides students with the opportunity to gain hands-on experience working with professionals in a manufacturing setting and get an insider's view of manufacturing operations management in the workplace. In consultation with a faculty adviser, students apply classroom learning and prepare for the transition from school to full-time MM employment. Students seeking credit for the internship are expected to find employment that primarily draws upon the intern's academic knowledge in management level tasks and allows for new learning in these areas. prereq: [MM major or minor or certificate or instr consent], dept consent

Marketing (MKTG)

MKTG 3001. Principles of Marketing. (3 cr. ; A-F or Audit; Every Fall, Spring & Summer) Introduction to terms, concepts, and skills for analyzing marketing problems. Factors outside the organization affecting its product, pricing, promotion, and distribution decisions. Cases from actual organizations. prereq: ECON 1101 or ECON 1165

MKTG 3001H. Honors:Principles of Marketing. (3 cr. ; A-F only; Every Fall) Honors: Introduction to terms, concepts, and skills for analyzing marketing problems. Factors outside the organization affecting its product, pricing, promotion, and distribution decisions. Cases from actual organizations. prereq: ECON 1101 or ECON 1165, Honors Student

MKTG 3005. Introduction to Applying Analytical Tools for Solving Business Problems. (2 cr. ; A-F only; Every Fall) The ability to make intelligent business decisions based on large data and information is becoming increasingly important for businesses and managers. This course provides a practitioner-oriented introduction of applying analytical tools in business setting. This class entails hands-on computer exercises on real data sets to apply various analytical techniques in common business applications. This course assumes that students have knowledge of fundamental analytical tools and statistical methods. The class emphasizes understanding model assumptions to help

students with appropriate model selection; interpreting results in order to make optimal business decisions; designing experiments in a business setting and analyzing the experimental data to advance business objectives. prereq: SCO 2550 or equivalent statistics course

MKTG 3011. Marketing Research. (4 cr. ; A-F or Audit; Every Fall & Spring)

This course focuses on managing the entire marketing research process, which involves collecting and analyzing relevant, timely, and accurate information to gain customer insights and drive effective marketing decision making. Students learn fundamental techniques of data collection and analysis to solve specific marketing problems. The class offers hands-on learning-by-doing opportunities through group projects for students to practice every stage of marketing research. prereqs: 3001 and BA 2551 or SCO 2550 or equivalent statistics course

MKTG 3041. Buyer Behavior. (4 cr. ; A-F or Audit; Every Fall & Spring)

Application of behavioral sciences to buyer behavior. Perception, attitudes, learning, persuasion, motivation, decision-making, social/cultural influences, managerial implications. prereq: 3001

MKTG 4031. Sales Management. (4 cr. ; A-F or Audit; Every Fall & Spring)

Hiring, motivating, performance enhancement. Customer relationship management, data analysis, quantitative methods. Developing metrics to evaluate individual/group performance in attaining an organization's strategic goals. prereq: MKTG 3040 or 3041

MKTG 4051. Advertising and Promotion. (4 cr. ; A-F or Audit; Every Fall & Spring)

Managing/integrating communication aspects of marketing. Advertising, sales promotion, public relations. Setting objectives, selecting media. Measuring effectiveness. Sales promotion techniques. Issues in global IMC. prereq: MKTG 3011 and MKTG 3041 (or 3010 & 3040) or instructor approval

MKTG 4061. Marketing Channels. (4 cr. ; A-F or Audit; Every Fall & Spring)

Today, a brand's marketing channel strategy directly impacts its brand value. And if designed properly, a channel strategy acts as a key differentiator for any organization. In this class, we will study how to select the right channel partners, and properly motivate their actions. We will also explore the connections between marketing channels and supply chains. By the end of the course you will see how organizations create significant brand value via their marketing channels. prereq: MKTG 3011 and MKTG 3041 (or 3010 & 3040) or instructor approval

MKTG 4072. Marketing-in-Action: Marketing Practicum. (4 cr. ; A-F or Audit; Every Fall)

This course focuses on what marketers do in real-life. Each week begins with guidance on approaching a typical task, then developing recommendations by working in groups during class with ongoing feedback from the instructor, and concluding with a short

presentation. Weekly topics may include identifying marketing challenges (ala Shark Tank), segmenting customers, pricing a product, and developing an advertising plan. The course concludes with a multi-week, interactive simulation in which students compete in groups as they manage a product. prereq: MKTG 3001 and BA 2551 or SCO 2550 or equivalent statistics course

MKTG 4074. Data-Driven Marketing. (4 cr. ; A-F only; Every Spring)

This course emphasizes various analytical techniques and statistical models with hands-on applications of marketing data and software tool kits. The course will cover classic marketing topics such as segmentation, positioning, new product development, advertising, and pricing. It will focus on how to choose and apply the most effective statistical tool to analyze questions on marketing topics and then translate the information from analysis into data-driven decisions. The goal is to increase students' comfort level of analyzing large marketing databases and help understand how a scientific approach can enhance marketing decision making by converting data into insights. prereq: Mktg 3011 (or 3010)

MKTG 4076. Digital Marketing. (2 cr. [max 4 cr.] ; A-F only; Every Spring)

The Internet and digital technologies have continued to alter the way consumers search information, make transactions, and share experiences, as well as the way firms market towards and engage with consumers. In today's digital era, it is imperative for marketers to understand how to gain a competitive edge by leveraging digital media to set targeting strategies and implement the marketing mix. This course will provide a structured framework to introduce students to the most up-to-date tactics, applications, and trends in digital marketing. The course is organized around three main sections developed by the instructor: - Internet marketing, which explores the impact of Internet on (1) consumer behaviors and (2) advertising strategies. - Social marketing, which focuses on (1) the formation of online social networks and (2) social media analytics. - Mobile marketing, which examines (1) location-based targeting and (2) the management of omni-channel marketing. prereq: Mktg 3011 (or 3010)

MKTG 4081W. Marketing Strategy. (WI; 4 cr. ; A-F or Audit; Every Fall & Spring)

Determining product markets where organizations should compete based on ability to create/maintain competitive advantage. External environment of business. Constructing/evaluating global marketing strategies. Largely case-based. This is the capstone course in the Marketing major. prereq: Mktg 3011, Mktg 3041, (or Mktg 3010 & Mktg 3040) and 8 Mktg elective credits

MKTG 4082W. Brand Management. (WI; 4 cr. ; A-F only; Every Fall & Spring)

How do firms build great brands, such as Apple and Nike? How do firms leverage their popular brands to expand into new markets, new products, and new countries? This

course focuses on questions like these to help students understand how to use brand strategies to successfully build, measure, and manage brands. Students participate in a course-long project to research and evaluate brand strategies used by a brand of their choosing. The course includes lectures, cases, and project check-ins between group members and their instructor. prereq: Mktg 3010/3011 and Mktg 3040/3041

MKTG 4085. Nudge: Improving Decisions about Health, Wealth, and Happiness. (2 cr. ; A-F only; Every Spring)

People do surprising and funny things. Business leaders, policy makers, and scientists long have been interested in why people do what they do, and for a long time that interest has fallen under the rubric of a "rational man" model. It is now clear that the rational model is imperfect, at best. This course takes a look at the less rational side of life, studying the shortcuts, the low road, and the error-prone processes that enable people to feel, decide, and act efficiently--despite costs to rationality. For most of the past 200 years, most of what organizations, politicians, and well-meaning people did in order to make consumers change their behavior consisted of what might be called "shoves"--heavy-handed, choice-restricting, highly-incentivized, information-dense treatments that basically told consumers what to do (or else!). Those, by and large, do not work. Not only do they not work, but they are also costly and can even make the unwanted behavior emerge even more than before the shove by creating boomerang or counterproductive effects. prereq: MKTG 3001

MKTG 4090. Marketing Topics. (; 2-4 cr. [max 8 cr.] ; A-F or Audit; Periodic Fall & Spring)

Selected topics and problems of current interest considered in depth. Class discussion and course projects.

Martin Luther King, Jr Program (MLK)

MLK 1001. CLA First-Year Experience I. (1 cr. ; S-N only; Every Fall)

This course is designed to help MLK students transition into the University of Minnesota and the College of Liberal Arts. The course will include various opportunities to engage, create, and reflect on your own unique experiences and identify effective strategies, skills, and tools to be successful in your first year and beyond.

MLK 1002. CLA First-Year Experience II. (1 cr. ; S-N only; Every Spring)

This course is designed to help MLK students achieve their individual goals by promoting proactive educational and career planning, introducing CLA's Core Career Competencies, and encouraging students to reflect on how they are developing them in their first year.

Master of Business Admin (MBA)

MBA 5200. Directed Studies for Curricular Practical Training. (; 1-3 cr. ; S-N only; Every Fall & Spring)

CPT is work authorization which allows a student to work in a job directly related to the student's major area of study before degree completion. prereq: International student with approval from the Program Office

Master of Business Taxation (MBT)

MBT 5223. Tax-exempt Organizations. (2 cr. ; A-F or Audit; Spring Odd Year)

Tax law/issues concerning Section 501(c)(3) and other tax-exempt organizations. Qualification, procedures. Unrelated business income, private foundations (including intermediate sanctions), joint ventures. prereq: ACCT 5135

Master of Development Practice (MDP)

MDP 5001. Ways of Knowing for Sustainable Development. (; 2 cr. ; A-F or Audit; Every Fall)

Complexities of interdisciplinary study of development and a range of ways of knowing the field of development studies and sustainability. Approaches practiced by physical, biological, social science, and humanities scholars. "Ways of knowing" in different cultures/groups and from a variety of situated perspectives. Key issues and concepts and key methodological challenges facing us as we engage in interdisciplinary and international development study and practice. Sustainable livelihoods. Team taught when possible by faculty from biological, social sciences, and humanities, or at minimum will include guest lecturers who can offer a range of disciplinary perspectives on questions of development. prereq: Grad MDP major or instr consent

MDP 5002. Program Development Workshop. (3 cr. [max 4 cr.] ; A-F only; Every Spring)

Research/writing skills to support work in international development. Discussion of basic qualitative research methods/data analysis. Qualitative/quantitative data, collaborative research/analysis. Relationship between research/policy. prereq: MDP grad student or instr consent

MDP 5004. International Field Experience. (; 3 cr. ; S-N or Audit; Every Summer)

International field experience. prereq: MDP grad student or instr consent

MDP 5005. Qualitative Methods for Development Practice. (3 cr. ; A-F only; Every Spring)

Course introduces students to qualitative inquiry and analysis in the field of international and/or sustainable development practice. It provides students with first hand experience in research design for development practice applications, including data collection and analysis. The course includes lectures, discussions, presentations, and project based learning. It is considered introductory as a single semester is insufficient to introduce, design, and conduct a comprehensive qualitative inquiry and analysis.

MDP 5100. Post-Field / Pre-Capstone Seminar. (; 1 cr. ; A-F only; Every Fall)

This project-focused seminar meets once at the beginning of the fall semester to collect observations, reflections and insights from the summer field placements. Then, throughout the fall semester, the seminar will meet periodically to stage the spring capstone course. Staging includes a capstone overview session, presentation of projects, team selection process and initial client engagements, the latter being particularly important for teams aspiring to travel during the winter or spring breaks.

MDP 5200. Capstone Workshop in Development Practice. (3 cr. [max 6 cr.] ; A-F or Audit; Every Fall & Spring)

Learning from field experiences. Analytical/practical skills developed in academic training. Apply skill/experiences to "real world" problem provided by local or international development-focused organization. Reflective practice. prereq: MDP grad student or instr consent

Materials Science (MATS)

MATS 1001. Advances in Chemical Engineering and Materials Science. (; 1 cr. ; S-N or Audit; Every Fall)

Introduction to chemical engineering, materials science/engineering. Practical examples of important advances in both fields. Design problems, career opportunities. Lectures, demonstrations, interactive exercises. prereq: Credit will not be granted if credit has been received for: : ChEn 1001; Recommended for [chemical engineering, materials science/engineering] majors

MATS 2001. Introduction to the Science of Engineering Materials. (3 cr. ; A-F only; Every Fall, Spring & Summer)

Structure-property relationships of engineering materials. Atomic structure and bonding. Crystal structures. Imperfections in solids. Strength of materials, strengthening mechanisms. Phase transformations. Heat treatment/control of micro-structures. Materials selection/design. Integrating properties of metals, ceramics, polymers, and composites. prereq: CHEM 1061, CHEM 1065, [MATH 1272 or MATH 1372], PHYS 1301W, CSE student

MATS 2002. Introduction to the Science of Engineering Materials Laboratory. (; 1 cr. ; A-F only; Every Fall, Spring & Summer)

Lab experiments dealing with mechanical properties of engineering materials. Elastic modulus, tensile strength, creep, impact strength, fracture. prereq: [2001 or concurrent registration is required (or allowed) in 2001], IT student

MATS 3001. Thermodynamics of Materials. (; 3 cr. ; A-F or Audit; Every Fall)

Fundamental thermodynamic concepts, 1st, 2nd, 3rd Laws. Behavior of gases, liquids, solids. Phase diagrams. Reaction equilibria involving gases, condensed phases. Use of computer-based thermodynamic program(s). Electrochemistry. prereq: MatS upper div

MATS 3002. Mass Transport and Kinetics. (; 3 cr. ; A-F or Audit; Every Spring)

Mass transport in solids: solid state diffusion, Fick's laws, defects/diffusion mechanisms. Mass transport in fluids: fluid flow, diffusion with convection, mass transfer. Kinetics of chemical reactions and phase transformations. Computer-based problems illustrating applications. prereq: 3001, 3141, [MATH 2373 or equiv], upper div Mat

MATS 3011. Introduction to Materials Science and Engineering. (3 cr. ; Student Option; Every Fall & Spring)

Builds progressively from electrons to atoms to bonding to crystal structures. Defects, X-ray diffraction, phase diagrams. Microstructure as basis for understanding mechanical/electrical properties. Metals, polymers, ceramics, semiconductors, composites. prereq: CHEM 1061, CHEM 1065, [MATH 1272 or MATH 1372], PHYS 1302, CSE student

MATS 3012. Metals and Alloys. (3 cr. ; A-F or Audit; Every Fall)

Structure of metals/alloys. Crystal structure/defects (point defects, dislocations, grain boundaries). Microstructure. Properties of metals, especially mechanical properties. prereq: [3011, [MatS or ChEn upper div]] or instr consent

MATS 3013. Electrical and Magnetic Properties of Materials. (; 3 cr. ; A-F or Audit; Every Fall)

Electronic/magnetic properties of solids. Simple band theory of solids. Free electron theory of conductivity/transport. Optical/dielectric response functions. Elementary theory of magnetism. Electronic devices. Superconductivity. Computer-based problems to illustrate applications. prereq: 3011, [CHEM 4502 or PHYS 2303], [upper div MatS or ChEn] or instr consent

MATS 3041. Industrial Assignment I. (2 cr. ; A-F only; Every Fall, Spring & Summer)

Industrial work assignment in engineering co-op program. Formal report on technical project related to industrial work. prereq: MatS upper div, completion of required courses in MatS program through fall sem of 3rd yr, GPA of at least 2.80, regis in co-op program

MATS 3045. Materials Science and Engineering Industrial Internship. (1 cr. [max 2 cr.] ; Student Option No Audit; Every Fall, Spring & Summer)

Industrial internship, three to eight months. Formal report on technical project related to industrial work. prereq: MatS Upper Division. GPA of at least 2.8.

MATS 3141. Numerical Methods for Materials Science. (3 cr. ; A-F only; Every Spring)

Mathematics and numerical/computation methods for Materials Science. Example problems include: diffusion problems; coupled diffusion/kinetics problems; nucleation, growth and crystallization; quantum mechanics/electrostatic problems relevant to electronic/magnetic/optical devices. The use of MatLab will be emphasized. prereq: Math 2374 or equivalent, MatS 3011 (or &) Coreqs: Math 2373 or equivalent, Chem 4502/Phys 2303

MATS 3801. Structural Characterization Lab. (; 4 cr. ; A-F only; Every Fall)

Characterization of structure of engineering materials by optical/electron microscopy, atomic force microscopy, x-ray diffraction, spectroscopic method, related methods. Crystallography, defects, microstructure, macromolecular structure. Specimen preparation, data collection/analysis, maintaining laboratory notebook. prereq: [3011, MatS upper div] or dept consent

MATS 3851W. Materials Properties Lab.

(WI; 4 cr. ; A-F or Audit; Every Spring) Characterization of properties of engineering materials. Mechanical, electrical, optical, magnetic, and thermal properties. Relationship between properties and materials structure. Specimen preparation. Data collection and analysis, including statistical analysis. Laboratory notebook and report writing. prereq: [3801, 3013, MatS upper div] or dept consent

MATS 4041. Industrial Assignment II. (2 cr. ; A-F only; Every Fall, Spring & Summer)

Industrial assignment in engineering co-op program. Application of materials science principles to engineering design problems in an industrial work environment. Formal written report and presentation. prereq: 3041, GPA of at least 2.80, registration in co-op program

MATS 4212. Ceramics. (3 cr. ; A-F or Audit; Every Fall)

Crystal structures, non-crystalline (glass) structures, microstructure. Ceramic phase relationships: binary/ternary diagrams. Ceramic properties: thermal, mechanical, electrical, magnetic, optical. Computer applications. prereq: [3011, [3001 or CHEN 3101], [MatS or ChEn upper div]] or instr consent

MATS 4214. Polymers. (; 3 cr. ; A-F or Audit; Every Spring)

Polymer structure-property relations: structure/morphology of crystalline/amorphous state. Crystallization kinetics. Vitrification and glass transition. Mechanical properties, failure, permeability, optical/electrical properties, polymer composites, effect of processing on properties. prereq: [3011, [3001 or CHEN 3101], [upper div MatS or ChEn]] or instr consent

MATS 4221. Materials Performance. (4 cr. ; A-F only; Every Fall)

Thermal/mechanical processing to control properties/other applications. Analysis of costs/performance, failure in metallurgical structures by use of fracture mechanics methodology. prereq: 3012, AEM 2031, Upper div MatS

MATS 4223W. Polymer Laboratory. (WI; 2 cr. ; Student Option; Every Spring)

Synthesis, characterization, and physical properties of polymers. Free radical, condensation, emulsion, anionic polymerization. Infrared spectroscopy/gel permeation chromatography. Viscoelasticity, rubber elasticity, crystallization.

MATS 4301W. Materials Processing. (WI; 4 cr. ; A-F only; Every Spring)

Casting, solidification and plastic forming of metals. Powder processing, forming

operations, sintering of ceramics. Processing of thermoplastic/thermoset polymers. Computer applications of data collection/reduction. prereq: 4212, [4214 or concurrent registration is required (or allowed) in 4214] Upper Div MatS

MATS 4312. Principles and Applications of Solar Cells. (3 cr. ; A-F only; Every Fall)

This course begins with a discussion of current energy conversion and consumption before focusing on the working principles and applications of solar cells. Students will understand the operation of solar cells based on optical absorption, carrier generation and recombination, and charge separation in semiconductors. Several different materials platforms for solar cells are discussed including monocrystalline, thin film (inorganic, organic, and hybrid semiconductors), and tandem devices. Students will also develop an understanding of associated cost and economic considerations.

MATS 4400. Senior Design Project. (; 3 cr. ; A-F only; Every Spring)

Work in teams to apply expertise in materials science/engineering toward a specific project. With mentor from industry or faculty member guidance, each team defines a problem/follows design steps that culminate in a product design. prereq: Sr MatS major

MATS 4591. Independent Study in Materials Science. (; 1-3 cr. [max 6 cr.] ; Student Option No Audit; Every Fall, Spring & Summer)

Library, theoretical, laboratory or design studies of scientific or engineering topics in materials science for an individual student. Course content and credits by arrangement with professor. Design credits available if arranged with professor. May be used for upper division Honors Program experience if arranged with professor. prereq: Upper div mat sci

MATS 4593. Directed Study in Materials Science. (; 1-4 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)

This course can take two forms: (a) Library, theoretical or design studies of scientific or engineering topics in materials science for an individual or a small group of students. Course content and credits by arrangement with professor. Design credits available if arranged with professor. (b) Special topics course offered only once, e.g., by a visiting professor. prereq: upper div MatS

MATS 4594. Directed Research in Materials Science. (; 1-3 cr. [max 6 cr.] ; Student Option No Audit; Every Fall, Spring & Summer)

Research studies of scientific or engineering topics in materials science for an individual or small group of students. Course content and credits by arrangement with professor. Design credits available if arranged with professor. May be used for upper division Honors Program experience if arranged with professor. prereq: Upper div mat sci

MATS 5517. Microscopy of Materials. (; 3 cr. ; A-F or Audit; Every Spring)

A basic introduction to electron microscopy (EM) methods and techniques for materials characterization. The course is intended for

junior- and senior-level undergraduates and graduate students interested in obtaining a basic understanding of characterization with EM. Topics to be covered include an introduction to instrumentation, basics of scattering theory, and a survey of imaging, diffraction, and analytical measurement techniques. Current and emerging techniques will also be covered, including machine learning and big data for EM and time-resolved measurements. Students will research a specific topic of interest over the course of the semester, culminating in a project paper and a class presentation.

MATS 5531. Electrochemical Engineering. (3 cr. ; Student Option; Periodic Fall)
Fundamentals of electrochemical engineering. Topics include electrochemical mass transfer electrokinetics, thermodynamics of cells, modern sensors, formation of thin films and microstructured materials. Computer-based problems will be assigned. prereq: MatS 3011 or instr consent, upper div CSE or grad

MATS 5771. Colloids and Dispersions. (3 cr. ; A-F or Audit; Every Fall)
Preparation, stability, coagulation kinetics, or colloidal solutions. DLVO theory, electrokinetic phenomena. Properties of micelles, other microstructures. prereq: Physical chemistry

MATS 5801. Optimization in Chemical and Energy Systems Engineering. (3 cr. ; A-F or Audit; Every Fall)
Mathematical optimization is a rigorous and systematic method for modeling and solving decision-making problems. It has become an indispensable tool in various disciplines, including economics, science, and engineering. In this course, students are introduced to the theory of mathematical optimization, systematic approaches to modeling complex optimization problems, and state-of-the-art algorithms for solving them. While the presented methods are general, we focus on applications in chemical engineering, energy systems engineering, and related disciplines. Many of the applications are directly related to the efficient design and operation of sustainable industrial systems.

MATS 5802. Machine Learning for Chemical Sciences and Engineering. (3 cr. ; A-F or Audit; Periodic Fall & Spring)
This course is meant to be an introduction for advanced-undergraduates or graduate students to probabilistic machine learning (ML) and to recent advances at the intersection of chemical sciences/engineering and ML. The course provides an introduction to Machine Learning with a Bayesian perspective, thus placing a lot of emphasis on Bayesian reasoning and methods. After an overview of the fundamental concepts necessary to tackle the subject, namely Probability Theory, Decision Theory, Information Theory, and an exploration of simple probability distributions, the students will be introduced to Mixture Models, Linear Methods and Neural Networks (NN). These topics will lay the foundation for a discussion of molecular descriptors, Behler-Parrinello NN, Message Passing NN, and possibly, Kernel Methods for quantum chemistry.

MATS 5803. Chemical and Materials Technology Commercialization. (3 cr. ; A-F only; Every Fall)
Introduction to chemical and materials technology commercialization including a focus on products, markets, customers, and processes for bringing innovations to market.

Mathematics (MATH)

MATH 1001. Excursions in Mathematics. (MATH; 3 cr. ; Student Option; Every Fall & Spring)
Introduction to the breadth and nature of mathematics and the power of abstract reasoning, with applications to topics that are relevant to the modern world, such as voting, fair division of assets, patterns of growth, and opinion polls. prereq: 3 yrs high school math or placement exam or [grade of at least C- in PSTL 731 or 732]

MATH 1031. College Algebra and Probability. (MATH; 3 cr. ; Student Option; Every Fall, Spring & Summer)
Graphs of equations and functions, transformations of graphs; linear, quadratic, polynomial, and rational functions, with applications; inverses and compositions of functions; exponential and logarithmic functions with applications; basic probability rules, conditional probabilities, binomial probabilities. prereq: 3 yrs high school math or satisfactory score on placement exam or grade of at least C- in [PSTL 731 or PSTL 732 or CI 0832]

MATH 1038. College Algebra and Probability Submodule. (1 cr. ; A-F or Audit; Every Fall, Spring & Summer)
For students who need probability/permutations/combinations portion of 1031. Meets with 1031, has same grade/work requirements. prereq: 1051 or 1151 or 1155

MATH 1040. Topics in Mathematics. (1 cr. ; S-N only; Every Fall & Spring)
See Specific Topic Titles

MATH 1042. Mathematics of Design. (MATH; 4 cr. ; Student Option; Every Fall)
A tour of mathematics relevant to principles of design that support the "making" of things: from objects to buildings. Project-based problem solving. Systems of equations, trigonometry, vectors, analytic geometry, conic sections, transformations, approximation of length, area, and volume. Prereq: Satisfactory score on placement test or grade of at least C- in [1031 or 1051]

MATH 1049. Intermediate Algebra Skills. (1 cr. ; S-N only; Every Fall & Spring)
This course serves as a co-requisite course to MATH 1031 and MATH 1051. It is designed to reinforce the skills in Intermediate Algebra and Trigonometry that are necessary for success in College Algebra. Students should enroll in this course if their placement exam score indicates that their preparedness for College Algebra is borderline. Other students with sufficiently high placement exam scores can enroll in MATH 1031/1051 without registering for MATH 1049. Students enrolled in this course should be concurrently enrolled in MATH 1031

or MATH 1051. This course is designed to build computational skills in material that is important for success in MATH 1031/1051. Skills include signed expressions, simplifying rational numbers and radicals, evaluating expressions, functions and function notation, and simplifying monomial expressions.

MATH 1051. Precalculus I. (MATH; 3 cr. ; Student Option; Every Fall, Spring & Summer)
Graphs of equations and functions, transformations of graphs; linear, quadratic, polynomial, and rational functions with applications; zeroes of polynomials; inverses and compositions of functions; exponential and logarithmic functions with applications; coverage beyond that found in the usual 3 years of high school math. prereq: 3 yrs of high school math or satisfactory score on placement test or grade of at least C- in [PSTL 731 or PSTL 732 or CI 0832]

MATH 1139. College Algebra Skills. (1 cr. ; S-N only; Every Fall & Spring)
This course serves as a co-requisite course to MATH 1142. It is designed to reinforce the skills in College Algebra that are necessary for success in Short Calculus. Students should enroll in this course if their placement exam score indicates that their preparedness for Short Calculus is borderline. Other students with sufficiently high placement exam scores can enroll in MATH 1142 without registering for MATH 1139. Students enrolled in this course should be concurrently enrolled in MATH 1142. This course is designed to review computational skills in material that is important for success in MATH 1142. Skills include simplifying rational expressions, rationalizing the denominator, functions and function notation, factoring polynomials, the distance formula, equations of lines, exponential and logarithmic functions, and systems of equations.

MATH 1142. Short Calculus. (MATH; 4 cr. ; Student Option; Every Fall, Spring & Summer)
A streamlined one-semester tour of differential and integral calculus in one variable, and differential calculus in two variables. No trigonometry/does not have the same depth as MATH 1271-1272. Formulas and their interpretation and use in applications. prereq: Satisfactory score on placement test or grade of at least C- in [1031 or 1051]

MATH 1149. College Algebra Skills. (1 cr. ; S-N only; Every Fall & Spring)
This course serves as a co-requisite course to MATH 1151. It is designed to reinforce the skills in College Algebra that are necessary for success in Trigonometry. Students should enroll in this course if their placement exam score indicates that their preparedness for Trigonometry is borderline. Other students with sufficiently high placement exam scores can enroll in MATH 1151 without registering for MATH 1149. Students enrolled in this course should be concurrently enrolled in MATH 1151. This course is designed to review computational skills in material that is important for success in MATH 1151. Skills include simplifying rational expressions, rationalizing the denominator, functions and function

notation, factoring polynomials, congruent and similar triangles, distance formula, equations of lines, exponential functions, and sequences.

MATH 1151. Precalculus II. (MATH; 3 cr. ; Student Option; Every Fall, Spring & Summer) Properties of trigonometric functions and their inverses, including graphs and identities, with applications; polar coordinates, equations, graphs; complex numbers, complex plane, DeMoivre's Theorem; conic sections; systems of linear equations and inequalities, with applications; arithmetic and geometric sequences and series. prereq: Satisfactory score on placement exam or grade of at least C- in [1031 or 1051]

MATH 1155. Intensive Precalculus. (MATH; 5 cr. ; Student Option; Every Fall & Spring) Graphs of equations and functions; polynomial and rational functions; inverses and composition of functions; exponentials and logarithms; trig functions, graphs, identities; polar coordinates; complex numbers; systems of linear equations; arithmetic, geometric sequences, series; applications. prereq: 3 yrs high school math or satisfactory score on placement exam or grade of at least C- in [PSTL 731 or PSTL 732]

MATH 1241. Calculus and Dynamical Systems in Biology. (MATH; 4 cr. ; Student Option; Every Fall & Spring) Differential/integral calculus with biological applications. Discrete/continuous dynamical systems. Models from fields such as ecology/evolution, epidemiology, physiology, genetic networks, neuroscience, and biochemistry. prereq: [4 yrs high school math including trig or satisfactory score on placement test or grade of at least C- in [1151 or 1155]], CBS student

MATH 1269. Precalculus Skills. (1 cr. ; S-N only; Every Fall & Spring) This course serves as a co-requisite course to MATH 1241, MATH 1271, and MATH 1371. It is designed to reinforce the skills in College Algebra and Trigonometry that are necessary for success in Calculus. Students should enroll in this course if their placement exam score indicates that their preparedness for Calculus is borderline. Other students with sufficiently high placement exam scores can enroll in MATH 1241/1271/1371 without registering for MATH 1269. Students enrolled in this course should be concurrently enrolled in MATH 1241, MATH 1271, or MATH 1371. This course is designed to review computational skills in material that is important for success in an introductory Differential Calculus. Skills include simplifying rational expressions, factoring, binomial theorem, finding roots, quadratic formula, rationalizing denominators, equations of lines, laws of exponents and logarithms, graphs of common functions, the unit circle, trig identities, inverse trig functions, isolating variables, similar triangles, geometric formulas, inequalities, functions and function notation, domain and range of functions, inverse functions, composition of functions, symmetry, recursion and sequences, and solving systems of equations.

MATH 1271. Calculus I. (MATH; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Differential calculus of functions of a single variable, including polynomial, rational, exponential, and trig functions. Applications, including optimization and related rates problems. Single variable integral calculus, using anti-derivatives and simple substitution. Applications may include area, volume, work problems. prereq: 4 yrs high school math including trig or satisfactory score on placement test or grade of at least C- in [1151 or 1155]

MATH 1272. Calculus II. (; 4 cr. ; Student Option; Every Fall, Spring & Summer) Techniques of integration. Calculus involving transcendental functions, polar coordinates. Taylor polynomials, vectors/curves in space, cylindrical/spherical coordinates. prereq: [1271 or equiv] with grade of at least C-

MATH 1371. CSE Calculus I. (MATH; 4 cr. ; Student Option; Every Fall & Spring) Differentiation of single-variable functions, basics of integration of single-variable functions. Applications: max-min, related rates, area, curve-sketching. Use of calculator, cooperative learning. prereq: CSE or pre-bioproduct concurrent registration is required (or allowed) in biosys engn (PRE), background in [precalculus, geometry, visualization of functions/graphs], instr consent; familiarity with graphing calculators recommended

MATH 1372. CSE Calculus II. (; 4 cr. ; Student Option; Every Spring) Techniques of integration. Calculus involving transcendental functions, polar coordinates, Taylor polynomials, vectors/curves in space, cylindrical/spherical coordinates. Use of calculators, cooperative learning. prereq: Grade of at least C- in [1371 or equiv], CSE or pre-Bioproduct/Biosys Engr

MATH 1471. UM Talented Youth Mathematics Program--Calculus I, First Semester. (MATH; 2 cr. [max 4 cr.] ; A-F or Audit; Every Fall) Accelerated honors-level sequence for selected mathematically talented high school students. Single variable calculus through differentiation and its applications.

MATH 1472. UM Talented Youth Mathematics Program--Calculus I, Second Semester. (MATH; 2 cr. [max 4 cr.] ; A-F or Audit; Every Spring) Accelerated honors sequence for selected mathematically talented high school students. Integration and its applications.

MATH 1473. UM Talented Youth Mathematics Program--Calculus II, First Semester. (MATH; 2 cr. [max 4 cr.] ; A-F or Audit; Every Fall) Accelerated honors sequence for selected mathematically talented high school students. Sequences and series, differential equations, 3D analytical geometry, and methods of proof.

MATH 1474. Honors Calculus IIB for Secondary Students. (; 3 cr. ; Student Option; Every Spring) Accelerated honors sequence. Linear Algebra from geometric viewpoint. First-order systems of differential equations. prereq: 1473H

MATH 1571H. Honors Calculus I. (MATH; 4 cr. ; A-F only; Every Fall) Differential/integral calculus of functions of a single variable. Emphasizes hard problem-solving rather than theory. prereq: Honors student and permission of University Honors Program

MATH 1572H. Honors Calculus II. (; 4 cr. ; A-F only; Every Spring) Continuation of 1571. Infinite series, differential calculus of several variables, introduction to linear algebra. prereq: 1571H, honors student, permission of University Honors Program

MATH 2142. Elementary Linear Algebra. (; 4 cr. ; Student Option; Every Fall & Spring) This course has three primary objectives. (1) To present the basic theory of linear algebra, including: solving systems of linear equations; determinants; the theory of Euclidean vector spaces and general vector spaces; eigenvalues and eigenvectors of matrices; inner products; diagonalization of quadratic forms; and linear transformations between vector spaces. (2) To introduce certain aspects of numerical linear algebra and computation. (3) To introduce applications of linear algebra to other domains such as data science. Objectives (2) and (3) will be taught with hands-on computer projects in a high-level programming language. Prerequisites: MATH 1272 or equivalent

MATH 2241. Mathematical Modeling of Biological Systems. (3 cr. [max 4 cr.] ; Student Option; Every Fall & Spring) Development, analysis and simulation of models for the dynamics of biological systems. Mathematical topics include discrete and continuous dynamical systems, linear algebra, and probability. Models from fields such as ecology, epidemiology, physiology, genetics, neuroscience, and biochemistry. prereq: [1241 or 1271 or 1371] w/grade of at least C-

MATH 2243. Linear Algebra and Differential Equations. (; 4 cr. ; Student Option; Every Fall, Spring & Summer) Linear algebra: basis, dimension, matrices, eigenvalues/eigenvectors. Differential equations: first-order linear, separable; second-order linear with constant coefficients; linear systems with constant coefficients. prereq: [1272 or 1282 or 1372 or 1572] w/grade of at least C-

MATH 2263. Multivariable Calculus. (; 4 cr. ; Student Option; Every Fall, Spring & Summer) Derivative as linear map. Differential/integral calculus of functions of several variables, including change of coordinates using Jacobians. Line/surface integrals. Gauss, Green, Stokes Theorems. prereq: [1272 or 1372 or 1572] w/grade of at least C-

MATH 2373. CSE Linear Algebra and Differential Equations. (; 4 cr. ; Student Option; Every Fall & Spring) Linear algebra: basis, dimension, eigenvalues/eigenvectors. Differential equations: linear equations/systems, phase space, forcing/resonance, qualitative/numerical analysis of nonlinear systems, Laplace transforms. Use of computer technology. prereq: [1272 or 1282 or

1372 or 1572] w/grade of at least C-, CSE or pre-Bio Prod/Biosys Engr

MATH 2374. CSE Multivariable Calculus and Vector Analysis. (; 4 cr. ; Student Option; Every Fall & Spring)

Derivative as linear map. Differential/integral calculus of functions of several variables, including change of coordinates using Jacobians. Line/surface integrals. Gauss, Green, Stokes theorems. Use of computer technology. prereq: [1272 or 1282 or 1372 or 1572] w/grade of at least C-, CSE or pre-Bioprod/Biosys Engr

MATH 2471. UM Talented Youth

Mathematics Program--Calculus II, Second Semester. (MATH; 2 cr. [max 4 cr.]; A-F or Audit; Every Spring)

Accelerated honors sequence for selected mathematically talented high school students. Theoretical and geometric linear algebra.

MATH 2472. UM Talented Youth

Mathematics Program--Calculus III, First Semester. (MATH; 2 cr. [max 4 cr.]; A-F or Audit; Every Fall)

Accelerated honors sequence for selected mathematically talented high school students. Geometry of surfaces and curves in \mathbb{R}^n . Multivariable calculus through differentiation using linear algebra.

MATH 2473. UM Talented Youth

Mathematics Program--Calculus III, Second Semester. (MATH; 2 cr. [max 4 cr.]; A-F or Audit; Every Spring)

Accelerated honors sequence for selected mathematically talented high school students. Multivariable integration and classical vector analysis.

MATH 2474. Advanced Topics for

Secondary Students. (; 3 cr. ; Student Option; Every Spring)

Topics may include linear algebra, combinatorics, advanced differential equations, probability/statistics, numerical analysis, dynamical systems, topology/geometry. Emphasizes concepts/explorations. prereq: 2473H

MATH 2573H. Honors Calculus III. (; 4 cr. ; A-F only; Every Fall)

Integral calculus of several variables. Vector analysis, including theorems of Gauss, Green, Stokes. prereq: Math 1572H or Math 2574H, honors student and permission of University Honors Program

MATH 2574H. Honors Calculus IV. (; 4 cr. ; A-F only; Every Spring)

Advanced linear algebra, differential equations. Additional topics as time permits. prereq: Math 1572H or Math 2573H, honors student and permission of University Honors Program

MATH 2999. Special Exam. (5 cr. ; Student Option;)

MATH 3283W. Sequences, Series, and Foundations: Writing Intensive. (WI; 4 cr. ; Student Option; Every Fall & Spring)

Introduction to reasoning used in advanced mathematics courses. Logic, mathematical induction, real number system, general/monotone/recursively defined sequences,

convergence of infinite series/sequences, Taylor's series, power series with applications to differential equations, Newton's method. Writing-intensive component. prereq: [concurrent registration is required (or allowed) in 2243 or concurrent registration is required (or allowed) in 2263 or concurrent registration is required (or allowed) in 2373 or concurrent registration is required (or allowed) in 2374] w/grade of at least C-

MATH 3592H. Honors Mathematics I. (; 5 cr. ; A-F only; Every Fall)

First semester of three-semester sequence. Focuses on multivariable calculus at deeper level than regular calculus offerings. Rigorous introduction to sequences/series. Theoretical treatment of multivariable calculus. Strong introduction to linear algebra. prereq: dept consent; for students with mathematical talent

MATH 3593H. Honors Mathematics II. (; 5 cr. ; A-F or Audit; Every Spring)

Second semester of three-semester sequence. Focuses on multivariable calculus at deeper level than regular calculus offerings. Rigorous introduction to sequences/series. Theoretical treatment of multivariable calculus. Strong introduction to linear algebra. prereq: 3592H or instr consent

MATH 4065. Theory of Interest. (; 4 cr. ; A-F only; Every Fall & Spring)

Time value of money, compound interest and general annuities, loans, bonds, general cash flows, basic financial derivatives and their valuation. Primarily for students who are interested in actuarial mathematics. prereq: 1272 or 1372 or 1572

MATH 4067W. Actuarial Mathematics in Practice. (WI; 3 cr. ; A-F only; Every Spring)

Real world actuarial problems that require integration of mathematical skills with knowledge from other disciplines such as economics, statistics, and finance. Communication and interpersonal skills are enhanced by teamwork/presentations to the practitioner actuaries who co-instruct. prereq: 4065, ACCT 2050, ECON 1101, ECON 1102

MATH 4152. Elementary Mathematical

Logic. (; 3 cr. ; Student Option; Every Spring) Propositional logic. Predicate logic: notion of a first order language, a deductive system for first order logic, first order structures, Godel's completeness theorem, axiom systems, models of formal theories. prereq: one soph math course or instr consent

MATH 4242. Applied Linear Algebra. (; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Systems of linear equations, vector spaces, subspaces, bases, linear transformations, matrices, determinants, eigenvalues, canonical forms, quadratic forms, applications. prereq: 2243 or 2373 or 2573

MATH 4281. Introduction to Modern Algebra. (; 4 cr. ; Student Option; Periodic Fall)

Equivalence relations, greatest common divisor, prime decomposition, modular arithmetic, groups, rings, fields, Chinese

remainder theorem, matrices over commutative rings, polynomials over fields. prereq: 2283 or 3283 or instr consent

MATH 4428. Mathematical Modeling. (; 4 cr. ; Student Option; Every Spring)

Modeling techniques for analysis/decision-making in industry. Optimization (sensitivity analysis, Lagrange multipliers, linear programming). Dynamical modeling (steady-states, stability analysis, eigenvalue methods, phase portraits, simulation). Probabilistic methods (probability/statistical models, Markov chains, linear regression, simulation). prereq: 2243 or 2373 or 2573

MATH 4471W. Mathematics for Social Justice. (WI; 4 cr. ; A-F only; Every Spring)

This course will introduce you to quantitative literacy, critical thinking, and problem solving skills in socially relevant contexts. While students may be accustomed to thinking about mathematics as an abstract set of principles and proofs, this course will encourage thinking about mathematics in concrete contexts as a way to improve our communities and the world. Students will develop the ability and inclination to understand and develop realistic solutions to issues of social, political, and economic justice. Examples of specific topics include: the Flint water crisis, sea level change in an island community, gerrymandering, and racial bias in policing. The mathematical tools used will include basic statistics, modeling, and data analysis, among others. While most students in this class will be "good at math," this class explores using math to do good. Prereq: Math 1272 or instructor consent

MATH 4512. Differential Equations with Applications. (; 3 cr. ; Student Option; Every Fall & Spring)

Laplace transforms, series solutions, systems, numerical methods, plane autonomous systems, stability. prereq: 2243 or 2373 or 2573

MATH 4567. Applied Fourier Analysis. (; 4 cr. ; Student Option; Every Fall & Spring)

Fourier series, integral/transform. Convergence. Fourier series, transform in complex form. Solution of wave, heat, Laplace equations by separation of variables. Sturm-Liouville systems, finite Fourier, fast Fourier transform. Applications. Other topics as time permits. prereq: 2243 or 2373 or 2573

MATH 4603. Advanced Calculus I. (; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Axioms for the real numbers. Techniques of proof for limits, continuity, uniform convergence. Rigorous treatment of differential/integral calculus for single-variable functions. prereq: [[2243 or 2373], [2263 or 2374]] or 2574 or instr consent

MATH 4604. Advanced Calculus II. (; 4 cr. ; Student Option; Every Spring)

Sequel to MATH 4603. Topology of n-dimensional Euclidean space. Rigorous treatment of multivariable differentiation and integration, including chain rule, Taylor's Theorem, implicit function theorem, Fubini's Theorem, change of variables, Stokes' Theorem. prereq: 4603 or 5615 or instr consent

MATH 4653. Elementary Probability. (; 4 cr. ; Student Option; Every Fall & Spring)
Probability spaces, distributions of discrete/continuous random variables, conditioning. Basic theorems, calculational methodology. Examples of random sequences. Emphasizes problem-solving. prereq: [2263 or 2374 or 2573]; [2283 or 2574 or 3283] recommended

MATH 4707. Introduction to Combinatorics and Graph Theory. (; 4 cr. ; Student Option; Every Fall & Spring)
Existence, enumeration, construction, algorithms, optimization. Pigeonhole principle, bijective combinatorics, inclusion-exclusion, recursions, graph modeling, isomorphism. Degree sequences and edge counting. Connectivity, Eulerian graphs, trees, Euler's formula, network flows, matching theory. Mathematical induction as proof technique. prereq: 2243, [2283 or 3283]

MATH 4990. Topics in Mathematics. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

MATH 4991. Independent Study. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

MATH 4992. Directed Reading. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
TBD

MATH 4993. Directed Study. (; 1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
TBD

MATH 4995. Senior Project for CLA. (; 1 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Directed study. May consist of paper on specialized area of math or original computer program or other approved project. Covers some math that is new to student. Scope/topic vary with instructor. prereq: 2 sem of upper div math, dept consent

MATH 4997W. Senior project (Writing Intensive). (WI; 1 cr. [max 2 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Directed study. A 10-15 page paper on a specialized area, including some math that is new to student. At least two drafts of paper given to instructor for feedback before final version. Student keeps journal of preliminary work on project. Scope/topic vary with instructor. prereq: 2 sem upper div math, dept consent

MATH 5067. Actuarial Mathematics I. (; 4 cr. ; Student Option; Every Fall)
Future lifetime random variable, survival function. Insurance, life annuity, future loss random variables. Net single premium, actuarial present value, net premium, net reserves. prereq: 4065, [one sem [4xxx or 5xxx] [probability or statistics] course]

MATH 5068. Actuarial Mathematics II. (; 4 cr. ; Student Option; Every Spring)
Multiple decrement insurance, pension valuation. Expense analysis, gross premium, reserves. Problem of withdrawals. Regulatory

reserving systems. Minimum cash values. Additional topics at instructor's discretion. prereq: 5067

MATH 5075. Mathematics of Options, Futures, and Derivative Securities I. (; 4 cr. ; Student Option; Every Fall)
Mathematical background (e.g., partial differential equations, Fourier series, computational methods, Black-Scholes theory, numerical methods--including Monte Carlo simulation). Interest-rate derivative securities, exotic options, risk theory. First course of two-course sequence. prereq: Two yrs calculus, basic computer skills

MATH 5076. Mathematics of Options, Futures, and Derivative Securities II. (; 4 cr. ; A-F or Audit; Every Spring)
Mathematical background such as partial differential equations, Fourier series, computational methods, Black-Scholes theory, numerical methods (including Monte Carlo simulation), interest-rate derivative securities, exotic options, risk theory. prereq: 5075

MATH 5165. Mathematical Logic I. (; 4 cr. ; Student Option; Every Fall)
Theory of computability: notion of algorithm, Turing machines, primitive recursive functions, recursive functions, Kleene normal form, recursion theorem. Propositional logic. prereq: 2283 or 3283 or Phil 5201 or CSci course in theory of algorithms or instr consent

MATH 5248. Cryptology and Number Theory. (; 4 cr. ; Student Option; Every Fall)
Classical cryptosystems. One-time pads, perfect secrecy. Public key ciphers: RSA, discrete log. Euclidean algorithm, finite fields, quadratic reciprocity. Message digest, hash functions. Protocols: key exchange, secret sharing, zero-knowledge proofs. Probabilistic algorithms: pseudoprimes, prime factorization. Pseudo-random numbers. Elliptic curves. prereq: 2 sems soph math

MATH 5251. Error-Correcting Codes, Finite Fields, Algebraic Curves. (; 4 cr. ; Student Option; Every Spring)
Information theory: channel models, transmission errors. Hamming weight/distance. Linear codes/fields, check bits. Error processing: linear codes, Hamming codes, binary Golay codes. Euclidean algorithm. Finite fields, Bose-Chaudhuri-Hocquenghem codes, polynomial codes, Goppa codes, codes from algebraic curves. prereq: 2 sems soph math

MATH 5285H. Honors: Fundamental Structures of Algebra I. (; 4 cr. ; Student Option; Every Fall)
Review of matrix theory, linear algebra. Vector spaces, linear transformations over abstract fields. Group theory, including normal subgroups, quotient groups, homomorphisms, class equation, Sylow's theorems. Specific examples: permutation groups, symmetry groups of geometric figures, matrix groups. prereq: [2243 or 2373 or 2573], [2283 or 2574 or 3283]

MATH 5286H. Honors: Fundamental Structures of Algebra II. (; 4 cr. ; Student Option; Every Fall & Spring)

Ring/module theory, including ideals, quotients, homomorphisms, domains (unique factorization, euclidean, principal ideal), fundamental theorem for finitely generated modules over euclidean domains, Jordan canonical form. Introduction to field theory, including finite fields, algebraic/transcendental extensions, Galois theory. prereq: 5285

MATH 5335. Geometry I. (; 4 cr. ; Student Option; Every Fall)
Advanced two-dimensional Euclidean geometry from a vector viewpoint. Theorems/problems about triangles/circles, isometries, connections with Euclid's axioms. Hyperbolic geometry, how it compares with Euclidean geometry. prereq: [2243 or 2373 or 2573], [concurrent registration is required (or allowed) in 2263 or concurrent registration is required (or allowed) in 2374 or concurrent registration is required (or allowed) in 2574]

MATH 5345H. Honors: Introduction to Topology. (; 4 cr. ; A-F only; Every Fall)
Rigorous introduction to general topology. Set theory, Euclidean/metric spaces, compactness/connectedness. May include Urysohn metrization, Tychonoff theorem or fundamental group/covering spaces. prereq: [2263 or 2374 or 2573], [concurrent registration is required (or allowed) in 2283 or concurrent registration is required (or allowed) in 2574 or concurrent registration is required (or allowed) in 3283]

MATH 5378. Differential Geometry. (; 4 cr. ; Student Option; Every Spring)
Basic geometry of curves in plane and in space, including Frenet formula, theory of surfaces, differential forms, Riemannian geometry. prereq: [2263 or 2374 or 2573], [2243 or 2373 or 2574]; [2283 or 3283] recommended]

MATH 5385. Introduction to Computational Algebraic Geometry. (; 4 cr. ; Student Option; Every Fall)
Geometry of curves/surfaces defined by polynomial equations. Emphasizes concrete computations with polynomials using computer packages, interplay between algebra and geometry. Abstract algebra presented as needed. prereq: [2263 or 2374 or 2573], [2243 or 2373 or 2574]

MATH 5445. Mathematical Analysis of Biological Networks. (; 4 cr. ; Student Option; Every Spring)
Development/analysis of models for complex biological networks. Examples taken from signal transduction networks, metabolic networks, gene control networks, and ecological networks. prereq: Linear algebra, differential equations

MATH 5447. Theoretical Neuroscience. (; 4 cr. ; Student Option; Every Fall)
Nonlinear dynamical system models of neurons and neuronal networks. Computation by excitatory/inhibitory networks. Neural oscillations, adaptation, bursting, synchrony. Memory systems. prereq: 2243 or 2373 or 2574

MATH 5467. Introduction to the Mathematics of Image and Data Analysis. (; 4 cr. ; Student Option; Every Spring)

Background theory/experience in wavelets. Inner product spaces, operator theory, Fourier transforms applied to Gabor transforms, multi-scale analysis, discrete wavelets, self-similarity. Computing techniques. prereq: [2243 or 2373 or 2573], [2283 or 2574 or 3283 or instr consent]; [[2263 or 2374], 4567] recommended

MATH 5485. Introduction to Numerical Methods I. (4 cr. ; Student Option; Every Fall) Solution of nonlinear equations in one variable. Interpolation, polynomial approximation. Methods for solving linear systems, eigenvalue problems, systems of nonlinear equations. prereq: [2243 or 2373 or 2573], familiarity with some programming language

MATH 5486. Introduction To Numerical Methods II. (4 cr. ; Student Option; Every Spring) Numerical integration/differentiation. Numerical solution of initial-value problems, boundary value problems for ordinary differential equations, partial differential equations. prereq: 5485

MATH 5490. Topics in Applied Mathematics. (4 cr. [max 12 cr.] ; Student Option; Periodic Fall & Spring) Topics vary by instructor. See class schedule.

MATH 5525. Introduction to Ordinary Differential Equations. (4 cr. ; Student Option; Periodic Fall & Spring) Ordinary differential equations, solution of linear systems, qualitative/numerical methods for nonlinear systems. Linear algebra background, fundamental matrix solutions, variation of parameters, existence/uniqueness theorems, phase space. Rest points, their stability. Periodic orbits, Poincare-Bendixson theory, strange attractors. prereq: [2243 or 2373 or 2573], [2283 or 2574 or 3283]

MATH 5535. Dynamical Systems and Chaos. (4 cr. ; Student Option; Every Fall & Spring) Dynamical systems theory. Emphasizes iteration of one-dimensional mappings. Fixed points, periodic points, stability, bifurcations, symbolic dynamics, chaos, fractals, Julia/Mandelbrot sets. prereq: [2243 or 2373 or 2573], [2263 or 2374 or 2574]

MATH 5583. Complex Analysis. (4 cr. ; Student Option; Every Fall, Spring & Summer) Algebra, geometry of complex numbers. Linear fractional transformations. Conformal mappings. Holomorphic functions. Theorems of Abel/Cauchy, power series. Schwarz' lemma. Complex exponential, trig functions. Entire functions, theorems of Liouville/Morera. Reflection principle. Singularities. Laurent series. Residues. prereq: 2 sems soph math [including [2263 or 2374 or 2573], [2283 or 3283]] recommended

MATH 5587. Elementary Partial Differential Equations I. (4 cr. ; Student Option; Every Fall) Emphasizes partial differential equations w/physical applications, including heat, wave, Laplace's equations. Interpretations of boundary conditions. Characteristics, Fourier series, transforms, Green's functions, images, computational methods. Applications include

wave propagation, diffusions, electrostatics, shocks. prereq: [2243 or 2373 or 2573], [2263 or 2374 or 2574]

MATH 5588. Elementary Partial Differential Equations II. (4 cr. ; A-F or Audit; Every Spring) Heat, wave, Laplace's equations in higher dimensions. Green's functions, Fourier series, transforms. Asymptotic methods, boundary layer theory, bifurcation theory for linear/nonlinear PDEs. Variational methods. Free boundary problems. Additional topics as time permits. prereq: [[2243 or 2373 or 2573], [2263 or 2374 or 2574], 5587] or instr consent

MATH 5615H. Honors: Introduction to Analysis I. (4 cr. ; Student Option; Every Fall) Axiomatic treatment of real/complex number systems. Introduction to metric spaces: convergence, connectedness, compactness. Convergence of sequences/series of real/complex numbers, Cauchy criterion, root/ratio tests. Continuity in metric spaces. Rigorous treatment of differentiation of single-variable functions, Taylor's Theorem. prereq: [[2243 or 2373], [2263 or 2374], [2283 or 3283]] or 2574

MATH 5616H. Honors: Introduction to Analysis II. (4 cr. ; Student Option; Every Spring) Rigorous treatment of Riemann-Stieltjes integration. Sequences/series of functions, uniform convergence, equicontinuous families, Stone-Weierstrass Theorem, power series. Rigorous treatment of differentiation/integration of multivariable functions, Implicit Function Theorem, Stokes' Theorem. Additional topics as time permits. prereq: 5615

MATH 5651. Basic Theory of Probability and Statistics. (4 cr. ; Student Option; Every Fall & Spring) Logical development of probability, basic issues in statistics. Probability spaces, random variables, their distributions/expected values. Law of large numbers, central limit theorem, generating functions, sampling, sufficiency, estimation. prereq: [2263 or 2374 or 2573], [2243 or 2373]; [2283 or 2574 or 3283] recommended.

MATH 5652. Introduction to Stochastic Processes. (4 cr. ; Student Option; Every Fall & Spring) Random walks, Markov chains, branching processes, martingales, queuing theory, Brownian motion. prereq: 5651 or Stat 5101

MATH 5654. Prediction and Filtering. (4 cr. ; Student Option; Every Spring) Markov chains, Wiener process, stationary sequences, Ornstein-Uhlenbeck process. Partially observable Markov processes (hidden Markov models), stationary processes. Equations for general filters, Kalman filter. Prediction of future values of partially observable processes. prereq: 5651 or Stat 5101

MATH 5705. Enumerative Combinatorics. (4 cr. ; Student Option; Every Fall & Spring) Basic enumeration, bijections, inclusion-exclusion, recurrence relations, ordinary/exponential generating functions, partitions,

Polya theory. Optional topics include trees, asymptotics, listing algorithms, rook theory, involutions, tableaux, permutation statistics. prereq: [2243 or 2373 or 2573], [2263 or 2283 or 2374 or 2574 or 3283]

MATH 5707. Graph Theory and Non-Enumerative Combinatorics. (4 cr. ; Student Option; Every Fall & Spring) Basic topics in graph theory: connectedness, Eulerian/Hamiltonian properties, trees, colorings, planar graphs, matchings, flows in networks. Optional topics include graph algorithms, Latin squares, block designs, Ramsey theory. prereq: [2243 or 2373 or 2573], [2263 or 2374 or 2574]; [2283 or 3283 or experience in writing proofs] highly recommended; Credit will not be granted if credit has been received for: 4707

MATH 5711. Linear Programming and Combinatorial Optimization. (4 cr. ; Student Option; Every Fall & Spring) Simplex method, connections to geometry, duality theory, sensitivity analysis. Applications to cutting stock, allocation of resources, scheduling problems. Flows, matching/transportation problems, spanning trees, distance in graphs, integer programs, branch/bound, cutting planes, heuristics. Applications to traveling salesman, knapsack problems. prereq: 2 sems soph math [including 2243 or 2373 or 2573]

MATH 5900. Tutorial in Advanced Mathematics. (1-6 cr. [max 120 cr.] ; A-F or Audit; Every Fall, Spring & Summer) Individually directed study.

MATH 5990. Topics in Mathematics. (3-4 cr. [max 12 cr.] ; Student Option; Periodic Fall & Spring) Topics vary by instructor. See class schedule.

Mathematics Education (MTHE)

MTHE 3101. Mathematics and Pedagogy for Elementary Teachers I. (3 cr. ; A-F or Audit; Every Fall, Spring & Summer) Math content knowledge of K-6 in an environment modeling pedagogy for future implementation. Integrated content/methods. Problem solving, connections, communication, reasoning, representation. Functions, proportionality, number, numeration. prereq: [College algebra, elementary FOE or Early Childhood student, jr status or above] or instr consent

MTHE 3102. Mathematics and Pedagogy for Elementary Teachers II. (3 cr. ; A-F or Audit; Every Fall, Spring & Summer) Math content knowledge of K-6 in an environment modeling pedagogy for future implementation. Integrated content/methods. Problem solving, connections, communication, reasoning, representation. Geometry, measurement, probability, statistics. prereq: 3101, college algebra

MTHE 5011. Arithmetic Structures in School Mathematics. (3 cr. ; Student Option; Every Summer) Pedagogy, content, and instructional strategies for teaching arithmetic. Content and issues

relevant to the K-8 mathematics curriculum. Instructional materials and technology appropriate for elementary or middle school arithmetic. Credit hours and targeted level vary with particular classes. prereq: Enrollment in math initial licensure program or tchg exper

MTHE 5021. Algebraic Structures in School Mathematics. (; 3 cr. ; Student Option; Every Fall)

Pedagogy, content, and instructional strategies for teaching arithmetic. Content and issues relevant to the algebra curriculum. Instructional materials and technology appropriate for arithmetic. Each offering of the course will focus on either elementary/middle or middle/secondary grade levels. prereq: Tchg exper or instr consent

MTHE 5031. Geometric Structures in School Mathematics. (; 3 cr. ; Student Option; Every Spring)

Pedagogy, content, and instructional strategies for teaching school geometry. Content and issues relevant to the geometry curriculum. Instructional materials and technology appropriate for geometry. Each offering will focus on either elementary/middle or middle/secondary grade levels. prereq: Enrollment in math initial licensure program

MTHE 5115. Applications of Teaching Mathematics. (3 cr. ; A-F only; Every Fall)

The purpose of this course is to examine mathematics teaching in diverse school settings and help you inquire and reflect about your own teaching practice and its impact on you, and the students you will meet. Throughout this course we will collaboratively inquire about teaching and learning, observe and analyze instruction, and reflect on your own and each other's teaching. We will develop and integrate technological knowledge that works together with pedagogical and content knowledge to make math teaching more effective. prereq: You must be enrolled in the Mathematics initial licensure program to take this course.

MTHE 5155. Rational Number Concepts and Proportionality. (; 3 cr. ; Student Option; Fall Even Year)

The relationship between the development of rational number concepts and proportional reasoning skills. Examination of how newer school curricula treat these concepts. Application of materials in the classroom and analysis of results. Reading and responding to current research. prereq: Educ student or instr consent

MTHE 5171. Teaching Problem Solving. (; 3 cr. ; Student Option; Periodic Spring & Summer)

Investigation of fundamental concepts and principles of problem solving, reasoning, and proof. Emphasis on activities and applications appropriate for junior and senior high classes. Pedagogical experiences to prepare teachers to teach problem solving, reasoning, and proof in classrooms.

MTHE 5172. Teaching Probability and Statistics. (; 3 cr. ; Student Option; Fall Odd Year)

Investigation of fundamental concepts and principles of probability and statistics. Emphasis on activities and applications appropriate for junior and senior high school classes. Pedagogical experiences to prepare teachers to integrate quantitative literacy accurately and effectively in classrooms.

MTHE 5305. Middle School Mathematics Methods. (; 2 cr. ; A-F only; Every Fall)

The unique needs of middle school students in the mathematics classroom. Mathematics content and pedagogical skills. Adolescent development/psychology. Field placement in a middle school mathematics classroom. prereq: Elem ed licensure student

MTHE 5314. Teaching and Learning Mathematics. (; 3 cr. ; Student Option; Every Fall)

Methods, materials, and curriculum development. Principles of learning. Review of research. Preparation/evaluation of tests, units, and materials of instruction. Recent developments in mathematics curriculum and in instructional alternatives. Issues in teaching/learning. Program planning/evaluation. prereq: Math Ed or MEd or CI MEd or grad student or instr consent

MTHE 5355. Mathematics for Diverse Learners. (; 3 cr. ; Student Option; Every Fall & Spring)

Mathematical concepts and methods for exceptional students, both low achieving and gifted. Experimental materials and methods designed for underachieving students. prereq: Teaching license or student in elem ed or special ed or instr consent

MTHE 5366. Technology-Assisted Mathematics Instruction. (; 3 cr. ; Student Option; Every Spring)

Technology--including computers, programmable and graphing calculators, and video--as instructional tools in mathematics; design and evaluation of technology-based mathematics lessons; the effect of technology on the mathematics curriculum; managing the technology-enriched classroom.

MTHE 5696. Student Teaching in Mathematics. (; 1-8 cr. ; S-N only; Every Spring)

Student teaching in secondary school mathematics classes. prereq: MEd/initial licensure student or instr consent

MTHE 5993. Directed Studies in Mathematics Education. (; 2 cr. ; S-N or Audit; Every Fall, Spring & Summer)

Secondary school classroom teaching project to improve specific teaching skills, planned by student, approved/directed by student's adviser. prereq: Math ed MEd student, instr consent

Mechanical Engineering (ME)

ME 2011. Introduction to Engineering. (; 4 cr. ; A-F or Audit; Every Fall)

Skills critical for practicing engineers. Mechanical engineering, engineering design. Visual, written, and oral communication forms. Computer-based design tools.

Substantial design projects, including prototype construction. prereq: CSE pre-major

ME 2021. Introduction to Programming and Computations for Mechanical Engineers. (4 cr. ; A-F or Audit; Every Fall & Spring)

This course introduces programing concepts and numerical methods, specific to engineers using MATLAB. Programming concepts include variable types, data structures, programming logic, debugging, file input and output, functions, and data visualization. These topics will then be used to develop numerical methods, topics to include root finding, differentiation, integration, systems of equations, and an introduction to solving ordinary differential equations. An emphasis will be placed on using these methods to solve mechanical engineering problems. prereq: Completed or concurrent registration in Math 1272 or 1372 or 1572H

ME 3041. Industrial Assignment I. (2 cr. ; A-F only; Every Fall, Spring & Summer)

Industrial work assignment in engineering intern program. Evaluation based on student's formal written report covering the quarter's work assignment. prereq: ME upper div, enrolled in ME co-op program

ME 3080. Topics in Mechanical Engineering. (; 1-4 cr. [max 16 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Specialized topics within various areas of mechanical engineering. Topics vary each semester. prereq: dept consent

ME 3221. Fundamentals of Design & Manufacturing. (; 4 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Material behavior and failure in design and manufacturing. Models for material removal, bulk deformation, sheet metal forming, and consolidation processes. Characterization of process capabilities and parts. prereq: 2011, AEM 3031, MatS 2001

ME 3222. Mechanisms & Machine Design. (; 4 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Selection of standard mechanical components such as bearings, gears, and fasteners. Analysis and synthesis of motion in machines. Displacement, velocity, and acceleration of mechanisms. Machine design project: Apply lecture topics to develop new machines that fulfill customer specifications. prereq: [3221 or concurrent registration is required (or allowed in 3221), [CSci 1113 or equiv]

ME 3281. System Dynamics and Control. (; 4 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Dynamics of mechanical, electrical, thermal, fluid, and hybrid systems. System response using Laplace transform and numerical integration. Fourier transform and convolution. Transfer functions and frequency response. Introduction to classical control. prereq: AEM 2021, [Math 2243 or Math 2373], ME upper div

ME 3324. Introduction to Thermal Science. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Thermodynamics, heat transfer. Thermal properties of substances. First/second laws

of thermodynamics. Steady/unsteady heat conduction. Thermal resistance concept. Convection heat transfer. Radiative heat transfer between solid surfaces. Boiling/condensation heat transfer. prereq: Chem 1061, Chem 1065, Math 2243 or Math 2373, Phys 1301. [CSE student]

ME 3331. Thermodynamics. (3 cr. ; A-F only; Every Fall, Spring & Summer)
Properties, equations of state, processes, cycles for reversible and irreversible thermodynamic systems. Modes of energy transfer. Equations for conservation of mass, energy, entropy balances. Application of thermodynamic principles to modern engineering systems. prereq: Chem 1061, Chem 1065, Phys 1301

ME 3332. Fluid Mechanics. (3 cr. ; A-F only; Every Fall, Spring & Summer)
Mass, momentum conservation principles. Fluid statics, Bernoulli equation. Control volume analysis, dimensional analysis, internal and external viscous flow. Momentum and energy considerations. Introduction to boundary layers. prereq: Math 2243 or Math 2373, 3331

ME 3333. Heat Transfer. (3 cr. ; A-F only; Every Fall, Spring & Summer)
Mechanisms of heat transfer. Conduction, convection, radiation. Boundary layer analysis using momentum and energy equations. Applications such as fins, heat exchangers, electronics cooling, bioheat transfer, energy conversion technologies, phase change energy storage and boiling. prereq: 3332

ME 3990. Curricular Practical Training. (1 cr. [max 2 cr.] ; S-N only; Every Fall, Spring & Summer)
Industrial work assignment involving advanced mechanical engineering technology. Reviewed by faculty member. Final report covering work assignment. prereq: ME major

ME 4031W. Basic Mechanical Measurements Laboratory. (WI; 4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Experimental methods, statistical estimates of experimental uncertainty, calibration, signal conditioning, selected transducers for mechanical measurements, data acquisition/processing. Temperature, pressure, humidity, stress-strain, force, velocity, flow/radiative properties. prereq: IE 4521, upper div ME

ME 4043W. Industrial Assignment II. (WI; 4 cr. ; A-F only; Every Fall, Spring & Summer)
Solution of system design problems that require developing criteria, evaluating alternatives, and generating a preliminary design. Final report emphasizes design communication and describes design decision process, analysis, and final recommendations. prereq: 3041

ME 4044. Industrial Assignment III. (; 2 cr. ; A-F only; Every Fall, Spring & Summer)
Industrial work assignment in engineering co-op program. Evaluation based on student's formal written report covering semester work assignment. prereq: ME upper div, registration in ME co-op program

ME 4053. Mechanical Engineering Modeling. (4 cr. ; Student Option; Every Fall & Spring)
This course is aimed at teaching undergraduate students mechanical engineering modeling, technical analysis and technical design capabilities from a non-compartmentalized perspective. The course focuses on, (i) modeling complex, multi-disciplinary mechanical engineering problems by identifying critical elements of a problem, (ii) design and development of analysis tools using analytical and numerical techniques and (iii) developing optimized solutions/designs to problems/challenges. PREREQ: ME 3221, ME 3222, ME 3281, ME 3331, ME 3332, ME 3333

ME 4054W. Design Projects. (WI; 4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Students work in teams and undertake single, substantial design project. Design problems are open-ended. Product design process. Teams give formal presentation of progress at mid-semester design review, show completed work at design show. prereq: 2011, 3221, 3222, 3281, 3331, 3332, 3333, 4031W, AEM 2021, AEM 3031, EE 3005, ME upper div

ME 4080. Topics in Mechanical Engineering. (; 1-4 cr. [max 8 cr.] ; Student Option; Every Fall)
Topics vary each semester. prereq: ME upper div

ME 4081H. Mechanical Engineering Honors Thesis I. (; 2 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Unstructured research course enabling honors students to do independent research supervised by faculty. Selection of suitable topics according to individual interests and faculty approval. Thesis and oral defense. prereq: ME upper div honors student, instr consent

ME 4082H. Mechanical Engineering Honors Thesis II. (WI; 2 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Unstructured research course enabling honors students to do independent research supervised by faculty. Selection of suitable topics according to individual interests and faculty approval. Thesis and oral defense. prereq: ME upper div honors student, instr consent

ME 4090. Advanced Engineering Problems. (; 2-4 cr. ; Student Option; Every Fall, Spring & Summer)
Independent research project with faculty advisor in mechanical engineering, typically related to advisor's research interests. Student contacts advisor to develop project description well before project's start date. prereq: ME upper div, instr consent

ME 4131W. Indoor Environment & Energy Laboratory. (WI; 4 cr. ; A-F or Audit; Every Fall)
Experiments in psychrometrics, refrigeration, air conditioning, solar energy, indoor air quality, and other topics related to refrigeration, building heating/cooling, and indoor air quality. prereq: ME 3333, ME 4031W, admitted to upper division/ME major

ME 4231. Motion Control Laboratory. (; 4 cr. ; A-F or Audit; Every Fall & Spring)
Microprocessor programming, digital filters, frequency response testing, modeling of electromechanical systems, closed loop velocity and position control, programmable logic controllers, factory automation, open loop position control of a vibratory system using input shaping, closed loop position control using pole placement. prereq: 3281, 4031W, ME upper div

ME 4232. Fluid Power Control Lab. (; 4 cr. ; A-F or Audit; Every Fall & Spring)
Fluid power fundamentals. Description/operation of components. Fluid power symbols/circuits. Component sizing. Modeling/simulation, system identification, controller design/implementation. Connecting/making measurements on hydraulic circuits. Lab. prereq: 3281, 4031W, ME upper div

ME 4331. Thermal Energy Engineering Laboratory. (; 4 cr. ; A-F or Audit; Every Fall & Spring)
Measurement/analysis of heat transfer in single phase, multiphase, reacting environments. Experimental measurements relevant to thermal/fluid systems, statistical design of experiments/uncertainty analysis. Heat exchange. prereq: [3331, 3332, 3333, 4031W], [ME upper div or grad student]

ME 4431W. Energy Conversion Systems Laboratory. (WI; 4 cr. ; A-F or Audit; Every Fall & Spring)
Analyze operation/control of engines, power plants, heating/ventilation systems. Performance characteristics of devices, measurement techniques. Interpretation of experimental data. Presentation of results. prereq: 3333, 4031W, [ME upper div or grad student]

ME 4583. Design for Life: Water in Tanzania. (GP,TS; 3 cr. ; A-F only; Every Spring)
Teams will evaluate community needs and infrastructure to design potable water-handling systems in rural Tanzania, typically off the power grid. Fluid mechanics: complex distribution networks, system losses, pump selection, borehole development; field measurements. Designs must address Tanzanian design guidelines.

ME 5070. Topics in Mechanical Engineering. (; 1-4 cr. [max 8 cr.] ; Student Option; Periodic Fall, Spring & Summer)
Specialized topics within areas of mechanical engineering. Emphasis on topics of current interest. Topics vary each semester. prereq: CSE upper div or grad student

ME 5101. Vapor Power Cycles. (; 4 cr. ; A-F or Audit; Periodic Spring)
Vapor power cycle analysis, regeneration, reheat, compound cycle modifications, combined gas turbine--vapor cycle systems, components, fuels and combustion, heat sources -- solar, nuclear, geothermal, low T cycles, bottoming cycles, environmental concerns. EES software used extensively for cycle analysis. prereq: CSE upper div or grad student

ME 5103. Thermal Environmental

Engineering. (; 4 cr. ; A-F or Audit; Every Fall)
Thermodynamic properties of moist air; psychrometric charts; HVAC systems; solar energy; human thermal comfort; indoor air quality; heating and cooling loads in buildings. prereq: 3331 or 3332, 3333, CSE upper div or grad

ME 5113. Aerosol/Particle Engineering. (; 4 cr. ; A-F or Audit; Every Fall)

Kinetic theory, definition, theory and measurement of particle properties, elementary particle mechanics, particle statistics; Brownian motion and diffusion, coagulation, evaporation and condensation, sampling and transport. prereq: CSE upper div or grad student

ME 5133. Aerosol Measurement Laboratory. (; 4 cr. ; A-F or Audit; Periodic Spring)

Principles of aerosol measurement. Single particle analysis by optical and electron microscopy. Aerosol samplers and inertial collectors. Integral mass concentration and number concentration detectors. Size distribution by laser particle counter and differential mobility particle sizer. Aerosol generation and instrument calibration. prereq: CSE upper div or graduate student

ME 5221. Computer-Assisted Product Realization. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

Injection molding with emphasis on design of manufacturing processes. Tooling design and specification of processing conditions using computer-based tools; process simulation software and computer-controlled machine tools. Simultaneous process and part design. Production of tooling and parts. Part evaluation. prereq: 3221, AEM 3031, CSci 1113, MatS 2001

ME 5223. Materials in Design. (; 4 cr. ; Student Option; Every Fall)

Fundamental properties of engineering materials. Fabrication, treatment. Physical/corrosive properties. Failure mechanism, cost/value analysis as related to material selection/specification. prereq: 3221, ME upper division or grad student

ME 5228. Introduction to Finite Element Modeling, Analysis, and Design. (; 4 cr. ; A-F or Audit; Every Fall)

Finite elements as principal analysis tool in computer-aided design (CAD); theoretical issues and implementation aspects for modeling and analyzing engineering problems encompassing stress analysis, heat transfer, and flow problems for linear situations. One-, two-, and three-dimensional practical engineering applications. prereq: CSE upper div or grad, 3221, AEM 3031, CSci 1113, MatS 2001

ME 5229. Finite Element Method for Computational Mechanics: Transient/Dynamic Applications. (4 cr. ; A-F or Audit; Spring Odd Year)

Computational mechanics involving transient/dynamic situations for solids and structures, heat transfer, fluid flow, nano-mechanics and the like. Development and analysis

of numerical methods and computational algorithms. Stability and accuracy of algorithms, convergence issues; linear/nonlinear situations. Implicit, explicit, mixed, and variable time discretization approaches; modal-based methods for engineering problems. CSE upper div or grad, CSci 1113, ME 3221, ME 3333, ME 5228 or equiv

ME 5241. Computer-Aided Engineering. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

Apply computer-aided engineering to mechanical design. Engineering design projects and case studies using computer-aided design and finite element analysis software; design optimization and computer graphical presentation of results. prereq: 3222, CSci 1113 or equiv, CSE upper div or grad

ME 5243. Advanced Mechanism Design. (; 4 cr. ; A-F or Audit; Periodic Summer)

Analytical methods of kinematic, dynamic, and kinetoelastodynamic analysis and synthesis of mechanisms. Computerized design for function, path, and motion generation based on Burmeister theory. prereq: CSE upper div or grad, 3222 or equiv, basic kinematics and dynamics of machines; knowledge of CAD packages such as Pro-E recommended

ME 5247. Applied Stress Analysis. (; 4 cr. ; A-F or Audit; Spring Odd Year)

Intermediate-level solid mechanics with application to common machine elements such as unsymmetrical beams, non-circular shafts and plates. Stress functions. Introduction to energy methods for stress analysis. Experimental methods for measuring strains and determining related stresses, with lab. prereq: AEM 3031, MatS 2001, ME 3221

ME 5248. Vibration Engineering. (; 4 cr. ; Student Option; Periodic Summer)

Apply vibration theory to design; optimize isolators, detuning mechanisms, viscoelastic suspensions and structures. Use modal analysis methods to describe free vibration of complex systems, relating to both theoretical and test procedures. prereq: CSE upper div or grad, 3281

ME 5281. Feedback Control Systems. (; 4 cr. ; Student Option; Every Fall)

Continuous and discrete time feedback control systems. Frequency response, stability, poles and zeros; transient responses; Nyquist and Bode diagrams; root locus; lead-lag and PID compensators, Nichols-Ziegler design method. State-space modeling/control. Digital implementation. Computer-aided design and analysis of control systems. prereq: 3281

ME 5286. Robotics. (; 4 cr. ; A-F or Audit; Every Spring)

The course deals with two major components: robot manipulators (more commonly known as the robot arm) and image processing. Lecture topics covered under robot manipulators include their forward and inverse kinematics, the mathematics of homogeneous transformations and coordinate frames, the Jacobian and velocity control, task programming, computational issues related to robot control, determining path

trajectories, reaction forces, manipulator dynamics and control. Topics under computer vision include: image sensors, digitization, preprocessing, thresholding, edge detection, segmentation, feature extraction, and classification techniques. A weekly 2 hr. laboratory lasting for 8-9 weeks, will provide students with practical experience using and programming robots; students will work in pairs and perform a series of experiments using a collaborative robot. prereq: [3281 or equiv], [upper div ME or AEM or CSci or grad student]

ME 5312. Solar Thermal Technologies. (; 4 cr. ; A-F or Audit; Spring Odd Year)

Solar radiation fundamentals. Measurement/processing needed to predict solar irradiance dependence on time, location, and orientation. Characteristics of components in solar thermal systems: collectors, heat exchangers, thermal storage. System performance, low-temperature applications. Concentrating solar energy, including solar thermo-chemical processes, to produce hydrogen/solar power systems and photovoltaics. Solar design project. prereq: [3333, CSE upper Div] or grad student

ME 5332. Intermediate Fluid Mechanics. (4 cr. ; A-F or Audit; Every Fall)

Bridge between introductory fluid mechanics and advanced graduate level course. Principles of incompressible and compressible flows, boundary layer theory, and analysis using differential formulations of the governing conservation equations. Analysis of phenomena relevant to the practice of engineering is emphasized through problem solving. prereq: ME 3332, Admitted to upper division/ME major or graduate student

ME 5341. Case Studies in Thermal Engineering and Design. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

Characteristics of applied heat transfer problems. Nature of problem specification, incompleteness of needed knowledge base, accuracy issues. Categories of applied heat transfer problems. prereq: 3333, CSE upper div or grad student

ME 5344. Thermodynamics of Fluid Flow With Applications. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

Conservation of mass, momentum, energy. Relevant thermodynamic properties. Nozzles, diffusers, thrust producers, shocks. Fluid-wall frictional interactions. Wall heat transfer, internal heat release. Temperature recovery. Mass addition. Chemical thermodynamics/applications. prereq: 3333, CSE upper div or grad student

ME 5351. Computational Heat Transfer. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

Numerical solution of heat conduction/ analogous physical processes. Develop/use computer program to solve complex problems involving steady/unsteady heat conduction, flow/heat transfer in ducts, flow in porous media. prereq: 3333, CSE upper div or grad student

ME 5446. Introduction to Combustion. (; 4 cr. ; A-F or Audit; Every Fall)

Thermodynamics, kinetics, energy and mass transport, pollutants in reacting systems. Reactors, laminar and turbulent flames. Ignition, quenching, and flame stability. Diffusion flames. Combustion in reciprocating engines, furnaces, and turbines, with emphasis on internal combustion engine performance and emissions. prereq: 3331, 3332, 3333, CSE upper div or grad student

ME 5461. Internal Combustion Engines. (; 4 cr. ; A-F or Audit; Every Spring)

Basic spark ignition and diesel engine principles, air, fuel-air and actual engine cycles, cycle modeling, combustion and emissions, knock phenomena, air flow and volumetric efficiency, mixture requirements, ignition requirements and performance. Lectures/complementary labs. prereq: CSE upper div or grad student, C or better in [3332, 3333] or 3324

ME 5462. Gas Turbines. (; 4 cr. ; A-F or Audit; Periodic Fall & Spring)

Gas turbine cycles, regeneration, recuperation, reheat, intercooling, combined cycle plants, and thermochemical regeneration. Axial and radial flow compressors and turbines; combustor designs, energy analysis, emissions, and noise. Turbojet, fanjet, turboprop engine performance. Stationary power plants, vehicular propulsion, hybrid vehicles. prereq: 3331, 3332, 3333, CSE upper div or grad student

ME 5666. Modern Thermodynamics. (; 4 cr. ; A-F only; Every Fall & Spring)

Applications of thermodynamics to natural phenomena. Multiscale approach. Student group projects, with undergrads and grad students in same group. Three hours/week classroom instruction, one hour/week project discussion. Project presentations at weeks 8 and 14 are webcast. prereq: 3331 or equiv

Medical Device Innovation (MDI)

MDI 5001. Technical Writing Essentials. (0.5 cr. [max 1 cr.] ; A-F only; Every Fall)

This course lays the groundwork for the Medical Device Innovation capstone as well as aspects of technical writing critical for success in the Medical Device Innovation MS program. prereq: grad MDI major

MDI 5002. Technology Foresight and Forecasting. (2 cr. [max 3 cr.] ; A-F only; Every Fall, Spring & Summer)

Tools and techniques for technology forecasting, assessment, foresight for decision making in medical device industry. Topics include technology dynamics, research and development, portfolio management, and resource allocation. prereq: grad MDI major

MDI 5003. Technology Foresight & Forecasting Analytical Lab. (1 cr. ; A-F only; Every Fall)

This course is a continuation of MDI 5002: Technology Foresight & Forecasting and will afford students with an opportunity to complete the therapeutic area analysis they began in the summer semester, prepare a Powerpoint

presentation in consultation with the instructor, and then present the results of their analysis to a group of MDI faculty. prereq: grad MDI major

MDI 5004. Clinical Foundations of Medical Device Innovation. (3 cr. ; A-F only; Every Fall, Spring & Summer)

Master essential topics to deepen knowledge of Clinical Environment in which products will be conceived, tested, used. Topics include surgical protocols, physician, surgeon, nursing, technical support functions. Medical terminology, anatomy/physiology, ethnology research, Healthcare Law, Medicare/Medicaid, HIPAA requirements. prereq: MDI grad student. Non-MDI graduate students and non-degree graduate students may register for this course with permission of the MDI program.

MDI 5006. Finance, Valuation, and Entrepreneurship. (3 cr. ; A-F only; Every Summer)

Course provides students the opportunity to develop the entrepreneurial skills important in managing design, development, and commercialization of medical devices. Focuses on creating value within the organization, financial methods important to managers in technology-based organizations, and business plan development. Topics include budgeting capital, projecting financial needs, and managing working capital. Registration is limited to MDI students only.

MDI 5008. Quality, Regulatory and Operations Management. (3 cr. ; A-F only; Every Fall, Spring & Summer)

Course provides students with understanding of the global regulatory environment in which the medical device industry operates. Students gain a fundamental understanding of critical quality systems regulations including ISO13485/ISO14971 and their relationship to the FDA's cGMP regulations. Students gain practical experience using tools that are essential to both product development and continuation/sustaining engineering including: design control procedures, FMEA, verification and validation, internal and external (supplier) management and audit methods. prereq: MDI graduate student only

MDI 5010. Product Innovation & Development Management. (2 cr. [max 3 cr.] ; A-F only; Every Spring)

Framework for conceptualization, design, development, commercialization process for medical products. Survey of key steps in innovation, from engineering/business perspective. Cross-functional development of concepts/processes. prereq: Grad MDI student. Non-MDI graduate students and non-degree graduate students may register for this course with permission of the MDI program.

MDI 5012. Medical Industry Strategic Analysis. (3 cr. ; A-F only; Every Fall, Spring & Summer)

Application of macro environmental analysis to medical device industry. Methods reviewed. Industry-relevant case studies/macro environmental analysis of firms of interest. Political, economic, social, technological, legal, ecological factors that impact medical

innovation. Prereq: MDI grad student. Non-MDI graduate students and non-degree graduate students may register for this course with permission of the MDI program.

MDI 5013. Biodesign Practicum I. (2 cr. ; A-F only; Every Fall, Spring & Summer)

First of three part series of practicum courses for MDI program. Focus on teaching innovation steps/process using known/pre-assigned clinical needs as examples in collaboration with Medical Device Center. Essential steps in BioDesign process. Apply knowledge to specific real-world examples. prereq: Grad MDI student

MDI 5014. Biodesign Practicum II. (2 cr. ; A-F only; Every Fall, Spring & Summer)

Second of three part series of practicum courses for MDI program. Clinical environment, including research tools/methods, filtering/translating needs, ideation/prototype development, communication with functional managers, corporate executives/investors. prereq: Grad MDI student

MDI 5015. Biodesign Practicum III. (2 cr. ; A-F only; Every Spring)

Medical Device Innovation Practicum III is the third of a three part series. Students will gain a high-level understanding of essential steps in the BioDesign process related to ideation. The steps of the ideation process will include brainstorming and prototyping of potential solutions, risk assessment, and business strategy development. Students will prepare and present a technical evaluation that articulates the value of their new technology or device to functional managers, corporate executives, and/or investors. prereq: Grad MDI student

MDI 5020. Medical Device Innovation Capstone. (1-2 cr. ; A-F only; Every Spring & Summer)

The MDI capstone is an independent, original, and applied investigation on a relevant subject, problem, or issue in areas of medical device technologies, policy, business, and innovation. All students in the MDI program are required to complete a capstone project as part of the program. Registration is open to MDI students only.

MDI 5050. Interpersonal & Team Effectiveness. (1 cr. ; A-F only; Every Summer)

MDI 5050 builds the context and capability innovation leaders need to manage effective interpersonal relationships and develop high performance teams. Emphasis is placed on foundational principles and practices that help leaders self-manage, engage and influence key stakeholders, and generate shared commitment for team and project success. Students will increase their self-awareness through self and peer feedback and develop an action plan to enhance their leadership effectiveness in both their current work role and their MDI practicum teams. prereq: Grad MDI student

MDI 5051. Leading Innovation & Change. (1 cr. ; A-F only; Every Fall)

MDI 5051 explores the role and differentiating capabilities of outstanding innovation leaders in complex and dynamic environments. Emphasis is placed on principles and practices that help leaders focus on the right strategies, build the organizational capability required to execute a strategy, lead change initiatives and sustain commitment versus compliance among diverse stakeholders. Students will practice improving their team effectiveness and develop a change leadership plan to support implementation of either a current work initiative or their upcoming Capstone Project. prereq: Grad MDI Student and completion of MDI 5050.

MDI 5060. MDI Independent Study. (1-3 cr. ; A-F only; Periodic Fall, Spring & Summer) Independent study in MDI-related topic. prereq: MDI grad student

Medical Industry Leadrshp Inst (MILI)

MILI 3585. Navigating the Healthcare Marketplace with Economic, Social and Policy Lenses. (SOCS; 3 cr. ; A-F only; Every Fall)

The healthcare marketplace constitutes over three trillion dollars in the United States and several trillion spent throughout the world. With growing demand for medical technology and the aging of the population, the scale and complexity of the healthcare supply chain is expected to dramatically increase over the next two decades. The healthcare sector is comprised of several markets for goods and services, including physician services, hospital services, insurance, pharmaceuticals and medical devices, and information technology. At the core of it all is healthcare consumers: us as patients, patient family members and caregivers. This course aims to 1) provide a historical evolution and social transformation of the healthcare sector, 2) critically review the current survey of the health economy, 3) discuss new health policy and reform initiatives and compare to international health system models. The overall goal is to provide an understanding of the scale and interactions between different health sector markets and consumers; to identify market opportunities and policy initiatives, as well as barriers to this expanding and global industry.

MILI 3589. Medical Technology and Society. (TS; 3 cr. ; A-F or Audit; Every Spring)

Course Description Innovations in medical technologies are one of the leading areas of economic growth in the world. Whether new technologies take the form of pharmaceutical, medical device, biotechnology, information technology of some combination of these innovations, the opportunities for both private enterprise and social welfare are substantial. However, these innovations are not without cost, and require reimbursement from either a privately or publicly financed health care delivery system. Thus, the demand for the evaluation of new medical technologies continues to grow as new treatments are developed and health care costs continue to rise. This course aims to

provide knowledge of the skills, data, and methodology required to critically evaluate new medical technologies from a social perspective as well as from a business perspective in order to meet financial investment and regulatory compliance objectives. The course will provide an introduction to the analytic tool kit needed to critically evaluate new medical technologies including: 1. Understanding regulatory pathways such as the FDA approval 2. Understanding the U.S. payment policy & reimbursement for medical technology 3. Assessing unmet needs and the relevant market for the technology 4. Evaluating the social and economic value to convince payers to cover and reimburse the technology 5. Recognizing provider, healthcare organization and market-level factors that influence adoption of new medical technologies. Throughout the course, students will work on team-based hands-on exercises that will provide them gain further understanding of the impact of medical technology from the perspectives of an innovator, a regulator, a payer, a public entity, and consumers of the medical technology including physicians, hospitals, health systems and patients.

MILI 3963. Health Market Analytics. (3 cr. ; A-F only; Every Spring)

This course prepares students to analyze large health care databases with a focus on advanced applications with health insurance claims data. The course is designed to be a STEM offering with the use of statistical programming languages including R, Tableau, and SAS. This course is designed to appeal to students with an interest in developing data science as core skill and already have knowledge of some programming tools, and experience with data manipulation in Excel, SQL, or Access. Prerequisite: We recommend that students have a background in statistics. Consider MKTG 3005 - or STAT 3011 or equivalent course. We also recommend a previously taken class with Excel, R, SAS, SQL, or Access.

MILI 5995. Medical Industry Valuation Laboratory. (; 2 cr. ; A-F only; Every Fall, Spring & Summer)

Interdisciplinary student teams create rapid production market analysis of promising medical technologies/services to determine potential for success in market. Exposure to University innovations, venture firms, inventors. prereq: instr consent

MILI 5999. Independent Study. (; 1-8 cr. [max 16 cr.] ; A-F only; Every Fall, Spring & Summer) Independent study.

Medical Laboratory Sciences Pr (MLSP)

MLSP 1010. Introduction to Medical Laboratory Science. (; 1 cr. ; S-N only; Every Fall, Spring & Summer)

Introduction to medical laboratory sciences. Primary disciplines in field/areas of specialty practice. Career pathways explored in hospital laboratories, public health, research.

MLSP 2015. Medical Laboratory Scientist's Vital Role in Patient Care. (; 2 cr. ; Student Option; Every Fall, Spring & Summer)

Introduction to medical laboratory sciences and its critical role in health care. Discussion of basic functions of organ systems and laboratory tests associated with health and disease. Exploration of the profession through case studies as well as career pathways and specialty areas of practice.

MLSP 3010. Topics in Medical Laboratory Science. (; 1-4 cr. [max 8 cr.] ; Student Option; Periodic Fall, Spring & Summer) Topics shell. See title descriptions.

MLSP 5011W. Professional Issues in the Health Care Community. (WI; 2 cr. ; A-F only; Every Spring & Summer)

Current literature and written discussion to explore the laboratory profession: healthcare systems, professional scope of practice, regulatory and licensure issues, medical ethics, Interprofessional practice models and current topics impacting health care delivery. Focus is on the medical laboratory's crucial role in patient care.

MLSP 5012. Educational Methods and Interprofessional Practice. (; 1 cr. ; A-F only; Every Fall)

Introduction to basic education theory, instructional design, development of lesson goals, objectives, content delivery methods, and assessments. Course also includes exploration of Interprofessional approach to health care. Professional identity and integrity, relationships between professions and those they serve, and teamwork.

MLSP 5013. Scholarly Inquiry and Analysis in Medical Laboratory Sciences. (; 1 cr. ; A-F only; Every Fall & Summer)

Review concepts of scientific inquiry. Major steps of research project. How to select topics, evaluate literature, and construct and test working hypothesis. Analyze and interpret data, report results. Quantitative, qualitative, and mixed methods research designs.

MLSP 5013H. Scholarly Inquiry and Analysis in Medical Laboratory Sciences - Honors. (; 2 cr. ; A-F only; Every Fall & Summer)

Introduction to scientific inquiry. Steps of research projects. Topic selection, literature evaluation, construct and test hypotheses. Analyze and interpret data, report results. Quantitative, qualitative, and mixed methods designs. Students select a clinical case study, research relevant literature, and write a publication quality article.

MLSP 5014W. Laboratory Operations and Management in Health Care Systems. (WI; 2 cr. ; A-F only; Every Fall & Summer)

Operational aspects of medical laboratory fiscal and personnel management laboratory information systems, total quality management, legal aspects of test reporting, government regulatory issues, certification, licensure, accreditation policies. This course meets the campus requirement for an upper division, writing intensive course, in the major.

MLSP 5111. Concepts of Diagnostic Microbiology. (; 3 cr. ; A-F only; Every Fall)
Investigation of pathophysiologic mechanisms of disease for medically significant human bacteria and yeast including epidemiology, pathogenesis, spectrum of disease, antimicrobial susceptibility testing and therapy. Current analytical methods and applications are discussed.

MLSP 5112. Application of Diagnostic Microbiology Principles. (2 cr. ; A-F only; Every Fall)
Application of laboratory methods to identify and treat commonly encountered and clinically significant bacterial and yeast pathogens including specimen processing, culture workup, conventional microscopy, susceptibility testing, and molecular and immunological techniques. Emphasis on aerobic and anaerobic bacteria, mycobacteria, and yeast from various body sites.

MLSP 5113. Advanced Concepts in Diagnostic Microbiology. (3 cr. ; A-F only; Every Spring)
Physiology and pathogenic interactions between man and clinically significant fungal, parasitic, viral, and miscellaneous bacterial agents including the epidemiology, prevention, detection, and treatment of these agents. Current analytical methods and applications are discussed.

MLSP 5211. Fundamentals in Hematology and Hemostasis. (3 cr. ; A-F only; Every Fall)
Anatomy and physiology of hematopoietic and coagulation systems including cell morphology, theory of routine and specialized hematology and hemostasis tests, non-malignant alterations and their etiologies, current therapeutic regimens, and clinical implications. Current analytical methods and applications are discussed.

MLSP 5212. Application of Hematology & Hemostasis Principles. (1 cr. ; A-F only; Every Fall)
Theory, performance, and application of routine and specialized diagnostic procedures. Practice in venipuncture, cell counting, white blood cell differential, red cell, white cell and platelet morphology and interpretation, and coagulation studies. Quality control in diagnostic procedures. Interpretation and correlation of laboratory findings.

MLSP 5213. Diagnostic Hematology. (3 cr. ; A-F only; Every Spring)
Blood and bone marrow in assessment of hematologic function and disease. Focus on normal development, differentiation, and abnormal changes in disease. Group integration of case data including bone marrow collection, interpretation of cytochemical stains, flow cytometry, cytogenetics, molecular diagnostics in hematologic neoplasms and disorders.

MLSP 5214. Advanced Hematology Morphology. (; 1 cr. ; A-F only; Every Spring)
Blood and bone marrow in assessment of hematologic function and presence of disease. Focus on normal development and differentiation, abnormal changes in pathologic

conditions. Practice in bone marrow differential. Mastery in peripheral blood differential and morphology. Integration and interpretation of case history and specialized test data.

MLSP 5311. Fundamental Biomedical Laboratory Techniques. (4 cr. ; A-F only; Every Spring & Summer)
Foundations of biomedical laboratory methods, development of technical skills: safety, lab math, total testing process, method validation, Quality Control and Assurance. Emphasis on documentation and analysis, analytical techniques, microscopy, spectrophotometry, chromatography, electrochemical, immunologic, nucleic acid (molecular) techniques.

MLSP 5312. Body Fluid Analysis. (2 cr. ; A-F only; Every Spring)
Formation and analysis of urine, cerebrospinal, pleural, peritoneal, amniotic, synovial, seminal, and other body fluids, and the correlation to pathological conditions are discussed. Laboratory skills for analysis of the physical, chemical, and microscopic characteristics of body fluids will be developed.

MLSP 5313. Chemical Analysis in Health and Disease. (; 3 cr. ; A-F only; Every Fall)
Correlation of medically significant organic and inorganic substances found in body fluids to pathophysiology of organ systems and metabolic disorders. Topics include electrolytes, blood gases, carbohydrates, lipoproteins, bone disorders, tumor markers, therapeutic drug monitoring, cardiac, hepatic, renal, endocrine, and gastrointestinal disorders. Current analytical methods and applications are discussed.

MLSP 5511. Principles of Immunobiology. (3 cr. ; A-F only; Every Fall & Summer)
Comprehensive exploration of the immune system and functions. Fundamental principles of humoral and cellular immunity. Adaptive immunity, clinical outcomes, hypersensitivity, autoimmunity, cancer, transplantation, immunotherapy, and immunity against infectious diseases. Immunologic testing methods and immune function assessment are discussed.

MLSP 5513. Transfusion Medicine Principles and Methods. (3 cr. ; A-F only; Every Spring)
Investigation of genetics, structure and detection of clinically significant blood group antigens/antibodies. Principles of donor requirements, component therapy, transfusion reactions, hemolytic disease of the fetus and newborn, immune hemolytic anemias, quality systems, and automation in the blood bank.

MLSP 5514. Application of Transfusion Medicine Principles. (2 cr. ; A-F only; Every Spring)
Application of standard serologic techniques to the detection/identification of blood group antigens/antibodies and hemolytic disease of the fetus and newborn. Evaluation of clinically significant serum titers. Performance of direct antiglobulin, compatibility, gel and molecular testing. Utilization protocols. Recognizing/resolving common problems.

MLSP 5701. Clinical Experience in Microbiology. (2 cr. ; S-N only; Every Fall, Spring & Summer)
Practical hands-on experience, application of theory, technical, and affective competencies learned on campus in a microbiology laboratory. Designed to assist students in making transition to clinical practitioner.

MLSP 5702. Clinical Experience in Hematology and Hemostasis. (2 cr. ; S-N only; Every Fall, Spring & Summer)
Practical hands-on experience, apply technical and affective competencies learned on campus in a hematology and coagulation laboratory. Designed to assist students in making transition to clinical practitioner.

MLSP 5703. Clinical Experience in Clinical Chemistry and Urinalysis. (2 cr. ; S-N only; Every Fall, Spring & Summer)
Practical hands-on experience, apply technical and affective competencies learned on campus to a chemistry, urinalysis, and body fluids laboratory. Designed to assist students in making transition to clinical practitioner.

MLSP 5704. Clinical Experience in Transfusion Medicine. (2 cr. ; S-N only; Every Fall, Spring & Summer)
Practical hands-on experience, apply technical and affective competencies learned on campus to a transfusion services laboratory. Designed to assist students in making transition to clinical practitioner.

MLSP 5801. Advanced Practicum Experience in Specialty Disciplines. (1 cr. [max 2 cr.] ; S-N only; Every Fall, Spring & Summer)
Students select an advanced specialty discipline of MLS: cytogenetics, flow cytometry, bone marrow, molecular diagnostics, toxicology, education, management, research, public health, etc.

Medical Physics (MPHY)

MPHY 5040. Introduction to Medical Physics. (3 cr. ; A-F only; Every Spring)
Interactions and energy deposition by ionizing radiation in matter; medical imaging; radiation therapy physics and related radiation safety topics.

MPHY 5138. Research Seminar. (; 1-5 cr. ; S-N or Audit; Every Fall)

MPHY 5139. Seminar and Journal Club. (; 1 cr. [max 2 cr.] ; S-N or Audit; Every Spring)
Current research/topics related to goals/methods of biophysical sciences and medical physics. Lectures/discussions.

MPHY 5160. Advanced Radiation Physics and Dosimetry. (3 cr. ; A-F only; Every Fall)
Interactions and energy deposition by ionizing radiation in matter; concepts, quantities and units in radiological physics; principles and methods of radiation dosimetry.

MPHY 5170. Radiation Therapy Physics I. (; 3 cr. ; Student Option; Every Fall)
Theoretical/experimental aspects of radiological physics. Physical properties of

various ionizing radiations, interactions of ionizing radiations with matter, methods of radiation dose measurement. prereq: instr consent

MPHY 5171. Medical and Health Physics of Imaging I. (3 cr. ; Student Option; Every Fall)

Physics of diagnostic imaging: specification/quantification of image quality, X-ray production, image receptors, magnetic resonance imaging, radiation exposure and protection. Special imaging techniques, including mammography, computed tomography, and direct digital image capture. prereq: 5170 or instr consent

MPHY 5172. Radiation Biology. (3 cr. ; Student Option; Every Fall & Spring)

Effects of ionizing radiation on cells, tissues, and organisms. Biochemical/physiological bases of radiation effects. Biological rationale for radiation therapy practices. prereq: 5170 or instr consent

MPHY 5173. Radiation Therapy Physics II. (3 cr. ; Student Option; Every Spring)

Measurements of radiation quality, output, and depth dose distributions for clinical use. Treatment parameter calculation. Beam modification and shaping. Treatment planning for fixed field and rotational therapy in external beam, intracavitary, and interstitial therapy. Computer applications in treatment planning. Principles/criteria for radiation protection. prereq: 5170 or instr consent

MPHY 5174. Medical and Health Physics of Imaging II. (3 cr. ; Student Option; Every Spring)

Physics of diagnostic imaging. Ultrasound, theoretical/experimental applications of radionuclides in medicine and biology. Counting statistics and imaging systems associated with radiopharmaceuticals, radiation dosimetry, and safety in nuclear medicine. prereq: 5170 or instr consent

MPHY 5177. Radiation Therapy Physics Lab: Radiation Physics Basics. (3 cr. ; A-F only; Every Spring)

This course provides students hands-on experience with Hardware/software used in radiation therapy clinic for physics measurements. prereq: 5170 or concurrent registration is required (or allowed) in 5173 or instr consent

MPHY 5178. Physical Principles of Magnetic Resonance Imaging. (3 cr. ; Student Option; Spring Even Year)

Magnetic resonance imaging physics, spatial selection and encoding, imaging hardware and system engineering. Imaging sequences, signal-to-noise, and contrast.

Medicinal Chemistry (MEDC)

MEDC 5185. Principles of Biomolecular Simulation. (3 cr. ; Student Option; Periodic Fall)

Molecular simulation for students in medicinal chemistry, pharmaceuticals, biochemistry, and chemical physics prereq: Chem 3502 or instr consent

MEDC 5245. Introduction to Drug Design. (3 cr. ; A-F or Audit; Every Fall)

Concepts that govern design/discovery of drugs. Physical, bioorganic, medicinal chemical principles applied to explain rational design, mechanism of action drugs. prereq: Chem

MEDC 5485. Drug Metabolism and Pharmacokinetics. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

Drug Metabolism and Pharmacokinetics is a stand-alone elective that is intended for Medicinal Chemistry graduate students or other students interested in the drug development process. Absorption and pharmacokinetic principles will be supplemented with problem sets. The primary method of instruction is lecture-based with the use of textbook readings and review articles as support for class notes and discussions. A total of 2 non-cumulative exams will be given during the semester. Prerequisites: Organic Chemistry, Med Chem 8001 (may be waived for students from other programs). This course adheres to the items listed in the College of Pharmacy Central Syllabus: https://docs.google.com/a/umn.edu/document/d/1artQ5e1rbzxe8IEtWo7BE8k8snZAEgMMz_QcW8yE/edit?pli=1

MEDC 5494. Advanced Methods in Quantitative Drug Analysis. (2 cr. ; A-F or Audit; Periodic Fall & Spring)

Quantitative methods (HPLC, GC, TLC, immunoassays) for analysis of drugs/metabolites in biological fluids. Advanced techniques such as capillary electrophoresis, supercritical fluid chromatography, GC-MS, LC-MS, tandem mass spectrometry. Chromatographic theory/statistical approaches to method validation.

MEDC 5495. Vistas in Medicinal Chemistry Research. (1 cr. ; S-N or Audit; Every Fall)

Selected topics of contemporary interest in medicinal chemistry

Medieval Studies (MEST)

MEST 1002. Medieval Tales and their Modern Echoes. (GP,LITR; 3 cr. ; Student Option; Every Spring)

Knights of the Round Table, dragon-slayers, magic djinn, pilgrims in Hell. How these stories have been retold in modern fiction, film, and the arts. Texts from Europe and other regions of globe.

MEST 1081W. Martyrs, Monks, Crusaders: World Christianity, 100-1400. (GP,WI,HIS; 4 cr. ; Student Option; Fall Odd, Spring Even Year)

This course surveys the history of Christianity from its status as a persecuted minority religion of the Roman Empire to its dominant role in medieval Europe and Byzantium. We study Christian traditions in Asia and Africa as well as Europe with special attention to the relationship between Christianity and culture in the ancient and medieval world.

MEST 3001. Introduction to Medieval History. (GP,HIS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Europe from decline of Rome to early Renaissance. Politics, institutions, society, economy, and culture of Middle Ages.

MEST 3002. Medieval Tales and their Modern Echoes. (GP,LITR; 3 cr. ; Student Option; Every Spring)

Knights of the Round Table, dragon-slayers, magic djinn, pilgrims in Hell. How these stories have been retold in modern fiction, film, and the arts. Texts from Europe and other regions of globe.

MEST 3009. Medieval Art. (AH; 3 cr. ; Student Option; Every Fall & Spring)

Medieval art in Western Europe, from around 1000 to the mid-14th century. Works from France, Spain, Germany, Italy, and England examined in their historical context. Cross cultural relations, development of completely new forms of art and techniques, and the processes of realization.

MEST 3072. Witchcraft, Possession, Magic: Concepts in the Atlantic Supernatural, 1500-1800. (LITR; 3 cr. ; Student Option; Every Spring)

Salem is what typically comes to mind when we think of witchcraft, and our class will indeed focus on the 1692 trials and their aftermath. But we will also range more broadly, exploring witchcraft in the early Atlantic world by paying special attention to the roles played by magic and possession. A fundamental aspect of this course, moreover, is its distinction as a literary one. This is not a class about how witchcraft, possession, and magic "change over time" but a class about their representations. From the beginning, we will be deeply attentive to the fact that each and every "evidence" of witchcraft, possession, or magic is an act of representation in the first place. As literary historians, we will move from Europe to the Americas, looking at how invocations and accusations of witchcraft traveled between the 16th and late-18th centuries. More importantly, as literary critics we will trace and examine depictions of witchcraft and the idea of the witch across four interrelated socio-historical contexts: the Protestant Reformation in 16th-century Europe; slave medicine and obeah in the Caribbean; possession and the "invisible world" in Puritan Massachusetts; and revivalism in 18th-century New England. By the end of this course, you will be able to: interpret literary texts and understand the literary aspects of historical documents; place literature in relation to its historical and cultural contexts; locate and evaluate relevant scholarship and cultural commentary; and formulate and communicate a focused and stylistically appropriate that supports its claims with textual evidence, especially through close and critical reading.

MEST 3081W. Martyrs, Monks, Crusaders: World Christianity, 100-1400. (GP,WI,HIS; 4 cr. ; Student Option; Fall Odd, Spring Even Year)

This course surveys the history of Christianity from its status as a persecuted minority religion of the Roman Empire to its dominant role in medieval Europe and Byzantium. We study Christian traditions in Asia and Africa as well as

Europe with special attention to the relationship between Christianity and culture in the ancient and medieval world.

MEST 3101. Knights and Pilgrims in Medieval Literature. (LITR; 3 cr. ; A-F or Audit; Fall Odd Year)

Medieval writers and readers were fascinated by stories about knights and about pilgrims. In this course, we study some of the best-known and most compelling narratives and poems from the Middle Ages. Although written hundreds of years ago, these literary works speak to us of the human desire to strive for meaning and excellence, to work toward shared ideas of community, and to explore worlds beyond the sometimes narrow confines of home. Knights and pilgrims appear as central figures in a wide range of literary works. Some of the texts are humorous, like Chaucer's *Canterbury Tales* in which pilgrims, from social classes ranging from knights to tradespeople, travel together and tell stories. Some are exciting and emotional, like Malory's retelling of stories about King Arthur and his knights. Others provide us with explorations of longing for change: in these works people search for new kinds of social and spiritual life such as Margery Kempe's autobiographical account of her experiences as a pilgrim to Rome and the Holy Land. Still others, such as Langland's *Piers Plowman*, which incorporates pilgrimage and chivalric quest, critique and explode static ideas about social problems such as poverty and hunger. Some draw our attention to the dangers and turmoil involved in love and relationships, such as Marie de France's courtly, aristocratic lays: Marie's knights and ladies take up the search for love and meaning. Some, finally, invite us to imagine ourselves in mysterious otherworlds, such as Mandeville's *Travels* and Sir Orfeo, both of which focus on travel and self knowledge. These exciting and challenging works continue to speak to us about the quest to pursue ideals and to change the world and ourselves

MEST 3102. Chaucer. (3 cr. ; A-F or Audit; Every Fall & Spring)

Major/representative works written by Chaucer, including *The Canterbury Tales*, *Troilus and Criseyde*, and the dream visions. Historical, intellectual, and cultural background of the poems. Language, poetic theory, form.

MEST 3206. Sex, Murder, and Bodily Discharges: Purity and Pollution in the Ancient World. (3 cr. ; Student Option; Every Spring)

"Dirt is dangerous" wrote Mary Douglas more than 50 years ago in her groundbreaking study, *Purity and Danger: An Analysis of Concept of Pollution and Taboo*. Her work has been influential in ancient Near Eastern and Mediterranean studies when dealing with issues of sacred/profane, purity/pollution, and ritual sacrifice and purification. Douglas' work provides a framework within which to understand ancients' thinking about these concepts that range from the sacredness of space and of bodies to perceived pollutions caused by bodily leakage or liminal stages of life and death. In this course, we will examine

Douglas' theory in light of ancient evidence, with special attention to ancient Israelite literature (the Tanakh or Old Testament) and ancient Jewish literature (the Dead Sea Scrolls), but we will also analyze other ancient Near Eastern and Mediterranean examples of purity and pollution (from epigraphical and documentary evidence).

MEST 3271. The Viking World: Story, History, and Archaeology. (3 cr. ; Student Option; Periodic Fall)

Viking society and expansion of Viking influence abroad. Viking impact on Western Europe; interactions with Slavic lands; settlement of North Atlantic islands; and Western Europe's impact on Scandinavian lands. Analyzes archaeological, historical, linguistic, and numismatic evidence.

MEST 3426. Piracy in the Mediterranean: The World of Merchants and Pirates. (GP,HIS; 3 cr. ; Student Option No Audit; Spring Odd Year)

This course will use the vehicle of piracy and privateering in the Mediterranean world to explore issues of cross-cultural interaction, global connections, and identity from earliest times when people took to the sea to the Middle Ages through the early modern era, 500-1800. Wherever there was trade, wherever there was movement on the seas, there was piracy. Recent scholarship on the Mediterranean has focused on connectivities, micro-environments, the uniqueness of islands, and various climatic spheres in a geographic tradition that follows the path-breaking work of Fernand Braudel. This course will consider the urban and rural dimensions of the Mediterranean region as they relate to the history of merchants and pirates. Finally, the political and military aspects of Mediterranean history will be examined. There was a continuum from piracy to privateering to war. Students should gain a deeper understanding of a region that continues to fascinate us today.

MEST 3502. Scandinavian Myths. (GP,LITR; 3 cr. ; Student Option; Fall Odd, Spring Even Year)

Literary and cultural investigation of the popular beliefs, myths, and religion of the medieval Scandinavians; the interaction of paganism and Christianity; the reflection of myths in Old Scandinavian literature and art. All readings in English.

MEST 3606. Christians, Muslims, and Jews in the Middle Ages. (GP,HIS; 3 cr. ; Student Option; Fall Even, Spring Odd Year)

A Pew Research survey of the global religious landscape in 2010 found 2.2 billion Christians (31.5% of the world's population), 1.6 billion Muslims (23.2%), and 14 million Jews (.2%). In this class, we explore how the histories of these religious communities became deeply entangled in an age of diplomacy, trade, jihad, and crusade.

MEST 3611. Medieval Cities of Europe: 500-1500. (GP,HIS; 3 cr. ; Student Option No Audit; Every Fall & Spring)

European cities changed from Roman times through the urban nadir of the Early Middle

Ages to the flowering of cities in the High and Late Middle Ages. We explore planned towns, ad hoc developments, revived Roman sites, and economic, political, cultural, and sensory elements of city life. Students design a medieval city using Arc.GIS and StoryMap. Contact the instructor for more information.

MEST 3613. History of the Crusades.

(GP,HIS; 3 cr. ; Student Option; Every Fall, Spring & Summer)
Crusading spirit in Europe. Results of classic medieval crusades ca 1095-1285. States established by crusaders in Near East. Internal European crusades. Chronological prolongation of crusading phenomenon.

MEST 3616. The Hundred Years War: France and England in the Middle Ages. (HIS; 3 cr. ; Student Option No Audit; Periodic Fall)

Politics, society, and culture in medieval France from the end of the Carolingians to the end of the Hundred Years War.

MEST 3617. Pagans, Christians, Barbarians: The World of Late Antiquity. (GP,HIS; 3 cr. ; A-F or Audit; Fall Odd Year)

Between classical and medieval, pagan and Christian, Roman and barbarian, the late antique world was a dynamic age. Course focuses on the Mediterranean region from the 2nd to the mid-7th century exploring such topics as the conversion of Constantine, the fall of Rome, barbarian invasions, the spread of Christianity, and the rise of Islam.

MEST 3993. Directed Studies in Medieval Studies. (; 1-3 cr. ; Student Option; Every Fall, Spring & Summer)

Directed study with one of core faculty members of Medieval Studies program. prereq: Previous work in a medieval studies discipline, instr consent

MEST 4043. Romans, Anglo-Saxons and Vikings: Archaeology of Northern Europe. (3 cr. ; Student Option; Periodic Spring)

Archaeology of the British Isles, Scandinavia, and northern continental Europe, from the Romans through the Viking period. Themes to be examined include social and political organization, cross-cultural interactions, art and symbolism, and religion and rituals.

MEST 4612. Old English I. (3 cr. ; Student Option; Periodic Fall)

"I am learning Anglo-Saxon and it is a vastly superior thing to what we have now" (Gerard Manley Hopkins, letter to fellow poet Robert Bridges, 1882). This course is an introduction to the rich language and literature of Anglo-Saxon England (ca. 500-1100). "Old English," or as it is sometimes known, "Anglo-Saxon," is the earliest form of the English language; therefore, the primary course goal will be to acquire the ability to read Old English texts in the original. No previous experience with Old English or any other language is necessary or expected; undergraduates and graduate students from all departments are welcome. For graduate students in English, Old English I may count for the rhetoric/language/literacy distribution area. This course also fulfills the literary theory/linguistic requirement for the

undergraduate English major. A knowledge of Old English will allow you to touch the most ancient literary sensibilities in the English tradition; these sensibilities are familiar and strange at the same time, as we sense our deep cultural connection to these texts across the centuries, yet also find that the past is a strange place indeed. The power of Old English literature has profoundly influenced authors such as Tennyson, Pound, Graves, Wilbur, Hopkins, Gunn, Auden, Seamus Heaney, C.S. Lewis, and of course, J.R.R. Tolkien.

MEST 4613. Old English II. (3 cr. ; Student Option; Periodic Spring)
The second semester of Old English is devoted to a full translation and study of the great Anglo-Saxon epic "Beowulf." J.R.R. Tolkien wrote of the poem that "its maker was telling of things already old and weighted with regret, and he expended his art in making keen that touch upon the heart which sorrows have that are both poignant and remote." "Beowulf" is an exciting tale of strife and heroism; but it is also a subtle meditation upon the character of humanity as it struggles to understand the hazards of a harsh world, the inscrutability of fate, and the nature of history itself. "Beowulf" is not only important for a detailed understanding of Anglo-Saxon culture, but it is also a significant and moving poetic achievement in the context of world literature. We will read and translate the poem in the original Old English; thus ENGL 4612 (or a similar course resulting in a basic reading knowledge of Old English) is a prerequisite. "Beowulf" has been the object of intensive scholarly study; we will delve into the debates over the poem's date, genesis, manuscript and historical context and critical interpretation. Spending an entire semester studying one complex work can be an invaluable experience. Please contact the instructor for any questions concerning the prerequisite.

MEST 5271. The Viking World: Story, History, and Archaeology. (3 cr. ; A-F or Audit; Periodic Fall & Spring)
Viking society and expansion of Viking influence abroad. Viking impact on Western Europe, interactions with Slavic lands, settlement of North Atlantic islands, Western Europe's impact on Scandinavian lands. Analyzes archaeological, historical, linguistic, and numismatic evidence.

MEST 5610. Advanced Topics in Medieval Studies. (; 3-4 cr. [max 15 cr.] ; Student Option; Every Fall & Spring)
From late antiquity through end of Middle Ages (circa 300-1500 A.D.). Topics specified in Class Schedule. prereq: One yr work in some area of Middle Ages, reading knowledge of appropriate language.

MEST 5701. Old Norse Language and Literature. (3 cr. ; Student Option; Every Fall)
Acquisition of a reading knowledge of Old Norse; linguistic, philological, and literary study of Old Norse language and literature.

MEST 5993. Directed Studies in Medieval Studies. (; 1-3 cr. [max 6 cr.] ; Student Option; Every Fall & Spring)

Directed study with one of the core faculty of medieval studies program. prereq: One yr work in some area of Middle Ages, reading knowledge of appropriate language, instr consent

Microbial Engineering (MICE)

MICE 5035. Personal Microbiome Analysis. (3 cr. ; Student Option; Every Spring)
Personal Microbiome Analysis, an introduction to the computational exploration and analysis of your inner microbial community, also known as your microbiome. In this course, you will have the opportunity to explore your own microbiome using visualization and analysis tools. Sequencing your own microbiome is encouraged but not required for the course. Introductory biology or genetics is recommended: BIOL 1009, GCD 3022 or BIOL 4003.

MICE 5355. Advanced Fermentation and Biocatalysis Laboratory. (1 cr. ; S-N only; Every Spring)
Methods in industrial microbiology, lab, and pilot scale fermentation/biocatalysis engineering. Lab experiments carried out in fermentation pilot plant. Operation of bench/pilot scale bioreactors. Designing bioreactors. Process optimization, monitoring, and control. Scale-up experiments, data analysis. prereq: [3301 or BIOL 3301], [grad student in microbial engineering or upper-div major in [microbiology or chem engineering or biochemistry]], instr consent

Microbiol/Immun/Cancer Biology (MICA)

MICA 5000. Practicum: Teaching. (; 0 cr. ; No Grade Associated; Every Fall & Spring)
Supervised experience in lab instruction. Use of instructional materials, tests/measurement.

Microbiology (MICB)

MICB 3301. Biology of Microorganisms. (5 cr. ; A-F only; Every Fall, Spring & Summer)
Taxonomy, anatomy, physiology, biochemistry, pathogenesis, immunology, ecology of microbes. Molecular structure in relation to bacterial function/disease. Includes lab. prereq: [Biol 1961 and Biol 2003] or Biol 1009 or instructor permission

MICB 3302. Biology of Microorganisms Laboratory. (2 cr. ; A-F only; Every Fall, Spring & Summer)
This is a hands-on laboratory that together with MICB 3303 will provide an extensive overview of the microbial world highlighting the structure, function, and diversity of microorganisms including bacteria, fungi, protists, and viruses. In laboratory, students will get hands-on experience with the techniques, methods, protocols, and instrumentation for the study of microorganisms that will coincide with what is taught in the lecture component. The combination of MicB 3303 (lecture only) and MicB 3302 (lab only) is equivalent to MicB 3301. No credit if credit already received

for MicB 3301. MicB 3303 (lecture) is a prerequisite for MicB 3302 (lab only). Students who desire both should register for MicB 3301.

MICB 3303. Biology of Microorganisms (without laboratory). (3 cr. ; A-F only; Every Fall, Spring & Summer)
Taxonomy, anatomy, physiology, biochemistry, pathogenesis, infectious disease, immunology, ecology of microbes. Molecular structure in relation to function of bacteria, fungi, protozoa, viruses. prereq: Biol 2003 or Biol 1009 or instructor permission

MICB 4131. Immunology. (3 cr. ; Student Option; Every Fall)
Molecular, genetic and cellular basis for innate and adaptive immune responses. The immune systems role in; transplantation, autoimmune disease, cancer immunotherapy, vaccinology, acquired and genetic immunodeficiencies. prereq: Biol 2003 or Biol 1009 and [Junior or senior]

MICB 4151. Molecular and Genetic Bases for Microbial Diseases. (3 cr. ; Student Option; Every Spring)
Genetic basis of microbial pathogenesis. Effect of gene transfer and regulation on evolution of microbial pathogens and capacity to colonize, induce disease. Biochemical and cellular interactions between bacteria and human hosts. prereq: MICB 3301 AND [BIOL4003 OR PMB4131 OR Molecular Biology (BIOL 3020 or BIOL 3025 or BIOL 3015)]

MICB 4161W. Eukaryotic Microbiology. (WI; 3 cr. ; A-F only; Every Fall)
Cell biology of higher eukaryotes, animal/plant pathogenesis, evolution, industrial microbiology. Tetrahymena/Chlamydomons/Paramecium/Toxoplasma/Aspergillus/Neurospora. prereq: Biol 4003

MICB 4171. Biology, Genetics, and Pathogenesis of Viruses. (3 cr. ; A-F only; Every Spring)
Structure, attachment, entry. Genome replication/mRNA production by RNA viruses. Reverse transcription. DNA virus templates. Replication of DNA virus genomes. Processing of viral pre-mRNA. Translational control. Assembly, host defense, tumor viruses, pathogenesis, HIV, antivirals. prereq: Biol 2003 and Biol 4003 and [MicB 4131 or instructor permission]

MICB 4215. Advanced Laboratory: Microbial Physiology and Diversity. (; 3 cr. ; A-F or Audit; Every Fall)
Isolation/cultivation of wide variety of bacteria. Physiological experiments illustrate characteristic features of microorganisms. prereq: MICB 3301 AND Microbiology major or minor; priority for seats from waitlist to graduating Microbiology majors

MICB 4225W. Advanced Laboratory: Microbial Genetics. (WI; 3 cr. ; A-F only; Every Fall)
Yeast is used as a model organism for microbial molecular genetic principles and methods such as ultraviolet mutagenesis, isolation and creation of mutant strains, plasmid design and construction, PCR,

Sanger sequencing, gene replacement, and bioinformatics. Students will design and execute their own independent research project using hands-on experimentation with advanced molecular methods prereq: MicB 3301 and [Biol 4003 or permission]; priority for seats from waitlist to graduating Microbiology majors

MICB 4235. Advanced Laboratory: Virology, Immunology, and Microbial Genetics. (3 cr. ; Student Option; Every Spring)

Techniques, experimental methods in microbial genetics, immunology. Virology used to study microbes/interactions with host. prereq: Micb 3301 and [BIOC 3022 or Bioc 4331] and [MicB 4171 prereq or concurrent registration or permission]

MICB 4793W. Directed Studies: Writing Intensive. (WI; 1-7 cr. ; S-N only; Every Fall, Spring & Summer)

Writing Intensive Directed Studies is an individual-study, literature-based investigation in which the student is mentored directly by a faculty member. One main feature of this course is that the student will receive writing instruction and the written output of the course will be revised during the semester. The project needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, how writing instruction will take place, a timeline for when student writing will be handed in and how it will be assessed, methodology to be used by the student, and how assessment of learning will be conducted by the mentor. Additional oversight is established for this course near the end of the semester the written output is submitted to the DUGS for the major. The DUGS is responsible to determine that the writing meets standards set by the CBS Education Policy Committee for quality of writing, appropriate citation of literature, well-constructed figures, tables, and legends (if present), appropriate use and interpretation of statistics (if present), conclusions that are supported by evidence, and well-formatted references. This course is graded S/N and approval of the DUGS is required before a grade of S can be given by the faculty mentor. prereq: department consent, instructor consent, no more than 7 credits of 4793, 4794, 4993W, 4994W counts towards CBS major requirements.

MICB 4794W. Directed Research: Writing Intensive. (WI; 1-7 cr. [max 15 cr.] ; S-N only; Every Fall, Spring & Summer)

Writing Intensive Directed Research is an individual-study, laboratory or field research experience in which the student is mentored directly by a faculty member. This course is intended for students who already have initiated a research project in the lab of the mentor and already have results. In this course the student will receive writing instruction. The written output usually is in the form of a scientific paper describing the results of the student's project. Written output of the course

must be revised during the semester and a schedule for writing, assessment and revision needs to be in place at the beginning of the semester. The project needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the Director of Undergraduate Studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, how writing instruction will take place, a timeline for when student writing will be handed in and how it will be assessed, methodology to be used by the student, and how assessment of learning will be conducted by the mentor. Additional oversight is established for this course - near the end of the semester the written output is submitted to the DUGS for the major. The DUGS is responsible to determine that the writing meets standards set by the CBS Education Policy Committee for quality of writing, appropriate citation of literature, well-constructed figures, tables, and legends (if present), appropriate use and interpretation of statistics (if present), conclusions that are supported by evidence, and well-formatted references. The DUGS can call for a final revision before a grade is given. This course is graded S/N and approval of the DUGS is required before a grade of S can be given by the faculty mentor. prereq: department consent, instructor consent, no more than 7 credits of 4793, 4794, 4993W, 4994W counts towards CBS major requirements.

MICB 4993. Directed Studies. (; 1-7 cr. [max 36 cr.] ; S-N only; Every Fall, Spring & Summer)

Directed Studies is an individual-study, literature-based investigation in which the student is mentored directly by a faculty member. The topic for the course needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, methodology to be used, and how the assessment of learning will be conducted. prereq: department consent, instructor consent, no more than 7 credits of 4793, 4794, 4993W, 4994W counts towards CBS major requirements.

MICB 4994. Directed Research. (1-7 cr. [max 28 cr.] ; S-N only; Every Fall, Spring & Summer)

Directed Research is an individual-study, laboratory or field investigation course. The research topic needs to be agreed on by both the student and the faculty mentor and explained in a Research/Directed Studies contract. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, methodology to be used, and how the assessment of learning will be conducted. prereq: department consent, instructor consent, no more than 7

credits of 4793, 4794, 4993W, 4994W counts towards CBS major requirements.

Military Science (MIL)

MIL 1003. Military Science I Leadership Lab. (1 cr. ; A-F only; Every Fall)

Basic skills. Preview advanced course. Team-building leadership skills. prereq: concurrent registration is required (or allowed) in 1201

MIL 1101. Introduction to the Army and Critical Thinking. (; 1 cr. ; A-F only; Every Fall)

Introduces cadets to the personal challenges and competencies that are critical for effective leadership. Cadets learn how the personal development of life skills such as critical thinking, goal setting, time management, physical fitness, and stress management relate to leadership, officership, and the Army profession.

MIL 1102. Introduction to the Profession of Arms. (; 1 cr. ; A-F only; Every Spring)

Leadership fundamentals such as setting direction, problem-solving, listening, presenting briefs, providing feedback, and using effective writing skills. Cadets explore dimensions of leadership attributes and core leader competencies in the context of practical, hands-on, and interactive exercises.

MIL 1104. MS I One Credit Lead Lab. (; 1 cr. ; A-F only; Every Spring)

Army ROTC leadership and personal development lab. prereq: concurrent registration is required (or allowed) in 1102

MIL 1201. Leadership and Decision Making. (; 2 cr. ; A-F only; Every Fall)

The outcomes of MIL 1201 are demonstrated through Critical and Creative Thinking and the ability to apply Troop Leading Procedures. Comprehension of the officer's role in leading change by applying innovative solutions to problems in concert with the principles of mission command. The Army profession is also stressed through leadership forum and a leadership self-assessment. prereq: concurrent registration is required (or allowed) in lab

MIL 1202. Army Doctrine and Team Development. (; 2 cr. ; A-F only; Every Spring)

MIL 1202 begins the journey to understand and demonstrate cross-cultural competencies as they relate to Army doctrine and how they apply in a combatant commander's engagement strategies. Army values, teamwork, and Warrior Ethos and their relationship to the Law of Land Warfare and philosophy of military service are also stressed. The ability to lead and follow is also covered through team building exercises in small units up to squad level. prereq: Must enroll in lab.

MIL 1203. MS II One Credit Lead Lab. (; 1 cr. ; A-F only; Every Fall)

Army ROTC leadership and personal development lab. prereq: concurrent registration is required (or allowed) in 1201

MIL 1204. MS II One Credit Lead Lab. (; 1 cr. ; A-F only; Every Spring)

Army ROTC leadership and personal development lab. prereq: concurrent registration is required (or allowed) in 1202

MIL 3301. Training Management and Warfighting Functions. (; 3 cr. ; A-F only; Every Fall)

MIL 3301 includes introduction to squad/platoon tactical operations using troop leading procedures and battle drills to achieve the assigned mission within the commander's intent. Through the introduction of the leadership lab practicum the cadets learn to plan, resource, and execute training of subordinates within the leadership labs. This experience gives the cadet the opportunity to work on their teamwork and leadership skills in a hands-on performance-oriented environment. prereq: Two yrs of ROTC or equiv established by U.S. Army, must see Army ROTC dept officials, concurrent registration is required (or allowed) in lab

MIL 3302. Applied Leadership in Small Unit Operations. (; 3 cr. ; A-F only; Every Spring)

MIL 3302 balances adaptability and professional competence building on the tactical lessons introduced in MIL 3301. Adaptability concepts introduced include analysis of complex problems, creating solutions that exhibit agile and adaptive thinking, analysis of the environment and formulation of solutions to tactical and organizational problems. prereq: Two yrs of ROTC or equiv established by U.S. Army, must see Army ROTC dept officials, concurrent registration is required (or allowed) in lab.

MIL 3303. MS III One Credit Lead Lab. (; 1 cr. ; A-F only; Every Fall)

Army ROTC leadership and personal development lab. prereq: Completion of basic courses, concurrent registration is required (or allowed) in 3301

MIL 3304. MS III One Credit Lead Lab. (; 1 cr. ; A-F only; Every Spring)

Army ROTC leadership and personal development lab. prereq: Completion of basic courses, concurrent registration is required (or allowed) in 3302

MIL 3401. The Army Officer. (; 3 cr. ; A-F only; Every Fall)

MIL 3401 places primary emphasis on officership with the MS IV cadets, who are the educational main effort within the Battalion. MIL 3401 and 3402 together refine and ultimately complete the cadet-to-commissioned officer transition. Mission command and ethics are stressed to assist the cadet in further embracing their role as a future army officer. prereq: Completed all other military courses or Army equiv, concurrent registration is required (or allowed) in lab

MIL 3402. Company Grade Leadership. (; 3 cr. ; A-F only; Every Spring)

MIL 3402 is the culmination of a four-year sequential, progressive, challenging developmental leadership experience. It is during this final semester that the cadet is undergoing final preparation for the duties and responsibilities of a commissioned officer along

with their integration into the army. Emphasis is placed on critical knowledge, skills, abilities and competency skills newly commissioned officers will need to succeed in their first unit of assignment, and the modern operating environment where they will be expected to plan, prepare, execute, and assess platoon-level training strategies and more to enable mission accomplishment. prereq: Completion of all other military courses or Army equiv, concurrent registration is required (or allowed) in lab

MIL 3403. MS IV One Credit Lead Lab. (; 1 cr. ; A-F only; Every Fall)

Army ROTC leadership and personal development lab. prereq: Completion of basic courses, concurrent registration is required (or allowed) in 3401

MIL 3404. MS IV One Credit Lead Lab. (; 1 cr. ; A-F only; Every Spring)

Army ROTC leadership and personal development lab. prereq: Completion of basic courses, concurrent registration is required (or allowed) in 3402

MIL 3501. Marksmanship Training Programs. (; 2 cr. ; A-F only; Every Fall & Spring)

Uses a laser-simulated Army rifle to train on how to fire weapons accurately. Students learn how to operate the computer-based simulation system as well as practical exercises of firing at targets on a video screen.

MIL 3502. Marksmanship Training Programs. (; 2 cr. ; A-F only; Every Fall & Spring)

Basic rifle marksmanship skills. Students instruct/train other students.

MIL 3555. Applied Military Learning. (; 0-3 cr. [max 6 cr.] ; A-F only; Periodic Fall)

This course is only offered to Military Science level 5 with special permission. This course allows you the opportunity to apply the tactical and technical skills you have learned throughout your Military Science classes and Military Experience to assist in the duties of the cadre. prereq: Must successfully complete or receive constructive credit for all Military Science classes: MIL 1101, MIL 1102, MIL 1201, MIL 1202, MIL 3301, MIL 3302, MIL 3401, MIL 3402

MIL 3970. Military History. (; 3 cr. ; A-F only; Every Fall & Spring)

General overview of all wars fought by United States from the 18th century Revolutionary War to today's War on Terror. Military tactics as well as war's impact on society. Two exams, two papers to write, readings.

Mortuary Science (MORT)

MORT 2171. Introductory Anatomy. (3 cr. ; A-F only; Every Fall, Spring & Summer)

Study of the human body systems and functions in a systemic approach with an emphasis placed on providing a foundation for funeral service preparation in the areas of embalming and restorative art. Systems covered include integumentary, skeletal,

muscular, nervous, endocrine, cardiovascular, lymphatic, respiratory, digestive, urinary, and reproductive. Pre- / co-requisite: Medical Terminology

MORT 3009. Introductory Accounting. (3 cr. ; A-F only; Periodic Fall, Spring & Summer)

This course is an introduction to the basic principles of financial and cost accounting with an emphasis on small business and funeral home operations. Accounting provides financial information about a business to owners, creditors, managers, and other interested parties that need to make various business decisions. This course covers the preparation and analysis of financial statements, accounting for sales and accounts receivable, accounting for purchases and accounts payable, cash flow and working capital management, payroll computations, inventory management, investment in fixed assets, debt and equity capital management, and valuation of business and assets, as well as an introduction to cost accounting concepts including cost behavior, basic budgeting, and cost-revenue analysis.

MORT 3012W. Organization and Management of Funeral Business. (WI; 3 cr. ; A-F only; Every Fall)

How to create an entrepreneurial marketing strategy and business plan for a small funeral business. Various forms of ownership. Financial requirements, risk management, human resources management. Theory supplemented with practical information, real-life experiences. Prerequisites: Diversified Core Mathematical Thinking, ACCT 2050: Introduction to Financial Reporting

MORT 3014. Funeral Service Rules and Regulations. (2 cr. ; A-F only; Every Fall, Spring & Summer)

Licensing/government regulations, compliance with regulations of state/federal regulatory agencies, cemetery and crematory rules and regulations, and Federal Trade Commission Funeral Practice Rule for the funeral industry.

MORT 3016. Funeral Service Marketing and Merchandising. (; 3 cr. ; A-F or Audit; Every Spring)

Introduction to key elements of funeral service merchandising/marketing. How to manage delivery process. Theory supplemented with contemporary product offerings, merchandising techniques.

MORT 3018. Funeral Service Practice I. (3 cr. ; A-F only; Every Fall)

A study of the practice of funeral service, the conduct of funerals in the diverse American society; various survivor benefits including Social Security, Veterans benefits, active military benefits, and others; private and National cemetery familiarization, including eligibility; merchandise familiarization

MORT 3019. Funeral Service Practice II. (3 cr. ; A-F only; Every Spring)

The purpose of this course is to provide students with a multidisciplinary perspective on information, issues and problems associated with, and relating to, the contemporary practice of funeral service. Building upon the

foundational theories, definitions and activities presented in complementary mortuary science courses, this class is designed to deepen students' understanding of how funeral service is practiced in a variety of different contexts today from the perspectives of multiple stakeholders.

MORT 3021W. Funeral Service Psychology and Arrangements Theory. (WI; 3 cr. ; A-F only; Every Fall & Spring)

This course instructs students in grief psychology principles as they relate to funeral service, as well as principles underlying successful funeral arrangements. Coursework includes psychology, counseling, and communication principles, as well as an introduction to helping skills, communication techniques, and other tools to conduct funeral arrangements with diverse client families. Particular emphasis is placed on adapting these tools to a variety of arrangement factors, including disposition type, family dynamics, veteran status, and religious affiliation. Coursework is delivered and assessed via readings, lectures, in-class role-playing, writing-to-learn activities, quizzes, tests, discussions, qualitative research, and reflective writing assignments. Prerequisites: WRIT 1301, PSY 1001, COMM 3401 or COMM 3402

MORT 3022W. Funeral Service Arrangements Laboratory. (WI; 4 cr. ; A-F only; Every Fall & Spring)

This course provides students with practical tools to conduct funeral arrangements with diverse client families. Coursework includes application of MORT 3021W material, group discussion, and laboratory-based application of skills. Each student will conduct a simulated arrangement with a community volunteer based on real-world arrangement scenarios. Delivery and assessment of coursework will be via readings, lectures, in-class role-playing, quizzes, tests, writing-to-learn activities, and reflective writing assignments. Prerequisites: MORT 3021W, MORT 3014

MORT 3025. Business Law. (; 3 cr. ; A-F only; Every Fall)

Principles of business law relating to funeral service. U.S. judicial system. Contracts. Sales. Bailments (including carriers). Commercial paper. Agency. Employment. Business organization.

MORT 3031. Funeral Service Law. (; 2 cr. ; A-F only; Every Spring)

Duty of burial. Right to control funeral arrangements. Final disposition, liability for funeral expenses. Torts involving dead human body and the funeral director. Wills. Estates. Probate. Prerequisites: MORT 3025: Business Law

MORT 3048. Microbiology and Pathology for Funeral Service. (4 cr. ; A-F only; Every Fall, Spring & Summer)

Basic principles of microbiology/pathology for funeral service, including bacteriology, rickettsiology, virology, protozoology, mycology, methods of transmission of infectious disease. Control procedures for protection of public health as related to

funeral practice. Scientific focus on causes of disease, mechanisms of disease development, pathways by which morphologic changes occur.

MORT 3051. Restorative Art. (; 3 cr. ; A-F only; Every Fall & Spring)

In Restorative Art 3051, we will consider the importance of, and techniques for, creating an acceptable physical appearance upon deceased persons for the benefit of the survivors. Over the semester, we will study a variety of topics for the purpose of building skills in the area of restorative art, including anatomical terminology; skeletal structures of the face and cranium; musculature of the face and neck; photographic interpretations; classical proportions of the face and cranium; physiognomy of the face and cranium; essential components of the nose, mouth, eyes, and ears; various modeling techniques; proper placement guides for the restoration of damaged structures and/or missing features; treatments and techniques for both general and specific injuries; color theory, and cosmetology related to the funeral profession. Pre / Co-requisite: MORT 3061 Embalming Theory Prerequisites: MORT 2171 Introductory Human Anatomy; MORT 3171 Human Anatomy Laboratory

MORT 3061. Embalming Theory. (; 3 cr. ; A-F only; Every Fall & Spring)

This is an introductory course which covers the phenomenon of death of the human body, and the fundamental procedures associated with the practice of the art and science of embalming. Embalming is the process of chemically treating the dead human body in order to: (1) reduce the presence and growth of microorganisms; (2) retard organic decomposition; and (3) restore an acceptable physical appearance to the decedent. The semester begins with such topics as personal and public health considerations, and government regulations that are applicable to the embalming process and the fundamentals of embalming. Next are the topics of terminology and identification of embalming instruments, the importance of embalming analysis, and the completion of embalming reports. We advance to vessel location and selection, and procedures for preparing the body before the embalming process begins. We move on to the subject of embalming chemicals, with our lectures and discussions focusing on the reasons why we use various quantities and types of chemicals for each individual case. The course continues with presentations focusing on treatments for embalming difficult cases, including discussion of traumatic and pathological conditions, infections, communicable diseases, autopsied bodies, organ and tissue donors, and other various conditions. Prerequisites: MORT 2171 Introductory Human Anatomy; MORT 3171 Human Anatomy Laboratory

MORT 3065. Embalming Chemistry. (; 2 cr. ; A-F only; Every Fall, Spring & Summer)

Fundamentals of inorganic/organic chemistry and biochemistry. Chemical changes in human body during life, after death, and during

chemical preservation. Disinfection, toxicology, embalming fluids.

MORT 3090. Independent Study Project. (; 1-15 cr. [max 30 cr.] ; Student Option; Every Fall, Spring & Summer)

Independent study contracted between instructor, program director, and student. prereq: Mortuary science major

MORT 3091W. Independent Study in Funeral Service. (WI; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)

Students complete a project supervised by a faculty member. Credit(s) is negotiated with the faculty member based on the size and scope of the project. Students must demonstrate that the project has value within the major. prereq: Mortuary science major

MORT 3151. Restorative Art Laboratory. (; 1 cr. [max 2 cr.] ; A-F only; Every Fall & Spring)

Principles/techniques for restorative art. Modeling facial features with clay or wax. Use of restorative techniques. Cosmetic application on human remains. Mortuary Science Major Pre / Co-requisites: MORT 3051 Restorative Art

MORT 3161. Embalming Laboratory. (; 1 cr. [max 2 cr.] ; A-F only; Every Fall & Spring)

Practices/procedures of chemically preserving/restoring human remains. Mortuary Science Major Pre / Co-requisites: MORT 3061 Embalming Lecture

MORT 3171. Human Anatomy Laboratory. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Study of gross human anatomy using cadavers. Anatomical structures, post-mortem examination, embalming, pathology, restorative art, forensic science. Prerequisites: MORT 2171; PHAR 1002: Medical Terminology

MORT 3371. Funeral Service Rites, Customs, and Ceremonies. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall & Spring)

This course explores funeral and death-care customs of select faith, religious, and philosophical traditions, with emphasis on the role of the funeral director in caring for the deceased, in service to survivors. The course curriculum is based on the American Board of Funeral Service Education Student Learning Outcomes for mortuary science students. Mortuary customs to be studied will include Christian, Jewish, Islamic, Buddhist, and Hindu traditions, as well as secular rites and ceremonies.

MORT 3379. Clinical Funeral Service Rotation. (1-6 cr. [max 18 cr.] ; A-F only; Every Fall, Spring & Summer)

Practical experience working in clinical settings related to funeral service. What it means to be a funeral director in contemporary American society. Mortuary Science Major Pre / Co-requisite: 3021W Prerequisites: MORT 3051; 3061; 3151; 3161

MORT 3384. Mortuary Science Practice in the US: An Integrative Capstone Course For Professional Practice. (; 1 cr. [max 2 cr.] ; A-F only; Every Fall, Spring & Summer)

The purpose of this course is to synthesize concepts relating to professional practice,

culminating in the completion of the National Board Examination of the International Conference of Funeral Examining Boards (ICFSEB). The course will consider the application of mortuary science-related concepts to professional practice, and will include activities that integrate funeral service knowledge with problems as presented by the National Funeral Service Task Analysis of the ICFSEB. In the course we will explore issues related to licensure, continuing professional education and development, and the application of mortuary science principles to professional practice. The course will integrate key theories relating to the practice of mortuary science for the goal of ensuring competency in professional practice upon graduation. Note: This course will be taken during the student's last semester of enrollment in the program.

Moving Image Studies (MIMS)

MIMS 5910. Topics in Moving Image Studies. (2-4 cr. [max 8 cr.]; A-F only; Every Fall & Spring)
Special topics in moving image studies.

Multidisciplinary Studies (MDS)

MDS 3001W. Introduction to Multidisciplinary Studies. (WI; 3 cr.; A-F only; Every Fall, Spring & Summer)
University study at a major research institution, its history/theory and expectations/outcomes. Students design their degree and select areas/courses. Institutional/student perspectives. prereq: Admitted to multidisciplinary studies

MDS 3093. Directed Study. (1-15 cr.; A-F only; Every Fall, Spring & Summer)
Independent, directed study. prereq: instr consent

MDS 3101. Project Development. (1 cr. [max 5 cr.]; A-F only; Every Fall, Spring & Summer)
Development, completion, approval of MdS project proposal. Steps/skills of academic project design/development including academic research/writing. Library data base searching methods/citation styles. prereq: 3001W, MdS major, adviser referral, permission number, basic computer/internet skills

MDS 3201. Project Registration 1. (3 cr.; A-F only; Every Fall, Spring & Summer)
Complete project developed in MdS 3101 by conducting research, accomplishing project outcome(s), securing narrative evaluation from project adviser/evaluator. prereq: 3001W, MdS major, C- or above in 3101, approved project proposal, permission number, basic computer and internet skills

MDS 3202. Project Registration 2. (3 cr.; A-F only; Every Fall, Spring & Summer)
Complete project developed in MdS 3101 by conducting research, accomplishing project outcome(s), securing a narrative evaluation from project adviser/evaluator. prereq: 3001W, MdS major status, C- or above 3101, approved project proposal, permission number, basic computer/internet skills

MDS 3203. Project Registration 3. (3 cr.; A-F only; Every Fall, Spring & Summer)
Complete project developed in MdS 3101 by conducting research, accomplishing project outcome(s), securing narrative evaluation from project adviser/evaluator. prereq: 3001W, MdS major, C- or above 3101, approved project proposal, permission number, basic computer/internet skills

Museum Studies (MST)

MST 5011. Museum History and Philosophy. (3 cr.; A-F or Audit; Every Fall)
Historical and philosophical roots of museums and emerging philosophical issues faced by museums today - from art, history, science, and youth to living collections, living history sites, and historic houses. Field trips to area museums.

MST 5012. Museum Practices. (3 cr.; A-F or Audit; Every Spring)
Practical aspects of museum work. Standards, practices, responsibilities, issues, all set in greater museum context. Curatorial/educational duties, collections management, security, funding, boards, public relations, installation, budgeting. prereq: Grad student or instr consent

MST 5020. Internship. (1-6 cr. [max 32 cr.]; S-N or Audit; Every Fall, Spring & Summer)
Students arrange to perform a professional-level task in a museum of good standing under close supervision of a member of the museum's professional staff. Instructor must approve a work plan and report. prereq: 5011, 5012, dept consent

MST 5170. Topics in Museum Studies. (1-4 cr.; A-F only; Periodic Fall & Spring)
In-depth investigation of specific topic, announced in advance. prereq: grad student

Music (MUS)

MUS 1013. Rock I: The Historical Origins and Development of Rock Music to 1970. (AH,DSJ; 3 cr.; A-F or Audit; Every Fall & Summer)
Musical, cultural, historical, social, and political evolution of rock music, from its traceable antecedents in mid-19th century America through the early 1970s. Emphasizes manner in which African, European, and other ethnic traditions combined in a uniquely American manner.

MUS 1014. Rock II: Rock Music from 1970 to the Present. (AH,DSJ; 3 cr.; Student Option; Every Spring)
Musical, cultural, and historical evolution of rock music and related pop forms. Progressive rock, punk, disco, new wave, MTV, heavy metal, hip-hop, grunge, turntable-based styles, women in rock.

MUS 1015W. Music and Movies: The Use and Representation of Music and Musicians in Film in a Global Context. (WI; 4 cr.; A-F or Audit; Periodic Spring & Summer)
Film from perspectives of its use/representation of music/musicians. How does music

underscore nuances of action, characterization, and feeling in film? Roles of music in film musicals, rock, and other vernacular films. Films about musical life. Films whose structure is musically based.

MUS 1021. Introduction to Music. (AH; 3 cr.; Student Option; Every Fall, Spring & Summer)
Survey of European/American "art," "popular" music in context of those cultures. Aural analyses of musical styles/forms.

MUS 1051. Class Piano for Nonmusic Majors I. (2 cr.; Student Option No Audit; Every Fall, Spring & Summer)
A beginning course for non-music majors with little or no keyboard background. Emphasis on basic functional skills, such as reading, harmonizing, playing by ear, and improvising, along with basic technique, elementary repertoire, and music theory (written). Taught by graduate assistants in an electronic multi-piano lab. Includes lecture, group and individual performance, and some individual instruction. Outside practice is required.

MUS 1052. Class Piano for Non Music Majors II. (2 cr.; Student Option No Audit; Every Fall & Spring)
Continuation of MUS 1051. Emphasis on basic functional skills, such as reading, harmonizing, playing by ear, and improvising, along with basic technique, elementary repertoire, and music theory (written). Taught by graduate assistants in an electronic multi-piano lab. Includes lecture, group and individual performance, and some individual instruction. Outside practice is required.

MUS 1151. Piano: Class Lessons I. (2 cr.; A-F or Audit; Every Fall)
A beginning course for freshman music majors or minors with limited keyboard backgrounds. Taught by graduate assistants in an electronic piano lab. Emphasis is on functional skills, such as reading, transposing, harmonizing, improvising, and playing by ear, along with keyboard theory, technique, and repertoire. Includes lecture, group and individual performance, and some individual instruction. Students with previous piano backgrounds should contact the School of Music for information regarding placement. prereq: undergraduate music major or music minor status.

MUS 1152. Piano: Class Lessons II. (2 cr.; A-F or Audit; Every Spring)
Continuation of MUS 1151, a beginning course for music majors or minors with limited keyboard backgrounds. Taught by graduate assistants in an electronic piano lab. Emphasis is on functional skills, such as reading, transposing, harmonizing, improvising, and playing by ear, along with keyboard theory, technique, and repertoire. Includes lecture, group and individual performance, and some individual instruction. Students with previous piano backgrounds should contact the School of Music for information regarding placement. prereq: MUS 1151 or instr consent

MUS 1155. Keyboard Skills I. (2 cr.; A-F or Audit; Every Fall)

Reading, transposing, harmonizing, improvising, playing by ear. Keyboard theory, technique, music learning skills. prereq: Keyboard major or music major with extensive keyboard background or instr consent

MUS 1260. Voice Class. (; 2 cr. [max 4 cr.] ; Student Option; Every Fall & Spring)

The fundamentals of speech and singing including information about the vocal instrument, the vocal process, vocal technique, and how to learn and perform three simple songs. prereq: Basic musicianship for learning and performing simple songs. In this context, basic musicianship means: 1. Ability to match pitch 2. Ability to repeat and read simple a simple rhythm. 3. Ability to learn a song independently from sheet music.

MUS 1471. Guitar: Class Lessons I. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Fundamentals for the beginning guitarist; progressive development of skills. Basic strumming techniques, harmonizations in basic keys. Students must furnish acoustic guitar.

MUS 1472. Guitar: Class Lessons II. (; 2 cr. ; A-F or Audit; Every Spring)

Fundamentals for the beginning guitarist; progressive development of skills. Advanced strumming techniques, bass runs, finger-picking strums. Students must furnish acoustic guitar. prereq: 1471 or instr consent

MUS 1475. Beginning Ukulele. (2 cr. [max 4 cr.] ; A-F only; Every Fall & Spring)

This course is intended as an introduction to beginning ukulele techniques employed in contemporary songs. This will involve learning basic open and bar chords, learning how to read music and play it on the instrument, as well as learning basic ukulele finger style technique. The course will also cover basic music theory necessary for a) playing songs and b) getting basic fret board knowledge.

MUS 1476. Guitar World - guitar and its music, overview of world music styles through guitar related music. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

This course will introduce students to variety of styles of World music, and Guitar Cultures: variety of music styles/genres, in which guitar plays very important role (e.g. Bossa Nova, African palm vine guitar, Flamenco, crossover styles, Mississippi blues, City blues, Jazz, Rock, etc.). We will focus mainly on music of all continents with a bit of focus on European and American continents. We will be examining styles connected variety of types of guitar: Classical (Spanish) guitar, Acoustic (steel string) guitar, Electric guitar, seven string guitar, Indian slide guitar, Hawaiian slack key guitar, etc. Guitar heroes will be presented in connection with the specific style and culture. Guitar Heroes are performers who represent the essence of the style, are in some way interesting for studying (e.g., by their social/political role in the given time), or represent unusual fusion of music styles and genres (e.g., flamenco in synthesis with Balkan music). By learning about Guitar Cultures, students will overview historical/social circumstances around variety of music genres or styles, and

become familiar with many music genres of the world, that they were not aware of. The goal of this course is to introduce the guitar and its music, in variety of historical, political, cultural, and social circumstances, and help students in understanding what the World music is, and the role of music in cultures around the world.

MUS 1501. Theory and Analysis of Tonal Music I. (2 cr. ; A-F or Audit; Every Fall)

This course begins the core sequence of theory and musicianship courses required of the undergraduate music majors and music minors. In this course you will develop basic skills in music fundamentals and then apply these to species counterpoint, harmony and analysis exercises. These studies will then also be applied as concrete skills in your musicianship class (MUS 1511 Ear-Training/Sight-Singing I) through identification of musical materials, melodic, harmonic, and rhythmic dictation; sight-singing and clef reading. Listening exercises will train you not only in familiarity with the core repertoire of Western European concert music, but also in what to listen for and how. prereq: Co-Requisite: course must be taken concurrently w/ MUS 1511.

MUS 1502. Theory and Analysis of Tonal Music II. (2 cr. ; A-F or Audit; Every Spring)

These courses continue the core sequence of undergraduate theory and musicianship courses that are required for the undergraduate music majors and minors. Building upon the skills developed in the earlier courses [MUS 1501, 1511], we will now develop a more complete and sophisticated phrase model for harmony. These concepts will then also be applied as concrete skills in your musicianship classes (MUS 1512 Ear-Training and Sight Singing II) through melodic, harmonic, and rhythmic dictation; sight-singing and clef reading. Each component emphasizes diatonic harmony. Course intended to be taken concurrently w/MUS 1512. prereq: [1501, 1511 with grade of at least C-]

MUS 1511. Ear-Training and Sight-Singing I. (1 cr. ; A-F or Audit; Every Fall)

Introduction to foundations of musicianship. Co-Requisite: students must concurrently enroll in MUS 1501 Theory and Analysis of Tonal Music I.

MUS 1512. Ear-Training and Sight-Singing II. (1 cr. ; A-F or Audit; Every Spring)

Develop basic musicianship skills in sight-singing, ear-training and musical vocabulary. Chromatic harmonic, contrapuntal/voice leading principles in common-practice music (Corelli to Brahms). Analyze chromatic progressions, rhythms, melodies, contrapuntal functions. Proficiency in keyboard skills. Course intended for concurrent registration in MUS 1502 Tonal Theory II. prereq: [MUS 1501 and MUS 1511] with grades of at least C-.

MUS 1593. Making Music With Computers. (3 cr. ; A-F only; Every Fall & Spring)

This course will provide students with the understanding and skills to create music using computers.

MUS 1801W. Music, Society, and Cultures. (AH,WI,GP; 3 cr. ; A-F or Audit; Every Fall)

Drawing on examples from many different places and times, we will develop an analytic language to address the power of musical performance. We will study various methods of musical enculturation; the connections between politics and musical aesthetics; the ways in which music reinforces and challenges scaffoldings of race, nation, and ethnicity; and the power of music to form ethical subjects. Prereq: Registration for this course is open until the first day of class, at which point instructor consent will be required.

MUS 1804. World Music. (AH,GP; 3 cr. ; Student Option; Every Fall & Spring)

Musical practice/meaning around the world and in our backyard. World music styles/perspectives in cultural context. Lectures, in-class music making, guest artists, videos, listening. prereq: Registration for this course is open until the first day of class, at which point instructor consent will be required.

MUS 1914W. Music in Nazi Germany & the Holocaust. (CIV,WI; 3 cr. ; Student Option No Audit; Periodic Fall & Spring)

Apart from an explicit message in the lyrics, title, or dedication, can music itself be political? Often, the political message comes from the interpreter, not just the composer or performer. Are composers responsible for the effect of the music, regardless of their intentions? How have those in power sought to legitimize their rule through the arts? Can the arts maintain their independence? What is the responsibility of the listener in a highly political environment? This seminar will examine the role of art and art censorship by focusing on one of history's most brutal regimes, which was also among the greatest patrons of music. What compromises and benefits followed when a musician, conductor, or composer collaborated? Did exploiting music actually help the Nazis to build support? How should citizens of democratic societies commemorate and/or judge the choices that artists made in harsher times?

MUS 1915. The Color of Music. (; 3 cr. ; A-F only; Periodic Fall & Spring)

How are sounds depicted? How are colors sounded? How do the worlds of music and fine arts intersect and construct meaning that is both specific to each and shared by both? How does each help us experience the world around us in different yet complementary ways? In this seminar you are invited to join a semester-long journey which seeks some answers to these questions through immersion in the sounds, shapes, and colors of Western European art across many centuries. We will be looking at art and listening to music, while learning how to express what we perceive to be interesting, beautiful, and meaningful about their relationship and our reaction to them.

MUS 1916. All About Music: Its Meaning, Reality, Communication, and Embodiment. (TS; 3 cr. ; A-F only; Periodic Fall & Spring)

The great philosopher of life Friedrich Nietzsche rightly claims that "without music, life would be a mistake." This does not mean that life is automatically perfect with music. This seminar deals with exactly this problem: What is music doing to us? Why do we listen to it?

And how? What is its meaning in our lives, why does it matter, which realities does it touch, how can it be communicated? In what way is it distributed between intellect and emotions? And why do we go to concerts, since electronic media and the internet provide such easy access? The answers will be approached via intensive listening to all kinds of music from different cultures and epochs as well as through critical, very open discussions with the students. The instructor is highly sensitive to non-authoritarian music cultures, so he may provide a thoroughly dynamic and flexible access to music.

MUS 3021. Introduction to Music. (AH; 3 cr. ; Student Option; Every Fall, Spring & Summer) Survey of European and American .art and .popular. music in the context of those cultures; aural analyses of musical styles and forms.

MUS 3200. Campus Singers. (; 2 cr. [max 16 cr.] ; Student Option; Every Fall & Spring) Campus Singers is a non-auditioned ensemble and open to all members of the University community, including students, faculty, staff, and alumni. The Campus Singers sing diverse repertoire from various periods/cultures.

MUS 3230. Chorus. (; 1-2 cr. [max 16 cr.] ; Student Option; Every Fall & Spring) Includes the University Women's Chorus, Men's Chorus, Concert Choir, and Choral Union. Choirs participate in a variety of programs exploring both Western and non-Western repertoire from the Middle Ages through the 20th century. Concerts include touring, and collaborative campus and community performances. prereq: Choral and/or instrumental music background, audition, instr consent

MUS 3241. Vocal Literature (German Lieder) and Pedagogy. (1 cr. ; A-F or Audit; Periodic Fall)

This is an undergraduate survey course of the history of German Lieder with pedagogical considerations for performance practices of the major repertoire. We will explore the beginnings of the movement from the Enlightenment of the 1700's with Mozart and Beethoven to the end of the movement culminating in the early 20th century with the Second Viennese School, as well as topics associated with voice in speech/singing and vocal anatomy/physiology, process/methods/techniques, care. The class will consist of lectures, listening lists, reading assignments, tests and performance presentations from the students. prereq: MUS 1502, MUS 1512, MUS 3602W and [Vocal performance or accompanying major]

MUS 3242. Vocal Literature (French Melodie) and Pedagogy. (; 1 cr. ; A-F or Audit; Periodic Spring) French M?lodie: its origins, composers, and development. Musical/textual analysis of representative works. Poetry that serves as song text. French symbolist poets. Listening assignments. prereq: [Vocal music or accompanying major], 2 yrs of music theory/history

MUS 3261. Italian Diction for Singers. (; 1 cr. ; A-F or Audit; Every Fall)

The sounds and symbols of the International Phonetic Alphabet, rules for correct Italian lyric diction, rudimentary Italian grammar, the meanings of Italian musical expressive markings, and Italian words most commonly found in song texts. prereq: Voice or choral music major, concurrent registration is required (or allowed) in applied voice

MUS 3262. English Diction for Singers. (; 1 cr. ; A-F or Audit; Every Spring)

English lyric diction for performance of classical vocal music. Use International Phonetic Alphabet for standard transcriptions of song texts, compile a discography of British/American art songs, perform songs in class, and prepare poetry for oral presentation and improvisation. prereq: Voice or choral music major, concurrent registration is required (or allowed) in applied voice

MUS 3263. German Diction for Singers. (; 1 cr. ; A-F or Audit; Every Fall)

Principles and practice of German lyric diction for classical vocal music. Transcriptions of German Lieder into International Phonetic Alphabet, elementary German grammar and common song vocabulary, 4 to 5 German songs performed in class for critique, and rules for pronunciation. prereq: Voice or choral music major, concurrent registration is required (or allowed) in applied voice

MUS 3264. French Diction for Singers. (; 1 cr. ; A-F or Audit; Every Spring)

Principles and practice of French lyric diction for classical vocal music. Transcriptions of French m?lodie into International Phonetic Alphabet, elementary French grammar and common song vocabulary, 4 to 5 French songs performed in class for critique, and rules for pronunciation. prereq: Voice or choral music major, concurrent enroll in applied voice

MUS 3271. Benvenuto a Milano: The City of Music, Art and Fashion. (AH,GP; 3 cr. ; Student Option No Audit; Periodic Summer)

This global seminar will feature a three-week stay experiencing some of the world's greatest visual art, architecture, music and fashion in the magnificent cosmopolitan city of Milan, Italy. While in Milan, you will explore the origins of the Renaissance Movement through the Contemporary Period and trace the social and political events that influenced Italian artists and composers through these eras. Known as the "Risorgimento" (resurgence) movement, students will discover how 18th century opera, with an emphasis on Giuseppe Verdi, helped influence and unify the individual peninsula states into a grand Italian kingdom and help shape modern day Italy.

MUS 3301. The Music of Black Americans. (AH,DSJ; 3 cr. ; A-F only; Every Fall, Spring & Summer)

This course examines the variety of ways African and African Americans express social history through music. It will consider the union of African elements and European elements that combined to present a new syncretized African-American product. To

do this it is imperative that we explore the diversity of musical "voices" found within the African American culture. This diversity can be seen in the struggles to retain African cultural effects and the desire to be eclectic, creative, and contemporary. Such an approach to the study of the place of Black music in American music corresponds with the criteria of Diversity and Social Justice in the United States Liberal Education. The "multi-layered operation of power, prestige, and privilege" can be understood through an examination of the music of African Americans, which represents both a Free African voice and an enslaved African voice; the western-trained Black performer/composer and the self-taught performer/composer. It also represents the habits of well-to-do African Americans and the poor African Americans. Students will examine the complexities of the history of African Americans and how this is played out in the development of musical styles and genres. From this, students will then begin to understand how this unique diversity within a community affects those outside of those communities. Such an approach to the study of the place of Black music in American music corresponds with the criteria of Diversity and Social Justice in the United States Liberal Education. We will follow elements found in West African culture and music such as "call and response" and the "2nd Line" as they travel to the "New World" and expressed through Spirituals, Symphonies, Gospel Music, Jazz, Rock and Roll, Step Bands and more. Through lectures, readings, discussion, audiovisual examples, and homework assignments student can expect to gain a deeper understanding of the ways music both reflects and influences the social history of all Americans.

MUS 3331. Jazz Improvisation I. (; 2 cr. ; A-F or Audit; Periodic Fall)

Rudiments; analysis; improvisation on blues in three major keys and standard American popular jazz compositions from swing era to early bebop; applications of major and minor scales; ear training. prereq: Music major or instr consent

MUS 3340. Jazz Ensemble. (; 1 cr. [max 8 cr.] ; A-F or Audit; Every Fall & Spring)

A 20-member performing organization covering significant jazz compositions and arrangements written specifically for this medium. prereq: Audition, instr consent

MUS 3350. Jazz Combo. (; 1 cr. [max 8 cr.] ; A-F or Audit; Every Fall & Spring)

A performance laboratory class with emphasis on improvisation and learning the jazz vocabulary. A minimum of two public performances is required each semester. prereq: Audition, instr consent

MUS 3380. Gospel Choir. (2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Gospel Choir is a non-auditioned choral ensemble open to all members of the University community, including students, faculty, staff, and alumni. Throughout the semester, students will perform in choral department concerts, observe and critique musical performances, and demonstrate

improved musicianship. The music performed will cover a wide range of musical styles and will help students develop improved vocal skills. Students explore history of gospel music through experiential/participatory songs, field songs, songs of struggle, Southern, traditional, and contemporary songs. prereq: Although no audition is required, all students will be heard privately by the instructor during the first week of class for voice placement in the choir. Additionally, a survey will be taken at the beginning of the semester to assess students' prior musical experiences.

MUS 3400. University and Campus Bands. (; 2 cr. [max 20 cr.] ; Student Option; Every Fall & Spring)

University Band- The University Band is comprised of woodwind, brass, and percussion musicians in disciplines across the university. This ensemble studies and prepares standard and contemporary wind band repertoire and performs four concerts each year. Please consult with the Ensemble Library in Ferguson Hall for more details on the rehearsal and performance schedule. Placement in the ensemble is determined through an audition; all university students are eligible to audition. The Gold/Maroon/North Star Campus Bands- The Gold/Maroon/North Star Campus Bands comprise woodwind, brass, and percussion musicians from all disciplines across the university. Consisting primarily of non-music majors, this ensemble is intended as a way for students outside the School of Music to continue performing in college. Music majors are also encouraged to perform in this ensemble on a secondary instrument. This ensemble studies and prepares standard and contemporary wind band repertoire and performs two concerts per semester. No audition is required to join the Gold Campus Band, though basic proficiency on a traditional band instrument and fluency in reading notated music is a requirement

MUS 3401. Basic Conducting. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

The Basic Conducting course explores the many facets of the role of a conductor (within orchestral, wind band, choral areas), conducting philosophies, and conducting and rehearsal techniques for choral and instrumental ensembles. Students explore score study, analysis, gesture, body awareness, and expression. Basic Conducting is offered annually in the spring semester. prereq: MUS 1502 (Theory and Analysis of Tonal Music II), music major, music minor, or instructor approval

MUS 3410. University Wind Bands. (; 1 cr. [max 14 cr.] ; A-F or Audit; Every Fall & Spring) The University Wind Ensemble is comprised of the university's finest graduate and undergraduate woodwind, brass, and percussion musicians. This ensemble prepares a wide variety of repertoire composed from the early Renaissance through today and performs concerts on and off campus throughout the year. The ensemble participates in special activities, events, projects, and collaborations with featured guest artists. The University

Wind Ensemble and University Symphony Orchestra share musicians and rehearse on alternating block schedules during the semester (a project-focused schedule). Please consult with the Ensemble Library in Ferguson Hall for more details on the rehearsal and performance schedule. Placement in the ensemble is determined through an audition; all university students are eligible to audition. The Symphonic Band is comprised of woodwind, brass, and percussion musicians in music disciplines as well as other disciplines across the university. This ensemble studies and prepares standard and contemporary wind band repertoire and performs concerts on and off campus throughout the year. Many performances are shared with guest ensembles and/or featured guest artists. Please consult with the Ensemble Library in Ferguson Hall for more details on the rehearsal and performance schedule. Placement in the ensemble is determined through an audition; all university students are eligible to audition. prereq: Audition, instr consent

MUS 3420. Orchestra. (; 1 cr. [max 8 cr.] ; A-F or Audit; Every Fall & Spring)

Symphony orchestra performs standard repertoire and major works with chorus; concerts and tour appearances. Players from all colleges may participate. prereq: Audition, instr consent

MUS 3430. Campus Orchestra. (; 2 cr. [max 16 cr.] ; Student Option; Every Fall & Spring)

Three campus orchestras perform standard and contemporary orchestral literature. Non-Music-Major Wind, Brass, Percussion, and String Players from all colleges may participate. prereq: Non-music major or unable to register for University Orchestra

MUS 3440. Chamber Ensemble. (; 1 cr. [max 8 cr.] ; A-F or Audit; Every Fall & Spring)

Performance of chamber music; duos, trios, quartets, quintets, and other ensemble combinations for instruments and voices. prereq: instr consent

MUS 3480. Marching Band. (2 cr. [max 12 cr.] ; A-F or Audit; Every Fall)

One of the premiere marching bands in the country, the University of Minnesota Marching Band?The Pride of Minnesota? is comprised of 320 students from colleges and departments across the university. The UMMB performs at all home Gopher Football games as well as at other events throughout the semester. Please consult the Band Department for more details on the rehearsal and performance schedule. Placement in the ensemble is determined through an audition; all university students are eligible to audition. prereq: instr consent

MUS 3490. Athletics Bands. (; 1 cr. [max 16 cr.] ; A-F or Audit; Every Fall & Spring)

Each of the three pep bands perform at approximately 25 regular season events between late September and early March (roughly 12-13 each semester). In addition, bands perform at several post-season events as the teams progress through conference and NCAA tournaments. Attendance at all pep bands rehearsals is required. Please

consult the Band Department for more details on the rehearsal and performance schedule. Placement in the ensemble is determined through an audition; all university students are eligible to audition.

MUS 3501. Theory and Analysis of Tonal Music III. (; 2 cr. ; A-F or Audit; Every Fall) Harmony and voice-leading. Diatonic and basic chromatic chords. Form. Analysis of music from 18th/19th centuries. Co-requisite: intended for concurrent registration with MUS 3511 Ear Training & Sight Singing III. prereq: [MUS 1511, MUS 1512] with grade of at least C- or higher.

MUS 3501H. Theory and Analysis of Tonal Music III - Honors. (; 2 cr. ; A-F only; Every Fall)

Harmony and voice-leading. Diatonic and basic chromatic chords. Form. Analysis of music from 18th/19th centuries. Co-requisite: intended for concurrent registration with MUS 3511 Ear Training & Sight Singing III. prereq: [MUS 1511, MUS 1512] with grade of at least C- or higher.

MUS 3506. Theory and Analysis of American Popular Music. (; 3 cr. ; A-F or Audit; Fall Odd Year)

This course provides a basic introduction to analyzing popular songs, primarily those within the Anglo-American tradition. Although the course focuses directly on the musical details, techniques, and forms pertaining to popular songs, larger questions of meaning and interpretation, production, sound and instrumentation, history of musical style and genre and historical periodization, important individual performers/songwriters and artistic formations, marketing and sociology, and globalization will not be ignored?but they will be most often pursued in the context of analyzing specific songs and recordings. Like any viable form of music, popular music is also a living practice, and hence our engagement with popular music will also require us to be in contact with practitioners of popular music here in the Twin Cities. Finally, the course will require students to engage with popular music in a number of ways?transcription, analysis, aural skills, ethnography (of a modest sort), composition, performance, and expository writing. The class begins with basic parameters as explored in rock music (which, for the purposes of this class, overlaps with classic R&B/soul), then moves backwards to various origination points for rock in American popular music, and then pursues various different topics for the remainder of the course. prereq: [MUS 3501, MUS 3511] with a grade of C- or better

MUS 3508. Review of Tonal Theory. (; 2 cr. ; Student Option; Every Fall)

Fast-paced review of 1501, 1502, and 3501. Focuses on diatonic and basic chromatic procedures, part-writing, and analysis. prereq: Theory placement exam

MUS 3509. Review of Tonal Theory IV. (; 2 cr. ; Student Option; Every Fall)

Remedial course. Harmony, voice-leading. Chromatic tonal practices. Form, including

sonata, rondo, variations, and other standard categories of tonal composition. Analysis of music from 18th/19th centuries. prereq: Grad music student or instr consent

MUS 3511. Ear-Training and Sight-Singing III. (; 1 cr. ; A-F or Audit; Every Fall)

Melodic, harmonic, and rhythmic dictation. Sight-singing. Clef reading. Emphasizes chromatic harmony. Co-requisite: course intended for concurrent enrollment in MUS 3501 Tonal Theory III. prereq: [MUS 1502, MUS 1512] with grade of at least C- or higher, or diagnostic test administered by School of Music

MUS 3518. Review of Ear-Training and Sight-Singing. (; 1 cr. ; Student Option; Every Fall)

Fast-paced review of 1502 and 3501 focusing on diatonic and basic chromatic procedures. Emphasis on melodic and harmonic dictation. Individual sight-singing auditions. prereq: Theory Placement Exam

MUS 3519. Review of Ear-Training and Sight-Singing. (; 1 cr. ; Student Option; Every Fall & Spring)

Remedial course. Fast-paced review of 3502. Focuses on diatonic/basic chromatic procedures. Emphasizes melodic/harmonic dictation. Individual sight-singing auditions. prereq: Grad student in music or instr consent

MUS 3601W. History of Western Music I.

(WI; 3 cr. ; A-F or Audit; Every Spring)
This is the first course in the undergraduate music history sequence. We will study music composed over a very broad time span, ca. 800 to 1700, looking at the works' musical structures within the larger contexts of musical style, social/political significance, and broad aesthetic and philosophical movements. In addition, as a writing intensive course, students will hone their writing skills, focusing in particular on listening to and analyzing early music. prereq: MUS 1501 and MUS 1511

MUS 3602W. History of Western Music II.

(WI; 3 cr. ; A-F or Audit; Every Fall)
This is the second course in the undergraduate music history sequence. We will study music composed ca. 1700?1880, looking at the works' musical structures within the larger contexts of musical style, social/political significance, and broad aesthetic and philosophical movements. In addition, as a writing intensive course, students will hone their writing skills, focusing in particular on analyzing and writing about music. prereq: MUS 1502, MUS 1512, and MUS 3601 OR instr consent

MUS 3603W. History of Western Music III.

(WI; 3 cr. ; A-F or Audit; Every Spring)
History of European/American art, popular music traditions, from 1850 to present. Composers, styles, structures, social institutions. prereq: [MUS 3602W, MUS 3501, MUS 3511] with grades of at least C- or instr consent

MUS 3950. Topics in Music. (; 1-3 cr. [max 15 cr.] ; Student Option; Periodic Fall & Spring)
Each offering focuses on a single topic. Topics specified in Class Schedule.

MUS 3993. Directed Studies. (1-4 cr. [max 10 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Guided individual reading or study. prereq: instr consent, dept consent, college consent.

MUS 3995. Major Project. (; 1 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Required of music majors in senior year of the B.A. program. Research paper on topic of student's choice in consultation with faculty mentor. Sign up in Undergraduate Studies office one term in advance. prereq: Undergrad music major in B.A. program, instr consent, dept consent

MUS 4502. 18th-Century Counterpoint. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

The content of this course is stylistic, focusing on the contrapuntal technique of the late Baroque period (approximately 1700?1750) with some allusions to immediately preceding and following styles. Emphasis will focus on writing skills with some analysis of complete (or substantial sections of) pieces. A working knowledge of tonal harmony and figured bass is prerequisite. Topics to be covered will include: melody, two- and three-part counterpoint; diminutions; cadences, motivic development, and form; techniques for cantus firmus, imitative, and free counterpoint; canon and fugue; and chromaticism. prereq: [3501, 3508] or pass basic skills exam

MUS 4504. Intensive Theory and Analysis of 20th-Century Music. (; 2 cr. ; A-F or Audit; Every Spring)

Theory and analysis of art music in various styles developed in 20th century. Co-requisite: course intended for concurrent registration in MUS 4514 Ear-Training and Sight-Singing for 20th-Century Music. prereq: [MUS 3501 and MUS 3511 with grades of at least "C -"] or instr consent

MUS 4505. Jazz Theory. (; 3 cr. ; A-F or Audit; Every Fall)

Beginning through advanced techniques for jazz chord construction including extended chords and advanced nomenclature in jazz idiom. prereq: [MUS 3501 and MUS 3511] with grades of at least C- or instructor permission

MUS 4514. Ear-Training and Sight-Singing for 20th-Century Music. (; 1 cr. ; A-F or Audit; Every Spring)

Developing aural skills relevant to 20th-century Western art musics. Focuses on pitch relations, rhythmic techniques, form, and to a lesser degree, timbre and texture. Co-requisite: concurrent registration required with MUS 4504 Intensive Theory and Analysis of 20th-Century Music. prereq: [MUS 3501 and MUS 3511 with grade of at least C-] or instr consent

MUS 4715. Marching Band Techniques. (2 cr. ; A-F only; Every Spring)

This course covers the administration and management of the high school marching band as part of a total instrumental music program in the public schools. Students are exposed to the various techniques used in producing a superior performing ensemble that also adheres to the basic musical objectives of a

quality band program. The course emphasizes rehearsal technique and the application of pedagogical skills to the marching ensemble. Show design, charting, marching and maneuvering, rehearsal planning, equipment selection, personnel management, auxiliary units, percussion, discipline, and performance preparation are major topics for discussion.

MUS 5101. Piano Pedagogy I. (; 2 cr. ; Student Option; Periodic Fall)

Demonstration and discussion of teaching techniques, methods, and materials for group and individual instruction at the elementary, early intermediate, and late intermediate levels. prereq: 8 cr in MusA 1301 or MusA 1401 or instr consent

MUS 5150. Body Awareness in Activity: The Alexander Technique for Musicians. (2 cr. [max 8 cr.] ; Student Option; Every Fall & Spring)

The Alexander Technique is a century-old technique used by musicians and others as a means of solving performance problems. Its principles address how the daily habits in the use of the self (such as sitting, standing, folding/bending, and walking) affect seemingly disparate problems such as stage fright, musculoskeletal pain, playing induced injuries, and computer use injuries. For musicians, the interplay of unconscious habits and the body mechanics of daily use of the self strongly affect tone production and technique. The Alexander Technique provides tools to enhance fundamental coordination leading to greater performance ease and a reduction of chronic aches and pains. More information can be found at: <https://www.amsatonline.org>

MUS 5151. Organ Literature I. (; 3 cr. ; A-F or Audit; Periodic Fall)

Organ literature from the 14th century to the mid-18th century. Influence of organ design of various periods and national schools on the literature and its performance. prereq: 3502, 3603, sr or grad or instr consent

MUS 5152. Organ Literature II. (; 3 cr. ; A-F or Audit; Periodic Fall)

Organ literature of J. S. Bach and of other 19th- and 20th-century composers. Influence of organ design of various periods and national schools on the literature and its performance. prereq: 3502, 3603, sr or grad or instr consent

MUS 5153. Organ Pedagogy. (2 cr. ; A-F or Audit; Spring Odd Year)

Familiarization with materials and techniques for teaching playing the pipe organ. Through their study, students are to gain knowledge of organ methods and various aspects of teaching and learning to play the King of Instruments.

MUS 5181. Advanced Piano Literature I. (; 2 cr. ; A-F or Audit; Fall Even, Spring Odd Year)

Literature for piano from late Baroque period to mid-20th century. prereq: grad piano major or instr consent

MUS 5182. Advanced Piano Literature II. (; 2 cr. ; A-F or Audit; Periodic Spring)

Literature for piano from late Baroque period to mid-20th century. prereq: grad piano major or instr consent

MUS 5230. Chorus. (; 1-2 cr. [max 16 cr.] ; Student Option; Every Fall & Spring)
University Women's Chorus, Men's Chorus, Concert Choir and Choral Union. Choirs participate in a variety of programs exploring both Western and non-Western repertoire from the Middle Ages through the 20th century. Concerts include touring, and collaborative campus and community performances. prereq: Choral and/or instrumental music background; audition, instr consent

MUS 5240. University Singers. (; 1 cr. [max 8 cr.] ; A-F or Audit; Every Fall & Spring)
Mixed chorus with members of former chamber singers and concert choir. Programs exploring Western/non-Western repertoire from Middle Ages through 20th century. Concerts include touring and collaborative campus/community performances. prereq: Audition, instr consent

MUS 5241. Vocal Literature I. (; 3 cr. ; A-F or Audit; Periodic Fall)
Vocal literature of major/minor composers from 17th century to present. Structure, style, performance practice. prereq: [12 cr in MusA 1304, grad music student] or instr consent

MUS 5242. Vocal Literature II. (; 3 cr. ; A-F or Audit; Periodic Spring)
Vocal literature of major and minor composers from 17th century to present; structure, style, and performance practice. prereq: 12 cr in MusA 1104 or MusA 1304, grad music major or instr consent

MUS 5250. Opera Workshop and Ensemble. (; 2 cr. [max 16 cr.] ; A-F or Audit; Every Fall & Spring)
Preparation and performance of operatic arias, choruses, and scenes. Participation in fully staged or workshop productions of music theatre repertoire. prereq: audition, instr consent

MUS 5271. Diction for Singers I. (; 2 cr. ; A-F or Audit; Every Fall)
Principles and techniques of singing in English, Italian, Spanish, German, and French. International Phonetic Association alphabet used. prereq: 12 cr MusA 1304 or grad music major or instr consent

MUS 5272. Diction for Singers II. (; 2 cr. ; A-F or Audit; Periodic Spring)
Principles and techniques of singing in English, Italian, Spanish, German, and French. International Phonetic Association alphabet used. prereq: 12 cr MusA 1304 or grad music major or instr consent

MUS 5275. Vocal Pedagogy I. (; 3 cr. ; Student Option; Every Spring)
Advanced study of mind/body preparations for singing, anatomy, and physiology of the vocal mechanism. Voice use and care, historical and comparative pedagogy, learning theories, models and guidelines for teaching, instructional techniques, and diagnosing and solving vocal problems. prereq: Sr vocal major or instr consent

MUS 5276. Vocal Pedagogy II. (; 3 cr. ; A-F or Audit; Periodic Spring)
History of solo vocal performance; selection and preparation of beginning level solo vocal

repertoire; development of vocal performance skills (interpretation, expression, artistry), recital programming, and vocal career counseling. prereq: Sr vocal major or instr consent

MUS 5280. Opera Theatre. (; 2 cr. [max 16 cr.] ; A-F or Audit; Every Fall & Spring)
Preparation and performance of fully-staged operatic production. Major involvement in singing, acting, and technical aspects of opera. prereq: audition, instr consent

MUS 5331. Jazz Improvisation I. (; 2 cr. ; A-F or Audit; Periodic Summer)
Rudiments, analysis. Improvisation on blues in three major keys and on standard American popular jazz compositions from swing era to early bebop. Applications of major/minor scales. Ear training. prereq: Music major or instr consent

MUS 5333. Music After 1945. (3 cr. ; A-F only; Fall Even Year)
This course will explore theoretical and analytical techniques in mid-twentieth and twenty-first-century music. After an initial unit of review of early twentieth-century techniques, the semester will be divided into units that encapsulate a musical domain (e.g. "rhythm"), rather than exploring chronologically. Students will be responsible for completing readings as well as analytical assignments for each class, as outlined on the course schedule. prereq: MUS 4504 or Graduate music major

MUS 5336. Jazz Arranging. (; 3 cr. ; A-F or Audit; Every Fall & Spring)
Beginning techniques of arranging for jazz combo and jazz ensemble; vocal and instrumental. prereq: 3502 or instr consent

MUS 5340. Jazz Ensemble. (; 1 cr. [max 6 cr.] ; A-F or Audit; Every Fall & Spring)
A 20-member performing organization covering significant jazz compositions and arrangements written specifically for this medium. prereq: audition, instr consent

MUS 5400. University and Campus Bands. (; 1 cr. [max 10 cr.] ; Student Option; Every Fall & Spring)
Lab course.

MUS 5410. University Wind Bands. (; 1 cr. [max 14 cr.] ; A-F or Audit; Every Fall & Spring)
The University Wind Ensemble is comprised of the university's finest graduate and undergraduate woodwind, brass, and percussion musicians. This ensemble prepares a wide variety of repertoire composed from the early Renaissance through today and performs concerts on and off campus throughout the year. The ensemble participates in special activities, events, projects, and collaborations with featured guest artists. The University Wind Ensemble and University Symphony Orchestra share musicians and rehearse on alternating block schedules during the semester (a project-focused schedule). Please consult with the Ensemble Library in Ferguson Hall for more details on the rehearsal and performance schedule. Placement in the ensemble is determined through an audition; all university students are eligible to audition.

The University Symphonic Band is comprised of woodwind, brass, and percussion musicians in music disciplines as well as other disciplines across the university. This ensemble studies and prepares standard and contemporary wind band repertoire and performs concerts on and off campus throughout the year. Many performances are shared with guest ensembles and/or featured guest artists. Please consult with the Ensemble Library in Ferguson Hall for more details on the rehearsal and performance schedule. Placement in the ensemble is determined through an audition; all university students are eligible to audition. prereq: audition, instr consent

MUS 5420. Orchestra. (; 1 cr. [max 8 cr.] ; A-F or Audit; Every Fall & Spring)
Symphony orchestra performs standard repertory and major works with chorus; concerts and tour appearances. Players from all colleges may participate. prereq: audition, instr consent

MUS 5427. Violin Pedagogy I. (; 2 cr. ; A-F or Audit; Periodic Fall)
Private teaching of violin students at beginning, intermediate, and advanced levels. Discussion and demonstrations of pedagogical techniques. prereq: Violin or viola major or instr consent

MUS 5440. Chamber Ensemble. (; 1 cr. [max 8 cr.] ; A-F or Audit; Every Fall & Spring)
Performance of chamber music; duos, trios, quartets, quintets, and other ensemble combinations for instruments and/or voices. prereq: audition, instr consent

MUS 5450. Orchestral Repertoire. (; 1-3 cr. [max 9 cr.] ; A-F or Audit; Every Fall & Spring)
Investigation of practical and performance problems in standard orchestral repertoire with regard to style and interpretation. prereq: instr consent

MUS 5451. Applied Studio Resources and Administration. (; 2 cr. ; A-F only; Every Spring)
The courses focuses on preparing graduate students for successful entry into the college-level applied teaching profession, and developing strategies for a tenurable record of teaching, performance, research, and service.

MUS 5460. World Music Ensemble. (1-2 cr. [max 16 cr.] ; Student Option; Every Fall & Spring)
Afro-Brazilian/Afro-Caribbean popular repertoires. Samba, bossa nova, salsa, merengue, mambo. Planned master classes/clinics with local artists to complement regularly scheduled rehearsals/performances. No audition required.

MUS 5461. Guitar Literature. (2 cr. ; Student Option; Fall Odd Year)
This course is principally intended for guitar majors (graduate and undergraduate students). The main focus of this course is to introduce students to guitar literature, through the historical overview of the repertoire, classical guitar composers, and performers. It will also introduce students to method books, in chronological order (through an examination of specific styles and "performance practices")

and teaching methods through the history of guitar and guitar literature intended for technique development (studies, exercises, etc.).

MUS 5464. Cello Pedagogy. (; 2 cr. ; A-F or Audit;)

Concentrated study of cello teaching methods. Provides students with the strategies for teaching cello privately, develops analytical skills, and increases knowledge of cello repertoire. Designed for practical application in conjunction with the string technique class.

MUS 5466. Guitar Pedagogy. (; 2 cr. ; A-F or Audit; Fall Even Year)

Intended for guitar performance majors. This course will introduce basic teaching concepts/methods/philosophies and examine method books, studies, and methodology through the history of classical guitar. Other topics (e.g., starting a studio, developing promotional material/website, contemporary teaching methods) will be addressed. prereq: Guitar performance major or instr consent

MUS 5481. Trumpet Pedagogy. (; 2 cr. ; Student Option; Fall Odd, Spring Even Year)

Principles of trumpet pedagogy. Discussion of literature, history, and current teaching aids. prereq: Sr or grad in music or instr consent

MUS 5490. Percussion Ensemble. (; 1 cr. [max 10 cr.] ; A-F or Audit; Every Fall & Spring)

Practice and performance of standard and contemporary compositions for percussion instruments in various combinations. prereq: instr consent

MUS 5491. Percussion Literature I. (; 2 cr. ; A-F or Audit; Periodic Fall)

Repertoire derived from orchestral and band literature for snare drum, timpani, mallet instruments, and various percussion accessories. Major works of the 20th century written for solo percussion, percussion ensemble, and chamber groups of percussion and non-percussion instruments. prereq: Jr or sr or grad or instr consent

MUS 5492. Percussion Literature II. (; 2 cr. ; A-F or Audit; Periodic Fall & Spring)

Repertoire derived from orchestral and band literature for snare drum, timpani, mallet instruments, and various percussion accessories. Major works of the 20th century written for solo percussion, percussion ensemble, and chamber groups of percussion and non-percussion instruments. prereq: Jr or sr or grad or instr consent

MUS 5493. Javanese Gamelan Music Ensemble. (1 cr. [max 8 cr.] ; Student Option; Periodic Fall & Spring)

Hands-on experience in learning to play Javanese gamelan music, one of the great non-western musical traditions that is readily accessible to beginners. Related insights into the role of this tradition in Javanese culture. Open to all students - no musical background needed!

MUS 5494. West African Music Ensemble. (1 cr. [max 8 cr.] ; Student Option; Periodic Fall & Spring)

Hands-on experience in learning to play West African music, one of the great non-western musical traditions that is readily accessible to beginners. Also, insights into function, context, structure, gender roles, politics, instruments, life-cycle rites, genres, musical organizations, traditional musicians, and contemporary popular music. Open to all students - no musical background needed!

MUS 5534. Musical Minimalisms. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

This course provides an introduction to the various musics associated with the label "minimalism," including musical trajectories emerging from them. Numerous artists and compositions will be covered, spanning from 1958 to the present, though the focus is on music composed during the 1960s and 1970s, including that by Young, Riley, Reich, Glass, Monk, the Velvet Underground, Andriessen, P?rt, Eno, Feldman, and others. The class blends analysis, historical and analytical secondary readings, and in-class performance. Students must contribute informed comments to discussion, which in turn requires the completion of reading and listening assignments. prereq: Undergraduates-Mus 4504/4514 or equivalent; Graduates-Music 3508/3518 or passing of the Theory Entrance Exam

MUS 5541. 16th-Century Counterpoint. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Polyphonic counterpoint in modal style of Renaissance. Writing exercises in species counterpoint and in two, three, and four parts. Cantus firmus techniques, mixed values, invertible counterpoint, canon. Representative works by Josquin, Lassus, Palestrina, Victoria, and others. Renaissance treatises by Artusi, Banchieri, Diruta, Morley, Zarlino, and others. prereq: [3501, 3508] or pass basic skills exam

MUS 5550. Class Composition for Performers. (; 3 cr. [max 12 cr.] ; A-F or Audit; Every Fall & Spring)

Original works in various forms. Development of individual compositional style in a post-tonal idiom. Various forms, performing forces, techniques. prereq: [4504, 4514 [with C- or better]] or instr consent

MUS 5561. Orchestration I. (; 3 cr. ; A-F or Audit; Every Fall)

Scoring techniques for ensembles in combination and full orchestra; year-long sequence. Score study of representative works from 18th through 20th centuries. prereq: 3502

MUS 5571. Schenkerian Analysis for Performers. (; 3 cr. ; A-F or Audit; Periodic Fall & Summer)

Theory/analysis of tonal music using principles developed by Henrich Schenker. Basic concepts/notation, their application to excerpts/short pieces from 18th/19th centuries. prereq: 3502

MUS 5572. Chromatic Harmony. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Exploration of chromatic tonal practices through analysis of selected repertoire, completion of written exercises (figured bass, harmonization of melodies, model

composition), ear-training, and keyboard exercises.

MUS 5573. Analysis of Late-Romantic Orchestral Literature. (; 3 cr. ; A-F or Audit; Periodic Spring)

Advanced tonal analysis. Dramatic orchestral music by Wagner, Strauss, Tchaikovsky, Rimsky-Korsakov, Moussorgsky, and Rachmaninoff as focus for projects/discussions related to chromatic harmony, form, and orchestration. prereq: 3502 or Theory IV Exam or instr consent; [4504 or equiv] recommended

MUS 5591. Introduction to Music Information Technology. (3 cr. ; A-F or Audit; Every Fall)

Principles of acoustics, electronic sound generation/manipulation, digital signal processing techniques. Programming languages for digital sound synthesis. Editing software, MIDI applications. prereq: Music grad student or instr consent

MUS 5592. Music Informatics Seminar. (3 cr. ; A-F or Audit; Every Spring)

Filtering, formant synthesis, reverberation techniques, additive synthesis. Interactive MIDI applications. prereq: 5591 or instr consent

MUS 5611. Resources for Music Research. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Development of skills in identifying, locating, and evaluating resources for research in music. Computer-searching techniques, acquaintance with basic reference sources in the field, preparation of the music research paper. prereq: 3603

MUS 5620. Topics in Opera History. (; 3 cr. [max 6 cr.] ; A-F or Audit; Periodic Fall & Spring)

Study of specific operas. Development of opera in context of other artistic, social, cultural, political events, movements, changes. Periods/countries vary each semester.

MUS 5624. Music of J. S. Bach. (; 3 cr. ; A-F or Audit; Spring Even Year)

Issues of musical style, historical context. Moves chronologically through Bach's career. Relationships between his duties and works he composed. Genesis, function, relationship of a work to genre and performing forces. Lectures, presentations, research/analysis assignments. prereq: Grad student in music or instr consent

MUS 5630. Performance Practice: 1700 to the Present. (3 cr. ; A-F only; Fall Even Year)

This course will explore issues relevant to the historically informed performance of music written between 1700 and the present, including primary sources, original instruments and iconography, editions, treatises, phrasing and articulation, tempo and rubato, rhythmic alteration, ornamentation and cadenzas, and basso continuo. Class activities and assignments will include readings, discussion, and practicum. Pre-requisite: Graduate student in Music or instructor consent

MUS 5631. Beethoven Sonatas for Solo Piano, Violin, & Cello. (3 cr. ; A-F only; Fall Odd Year)

Beethoven's sonatas are central to the violin, cello, and piano repertoires, and they will be examined in relation to the composer's life, times, and developing style. Scholarly books and articles, mostly musicological but also analytical, will provide the stimulus for understanding these works. The implications of such scholarly investigations for performance will also be a running theme of the course. Attention will therefore be given to performance practice issues as well as some difficult editorial and notational problems associated with the scores. Pre-requisite: Graduate student in Music or instructor consent

MUS 5647. 20th-Century European/American Music. (; 3 cr. ; Student Option; Every Spring)

Concert music and opera in European and American culture 1890s to present, political and social roles of music. prereq: MUS 1501 or equiv

MUS 5731. Jazz and Modernism. (3 cr. ; A-F or Audit; Spring Even Year)

Critical consideration of the mutual impact and cross-influences of jazz practices and modernist aesthetics. Contextualizes the emergence of styles including ragtime, swing, bebop, cool, third-stream, modal, and avant-garde jazz within the broader aesthetic currents of 20th-century art and popular music cultures. prereq: Graduate student in music or instr consent

MUS 5732. Free Jazz: From Structure to Gesture. (3 cr. ; A-F only; Spring Odd Year)

Discuss musical form of free jazz comprising flow expressivity, collaborative interaction, gestural communication from theoretical/practical point of view. Major representatives such as Ornette Coleman, Cecil Taylor, Archie Shepp, The Art Ensemble of Chicago, John Coltrane. Sound material include classical recordings but also recent free jazz CDs/DVDs. prereq: Grad student in music or instr consent

MUS 5805. Worlds of Improvisation. (3 cr. ; A-F or Audit; Spring Odd Year)

This course will explore traditions of improvisation from a variety of world cultures -- such as African, African-American, European, Middle Eastern, South Asian -- to gain insight into processes of composition in performance, from ethnomusicological, music-theoretical, and applied vocal/instrumental perspectives.

MUS 5807. Raga Music. (3 cr. ; A-F only; Periodic Fall & Spring)

This seminar is an introduction to the theory and practice of Hindustani raga. Raga is melodic structure and melodic flavor: a secret suffused with affect, image, color, and memory, disclosed through a particular way of listening. Raga has sustained centuries of composition and improvisational practice and inspired a vast literature of poetry, metaphysics, painting, and music theory. We will learn to intuitively discern the identity of common ragas, to rigorously describe their differences in the language of Indian music theory, and to perform their characteristic movements.

MUS 5809. What Do Voices Do?. (3 cr. ; A-F only; Periodic Fall & Spring)

The voice is mysterious. Voice teachers disagree wildly about the best method of voice production; linguists are fascinated by the acoustic complexity of speech; and ethnomusicologists have no comprehensive theory of vocal action that accounts for the hundreds of distinct vocal traditions in the world, or for the great ethical and political power wielded by elevated speech and song. Indeed, political "voice" is often exercised silently (voting, letter writing, silent protest), and submission to political authority is often affirmed vocally (through pledges, songs, and oaths.) This course proceeds optimistically, in the hope that we can find our way through this vocal thicket through historical and ethnographic study, close listening, acoustical analysis, and experimental performance. Students from all disciplines--the natural and human sciences, the humanities, the arts, etc.--are welcome.

MUS 5950. Topics in Music. (; 1-4 cr. [max 60 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Each offering focuses on a single topic. Topics specified in Class Schedule.

MUS 5993. Directed Studies. (1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study. prereq: instr consent, dept consent, college consent.

Music Applied (MUSA)

MUSA 1101. Piano: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1103. Organ: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1104. Voice: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1105. Violin: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1106. Viola: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1107. Cello: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1108. Double Bass: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1109. Flute: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1111. Oboe: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1112. Clarinet: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1113. Saxophone: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1114. Bassoon: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1115. French Horn: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1116. Trumpet: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1117. Trombone: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1118. Euphonium: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Periodic Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1119. Tuba: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1121. Percussion: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1123. Guitar: Elective (non-major in music). (; 2-4 cr. [max 32 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 1201. Piano: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 1203. Organ: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction. prereq: [Music education or BA applied] major, dept consent This course is offered for 2 credits and meets for two hours a week; one hour being a one-on-one lesson between the instructor and student, and another hour in the instructor-led studio class.

MUSA 1204. Voice: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 1205. Violin: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 1206. Viola: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 1207. Cello: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 1208. Double Bass: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Periodic Fall & Spring)
Private instruction.

MUSA 1209. Flute: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 1211. Oboe: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 1212. Clarinet: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 1213. Saxophone: Music Ed and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 1214. Bassoon: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 1215. French Horn: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 1216. Trumpet: Music Education and BA. (2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 1217. Trombone: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 1218. Euphonium: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 1219. Tuba: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 1221. Percussion: Music Ed and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 1222. Harp: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 1223. Guitar: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 1301. Piano: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1302. Harpsichord: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1303. Organ: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1304. Voice: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1305. Violin: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1306. Viola: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1307. Cello: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1308. Double Bass: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1309. Flute: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1311. Oboe: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1312. Clarinet: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1313. Saxophone: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1314. Bassoon: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1315. French Horn: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1316. Trumpet: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1317. Trombone: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1318. Euphonium: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1319. Tuba: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1321. Percussion: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1322. Harp: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1323. Guitar: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1401. Piano: Music Major Secondary (undergraduate). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall & Spring)
Private instruction. prereq: Music major, dept consent

MUSA 1402. Harpsichord: Music Major Secondary (undergraduate). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1403. Organ: Music Major Secondary (undergraduate). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1404. Voice: Music Major Secondary (undergraduate). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall & Spring)
Private instruction. prereq: Audition, dept consent

MUSA 1405. Violin: Music Major Secondary (undergraduate). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall & Spring)
Private instruction. prereq: Audition, dept consent

MUSA 1406. Viola: Music Major Secondary (undergraduate). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1407. Cello: Music Major Secondary (undergraduate). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1408. Double Bass: Music Major Secondary (undergraduate). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Periodic Fall, Spring & Summer)
Individual instruction on the double bass as a secondary instrument. prereq: Audition, dept consent

MUSA 1409. Flute: Music Major Secondary (undergraduate). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1411. Oboe: Music Major Secondary (undergraduate). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1414. Bassoon: Music Major Secondary (undergraduate). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1418. Euphonium: Music Major Secondary (undergraduate). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1421. Percussion: Music Major Secondary (undergraduate). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1423. Guitar: Music Major Secondary (undergraduate). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 1901. Piano: Music Major Transfer. (; 2-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction for transfer students. One semester only. prereq: Audition, dept consent

MUSA 1903. Organ: Music Major Transfer. (; 2-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction for transfer students. One semester only. prereq: Audition, dept consent

MUSA 1904. Voice: Music Major Transfer. (; 2-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction for transfer students. One semester only. prereq: Audition, dept consent

MUSA 1905. Violin: Music Major Transfer. (; 2-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction for transfer students. One semester only. prereq: Audition, dept consent

MUSA 1906. Viola: Music Major Transfer. (; 2-4 cr. ; A-F or Audit; Periodic Fall, Spring & Summer)
Private instruction for transfer students. One semester only. prereq: Audition, dept consent

MUSA 1907. Cello: Music Major Transfer. (; 2-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction for transfer students. One semester only. prereq: Audition, dept consent

MUSA 1908. Double Bass: Music Major Transfer. (; 2-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction for transfer students. One semester only. prereq: Audition, dept consent

MUSA 1909. Flute: Music Major Transfer. (; 2-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction for transfer students. One semester only. prereq: Audition, dept consent

MUSA 1911. Oboe: Music Major Transfer. (; 2-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction for transfer students. One semester only. prereq: Audition, dept consent

MUSA 1912. Clarinet: Music Major Transfer. (; 2-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction for transfer students. One semester only. prereq: Audition, dept consent

MUSA 1913. Saxophone: Music Major Transfer. (; 2-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction for transfer students. One semester only. prereq: Audition, dept consent

MUSA 1915. French Horn: Music Major Transfer. (; 2-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction for transfer students. One semester only. prereq: Audition, dept consent

MUSA 1916. Trumpet: Music Major Transfer. (; 2-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction for transfer students. One semester only. prereq: Audition, dept consent

MUSA 1917. Trombone: Music Major Transfer. (; 2-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction for transfer students. One semester only. prereq: Audition, dept consent

MUSA 1918. Euphonium: Music Major Transfer. (; 2-4 cr. ; A-F or Audit; Periodic Fall, Spring & Summer)
Private instruction for transfer students. One semester only. prereq: Audition, dept consent

MUSA 1921. Percussion: Music Major Transfer. (; 2-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction for transfer students. One semester only. prereq: Audition, dept consent

MUSA 1922. Harp: Music Major Transfer. (; 2-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction for transfer students. One semester only. prereq: Audition, dept consent

MUSA 1923. Guitar: Music Major Transfer. (; 2-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Private instruction for transfer students. One semester only. prereq: Audition, dept consent

MUSA 2201. Piano: Music Ed and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: [Music education or BA applied] major, dept consent

MUSA 2203. Organ: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: dept consent

MUSA 2204. Voice: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: dept consent

MUSA 2205. Violin: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: dept consent

MUSA 2206. Viola: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: dept consent

MUSA 2207. Cello: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: dept consent

MUSA 2208. Bass: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: dept consent

MUSA 2209. Flute: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)
Private instruction. prereq: dept consent

MUSA 2211. Oboe: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 2212. Clarinet: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 2213. Saxophone: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 2214. Bassoon: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 2215. French Horn: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 2216. Trumpet: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 2217. Trombone: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 2218. Euphonium: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 2219. Tuba: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 2221. Percussion: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 2222. Harp: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 2223. Guitar: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 2301. Piano: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2302. Harpsichord: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, instr consent

MUSA 2303. Organ: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2304. Voice: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2305. Violin: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2306. Viola: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2307. Cello: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2308. Double Bass: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2309. Flute: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2311. Oboe: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2312. Clarinet: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2313. Saxophone: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2314. Bassoon: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2315. French Horn: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2316. Trumpet: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2317. Trombone: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2318. Euphonium: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2319. Tuba: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2321. Percussion: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2322. Harp: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 2323. Guitar: Music Major. (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3101. Piano: Elective (non-major in music). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 3103. Organ: Elective (non-major in music). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 3104. Voice: Elective (non-major in music). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 3105. Violin: Elective (non-major in music). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 3117. Trombone: Elective (non-major in music). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Periodic Fall & Spring)

Private instruction. prereq: dept consent

MUSA 3121. Percussion: Elective (non-major in music). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 3123. Guitar: Elective (non-major in music). (; 2-4 cr. [max 16 cr.] ; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 3201. Piano: Music Ed and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction.

MUSA 3204. Voice: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction.

MUSA 3205. Violin: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction.

MUSA 3206. Viola: Music Education and BA. (; 2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

Private instruction.

MUSA 3207. Cello: Music Education and BA. (; 2 cr. [max 16 cr.]; A-F only; Every Fall & Spring)

Private instruction.

MUSA 3209. Flute: Music Education and BA. (; 2 cr. [max 16 cr.]; A-F only; Every Fall & Spring)

Private instruction.

MUSA 3211. Oboe: Music Education and BA. (; 2 cr. [max 16 cr.]; A-F only; Every Fall & Spring)

Private instruction.

MUSA 3212. Clarinet: Music Education and BA. (; 2 cr. [max 16 cr.]; A-F only; Every Fall & Spring)

Private instruction.

MUSA 3213. Saxophone: Music Education and BA. (; 2 cr. [max 16 cr.]; A-F only; Every Fall & Spring)

Private instruction.

MUSA 3214. Bassoon: Music Education and BA. (; 2 cr. [max 16 cr.]; A-F only; Every Fall & Spring)

Private instruction.

MUSA 3215. French Horn: Music Education and BA. (; 2 cr. [max 16 cr.]; A-F only; Every Fall & Spring)

Private instruction.

MUSA 3216. Trumpet: Music Education and BA. (; 2 cr. [max 16 cr.]; A-F only; Every Fall & Spring)

Private instruction.

MUSA 3217. Trombone: Music Education and BA. (; 2 cr. [max 16 cr.]; A-F only; Every Fall & Spring)

Private instruction.

MUSA 3219. Tuba: Music Education and BA. (; 2 cr. [max 16 cr.]; A-F only; Every Fall & Spring)

Private instruction.

MUSA 3221. Percussion: Music Education and BA. (; 2 cr. [max 16 cr.]; A-F only; Every Fall & Spring)

Private instruction.

MUSA 3222. Harp: Music Education and BA. (; 2 cr. [max 16 cr.]; A-F only; Every Fall & Spring)

Private instruction.

MUSA 3223. Guitar: Music Education and BA. (2 cr. [max 6 cr.]; A-F only; Every Fall & Spring)

Private instruction. prereq: Audition, dept consent

MUSA 3301. Piano: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3302. Harpsichord: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3303. Organ: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3304. Voice: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3305. Violin: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3306. Viola: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3307. Cello: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3308. Double Bass: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3309. Flute: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3311. Oboe: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3312. Clarinet: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3313. Saxophone: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3314. Bassoon: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3315. French Horn: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3316. Trumpet: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3317. Trombone: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3318. Euphonium: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3319. Tuba: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3321. Percussion: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3322. Harp: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 3323. Guitar: Music Major. (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: Audition, dept consent

MUSA 5101. Piano: Elective (graduate non-major in music). (; 2 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 5103. Organ: Elective (graduate non-major in music). (; 2 cr. [max 8 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Private instruction. prereq: dept consent

MUSA 5104. Voice: Elective (graduate non-major in music). (; 2 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 5105. Violin: Elective (graduate non-major in music). (; 2 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 5106. Viola: Elective (graduate non-major in music). (; 2 cr. [max 8 cr.]; A-F or Audit; Periodic Fall & Spring)

Private instruction. prereq: dept consent

MUSA 5112. Clarinet: Elective (graduate non-major in music). (; 2 cr. [max 8 cr.]; A-F or Audit; Periodic Fall & Spring)

Private instruction. prereq: dept consent

MUSA 5113. Saxophone: Elective (graduate non-major in music). (; 2 cr. [max 8 cr.]; A-F or Audit; Periodic Fall & Spring)

Private instruction. prereq: dept consent

MUSA 5114. Bassoon: Elective (graduate non-major in music). (; 2 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring)

Private instruction. prereq: dept consent

MUSA 5116. Trumpet: Elective Individual Lessons (graduate non-major in music). (; 2 cr. [max 8 cr.]; A-F or Audit; Periodic Fall, Spring & Summer)

Individualized trumpet instruction. prereq: dept consent

MUSA 5121. Percussion: Elective (graduate non-major in music). (; 2 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring)
Private instruction. prereq: dept consent

MUSA 5123. Guitar: Elective (graduate non-major in music). (; 2 cr. [max 8 cr.]; A-F or Audit; Every Fall & Spring)
Private instruction. prereq: dept consent

MUSA 5401. Piano: Music Major Secondary (graduate). (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring)
Private instruction. prereq: Audition, dept consent

MUSA 5402. Harpsichord: Music Major Secondary (graduate). (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 5403. Organ: Music Major Secondary (graduate). (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 5404. Voice: Music Major Secondary (graduate). (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring)
Private instruction. prereq: Audition, dept consent

MUSA 5405. Violin: Music Major Secondary (graduate). (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring)
Private instruction. prereq: Audition, dept consent

MUSA 5408. Double Bass: Music Major Secondary (graduate). (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring)
Private instruction. prereq: Audition, dept consent

MUSA 5409. Flute: Music Major Secondary (graduate). (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring)
Private instruction. prereq: Audition, dept consent

MUSA 5414. Bassoon: Music Major Secondary (graduate). (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring)
Private instruction. prereq: Audition, dept consent

MUSA 5415. French Horn: Music Major Secondary (graduate). (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring)
Private instruction. prereq: Audition, dept consent

MUSA 5416. Trumpet: Music Major Secondary (graduate). (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring)
Private instruction. prereq: Audition, dept consent

MUSA 5417. Trombone: Music Major Secondary (graduate). (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 5418. Baritone: Music Major Secondary (graduate). (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall, Spring & Summer)
Private instruction. prereq: Audition, dept consent

MUSA 5421. Percussion: Music Major Secondary (graduate). (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring)
Private instruction. prereq: Audition, dept consent

MUSA 5423. Guitar: Music Major Secondary (graduate). (; 2-4 cr. [max 24 cr.]; A-F or Audit; Every Fall & Spring)
Private instruction. prereq: Audition, dept consent

Music Education (MUED)

MUED 1201. Introduction to Music Education. (; 2 cr. ; A-F only; Every Spring)
This course is designed as an introduction to the field of music education. It will provide students with an overview of the multifaceted nature of music teaching and learning, and serve as a foundation for the construction of your own beliefs and practices as a teacher and give you a framework to work effectively in diverse settings. This course will include: field experiences, readings, presentations, instructional technologies as well as historical, psychological, and philosophical foundations. Though this class is the first required MUED course of the music education major, major-level status in the School of Music is not required to enroll.

MUED 1801. Introduction to Music Therapy. (; 2 cr. ; A-F or Audit; Every Fall & Spring)
Methods, materials, and applications of music therapy in various clinical settings with emphasis on field observation.

MUED 3011. Music in Childhood. (; 3 cr. ; Student Option; Every Fall & Spring)
Learning each child's interests, needs, and abilities. Integrate music with other classroom subjects. Written/oral discussions, music making, micro-teaching, lesson presentations. Taught from arts perspective.

MUED 3802. Guitar I for Music Education and Music Therapy Majors: Developing Group Songleading Skills. (; 2 cr. ; A-F only; Every Fall)

How to play standing up, accompany oneself, cue/prompt, move around room while playing, sight-read chords, read tablature. Open chords, tuning, keys that facilitate group singing. Eye contact. Simple 2-5 chords songs. Teaching guitar to novice players. prereq: [Music therapy or music education major], dept consent

MUED 3803. Guitar II for Music Education and Music Therapy Majors: Developing Group Songleading Skills. (; 2 cr. ; A-F only; Every Spring)

Students play guitar, accompany themselves as they sing songs, and role play live music therapy and music education settings. How to play in various styles using open chords and different rhythmic accompaniment. prereq: 3802 with grade of at least C-, [music therapy or music education major], dept consent

MUED 3807. Percussion Techniques for Music Therapists. (; 2 cr. ; A-F or Audit; Every Spring)
Design, implement, and facilitate percussion into music therapy session. Variety of music therapy percussion instruments/how to successfully implement them into clinical practice with children, adolescents, and adults who are differently-abled.

MUED 4417. Style, Pedagogy, and Diction in the Choral Music Classroom I. (; 2 cr. ; A-F only; Every Fall)
Vocal styles. Lyric diction, vocal pedagogy. Performance in vocal jazz, musical theater, and classical styles. How to apply style concepts in school setting. SMARTMUSIC software. prereq: two semesters of applied voice at college level

MUED 4418. Style, Pedagogy, and Diction in the Choral Music Classroom II. (; 2 cr. ; A-F only; Spring Even Year)
Vocal styles. Lyric diction, vocal pedagogy. Performance in vocal jazz, musical theater, and classical styles. How to apply style concepts in school setting. SMARTMUSIC software. prereq: two semesters of applied lessons at college level

MUED 4502. String Techniques and Teaching. (; 2 cr. ; A-F or Audit; Every Spring)
Playing experience on orchestral string instruments. Historical/acoustical background. Scoring for strings. Principles of improvisation. Basic concepts of teaching. Methods/materials. Techniques of individual/class instruction.

MUED 4503. Woodwind Techniques and Teaching. (; 2 cr. ; A-F or Audit; Every Spring)
Playing experience on instruments of the woodwind family. Historical/acoustical background. Scoring for brasses. Principles of improvisation. Basic concepts of teaching. Methods/materials. Techniques of individual/class instruction.

MUED 4504. Brass Techniques and Teaching. (; 2 cr. ; A-F or Audit; Every Fall)
Playing experience on instruments of the brass family. Historical/acoustical background. Scoring for brasses. Principles of improvisation. Basic concepts of teaching. Methods/materials. Techniques of individual/class instruction.

MUED 4505. Percussion Techniques and Teaching. (; 2 cr. ; A-F or Audit; Every Fall)
Playing experience on percussion instruments. Historical/acoustical background. Scoring for percussion. Principles of improvisation. Basic concepts of teaching. Methods/materials. Techniques of individual/class instruction.

MUED 5101. Improvisation and Creativity in the Music Classroom. (; 2 cr. ; A-F only; Every Fall)

This course will address issues of improvisation, composition, and creativity of critical importance to musicians and music educators, with a strong emphasis on music-theoretical and socio-cultural modes of understanding the meanings and functions of music. Students will gain experience with the creative practices characteristic of a variety of Western and non-Western forms, including those of jazz and Minnesota American Indian

music. The workshop format of the class will challenge students to improvise and compose works, present and perform them to their peers, provide and receive constructive feedback, engage and respond to this feedback with reference to clearly articulated statements of artistic intent, and revise the works accordingly. Students will apply insights derived in this manner in final research projects focused on the development of lesson and unit plans. prereq: At least C- in MUS 4504 or instructor permission

MUED 5301. General Music I. (; 3 cr. ; A-F or Audit; Every Spring)

Materials, strategies and the field experience for planning and implement instruction for global arts understanding among early childhood and lower elementary school children. Experiential learning, for integrating international music and culture perspectives while planning and implementing sequential elementary music instruction. prereq: MUED 1201, MUS 4504, MUS 4514, [music education major or instr consent], successful completion of soph proficiency exam

MUED 5302. General Music II. (; 3 cr. ; A-F only; Every Fall)

Materials, strategies and an extensive field experience with expert general music teachers for planning and implementing sequential upper elementary, middle and high school music instruction for global arts understanding. Includes interdisciplinary connections, performance, and applications of academic technologies. prereq: MUED 5301, MUED 1201, MUS 4504, and MUS 4514 with a grade of at least C-

MUED 5350. Student Teaching in Classroom Music. (; 4-8 cr. ; A-F or Audit; Every Fall & Spring)

Supervised teaching and observing of classroom and general music in elementary, junior high, and senior high schools. Weekly seminar emphasizing classroom management, curriculum development, and administration of music programs.

MUED 5415. Choral/Vocal Methods and Materials I. (; 3 cr. ; A-F only; Every Spring)

Choral/vocal methods and materials as part of licensure to work in K-12 settings per legislated standards. Sight-singing, classroom management, warm-ups, adolescent voice, choral conducting skills, repertoire, and rehearsal techniques. 25 hours of practicum at the middle school level. Applications of technology. First of two required semesters. prereq: MUED 1201, MUS 4504, MUS 4514, [music education major or instr consent], successful completion of soph proficiency exam

MUED 5416. Choral/Vocal Methods and Materials II. (; 3 cr. ; A-F only; Every Fall)

Choral/vocal methods and materials as part of licensure to work in K-12 settings per legislated standards. Choral conducting skills, rehearsal techniques, and interpretation of choral compositions. Methods, materials, and curriculum for high school choral ensembles. 20 hours of practicum at the high school level.

Second of two required semesters. prereq: MUED 5415, MUED 1201, MUS 4504, and MUS 4514 with grade of at least C-, [music education major or instr consent], completion of the Music Education sophomore proficiency exam

MUED 5419. Advanced Conducting and Repertoire (Choral). (; 2 cr. ; A-F only; Every Fall)

Conducting/baton technique, nonverbal communication skills, rehearsal techniques, score study habits. Aural/diagnostic skills to rehearse a choral ensemble. Selection of age-appropriate repertoire. prereq: 3416, MUS 3401, MUS 3502, MUS 3512, music education major [choral]

MUED 5450. Student Teaching in Vocal Music. (; 4-8 cr. ; A-F or Audit; Every Fall & Spring)

Supervised teaching and observing of vocal music in elementary, junior high, and senior high schools. Weekly seminar emphasizing classroom management, curriculum development, and administration of music programs.

MUED 5516. Instrumental Methods and Materials I. (; 3 cr. ; A-F only; Every Spring)

Instrumental methods and materials as part of licensure to work in K-12 settings per legislated standards. Sight-singing, classroom management, adolescent development, instrumental conducting skills, repertoire, and rehearsal techniques. 25 hours of practicum at the middle school level. Applications of technology. First of two required semesters. prereq: MUED 1201, MUS 4504, and MUS 4514 with a grade of C- or better, music education major, successful completion of Music Education sophomore proficiency exam

MUED 5517. Instrumental Methods and Materials II. (; 3 cr. ; A-F only; Every Fall)

Instrumental methods and materials as part of licensure to work in K-12 settings per legislated standards. Sight-singing, classroom management, adolescent development, instrumental conducting skills, repertoire, and rehearsal techniques. 25 hours of practicum at the middle school level. Applications of technology. Second of two required semesters. prereq: MUED 5517, MUED 1201, MUS 4504, and MUS 4514 with a grade of C- or better, music educ major, completion of the Music Education sophomore proficiency exam

MUED 5519. Advanced Conducting and Repertoire (Instrumental). (; 2 cr. ; A-F only; Every Fall)

The Advanced Conducting (Instrumental) course continues exploration of the many facets of the role of a conductor (within orchestral and wind band areas), conducting philosophies, and conducting and rehearsal techniques for instrumental ensembles. Students advance in knowledge of score study, analysis, non-verbal communication skills, body awareness, repertoire selection, and rehearsal techniques. Advanced Conducting is offered in annually in the fall semester. Pre-req: MUED 5416 (Choral/Vocal Methods and Materials II) MUS 3401 (Basic Conducting) MUS 4504

(Intensive Theory and Analysis of 20th-Century Music) MUS 4514 (Ear-Training and Sight-Singing for 20th-Century Music) music major or instructor approval

MUED 5550. Student Teaching in Instrumental Music. (; 4-8 cr. ; A-F or Audit; Every Fall & Spring)

Supervised teaching and observing of instrumental music in elementary, junior high, and senior high schools. Weekly seminar emphasizing classroom management, curriculum development, and administration of music programs.

MUED 5650. Student Teaching Seminar. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Reflective practice during student teaching. Developing materials for professional employment (e.g., resume, portfolio). prereq: At least C- in all required [music, music education, professional education] courses

MUED 5669. Psychology of Music. (; 3 cr. ; A-F or Audit; Every Fall)

Basic study of the psychology and psychoacoustics of music including hearing, music perception and cognition, values and preferences, musical abilities, musical systems, media music effects, the influence of music on human behavior, and psycho-socio-physiological processes involved in musical behavior. prereq: Psy 1001 or Psy 3604 or instr consent

MUED 5750. Topics in Music Education. (; 1-4 cr. [max 16 cr.] ; A-F or Audit; Periodic Fall & Spring)

Focuses on single topic, specified in Class Schedule.

MUED 5800. Group Music Leadership Skills. (; 3 cr. ; A-F or Audit; Every Spring)

Role of group music experiences in human development. Relations specific to music therapy. Students develop repertoire of music applications/techniques for various age groups/populations. Standards for group leadership. Precision teaching skills. prereq: [[Completion of [MUS 1151, MUS 1152] or MUS 1155], music therapy major] or instr consent

MUED 5803. Therapeutic Management in Music Settings. (; 4 cr. ; A-F only; Every Fall)

Cognitive behavioral methodology related to music therapy and music education settings. Prepares students to complete case studies mandated for internship completion set forth by American Music Therapy Association. prereq: [5804, 5805] or instr consent

MUED 5804. Music Therapy Methods and Procedures I. (; 4 cr. ; A-F or Audit; Every Fall)

Methods/procedures for developing basic music therapy competencies/professionalism. Music therapy populations, their clinical needs. How to use music therapy in an evidence-based approach to meet client objectives. prereq: 5800 or instr consent

MUED 5805. Music Therapy Methods and Procedures II. (; 4 cr. ; A-F only; Every Spring)

Second course in professional sequence for music therapy. Topics include psychotherapy

techniques and other music therapy approaches. Practicum in the community, in-class lab. prereq: 5804 or instr consent

MUED 5806. Career Preparation. (; 4 cr. ; A-F or Audit; Every Spring)

Ethics, grant writing, resume/CV preparation, supervision, board certification, professional responsibilities. Students design evidence-/research-based music therapy program, present their proposals to class/community. prereq: 5805 or instr consent

MUED 5807. Psychiatric Music Therapy. (; 3-4 cr. ; A-F only; Every Fall)

Psychiatric populations. How music therapy can be implemented as evidence-based practice. Students design original research and role-play music therapy interventions for psychiatric populations. Practicum component on designing music therapy interventions. Graduate students registering for this course should enroll for 4 credits. Undergraduate students registering for this course should enroll for 3 credits. prereq: Grad music therapy student or instr consent

MUED 5808. Medical Music Therapy. (; 3-4 cr. ; A-F only; Every Spring)

Role/scope of music therapy in medical treatment. Medical diagnoses. How to program appropriate music therapy interventions to address patient needs. prereq: Grad music therapy major or instr consent

MUED 5855. Music Therapy Internship. (; 1-13 cr. ; S-N or Audit; Every Fall & Spring)

Six-month resident internship in music therapy at an affiliated, approved hospital or clinic. prereq: Music therapy major, instr consent

MUED 5991. Independent Study. (; 1-4 cr. [max 8 cr.]; A-F or Audit; Every Fall, Spring & Summer)

Independent study project organized by the student in consultation with the appropriate instructor. prereq: Music ed or music therapy major or grad, instr consent, dept consent

Natural Resources Sci and Mgmt (NR)

NR 5021. Statistics for Agricultural and Natural Resource Professionals. (; 3 cr. ; Student Option; Every Spring)

This course is designed for graduate students in the agricultural, environmental, natural resources, and other related programs that require an understanding of statistics and applied quantitative research. Course content focuses on data analysis approaches using common statistical methods, e.g., probability and distributions, simple linear, multiple, and logistic regression, linear models, and analysis of variance. This course is completely online and asynchronous. prereq: College algebra or instructor consent

Naval Science (NAV)

NAV 1000. Professional Training in Naval Science. (; 1 cr. ; S-N or Audit; Every Fall & Spring)

Instruction and training in basic military subjects and professional development, including military leadership, close order drill, marksmanship, honors and ceremonies, personnel inspections, and computer-based war game simulations. Classes and small group seminars on leadership and ethical issues with case studies. prereq: enrolled in NROTC

NAV 1101. Introduction to Naval Science. (; 3 cr. ; A-F or Audit; Every Fall)

Navy organization, customs and traditions, officer and enlisted rank and rating structures, uniforms and insignia, shipboard duties, seamanship, damage control, and safety. Core values of the naval services, Navy regulations, and the Uniform Code of Military Justice.

NAV 1102. Seapower and Maritime Affairs. (; 3 cr. ; A-F or Audit; Every Spring)

Historical influences on development of U.S. Navy, from American Revolution to present. Critical, contemporary issues.

NAV 2000. Professional Training in Naval Science. (; 1 cr. ; S-N or Audit; Every Fall & Spring)

Instruction and training in basic military subjects and professional development, including military leadership, close order drill, marksmanship, honors and ceremonies, personnel inspections, and computer-based war game simulations. Classes and small group seminars on leadership and ethical issues with case studies. prereq: Soph enrolled in NROTC

NAV 2201. Ship Systems I: Naval Engineering. (; 3 cr. ; A-F or Audit; Every Fall)

Detailed study of ship characteristics/types. Design, hydrodynamic forces, stability, compartmentation, propulsion, electrical/auxiliary systems, damage control, administration. Basic concepts of theory/design for steam, gas turbine, diesel, nuclear propulsion.

NAV 2202. Ship Systems II: Science and Technology in Naval Weapons Systems. (; 3 cr. ; A-F or Audit; Every Spring)

Detection, evaluation, threat analysis, weapon selection, delivery, guidance, explosives. Physical aspects of radar, underwater sound. Facets of command, control, communications as means of weapons system integration.

NAV 3000. Professional Training in Naval Science. (; 1 cr. ; S-N or Audit; Every Fall & Spring)

Instruction and training in basic military subjects and professional development, including military leadership, close order drill, marksmanship, honors and ceremonies, personnel inspections, and computer-based war game simulations. Classes and small group seminars on leadership and ethical issues with case studies. prereq: Jr enrolled in NROTC

NAV 3301. Navigation I: Piloting and Celestial Navigation. (; 3 cr. ; A-F or Audit; Every Fall)

Great military leaders of history. Development of warfare, from dawn of recorded history to present. Focuses on effect of major military

theorists, strategists, tacticians, technological developments.

NAV 3302. Navigation II: Seamanship and Ship Operations. (; 3 cr. ; A-F or Audit; Every Fall)

National/international nautical rules of the road, seamanship, tactical maneuvering/signaling, relative motion, vector-analysis, formation tactics, ship employment, ship behavior/characteristics. Application of maneuvering board in solving motion problems. prereq: 3301

NAV 3309. Fundamentals of Maneuver Warfare. (3 cr. ; A-F or Audit; Fall Even Year)

Fundamentals of Maneuver Warfare (FMW) is a detailed look at broad aspects of warfare and their interactions with maneuver warfare doctrine, with a focus on the United States Marine Corps. Throughout the course there is a strong focus on Leadership, as the fundamental purpose of this course is to develop the skills, knowledge, leadership background and mentality necessary for a successful Marine Corps Officer.

NAV 3310. Evolution of Warfare. (; 3 cr. ; A-F or Audit; Periodic Fall)

Great military leaders of history. Development of warfare, from dawn of recorded history to present. Focuses on effect of major military theorists, strategists, tacticians, technological developments.

NAV 4000. Professional Training in Naval Science. (1 cr. [max 4 cr.]; S-N or Audit; Every Fall & Spring)

Instruction and training in basic military subjects and professional development, including military leadership, close order drill, marksmanship, honors and ceremonies, personnel inspections, and computer-based war game simulations. Classes and small group seminars on leadership and ethical issues with case studies. prereq: Sr enrolled in NROTC

NAV 4401W. Leadership and Management I. (WI; 3 cr. ; A-F or Audit; Every Fall)

Advanced study of organizational behavior/management. Major behavioral theories examined in detail. Practical applications. Exercises, case studies, seminar discussions.

NAV 4402W. Leadership and Ethics.

(CIV,WI; 3 cr. ; A-F or Audit; Every Spring) Junior officer role. Responsibilities faced as leader, manager, professional officer of Naval Services. Develops specific competencies in areas of leadership, management, professional administration, development. Emphasizes Naval Service ethics, core values. prereq: NAV 4401W

Neurology (NEUR)

NEUR 5121. Descriptive Neurology. (; 2 cr. ; O-N or Audit; Every Spring)

Central and peripheral nervous system. Correlation of neuroanatomy, neurophysiology, clinical neurology, and pathology of the nervous system. prereq: enrolled OT or PT

NEUR 5230. Cerebrovascular Hemodynamics and Diseases I. (; 4 cr. ; A-F only; Every Fall)

Principles of cerebrovascular disease/pathophysiology, hemodynamics, diagnostic imaging, and endovascular devices. Bench-to-bedside experiments. Clinical trials, including design constraints and biostatistics. prereq: [[PHSL 3051 or PHSL 3063], [MATH 1271 or MATH 1371], [MATH 1272 or MATH 1372], [PHYS 1201W or PHYS 1301W], instr consent] or [grad student, [PHSL 5061 or instr consent]]

Neuroscience (NSC)

NSC 5031W. Perception. (WI; 3 cr. ; Student Option; Periodic Fall)

Cognitive, computational, and neuroscience perspectives on visual perception. Color vision, pattern vision, image formation in eye, object recognition, reading, impaired vision. Course is biennial: offered fall of odd years. prereq: Psy 3031 or Psy 3051 or instr consent

NSC 5040. Brain Networks: From Connectivity to Dynamics. (; 4 cr. ; A-F or Audit; Fall Odd Year)

Brain networks. Application of emerging science of complex networks to studies of the brain. Network approaches that provide fundamental insights into the integrative nature of brain function and its relation to the brain structure. Organization of brain networks and dynamics at multiple spatial scales, ranging from the microscale of single neurons and synapses, to mesoscale of anatomical cell groupings and their projections, and to the macroscale of brain regions and pathways. Experimental studies, including electrophysiology, voltage-sensitive dye imaging, electroencephalography, magnetoencephalography, and functional magnetic resonance imaging, that allow mapping network elements and structural/functional connectivity between them at different temporal and spatial scales will be considered. Experimental/theoretical perspectives.

NSC 5202. Theoretical Neuroscience: Systems and Information Processing. (; 3 cr. ; Student Option; Every Spring)

Concepts of computational/theoretical neuroscience. Distributed representations and information theory. Methods for single-cell modeling, including compartmental/integrate-and-fire models. Learning rules, including supervised, unsupervised, and reinforcement learning models. Specific systems models from current theoretical neuroscience literature. Lecture/discussion. Readings from current scientific literature. prereq: [3101, 3102W] recommended

NSC 5203. Basic and Clinical Vision Science. (; 3 cr. ; Student Option; Spring Even Year)

Basic and clinical vision science. prereq: instr consent

NSC 5461. Cellular and Molecular Neuroscience. (; 3 cr. [max 4 cr.]; A-F or Audit; Every Fall)

Lectures by team of faculty, problem sets in important physiological concepts, discussion of original research papers. prereq: NSc grad student or instr consent

NSC 5462. Neuroscience Principles of Drug Abuse. (; 2 cr. ; Student Option; Periodic Spring)

Current research on drugs of abuse, their mechanisms of action, characteristics shared by various agents, and neural systems affected by them. Offered biennially, spring semester of even-numbered years. prereq: instr consent

NSC 5540. Survey of Biomedical Neuroscience. (2 cr. ; A-F or Audit; Every Summer)

Current topics in biomedical neuroscience, accompanied by supporting, fundamental concepts. Intensive, one week course. prereq: instr consent, intended for members of biomedical community or students with advanced scientific backgrounds

NSC 5551. Itasca Cell and Molecular Neurobiology Laboratory. (; 4 cr. ; S-N or Audit; Every Summer)

Intensive lab introduction to cellular and molecular aspects of research techniques in contemporary neurobiology; held at Itasca Biological Station. Electrophysiological investigations of neuronal properties, neuropharmacological assays of transmitter action, and immunohistochemical studies in experimental preparations. prereq: Neuroscience grad or instr consent

NSC 5561. Systems Neuroscience. (; 4 cr. ; A-F or Audit; Every Fall)

Principles of organization of neural systems forming the basis for sensation/movement. Sensory-motor/neural-endocrine integration. Relationships between structure and function in nervous system. Team taught. Lecture, laboratory. prereq: NSc grad student or instr consent

NSC 5661. Behavioral Neuroscience. (; 3 cr. [max 4 cr.]; A-F or Audit; Every Spring)

Neural coding/representation of movement parameters. Neural mechanisms underlying higher order processes such as memorization, memory scanning, and mental rotation. Emphasizes experimental psychological studies in human subjects, single cell recording experiments in subhuman primates, and artificial neural network modeling. prereq: Grad NSc major or grad NSc minor or instr consent

Neuroscience Department (NSCI)

NSCI 1001. Fundamental Neuroscience: Understanding Ourselves. (TS; 3 cr. ; A-F only; Every Fall & Spring)

Assessing objectively the neuroscience information presented to public at-large across various media outlets. Explaining the potential importance of these discoveries.

NSCI 1002. Social Neuroscience: Understanding Others. (3 cr. ; A-F only; Every Spring)

The field of neuroscience makes a special contribution to our understanding of the human condition, as it can both help us understand ourselves and also how we interact in a world of other individuals. Historically, there has been a dichotomy between disciplines that identify

the abstract principles of the social world we live in and the biology of the organ (i.e., the central nervous system) we use to identify and coordinate those abstract principles as we function in our daily lives. By merging these disciplines and studying our interactions with the world on many layers of analysis, from genes to social dynamics, we can develop a richer understanding of who we are as people. prereq: None

NSCI 2001. Human Neuroanatomy (without a lab). (; 3 cr. ; Student Option; Every Spring)

This course will provide a broad introduction to the nervous system with an emphasis on the human nervous system. The course will introduce the structure and function of neurons, the major anatomical parts of the nervous system and the main functional systems. Functional systems will be approached through an understanding of the anatomical circuitry. The fundamental concepts of neurochemical communication studied in general terms in the first part of the course will be re-examined relative to specific functional systems later in the course. Although the major focus of the course will be on the normal nervous system, common diseases will be introduced for each main topic. Students will gain an understanding of the nature of many neurological diseases, which will provide further insight into how the normal nervous system functions. The neuronal substrates of learning/memory, addiction and drug actions will be examined. Through the lectures, discussions and other resources, students will be expected to gain an understanding of the neural circuitry and information processing responsible for the diverse range of human behaviors. The material covered in Nsci 2001 and 2100 is very similar. N2100 is taught only fall semester. It is a traditional lecture course that includes a weekly laboratory. The faculty believe that the laboratory is a valuable part of the course. N2001 is taught only spring semester for those who cannot take the fall course. It does not have a lab, but has the advantage of a flipped format. In N2001, students will be expected to watch the assigned lectures prior to coming to class. Class time will be spent on exercises and discussions that use the material presented in the online lectures. Students who take one of these two courses will not be allowed to take the other course. For more information, see <http://mclonlab.neuroscience.umn.edu/2001/index.htm>

NSCI 2101. Human Neuroanatomy. (BIOL; 4 cr. ; A-F only; Every Fall)

This course will provide a broad introduction to the nervous system with an emphasis on the human nervous system. The course will introduce the structure and function of neurons, the major anatomical parts of the nervous system and the main functional systems. Functional systems will be approached through an understanding of the anatomical circuitry. The fundamental concepts of neurochemical communication studied in general terms in the first part of the course will be re-examined relative to specific functional systems later in the course. Although the major focus of the

course will be on the normal nervous system, common diseases will be introduced for each main topic. Students will gain an understanding of the nature of many neurological diseases, which will provide further insight into how the normal nervous system functions. The neuronal substrates of learning/memory, addiction and drug actions will be examined. Through the lectures, laboratory exercises and other resources, students will be expected to gain an understanding of the neural circuitry and information processing responsible for the diverse range of human behaviors. The material covered in Nsci 2001 and 2100 is very similar. N2100 is taught only fall semester. It is a traditional lecture course that includes a weekly laboratory. The faculty believe that the laboratory is a valuable part of the course. N2001 is taught only spring semester for those who cannot take the fall course. It does not have a lab, but has the advantage of a flipped format. In N2001, students will be expected to watch the assigned lectures prior to coming to class. Class time will be spent on exercises and discussions that use the material presented in the online lectures. Students who take one of these two courses will not be allowed to take the other course. For more information, see <http://mcloonlab.neuroscience.umn.edu/2100/index.htm>

NSCI 3001W. Neuroscience and Society. (CIV,WI; 4 cr. ; A-F only; Every Spring) Ethical implications. Readings, personal reflections, class discussions, debates, and formal writing. Development of logical arguments, writing skills, oral presentation skills, and teamwork. Students present/argue both their own personal views and those of others. What it is like to have altered mentation, i.e. a brain disease or disability. Readings/multimedia reports from primary neuroscience literature as well as philosophy, policy, and law literature and popular media.

NSCI 3101. Neurobiology I: Molecules, Cells, and Systems. (3 cr. ; A-F or Audit; Every Fall & Spring) This course discusses the basic principles of cellular and molecular neurobiology and nervous systems. The main topics include: Organization of simple networks, neural systems and behavior; how the brain develops and the physiology and communication of neurons and glia; the molecular and genetic basis of cell organization; ion channel structure and function; the molecular basis of synaptic receptors; transduction mechanisms and second messengers; intracellular regulation of calcium; neurotransmitter systems, including excitation and inhibition, neuromodulation, system regulation, and the cellular basis of learning, memory, and cognition. The course is intended for students majoring in neuroscience, but is open to all students with the required prerequisites.

NSCI 3102W. Neurobiology II: Perception and Behavior. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring) This is the second of the introductory neurobiology courses. It introduces

fundamental concepts in systems and behavioral neuroscience with emphasis on the neural circuits underlying perception and sensorimotor integration. Lectures will examine the neural basis of specific behaviors arising from the oculomotor, visual and auditory systems and notes are available on Canvas. Topics include: retinal processing, functional organization in the cerebral cortex, neural circuit development, language, reward, and addiction. Students must learn to read scientific papers, and to understand the main ideas well enough to synthesize them and communicate them both orally and in writing. The course is writing intensive: exams are in essay and short answer format, and a 10-15 page term paper is required. The course is required for students majoring in neuroscience. The course consists of two hours of lecture and one hour of discussion per week.

NSCI 3505W. Mind and Brain. (WI; 4 cr. ; A-F only; Every Spring)

This course is intended as an introduction to the new views on the relationship between mind and brain. Over the last several decades, a new view of cognition and neural processing has been developed based on the concepts of algorithm, representation, computation, and information processing. Within this theoretical framework, psychological constructs are computational processes occurring across physical neural systems. We will take a neuroscience and psychological perspective in which the physical neuroscience instantiates but does not diminish the psychological constructs. Although our conceptual framework will be computational, this course will not require or expect any mathematical or computer background. At the completion of this class, you will understand the implications of the physical nature of the brain? how mentation is explicable from physical processes, and how decision-making arises from those same physical processes. Importantly, you will also understand the limitations of current knowledge and the methodologies being used to push those limitations. This class is not intended as a final step in this understanding, but as a first step into these issues. At the conclusion of the class, you should have sufficient understanding to continue more in-depth reading and study in these issues. There are no official prerequisites. However, I have found that students who have EITHER a strong computational background (computer science, mathematics, economics, physics) OR have taken an introductory neuroscience course (e.g. Nsci 2100) have done better in the class than students with no background. However, I have seen students come in with very little background and do well in the class if they engage with the class and work hard.

NSCI 3700. Neuroscience Journal Club. (; 1 cr. [max 3 cr.] ; S-N only; Every Fall & Spring) In this journal club, students will read and discuss original scientific research articles. Each section will focus on a topic chosen by the instructor and each class meeting will focus on a different research article on the chosen topic. Topics may take a historical

perspective (e.g. Ground breaking articles in addiction research) or focus on timely issues (e.g. Neuroethics: How do recent advances in neuroscience influence of legal system?). Students will take turns being the presenter, which includes presenting background material relevant to the article and as well as leading a critical discussion of the research findings and interpretation of the data.

NSCI 4101. Development of the Nervous System: Cellular and Molecular Mechanisms. (; 3 cr. ; A-F only; Every Spring) This course will extend students'

understanding of fundamental concepts of biology and neuroscience through study of the cellular and molecular mechanisms that underlie development of the nervous system. Neurodevelopment provides a context in which to study processes active in many biological functions and diseases. Students will learn about each of the major cellular processes involved in development of the nervous system such as cell division and cell migration, and will learn about the function of molecules and signaling pathways active in each process. Human developmental pathologies will be studied as a means to better understand normal developmental processes. Some lectures will focus on current research, and students will be expected to read some scientific literature.

NSCI 4105. Neurobiology Laboratory I. (; 3 cr. ; A-F or Audit; Every Fall)

Principles, methods, and laboratory exercises for investigating neural mechanisms and examining experimental evidence.

NSCI 4150. Advanced Topics in Neuroscience. (; 3 cr. [max 9 cr.] ; A-F or Audit; Periodic Spring)

In-depth study of aspects of neurodevelopment, neurochemistry/molecular neuroscience, sensory systems, motor control, and behavioral neuroscience. Primarily for undergraduates majoring in neuroscience or related areas.

NSCI 4201. Neuroscience of Drug Abuse. (3 cr. ; A-F only; Every Spring)

The use and abuse of illicit drugs is an ongoing and insidious world problem. Neuroscience research has contributed importantly to understanding drug abuse as a disease of the nervous system. The goal of this course will be to provide a clinical characterization of drug abuse from a human perspective. From there animal models of drug use and addiction will be discussed as a basis for research examining cellular and molecular mechanisms of the effects of drugs on the nervous system. As all drugs of abuse have a common neurobiology, that neurobiology will be examined from a circuit perspective that will include the underlying molecular control. Collectively students should develop a comprehensive view of the problem of drug addiction including prospects for the development of neurobiologically-based therapeutics.

NSCI 4444. Neuroscience and Education. (3 cr. ; A-F only; Every Fall)

Neuroscience and Education will explore how our contemporary understanding of neuroscience could, should or does influence educational practice and policy. Students in this class will engage in evaluating which cellular and systems level neuroscience concepts apply to education, from pre-school to university levels.

NSCI 4501. Neurodegenerative Diseases, Mechanisms to Therapies. (3 cr. ; A-F only; Every Fall)

With a rapid increase in population aging in western educated industrialized rich democratic (WEIRD) societies, neurodegenerative disorders such as Alzheimer's disease have become an alarming health priority due to the current absence of disease-modifying therapies. The objective of this course is to acquire a fundamental appreciation for the most common degenerative disorders of the nervous system as well as to integrate central notions shared across these diseases and emerging concepts in the field

NSCI 4793W. Directed Studies: Writing Intensive. (WI; 1-6 cr. [max 42 cr.] ; S-N or Audit; Every Fall, Spring & Summer)

Individual study of selected topics. Emphasis on readings, use of scientific literature. Writing intensive. prereq: instr consent, dept consent; no more than 7 cr of [4793, 4794, 4993, 4994] may count toward major requirements

NSCI 4794W. Directed Research: Writing Intensive. (WI; 1-6 cr. ; S-N or Audit; Every Fall, Spring & Summer)

Lab or field investigation of selected areas of research. Writing intensive. prereq: instr consent, dept consent; no more than 7 cr of [4793, 4794, 4993, 4994] may count toward major requirements

NSCI 4993. Directed Studies. (; 1-7 cr. ; S-N or Audit; Every Fall, Spring & Summer)

Individual study of selected topics with emphasis on selected readings and use of scientific literature. prereq: instr consent, dept consent; max of 7 cr of 4993 and/or 4994 may count toward major requirements

NSCI 4994. Directed Research. (; 1-6 cr. [max 42 cr.] ; S-N or Audit; Every Fall, Spring & Summer)

Lab or field investigation of selected areas of research. prereq: instr consent, dept consent; max of 7 cr of 4993 and/or 4994 may count toward major requirements

NSCI 5101. Neurobiology I: Molecules, Cells, and Systems. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

This course discusses the basic principles of cellular and molecular neurobiology and nervous systems. The main topics include: Organization of simple networks, neural systems and behavior; how the brain develops and the physiology and communication of neurons and glia; the molecular and genetic basis of cell organization; ion channel structure and function; the molecular basis of synaptic receptors; transduction mechanisms and second messengers; intracellular regulation of calcium; neurotransmitter systems, including excitation and inhibition, neuromodulation,

system regulation and the cellular basis of learning, memory and cognition. The course is intended for students majoring in neuroscience, but is open to all students with the required prerequisites.

NSCI 5110. Dental Neuroscience for Graduate Students. (; 2 cr. ; A-F or Audit; Every Spring)

Structure/function of human nervous system. Lectures and reading assignments emphasize topics pertinent to dentistry. prereq: Credit will not be granted if credit has been received for: : 6110; BioC 3021, Biol 4004, instr consent; intended for grad students who require a comprehensive grad-level neuroscience course

NSCI 5111. Medical Neuroscience for Graduate Students. (; 5 cr. ; A-F or Audit; Every Spring)

Survey of molecular, cellular, and systems neuroscience as related to medicine. Lecture/lab. prereq: Credit will not be granted if credit has been received for: : 6111; BioC 3021, Biol 4004, instr consent; intended for grad students who require a comprehensive medically-oriented neuroscience course

NSCI 5501. Neurodegenerative Diseases, Mechanisms to Therapies. (3 cr. ; A-F only; Every Fall)

With a rapid increase in population aging in western educated industrialized rich democratic (WEIRD) societies, neurodegenerative disorders such as Alzheimer's disease have become an alarming health priority due to the current absence of disease-modifying therapies. The objective of this course is to acquire a fundamental appreciation for the most common degenerative disorders of the nervous system as well as to integrate central notions shared across these diseases and emerging concepts in the field.

NSCI 5551. Statistical Foundations of Systems Neuroscience. (3 cr. ; A-F only; Spring Even Year)

The purpose of this course is to provide the student with a familiarity with the mathematical and statistical techniques to practice contemporary systems neuroscience. Topics are chosen with a focus on current areas of active research, as well as problems that have driven the field over the past twenty years. The class will combine lectures with discussions of important systems neuroscience papers, and will move at a fast pace. It is intended for graduate students and ambitious undergraduates. One major difference between this course and other math and statistics courses is the focus on systems neuroscience. Our examples will come from the Systems Neuroscience field. Our research priorities will come from Systems Neuroscience and our Friday paper discussions will draw exclusively from scholarly papers in Systems Neuroscience.

NSCI 5916. BrainU 101: Neuroscience in the Classroom. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Four-weekend workshop. Concepts in neuroscience. Neurobiology of learning. Effects of drugs. Lectures, activities, discussion,

designing investigations. In 2009-10, held in Winona. In 2010-11, held in Duluth. prereq: instr consent; intended for high school teachers

Neurosurgery (NSU)

NSU 5667. Neurobiology of Disease. (; 2-3 cr. ; Student Option; Every Fall)

Basic clinical/pathological features, pathogenic mechanisms. Weekly seminar.

Norwegian (NOR)

NOR 1001. Beginning Norwegian. (; 5 cr. ; Student Option; Every Fall)

Emphasis on working toward novice-intermediate low proficiency in all four language modalities (listening, reading, speaking, writing). Topics include everyday subjects (shopping, directions, family, food, housing, etc.).

NOR 1002. Beginning Norwegian. (; 5 cr. ; Student Option; Every Spring)

Continues the presentation of all four language modalities (listening, reading, speaking, writing) with a proficiency emphasis. Topics include free-time activities, careers, and Norwegian culture. prereq: 1001

NOR 1003. Intermediate Norwegian. (; 5 cr. ; Student Option; Every Fall)

Emphasis on intermediate proficiency in listening, reading, speaking, and writing. Contextualized work on grammar and vocabulary is combined with authentic readings and essay assignments. prereq: 1002

NOR 1004. Intermediate Norwegian. (; 5 cr. ; Student Option; Every Spring)

Emphasis on developing intermediate mid-high proficiency in listening, reading, speaking, and writing. Contextualized work on grammar and vocabulary is supported by work with authentic readings and essay assignments. prereq: 1103

NOR 4001. Beginning Norwegian for Graduate Research. (; 5 cr. ; Student Option; Every Fall)

Emphasis on working toward novice-intermediate low proficiency in all four language modalities (listening, reading, speaking, writing). Topics include everyday subjects (shopping, directions, family, food, housing, etc.). Meets concurrently with 1001.

NOR 4002. Beginning Norwegian for Graduate Research. (; 5 cr. ; Student Option; Every Spring)

Continues the presentation of all four language modalities (listening, reading, speaking, writing) with a proficiency emphasis. Topics include free-time activities, careers, and Norwegian culture. Meets concurrently with 1002.

NOR 4003. Intermediate Norwegian for Graduate Research. (; 5 cr. ; Student Option; Every Fall)

Emphasis on intermediate proficiency in listening, reading, speaking, and writing. Contextualized work on grammar and vocabulary is combined with authentic readings and essay assignments. Meets concurrently with 1003.

NOR 4004. Intermediate Norwegian for Graduate Research. (; 5 cr. ; Student Option; Every Spring)

Emphasis on developing intermediate mid-high proficiency in listening, reading, speaking, and writing. Contextualized work on grammar and vocabulary is supported by work with authentic readings and essay assignments. Meets concurrently with 1004. prereq: 1004 in another language or passing score on LPE or grad student

Nursing (NURS)

NURS 1030. Nursing First Year Seminar I. (1 cr. ; Student Option; Every Fall)

This course is designed to help each student achieve their individual goals by promoting proactive educational and career planning, introducing students to resources available at the University and in the School of Nursing, and connecting students with academic advisors, faculty, and student groups in the School of Nursing and throughout the University. prereq: Freshman guarantee student, instr consent

NURS 1031. Nursing First Year Seminar II. (1 cr. ; A-F only; Every Spring)

This course will provide the student with opportunities to explore the wide range of opportunities in the nursing profession. Throughout this course students will be asked to reflect on the alignment of their academic decisions; personal strengths, values, and interests; related to their future career in nursing and life goals. This course will allow the student to deepen their understanding of campus engagement, consider supporting coursework to compliment the nursing major, and advance progress toward the BSN degree and future graduate education.

NURS 2001. Human Growth and Development: A Life Span Approach. (3 cr. ; Student Option; Every Fall & Spring)

Theoretical, personal, and culturally determined theories on life span development, from prenatal period through death/dying. Psychoanalytical, behaviorism, cognitive, sociocultural, and epigenetic categories of biosocial, cognitive, and psychosocial domains.

NURS 2996. Health Science Practical Experience for Nursing. (; 1 cr. [max 2 cr.] ; Student Option No Audit; Periodic Fall & Spring)

This course will supplement and enrich co-curricular health sciences practical experiences like work, volunteer positions, or non-Nursing internships. Students will set and work toward goals, receive and respond to feedback, reflect on their progress, and connect their experience to Nursing careers. Course notes: NURS 2996 is designed for Nursing students who have secured a health sciences practical experience (such as a volunteer position, job, or internship) that requires them to be enrolled in a course for academic credit including CPT for International Students. This course is not for students completing their Junior year Nursing internship. There are specific requirements for Nursing internship courses set by the Minnesota Board

of Nursing which are only met through NURS 3996.

NURS 3115. Health Informatics and Information Technology. (TS; 3 cr. ; A-F only; Every Fall & Spring)

Examine health informatics and information technology from consumer, clinical, and public health perspectives. Develop skills in using information technology to communicate, manage knowledge, mitigate error, and support decision-making.

NURS 3703. Assessment and Beginning Interventions: Nursing Lab 1. (2 cr. ; A-F only; Every Fall)

Psychomotor skills/interventions with focus on therapeutic interventions. Experiential learning activities used to build skill in assessment, planning/implementation of select nursing interventions. Theoretical foundations of nursing interventions. prereq: Admitted to Nurs BSN program

NURS 3705. Nursing Interventions. (2 cr. ; A-F or Audit; Every Spring)

Psychomotor skills/interventions with focus on therapeutic interventions. Experiential learning activities used to build skill in assessment, planning, implementation of select nursing interventions. prereq: 3703, enrolled in School of Nursing

NURS 3710. Statistics for Clinical Practice and Research. (MATH; 3 cr. ; Student Option; Every Fall)

Numerical reasoning, measurement principles. Vital statistics, rates, data description. Probability. Hypothesis testing/confidence intervals for tests on means. Proportions, correlations, linear regression. prereq: [High school algebra or instr consent], students enrolled in School of Nursing must take A/F option

NURS 3801. Patient Centered Care of Adults and Older Adults I. (3 cr. ; A-F only; Every Fall & Spring)

Person-centered evidence based nursing care for adults, including physical/mental health promotion, acute/chronic illness management. Critical analysis of patient needs/planning nursing care. prereq: Admitted to Nurs BSN program

NURS 3802. Patient Centered Care: Nursing Care of Families I. (; 3 cr. ; A-F only; Every Fall & Spring)

Introduction to nursing care of childbearing/childrearing families. Family theory, family-centered care, and family culture in the context of home and community settings. prereq: Enrolled in School of Nursing

NURS 3802H. Nursing Care of Families I Honors. (; 4 cr. ; A-F only; Every Fall & Spring)

Nursing care of childbearing/childrearing families. Family theory, family-centered care, family culture in the context of home and community settings and therapeutic communication between nurse and patients/families. prereq: Enrolled nursing student

NURS 3803. Application of Genetics in Nursing. (; 2 cr. ; A-F or Audit; Every Spring)

Application of genetics to the practice of professional nursing. prereq: Enrolled in nursing major

NURS 3806. Nurse as Professional. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Basic nursing concepts, role development, competencies, therapeutic use of self, and communication skills for person-centered care and professional teamwork; beginning development of own nursing philosophy; career exploration. prereq: Admitted to nursing BSN program

NURS 3996. Clinical Internship. (; 1 cr. [max 3 cr.] ; S-N or Audit; Every Summer)

Application of nursing theory/research based knowledge in clinical practice. prereq: Completed jr yr of baccalaureate nursing program, accepted into approved clinical internship program

NURS 4104. Ethical Sensitivity and Reasoning in Health Care. (CIV; 2 cr. ; A-F only; Every Fall)

Developing sensitivity to range/complexity of ethical issues/dilemmas in health care. Ethical principles/theories. Key ethical concepts in addressing morally troubling issues in health care settings.

NURS 4106. Nurse as Collaborator. (; 1 cr. ; A-F only; Every Fall)

Examination of evidence-based teamwork systems and processes to improve communication and collaboration among health care professionals. prereq: Enrolled in nursing program

NURS 4205V. Honors: Nursing Theory and Research. (WI; 3 cr. ; Student Option; Every Spring)

Knowledge basic to discipline/practice of nursing. Relationships among research, theory, practice. Introduction to research process, with attention to use of research in practice. Students develop honors research proposal. prereq: Nurs honors

NURS 4205W. Nursing Theory and Research. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)

Examination of the knowledge basic to the discipline and practice of nursing. The relationships among research, theory, and practice are discussed. The research process is introduced to assist with understanding the utilization of research in practice. prereq: Undergrad in nursing

NURS 4301. Person Centered Care of Adults and Older Adults II. (4 cr. ; A-F only; Every Fall & Spring)

Person-centered evidence based nursing care for adults with complex physical and mental health illnesses. Critical analysis of multiple complex patient needs. Planning nursing care. prereq: 3801, 3802, 3703, 3705, enrolled in School of Nursing

NURS 4303. Practicum: Person Centered Care of Adults in Acute Care. (; 3 cr. ; A-F only; Every Fall & Spring)

Clinical reasoning is applied to the nursing care of young through older adults in acute

care. Evidenced based practice and clinical reasoning to provide person centered care within the health system environment. prereq: 3703, 3705, 3801, [3802 or 3802H], enrolled in nursing

NURS 4305. Practicum: Community-based Care of Families Across Life Span. (; 3 cr. ; A-F only; Every Fall & Spring)

Examine an evidence-based teamwork system to improve communication and teamwork skills among health care professionals. prereq: 3703, 3705, 3801, [3802 or 3802H], enrolled Nurs student

NURS 4312. Patient Centered Care: Nursing Care of Families II. (; 4 cr. ; A-F only; Every Fall & Spring)

Family centered care theory applied to care of childbearing, childrearing families in acute care setting. High risk pregnancy. Child response to illness/hospitalization. prereq: 3802, enrolled nursing student

NURS 4321. Public Health Nursing. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Concepts of epidemiology, systems theory, and social justice applied to population-based nursing care. Public health nursing competencies and principles of community assessment. Public health nursing practice models and evidenced-based nursing interventions. prereq: jr nursing student

NURS 4402. Taking Ethical Action in Health Care. (CIV; 1 cr. ; A-F only; Every Fall)

Ethical dimensions/role obligations of health care professionals related to selected social issues with health consequences. prereq: Senior undergrad nursing student, [4104 or instr consent]

NURS 4404V. Honors: Applied Research and Research Utilization. (WI; 3 cr. ; A-F only; Every Fall)

Systematic inquiry in interpreting/evaluating research. Implement study proposed in Nurs4205V. Write scholarly research report, which will serve as honors research thesis. prereq: Honors student in School of Nursing, Nurs 4205V, upper division statistics course

NURS 4435. Immunization Tour. (1 cr. ; S-N or Audit; Every Fall)

The focus of this course is interprofessional collaboration, teams and teamwork, roles and responsibilities, and ethical issues as nursing and pharmacy public health professionals. Students operate mobile influenza immunization clinics for faculty, staff and students across the UMN Twin Cities campus. prereq: [Senior Bachelor of Science nursing student or professional master's nursing student], completion of CPR

NURS 4701. Nursing Care Across the Lifespan I. (3 cr. [max 4 cr.] ; A-F only; Every Fall)

Examines person-centered evidence based nursing care for persons across the lifespan considering the underlying pathophysiology and pharmacological interventions in complex physical and mental health illnesses. Emphasis is on critical analysis of complex patient needs and planning and prioritizing nursing care.

NURS 4703. Nursing Care Across the Lifespan Practicum I. (2 cr. [max 4 cr.] ; A-F only; Every Fall)

Person-centered nursing care that is safe, effective, holistic, culturally sensitive. prereq: Nursing student in School of Nursing

NURS 4704. Continuum of Care Practicum. (; 2 cr. ; A-F only; Every Fall)

Care coordination/relationship of acute, home, community services. Populations may include chronically ill, all ages (aging adults, pediatric), culturally diverse/healthy communities. prereq: Nursing Student in School of Nursing

NURS 4705. Nursing Care Across the Lifespan II. (; 2 cr. ; A-F or Audit; Every Spring)

Synthesize person-centered evidence-based nursing care for persons across the lifespan with complex health conditions in the context of families and communities. Didactic Course. prereq: 4703, sr in good standing in BSN

NURS 4706. Transition to Practice. (; 1 cr. ; A-F or Audit; Every Fall & Spring)

Professional and legal issues necessary to the transition into nursing practice; strategies for lifelong learning and nursing career trajectories in preparation for entry into practice in a complex health care system. prereq: Sr in BSN program

NURS 4707. Nursing Leadership: Professional Practice in Complex Systems. (; 2 cr. ; A-F only; Every Spring)

Leadership skills for safe effective practice as a new graduate nurse; issues affecting nursing practice; leadership attributes, e.g., creating effective teams, confident interaction with others, resolving conflict, managing resources, leadership for assuring patient safety and quality care. prereq: Sr enrolled in BSN program

NURS 4708. Nursing Care Across the Lifespan Practicum II. (4 cr. ; A-F only; Every Spring)

Synthesis of the nursing process to provide nursing care in a clinical setting that demonstrates the School of Nursing Pre-licensure Competencies. Preceptor led. Prereq: BSN Student

NURS 4777W. Senior Project in the Nursing Major. (WI; 3 cr. [max 9 cr.] ; A-F only; Every Fall & Spring)

Application of evidence-based practice and the relationship to research, quality improvement, and safety leading to improved patient, population, or system outcomes. Scholarly exploration of a clinical problem or system issue from a nursing perspective that culminates in a professional presentation. prereq: 4205W or 4205V

NURS 5011. Interprofessional Diabetes Experience. (; 2 cr. ; A-F only; Every Spring)

Explore diabetes mellitus through active, hands-on learning in an interprofessional environment. Week-long simulated experience of living with diabetes. Online learning activities focused on interprofessional teamwork for optimal care to patients with diabetes. prereq: 2nd or 3rd year in nursing curriculum prereq: 2nd or 3rd year in nursing curriculum

NURS 5016. Critical Reading of Scientific Literature in Adolescent Health. (1 cr. ; Student Option; Every Fall)

Develop skills for critically reading empirical literature within field of adolescent health. Written/oral critiques of core elements of research articles, including literature review, conceptual framework, research questions/hypotheses, methods, results, discussion, conclusions. prereq: [Grad-level research methods course, inferential statistics course] or instr consent

NURS 5029. Introduction to Nursing Interventions. (; 3 cr. ; A-F only; Every Fall)

Introduction to evidence-based interventions for safe, inclusive, and ethical nursing practice. Active learning activities in laboratory, simulation, are used to build skills to support nursing process.

NURS 5030. Foundational Concepts of Professional Nursing. (; 3 cr. ; A-F or Audit; Every Fall)

Foundation of knowledge for culturally appropriate, ethical, evidence-based nursing practice across the life span. Research/theory that underlie the art/science of professional nursing. Concepts of person, environment, health, and nursing. prereq: Admission to master's in nursing program

NURS 5031. Human Response to Health and Illness: Adults and Elders. (; 4 cr. ; A-F or Audit; Every Spring)

Focus on individual responses to health and illness in the context of families and environments. The clinical component will emphasize the application of the nursing process in adult and older adult populations.

NURS 5032. Human Response to Health and Illness: Children and Childbearing Families. (; 5 cr. ; A-F or Audit; Every Spring)

Focus is on family responses to health and illness. Application of the nursing process in children and childbearing families is emphasized. The family as the unit of care is the focus of a seminar.

NURS 5033. Population-Focused Health in Public Health and Mental Health Nursing. (; 5 cr. ; A-F or Audit; Every Summer)

Focus on population-based public health and mental health nursing practice across the lifespan, with local to global perspectives. Emphasis on health equity, health promotion and levels of disease prevention. Apply theory and research to examine interventions and outcomes.

NURS 5034. Transition to Professional Nursing Practice. (3 cr. ; A-F or Audit; Every Fall)

Critical analysis of issues affecting the transition to professional nursing practice including those related to the quality of healthcare, quality improvement, and the ability of nurses to improve patient outcomes across settings. prereq: Nurs 5033, Nurs 6200

NURS 5035. Practicum Nursing Care for Complex Health Conditions. (4 cr. ; A-F or Audit; Every Fall)

Clinical decision-making, comprehensive nursing care of clients with complex health

problems. In collaboration with a clinical preceptor and a faculty advisor, students develop an individualized learning contract. prereq: Nursing postbaccalaureate certificate program or master of nursing program

NURS 5115. Interprofessional Health Care Informatics. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Implications of informatics for practice, including nursing, public health, and health care in general. Electronic health record issues. Ethical, legislative, political, and global/future informatics issues.

NURS 5116. Consumer Health Informatics. (; 2 cr. ; Student Option No Audit; Every Fall)

This course examines issues from the consumer's perspective in the acquisition, understanding, or use of health information. Mobile health, telehealth, sensor technology, and internet sources for improving health are examined. The impact on consumer-provider communication and relationships as well as ethical and legal issues are explored. prereq: Grad student or instr consent

NURS 5117. Consumer Health Informatics Practicum. (; 2 cr. ; S-N only; Every Fall)

Students apply consumer health informatics principles, theories, and research to consumer health informatics topics and how technology is used to engage patients, clinicians, and family members in their health care. Specific topics include electronic health literacy, digital/mobile health technologies (health apps), and sensor/remote monitoring. prereq: Graduate student, [Nurs 5116 or &Nurs 5116] or instructor consent

NURS 5190. Essentials of Holistic Health Assessment and Foundational Clinical. (; 3 cr. ; A-F only; Every Fall & Spring)

Introduction to health and physical assessment for safe, culturally sensitive, inclusive, and ethical nursing practice across the life span. Active learning, simulation, and clinical settings are used to develop a holistic approach to nursing process: assessment, diagnosis, outcome, planning, implementation, and evaluation. prereq: Admission to MN Program

NURS 5200. Advanced Holistic Health Assessment for the Advanced Practice Nurse. (; 3 cr. ; A-F only; Every Fall & Summer)

Provides students with advanced holistic health assessment knowledge and skills needed for ANP across the life span. Prepares students to utilize advanced health assessment skills to differentiate between normal, variations of normal and abnormal findings. Integrates Integrates EB data into a comprehensive health assessment. prereq: Admission to advanced practice nursing area of study (DNP or Post-Graduate certificate program), instr consent

NURS 5220. Pharmacotherapeutics for Nurse Anesthesia I. (2 cr. ; A-F only; Every Fall)

Basic overview of the pharmacologic principles for commonly used medication classes specific to acute care and perioperative populations. Includes an overview of each drug class, a review of related physiology, and the

pharmacodynamics and pharmacokinetics of drug classes and specific medications.

NURS 5222. Advanced Human Physiology. (; 2 cr. ; A-F or Audit; Every Fall)

This course will use a systems approach to human physiology and physiologic changes across life span. Emphasizes clinical application using population-specific content related to various specialty areas in advanced practice nursing.

NURS 5225. Psychopharmacology Advanced Practice Psychiatric/Mental Health Nursing. (; 3 cr. ; A-F only; Every Fall & Spring)

Advanced concepts in neuroscience, psychopharmacology, and clinical management related to psychopharmacologic treatment of psychiatric disorders/symptoms. Application to problems in various clinical settings. prereq: 5228 or instr consent

NURS 5226. Advanced Human Pathophysiology. (; 2 cr. ; A-F or Audit; Every Spring)

This course will use a systems approach to human pathophysiology across the life span. Emphasizes clinical application using population-specific content related to various specialty areas in advanced practice nursing.

NURS 5227. Pharmacology for Pediatric Nurse Practitioner - Acute Care. (; 2 cr. ; A-F or Audit; Every Summer)

This course is designed to provide students with the knowledge of pharmacodynamics and pharmacokinetics of medications used in the pediatric acute care setting. Content provided in this course will enable the students to select pharmacologic agents safely and appropriately for the management of acute and chronic health care problems of pediatric patients.

The course addresses representative drugs of pharmacologic groups, indications for use, drug selection, titration of dose, key adverse effects, drug to drug interactions, and monitoring of therapy.

NURS 5228. Pharmacology for Advanced Practice Nursing. (; 2 cr. ; A-F or Audit; Every Fall)

Overview of pharmacological principles for commonly used medication classes. Each drug class, related physiology. Pharmacodynamics and pharmacokinetics of drug classes and specific medications. prereq: Grad nursing student or instr consent

NURS 5229. Clinical Pharmacotherapeutics. (; 3-4 cr. ; A-F only; Every Spring)

Pharmacokinetics, pharmacodynamics, therapeutic dosages for various age groups. Client patterns of drug use. Prescriptive privileges. Prescription writing for advanced practice nurses. prereq: 5222, [5228 or PHAR 5800], DNP student, instr consent

NURS 5230. Pharmacotherapeutics for Nurse Anesthesia II. (4 cr. ; A-F only; Every Spring)

Reviews basic physics, organic and biochemistry of metabolic processes, pharmacodynamics & pharmacokinetics. Detailed description of anesthetic drugs,

physiologic mechanisms, side effects, toxicities, metabolism & elimination as outlined on National Certification Examination. Synthesis of pharmacotherapeutics into nurse anesthesia plan of care.

NURS 5241. Nursing Leadership for Effective Practice. (; 2 cr. [max 3 cr.] ; A-F or Audit; Every Fall)

Analysis of leadership theory and application of leadership skills needed for safe and effective practice as a new graduate nurse. Exploration of system issues affecting nursing practice and patient outcomes. prereq: Final sem of MN Program

NURS 5284. Supporting Physiologic Labor and Childbirth for Nurses. (2 cr. ; S-N only; Every Fall & Spring)

Techniques to provide labor support, discussion about doula role and overlap with nursing support. Emphasizing continuous physical and emotional labor support plus information to enhance physiologic birth. Experience providing labor support to women at a clinical facility included.

NURS 5448. Interprofessional Collaborative Practice in HIV Care. (1 cr. ; A-F only; Every Spring)

This program is designed to provide learners with foundational knowledge of HIV prevention and care and to develop the ability to work as a member of an interprofessional collaborative health care team. Learners will explore options for involvement in HIV care as part of their health care career and will be inspired to lifelong learning related to HIV care and interprofessional collaborative practice.

NURS 5505. Assessment and Support of Individuals in Labor. (2 cr. ; S-N only; Every Spring)

Self-directed study with goal of working with experienced labor nurses/learning knowledge/skills required to perform labor. Clinical experience. Completion of selected online modules related to nursing care of women in labor. prereq: Admission to DNP Program

NURS 5604. Advanced Health Assessment and Interventions with Adolescents. (; 2 cr. ; Student Option; Every Summer)

Integrates knowledge from nursing, public health, health behavior, and adolescent development as framework for developing health assessment/intervention strategies for clinical practice with adolescents. prereq: CPsy 5303 or equiv or instr consent

NURS 5611. Database Principles for Healthcare. (; 2 cr. ; A-F only; Every Fall)

Principles of database theory, modeling, design, and manipulation of databases will be introduced, taught with a healthcare applications emphasis. Students will be able to critically evaluate database query methods and results, and understand their implications for healthcare. Course Prerequisites: Graduate student or instructor consent

NURS 5726. Sexual Assault Nurse Examiner (SANE) Trauma-Informed Care Clinical Experience. (; 1-2 cr. ; Student Option; Every Fall, Spring & Summer)

Practicum course in which there is supervised application of clinical skills in SANE assessment using a trauma-informed approach. During this course, students will explore the tenets of trauma-informed care and integrate them into their forensic nursing practice and patient encounters during SANE exams.

NURS 5800. Nursing Topics. (; 1-4 cr. [max 16 cr.] ; Student Option; Every Fall, Spring & Summer)

Course allows students to study a topic not included in regular courses, or for faculty to offer a course to determine interest in a topic. prereq: instr consent

NURS 5812. Global Health Through Study Abroad. (; 1-2 cr. ; S-N only; Periodic Spring & Summer)

Nursing as a global profession and the issues that impact health of populations worldwide. prereq: instr consent

NURS 5830. Advanced Clinical Nursing. (; 1-6 cr. ; Student Option; Every Fall, Spring & Summer)

Independent study or faculty seminar on special clinical topic. prereq: Grad nursing major, instr consent

Nutrition (NUTR)

NUTR 5622. Vitamin and Mineral Biochemistry. (; 3 cr. ; Student Option; Every Spring)

Nutritional, biochemical, and physiological aspects of vitamins and essential minerals in human and experimental-animal models. prereq: BioC 3021, Phsl 3051, FSCN 4612

NUTR 5624. Nutrition and Genetics. (; 2 cr. ; Student Option; Every Fall)

Overview of gene-diet interactions and relevant technologies used to study such interactions. Nutrigenomics, epigenetics, transcriptomics, proteomics, metabolomics. Examples of gene-diet interactions, implications. Current issues. Prerequisites: Courses in Nutritional Biochemistry (e.g., NUTR 5625), and Vitamin and Mineral Biochemistry (e.g., NUTR 5622), or consent of instructor

NUTR 5625. Nutritional Biochemistry. (; 3 cr. ; Student Option; Every Fall)

Overview of biochemical molecules and pathways important in nutritional events. prereq: BIOC 3021 or instr consent

NUTR 5626. Nutritional Physiology. (; 3 cr. ; A-F or Audit; Every Spring)

Whole body macronutrient metabolism as it relates to etiology of metabolic diseases. Signaling between tissues to control homeostasis. How dysregulation of crosstalk can lead to metabolic diseases. How diet, exercise, or starvation impact metabolism. Regulation of food intake and energy expenditure. Designing/analyzing/interpreting research data. prereq: NUTR 5625

NUTR 5627. Nutritional and Food Toxicology. (; 3 cr. ; A-F only; Every Spring)

Toxic agents, organisms, and toxic effects that are important in the toxic events, with a

focus on food toxicants and nutrient-toxicant interaction. prereq: BIOC 3021; designed for students majoring in [nutrition or food science or toxicology]

NUTR 5993. Directed Research. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

NUTR 5994. Directed Research. (1-4 cr. ; Student Option; Every Fall, Spring & Summer)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

Occupational Therapy (OT)

OT 1003. Introduction to Occupational Therapy. (; 1 cr. ; Student Option; Every Fall, Spring & Summer)

Introduction to career of occupational therapy. Overview of profession's domain/process. Work settings, populations served, approaches used by occupational therapist.

Off-Campus Study (OCS)

OCS 3000. Non-affiliated Domestic Program. (; 0-30 cr. ; S-N only; Every Fall, Spring & Summer)

Not printed in catalog. A registration mechanism for students pursuing a unique off-campus study experience through either other educational institutions or through private non-credit granting agencies. Limited to students whose study is approved by University of Minnesota faculty who certify likely departmental credit for successfully completed study as specified by agreement forms signed by both student and faculty. prereq: instr consent

OCS 3550. NSE: National Student Exchange Plan B. (0-20 cr. [max 40 cr.] ; S-N only; Every Fall, Spring & Summer)

National Student Exchange: off-campus study. (Do not publish.) prereq: dept consent

Office of Undergrad Education (OUE)

OUE 1001. Mastering Skills for College Success. (; 2 cr. ; Student Option; Every Fall & Spring)

Practical assistance to students in developing efficient and effective learning and academic performance skills, improving reading speed and comprehension, increasing memorization and test-taking skills, managing test anxiety, identifying academic and career goals, and using advanced technology in university learning. Students identify individual academic strengths and weaknesses and formulate a plan for skill development through individualized learning projects. Addresses student learning styles, attitudes, and motivations and their relation to successful academic performance. Class focuses on transition to college, a good option for first year, transfer, international, and returning students.

OUE 1086. The First Year Experience: Fall. (2 cr. ; A-F only; Every Fall)

Awareness of roles, identity, needs, and interactions with diverse groups. Expectations, resources, and challenges associated with transition into college. Speakers, journals/portfolios, technology, reading/writing assignments, classroom exercises/experiences.. prereq: 1st-yr student athletes

OUE 1087. The First Year Experience:

Summer. (3 cr. ; A-F only; Every Summer)

Awareness of roles, identity, needs, and interactions with diverse groups. Expectations, resources, and challenges associated with transition into college. Speakers, journals/portfolios, technology, reading/writing assignments, classroom exercises/experiences. Prereq: 1st-yr student athletes

OUE 1101. Academic Refresher. (; 1 cr. ; S-N or Audit; Every Fall & Spring)

Identifying factors interfering with academic performance, selecting strategies, and establishing a plan to promote academic success. Learning-style, educational goals, life management skills, motivation, attitude. Class intended to support students who are experiencing academic barriers during the first half of the semester. prereq: instr consent

OUE 1102. Academic Success. (; 2 cr. [max 4 cr.] ; S-N only; Every Fall & Spring)

Assistance in identifying barriers in academic performance and developing plans for effective scholarship. Skill development, performance enhancement. Objectives achieved through didactic instruction, assignments, behavioral monitoring. Course designed for students who are on academic probation, returning from suspension, or have experienced significant academic barriers.

OUE 1830. Office of Undergraduate Education Topics Course. (; 1-4 cr. ; Student Option No Audit; Periodic Fall, Spring & Summer)

Topics courses offered by the Office of Undergraduate Education.

OUE 2001. Academic Planning and Exploration. (; 1 cr. ; A-F only; Every Fall & Spring)

Undecided and competitive-major students engage in academic and career decision-

making process. Students develop an exploratory action plan to help them discover/declare a best-fit major matching their interests, values, and academic skills. Customized course assignments include self-assessment, reflective essays, and an action plan project.

OUE 3000. Special Topics Course. (; 1-3 cr. ; Student Option No Audit; Periodic Fall, Spring & Summer)
See topics course for course-specific description.

OUE 3050. Introduction to Peer Education. (1 cr. ; Student Option; Every Fall)
Peer cooperative learning. Factors that enhance effectiveness of group learning, including facilitating learning process, integrating learning skill development/content knowledge acquisition, application of appropriate theories of learning.

OUE 3205. Law School Exploration. (; 2 cr. ; Student Option; Periodic Fall & Spring)
This is a course for those interested in law school. It offers an overview of applying to and attending law school, as well as exploration of careers and specialties within the field of law. Discover how your strengths, values, and interests prepare you for and make you competitive in the field of law. Assignments include informational interviews and research into law school and the legal field that allow you to examine the reality of attending law school and becoming a lawyer.

OUE 3311. Leadership Development for University Student Leaders. (1 cr. ; S-N only; Every Spring)
This course will provide an opportunity for student orientation leaders to translate theory to practice, using the University of Minnesota Orientation and Welcome Week experience as a learning laboratory. Students will build upon existing self-awareness to further examine their identity, biases, and strengths through the use of critical reflective models and leadership theory concepts. Guest lecturers will share expertise on the topics of leadership, communication, and diversity. Course participants will gain an advanced level of leadership self-awareness and responsibility vital to creating an inclusive and welcoming environment for incoming students and their families.

Ojibwe (OJIB)

OJIB 1101. Beginning Ojibwe I. (; 5 cr. ; Student Option; Every Fall)
Speaking. Grammar. Writing systems.

OJIB 1102. Beginning Ojibwe II. (; 5 cr. ; Student Option; Every Spring)
Speaking. Grammar. Writing systems. prereq: 1101

OJIB 3103. Intermediate Ojibwe I. (; 5 cr. ; Student Option; Every Fall)
Speaking. Grammar. Storytelling. Oral history. Translation projects. prereq: 1101, 1102

OJIB 3104. Intermediate Ojibwe II. (; 5 cr. ; Student Option; Every Spring)

Speaking. Grammar. Storytelling. Oral history. Translation projects. prereq: 1102, 1102.3103

OJIB 4101. Beginning Ojibwe I. (; 3 cr. ; Student Option; Every Fall)
Speaking, grammar, writing systems. prereq: community member, see department for permission to enroll.

OJIB 4102. Beginning Ojibwe II. (; 3 cr. ; Student Option; Every Spring)
Speaking. Grammar. Writing systems. prereq: community member, see department for permission to enroll.

OJIB 4103. Intermediate Ojibwe I. (; 3 cr. ; Student Option; Every Fall)
Speaking. Grammar. Storytelling. Oral history. Translation projects. prereq: 1101, 3103, community member, see department for permission to enroll.

OJIB 4104. Intermediate Ojibwe II. (; 3 cr. ; Student Option; Every Spring)
Speaking. Grammar. Storytelling. Oral history. Translation projects. prereq: 1102, 3102, community member, see department for permission to enroll.

OJIB 5106. Advanced Ojibwe Language I. (; 3 cr. [max 12 cr.] ; A-F or Audit; Every Fall)
Focuses on immersion method.

OJIB 5109. Advanced Ojibwe Language II. (; 3 cr. [max 12 cr.] ; A-F or Audit; Every Spring)
Focuses on immersion method.

OJIB 5202. Ojibwe Mastery I. (3 cr. ; A-F or Audit; Every Fall)
The purpose of the first three years of the Ojibwe language courses at the University is to introduce students to the most common Ojibwe grammatical and conjugational systems, and to help develop their fluency through immersion. In this course and in the subsequent course in the winter semester, students will work towards Ojibwe language mastery by learning less frequent, but crucial aspects of the Ojibwe language and further working towards a more sophisticated level of talking.

OJIB 5204W. Ojibwe Mastery II. (WI; 3 cr. ; A-F or Audit; Every Spring)
The purpose of the first three years of the Ojibwe language courses at the University is to introduce students to the most common Ojibwe grammatical and conjugational systems, and to help develop their fluency through immersion. In this semester, students will continue refining their Ojibwe language ability by studying verb conjugational systems, more complex mii-phrases, reduplication, more grammar pattern study, and more opportunities to use and apply their language skills.

OJIB 5250. Ojibwe Conversations 1. (3 cr. [max 6 cr.] ; A-F or Audit; Periodic Fall & Spring)
The course provide students opportunities to increase their Ojibwe speaking ability through consistent practice and performance of dialogues and stories while receiving native-speaker/instructor feedback. This is a performance based class, which will allow students to apply and practice what they have learned from other Ojibwe courses.

OJIB 5252. Ojibwe Conversations II. (3 cr. ; A-F or Audit; Every Spring)
The course provide students opportunities to increase their Ojibwe speaking ability through consistent practice and performance of dialogues and stories while receiving native-speaker/instructor feedback. This is a performance based class, which will allow students to apply and practice what they have learned from other Ojibwe courses.

Ophthalmology (OPH)

OPH 5201. Orthoptics I. (4 cr. ; S-N or Audit; Every Summer)
Human anatomy, Ocular anatomy, history taking skills, basic optics, Diagnostic Testing I, Intro to Clinical Skills, Vision Screening and Assessment

OPH 5301. Orthoptics II. (5 cr. ; S-N or Audit; Every Fall)
Basic Ophthalmic skills, Strabismus, Retinoscopy, Surgical technique I, Pharmacology I, Clinical Skills II, Embryology

OPH 5401. Orthoptics III. (; 5 cr. ; S-N or Audit; Every Spring)
Pharmacology II, Vision Development, Amblyopia I, Visual Field, Orthoptic treatment I, Clinical Skills III, Visual Fields, Imaging

OPH 5501. Orthoptics IV. (4 cr. ; S-N only; Every Summer)
First semester Advanced Placement of Orthoptics Certificate program. prereq: Admission to Orthoptics Certificate program and completion of

OPH 5601. Orthoptics V. (5 cr. ; S-N only; Every Fall)
Second semester of Advanced Placement Year - Orthoptics training program. prereq: Enrollment in Orthoptics Certificate program

OPH 5701. Orthoptics VI. (5 cr. ; S-N only; Every Spring)
Third semester of Advanced Placement Year - Orthoptics certificate program. Medical Genetics, Ophthalmic Syndromes, Genetic syndromes, Treatment and Management, Oral and Practical exam review, Clinical Skills Review

Oral Biology (OBIO)

OBIO 5001. Methods in Research and Writing. (; 2 cr. ; Student Option; Every Fall)
Skills necessary to begin a research project, including literature review, hypothesis formation, research design, and writing. Each student develops a research protocol.

OBIO 5010. Molecular Virology. (1 cr. ; A-F or Audit; Every Fall)
This course provides graduate students and upper-level undergraduate students with a knowledge base for understanding the molecular aspects of replication strategies utilized in virus replication. Topics for the course will focus on the molecular aspects of virus replication for the major virus families (e.g., arenaviruses, bacteriophages,

flaviviruses, herpesviruses, orthomyxoviruses, picornaviruses, and retroviruses) as well as virus evolution, structure, and taxonomy.

OBIO 5020. Virus Pathogenesis and Host Interactions. (1 cr. ; A-F or Audit; Every Fall)

This course provides graduate students and upper-level undergraduate students with a knowledge base for understanding virus pathogenesis and host interactions. Topics for the course will focus on the molecular, cellular, and organismal aspects of virus pathogenesis and host interactions. The concepts of cellular pathogenesis, tissue tropism, portals of entry, local replication and virus spread, virus dissemination, and congenital infections will be covered. A particular emphasis will be placed on virus pathogenesis of the major virus families (e.g., arenaviruses, bacteriophages, flaviviruses, herpesviruses, orthomyxoviruses, picornaviruses, and retroviruses) and virus-host cell interactions that can restrict virus replication and are responsible for immunity will be discussed.

OBIO 5050. Evolution of Emerging Viruses. (2 cr. ; A-F or Audit; Every Spring)

This course is designed to provide graduate students and undergraduate students with junior or senior standing a knowledge base for understanding how HIV and other emerging viruses (e.g., Ebola, influenza, SARS, West Nile virus, hantavirus, hepatitis C) evolve and become public health threats. Topics for the course will focus on the biochemical, molecular, cellular, clinical, and epidemiological aspects of emerging viruses, with an emphasis on how each plays a role in virus evolution and emergence. This course will emphasize HIV as a key example of an emerging virus disease that has had a profound impact on human health.

Oral and Maxillofacial Surgery (OSUR)

OSUR 5257. Ambulatory General Anesthesia for the Oral and Maxillofacial Surgeon. (; 0-6 cr. ; S-N only; Every Fall, Spring & Summer)

Clinical rotation involving experience in outpatient management and using intravenous sedation and general anesthesia. prereq: Participation in oral and maxillofacial surgery training program.

OSUR 5276. Medicine Rotation for the Oral and Maxillofacial Surgeon. (; 0-6 cr. ; S-N only; Every Fall, Spring & Summer)

Clinical rotation at Fairview-University Medical Center under the direction of the Internal Medicine Department. Involves workup, admission, and daily management of patients on medical service, specifically cardiology and pulmonary. prereq: Participation in oral and maxillofacial surgery training program.

OSUR 5277. Physical Diagnosis for Oral Surgery Residents. (; 2 cr. [max 6 cr.]; S-N only; Every Summer)

Six-week didactic course coupled with evaluation of patients. prereq: Participation in oral and maxillofacial surgery training program.

Org Leadership, Policy & Dev (OLPD)

OLPD 1303. Leadership in the Organizational Context. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Life - like leadership - is full of paradoxes. We are all individuals. At the same time, we are all part of families, communities, institutions, structures, and systems. To understand and practice effective leadership, we must make sense of our lives - including our unique identities and experiences - within these broader organizational and societal contexts. We must think critically about how power flows through society, and how it shapes agency, opportunities and wellbeing for individuals and communities. And we must think creatively and critically about how leadership can help promote equity, justice, and human flourishing. In this course, we focus on organizations as a core context for leadership. Organizations are everywhere - some formal, some informal. For example, we are all part of an educational organization: the University of Minnesota. We all interact with governmental organizations at national, state, and local levels. We may belong to community, religious, or cultural organizations. We might work - now or in the future - for a corporation, a nonprofit, or a cooperative. We may belong to an advocacy organization that works for social change. To study leadership within these various types of organizations, we must also turn inward to examine our own identities, social locations, and experiences. We draw on concepts and theories - from the fields of leadership development, organizational studies, sociology, and psychology - to analyze our lived experiences within broader contexts, and better understand the behaviors of individuals and groups within organizations. This course will require active engagement with course materials, your classmates, and class projects. Our class sessions will include group activities, student-driven discussions, and the occasional mini-lecture. We will explore case studies and individual narratives as touchstones for applying theory to real world contexts. Over the semester, you will complete both individual and group assignments, including reflective writing and class facilitation. Ultimately, this course is a "learning lab" where we have the chance to practice being how we would like the world to be. Old: Students examine own views of leadership, differences between

OLPD 1461. Presentations in Work Settings: Business & Marketing Education and Human Resource Development. (CIV; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

This course prepares students to present information and hone their messages based on audience need in a variety of business, leadership, and workplace contexts. Students interested in majoring in Business and Marketing Education (BME), Human Resource Development (HRD), and other majors can take this course in order to develop the disciplinary practices used in training and development, as well as business and industry to convey vital and timely messages.

OLPD 2811. Societies of the Future: Changing Work Contexts. (TS; 3 cr. ; A-F or Audit; Every Fall & Spring)

Ongoing evolution of social contexts and work through the interdisciplinary lens of future studies.

OLPD 2811H. Societies of the Future: Changing Work Contexts, Honors. (TS; 3 cr. ; A-F only; Every Fall & Spring)

Ongoing evolution of social contexts and work through the interdisciplinary lens of future studies. prereq: Honors student

OLPD 3202. Introduction to Strategies for Teaching Adults. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Theories of adult learning, learning/teaching styles, methods/perspectives of teaching, applications of teaching in various settings.

OLPD 3305. Learning About Leadership Through Film and Literature. (; 3 cr. ; Student Option; Every Fall)

Readings from leadership studies, literature, and film. Ethical dilemmas. Different styles of leadership and their consequences. Intersection of public/private in exercising leadership. Competing loyalties/pressures felt by leaders/followers. Fundamental questions about nature/desirability of leadership.

OLPD 3308. Data-Driven Decision-Making in BME and HRD. (3 cr. ; A-F only; Every Fall & Summer)

Living in the age of technology has implications for everyone in Business & Marketing Education (BME) and Human Resource Development (HRD). Technology that makes it possible to collect huge amounts of data has given more individuals and organizations the power and responsibility to analyze data and make decisions based on this data. The amount of data being collected on our preferences, attitudes, and behaviors will only increase in the future, and this rich data can be used towards a variety of ends. In this course, we will use quantitative methods to uncover the information in large data sets and then consider how individuals and organizations are able to gain a competitive advantage by acting on this information. Topics covered in this course include: - Critical analysis of complex issues related to BME and HRD in organizations; - Major techniques of quantitative data analyses used in BME and HRD; - How to use of Excel and Excel Add-in Tools to conduct data analyses; - How to make effective decisions based on quantitative information in BME and HRD situations; and - Effective reporting of quantitative results to meet the expectations of stakeholders.

OLPD 3310. Special Topics for Undergraduates. (; 1-3 cr. [max 9 cr.]; Student Option; Periodic Fall, Spring & Summer)

Inquiry into special topics related to organizational leadership, policy/development.

OLPD 3318. Introduction to Project Management. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Project management for business and industry. Project lifecycles, deliverables, and processes as they are commonly used in the workplace.

OLPD 3324W. Writing in the Workplace for Education and Human Development Majors. (WI; 4 cr. ; Student Option; Every Fall & Spring) Explore professional communication. Research/analysis writing. Memos, reports, proposals, human resource-related documentation, letters or announcements, presentations. prereq: 60+ undergraduate credits, declared major

OLPD 3331H. Honors: Leveraging and Understanding Global Identity through Intercultural Learning. (GP; 1 cr. ; A-F only; Periodic Fall, Spring & Summer)

Studying abroad can be a transformative experience that has the power to challenge your thinking and enlarge your perspective on the world. This course guides you through your studies abroad with intercultural readings, theory, writing, reflection, and feedback from peers and the instructor. A key element to this course is leveraging and connecting the intercultural and self-knowledge gained abroad to strengthened core career competencies. Using scenarios from your time abroad, you will work to understand and articulate career skill outcomes. As you discover your own global identity, you will be better prepared to translate and communicate the skills and strengths that employers and grad school admissions committees value in a globalized world. prereq: studying abroad the semester student is enrolled in course

OLPD 3332. Global Identity: Connecting Your International Experience to Your Future. (GP; 1 cr. ; Student Option; Every Fall, Spring & Summer) Reflect on activities/readings of study abroad experiences overseas. E-journaling, written activities, group interaction using various formats. prereq: [3321 or EDPA 3102 or instr consent], studying abroad the semester student is enrolled in course

OLPD 3350. Special Topics in Professional Sales. (; 2 cr. [max 4 cr.] ; Student Option No Audit; Periodic Fall, Spring & Summer) In this course, students will learn how to understand and incorporate advanced professional selling topics into practical experiences in professional sales. Students will improve their ability to communicate effectively and identify, define, and solve problems through role-play simulations that incorporates topics such as Understanding Objections, Understanding Sales Differentiators, Networking, CRM and Strategic Relationships, and Sales Management. In addition, students will gain understanding of the sales cycle and how to successfully navigate buyer interactions for business relationships. Students will also describe how internships and introspective assessments can foster greater career progression in professional sales.

OLPD 3381. Developing Intercultural Competence. (; 3 cr. ; A-F or Audit; Every Fall)

Past/current research on intercultural leadership. Students share their understanding/ experiences within intercultural framework.

OLPD 3401. Teaching Marketing Promotion. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Materials, methods, and approaches to teaching marketing promotion. Advertising, promotion, public relations, direct selling, visual merchandising, and direct marketing.

OLPD 3424. Sales Training. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Strategies and techniques for developing effective sales people. A review of review practices related to sales management, business development, selling strategies, and learning objectives essential to developing the skills, knowledge, and abilities to create a competent sales force.

OLPD 3493. Directed Study in Business & Marketing Education. (1-4 cr. ; Student Option; Every Fall, Spring & Summer)

Open to qualified students. Opportunity to pursue study not available through regular coursework. In consultation with instructor, develop prospectus/complete progress reports/ final report on project. prereq: BME major, instr consent

OLPD 3601. Introduction to Human Resource Development. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Human resource development theories, principles, concepts, and practices.

OLPD 3609. Profession and Practice of Business and Marketing Education and Human Resource Development. (2 cr. ; A-F or Audit; Every Fall, Spring & Summer)

This course is designed to provide Undergraduate Business and Marketing Education (BME) & Human Resource Development (HRD) students with the tools necessary to develop a career management plan to become successful business and marketing professionals and/or human resource development professionals. prereq: Admitted BME major or Admitted HRD major

OLPD 3621. Introduction to Training and Development. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Processes to carry out theoretically sound training/development practices, within the context of systemic relationship with host organization or system.

OLPD 3641. Introduction to Organization Development. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Organization development theories, principles, concepts, and practices. How development is used to direct change in an organization.

OLPD 3805. Introduction to Strategic Planning Through Human Resources. (; 3 cr. ; A-F or Audit; Periodic Spring)

Processes organizations use when engaged in strategic planning. How to participate in planning, implementing, and evaluating strategic initiatives to improve performance. prereq: 3601 or HRD 3001

OLPD 3828. Diversity in the Workplace. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Diversity, equity, and inclusion in the workplace. Issues of recruitment, selection, management, learning, leadership, and performance.

OLPD 4401. E-Marketing. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Basic understanding and personal experience with how e-marketing can be used as part of an overall marketing and promotion plan.

OLPD 4421. Practicum in Nonprofit Organizations. (; 2 cr. [max 4 cr.] ; A-F or Audit; Every Fall & Spring)

This course will provide students the opportunity to develop and implement critical aspects of a nonprofit organization from board selection, training, fundraising, event marketing and management, and conducting outreach programs. Students will have the opportunity to develop a variety of job functions including: sales, marketing, e-marketing, operations, management, accounting, administration, purchasing, procurement, fundraising, pre-event planning, and post-event evaluation.

OLPD 4426. Strategic Customer Relationship Management. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Principles of customer relationship management, brand identity, and integrated marketing communications. Comprehensive framework for how organizations interact with their various publics to create goodwill/loyalty.

OLPD 4496. Applied Experience in Business & Marketing Education. (1-4 cr. ; S-N only; Every Fall, Spring & Summer)

Application of theory to practice related to BME core coursework with integrative paper. Work, internship, study abroad, research, field experience, service learning, etc. can all fulfill this degree requirement. Contact OLPD Program Advisors for more information. prereq: BME major, ugrd, [3496 or concurrent registration is required (or allowed) in 3496]

OLPD 4696. Applied Experience in Business Marketing Education & Human Resource Development. (1-4 cr. [max 8 cr.] ; S-N only; Every Fall, Spring & Summer)

OLPD 4696, the Applied Experience course, is designed as a culminating learning experience for students nearing graduation. It affords students an opportunity to seek out practical work experience related to their area of concentration in business and marketing or human resource development. An essential part of an Applied Experience is the opportunity to use the knowledge acquired in the classroom in practical applications in the workplace. Problem-solving and creative thinking in the workplace supports the retention and mastery of information gained in the classroom. To be successful, the Applied Experience in BME/HRD should focus on a specific project(s) or task(s) that lend to analysis and resolution over the course of 6 to 14 weeks. A typical Applied Experience in BME/HRD involves 160 hours of work for 4 credits including all the course work listed on this syllabus (20 hr) during a single semester (45 hours per credit). The Applied Experience in BME/HRD is not credit for work. Students must be engaged in specific activities/duties related to their area of concentration related to the field of business and marketing or human resource development. Each activity is expected to relate to a BME/HRD theory, a

career competency area, or professional skill. The student and the employment supervisor will be asked to sign a contract stipulating to the internship objective and activities; the contract must also be approved by the instructor. prereq: OLPD ugrad student in BME/HRD, BME compl 3 of the 4 cores: OLPD 3318, 3401, 3424, 4426. HRD compl 4 of the 4 cores: OLPD 3601, 3202, 3621, 3641. Completed or permission to be concurrently registered for OLPD 3609.

OLPD 5001. Formal Organizations in Education. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)
Classical/current theories of organizations. Applications to education and related fields.

OLPD 5002. Private Colleges as Formal Organizations. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Provide certificate students with introduction to contemporary thinking on organizations/administration. Primary focus on organizational theory. prereq: Bachelors degree must be completed before starting this course.

OLPD 5003. Borderland, Education Policy, Immigrant Experience. (3 cr. ; Student Option; Every Spring)
Borderland, Education Policy and Immigrant Student Experience brings to focus the history of individual, institutional (educational) and cultural forms of marginalization and discrimination of immigrant communities from US history. This class includes a Spring Break trip to Tucson and the Sonora Desert led by the non-profit Borderlinks (www.borderlinks.org). Service learning opportunities may include water drops in the desert, interpreting for newly arrived migrants and serving as a supportive witness for migrants at deportation court. Both in Minnesota and Tucson, participants will dialogue with local stakeholders, advocates and agents of change including migrants, activists, border patrol, ranchers, faith communities, lawyers and lawmakers. Students will also have the opportunity to compare and contrast US immigrant issues with those across the globe.

OLPD 5005. School and Society. (2 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Readings in history, philosophy, social sciences, and law revealing diverse educational values in a pluralistic society. Multiple expectations of schools. Civil liberties, rights, community. Varying cultural backgrounds of students, family circumstances, exceptional needs. prereq: Jr or sr or MED/initial licensure student or CLA music ed major or preteaching major or instr consent

OLPD 5009. Human Relations: Applied Skills for School and Society. (1 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Issues of prejudice/discrimination in terms of history, power, social perception. Knowledge/skills acquisition in cooperative learning, multicultural education, group dynamics, social influence, leadership, judgment/decision making, prejudice reduction, conflict resolution, teaching in diverse educational settings. prereq: MED/init lic or CLA music ed or preteaching or instr consent

OLPD 5011. Leading Organizational Change: Theory and Practice. (; 3 cr. ; Student Option; Every Fall)
How theory is incorporated, affects the change process, and can improve schools/institutions of higher education. Characteristics that impact change processes/outcomes. Leadership/policy effects.

OLPD 5033. Foundations of Individual/Organizational Career Development. (; 3 cr. ; Student Option; Every Spring)
Introduction to individual and organizational career development theory and practice. Examines critical issues in work patterns, work values, and workplaces in a changing global society, with implications for career planning, development, and transitions, emphasizing personal and organizational change. For nonmajors: serves students in adult ed, HRD, IR, college student advising, and other related fields.

OLPD 5041. Sociology of Education. (; 3 cr. ; Student Option; Every Spring)
Structures and processes within educational institutions; linkages between educational organizations and their social contexts, particularly related to educational change.

OLPD 5044. Introduction to the Economics of Education. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Costs and economic benefits of education, with a focus on K-12; educational markets, prices, and production relationships; investment and cost-benefit analysis.

OLPD 5048. Cross-Cultural Perspectives on Leadership. (; 3 cr. ; Student Option; Every Fall & Summer)
Introduction to cultural variables of leadership that influence functioning of cross-cultural groups. Lectures, case studies, discussion, problem-solving, simulations. Intensive workshop.

OLPD 5056. Case Studies for Policy Research. (; 3 cr. ; A-F or Audit; Periodic Fall, Spring & Summer)

This course introduces students to knowledge and skills appropriate for the conduct of rigorous case study research in educational, organizational, and other social settings. Underlying purposes and assumptions of case study methods will be examined as well as a variety of methodological approaches. The course focuses on the use of qualitative and mixed-methods approaches as these are the predominant strategies employed in contemporary case study research. Accordingly, it emphasizes links between research purposes, the conceptualization of case study projects, and the development of researchable questions. It also takes up a variety of ethical and political issues related to working with participants during the research process, as well as contemporary trustworthiness criteria for case study reports. The bulk of the course is given to training in observation, generating field notes, interviewing, collecting material cultural artifacts, using surveys, and analyzing, interpreting, and writing up case study data.

The first segment of the course focuses on a critical discussion of research paradigms and epistemological assumptions of a variety of case study approaches. Students choose and critique a published case study from their field of interest. The second part of the course is devoted to a very small scale case study project which students design and carry out themselves. This project is supported by relevant readings and in-class activities (including peer review) related to the actual conduct of case study research.

OLPD 5061. Ethnographic Research Methods. (; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)

This course introduces students to knowledge and skills appropriate for the conduct of ethnographic research. Underlying purposes, assumptions, and distinctive characteristics of ethnographic methods will be examined as well as appropriate exemplars. Accordingly, the course emphasizes links between research purposes, the conceptualization of ethnographic projects and the development of researchable questions. The course also takes up a variety of ethical and political issues related to working with participants during the research process, as well as contemporary trustworthiness criteria for ethnographic written accounts. The bulk of the course is given to training in observation, generating field notes, developing interview questions, interviewing, collecting material cultural artifacts, using surveys, and analyzing, interpreting, and writing up ethnographic data. The first part of the course focuses on a critical discussion of ethnographic research purposes, epistemological assumptions, and essential features. Students choose and explore a published ethnographic study from their field of interest. The second part of the course is devoted to a very small scale ethnographic project which students design and carry out themselves. This project is supported by relevant readings and in-class activities (including peer review) related to the actual conduct of ethnographic research.

OLPD 5080. Special Topics: Organizational Leadership, Policy, & Development. (; 1-3 cr. [max 9 cr.]; Student Option; Every Fall, Spring & Summer)
Topical issues in organizational leadership, policy, development.

OLPD 5087. MA Research Seminar. (3 cr. ; S-N only; Every Fall, Spring & Summer)
OLPD 5087, MA Research Seminar, is intended to support OLPD Masters students working on their plan A or plan B papers. The course will focus on conducting effective research and developing the writing skills and habits needed to support the development and completion of the paper, including setting individual and realistic goals to further the project. Class time will include review and discussion of research strategies and practice, expectations for graduate level writing, in-class research and writing time, reviewing and commenting on work in progress in small groups, and review of proper APA style documentation and practices.

OLPD 5095. Problems: Organizational Leadership, Policy, and Development. (1-3 cr. [max 24 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Course or independent study on specific topic within department program emphasis.

OLPD 5096. Internship: Organizational Leadership, Policy, and Development. (; 1-9 cr. [max 24 cr.] ; Student Option; Every Fall & Spring)

Internship in elementary, secondary, general, postsecondary administration, or other approved field related setting.

OLPD 5103. Comparative Education. (; 3 cr. ; Student Option; Every Fall)

Examination of systems and philosophies of education globally with emphasis upon African, Asian, European, and North American nations. Foundations of comparative study with selected case studies.

OLPD 5104. Strategies for International Development of Education Systems. (; 3 cr. ; A-F or Audit; Periodic Fall)

This course provides a critical analysis of strategies used to improve educational outcomes worldwide. This course examines contemporary trends in educational policy, development, and practice, focusing on how? s and why?s of educational change. Empirical studies, organizational reports, and student experiences all inform class discussion. prereq: Grad student

OLPD 5107. Gender, Education, and International Development. (3 cr. ; A-F or Audit; Every Fall)

Role of gender/gender relations in international development/education. Interdisciplinary body of literature from development studies, political science, economics, anthropology, cultural studies, gender/women's studies.

OLPD 5121. Educational Reform in International Context. (; 3 cr. ; Student Option; Every Spring)

Critical policy analysis of educational innovation and reform in selected countries. Use theoretical perspectives and a variety of policy analysis approaches to examine actual educational reforms and their implementation.

OLPD 5122. Indigenous Education: Research, Policy, and Practice. (; 3 cr. ; A-F only; Periodic Fall, Spring & Summer)

This course examines the relationship between local cultures, knowledges, and education. Linked with the field of comparative and international education, this course pays particular attention to local Indigenous educational experiences and in the global context. These experiences are examined using chronological (factors of time), thematic (topical yet interconnected ideas), and critical approaches (issues requiring urgent attention), including analysis of historical trajectories of Indigenous education, the expansion of mass schooling, education and language ideologies and policies, and notions of resistance, agency, and innovation in educational design that addresses pressing concerns today. This course assumes Indigenous education as

part of an array of anti-, post-, and decolonial strategies for Indigenous self-determination, and thus takes a holistic and connective approach towards understanding educational design, practice, and impacts as part of Indigenous knowledge systems. The course also assumes multiple definitions of education proposed by Indigenous and other critical scholars, highlighting education as a) formal schooling historically designed by non-Indigenous groups, b) ancestral education/Indigenous socialization; and c) Indigenous sovereign pedagogies (Goodyear-Ka?? pua, 2013). The course seeks to expand our understanding of the vital links between these different educational practices, in and out-of- school and across diverse places, from U.S. American Indian and Alaska Native communities to agrarian Indigenous communities in the highland Andes to the Pacific Islands and beyond. Central to student work in this course is learning the ways in which Indigenous communities shape learning contexts while drawing from multiple epistemologies. Three main themes comprise the course and are reflected through readings and lectures: 1) Patterns in policy (e.g. education, land/environmental, language, etc.) for historically underrepresented and underserved populations; 2) The role of families, communities, and place-based pedagogies in formal and out-of-school education; and 3) Creative proposals for educational development, based on Indigenous research and in relation to Indigenous knowledge systems, and that lend themselves towards Indigenous self-determination. Students are asked to critically examine the role of education under local, national and international pressures and amidst other variables, including environmental degradation and to offer their own proposals toward innovative Indigenous education research agendas that inform education design and practice?meaning, this course aims to provide insights, but most importantly to cultivate dialogue and exchange questions and ideas because there are no singular, closed, or universal solutions to educational design. For students interested in certain topics related to the identified themes, this course introduces but is not limited to Indigenous Knowledge Systems, Traditional Ecological Knowledge, Indigenous community-based education, Indigenous and global languages, decolonial research, and endogenous development. Students are invited to cultivate their own focal areas in relation to prior knowledge and current study interests.

OLPD 5124. Critical Issues in International Education and Educational Exchange. (; 3 cr. ; Student Option; Every Spring)

Analysis of comprehensive policy-oriented frameworks for international education; practices of U.S. and other universities; conceptual development of international education and its practical application to programs, to employment choices, and to pedagogy.

OLPD 5128. Anthropology of Education. (; 3 cr. ; Student Option; Periodic Spring)

Insights from educational anthropology for educators to address issues of culture, ethnicity, and power in schools.

OLPD 5132. Intercultural Education and Training: Theory and Application. (; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)

Introduction to the field of intercultural education and related field of multicultural education; analyzes the field through a critical lens; examines diverse meanings of education, including cultural knowledge.

OLPD 5201. Strategies for Teaching Adults. (; 3 cr. ; A-F or Audit; Periodic Fall, Spring & Summer)

Psychological theories of adult learning; learning styles and personality types; teaching styles; group and team learning; moderating and study circles; teaching technologies and distance learning; gender, race, and cultural communication. Applications of strategies. prereq: Grad student only

OLPD 5202. Perspectives of Adult Learning and Development. (; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)

Emphasis on major adult development theorists, theories, and current applications. Transformative learning, self-directed learning, experiential learning, and cooperative learning provide theoretical framework for exploring physiological, psychological, sociological, and cultural aspects of adult development through the life span.

OLPD 5204. Designing the Adult Education Program. (; 3 cr. ; A-F or Audit; Periodic Spring)

Designing and implementing educational programs for adults. Application of concepts, theories, and models in different adult learning situations.

OLPD 5211. Introduction to the Undereducated Adult. (; 1 cr. ; A-F or Audit; Every Summer)

Definitions of literacy in workplace, community, and family. Issues: poverty/welfare, ethnicity, cultural diversity, social class, language/learning, immigrants.

OLPD 5296. Field Experience in Adult Education. (1-6 cr. ; S-N or Audit; Every Fall, Spring & Summer)

Supervised fieldwork and practice. Presentations and evaluations of adult education practices.

OLPD 5309. Culturally Responsive School Leadership. (3 cr. ; A-F only; Periodic Fall, Spring & Summer)

This course will cover the histories, contexts, and major strands of culturally responsive school leadership. Module 1 begins with an overview of some of the primary sources of oppression in the West and the Global South. Here, we cover material on varying epistemologies, the nature of bias, critical self-reflection, and schools, space, and identity. In Module 2, we will examine how these oppressive practices and systems exist in the modern era. We look then at how they enter institutions and how they are reproduced. This

includes an examination of various types of bigotry and discrimination in school. In Module 3, we begin to look at how these histories and complex, dynamic systems of power, privilege, and oppression enter and express in schools and communities. We move from the individual to the collective as we explore the many divides between school and community people and perspectives. In Modules 4 and 5, we finally look at emancipatory, liberatory, and culturally responsive models of schooling. In this last part of the course, we look at how community-based and indigenous knowledge can be used to inform schooling. Here, we dig deep into culturally responsive leadership practice, spending time unpacking 4 major strands of culturally responsive school leadership. We look at how curriculum, instructional leadership, PDs, and other resources are structured to improve equity in a building. We take up the community-based approaches to education.

OLPD 5321. The Principal as Leader of High-Performing Schools. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)
Theory and practice for educational leadership that is specifically applied to the principalship. Overview competencies in AR 3512 required for MN K-12 principal licensure. Examines roles of the principal as a leader and manager. prereqs: OLPD 5385 Licensure Seminar: Program Policies and Inclusionary Leadership or concurrent registration and OLPD 5386 Leadership Portfolio or concurrent registration.

OLPD 5322. Leaders in the Superintendency and Central Office. (; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)
Role/responsibility of superintendent in school district. Real life experiences, leadership potential as CEO. Purposes, power, politics, practices of position. Interplay of internal school forces, community forces. Leadership in public, high-profile appointment. Addresses competencies required under MN AR 3512 for administrative licensure. Grad students working on K-12 Administrative Licensure, MA, MED or PHD prereqs: OLPD 5385 Licensure Seminar: Program Policies and Inclusionary Leadership or concurrent registration and OLPD 5386 Leadership Portfolio or concurrent registration.

OLPD 5324. Strategic Financial Planning and Policy for Educational Leaders. (; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)
State-local school finance systems, budgeting, governmental fund accounting. Interpretation of financial information. Addresses competencies required under MN AR 3512 for administrative licensure Grad students working on K-12 Administrative Licensure, MA, MED or PHD prereqs: OLPD 5385 Licensure Seminar: Program Policies and Inclusionary Leadership or concurrent registration and OLPD 5386 Leadership Portfolio or concurrent registration.

OLPD 5344. School Law. (; 3 cr. ; Student Option; Every Spring & Summer)
Legal foundations of elementary/secondary education. Statutory themes, relevant case law, emergent policy issues. Implications for educational organizations and for

administrative practice. Addresses competencies required under MN AR 3512 for administrative licensure. Grad students working on K-12 Administrative Licensure, MA, MED or PHD prereqs: OLPD 5385 Licensure Seminar: Program Policies and Inclusionary Leadership or concurrent registration and OLPD 5386 Leadership Portfolio or concurrent registration.

OLPD 5346. Politics of Education. (; 3 cr. ; A-F or Audit; Every Fall & Spring)
Political dimensions of policy formulation/implementation in education. Use of power/influence in shaping educational policies and in resolving conflicts over educational issues. Analysis of consequences/cross-impacts. prereq: postbac, MEd, or grad student

OLPD 5348. Leaders of Human Resources Administration. (; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)
Skills for administrator/leader. Human resources administration, employee recruitment, selection, orientation/support, supervision, performance appraisal of school district personnel. Addresses competencies required under MN AR 3512 for administrative licensure. prereqs: OLPD 5385 Licensure Seminar: Program Policies and Inclusionary Leadership or concurrent registration and OLPD 5386 Leadership Portfolio or concurrent registration.

OLPD 5356. Disability Policy and Services. (; 3 cr. ; Student Option; Every Spring & Summer)
Policy, research, and current practices related to education, health, and social services that support children, youth, and adults with special needs, and that support their families. Federal, state, and local perspectives.

OLPD 5361. Project in Teacher Leadership. (; 3 cr. ; Student Option No Audit; Periodic Fall, Spring & Summer)
Create, implement, evaluate, and present a leadership project designed to initiate positive change in educational environments. Review of related literature, proposal development, project development, implementation and evaluation, critical reflection, sharing learning outcomes. . If Administrative Licensure candidate see advisor. prereqs: Grad students working on K-12 Administrative Licensure and/or Master in Education (Leadership in Education)

OLPD 5364. Context and Practice of Educational Leadership. (; 3 cr. ; A-F or Audit; Every Fall & Summer)
Current research/practice on educational leadership. Focuses on creating school cultures conducive to continuous improvement/change. Strategies for personal/organizational leadership in PK-12 settings.

OLPD 5368. Leadership for Special Education Services. (; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)
Legislative, procedural, executive, and judicial actions that affect services, families, and children with special needs at federal, state, and local levels. Overview of cultural competence, conflict management, due

process, supplemental programs. Addresses competencies required under MN AR 3512 for administrative licensure Grad students working on K-12 Administrative Licensure and/or Master in Education (Leadership in Education) prereqs: OLPD 5385 Licensure Seminar: Program Policies and Inclusionary Leadership or concurrent registration and OLPD 5386 Leadership Portfolio or concurrent registration.

OLPD 5374. Leadership for Professional Development. (; 4 cr. ; Student Option; Every Fall)
Designing, implementing, evaluating staff development in preK-12 settings. Research-based standards for effective staff development. Need for embedded time for collaborative learning, evaluating staff/student outcomes. prereq: Postbaccalaureate, at least 3 yrs teaching experience

OLPD 5375. Special Education Finance: Program Models, Policy, and Law. (; 2 cr. ; Student Option; Every Summer)
How special education revenue is a resource to accomplish student-related objectives. Revenue sources, compliance, budget monitoring. Key policy, case law, program models from perspective of director of special education. prereq: Grad students working on K-12 Administrative Licensure and/or Master in Education (Leadership in Education)

OLPD 5376. Leading School Tax Elections. (; 1 cr. ; S-N or Audit; Periodic Fall, Spring & Summer)
Comprehensive planning model for conducting school tax elections. Emphasizes systems, strategies, and campaign tactics.

OLPD 5377. Leadership in Community Education Finance and Law. (; 1 cr. ; Student Option; Periodic Fall, Spring & Summer)
Statute 124D and its relationship to each of the categories of community education: early childhood, family education, adult basic education, and ALC funding. Revenues and expenditures, UFARS, and how to access information. Organize financial and legal data for presentation. The course will be approached from the frame of resource development. Prereqs: OLPD 5385, OLPD 5386

OLPD 5384. Special Education Law for Leaders. (; 1 cr. ; Student Option; Every Fall & Summer)
Competencies of leadership, policy, and political influence. Legal/regulatory applications focusing on special education law. Addresses competencies required under MN AR 3512 for administrative licensure prereq: Grad students working on K-12 Administrative Licensure and/or Master in Education (Leadership in Education)

OLPD 5385. Licensure Seminar: Program Policies and Inclusionary Leadership. (; 1 cr. ; S-N or Audit; Every Fall, Spring & Summer)
Overview of the rules and requirements of the U of M and MN AR, completion of the required individual pre-assessment, development of

the learner's individualized program plan. Discussion of beliefs and values that guide administrative leadership, and completion of the Intercultural Conflict Style Inventory.

OLPD 5386. Leadership Portfolio Seminar. (; 1 cr. ; S-N or Audit; Every Fall, Spring & Summer)

Development of electronic administrative licensure portfolio to use throughout Administrative Licensure program. Address competencies as mandated in the LEAPS Act. Addresses competencies required under MN AR 3512 for administrative licensure. prereq: OLPD 5385 or concurrent registration is required.

OLPD 5387. Leadership for Teaching and Learning. (; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)

Multiple aspects of administering teaching/learning. Administration of teaching/learning as system in inclusive schools. Questions administrator must ask as leader of learning for students/adults. Addresses competencies required under MN AR 3512 for administrative licensure. prereqs: OLPD 5385 Licensure Seminar; Program Policies and Inclusionary Leadership or concurrent registration and OLPD 5386 Leadership Portfolio or concurrent registration.

OLPD 5388. Leadership for Master(ful) Scheduling. (; 2 cr. ; Student Option; Periodic Fall, Spring & Summer)

Work of high-performing professional learning communities. Implications for moving from building master schedule to leadership for master(ful) scheduling of time, space, motion, people. Addresses competencies required under MN AR 3512 for administrative licensure. prereqs: OLPD 5385 Licensure Seminar; Program Policies and Inclusionary Leadership or concurrent registration and OLPD 5386 Leadership Portfolio or concurrent registration.

OLPD 5389. Community Education Leadership. (; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)

Competencies of leadership, community relations, communication, community assessment, program development, program evaluation. Philosophy/administration of community/alternative education programs. Addresses competencies required under MN AR 3512 for administrative licensure. prereqs: OLPD 5385 Licensure Seminar; Program Policies and Inclusionary Leadership or concurrent registration and OLPD 5386 Leadership Portfolio or concurrent registration.

OLPD 5396. Field Experience in PK-12 Administration: Authentic Practice in Leadership. (; 3 cr. [max 12 cr.]; S-N or Audit; Every Fall & Spring)

Field experience or internship arranged for students seeking licensure as PK-12 principal/superintendent. Content/credit depend on licensure requirements specified in individual field experience agreement prereqs: OLPD 5385 Licensure Seminar; Program Policies and Inclusionary Leadership or concurrent registration and OLPD 5386 Leadership Portfolio or concurrent registration.

OLPD 5501. Principles and Methods of Evaluation. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Introduction to program evaluation. Planning an evaluation study, collecting and analyzing information, reporting results; evaluation strategies; overview of the field of program evaluation.

OLPD 5502. Comparative evaluation theory for practice. (; 3 cr. ; A-F only; Every Fall & Summer)

This class will give students the foundation in evaluation theory necessary for high-quality and ethical practice in evaluation, consulting, or other forms of organizational change Recommend 5501 or equivalent (can be taken concurrently)

OLPD 5521. Cost and Economic Analysis in Educational Evaluation. (; 3 cr. ; Student Option; Every Fall)

Use and application of cost-effectiveness, cost-benefit, cost-utility, and cost-feasibility in evaluation of educational problems and programs.

OLPD 5601. Introduction to Human Resource Development. (; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)

This course introduces the primary foci of the MHRD program classes as an introduction to the theory and the current practices in human resource development that will be dealt with in more detail in the other ten (10) graduate classes that support the MHRD degree. The primary focus of the theory and practice will be: ? Organization Development and Change ? Training and Development with a specific focus on design aspects of in-person, online, and leadership development programs ? Career planning

OLPD 5604. Systems Foundation of Human Resource Development. (; 1 cr. ; Student Option; Every Fall, Spring & Summer)

Introduction to system theory as a core discipline supporting the theory and practice of human resource development. prereq: 5601

OLPD 5605. Strategic Human Resource Development. (; 3 cr. ; A-F or Audit; Periodic Fall, Spring & Summer)

Strategic nature of organizations. How HRD can align its goals with those of organization. Strategic planning, systems thinking. Ways HRD managers can become strategic players in organization. prereq: 5607 or 5615 or HRD 5201 or HRD 5301

OLPD 5606. Human Resource Development Evaluation Strategies. (; 3 cr. ; A-F or Audit; Periodic Fall, Spring & Summer)

This class will focus on the exploration of evaluation methods for human resource development programs and projects. This includes the systematic collection of data needed to make decisions related to the strengths and weaknesses of selection, adoption, value, and implementation of programs and projects.

OLPD 5607. Organization Development. (; 3 cr. ; A-F or Audit; Periodic Fall, Spring & Summer)

Introduction to major concepts, skills, and techniques for organization development/change. prereq: Grad student only

OLPD 5611. Facilitation and Meeting Skills. (; 1 cr. ; Student Option; Every Fall, Spring & Summer)

Introduction to the disciplines of planning and running effective meetings. Tools and methods for meeting management and evaluation are presented within the context of organization development.

OLPD 5612. International Human Resource Development. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Problems, practices, programs, theories, and methodologies in human resource development as practiced internationally. prereq: Grad students only; ugrad seniors with instr consent

OLPD 5613. Survey of Research Methods and Emerging Research in Human Resource Development. (; 3 cr. ; A-F or Audit; Periodic Spring)

Role of research in HRD. Standards/criteria for evaluating research, critique of conference research papers, identification of emerging research themes. Offered in conjunction with the annual conference of Academy of HRD. prereq: [Registered, in attendance] at conference of Academy of HRD

OLPD 5615. Training and Development of Human Resources. (; 3 cr. ; A-F or Audit; Periodic Fall, Spring & Summer)

Training/development of human resources in organizations. Process phases of analysis, design, development, implementation, and evaluation. prereq: Grad student only

OLPD 5616. Instructional Design for e-Learning. (; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)

Major concepts, skills, and techniques for giving and receiving training on the Internet. prereq: Grad student only

OLPD 5617. Diversity, Equity, Inclusion, and Belonging. (; 3 cr. ; A-F only; Periodic Fall, Spring & Summer)

This class will focus on two elements of DEI&B: 1) awareness and 2) skill building/behavior training. The first half on the semester is focused on the awareness of important DEI&B issues facing people and organizations in a global workplace. This includes defining the global workplace and how it may be the same and different from smaller local organizations. The second half of the semester will be focused on building skills and behaviors needed in purpose-driven global workplaces. This will be an interactive and engaged set of activities that include role play, virtual reality, and case studies. The primary audience for this class will be graduate students who plan to be HRD leaders and those that are in the online MHRD program.

OLPD 5618. Leadership Development Training. (; 3 cr. ; A-F only; Periodic Fall, Spring & Summer)

The focus of this class is to introduce best practices in leadership development training leveraging adult learning and training theories

to develop effective organizational leaders. While this class will look at leadership styles, it will also focus on training strategies that support strong skills in leadership (e.g. developing vision and mission in a purpose driven organizations, developing people and organization-level strategies, and finally creating skills that support the implementation of these strategies). Along with training topics, students will develop expertise in individual leadership assessment instruments commonly used in leadership training functions. The primary audience will be HRD people who develop and implement leadership training programs globally.

OLPD 5619. Planning and Decision-Making Skills. (; 1 cr. ; Student Option; Every Fall, Spring & Summer)

Introduction to the disciplines of planning and decision making typically used in process improvement interventions. Tools and methods for facilitating group decisions and problem solving.

OLPD 5696. Internship: Human Resource Development. (; 1-10 cr. ; S-N or Audit; Periodic Fall & Spring)

Students apply/contract for human resource development positions. prereq: [[3901 or HRD 3601, [3696 or HRD 3196], [3620 or 3640 or HRD 3201 or HRD 3301], [3202 or ADED 3101], undergrad] or [[5607 or 5615 or HRD 5201 or HRD 5301], [5801 or WHRE 5001], grad student]], instr consent

OLPD 5701. U.S. Higher Education. (; 3 cr. ; Student Option; Every Fall & Summer)

U.S. higher/postsecondary education in historical/contemporary perspective. Emphasizes structure, history, and purposes of system as a whole.

OLPD 5702. Higher Education in Global Contexts. (3 cr. ; A-F only; Periodic Fall, Spring & Summer)

This course is an introductory overview of higher education in the international context and the processes of internationalization in which higher education institutions engage. It addresses contemporary issues facing regions, countries, and higher education institutions across the world and focuses on how higher education institutions approach their global work. The outcomes sought for students in this course include the following: Understanding of broad historical events, including the political, cultural, religious, psychological, and economic factors that shaped higher education in regions and countries across the world; Knowledge about the role of the federal government in shaping the structure of the higher education system in specific countries; Understanding of the process of internationalization as it relates to institutions across the world; Identification of the motivating factors that influence international activity related to higher education institutions; Identification of the cultural and sociopolitical factors that drive internationalization in higher education institutions. No single course can address all of the topics related to international higher education. In this course, the following seven primary questions serve as the focus for an

analysis of international higher education:

1) What are the most significant historical factors that shaped higher education in a specific country, and to what extent do those country-specific historical factors help understand higher education in the region? 2) What is the role of the federal government in a country, and to what extent are within-country differences analogous to differences among states in the United States? 3) How is higher education financed within a country, and are there regional economic forces that affect countries in the region? 4) What is the structure of higher education in the country (e.g., public institutions, private non-profit institutions, and for-profit institutions)? 5) What sociocultural, political, and institutional aspects of institutions? global initiatives.

OLPD 5703. College Student Mental Health and Wellbeing. (3 cr. ; A-F only; Periodic Fall, Spring & Summer)

College counseling centers across the U.S. report that the number of students with significant mental health and wellness issues is an increasing concern. For example, 21 percent of counseling center students present with severe mental health concerns, while another 40 percent of students exhibit mild mental health problems. These numbers will be exacerbated as a result of the ongoing Covid-19 pandemic. An unknown number of students receive support from college staff who work in student support roles.

College Student Mental Health and Wellness, will critically explore research and practice describing the mental and emotional concerns of students on college campuses and the types of interventions designed to address them.

Topics in the course will include ? but will not be limited to ? types of mental health concerns, ways in which multicultural issues influence how students express mental health concerns, working with students in crisis, structures of referral sources, ethical and legal issues, managing mental health in Covid-19, and self-care for those working with these students on college campuses. Components on effective strategies for providing psychological support will assist students in the development of their communication skills. We will also explore a range of wellness issues that intersect with mental health and wellness concerns. Note: this class will focus on the exploration of mental health issues from higher education and student affairs perspectives (e.g. how can higher education professionals and student affairs staff best support students with mental health concerns across individual and institutional levels?).

OLPD 5704. College Students Today. (; 3 cr. ; Student Option; Every Spring & Summer)

Issues involving population of students in colleges/universities. College student development theory, students' expectations/interests. How college affects student outcomes. Role of curricular/extracurricular activities. Student-faculty interaction.

OLPD 5709. Critical Issues in Higher Education. (; 3 cr. ; A-F or Audit; Every Spring)

Issues/opportunities facing American higher education. Financial, demographic, athletics, for-profit, changing public opinion. Framework for analysis.

OLPD 5712. College Student Development Theory and Practice. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Multicultural student development theories/theorists. Implications for teaching/learning. Students reflect on The Student Personnel Point of View and Learning Reconsidered: Campus-wide Focus on the Student Experience and other collaborative efforts.

OLPD 5721. Race and Ethnicity in Higher Education. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Review of research. Theoretical frameworks, methodological perspectives, and research strategies used to study students, staff, and faculty. Historical perspectives.

OLPD 5724. Leadership and Administration of Student Affairs. (; 2-3 cr. ; Student Option; Periodic Fall & Spring)

Scope, administration, coordination, and evaluation of programs in college and university student affairs.

OLPD 5732. The Law and Postsecondary Institutions. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Analysis of court opinions and federal regulations affecting postsecondary educational institutions.

OLPD 5736. Public Engagement and Higher Education. (; 3 cr. ; A-F only; Every Fall)

Study/practice of public engagement in higher education. Civic roles of post-secondary education institutions.

OLPD 5796. Supervised Practicum in Multicultural Postsecondary Teaching and Learning. (; 3 cr. ; S-N only; Every Fall, Spring & Summer)

Postsecondary teaching experience in supervised settings. Weekly group supervision session. Classroom experiences, learning centers, and other postsecondary teaching venues. prereq: Grad student in PsTL certificate program or admitted to PsTL master's program

OLPD 5801. Survey: Human Resource Development and Adult Education. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Overview of fields of human resource development and adult education. Societal context, theories, processes, definitions, philosophies, goals, sponsoring agencies, professional roles, participants, and resources. Unique characteristics and ways fields overlap and enhance one another. prereq: Grad student only

OLPD 5812. Consulting for Organization Change. (; 3 cr. ; Student Option No Audit; Periodic Fall, Spring & Summer)

This course is an introduction to major theories, concepts, skills, and techniques of consulting for industry, education, and government

OLPD 5819. Evaluating and Using Research in Organizations and Education. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Role of educational research in professional practice. Problems of practice for research. Alternative modes of research. Synthesis/application of results of research. prereq: Grad student

OLPD 5893. Directed Study in OLPD. (1-4 cr. ; Student Option; Every Fall, Spring & Summer)

Self-directed study, with faculty advice, in areas not covered by regular courses.

OLPD 5902. Leading Change in Private Colleges. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Theories of organizational change process/application for leading private colleges with unique cultures/distinctive missions. Factors impacting change process/implications for leading private colleges. prereq: Must have Bachelors degree awarded prior to taking this course.

Otolaryngology (OTOL)

OTOL 5101. Introduction to the Basic Sciences in Otolaryngology I: Ear. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Multidisciplinary introduction to the basic sciences of the ear. Acoustics and psychoacoustics, temporal bone anatomy, external and middle ear mechanisms, cochlear physiology, auditory neurophysiology, ear embryology, ear biochemistry, immunology, fine structures, vestibular mechanisms and measurement. S-N grading option for nonmajors only. prereq: Otolaryngology major or instr consent

OTOL 5102. Introduction to the Basic Sciences in Otolaryngology II: Head and Neck. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Multidisciplinary introduction to the basic sciences of the head and neck. Laryngeal anatomy and physiology, nasal anatomy and physiology, immune biology, embryology of head and neck. S-N grading option for nonmajors only. prereq: Otol major or instr consent

OTOL 5993. Directed Studies. (; 1-12 cr. [max 24 cr.] ; Student Option; Every Fall, Spring & Summer)

Directed readings and preparation of reports on selected topics. prereq: instr consent

Periodontics (PERO)

PERO 5123. Practice Management Externship. (; 1 cr. ; Student Option; Every Spring)

Familiarizes periodontal students with the private practice environment and prepares them to select the type of practice they want to purchase or build and successfully manage their office. prereq: Resident in advanced education program in periodontology

Pharmaceutics (PHM)

PHM 5200. New-Drug Development Process. (; 1 cr. ; Student Option; Periodic Fall & Spring)

New-drug development process in the U.S. pharmaceutical industry.

Pharmacology (PHCL)

PHCL 2001. Basic Principles of Pharmacology: A Drug's Fantastic Voyage. (2 cr. ; Student Option; Every Fall)

Basic principles of pharmacology affecting drug from administration through action/elimination. prereq: First-year chemistry
Keywords: Pharmacology, Drug, Introduction, Pharmacogenetics, Addiction, Toxicity

PHCL 3100. Pharmacology for Pre-Med and Life Science Students. (; 2 cr. ; A-F or Audit; Every Spring)

Principles/mechanisms of drug action. Major drug categories for different organ systems. prereq: College-level biology, biochemistry or physiology recommended

PHCL 4001. Mechanisms of Drug Action. (2 cr. ; Student Option; Every Fall & Spring)

How drug function as applied to the treatment of a single medical condition. Pharmacology, pharmacokinetics, pharmacodynamics, pharmacogenetics, pharmacogenomics. prereq: Upper div or instr consent; [prev or concurrent] courses in [biology, biochemistry] recommended

PHCL 4003. Anti-infective drugs: Drugs that kill invaders. (; 2 cr. ; A-F or Audit; Every Spring)

Principles/mechanisms of anti-infective drugs, and treatments of infectious diseases. prereq: College-level biology

PHCL 4010. Current Research Topics in Pharmacology. (2 cr. ; A-F only; Every Fall)

Cutting-edge research projects in pharmacology. Research seminars, literature studies, discussion sessions, oral presentations. prereq: Upper div or instr consent

PHCL 4020. Chemotherapy: from current anticancer drugs to future cancer therapeutics. (3 cr. ; A-F only; Every Fall)

This course will expose students to the studies of therapeutic agents used for the treatment of cancer. We will study the mechanisms of current anticancer drugs. We will also explore the recent development of novel anticancer agents, as well as the process of drug discovery & development. prereq: College-level biology: PHCL 2001 and/or PHCL3100, GCD4151 recommended.

PHCL 4100. Laboratory in Molecular Pharmacology. (2 cr. ; A-F only; Every Fall & Spring)

Hands-on experimentation using molecular techniques for data collection/analysis. prereq: [2001 or 4001], 3100, [BioC 3021 or BioC 4331], [BioC 4025, BioC 4125 recommended]

PHCL 4343. Pharmacology of the Synapse. (; 3 cr. ; A-F only; Every Fall)

Study synapse as pharmacological gateway to nervous system. Explore physiology of/cellular signalling at synapse, how signalling influences conditions such as Parkinson's disease, depression, anxiety, pain, addiction. How

various drugs modify signalling at synapse. recommend: [PHCL 2001, PHCL 3100]

PHCL 4993. Directed Studies. (; 1-3 cr. [max 6 cr.] ; S-N only; Every Fall, Spring & Summer)
Individual study ("dry lab" experience) on selected topics in pharmacology/biomedical science with faculty from the Pharmacology Department or other biomedicine disciplines. Readings and use of scientific literature. prereq: instr consent, dept consent

PHCL 4994. Directed Research. (; 1-3 cr. [max 12 cr.] ; S-N only; Every Fall, Spring & Summer)

Laboratory research ("wet lab" experience) in the areas of pharmacological/biomedical research. prereq: instr consent, dept consent

PHCL 5108. Introduction to Laboratory Research. (4 cr. ; A-F only; Every Fall)

In this course, students will gain practical experience working in a biomedical research laboratory. Students will develop and refine skills required for productive and safe lab work. Topics covered in this class include lab safety, proper equipment usage, making solutions and related calculations, and fundamental concepts and techniques in molecular biology and signal transduction. Key course concepts and content will be reinforced by conducting experiments in the lab under the supervision of an experienced instructor.

PHCL 5109. Introduction to Scientific Communication. (; 1-18 cr. ; Student Option; Every Fall, Spring & Summer)

This course is an interactive classroom experience focused on developing student communication skills. The primary emphasis is on student presentations of their research projects. In addition to making verbal presentations, students are expected to provide constructive criticism and feedback to their peers. Students also work on scientific writing skills by preparing a one-page NIH-style Specific Aims page outlining their research project. Prerequisites: student in the Graduate Program in Pharmacology (MS program) or approval from the Director of Graduate Studies
Keywords: Pharmacology, Directed, Independent Study, Biomedical, Basic Science, Research, Drug

PHCL 5110. Introduction to Pharmacology. (; 3 cr. ; A-F or Audit; Every Fall)

This is a course for first-year students in the Graduate Program in Pharmacology. The course introduces students to the basic principles of pharmacology and focuses on molecular mechanisms of drug action. Topics covered include pharmacokinetics, pharmacodynamics, signal transduction, toxicology pharmacogenomics, and drug discovery. Prerequisites: student in the Graduate Program in Pharmacology or approval from the Course Director(s)
Keywords: Introduction, Pharmacology, Molecular, Drug, Pharmacokinetics, Pharmacodynamics, Protein, Pharmacokinetics

PHCL 5111. Pharmacogenomics. (; 3 cr. ; A-F or Audit; Every Spring)

Human genetic variation, its implications. Functional genomics, pharmacogenomics,

toxicogenomics, proteomics. Interactive, discussion-based course. prereq: Grad student or instr consent Keywords: Pharmacology, Pharmacogenomics, Toxicogenomics, Proteomics, Genetics, Drug

PHCL 5112. Foundations of Biomedical Research. (; 1-2 cr. ; A-F only; Every Fall) This is a course for first-year students in the Graduate Program of Pharmacology. This course will introduce graduate students to the basic operating principles and techniques of a scientific research laboratory, general concepts surrounding experimental design and experimental controls, and familiarity with common laboratory calculations. Discussion of scientific techniques will include recombinant DNA and molecular biology techniques, protein expression and purification, protein assays, biochemical data analysis and fitting methods, transcriptomics and proteomics studies, and cell culture & mouse models of disease. Methods are presented in the context of highlighting general principles in experimental design. Prerequisites: student in the Graduate Program in Pharmacology Keywords: Basic Science, Pharmacology, Personnel, Writing, Presentation, Protein, DNA, Molecule, Microscope, Bioinformatics, Drug

PHCL 5462. Neuroscience Principles of Drug Abuse. (; 2 cr. ; Student Option; Periodic Spring) Current research on drugs of abuse, their mechanisms of action, characteristics shared by various agents, and neural systems affected by them. Offered biennially, spring semester of even-numbered years. prereq: instr consent

Pharmacy (PHAR)

PHAR 1001. Orientation to Pharmacy. (; 2 cr. ; Student Option; Every Fall, Spring & Summer)

You may know that pharmacists are responsible for the dispensation of medications, but did you know that pharmacists play a critical role in the healthcare process by ensuring that their patients receive the best overall care? Designed to help you better understand the world of pharmacy, this online pharmacy course will introduce you to this exciting profession and help you gain an understanding of the impact pharmacists have in the patient care process. This course examines what training is necessary for success in the pharmacy field, demonstrates the roles a pharmacist can have in patient care, research and academia, and provides virtual tours of various settings in which pharmacists work. This is not a self-study course. While it is completely online, there are deadlines for assignments throughout the semester. No late registrations will be accepted. Course information is sent to the U of M email addresses of registered students shortly before, and/or on, the first day of classes each Fall, Spring, and Summer term. For more information, contact phar1001@umn.edu or 612-624-7976.

PHAR 1002. Medical Terminology. (; 2 cr. ; Student Option; Every Fall, Spring & Summer)

Interested in learning the difference between an antigen and an antibiotic? During this course, you will not only increase your medical vocabulary by more than 2500 words at your own pace, you will also learn to identify and articulately describe a wide variety of medical conditions and processes. Communication related to disease states, procedures, and diagnostics in health care can sometimes seem like another language. This course will help you recognize medical abbreviations, relate terms to procedures and diagnostics, and comprehend the meaning of medical terminology by using word elements. If you are interested in the health care field or would like to understand more about your own medical care, this course is a great place to start.

PHAR 1003. Nonprescription Medications and Self-Care: Treating Minor Conditions. (; 2 cr. ; Student Option; Every Fall, Spring & Summer)

Nonprescription medications and dietary supplements comprise a large market within the health care industry. Throughout this course, you'll learn about these medications and other self care remedies available to treat many different medical conditions. For each condition discussed, you will learn basic causes, signs, and symptoms; self care guidelines; and when to see a health care provider. For each medication discussed, you will learn the basic mechanism of action, uses, and potential side effects. This course will help you gain a better understanding of how nonprescription and self care products can be used safely and effectively.

PHAR 1004. Common Prescription Drugs and Diseases. (; 2 cr. ; Student Option; Every Fall, Spring & Summer)

Are you interested in understanding how some of the most common prescription medications work, why they are used, and how they should be used when treating common ailments? Perhaps you would like to recognize the most common causes of specific diseases, identify their symptoms, and recognize the diagnostic criteria associated with them. Throughout this course, you will learn why some medications can't be used by certain people, understand how prescription drugs are regulated, and examine the correlation between common prescription drugs and diseases. Additionally, you will explore various drug information resources and learn how to find reliable sources of drug information. This online class is primarily self-paced with due dates for certain aspects at times throughout the semester. Students may choose to work ahead in the course. Course information is sent to the University of Minnesota email addresses of registered students shortly before, and/or on, the first day of classes each fall, spring, and summer term. For more information, contact phar1004@umn.edu or 612-624-7976.

PHAR 2002. Precision Medicine and Health: Understanding the Personal Genome. (3 cr. ; A-F only; Every Fall)

This course is intended for students who want to understand the basic concepts of Precision Medicine. It will help students understand how

individuality impacts disease predisposition, diagnosis, treatment, and health. We will begin with the creation of an individualized full genome sequence and show how this information can be used to predict, diagnose, and treat disease. We will also discuss the ethical use of this information. This course is intended for undergraduate non-science majors who are interested in the impact of genetics on different aspects of medicine, however science majors may also take the course. The course will provide a brief introduction to molecular biology and then introduce different areas of precision medicine, with an emphasis on the contribution of genetics for understanding predisposition, disease diagnosis, and drug treatment. An important part of the class will be exercises which help the student better understand concepts presented in the lectures. Prerequisites: None. The course is directed towards undergraduate non-science majors, however science majors may take the course. Class time: 2 x 75 minute in person lectures (50 minute lecture and 25 minute class exercise) Supplemental Textbook (Not Required) Classes will begin with a traditional lecture/discussion or seminar format, followed by in class discussion of assigned materials, and hands on activities using databases and case studies where the discussion is based around a situation (problem) that a clinician may encounter that requires application of precision medicine knowledge.

PHAR 3206. Foundations of Health Literacy.

(; 3 cr. ; Student Option; Every Fall & Spring) In this course, we will focus on health literacy and its implications for patients, health care providers, and the health care system at large. We will discuss the consequences of poor health literacy and practical strategies for improving health literacy. This will include steps that individual patients can take and communication strategies for future health care providers. You will explore disparities in health and health care and the relationship to health literacy. We will discuss cultural competency through both student discussions and a book club and consider the impact on the patient experience. Functional health literacy includes being able to navigate the health care system and health insurance. As a class, we will discuss choosing a health insurance policy and controversies therein.

PHAR 3700. Fundamentals of

Pharmacotherapy. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer) Pharmacotherapy?the treatment of disease through the administration of medications? is a field particularly interesting to many healthcare workers. This course is designed to introduce you to some of the main drug classes available for the treatment of particular diseases. You will also learn about basic pharmacology, recognize brand and generic drug names, and explore their common uses and therapeutic classes. A basic understanding of treatment options available for common disease states will also be developed during this course. Additionally, the course develops basic proficiency in the use of drug information resources. This is a completely online course

with due dates throughout the semester though students have the option to work ahead if they choose. Course information is sent to the University of Minnesota email addresses of registered students shortly before, and/or on, the first day of classes each fall, spring, and summer term. For more information, contact phar3700@umn.edu or 612-624-7976. Prereq: Medical terminology recommended

PHAR 3800. Pharmacotherapy for the Health Professions. (; 3 cr. ; A-F only; Every Fall & Spring)

Pharmacotherapy?the treatment of disease through the administration of medications? is a topic central to the practice of nursing. This course is designed to introduce you to the main drug classes available for the treatment of particular diseases and the monitoring parameters for patients taking these medications. You will also learn about basic pharmacology, recognize brand and generic drug names, and explore their common uses and therapeutic classes. A basic understanding of contraindications and precautions related to various classes of medications will also be covered. Additionally, the course develops basic proficiency in the use of drug information resources. Students will be assessed through patient case quizzes and exams. This is a completely online course with weekly due dates. Course information is sent to the University of Minnesota email addresses of registered students shortly before and/or on the first day of classes each fall and spring term. For more information, contact phar3800@umn.edu or 612-624-7976. Prereq: Anatomy and physiology

PHAR 4204W. Drugs and the U.S. Healthcare System. (CIV,WI; 3 cr. ; Student Option; Every Fall & Spring)

Being an empowered patient is important when discussing ethics-driven issues within the U.S. healthcare system. This course will expose students to current controversial issues surrounding medications and national healthcare and help students examine their own role as a participant in this system. Students will learn to draw comparisons between medication use systems around the world and analyze other controversies related to access, choice, and quality of healthcare. During this course, students will explore how their choices, ethics, and behavior affect societal decisions surrounding the availability of medications in the U.S. and what their rights are as a citizen-participant during the healthcare debate. Students are expected to have completed the first-year writing requirement (<https://cla.umn.edu/writing-studies/first-year-writing>), or equivalent, prior to registering for this class. This is a completely online course with weekly due dates and is offered each Fall and Spring term. For more information, contact phar4204@umn.edu or 612-624-7976.

PHAR 4248. Drugs of Abuse. (; 2 cr. ; S-N only; Every Spring)

Medicinal chemistry/pharmacology/toxicology of substances of abuse. Synthesis/natural product extraction of illicit drugs. Dangers of

clandestine lab practices. Sociological aspects of abuse.

PHAR 4293. Directed Research I for Undergraduates. (1-5 cr. ; Student Option; Every Fall, Spring & Summer)

Work with College of Pharmacy faculty. prereq: undergrad, instr consent

PHAR 4294. Directed Study I for Undergraduates. (; 1-5 cr. [max 10 cr.] ; Student Option; Every Fall, Spring & Summer) Individualized study. Students work with faculty on special projects. prereq: Undergrad, instr consent

PHAR 5201. Applied Medical Terminology. (; 2 cr. ; Student Option; Every Fall, Spring & Summer)

Interested in learning the difference between an antigen and an antibiotic? During this course, you will not only increase your medical vocabulary by more than 2500 words at your own pace, you will also learn to identify and articulately describe a wide variety of medical conditions and processes. Communication related to disease states, procedures, and diagnostics in health care can sometimes seem like another language. This course will help you recognize medical abbreviations, relate terms to procedures and diagnostics, and comprehend the meaning of medical terminology by using word elements. If you are interested in the health care field or would like to understand more about your own medical care, this course is a great place to start. prereq: Basic knowledge of human anatomy/physiology

PHAR 5204. Drugs and the US Healthcare System. (; 3 cr. ; Student Option; Every Fall & Spring)

Being an empowered patient is important when discussing ethics-driven issues within the U.S. healthcare system. This course will expose students to current controversial issues surrounding medications and national healthcare and help students examine their own role as a participant in this system. Students will learn to draw comparisons between medication use systems around the world and analyze other controversies related to access, choice, and quality of healthcare. During this course, students will explore how their choices, ethics, and behavior affect societal decisions surrounding the availability of medications in the U.S. and what their rights are as a citizen-participant during the healthcare debate. Students are expected to have completed the first-year writing requirement (<https://cla.umn.edu/writing-studies/first-year-writing>), or equivalent, prior to registering for this class. This is a completely online course with weekly due dates and is offered each Fall and Spring term. For more information, contact phar4204@umn.edu or 612-624-7976.

PHAR 5205. Obesity: Issues, Interventions, Innovations. (; 2 cr. ; Student Option; Every Spring)

This course will focus on the role of the pharmacist in treating obesity. Students will learn the pharmacology of past and current

medications to treat obesity, as well as the pathophysiology of the disease to understand why more options aren't available. Students will explore drug information sources for dietary supplements for weight loss, discuss the care of an obese patient including non-pharmacologic treatments for obesity, as well as recognizing the potential for bias and its effect on patient care. Finally, students will look at bariatric surgery and discuss some specific adjustments in care for bariatric patients. This is a completely online course with weekly due dates offered each Fall and Spring term. For more information, contact phar5205@umn.edu or 612-624-7976. Prereq: Second or third year pharmacy student, or student enrolled in a graduate science or health-related program. Biochemistry and physiology suggested.

PHAR 5212. Survey of Pediatric Metabolic, Genetic, and Oncologic Disease. (; 2 cr. ; A-F only; Every Fall & Summer)

Appraisal of major genetic/metabolic disorders and oncologic diseases of childhood. Disease state epidemiology, pharmacotherapy, monitoring, practical applications. prereq: Second year or higher in College of Pharmacy or instr consent

PHAR 5230. Principles of Clinical Pharmacology Research. (2 cr. ; A-F only; Every Fall)

Drug therapy investigation. Topics include experimental design of drug studies in human research subject volunteers. Topics related to individualization of therapy including effects of genetic polymorphisms, demographic variables, physiologic variables, age on drug disposition treatment outcomes. prereq: 3rd Year Pharmacy Student or instr consent

PHAR 5270. Therapeutics of Herbal and Other Natural Medicinals. (; 2 cr. ; A-F or Audit; Every Spring)

Herbal products/supplements. Pharmacology/clinical indications/drug interactions of common products in nontraditional complementary health care. Historical significance/evidenced-based role of products in health care. Case studies of clinical applications. prereq: organic chemistry, pathophysiology of disease states, 3rd or 4th yr PHAR

PHAR 5310. Topics in Pharmacy Ethics (Pandemics). (; 2 cr. ; A-F only; Every Fall, Spring & Summer)

Using COVID-19 as a pandemic model, students in this elective course will explore the ethical considerations informing personal, public policy, and biomedical research decisions during a pandemic. Students will apply ethical principles and selected schools of ethical thought to discuss and debate those decisions.

PHAR 5700. Applied Fundamentals of Pharmacotherapy. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Pharmacotherapy, the treatment of disease through the administration of medications, is a field particularly interesting to many health care workers. This course is designed to introduce students to some of the main drug classes available for the treatment of particular diseases. Students will also learn about basic

pharmacology, recognize brand and generic drug names, and explore their common uses and therapeutic classes. A basic understanding of treatment options available for common disease states will also be developed during this course. Additionally, the course develops basic proficiency in the use of drug information resources. This is a completely online course with due dates throughout the semester, though students have the option to work ahead if they choose. This course is offered each Fall, Spring, and Summer term. For more information, contact phar3700@umn.edu or 612-624-7976. Prereq: Medical terminology recommended

PHAR 5800. Pharmacotherapy for the Health Professions. (; 3 cr. ; A-F only; Every Fall) Pharmacotherapy, the treatment of disease through the administration of medications, is a topic central to the practice of nursing. This course is designed to introduce you to the main drug classes available for the treatment of particular diseases and the monitoring parameters for patients taking these medications. You will also learn about basic pharmacology, recognize brand and generic drug names, and explore their common uses and therapeutic classes. A basic understanding of contraindications and precautions related to various classes of medications will also be covered. Additionally, the course develops basic proficiency in the use of drug information resources. This is a completely online course with weekly due dates offered each Fall term. For more information, contact phar5800@umn.edu or 612-624-7976. Prereq: Anatomy and physiology

Pharmacy Summer Research (PHRM)

PHRM 4999. Pharmacy Summer Research. (; 0 cr. ; No Grade Associated; Every Summer) Pharmacy Summer Research

Philosophy (PHIL)

PHIL 1001. Introduction to Logic. (MATH; 4 cr. ; Student Option; Every Fall, Spring & Summer) Sharpen your reasoning skills through a close examination of arguments. Learn formal methods for representing and assessing arguments, including how to represent informal arguments in formal languages, and how to evaluate whether the premises of an argument entail its conclusion.

PHIL 1001H. Honors Course: Introduction to Logic. (MATH; 4 cr. ; A-F only; Periodic Fall & Spring) Sharpen your reasoning skills through a close examination of arguments. Learn formal methods for representing and assessing arguments, including how to represent informal arguments in formal languages, and how to evaluate whether the premises of an argument entail its conclusion.

PHIL 1002W. Introduction to Philosophy. (AH,WI; 4 cr. ; Student Option; Every Fall & Spring)

Problems, methods, historical/contemporary schools of philosophy.

PHIL 1003W. Introduction to Ethics. (CIV,WI; 4 cr. ; Student Option; Every Fall & Spring)

Are values/principles relative to our culture? Is pleasure valuable? Are there any absolute rules? These questions and others are addressed through critical study of moral theories.

PHIL 1004W. Introduction to Political Philosophy. (AH,WI,CIV; 4 cr. ; Student Option; Every Fall & Spring)

Government -- what are its purpose; the limits on its authority; its responsibilities to citizens (and vice versa)? What roles do freedom, equality, rights, property, punishment and justice play here? Join in as we discuss and debate competing views.

PHIL 1005. Scientific Reasoning. (; 4 cr. ; Student Option; Every Fall) How does science work? What is scientific method? How to evaluate scientific information in popular media or specialized publications, especially when it relates to technology used in everyday life? General reasoning skills. prereq: [1st or 2nd] yr student or instr consent

PHIL 1006W. Philosophy and Cultural Diversity. (AH,WI,DSJ; 4 cr. ; Student Option; Every Fall & Spring)

Central problems/methods of philosophy through culturally diverse texts. Focus is critical/comparative, reflecting range of U.S. philosophical traditions.

PHIL 1007. Introduction to Political Philosophy Practicum. (; 1 cr. ; Student Option; Every Fall & Spring)

Students do at least two hours a week of community service and connect their service activities in writing to issues discussed in 1004. prereq: concurrent registration is required (or allowed) in 1004W

PHIL 1026W. Philosophy and Cultural Diversity. (AH,WI,DSJ; 3 cr. ; Student Option; Every Summer)

Central problems/methods of philosophy through culturally diverse texts. Focus is critical/comparative, reflecting a range of U.S. philosophical traditions.

PHIL 1201. Critical Reasoning. (AH; 4 cr. ; Student Option; Every Spring)

In this course, much of our focus will be on what makes reasoning good or bad. We will learn to suss out bad argumentation, and pinpoint the precise mistake in reasoning that is at fault in particular cases. Patterns will emerge, which will help us learn how to better argue for beliefs that we hold, and claims we take to be true. We will especially focus on developing these skills in various, real-world contexts, so that they can be transferable to your future life, career, and decision-making. To that end, special attention will be paid to the kinds of traps we can fall into when we encounter argumentation via social media.

PHIL 1760. Selected Topics in Philosophy. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)

Philosophical topics of contemporary interest. Topics specified in Class Schedule.

PHIL 1918. Comics as Art. (; 3 cr. ; A-F only; Periodic Fall)

In this seminar, we will explore the idea that comics are as legitimate an art form as painting or poetry. We will ask: How do comics differ from other artistic media? How does reading a comic differ from reading poetry or novels? How have comics influenced, and been influenced by, culture and politics? And what, exactly, makes a comic a comic (and not something else)?

PHIL 1919. Africana Philosophy. (; 3 cr. ; A-F only; Periodic Fall & Spring)

In this course, we will engage concepts related to Blackness, particularly race, gender, and sexuality. We will investigate them individually then through conversation untangle the ways that they intersect. We will see that Black philosophers reveal an epistemic insight from the ways that they push on the western status quo both rationally and morally. In terms of rationality, Black philosophers propel us to redefine Blackness, sexuality, imperialism, communal care, and whiteness in general. In relation to morality, Black philosophers place us in a tension between the inner and the outer, the individual and the community, the personal and the social; it insists on seriously inquiring into the blame, blameworthiness, and shame that avoids and rejects Black lives, i.e., of the outer, the community, and figure without being on the edges of society. It is at this intersection of the rational and moral in relation to Blacks that a breakdown of singularity creates a new something. I want us to get close to understanding that ?new something? by exploring the rational and moral in Black thought.

PHIL 3001W. General History of Western Philosophy: Ancient Period. (AH,WI; 4 cr. ; Student Option; Every Fall)

Major developments in ancient Greek philosophic thought: pre-Socrates, Socrates, Plato, Aristotle, Hellenistic thinkers.

PHIL 3005W. General History of Western Philosophy: Modern Period. (AH,WI; 4 cr. ; Student Option; Every Spring)

Can anything be known beyond a shadow of a doubt? How ought scientific knowledge be discovered and justified? In what does one's identity as a person consist? How does our human nature affect the way that we conceive of and come to know the world? This course examines the momentous intellectual transformations in Europe during the 17th and 18th centuries that inspired such questions and their innovative solutions.

PHIL 3100. Value Theory Practicum. (; 1 cr. [max 3 cr.] ; Student Option; Every Fall & Spring)

Combines issues in ethics/political philosophy courses to needs of people in Twin Cities through community service. At least 26 hours of community service for semester is required. prereq: [concurrent registration is required (or allowed) in 3301 or concurrent registration is required (or allowed) in 3302W or concurrent

registration is required (or allowed) in 3304 or concurrent registration is required (or allowed) in 3307 or concurrent registration is required (or allowed) in 3308], instr consent

PHIL 3201. Free Will and Responsibility. (; 3 cr. ; Student Option; Periodic Fall & Spring) What distinguishes actions from mere happenings? How do we accommodate our conception of ourselves as agents in a world governed by causal laws? Does free action require alternate possibilities? Is free will required to hold people accountable for actions? Conditions of moral responsibility.

PHIL 3231. Philosophy and Language. (; 4 cr. ; Student Option; Every Fall & Spring) Philosophical issues concerning the nature and use of human language.

PHIL 3234. Knowledge and Society. (; 4 cr. ; Student Option; Periodic Fall) Critical discussion of concepts such as knowledge, objectivity, justification, rationality, evidence, authority, expertise, and trust in relation to the norms and privileges of gender, race, class, and other social categories.

PHIL 3301. Environmental Ethics. (ENV; 4 cr. ; Student Option; Spring Odd Year) Philosophical basis for membership in moral community. Theories applied to specific problems (e.g., vegetarianism, wilderness preservation). Students defend their own reasoned views about moral relations between humans, animals, and nature.

PHIL 3302W. Moral Problems of Contemporary Society. (CIV,WI; 4 cr. ; Student Option; Every Fall, Spring & Summer) How do we determine what is right and wrong? How should we live our lives? What do we owe others? Moral/ethical thought applied to problems and public disputes (e.g., capital punishment, abortion, affirmative action, animal rights, same-sex marriage, environmental protection).

PHIL 3303W. Business Ethics. (WI; 4 cr. ; Student Option; Periodic Fall & Spring) The course offers a comprehensive overview of ethical questions that arise in the context of doing business, including questions regarding what duties companies have to consumers and the general public, and what the moral obligations businesses have to employees and shareholders.

PHIL 3304. Law and Morality. (; 3 cr. ; Student Option; Periodic Fall & Spring) What is law? Must true laws be just? When (if ever) are civil disobedience or legal punishment morally justified? Do good laws incorporate (or legislate) morality? Consider and debate these issues using philosophical texts, case law, and the occasional novel.

PHIL 3305. Medical Ethics. (; 4 cr. ; Student Option; Every Spring) Moral problems confronting physicians, patients, and others concerned with medical treatment, research, and public health policy. Topics include abortion, living wills, euthanasia, genetic engineering, informed consent, proxy decision-making, and allocation of medical resources.

PHIL 3311W. Introduction to Ethical Theory. (WI; 4 cr. ; Student Option; Every Fall & Spring) Nature and justification of moral judgments and moral principles; analysis of representative moral views.

PHIL 3322W. Moral Problems of Contemporary Society. (CIV,WI; 3 cr. ; Student Option; Every Summer) How do we determine what is right and wrong? How should we live our lives? What do we owe others? Moral/ethical thought applied to problems and public disputes (e.g., capital punishment, abortion, affirmative action, animal rights, same-sex marriage, environmental protection).

PHIL 3601W. Scientific Thought. (WI; 4 cr. ; Student Option; Every Fall & Spring) Science influences us daily, shaping how we understand ourselves and interpret nature. This course is an introduction to how scientists reason about the world, what that means for our lives, and the status of science as a human activity. What is science and what's so great about it? Is science the ultimate authority on the world and our place in it? This course examines the authority of science, how scientists reason, and science's status as a human activity. prereq: One course in philosophy or natural science

PHIL 3605. Disease, Diagnosis, and Intervention: Conceptual Issues in Medicine. (3 cr. ; Student Option; Periodic Fall & Spring)

Contemporary medicine dominates our daily concerns and societal conversation. From insurance coverage to the consumer advertising of pharmaceuticals, the variety of issues and their visibility is patently obvious. However, conceptual issues in medicine, such as what counts as health and disease or what do we mean by "evidence-based" or "precision" medicine, are arguably just as important--if not prior to--many of these other issues. For example, if doctors do not consider something an "official" disease or condition, it is unlikely your insurance company will pay to treat it. Additional conceptual questions include: what role do theories play in medicine? Can scientific experiments be replicated in clinical medicine? Should all medicine be based on evidence? How do we know what causes health or disease? What do advances in neuroscience reveal about the relationship between mind and body, especially with respect to mental health and illness? What properties do physicians measure and why? How does probability and chance enter into medical practice (e.g., diagnosis, therapy, and rehabilitation)? This course is an introduction to these and other related issues in medicine with an emphasis on their diversity and heterogeneity. It is designed for undergraduates across a variety of majors with an interest in these conceptual questions, including but not limited to Animal Science; Anthropology; Biochemistry; Biology, Society and Environment; Chemistry; Ecology, Evolution and Behavior; Genetics, Cell Biology and Development; Microbiology; Neuroscience; Physiology; Psychology). No prior knowledge

of medicine or philosophy is required; I do not assume that you have any previous exposure to the material we will be covering. Most of the assignments for this course are writing oriented. The goal is to identify, characterize, and critically reflect on the issues raised in our discussions and do this in the medium of writing. At the end of the class you will possess new analytical skills and recognize the value of philosophical investigation into the medical concepts and practices, including its application to your everyday life. Additionally, it is directly relevant to the Critical Analysis and Reasoning Skills portion of the MCAT.

PHIL 3607. Philosophy of Psychology. (; 4 cr. ; Student Option; Periodic Fall & Spring) What are minds and mental states (like desires and beliefs)? How are these different from brains and brain states? Should scientific explanation abandon any appeal to the mental (like behaviorism) or can we offer a scientific account of mind? prereq: One course in philosophy or psychology

PHIL 3993. Directed Studies. (1-3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer) Guided individual reading or study. Prereq instr consent, dept consent, college consent.

PHIL 4009. Existentialism. (; 3 cr. ; Student Option; Periodic Fall & Spring) Existentialism as a French philosophical and artistic movement of the mid-twentieth century, is commonly associated with Jean-Paul Sartre, Albert Camus, or Simone de Beauvoir. Only in retrospect did it become transnational, dating back to at least the 19th century--Soren Kierkegaard and Friedrich Nietzsche--and comprising figures like Martin Heidegger, Hannah Arendt, Ayn Rand, Silvia Plath, or Franz Fanon. This list already makes it a hard to define a creed or an ethical or political commitment that these writers have in common. What then will allow us to call them existentialist? To begin with, it is perhaps the focus on individual experience, on the experience of finitude, a heightened awareness of the individual's embeddedness in a here and now and a quest for the possibility of an unalienated life. Such concerns cannot easily be expressed through a systematic philosophy, a set of definitions and principles that can be passed on. Instead literary writing became a form of philosophical inquiry. Further, how these concerns could lend themselves to the most revolutionary as well as the most conservative, even Fascist politics, will be one of the puzzles we will seek to answer in this course. We will engage with a number of canonical existentialist texts and trace what defines Existentialism as a key mode of modern philosophizing.

PHIL 4010. Ancient Philosophers. (; 3 cr. [max 6 cr.] ; Student Option; Periodic Spring) Major work of selected ancient philosophers (e.g., Plato's Parmenides, Plato's Sophist, Aristotle's Metaphysics). Works discussed may vary from offering to offering. prereq: 3001 or instr consent

PHIL 4040. Rationalists. (3 cr. [max 6 cr.] ; Student Option; Periodic Fall & Spring)

Major work of selected early modern rationalists (e.g., Descartes' Principles of Philosophy, Spinoza's Ethics, Conway's Principles of the Most Ancient and Modern Philosophy, Leibniz's Discourse on Metaphysics). Works discussed may vary from offering to offering.

PHIL 4055. Kant. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Immanuel Kant has long been recognized as a particularly systematic thinker, one who wrote foundational texts in epistemology, metaphysics, ethics, politics, aesthetics, religion, teleology, and anthropology, which still resonate and influence contemporary thought. This course studies the wide breadth of Kant's philosophical system, paying especial attention to its relevance today. prereq: 3005 or 4004 or instr consent

PHIL 4085. Wittgenstein. (3 cr. ; Student Option; Periodic Fall & Spring)

In "Philosophical Investigations" Wittgenstein challenged some of the most long-standing and entrenched intuitions of philosophers -- basic intuitions about mind, rationality, linguistic understanding, and the very nature of philosophical/conceptual inquiry. Many of these intuitions remain entrenched and Wittgenstein's challenge is as relevant today as it was in 1950. In Phil 4805 we examine the text and the secondary literature, and do so in the light of issues and debates that continue to demand attention.

PHIL 4100. Value Theory Practicum. (; 1 cr. [max 3 cr.] ; Student Option; Every Fall & Spring)

Issues studied in ethics/political philosophy courses applied to needs of people in Twin Cities through community service. At least 26 hours of community service for semester is required. prereq: [concurrent registration is required (or allowed) in 4320 or concurrent registration is required (or allowed) in 4321 or or concurrent registration is required (or allowed) in 4330 or concurrent registration is required (or allowed) in 4324 or concurrent registration is required (or allowed) in 4414], instr consent

PHIL 4101. Metaphysics. (; 3 cr. ; Student Option; Fall Even Year)

Broadly speaking, metaphysics is the study of the nature of reality. Metaphysical questions include questions about what kinds of things exist, what is the nature of things, what are persons, what is possible or impossible, what is the nature of time, what is causality, and many other fundamental questions about the world. The aim of this course is to introduce students to some of the central questions of metaphysics to investigate some of their answers. prereq: One course in history of philosophy or instr consent

PHIL 4105W. Epistemology. (WI; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Epistemology is the study of knowledge. Epistemological questions include questions about the nature of knowledge, the difference between knowledge and true belief, the nature of justification, and the structure of our

knowledge about the world. Epistemology is also centrally concerned with understanding and responding to arguments for skepticism, the view that we do not know anything about the world around us. The aim of this course is to introduce students to some of the main problems of epistemology and to investigate some of their solutions. prereq: 1001 or instr consent

PHIL 4231. Philosophy of Language. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Theories of reference, linguistic truth, relation of language/thought, translation/synonymy. prereq: 1001 or 5201 or instr consent

PHIL 4311W. History of Moral Theories. (WI; 3 cr. ; Student Option; Periodic Fall)

Is human nature fundamentally selfish or are we sympathetic creatures? What is free will and do we have it? Do moral principles have a rational basis or are our moral judgments expressions of feelings? Should morality be thought of in terms of acting on principle or producing good outcomes? We will focus on these and other questions as they are explored in primary texts from the early modern history of western philosophy. prereq: 1003 or instr consent

PHIL 4320. Intensive Study of a Historical Moral Theory. (; 3 cr. [max 6 cr.] ; Student Option; Periodic Fall & Spring)

Intensive consideration of an author or theory in the history of moral or political philosophy. prereq: 1003 or instr consent

PHIL 4321W. Theories of Justice. (WI; 3 cr. ; Student Option; Periodic Fall & Spring)

What is justice, understood as a central virtue of our social (e.g., political and legal) institutions? What does justice require in the political realm and what kind of state is best suited to achieve it? Ideally, what image of the just state should regulate our behavior? How do the requirements of justice change, if they do, in non-ideal circumstances, such as in cases of noncompliance with the law or in the context of violent conflict (e.g., in war)? This course is intended to provide upper-level undergraduates and philosophy graduate students with a selective survey of important work in contemporary theory of justice that addresses such questions. prereq: 1003 or 1004 or instr consent

PHIL 4326. Lives Worth Living: Questions of Self, Vocation, and Community. (AH,CIV; 4 cr. [max 8 cr.] ; Student Option; Every Summer)

Immersion experience. Students live together as a residential community of learners. Works of philosophy, history, and literature form backdrop for exploring such questions as "How is identity constructed?," "What is vocation?," and "What experiences of community are desirable in a life?" Each student creates a life-hypothesis for a life worth living. prereq: instr consent

PHIL 4331. Contemporary Moral Theories. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Is morality objective, just a matter of feeling, or something in between? How do we know even the most basic of moral truths? Do I

always have a reason to do what is moral? What motivates people to be moral and why do some people behave immorally? This class looks at these and related questions in metaethics, moral psychology, and other areas of contemporary moral theory. prereq: 1003 or instr consent

PHIL 4350. Catching Lives Worth Living: Participation in the Growth of a Living-Learning Community. (; 2 cr. [max 4 cr.] ; Student Option; Every Summer)

Involvement in a democratic living-learning community built by students/instructors. Students participate in community activities and daily instructor meetings. Four seven-day offerings each summer. prereq: Application, instr consent

PHIL 4414. Political Philosophy. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Survey of historical/contemporary works in political philosophy. prereq: 1004 or instr consent

PHIL 4510. Philosophy of the Individual Arts. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Aesthetic problems that arise in studying or practicing an art. prereq: 3502

PHIL 4605. Space and Time. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Philosophical problems concerning nature/structure of space, time, and space-time. prereq: Courses in [philosophy or physics] or instr consent

PHIL 4607. Philosophy of the Biological Sciences. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Biology dominates the landscape of contemporary scientific research, and yet "biology" consists of a variety of different disciplinary approaches: from protein biochemistry to field ecology, from developmental biology to evolutionary genetics. Many philosophical issues can be found in the concepts and practices of life science researchers from these different disciplines. What is the structure of evolutionary theory? What is a gene? What are the units of selection? What is an individual? What counts as a "cause"? What is the relationship between evolution and development? Are all biological phenomena reducible to genes or molecules? What are adaptations, and how do we identify them? What is an ecological niche? Is there a progressive trend in the history of life? Is there such a thing as 'human nature'? This course is an introduction to these and other related issues in the biological sciences with an emphasis on their diversity and heterogeneity. It is designed for advanced undergraduates with an interest in conceptual questions and debates in biology that are manifested across a variety of majors (e.g., animal science; anthropology; biochemistry; biology, society and environment; biosystems and agricultural engineering; chemistry; ecology, evolution and behavior; genetics, cell biology and development; microbiology; neuroscience; physiology; plant biology; psychology). Some of these issues will appear familiar from previous

coursework or opportunities, whereas new issues will be intriguing because of their similarities and differences with those that have been encountered in other contexts.

PHIL 4615. Minds, Bodies, and Machines. (; 3 cr. ; Student Option; Periodic Fall & Spring) Mind-body problem. Philosophical relevance of cybernetics, artificial intelligence, computer simulation. Mental phenomena present the philosopher with a number of deep but inescapable puzzles and challenges. We tend to suppose that we know what it is to have a mind, to have beliefs, desires, etc., and we think that we know how to explain our own behavior and that of others -- and all of this without any formal training in the relevant science. All of this is surely amazing; indeed it verges on the outrageous. We admit to not knowing the makeup of the simplest structures, to not knowing how to explain the behavior of the simplest organisms -- we, OF COURSE, leave such issues to scientific investigation. Yet, at the same time, we think we know how to explain the behavior of this most complex of systems; we know how to do it, and we know what we are talking about when we explain behavior by citing the relevant beliefs, desires, etc. And, to repeat, we know all of this with no formal training. Strange indeed. Not only is this initial confidence puzzling, but attempts to articulate the mental story and to integrate it into the larger scientific picture have all proven problematical. We start our investigation with a very brief glance at a mid-century proposal that initiated a very different way of thinking about mind: the proposal by Turing -- one of the great minds of the 20th Century--that machines of a certain kind could exhibit intelligence. A story told in part in the recent movie, *The Imitation Game*. We then turn to some more traditional approaches to mind: Cartesianism, Behaviorism and Materialism. prereq: one course in philosophy or instr consent

PHIL 4622. Philosophy and Feminist Theory. (; 3 cr. ; Student Option; Periodic Fall) Encounters between philosophy/feminism. Gender's influence in traditional philosophical problems/methods. Social role of theorist/theorizing as they relate to politics of feminism. This course surveys central debates in feminist philosophy, with a focus on the methods and virtues of resistance. Along the way, we will consider the question of how we should live in an oppressive society. Topics may include intimidation, gaslighting, silencing, epistemic injustice, emotional labor, intersectionality, resistance, anger and violence. prereq: 8 crs in [philosophy or women's studies] or instr consent

PHIL 4760. Selected Topics in Philosophy. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring) Philosophical problems of contemporary interest. Topics specified in Class Schedule. prereq: 3 [3xxx-5xxx] cr in philosophy or instr consent

PHIL 4888. Philosophy Senior Capstone. (4 cr. ; A-F only; Every Spring) The Philosophy capstone course culminates students' work in the major. It offers the

opportunity to engage and combine skills in analysis, critical thought and clear and cogent expression developed throughout the course of undergraduate work in philosophy. Students will identify a provisional paper or paper topic prior to enrolling in the capstone course and will spend the semester writing, expanding, and revising this paper under the supervision of the faculty teaching the capstone. The capstone course will incorporate career readiness elements, and overall will strive to provide students with a culminating shared experience as Philosophy majors.

PHIL 4888H. Honors Philosophy Senior Capstone. (; 4 cr. ; A-F only; Every Spring) The Philosophy capstone course culminates students' work in the major. It offers the opportunity to engage and combine skills in analysis, critical thought, and clear and cogent expression developed throughout the course of undergraduate work in philosophy. Students will identify a provisional paper or paper topic prior to enrolling in the capstone course and will spend the semester writing, expanding, and revising this paper under the supervision of the faculty teaching the capstone. The capstone course will incorporate career readiness elements, and overall will strive to provide students with a culminating shared experience as Philosophy majors.

PHIL 4893. Capstone: Directed Studies. (; 1 cr. ; A-F only; Periodic Fall & Summer) Guided individual study leading to research paper that satisfies senior capstone requirement. Students enrolling in this directed study/research course will complete the Philosophy Senior Capstone: Directed Study contract form with a faculty mentor. The faculty member will ensure academic standards are upheld, including: - the work proposed is at the appropriate level for the course, academic in nature, and the student will be involved intellectually in the project. - the project scope is reasonable (42 hours of work per credit) - the faculty mentor is qualified to serve in this role - assessment of student learning and grading criteria are clear and appropriate - the student will be working in a respectful, inclusive environment. The contract will include the learning objectives for the course, the methods that will be employed, and how assessment will be conducted by the faculty mentor. The contract must be approved by the department academic approver before the student can register. prereq: instr consent, dept consent

PHIL 4993. Directed Studies. (1-3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer) Guided individual reading or study. Prereq instr consent, dept consent, college consent.

PHIL 5009. Existentialism. (3 cr. ; Student Option; Periodic Fall & Spring) Existentialism as a French philosophical and artistic movement of the mid-twentieth century, is commonly associated with Jean-Paul Sartre, Albert Camus, or Simone de Beauvoir. Only in retrospect did it become transnational, dating back to at least the 19th century--Søren Kierkegaard and Friedrich Nietzsche--and comprising figures like Martin

Heidegger, Hannah Arendt, Ayn Rand, Silvia Plath, or Franz Fanon. This list already makes it a hard to define a creed or an ethical or political commitment that these writers have in common. What then will allow us to call them existentialist? To begin with, it is perhaps the focus on individual experience, on the experience of finitude, a heightened awareness of the individual's embeddedness in a here and now, and a quest for the possibility of an unalienated life. Such concerns cannot easily be expressed through a systematic philosophy, a set of definitions and principles that can be passed on. Instead literary writing became a form of philosophical inquiry. Further, how these concerns could lend themselves to the most revolutionary as well as the most conservative, even Fascist politics, will be one of the puzzles we will seek to answer in this course. We will engage with a number of canonical existentialist texts and trace what defines Existentialism as a key mode of modern philosophizing.

PHIL 5010. Ancient Philosophers. (; 3 cr. [max 6 cr.] ; Student Option; Periodic Spring) Major work of selected ancient philosophers (e.g., Plato's *Parmenides*, Plato's *Sophist*, Aristotle's *Metaphysics*). Works discussed vary. prereq: 3001 or instr consent

PHIL 5040. Rationalists. (3 cr. [max 6 cr.] ; Student Option; Periodic Fall & Spring) Major work of selected early modern rationalists (e.g., Descartes' *Principles of Philosophy*, Spinoza's *Ethics*, Conway's *Principles of the Most Ancient and Modern Philosophy*, Leibniz's *Discourse on Metaphysics*). Works discussed may vary from offering to offering.

PHIL 5055. Kant. (3 cr. ; Student Option; Periodic Fall & Spring) Immanuel Kant has long been recognized as a particularly systematic thinker, one who wrote foundational texts in epistemology, metaphysics, ethics, politics, aesthetics, religion, teleology, and anthropology, which still resonate and influence contemporary thought. This course studies the wide breadth of Kant's philosophical system, paying especial attention to its relevance today. prereq: 3005 or 4004 or instr consent

PHIL 5085. Wittgenstein. (3 cr. ; Student Option; Periodic Fall & Spring) In "Philosophical Investigations" Wittgenstein challenged some of the most long-standing and entrenched intuitions of philosophers -- basic intuitions about mind, rationality, linguistic understanding, and the very nature of philosophical/conceptual inquiry. Many of these intuitions remain entrenched, and Wittgenstein's challenge is as relevant today as it was in 1950. In Phil 4805 we examine the text and the secondary literature, and do so in the light of issues and debates that continue to demand attention.

PHIL 5101. Metaphysics. (3 cr. ; Student Option; Fall Even Year) Broadly speaking, metaphysics is the study of the nature of reality. Metaphysical questions include questions about what kinds of things

exist, what is the nature of things, what are persons, what is possible or impossible, what is the nature of time, what is causality, and many other fundamental questions about the world. The aim of this course is to introduce students to some of the central questions of metaphysics to investigate some of their answers. prereq: One course in history of philosophy or instr consent

PHIL 5105. Epistemology. (3 cr. ; A-F or Audit; Periodic Fall & Spring)
Epistemology is the study of knowledge. Epistemological questions include questions about the nature of knowledge, the difference between knowledge and true belief, the nature of justification, and the structure of our knowledge about the world. Epistemology is also centrally concerned with understanding and responding to arguments for skepticism, the view that we do not know anything about the world around us. The aim of this course is to introduce students to the some of the main problems of epistemology and to investigate some of their solutions. prereq: 1001 or instr consent

PHIL 5201. Symbolic Logic I. (; 4 cr. ; Student Option; Every Fall & Spring)
Study of syntax and semantics of sentential and first-order logic. Symbolization of natural-language sentences and arguments. Development of deductive systems for first-order logic. Metatheoretic proofs and methods, including proof by mathematical induction and proof of consistency and completeness. prereq: 1001 or instr consent

PHIL 5202. Symbolic Logic II. (; 4 cr. ; Student Option; Every Spring)
Elements of set theory, including the concepts of enumerability and nonenumerability. Turing machines and recursive functions; the results of Church, Godel, and Tarski and the philosophical significance of those results. prereq: 5201 or instr consent

PHIL 5209. Mathematical Methods for Philosophy. (4 cr. ; Student Option; Fall Odd Year)
Introduction to some of the mathematical methods used throughout philosophy, such as sets, graphs, automata, probability and decision theory, statistics, and computer simulation, both explicitly and through example applications. prereq: prior course in mathematics, logic, or mathematics-related discipline or or instr consent

PHIL 5211. Modal Logic. (; 4 cr. ; Student Option; Spring Odd Year)
Axiomatic and semantic treatment of propositional and predicate modal logics; problems of interpreting modal languages. prereq: 5201 or instr consent

PHIL 5221. Philosophy of Logic. (; 3 cr. ; Student Option; Periodic Fall)
In this course, we will look at some of the central topics in philosophical logic, concentrating on issues that motivate the introduction of various non-classical logics as alternatives to the standard classical account of logical consequence. Topics covered include

(but are not limited to) the Liar paradox, vagueness, the paradoxes of relevance, and intuitionism. prereq: 5202 or instr consent

PHIL 5222. Philosophy of Mathematics. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Major philosophical questions arising in connection with mathematics. What is mathematics about? How do we know the mathematics we do? What is the relation between mathematics and the natural sciences? Selected readings of leading contributors such as Frege, Dedekind, Russell, Hilbert, Brouwer, Godel, Quine. prereq: College level logic or mathematics course or instr consent

PHIL 5231. Philosophy of Language. (3 cr. ; Student Option; Periodic Fall & Spring)
Theories of reference, linguistic truth, relation of language/thought, translation/synonymy. prereq: 1001 or 5201 or instr consent

PHIL 5311. History of Moral Theories. (3 cr. ; Student Option; Periodic Spring)
Is human nature fundamentally selfish or are we sympathetic creatures? What is free will and do we have it? Do moral principles have a rational basis or are our moral judgments expressions of feelings? Should morality be thought of in terms of acting on principle or producing good outcomes? We will focus on these and other questions as they are explored in primary texts from the early modern history of western philosophy. prereq: 1003W or instr consent or GRAD

PHIL 5320. Intensive Study of a Historical Moral Theory. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Intensive consideration of an author or theory in the history of moral or political philosophy. prereq: 1003 or instr consent

PHIL 5321. Theories of Justice. (3 cr. ; Student Option; Periodic Fall & Spring)
What is justice, understood as a central virtue of our social (e.g., political and legal) institutions? What does justice require in the political realm and what kind of state is best suited to achieve it? Ideally, what image of the just state should regulate our behavior? How do the requirements of justice change, if they do, in non-ideal circumstances, such as in cases of noncompliance with the law or in the context of violent conflict (e.g., in war)? This course is intended to provide upper-level undergraduates and philosophy graduate students with a selective survey of important work in contemporary theory of justice that addresses such questions. prereq: 1003 or 1004 or grad student or instr consent

PHIL 5326. Lives Worth Living: Questions of Self, Vocation, and Community. (4 cr. ; Student Option; Every Summer)
Immersion experience. Students live together as a residential community of learners. Works of philosophy, history, and literature form backdrop for exploring such questions as "How is identity constructed?," "What is vocation?," and "What experiences of community are desirable in a life?" Each student creates a life-hypothesis for a life worth living. prereq: instr consent

PHIL 5331. Contemporary Moral Theories. (3 cr. ; Student Option; Periodic Fall & Spring)
Is morality objective, just a matter of feeling, or something in between? How do we know even the most basic of moral truths? Do I always have a reason to do what is moral? What motivates people to be moral and why do some people behave immorally? This class looks at these and related questions in metaethics, moral psychology, and other areas of contemporary moral theory. prereq: 1003 or instr consent

PHIL 5350. Catching Lives Worth Living: Participation in the Growth of a Living-Learning Community. (; 1-3 cr. [max 6 cr.]; Student Option; Every Summer)
Involvement in a democratic living-learning community built by students/instructors. Students participate in community activities and daily instructor meetings. Four seven-day offerings each summer. prereq: Application, instr consent

PHIL 5414. Political Philosophy. (3 cr. ; Student Option; Periodic Fall & Spring)
Works in political philosophy, whether historical or more contemporary, are one central element of the study of philosophy more broadly. As we will address these works, and the issues and concepts they take up, they fall within the larger field of moral philosophy. Like other works in this broad category, discussion in political philosophy typically consider both metaethical and normative questions. Metaethical questions concern the concepts we use as we consider matters of right and wrong or of ethical value. In the realm of political philosophy, authors consider rightness, wrongness and ethical value as they bear on political societies and political leaders, and not only on citizens but on non-citizens who experience the effects of political power. Examples of such questions include: What is justice? What is political power? What are freedom, equality and autonomy? Normative questions, by contrast, concern matters of practice. In the context of moral and political philosophy, they are typically questions about what we must do or refrain from doing if we are to act rightly (as opposed to prudently or efficiently for instance). Examples in the political realm include: What are just standards of criminal punishment? What obligations does a just state have to citizens and to non-citizen residents? What right, if any, do citizens and others have to protest state laws, policies and actions? What rights can citizens or others claim to equality under the law? What grounds or justifies our responses to such questions? Over the course of this semester, we will read both canonical texts in the history of political philosophy and pieces by a variety of authors who are less well known. Our aim will be to improve our ability to understand broad claims and more nuanced points, to compare and critically assess contrasting views, and to appreciate the ways in which political philosophers often draw or expand on others' works even as they challenge them. We will also be working towards improvements in the difficult task of explaining and supporting claims and analyses, in short written pieces,

longer essays and oral discussions. prereq: 1004 or instr consent

PHIL 5415. Philosophy of Law. (; 3 cr. ; Student Option; Periodic Spring)
Analytical accounts of law and legal obligation. prereq: 1003 or 1004 or 3302 or social science major or instr consent

PHIL 5510. Philosophy of the Individual Arts. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Aesthetic problems that arise in studying or practicing an art. prereq: 3502

PHIL 5601. History of the Philosophy of Science. (; 3 cr. ; Student Option; Periodic Fall & Spring)
History of logical empiricism, from its European origins in first half of 20th century to its emergence as nearly universal account of science in post-war Anglo-American philosophy. prereq: instr consent

PHIL 5602. Scientific Representation and Explanation. (; 3 cr. ; Student Option; Periodic Fall)
Contemporary issues concerning representation and explanation of scientific facts. prereq: instr consent

PHIL 5603. Scientific Inquiry. (3 cr. ; Student Option; Periodic Spring)
Philosophical theories of methods for evaluating scientific hypotheses. Role of experimentation in science. How hypotheses are accepted within scientific community.

PHIL 5605. Space and Time. (; 3 cr. ; Student Option; Periodic Fall)
Philosophical problems concerning nature/structure of space, time, and space-time. prereq: Courses in [philosophy or physics] or instr consent

PHIL 5606. Philosophy of Quantum Mechanics. (; 3 cr. ; Student Option;)
Problems of interpretation in ordinary (nonrelativistic) quantum mechanics. Two-slit experiment, Schrodinger cat paradox (measurement problem), Einstein-Podolsky-Rosen paradox. Leading approaches to interpretation (Copenhagen, hidden variables, universal wave function) and their connections with philosophical issues.

PHIL 5607. Philosophy of the Biological Sciences. (3 cr. ; Student Option; Periodic Fall & Spring)
Biology dominates the landscape of contemporary scientific research, and yet "biology" consists of a variety of different disciplinary approaches: from protein biochemistry to field ecology, from developmental biology to evolutionary genetics. Many philosophical issues can be found in the concepts and practices of life science researchers from these different disciplines. What is the structure of evolutionary theory? What is a gene? What are the units of selection? What is an individual? What counts as a "cause"? What is the relationship between evolution and development? Are all biological phenomena reducible to genes or molecules? What are adaptations, and how do we identify

them? What is an ecological niche? Is there a progressive trend in the history of life? Is there such a thing as 'human nature'? This course is an introduction to these and other related issues in the biological sciences with an emphasis on their diversity and heterogeneity. It is designed for advanced undergraduates with an interest in conceptual questions and debates in biology that are manifested across a variety of majors (e.g., Animal Science; Anthropology; Biochemistry; Biology, Society and Environment; Biosystems and Agricultural Engineering; Chemistry; Ecology, Evolution and Behavior; Genetics, Cell Biology and Development; Microbiology; Neuroscience; Physiology; Plant Biology; Psychology). Some of these issues will appear familiar from previous coursework or opportunities, whereas new issues will be intriguing because of their similarities and differences with those that have been encountered in other contexts. prereq: Courses in [philosophy or biology] or instr consent

PHIL 5615. Mind, Bodies and Machines. (3 cr. ; Student Option; Periodic Fall & Spring)
Mind-body problem. Philosophical relevance of cybernetics, artificial intelligence, computer simulation. Mental phenomena present the philosopher with a number of deep but inescapable puzzles and challenges. We tend to suppose that we know what it is to have a mind, to have beliefs, desires, etc., and we think that we know how to explain our own behavior and that of others -- and all of this without any formal training in the relevant science. All of this is surely amazing; indeed it verges on the outrageous. We admit to not knowing the makeup of the simplest structures, to not knowing how to explain the behavior of the simplest organisms -- we, OF COURSE, leave such issues to scientific investigation. Yet, at the same time, we think we know how to explain the behavior of this most complex of systems; we know how to do it, and we know what we are talking about when we explain behavior by citing the relevant beliefs, desires, etc. And, to repeat, we know all of this with no formal training. Strange indeed. Not only is this initial confidence puzzling, but attempts to articulate the mental story and to integrate it into the larger scientific picture have all proven problematical. We start our investigation with a very brief glance at a mid-century proposal that initiated a very different way of thinking about mind: the proposal by Turing -- one of the great minds of the 20th Century--that machines of a certain kind could exhibit intelligence. A story told in part in the recent movie, *The Imitation Game*. We then turn to some more traditional approaches to mind: Cartesianism, Behaviorism and Materialism. prereq: one course in philosophy or instr consent

PHIL 5622. Philosophy and Feminist Theory. (; 3 cr. ; Student Option; Periodic Fall)
Encounters between philosophy/feminism. Gender's influence in traditional philosophical problems/methods. Social role of theorist/theorizing as they relate to politics of feminism. This course surveys central debates in feminist philosophy, with a focus on the methods and virtues of resistance. Along the way, we will

consider the question of how we should live in an oppressive society. Topics may include intimidation, gaslighting, silencing, epistemic injustice, emotional labor, intersectionality, resistance, anger and violence. prereq: 8 crs in [philosophy or women's studies] or instr consent

PHIL 5760. Selected Topics in Philosophy. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)
Philosophical problems of contemporary interest. Topics specified in Class Schedule. prereq: 3xxx-5xxx course in phil or instr consent

PHIL 5993. Directed Studies. (; 1-3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Guided individual reading or study. prereq: instr consent, dept consent, college consent

Physical Education (PE)

PE 1007. Beginning Swimming. (1 cr. ; Student Option No Audit; Every Fall & Spring)
Introduction to basic aquatic safety, fundamentals of swimming and hydrodynamics. Principles of hydrodynamics and stroke mechanics; five basic strokes; basic rescue techniques with use of pool equipment; hydrotherapy for disabilities and other conditions, opportunities for competitive activities, lifetime enjoyment of aquatics.

PE 1012. Beginning Running. (; 1 cr. ; Student Option No Audit; Every Fall & Spring)
This physically active class will expose students to the joys of running. Course topics and physical activities will explore technique, equipment, safety, etiquette, injury prevention, full-body conditioning, endurance, mobility, strength, and long-term training and goal setting. This course is designed for novices who aspire to run 5K.

PE 1014. Conditioning. (; 1 cr. ; Student Option No Audit; Every Fall & Spring)
Fundamentals of personal fitness. Principles of fitness; health and motor skill components of fitness; principles of training/conditioning programs; nutrition; weight control; common fitness injuries; motivation and consistency in fitness programs; stress management.

PE 1015. Weight Training. (1 cr. ; Student Option No Audit; Every Fall & Spring)
Introduction to weight training. Basic aspects of weight training including exercise selection and technique, charting workouts, program design, nutritional considerations, and safety.

PE 1016. Posture and Individual Exercise. (; 1 cr. ; Student Option No Audit; Every Fall & Spring)
Good posture techniques, individual exercises, fitness concepts, and mental techniques. Specific overall sound body and mind techniques to include flexibility exercises, cardiovascular fitness, resistance training, nutrition management, weight control, stress management, and self-thought.

PE 1029. Handball. (1 cr. ; Student Option No Audit; Every Fall & Spring)

Hand and eye coordination, footwork in practice and game conditions, and skills and strategies of service and rally for the court sport handball (four-wall version). Novice to intermediate levels of play accommodated.

PE 1031. Sabre Fencing. (1 cr. ; Student Option No Audit; Every Fall)

Basic sabre techniques, movement, an overview of fencing as a recreational sport and an Olympic sport, and the history of fencing.

PE 1032. Badminton. (1 cr. ; Student Option No Audit; Periodic Fall & Spring)

Fundamentals including etiquette, terminology, game rules for singles and doubles, footwork, shot selection, and strategy.

PE 1033. Foil Fencing. (1 cr. ; Student Option No Audit; Every Fall & Spring)

Fencing fundamentals, including basic foil techniques, movement, a general overview of fencing as a recreational sport and an Olympic sport, and the history of fencing.

PE 1034. Judo. (1 cr. ; Student Option No Audit; Every Fall & Spring)

Basic skills for throwing, falling, grappling (matwork), choking, arm and neck techniques; contest judo from Jiu-Jitsu; fundamental rules and scoring of contests. Videotapes used for technique instruction and contest appreciation.

PE 1035. Karate. (1 cr. ; Student Option No Audit; Every Fall & Spring)

Introduction to Traditional Japanese Shotokan Karate. Students learn to punch, block, strike, & kick with a focus on proper form, posture, & body mechanics. Students also learn a Kata (choreographed form), techniques with partners, & practical self-defense. Non-contact - no pads, hitting, or throwing.

PE 1036. Racquetball. (1 cr. ; Student Option No Audit; Every Fall & Spring)

Fundamentals of racquetball, including equipment; safety and etiquette; terminology; game rules of singles, doubles, and cutthroat; grips; basic strategies; serves and shots.

PE 1037. Squash Racquets. (1 cr. ; Student Option No Audit; Every Fall & Spring)

Entry-level technique, basic equipment, international dimension courts, and fitness.

PE 1038. Beginning Tennis. (1 cr. ; Student Option No Audit; Every Fall & Spring)

Fundamental strokes, including forehands, backhands, volleys, lobs, overheads, and serves; introduction to doubles play; terminology, rules, and etiquette.

PE 1044. Self-Defense. (1 cr. ; Student Option No Audit; Every Fall & Spring)

Physical, psychological, and de-escalation skills for acting in crisis situations. Distance, body language, and tone of voice are addressed. Physical skills include striking, kicking, shifting, blocking, releasing techniques, floor defenses, and applications to armed attackers and multiple attackers.

PE 1045. Rock Climbing. (1 cr. ; Student Option No Audit; Every Fall & Spring)

Safety, knots, equipment, techniques, and anchor systems used in climbing. Course includes all necessary equipment. prereq:

Good general health, no [neck or back] problems

PE 1046. Tae Kwon Do. (1 cr. ; Student Option No Audit; Every Fall & Spring)

Fundamentals of Tae Kwon Do. Principles of martial arts, body mechanics of Tae Kwon Do, practical self-defense.

PE 1048. Bowling. (1 cr. ; Student Option No Audit; Every Fall & Spring)

Fundamentals, including stance, approach and delivery, scoring, bowling terminology, and etiquette.

PE 1053. Ice Skating. (1 cr. ; Student Option No Audit; Every Fall & Spring)

Basic turns, basic stops, balance techniques, and various other skills from both the forward and backward positions. Equipment, safety issues, ice skating terminology.

PE 1055. Golf. (1 cr. ; Student Option No Audit; Every Fall, Spring & Summer)

Proper grip, stance, ball address, swing, club selection, psychological management, rules, and etiquette. Basic instruction in analyzing, assisting with, and coaching golf.

PE 1057. Beginning Skiing. (1 cr. ; Student Option No Audit; Every Spring)

Alpine skiing. How to stop, turn, and use lifts. Safety, etiquette, and purchase of equipment. Class held at Highland Hills ski area in Bloomington.

PE 1058. Snowboarding. (1 cr. ; Student Option No Audit; Every Spring)

Snowboarding is an exciting winter sport that is engaging and approachable to the true novice, which this course is designed for. This course is a beginning level, physically active course designed for students of all abilities. Students will develop a working knowledge of the etiquette, sportpersonship, rules, safety concerns, safe/healthy techniques, sports culture, and regulations of the international winter sport of Snowboarding. Physical literacy will be developed through in-class activities and drills that support the development of techniques and abilities in relation to the sport that students will be able to utilize in multiple environments that benefit the healthy development of the whole person. The pursuit of this lifelong activity is the ultimate goal, so students will have out-of-the-classroom opportunities to engage in this sport culture. This will expose students to the exciting local, national, and international competitive and basic engagement opportunities for individuals interested in this physical activity. This course is ideal for students interested in learning more about a growing and inclusive physical activity and a unique way to encourage a physically active lifestyle. This course takes place off-campus at an area ski hill so students need to make arrangements for their own transportation. Snowboarding equipment is available to rent at the facility for those who need it. Cold weather gear will be essential as class will take place as long as the ski hill is open.

PE 1065. Beginning Tumbling and Gymnastics. (1 cr. ; Student Option No Audit; Periodic Fall & Spring)

Rolls, handstands, cartwheels, extensions, handsprings, tucks (flips). Spotting techniques. Skills on bars, vault, and beam.

PE 1067. Basketball. (1 cr. ; Student Option No Audit; Every Fall & Spring)

Fundamental skills and rules of basketball, with emphasis on basic court movement and different offensive and defensive strategies.

PE 1071. Beginning Cricket. (1 cr. ; Student Option No Audit; Periodic Fall & Spring)

Fundamentals of Cricket. Laws of Cricket, bowling/batting techniques, competitive/recreational Cricket opportunities.

PE 1072. Soccer. (1 cr. ; Student Option No Audit; Every Fall & Spring)

Fundamentals of soccer including sporting behavior both on and off the field, game rules, soccer terminology, participation and competition drills, fundamental soccer skills, practical instruction in strategy.

PE 1074. Beginning Volleyball. (1 cr. ; Student Option No Audit; Every Fall & Spring)

Basic skills, team play, rules, officiating, and strategy.

PE 1076. Flag Football. (1 cr. ; Student Option No Audit; Periodic Fall & Spring)

Introduction to flag football, techniques, field positions, rules/regulations. Students will participate in vigorous exercise activities including running, throwing, kicking, and catching.

PE 1077. Lacrosse. (1 cr. ; Student Option No Audit; Periodic Fall & Spring)

Introduction to lacrosse, techniques, field positions, rules, regulations. Students participate in vigorous exercise activities including running, throwing, catching, and stick handling.

PE 1137. Intermediate Squash. (1 cr. ; Student Option No Audit; Periodic Fall & Spring)

Stroke mechanics, shot placement, changing pace. Court movement/positioning. Fitness requirements, joint/muscle stresses. Weight training for squash. On-court etiquette. prereq: 1037 or instr consent

PE 1205. Scuba and Skin Diving. (1 cr. ; Student Option No Audit; Every Fall & Spring)

Diving equipment, physics, physiology, decompression, emergencies, recreational dive planning, oceans, currents and aquatic life, snorkeling/SCUBA equipment usage, buoyancy control, entries, emergencies. prereq: Ability to swim 400 yds comfortably or instr consent

PE 1262. Marathon Training. (3 cr. ; Student Option No Audit; Every Spring)

Physical challenge achieved through physiological/psychological adaptation. Goal setting that fosters adaptation in many facets of life. Marathon history. prereq: No pre-existing medical condition that would prevent finishing a marathon, instr consent

PE 1720. Special Activities in Physical Education. (; 1-3 cr. [max 9 cr.] ; Student Option No Audit; Periodic Fall, Spring & Summer)

Activities or related opportunities not normally available through regular course offerings.

Physical Therapy (PT)

PT 1002. Orientation to Physical Therapy. (; 1 cr. ; S-N or Audit; Every Fall & Spring)
Introduction to the profession of physical therapy through lectures, discussions, patient presentations, clinic visit, videotapes, and exposure to treatment equipment.

Physics (PHYS)

PHYS 1001W. Energy and the Environment. (ENV,WI,PHYS; 4 cr. ; Student Option; Every Fall & Spring)
Fundamental principles governing physical world in context of energy/environment. Lab. prereq: 1 yr high school algebra

PHYS 1011. Physical World. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Fundamental laws and principles governing the physical world, discussed in the context in which encountered in modern science and technology. prereq: 1 yr high school algebra

PHYS 1021. Intro Phys. (5 cr. ; S-N only;)

PHYS 1101W. Introductory College Physics I. (PHYS,WI; 4 cr. ; Student Option; Every Fall & Spring)
Fundamental principles of physics in the context of everyday world. Use of kinematics/dynamics principles and quantitative/qualitative problem solving techniques to understand natural phenomena. Lecture, recitation, lab. prereq: High school algebra, plane geometry, trigonometry; primarily for students interested in technical areas

PHYS 1102W. Introductory College Physics II. (PHYS,WI; 4 cr. ; Student Option; Every Spring)
Fundamental principles of physics in context of everyday world. Use of conservation principles and quantitative/qualitative problem solving techniques to understand natural phenomena. Lecture, recitation, lab. prereq: 1101W or 1107

PHYS 1107. Introductory Physics Online I. (PHYS; 4 cr. ; Student Option; Every Fall)
Principles of physics in context of everyday world. Use of kinematics/dynamics principles together with quantitative/qualitative problem solving techniques to understand natural phenomena. prereq: High school algebra, plane geometry, trigonometry

PHYS 1108. Introductory Physics Online II. (PHYS; 4 cr. ; Student Option; Every Spring)
Fundamental principles of physics in context of everyday world. Use of conservation principles and quantitative/qualitative problem solving techniques to understand natural phenomena. prereq: 1107; primarily for students interested in technical areas

PHYS 1181. Introductory College Physics I. (3 cr. ; S-N only; Every Fall & Spring)
Intended only to be used to recognize proficiency in material of PHYS 1101W. prereq: Proficiency in the material of PHYS 1101W

PHYS 1182. Introductory College Physics II. (3 cr. ; S-N only; Every Spring)
Intended only to be used to recognize proficiency in material of PHYS 1102W. prereq: Proficiency in the material of PHYS 1102W

PHYS 1221. Introductory Physics for Life Science Majors I. (PHYS; 4 cr. ; Student Option; Every Fall, Spring & Summer)
The class exposes the student to physical principles and concepts, demonstrates how these principles can be applied to quantitatively describe natural phenomena, and provides the student with an opportunity to perform hands-on experiments and measurements that model how physical knowledge is obtained. The living world exists in the physical universe, and a complete understanding of biological processes is impossible without a firm foundation in the basic physical principles to which all systems, living and inorganic, must adhere. The basic principles of classical mechanics, fluid mechanics, and oscillations and waves will be examined, with particular emphasis to their application in biological systems, using mathematical analysis at the level of basic calculus. prereq: High School or College Calculus

PHYS 1222. Introductory Physics for Life Science Majors II. (PHYS; 4 cr. ; Student Option; Every Fall, Spring & Summer)
This is the second course in the introductory physics sequence for life science majors. The class exposes the student to physical principles and concepts, demonstrates how these principles can be applied to quantitatively describe natural phenomena, and provides the student with an opportunity to perform hands-on experiments and measurements that model how physical knowledge is obtained. The fundamental principles of thermal physics, electricity and magnetism, optics, and nuclear physics are considered. prereq: PHYS 1221 or equivalent

PHYS 1281. Introductory Physics for Biology and Pre-medicine I. (4 cr. ; S-N only; Every Fall, Spring & Summer)
Intended only to be used to recognize proficiency in material of PHYS 1201W. prereq: Proficiency in the material of PHYS1201W

PHYS 1282. Introductory Physics for Biology and Pre-medicine II. (4 cr. ; S-N only; Every Fall & Spring)
Intended only to be used to recognize proficiency in material of PHYS 1202W. prereq: Proficiency in the material of PHYS1202W

PHYS 1301W. Introductory Physics for Science and Engineering I. (PHYS,WI; 4 cr. ; Student Option; Every Fall, Spring & Summer)
Use of fundamental principles to solve quantitative problems. Motion, forces, conservation principles, structure of matter. Applications to mechanical systems. prereq or concurrent: MATH 1271/1371/1371H or equivalent

PHYS 1302W. Introductory Physics for Science and Engineering II. (PHYS,WI; 4 cr. ; Student Option; Every Fall & Spring)
Use of fundamental principles to solve quantitative problems. Motion, forces,

conservation principles, fields, structure of matter. Applications to electromagnetic phenomena. prereq: PHYS 1301 or equivalent, Prereq or Concurrent: MATH 1272/1372/1572H or equivalent

PHYS 1381. Introductory Physics for Science and Engineering I. (3 cr. ; S-N only; Every Fall, Spring & Summer)
Intended only to be used to recognize proficiency in material of PHYS 1301W. prereq: Proficiency in the material of PHYS1301W

PHYS 1382. Introductory Physics for Science and Engineering II. (3 cr. ; S-N only; Every Fall, Spring & Summer)
Intended only to be used to recognize proficiency in material of PHYS 1302W. prereq: Proficiency in the material of PHYS1302W

PHYS 1401V. Honors Physics I. (PHYS,WI; 4 cr. ; A-F only; Every Fall)
Comprehensive, calculus-level general physics. Emphasizes use of fundamental principles to solve quantitative problems. Description of motion, forces, conservation principles. Structure of matter, with applications to mechanical systems. Prereq: Honors program or with permission, Prereq or Concurrent: MATH 1271/1371/1571H or equivalent

PHYS 1402V. Honors Physics II. (PHYS,WI; 4 cr. ; A-F only; Every Spring)
Fundamental principles to solve quantitative problems. Description of motion, forces, conservation principles, fields. Structure of matter, with applications to electromagnetic phenomena. Honors program or with permission, PHYS 1401V or equivalent, Prereq or CC: MATH 1272/1372/1572H or equivalent

PHYS 1905. Aurora: From Myths to Modern Science. (; 2 cr. ; Student Option; Periodic Fall & Spring)
The aurora, or northern lights, have long fascinated humans. We now know that aurora occur on many other planets, including Jupiter, Neptune, and Uranus. We will examine the myths from both northern and southern hemisphere that were devised to explain this beautiful natural phenomenon. We have not yet developed a complete understanding of the physical process that create the aurora. Many very prominent scientists through the ages have struggled to explain what they observed. It is only with the new measurements made after the space age that we have finally begun to understand the aurora ? both on the Earth and on other planets. If the weather and the space weather cooperates, we will try to observe the aurora and related phenomena including sunspots.

PHYS 1906. What is Space Weather (and Why Should You Care)? (; 2 cr. ; Student Option; Periodic Fall & Spring)
In this class, we will explore the way our sun changes over the eleven-year solar cycle and how this can affect events from GPS signals, airline travel, cell phone coverage, and power outages to beautiful aurora and manned spaceflight to Mars. We will also touch on space weather and the possible impact on development of life on other planets (and exoplanets). If the space weather cooperates,

we will try to observe the aurora and related phenomena including sunspots.

PHYS 1910W. What is Time?. (WI; 2 cr. ; Student Option; Periodic Fall & Spring)
The precise meaning and use of the concept of time has evoked serious study and debate among the most able of human thinkers for more than 2,000 years. In this seminar, we will review several of the current perspectives as well as some of this history of the concept of time from the points of view of philosophers, biologists, psychologists, and physicists.

PHYS 1911W. How Likely is Extraterrestrial Life?. (WI; 2 cr. ; A-F or Audit; Periodic Fall & Spring)

The goal of this course is to familiarize students with the main available scientific facts and arguments which bear on the question of the likelihood of extraterrestrial life. A second goal is to familiarize students with aspects of the various relevant disciplines early in their university careers when they may still be selecting a major. The third goal is to provide familiarity with information resources at the university, particularly through the library, as well as improved reasoning, writing, and speaking skills.

PHYS 2201. Introductory Thermodynamics and Statistical Physics. (; 4 cr. ; Student Option; Every Fall)

Thermodynamics and its underlying statistical nature. Prereq: PHYS 1302W or equivalent

PHYS 2303. Physics III: Physics of Matter. (; 4 cr. ; Student Option; Every Spring)

Thermodynamics, mechanical/electromagnetic waves, optics, quantum theory. Applications of quantum nature of solids. prereq: 1302, [MATH 1272 or MATH 1372 or MATH 1572H], [MatSci or EE] student

PHYS 2503. Physics III: Intro to Waves, Optics, and Special Relativity. (; 4 cr. ; Student Option; Every Fall)

Third semester of introductory physics. Mechanical/electromagnetic waves, optics, special relativity. prereq: 1302W or equivalent

PHYS 2503H. Honors Physics III. (; 4 cr. ; A-F only; Every Fall)

The third semester of a calculus-based introductory physics sequence. Topics include: relativistic kinematics and dynamics, mechanical and electromagnetic waves, light, interference, diffraction, wave-particle duality, and topics in modern physics. Course emphasizes the use of fundamental problems to solve quantitative problems. Intended primarily for those who have completed 1401V/1402V, although those students with outstanding performance in 1301W/1302W may be granted permission to enroll. prereq: Honors program or with permission, PHYS 1402V or equivalent prereq: 1402V or 1502V, honors student or permission of University Honors Program or instr consent

PHYS 2601. Quantum Physics. (; 4 cr. ; Student Option; Every Spring)

Introduction to quantum mechanics. Applications to atomic, molecular, condensed-matter, nuclear, elementary-particle, and

statistical physics. prereq: PHYS2503/2503H, Recommended Concurrent: Phys 3041

PHYS 3022. Introduction to Cosmology. (; 3 cr. ; Student Option; Spring Odd Year)

Large-scale structure and history of universe. Dark matter, cosmic microwave background. Newtonian/relativistic world models. Physics of early universe. Cosmological tests. Prereq: PHYS 2601

PHYS 3041. Mathematical Methods for Physicists. (3 cr. ; Student Option; Every Spring)

This course introduces additional mathematical topics that physics majors need to properly handle upper division physics classes. PHYS 1302W, Prereq or CC: MATH 2263/2374/2573H or equivalent, Recommended Prereq: 2503/2503H, Recommended CC: PHYS 2601

PHYS 3071W. Laboratory-Based Physics for Teachers. (PHYS,WI; 4 cr. ; Student Option; Every Fall & Spring)

Laboratory-based introductory physics. Topics selected to apply to elementary school curriculum: earth's motion, properties of matter, heat and temperature, kinematics, and electric current. prereq: College algebra; no credit for CSE students or students who have completed PHYS 1201/1202, PHYS 1301/1301, PHYS 1401/1402, or PHYS 1501/1502.

PHYS 3605W. Modern Physics Laboratory. (WI; 3 cr. ; Student Option; Every Fall & Spring)

Laboratory experiments in atomic, solid state, and nuclear physics. Introduction to data analysis techniques as well as the communication of scientific results through maintaining a logbook and writing papers. Prerequisites: completion (or concurrent registration) in PHYS 2503 or 2503H.

PHYS 3993. Directed Studies. (; 1-5 cr. [max 10 cr.] ; Student Option; Every Fall, Spring & Summer)

Directed study in Physics in areas arranged by the student and a faculty member. prereq: instr consent, dept consent

PHYS 3994. Directed Research. (; 1-5 cr. [max 10 cr.] ; Student Option; Every Fall, Spring & Summer)

Independent, directed study in physics in areas arranged by the student and a faculty member. prereq: instr consent, dept consent

PHYS 4001. Analytical Mechanics. (; 4 cr. ; Student Option; Every Fall)

Analytic Newtonian mechanics. Mathematics beyond prerequisites developed as required. prereq: PHYS 2503/2503H or equivalent, PHYS 304

PHYS 4002. Electricity and Magnetism. (; 4 cr. ; Student Option; Every Fall & Spring)

Classical theory of electromagnetic fields using vector algebra and vector calculus. prereq: PHYS 3041, PHYS 2503/2503H or equivalent

PHYS 4041. Computational Methods in the Physical Sciences. (; 4 cr. ; Student Option; Periodic Fall & Spring)

Introduction to using computer programs to solve problems in physical sciences. Selected

numerical methods, mapping problems onto computational algorithms. Arranged lab.

Prereq: PHYS 3041

PHYS 4051. Methods of Experimental Physics I. (5 cr. ; Student Option; Every Fall)

Contemporary experimental techniques. Introduction to modern analog and digital electronics from an experimental viewpoint. Use of computers for data acquisition and experimental control. Statistics of data analysis. Prereq or Concurrent PHYS 3605W, PHYS 3041

PHYS 4052W. Methods of Experimental Physics II. (WI; 5 cr. ; Student Option; Every Spring)

Second semester of laboratory sequence. Contemporary experimental techniques illustrated by experiments with data analysis. Students design and execute an experimental project. Lectures on specialized topics of professional concern. prereq: PHYS 4051

PHYS 4101. Quantum Mechanics. (; 4 cr. ; Student Option; Every Fall)

Mathematical techniques of quantum mechanics. Schrodinger Equation and simple applications. General structure of wave mechanics. Operator methods, perturbation theory, radiation from atoms. prereq: PHYS 3041, PHYS 2601

PHYS 4121W. History of 20th-Century Physics. (WI; 3 cr. ; Student Option; Periodic Spring)

The transition from classical to modern physics (relativity, quantum) and its architects (from Planck and Einstein to Heisenberg and Schrödinger). The WWII bomb projects in the US and in Germany. Post-war developments (solid state, particle physics).

PHYS 4201. Statistical and Thermal Physics. (; 3 cr. ; Student Option; Every Fall)

Principles of thermodynamics and statistical mechanics. Selected applications such as kinetic theory, transport theory, and phase transitions. prereq: PHYS 3041, PHYS 2201, PHYS 2601

PHYS 4211. Introduction to Solid-State Physics. (; 3 cr. ; Student Option; Every Spring)

A modern presentation of the properties of solids. Topics include vibrational and electronic properties of solids; diffraction of waves in solids and electron band structure. Other possible topics include optical properties, magnetic phenomena, and superconductivity. prereq: 2201, 4101

PHYS 4303. Electrodynamics and Waves. (; 3 cr. ; Student Option; Every Spring)

Analytical mechanics. Electricity/magnetism, including mechanical/electromagnetic wave phenomena. Physical/geometrical optics. Prereq: PHYS 4002

PHYS 4501. Experimental Project. (; 1-5 cr. ; Student Option; Every Fall, Spring & Summer)

Research project in physics area of contemporary interest. Project must be approved by faculty coordinator before registration. prereq: 4052, instr consent

PHYS 4511. Introduction to Nuclear and Particle Physics. (; 3 cr. ; Student Option; Every Fall)

Fundamental particles and Standard Model. Symmetries/quarks, models of nuclei, interactions between particles/nuclei, tests of conservation laws, fission/fusion. prereq: 4101

PHYS 4611. Introduction to Space Physics. (; 3 cr. ; Student Option; Fall Odd Year)

Dynamics of charged particles/plasmas in space. Physics of the Sun and solar wind. Solar/galactic cosmic rays. Interactions of solar wind with planetary magnetospheres. Dynamics of Magnetosphere. Formation of the aurora. Physics of radiation belts. prereq: PHYS 4001, PHYS 4002

PHYS 4621. Introduction to Plasma Physics.

(; 3 cr. ; Student Option; Periodic Fall & Spring) Basic properties of collisionless, magnetized plasmas, single particle motion, plasmas as fluids, magnetohydrodynamics, waves in plasmas, equilibrium, instabilities, kinetic theory/shocks. Prereq: PHYS 4001, PHYS 4002

PHYS 4623. Introduction to Modern Optics.

(; 3 cr. ; Student Option; Every Fall) Modern optics broadly defined as geometrical, physical, and quantum optics, including interference and diffraction, optical polarization, Fourier optics, cavity optics, optical propagation, optical coherence, lasers, optical detection, and optical instruments.

PHYS 4811. Introduction to General Relativity.

(3 cr. ; Student Option; Spring Odd Year)

Introduction to general relativity for undergraduate students. The course will introduce basic concepts of differential geometry and use them to motivate Einstein's Equation. It will then solve Einstein's equation to study particle orbits, gravitational lensing of light, black holes, and gravitational waves. Brief introduction to cosmology and evolution of the universe will be included. prereq: PHYS 4001 and (PHYS 2503 or 2503H)

PHYS 4894. Thesis - Directed Research. (; 1-3 cr. [max 6 cr.]; S-N or Audit; Every Fall & Spring)

Thesis research/writing under direction of a faculty member. Students plan/implement scientific study while gaining experience in research methods. Details of work are determined in consultation with faculty thesis adviser selected based on availability/topic. Final grade (S/N) will be based on the completed thesis. Students enrolling in this directed research course will complete the University's common Directed Study/Research contract with the faculty mentor/evaluator.

PHYS 4911. Introduction to Biopolymer Physics. (; 3 cr. ; Student Option; Every Spring)

Introduction to biological and soft condensed matter physics. Emphasizes physical ideas necessary to understand behavior of macromolecules and other biological materials. Elements of thermodynamics and statistical mechanics are presented as needed. Prereq: PHYS 2201 or equivalent

PHYS 4960H. Honors Seminar. (; 1 cr. [max 2 cr.]; Student Option No Audit; Every Fall & Spring)

Designed to prepare students for senior honors thesis projects and provide guidance in choice of future careers. prereq: Upper div honors, instr consent

PHYS 4993. Directed Studies. (; 1-5 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer)

Directed study in Physics in areas arranged by student and faculty member. prereq: instr consent

PHYS 4994. Directed Research. (; 1-5 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer)

Independent, directed study in physics in areas arranged by student and a faculty member. prereq: instr consent

PHYS 5001. Quantum Mechanics I. (; 4 cr. ; Student Option; Every Fall)

Schrodinger equation: bound state and scattering problems in one dimension. Spherically symmetric problems in three dimensions, angular momentum, and the hydrogen atom. Approximation methods for stationary states. Time-dependent perturbation theory. Operators and state vectors: general formalism of quantum theory. prereq: 4101 or equiv or instr consent

PHYS 5002. Quantum Mechanics II. (; 4 cr. ; Student Option; Every Spring)

Symmetry in quantum mechanics, space-time symmetries and the rotation group, Clebsch-Gordan coefficients and the Wigner-Eckart theorem. Scattering theory. Method of second quantization with elementary applications. Relativistic wave equations including Dirac equation. prereq: 5001 or equiv

PHYS 5011. Classical Physics I. (; 4 cr. ; Student Option; Every Fall)

Classical mechanics: Lagrangian/Hamiltonian mechanics, orbital dynamics, rigid body motion, special relativity. prereq: 4001, 4002 or instr consent

PHYS 5012. Classical Physics II. (; 4 cr. ; Student Option; Every Spring)

Classical electromagnetism: electrostatics, magnetostatics, Maxwell's equations, electromagnetic waves, radiation, interaction of charged particles with matter. prereq: 5011 or instr consent

PHYS 5022. Relativity, Cosmology, and the Universe. (; 4 cr. ; Student Option; Periodic Fall)

Large-scale structure and history of universe. Introduction to Newtonian and relativistic world models. Physics of early universe. Cosmological tests. Formation of galaxies. prereq: 2601 or instr consent

PHYS 5041. Mathematical Methods for Physics. (; 4 cr. ; Student Option; Every Spring)

Survey of mathematical techniques needed in analysis of physical problems. Emphasizes analytical methods. prereq: 2601 or grad student

PHYS 5072. Best Practices in College Physics Teaching. (; 1-3 cr. [max 5 cr.]; Student Option; Every Fall & Spring)

Pedagogies for introductory physics classes. Topics from educational research/practice as applied to classroom.

PHYS 5081. Introduction to Biopolymer Physics. (; 3 cr. ; Student Option; Every Spring)

Introduction to biological and soft condensed matter physics. Emphasizes physical ideas necessary to understand behavior of macromolecules and other biological materials. prereq: PHYS 2201 or equivalent

PHYS 5201. Thermal and Statistical Physics. (; 3 cr. ; A-F or Audit; Every Fall)

Equilibrium Statistical Mechanics. General Principles of Statistical Mechanics: Ensembles. Derivation of Thermodynamics from statistical principles. Classical Systems. Quantum Statistical Mechanics: Fundamentals. Photons. Ideal Fermi & Bose Gases. Non-ideal gases. Introduction to Phase Transitions. prereq: [[4101, 4201] or equiv] previous exposure to thermodynamics, introductory statistical physics

PHYS 5621. Introduction to Plasma Physics.

(; 3 cr. ; Student Option; Periodic Fall) Basic properties of collisionless, magnetized plasmas, single particle motion, plasmas as fluids, magnetohydrodynamics, waves in plasmas, equilibrium, instabilities, kinetic theory/shocks. prereq: CSE grad student, working knowledge of waves/electromagnetism

PHYS 5701. Solid-State Physics for Engineers and Scientists. (; 4 cr. ; Student Option; Periodic Fall & Spring)

Crystal structure and binding; diffraction; phonons; thermal and dielectric properties of insulators; free electron model; band structure; semiconductors. prereq: Grad or advanced undergrad in physics or engineering or the sciences

PHYS 5750. Advanced Topics in Quantum Mechanics and Quantum Information. (; 3 cr. [max 6 cr.]; Student Option; Periodic Fall & Spring)

Topics may include quantum circuits and algorithms, hardware considerations for quantum computing, quantum information theory, and open quantum systems.

PHYS 5950. Colloquium Seminar. (; 1 cr. ; S-N or Audit; Every Fall & Spring)

Colloquium of School of Physics and Astronomy. prereq: [Grad student or advanced undergrad in physics], dept consent

PHYS 5970. Physics Journal Club. (; 1-3 cr. ; S-N only; Every Fall & Spring)

Weekly student-led presentation, discussion, and critical analysis of important papers. prereq: 2601, 2605 or equiv; intended for 2nd-yr grad students in physics

PHYS 5980. Introduction to Research Seminar. (; 1 cr. [max 3 cr.]; S-N or Audit; Every Fall & Spring)

Introduction to the research activities of the School of Physics and Astronomy. prereq: Grad or upper div phys major

PHYS 5993. Directed Studies. (; 1-5 cr. [max 15 cr.]; Student Option; Every Fall, Spring & Summer)

Independent, directed study in physics in areas arranged by the student and a faculty member. prereq: instr consent, dept consent

PHYS 5994. Directed Research. (; 1-5 cr. [max 15 cr.]; Student Option; Every Fall, Spring & Summer)

Problems, experimental or theoretical, of special interest to students. Written reports. prereq: Jr, dept consent

Physiology (PHSL)

PHSL 1001. Introductory Human Anatomy and Physiology for Non-Majors. (; 4 cr. ; Student Option; Every Fall & Spring)

Have you ever wondered why you get the chills when you are sick? Or what the lung of a lifelong smoker actually looks like? Ever curious about what your brain looks like compared to someone with Alzheimer's? If your answer is yes, then this class is for you! This entirely human-based course is designed to tap into the curiosities we all have about our bodies by providing you with a foundational understanding of how your body works. The goal of this course is for you to learn about the human body and how it functions when it is both healthy and when things break down. In the classroom setting, we will focus on understanding the functions of each major organ system from the heart to the brain. Then in the lab, each of you will have the opportunity to see and touch real human organs you just learned about in class. Additionally, in this course, you will compare both healthy and diseased human tissue to better understand how choices you make every day can affect your organ's structure and function. When you leave this course, you will leave empowered, not only by your understanding of your own physiology, but by your ability to evaluate and understand the science you will continue to hear about and see in the media.

PHSL 2001. Introductory Physiology for Human Physiology Majors. (4 cr. ; Student Option; Every Fall & Spring)

This introductory human physiology course is designed to give human physiology majors a basic understanding of the human body and how it functions when it is both healthy and when things break down. During lecture, we will focus on understanding the functions of each major organ system from the heart to the brain. Then in the lab, we will build on what you have learned by applying the content to actual human cadaveric material. Students will be asked to observe and document changes in structure of diseased organs and hypothesize how these changes would have affected the function of this organ in a human body. Additionally, the discussion portion of the class will focus on specific pathology as it relates to the organ systems you learned about in lecture and lab. These discussions will challenge students to think critically about disease mechanisms by studying primary literature and by diving into well understood mechanisms that highlight powerful physiology. The goal

of this course is to provide students a strong foundation in physiology and the important role each organ system plays in maintaining homeostasis within the body.

PHSL 2041. Physiology and Medicine. (2 cr. ; A-F only; Every Fall & Spring)

An understanding of Human Physiology is the basis of the practice of medicine. This course will provide an introduction and exploration of Physiology as it relates to the functions of the Human Body with special emphasis on the role of Physiology in Contemporary Medicine. The role of physiological research on advances in our understanding of health and disease will be emphasized. Students interested preparing for health science based careers and/or considering the Human Physiology major are encouraged to enroll.

PHSL 3051. Human Physiology. (; 4 cr. ; Student Option; Every Fall & Spring)

How major organ systems function (nerve, muscle, circulation, respiration, endocrine, renal, gastrointestinal, temperature regulation and energy metabolism). Three one-hour lectures, two-hour lab. prereq: [BIOL 1009 or 1 yr college biol], 1 yr college chem

PHSL 3061. Principles of Physiology. (; 4 cr. ; Student Option; Every Fall)

Human physiology with emphasis on quantitative aspects. Organ systems (circulation, respiration, gastrointestinal, renal, endocrine, muscle, peripheral and central nervous systems), cellular transport processes, and scaling in biology. prereq: 1 year college chem and physics and math through integral calculus

PHSL 3062W. Research Paper for Physiology Majors. (WI; 1 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Students write a research review on a physiological topic. Students select an area of focus within the discipline of physiology, and complete a literature review of basic science papers published in the past 10 years in their topic area. All students will work with a faculty advisor, who will assist the student in selecting their topic area, refining the focus of their literature review, and provide guidance on writing a scientific review article. prereq: concurrent registration is required (or allowed) in 3061, physiology major, 1 yr [college chem, physics], math through integral calculus

PHSL 3095. Problems in Physiology. (; 1-5 cr. [max 20 cr.]; Student Option; Every Fall, Spring & Summer)

Individualized study in physiology. Students address a selected problem in physiology through library or lab research, supervised by physiology faculty. prereq: concurrent registration is required (or allowed) in college physiology, instr consent

PHSL 3701. Physiology Laboratory. (; 2 cr. ; A-F or Audit; Every Fall)

Experiments in physiology. Emphasizes quantitative aspects, including analysis of organ systems. prereq: Physiology major

PHSL 4021. Advanced Physiology and Bioengineering: Bionic Human. (; 3 cr. ; A-F only; Every Spring)

Is "Iron Man" technology just around the corner? This course will examine how, and if, biomedical devices can address the needs of humans suffering from various pathologies and/or disabilities, or enhance human performance. Advanced discussion of the physiology of organs/organ systems and relevant devices past, present, and future. Emphasis will be on an in-depth understanding of normal physiology including cardiovascular, respiratory, renal, liver, motor, sensory, and pancreatic physiology. Classes will involve review of the physiology of organ systems, design considerations for medical devices, and discussions of published papers about basic science and clinical trials. Classes will be a combination of content presentation and discussion.

PHSL 4031. Physiological Discussions: Contemporary Topics. (; 2 cr. ; A-F only; Every Spring)

Students read, critically evaluate, present, and discuss research in cellular and organ system physiology. Journal club setting led by faculty members. prereq: 3061 or 3063 or 5061 or instr consent

PHSL 4095H. Honors Problems in Physiology. (; 2-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Students pursue a selected topic in physiology through library or lab research supervised by physiology faculty. Prereq & 3061, physiology honors candidate, approval of director of undergrad studies in physiology.

PHSL 4221. Systems and Computational Physiology. (3 cr. ; Student Option; Every Spring)

Physiological processes can involve a complex level of interactions that can be challenging to understand based on intuition alone. Quantitative and computational approaches can be used to help us better understand the mechanisms regulating such complex processes, both in healthy and pathological conditions. In this course, students will be introduced to current methods from systems biology, computational biology, and artificial intelligence to better understand human physiology. We will discuss mathematical approaches to model biological interactions that describe fundamental physiological concepts such as feedback and homeostasis that operate across biological scales, from intracellular enzymes to organ regulation. We will apply these approaches to understand a range of physiological systems, including hormone secretion, circadian rhythms, and inflammation. We will also introduce students to machine learning and deep learning methods, and discuss how these computational approaches are being applied in the areas of clinical physiology and biomedical imaging.

PHSL 4242. Professional Skills Development for Biomedical Scientists. (2 cr. ; A-F only; Spring Even Year)

Students will gain valuable experience in professional development for bio-medical science, applicable to academic, clinical, biotech, pharma, medical and other career paths. This course features essential

professional skills development, including critical evaluation of the scientific literature, oral short presentations, development of research project specific aims, and development of individual WOW statements (aka the Bill Gates elevator pitch). Students will gain knowledge of grant mechanisms and on strategies and mechanics to writing a winning grant. Students will evaluate funded research projects, develop and write their own grant, (possibly based on their previous PHSL 3062W paper or other experiences) and perform peer review critiques of their submitted grants. There are no conventional tests in this class. prereq: PHSL 3062W is recommended.

PHSL 4702. Cell Physiology. (3 cr. ; A-F or Audit; Every Fall)

Critical cell functions. Regulation of pH, volume, intracellular electrolyte composition, calcium signaling, membrane potential dynamics, motility, aspects of intercellular communication. prereq: [3051 or 3061 or BIOL 3211], [CHEM 1022 or equiv], [MATH 1272 or equiv]

PHSL 4900. Advanced Physiology Teaching Laboratory. (1-6 cr. [max 12 cr.] ; A-F only; Every Fall & Spring)

Teaching in undergrad physiology labs. Instructional sessions, hands-on teaching experiences. prereq: [3051 or [3061, 3071]], instr consent

PHSL 5061. Principles of Physiology for Biomedical Engineering. (4 cr. ; Student Option; Every Fall)

Human physiology with emphasis on quantitative aspects. Organ systems (circulation, respiration, renal, gastrointestinal, endocrine, muscle, central and peripheral nervous systems), cellular transport processes, and scaling in biology. prereq: Biomedical engineering grad, one yr college chem and physics and math through integral calculus

PHSL 5094. Research in Physiology. (1-5 cr. [max 20 cr.] ; Student Option; Every Fall, Spring & Summer)

Independent lab research project in physiology, supervised by physiology faculty. prereq: instr consent

PHSL 5095. Problems in Physiology. (1-5 cr. [max 20 cr.] ; Student Option; Every Fall, Spring & Summer)

Individualized study in physiology. Students address selected problem through library or lab research, supervised by physiology faculty. prereq: instr consent

PHSL 5096. Integrative Biology and Physiology Research Advances. (1 cr. [max 4 cr.] ; A-F only; Every Fall & Spring)

Attend/participate in IBP Fall/Spring seminar series. Seminars given by faculty, invited speakers, students. Exposure to key topics. How to present seminars. prereq: instr consent

PHSL 5101. Human Physiology. (5 cr. ; Student Option; Every Spring)

Survey of human physiology: Cardiovascular, muscle, respiratory, gastrointestinal, nutrition, renal physiology. Integrative, systems approach. Emphasizes normal function. prereq: Grad student

PHSL 5115. Clinical Physiology I. (3 cr. ; A-F or Audit; Every Fall)

Cellular mechanisms, disease states and clinical applications of excitable tissues: cellular transport, neurophysiology, skeletal muscle physiology, cardiovascular physiology. prereq: instr consent

PHSL 5116. Clinical Physiology II. (3 cr. ; A-F or Audit; Every Spring)

Cellular mechanisms, disease states and clinical applications of metabolic systems: respiratory physiology, renal physiology, acid base physiology, metabolism, gastrointestinal physiology, endocrine physiology, physiology of pregnancy and labor. prereq: instr consent

PHSL 5197. Stress Physiology. (1-3 cr. ; A-F only; Every Spring)

Journal club format. Meets weekly to examine foundations of stress, historical progress, development of stress, modern stress physiology. Focus on stress-induced pathology with attention to cardiovascular, metabolic, neuroendocrine disorders. Students participating in the weekly discussion are assessed on discussion participation, completion of weekly writing assignments and quality of the presentation in the class, are eligible for 1 credit. Students completing a midterm (test) and a final project (specific aims page of an NIH RO1 grant) in addition to the criteria described above are eligible for 3 credits. Prerequisite: instructor consent is required. Graduate student standing, master students, and post-doctoral fellows (if they are eligible for credits). Undergraduate students must have taken PHSL 3061 or equivalent, and have previous laboratory research experience.

PHSL 5201. Computational Neuroscience I: Membranes and Channels. (3 cr. ; Student Option; Every Fall)

Neural excitation (ion channels, excitation models, effects of neural morphology) using UNIX workstations to simulate empirical results. Includes the Hodgkin-Huxley model, nonlinear dynamic systems analysis, voltage and ligand gated ion channels, ion transport theories, and impulse initiation and propagation. prereq: calculus through differential equations

PHSL 5211. Physiology of Inflammation in Disease. (3 cr. ; A-F only; Every Spring)

In this course, we will explore the latest developments in the field of inflammation-mediated chronic diseases. The students will learn basic concepts of immunity and inflammation and the mechanisms by which non-infectious inflammatory processes mediate chronic disease. Instructor consent is required. Courses in physiology, such as PHSL3051, 3061, and Microbiology and Immunology, such as MICB 4131, are recommended but not required.

PHSL 5221. Systems and Computational Physiology. (3 cr. ; A-F only; Every Spring)

Physiological processes can involve a complex level of interactions that can be challenging to understand based on intuition alone. Quantitative and computational approaches can be used to help us better understand

the mechanisms regulating such complex processes, both in healthy and pathological conditions. In this course, students will be introduced to current methods from systems biology, computational biology, and artificial intelligence to better understand human physiology. We will discuss mathematical approaches to model biological interactions that describe fundamental physiological concepts such as feedback and homeostasis that operate across biological scales, from intracellular enzymes to organ regulation. We will apply these approaches to understand a range of physiological systems, including hormone secretion, circadian rhythms, and inflammation. We will also introduce students to machine learning and deep learning methods, and discuss how these computational approaches are being applied in the areas of clinical physiology and biomedical imaging.

PHSL 5444. Muscle. (3 cr. ; Student Option; Every Spring)

Muscle membranes: structures, mechanisms, and physiological roles of channels/pumps. Muscle contraction: force generation by actin/myosin. prereq: 3061 or 3071 or 5061 or BioC 3021 or BioC 4331 or instr consent

PHSL 5510. Advanced Cardiac Physiology and Anatomy. (2-3 cr. ; Student Option; Every Spring)

Fundamental concepts, advanced topics related to clinical/biomedical cardiac physiology. Lectures, laboratories, workshops, anatomical dissections. Intense, one week course. prereq: instr consent

PHSL 5525. Anatomy and Physiology of the Pelvis and Urinary System. (1-2 cr. ; A-F only; Every Spring)

Two-day intensive course. Pelvis, perineum, and urinary system with cadaveric dissection. Structure/function of pelvic and urinary organs, including common dysfunction and pathophysiology. Laboratory dissections, including kidneys, ureters, urinary bladder, pelvic viscera and perineum (male or female), pelvic floor, vascular and nervous structures. Grand rounds section. prereq: One undergrad anatomy course, one undergrad physiology course, instr consent

PHSL 5540. Advanced Exercise Medicine: Physiology and Bioenergetics. (1-2 cr. ; Student Option; Periodic Fall)

Three-day intensive course. Physiology, bioenergetics, nutrition, and sports medicine. Focuses on application of principles to treatment of diseases and functional deficits. Lectures, demonstrations, hands-on experiences in an exercise medicine facility. prereq: [Grad student or practicing health professional], instr consent

PHSL 5701. Physiology Laboratory. (1-2 cr. ; A-F or Audit; Every Fall & Spring)

Experiments in physiology. Emphasizes quantitative aspects, including analysis of organ systems. prereq: instr consent

PHSL 5702. Cell Physiology. (4 cr. ; A-F only; Every Fall)

Control mechanisms in maintaining homeostasis with respect to critical cell

functions. Regulation of pH, volume, nutrient transport, intracellular electrolyte composition, membrane potential. Aspects of intercellular communication. prereq: [Two semesters of physics/chemistry, calculus, one semester of systems-level physiology] or instr consent

Plant Pathology (PLPA)

PLPA 1005. Plants Get Sick Too. (BIOL; 4 cr. ; Student Option; Every Fall)
Biology of plant disease and plant-disease-causing organisms. Effects of plant disease on agriculture, human health/welfare, and the environment. Management/control of plant disease. Lecture, Internet, lab.

PLPA 1901. Antibiotics: Promise, Profits, and Pitfalls. (TS; 3 cr. ; A-F or Audit; Periodic Fall)

The discovery and availability of antibiotics has fundamentally changed the treatment of human infectious diseases. However, the broad effectiveness of antibiotics in reducing bacterial infections has led to overuse in medicine and agriculture. Consequences of overuse include widespread resistance to common antibiotics as well as antibiotic contamination in the environment. Antibiotic resistance currently represents a significant threat to treatment of some infectious bacteria, yet profit incentives and patenting regulations have limited investments by pharmaceutical companies in development of new antimicrobials. This course will explore the intriguing biology, chemistry, ecology, and evolutionary biology of antimicrobial warfare; the history of antibiotic discovery; the broad uses for antibiotics in medicine and agriculture; the costs, profits, and patenting issues associated with antibiotic development and production; the ethics of antibiotic regulation in developed and developing countries; and the future of antibiotic therapies in medicine and agriculture. prereq: freshman

PLPA 2001. Introductory Plant Pathology. (; 3 cr. ; Student Option; Every Spring)
Biology of the major groups of plant pathogens, symptoms and signs of plant disease, plant disease diagnosis, and principles of disease management. Lecture and laboratory. prereq: BIOL 1009 or equiv

PLPA 2003. Plague, Famine, and Beer: The Impact of Microscopic Organisms on Human Civilization. (HIS; 3 cr. ; Student Option; Every Spring)
Impacts that microbes have made on course of human civilization. Negative influences of major human/plant infectious disease. Positive benefits attained by harnessing power of microbes. Scale of history includes prehistoric to present day. Projected future impacts.

PLPA 3003. Diseases of Forest and Shade Trees. (; 3 cr. ; Student Option; Every Spring)
This course provides an overview of tree diseases in urban and forested areas. It covers diseases that have had a significant impact on society such as Dutch Elm disease; oak wilt, chestnut blight, white pine blister rust, sudden oak death and many others. It also

provides an overview of important cankers, leaf diseases, wilts, rusts, root rots and other tree problems. Laboratory sessions enable students to get hands-on experience identifying disease agents, examining symptoms and learning appropriate control procedures. Emphasis will also be placed on ecological processes, biological and cultural control, and host-parasite interactions. This course should be of value to anyone interested in biological sciences, natural resources or ecology. It is a must for individuals that will have a career in natural resources but should also be useful to those interested in maintaining healthy trees at home, in urban areas or woodlands. Alumni of the University working with trees or woody ornamentals indicate this is one of the most important courses you can take as a student.

PLPA 3993. Directed Study. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

PLPA 4096. Professional Experience Program: Internship. (; 1-3 cr. [max 6 cr.] ; S-N or Audit; Every Fall & Spring)
Supervised practicum with professional experience in plant pathology and related industries including the Plant Disease and "Dial-U" clinics. Evaluative reports and consultations with faculty advisers and employers. prereq: COAFES undergrad, complete internship contract available in COAFES Career Services before registering; UC only

PLPA 5003. Diseases of Forest and Shade Trees. (; 3 cr. ; Student Option; Every Spring)
This course provides an overview of tree diseases in urban and forested areas. It covers diseases that have had a significant impact on society such as Dutch Elm disease; oak wilt, chestnut blight, white pine blister rust, sudden oak death and many others. It also provides an overview of important cankers, leaf diseases, wilts, rusts, root rots and other tree problems. Laboratory sessions enable students to get hands-on experience identifying disease agents, examining symptoms and learning appropriate control procedures. Emphasis will also be placed on ecological processes, biological and cultural control, and host-parasite interactions. This course should be of value to anyone interested in biological sciences, natural resources or ecology. It is a must or individuals that will have a career in natural resources but should also be useful to those interested in maintaining healthy trees at home, in urban areas or woodlands. Alumni of the University working with trees or woody

ornamentals indicate this is one of the most important courses you can take as a student.

PLPA 5100. Topics in Plant Pathology. (; 1-4 cr. ; A-F or Audit; Every Fall & Spring)
Topics in Plant Pathology

PLPA 5103. Plant-Microbe Interactions. (3 cr. ; Student Option; Every Spring)
Genetics, physiology, molecular biology of plant-microbe interactions. Communication between plant/microbes, signal transduction, control of gene expression, symbiosis/parasitism, plant host response mechanisms, plant disease physiology. prereq: Intro course in plant pathology or molecular biology or equiv

PLPA 5202. Field Plant Pathology. (; 2 cr. ; S-N only; Every Fall)
Characteristics of a variety of plant diseases. Field trips to observe symptoms and effects of diseases, and to learn about prevention and control of diseases in field, forest, golf course, greenhouse, nursery, orchard, and urban environments.

PLPA 5203. Introduction to Fungal Biology. (; 3 cr. ; Student Option; Spring Odd Year)
Fungi are a critical component of the diversity and function of terrestrial ecosystems, affecting decomposition, plant nutrient uptake, and agricultural practices. Key components of fungal biology, including ecology, genetics, life cycles and diversity. Labs provide hands on experience with a diverse range of organisms. prereq: BIOL 1009 or equiv

PLPA 5300. Current Topics in Molecular Plant Pathology. (; 1 cr. [max 2 cr.] ; S-N only; Every Spring)
Current Topics in Molecular Plant Pathology is a highly interactive class in which students read, discuss, and critique pivotal publications in the field of molecular plant pathology. Specific topics will change from year to year, but will generally include subjects such as plant-microbe communication, diversity and evolution of plant-microbe associations, genomic analysis of pathogens (symbionts) and plant host responses, and mechanisms of pathogenicity. prereq: Introductory courses in plant pathology or microbiology; genetics; molecular biology or genomics; or consent of instructor

PLPA 5301. Large Scale Omic Data in Plant Biology. (; 3 cr. ; Student Option; Every Fall)
Introduction to large scale data in plant biology. Emphasizes model plants and important agricultural crops focusing on new approaches and technologies in the field. Fundamentals, acquisition, and analysis of high-throughput DNA and RNA sequencing, high-throughput plant phenotyping, functional and comparative genomics, epigenomics, proteomics, metabolomics, and microbiomics. prereq: Intro course in genetics or instr consent

PLPA 5303. Data Visualization in Plant and Microbial Biology. (3 cr. [max 31 cr.] ; Student Option; Every Fall)
Data Visualization in Plant and Microbial Biology is a course for graduate and advanced undergraduate students interested in developing skills to visualize common datasets in plant and microbial research. Students will

learn fundamentals of data visualization and reproducibility that are common approaches to present plant and microbial biological data. The topics to be covered in the course are not limited to but can include fundamentals of proper data visualization techniques, principles of manuscript figure design, differences between manuscript, poster, presentation, and communication data visualizations, and how to ensure that analysis and visualizations are reproducible. The class will consist of lectures, discussions, group activities, and lots of hands-on learning and analysis. prereq: Limited experience with R software is recommended, but not required.

PLPA 5444. Ecology, Epidemiology, and Evolutionary Biology of Plant-Microbe Interactions. (; 3 cr. ; A-F or Audit; Every Fall) Concepts and recent research in the ecology, epidemiology, and evolutionary/coevolutionary biology of plant-microbe interactions spanning the range from parasitic to mutualistic in agricultural and natural habitats. prereq: Intro plant pathology or advanced biology coursework recommended

PLPA 5480. Principles of Plant Pathology. (; 3 cr. ; Student Option; Every Fall) This course is intended for graduate students and undergraduate students in their third or fourth year that are interested in learning about principles of plant pathology, diseases that affect plants, microbiology and microbial and plant interactions. In this course students will learn principles of plant pathology through lectures and demonstrations and exercises in laboratory. Students will gain knowledge of mycology and select diseases caused by fungi within Ascomycota, Basidiomycota and the fungal-like Oomycota. Diseases caused by bacteria, nematodes, viruses, parasitic plants and abiotic damage are also examined. Lectures will include information concerning the history and importance of plant pathology, mycology, bacteriology, nematology, virology, infection process, genetics of host and microorganism interactions, epidemiology of diseases and disease control strategies. In the hands-on laboratory period the student will learn laboratory skills, gain experience using the microscope, work with microorganisms, learn diagnostic skills, and be able to recognize 30 plant diseases. prereq: BIOL 1009 or equiv

PLPA 5660. Plant Disease Resistance and Applications. (; 3 cr. ; A-F or Audit; Every Spring) Fundamentals of disease resistance in plants and the genetics of host-parasite interactions as they relate to the sustainable control of plant diseases. Examples explored at the Mendelian, populational, and molecular level of organization. prereq: 2001, BIOL 4003

PLPA 5999. Special Topics in Plant Pathology. (; 1 cr. ; Student Option; Every Fall, Spring & Summer) Workshops on topics in plant pathology. See Class Schedule or department for current offerings.

Plant Science (PLSC)

PLSC 3002. Seed Science, Technology, and Society. (2 cr. ; Student Option; Every Fall) Cultivate an understanding of seed and appreciation for seed with respect to agriculture. Focus of this course will be on agronomic crop seeds produced in the upper Midwest. prereq: HORT 1001 or BIOL 1009 or BIOL 2002 or consent of the instructor

PLSC 3005W. Introduction to Plant Physiology. (WI; 4 cr. ; Student Option; Every Spring) Introduction to physiological basis for effects of environment on plant growth/development. How to produce optimal plant growth. Experimental technique, data analysis, scientific writing. Lecture, readings, lab. Prerequisites: Biol 1009 or Hort 1001 and BioC 3021 or Hort 2100 or BioC 2011

PLSC 3093. Directed Study. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer) A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

PLSC 3094. Directed Research. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer) An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

PLSC 3401. Plant Genetics and Breeding. (4 cr. ; Student Option; Every Spring) Principles of plant genetics and environmental variation. Applications of genetics to crop evolution and breeding of self-pollinated, cross-pollinated, and asexually propagated crops. Investigation of hybridization, variation, and selection. Course is offered with two alternating instructors: Spring Odd its with Eric Watkins. Spring Even is with Aaron Lorenz. Prerequisites: BIOL 1009 or 1009H

Plant and Microbial Biology (PMB)

PMB 2022. General Botany. (; 3 cr. ; A-F or Audit; Every Fall & Spring) Introduction to the biology of plants, algae, and fungi. Structure, growth, development, reproduction, diversity, and aspects of their ecology. Includes laboratory that focuses on structures in photosynthetic organisms and

fungi as well as an introduction to physiology. prereq: One semester of college biology

PMB 3002. Plant Biology: Function. (; 2 cr. ; Student Option; Every Spring) This course explores a range of plant physiological processes, including how plants make and use food; acquire and use minerals; transport water and nutrients; and regulate growth and development in response to hormones and environmental cues, such as light quality. While this course is paired with the PMB 3005W Plant Function Laboratory, the courses do not need to be taken together or in a specific order. prereq: [1002 or 1009 or 2003 or equiv], [CHEM 1011 or one semester chemistry with some organic content]

PMB 3005W. Plant Function Laboratory. (WI; 2 cr. ; Student Option; Every Spring) In this lab course, students will use a variety of biological techniques to study plant structure and anatomy, plant physiology, cell biology, and plant growth. This includes topics related to climate change, plant adaptation, crop domestication, and genetic engineering. Includes hands-on laboratory activities and writing focus. While this course is paired with the PMB3002 lecture course, the courses do not need to be taken together or in a specific order. Prereq: BIOL 1009, BIOL 2003, or equiv.

PMB 3007W. Plant, Algal, and Fungal Diversity and Adaptation. (WI; 4 cr. ; Student Option; Every Fall) Evolution/Ecology/Diversity of plants, fungi, and algae. Lectures highlight phylogenetic diversity among and within multiple eukaryotic groups as well as adaptations and strategies for survival in varied environments. Includes both hands-on laboratory activities and writing focus. prereq: One semester college biology

PMB 3212. Fungi - A Kingdom of Their Own. (3 cr. ; A-F only; Every Spring) No matter how you classify life on Earth, the fungi are in a Kingdom of their own. Latest estimates of the number of fungal species on our planet are between 2.2 and 3.8 million species. The diversity of single-celled and multi-cellular fungi is staggering, the result of divergence within a group of aquatic eukaryotes one billion years ago (? 500 million years). That divergence ultimately gave rise to animals and fungi, but the diversification within the fungal lineages is unrivaled. They can be found in aerobic and anaerobic environments. They are found on every Continent, recycling and reallocating vast amounts of nutrients in every Biome. They cause problems in crops but are also used to make food, with ancient processes such as fermentation and mushroom cultivation. For these reasons, mycology (study of fungi) is increasingly popular among students with interests as diverse as their fungal subjects. With the advent of high-throughput DNA sequencing to sample entire communities, we are seeing fungi in all of these places where they were previously invisible. The fungal role in Earth's most critical processes is, right now, coming into light. It is an exciting time to study Kingdom Fungi. This course uses a format of lecture, discussion, and field trips to provide undergraduate and

graduate students with a solid foundation in the fungi, primarily through an environmental lens. Undergraduate and graduate students will learn the basics of fungi in three core sections: 1) Phylogeny, taxonomy, and diagnostics (Who are the fungi?); 2) Morphology and physiology (How do fungi work?); 3) Ecology and Biotechnology (What are fungal implications and applications?). Within each core section, there will be one class period devoted to a discussion of the environment, the role of fungi, and the human dimensions of conservation and management. This discussion will be used by the class to vote for an environmental theme used to frame writing assignments, one per unit. Using this theme, all students will create a "Fungus in Focus" one-page "brief" focused on this environmental issue. This is a creative way to connect "dots" for students linking microbial processes to environment, in our case harnessing connections to fungi that often have visible characters (e.g. mushrooms) that make those connections easier for students. We will also go on two field trips, one to a mushroom cultivation facility, and one into the field in April, all depending on class size and weather. prereq: Introductory Biology course

PMB 3701. PMB Seminar. (1 cr. ; S-N only; Every Fall & Spring)

Develop professional oral communication skills through the attendance and evaluation of biological science public seminars, the construction and presentation of a professional public seminar, and the introduction of a student seminar speaker. prereq: BIOL 3004/3004H.

PMB 3802. Field Microbiology at Itasca Biological Research Station. (3 cr. ; A-F only; Every Summer)

The microbial world is incredibly diverse: there are estimated to be more microbial cells on Earth than stars in the entire universe. Much of our understanding in microbiology derives from studies of pure cultures; organisms that can easily be grown in the lab. However, it is now clear that the vast majority of microorganisms in nearly every environment are not readily grown under laboratory conditions. We must therefore go to them. Field Microbiology will be a three-week intensive course where students will be taught methods of environmental microbiology in both lecture and laboratory format. The goal is to not only quantify who is in a given sample, but also to understand something about the conditions they live in (temperature, nutrient availability, etc.). Ecological data and microbial community structure will be generated using Oxford Nanopore sequencing technology ? a cutting edge method to generate large sequencing datasets in real-time. Analyses will be integrated with an in situ set of field instrumentation that includes an eddy covariance system for quantifying fluxes of methane and carbon dioxide from Lake Itasca and Elk Lake, as well as in-lake measurements of solar radiation, dissolved organic matter, pH, conductivity, temperature, dissolved oxygen and chlorophyll. A series of field trips will be scheduled to locations in and around Itasca State Park including Elk

Lake, Arco Lake, Iron Springs Bog and Lake Alice Spring. Students will also develop an independent research project that will apply methods learned during the first 1.5 weeks of the course.

PMB 3812. Field Mycology. (3 cr. ; A-F only; Every Summer)

This class focuses on learning about how to study fungi. Students will gain experience identifying mushrooms and other samples collected during course field trips using macromorphological, microscopic, and molecular techniques. In addition, students will isolate fungi from environmental samples and maintain cultures as well as assess fungal community abundance and composition using both traditional (e.g., root tip colonization) and DNA-based methods (e.g., next-generation sequencing, bioinformatics, and ecological statistics). Course lectures highlight different aspects of fungal diversity (taxonomic, physiological, and ecological) and lab exercises provide hands-on practice. Course writing assignments and presentations emphasize exploring the natural history of fungi as well as critically assessing primary research literature. Permission is required for undergraduates to enroll in the graduate level of this course (PMB 5812); inquire with the instructor.

PMB 4111. Microbial Physiology and Diversity. (; 3 cr. ; Student Option; Every Fall)

Structural/functional organization of bacteria/archaea. Energy metabolism utilizing light, inorganic/organic chemicals. Cell morphologies, roles/assembly of surface structures. Growth/survival mechanisms in various extreme environments. Adaptation to changing conditions by development of specialized cells/structures, altering metabolic patterns. prereq: MicB 3301 required; BioC 3021 or BioC 4331 recommended

PMB 4121. Microbial Ecology and Applied Microbiology. (; 3 cr. ; A-F or Audit; Every Spring)

Evolution/structure of microbial communities. Population interaction within ecosystems. Quantitative/habitat ecology. Biogeochemical cycling. Molecular microbial ecology, gene transfer in the environment. Molecular phylogeny of microorganisms. Application of microbes in agriculture. Production of commodity chemicals, drugs, and other high-value products. prereq: 3301

PMB 4131. Prokaryotic Genetics. (3 cr. ; Student Option; Every Spring)

Genetics is the application of abstractions to understand biological function. Much of our understanding at the molecular level of the natural world is derived from genetic work in model microbial systems like *Escherichia coli*, *Salmonella*, and *Saccharomyces*. Prokaryotic Genetics will focus on a molecular understanding of bacteria, with a smattering of archaea and phage genetics, covering both classic (transposons, mutant/suppressors) and modern (sequencing, metagenomics, synthetic biology) genetic approaches.

PMB 4321. Minnesota Flora. (3 cr. ; Student Option; Fall Even Year)

Practical skills for identifying plant species/surveying Minnesota vegetation to students of biology, environmental sciences, resource management, horticulture. Integrates botany, ecology, evolution, earth history, climate, global change in context of local plant communities. Labs/Saturday field trips explore Minnesota plants/plant communities. prereq: One semester college biology

PMB 4412. Plant Physiology and Development. (3 cr. ; A-F only; Every Fall)

Plant physiology and development is the study of how plant cells, tissues, and whole organisms grow and function in response to internal and external cues. PMB 4412/5412 covers the classic plant physiology and development processes including plant water relations, mineral nutrition, membrane transport, photosynthesis, respiration, vascular function, metabolism, growth and development, and hormone responses. The physics underlying our understanding of these physiological systems will also be addressed. Other areas of plant science such as plant genetics and biochemistry are covered in other courses and will not be emphasized this course. There are no enforced prerequisites for this course. The following preparation is recommended: PMB 2022 General Botany or PMB 3007W Plant Algal and Fungal Diversity; General Chemistry and Introductory Physics.

PMB 4511. Flowering Plant Diversity. (; 3 cr. ; Student Option; Spring Odd Year)

Systematics of flowering plants of the world. Ecology, geography, origins, and evolution. Family characteristics. Floral structure, function, evolution. Pollination biology. Methods of phylogenetic reconstruction. Molecular evolution. Taxonomic terms. Methods of collection/identification. Lab. prereq: BIOL 1001 or 1009 or 1009H or 2002

PMB 4516W. Plant Cell Biology: Writing Intensive. (WI; 3 cr. ; Student Option; Periodic Spring)

In this course, we will cover current important research topics in plant cell biology. We will cover many plant-specific topics such as gravitropism, plant cell wall biosynthesis, structure and function, plasmodesmata connections, signal transduction, tip growth, plant cytokinesis, cell energetics. We will also cover some topics that are important for both plant, fungal, and animal cell biology such as cell polarity, the cytoskeleton, protein sorting, and the secretory system. Since we will be using recent literature as the course text, some important and classic cell biology topics will not be covered. In the field of cell biology, new discoveries are often the result of improvements in technology especially in imaging, so we will cover some recent advances in methodology. This is also a writing class with the goal of helping students become familiar and comfortable with writing in a scientific style. There will be writing instruction and there will be some reading assignments on scientific writing. There are no enforced prerequisites. Introductory courses on plants, genetics, and biochemistry are helpful.

PMB 4601. Topics in Plant Biochemistry. (; 3 cr. ; A-F only; Every Spring)

Biochemical analysis of processes unique to photosynthetic organisms. Photosynthesis and carbon dioxide fixation. Synthesis of carbohydrates, lipids, and derivatives. Aromatic compounds such as lignin, other natural products. Functions of natural products. prereq: [BIOL 1002 or BIOL 1009 or BIOL 2003], CHEM 2301

PMB 4793W. Directed Studies: Writing Intensive. (WI; 1-7 cr. ; S-N only; Every Fall, Spring & Summer)

Writing Intensive Directed Studies is an individual-study, literature-based investigation in which the student is mentored directly by a faculty member. One main feature of this course is that the student will receive writing instruction and the written output of the course will be revised during the semester. The project needs to be explained in a research/directed studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, how writing instruction will take place, a timeline for when student writing will be handed in and how it will be assessed, methodology to be used by the student, and how assessment of learning will be conducted by the mentor. Additional oversight is established for this course near the end of the semester the written output is submitted to the DUGS for the major. The DUGS is responsible to determine that the writing meets standards set by the CBS Education Policy Committee for quality of writing, appropriate citation of literature, well-constructed figures, tables, and legends (if present), appropriate use and interpretation of statistics (if present), conclusions that are supported by evidence, and well-formatted references. This course is graded S/N and approval of the DUGS is required before a grade of S can be given by the faculty mentor. prereq: department consent, instructor consent, no more than 7 credits of 4793W, 4794W, 4993, 4994 counts towards CBS major requirements.

PMB 4794W. Directed Research: Writing Intensive. (WI; 1-7 cr. ; S-N only; Every Fall, Spring & Summer)

Writing Intensive Directed Research is an individual-study, laboratory or field research experience in which the student is mentored directly by a faculty member. This course is intended for students who already have initiated a research project in the lab of the mentor and already have results. In this course the student will receive writing instruction. The written output usually is in the form of a scientific paper describing the results of the student's project. Written output of the course must be revised during the semester and a schedule for writing, assessment and revision needs to be in place at the beginning of the semester. The project needs to be explained in a Research/Directed Studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the Director of Undergraduate Studies (DUGS) for the major before the student is allowed to

register. The contract includes a description of learning objectives for the course, how writing instruction will take place, a timeline for when student writing will be handed in and how it will be assessed, methodology to be used by the student, and how assessment of learning will be conducted by the mentor. Additional oversight is established for this course - near the end of the semester the written output is submitted to the DUGS for the major. The DUGS is responsible to determine that the writing meets standards set by the CBS Education Policy Committee for quality of writing, appropriate citation of literature, well-constructed figures, tables, and legends (if present), appropriate use and interpretation of statistics (if present), conclusions that are supported by evidence, and well-formatted references. The DUGS can call for a final revision before a grade is given. This course is graded S/N and approval of the DUGS is required before a grade of S can be given by the faculty mentor. prereq: department consent, instructor consent, no more than 7 credits of 4793W, 4794W, 4993, 4994 counts towards CBS major requirements.

PMB 4993. Directed Studies. (; 1-7 cr. ; S-N only; Every Fall, Spring & Summer)

Directed Studies is an individual-study, literature-based investigation in which the student is mentored directly by a faculty member. The topic for the course needs to be explained in a research/directed studies contract and agreed on by both the student and faculty mentor. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, methodology to be used, and how the assessment of learning will be conducted. prereq: department consent, instructor consent, no more than 7 credits of 4793W, 4794W, 4993, 4994 counts towards CBS major requirements.

PMB 4994. Directed Research. (; 1-7 cr. ; S-N only; Every Fall, Spring & Summer)

Directed Research is an individual-study, laboratory, or field investigation course. The research topic needs to be agreed on by both the student and the faculty mentor and explained in a research/directed studies contract. The contract must be approved by the director of undergraduate studies (DUGS) for the major before the student is allowed to register. The contract includes a description of learning objectives for the course, methodology to be used, and how the assessment of learning will be conducted. prereq: department consent, instructor consent, no more than 7 credits of 4793, 4794, 4993W, 4994W counts towards CBS major requirements.

PMB 5111. Microbial Physiology and Diversity. (3 cr. ; Student Option; Every Fall)

Structural/functional organization of bacteria/archaea. Energy metabolism utilizing light, inorganic/organic chemicals. Cell morphologies, roles/assembly of surface structures. Growth/survival mechanisms in various extreme environments. Adaptation

to changing conditions by development of specialized cells/structures, altering metabolic patterns.

PMB 5131. Prokaryotic Genetics. (3 cr. ; Student Option; Every Spring)

Genetics is the application of abstractions to understand biological function. Much of our understanding at the molecular level of the natural world is derived from genetic work in model microbial systems like *Escherichia coli*, *Salmonella*, and *Saccharomyces*. Prokaryotic Genetics will focus on a molecular understanding of bacteria, with a smattering of archaea and phage genetics, covering both classic (transposons, mutant/suppressors) and modern (sequencing, metagenomics, synthetic biology) genetic approaches. prereq.: Introductory microbiology course.

PMB 5212. Fungi - A Kingdom of Their Own.

(3 cr. ; Student Option No Audit; Every Spring) No matter how you classify life on Earth, the fungi are in a Kingdom of their own. Latest estimates of the number of fungal species on our planet are between 2.2 and 3.8 million species. The diversity of single-celled and multi-cellular fungi is staggering, the result of divergence within a group of aquatic eukaryotes one billion years ago (? 500 million years). That divergence ultimately gave rise to animals and fungi, but the diversification within the fungal lineages is unrivaled. They can be found in aerobic and anaerobic environments. They are found on every Continent, recycling and reallocating vast amounts of nutrients in every Biome. They cause problems in crops but are also used to make food, with ancient processes such as fermentation and mushroom cultivation. For these reasons, mycology (study of fungi) is increasingly popular among students with interests as diverse as their fungal subjects. With the advent of high-throughput DNA sequencing to sample entire communities, we are seeing fungi in all of these places where they were previously invisible. The fungal role in Earth's most critical processes is, right now, coming into light. It is an exciting time to study Kingdom Fungi. This course uses a format of lecture, discussion, and field trips to provide undergraduate and graduate students with a solid foundation in the fungi, primarily through an environmental lens. Undergraduate and graduate students will learn the basics of fungi in three core sections: 1) Phylogeny, taxonomy, and diagnostics (Who are the fungi?); 2) Morphology and physiology (How do fungi work?); 3) Ecology and Biotechnology (What are fungal implications and applications?). Within each core section, there will be one class period devoted to a discussion of the environment, the role of fungi, and the human dimensions of conservation and management. This discussion will be used by the class to vote for an environmental theme used to frame writing assignments, one per unit. Using this theme, all students will create a Fungus in Focus one-page brief focused on this environmental issue. This is a creative way to connect dots for students linking microbial processes to the environment, in our case harnessing connections to fungi that often have visible characters (e.g. mushrooms) that make

those connections easier for students. We will also go on two field trips, one to a mushroom cultivation facility, and one into the field in April, all depending on class size and weather.

PMB 5412. Plant Physiology and Development. (3 cr. ; Student Option; Every Fall)

Plant physiology and development is the study of how plant cells, tissues and whole organisms grow and function in response to internal and external cues. PMB 4412/5412 covers the classic plant physiology and development processes including plant water relations, mineral nutrition, membrane transport, photosynthesis, respiration, vascular function, metabolism, growth and development, and hormone responses. The physics underlying our understanding of these physiological systems will also be addressed. Other areas of plant science such as plant genetics and biochemistry are covered in other courses and will not be emphasized this course. There are no enforced prerequisites for this course. The following preparation is recommended: PMB 2022 General Botany or PMB 3007W Plant Algal and Fungal Diversity; General Chemistry and Introductory Physics.

PMB 5601. Topics in Plant Biochemistry. (; 3 cr. ; Student Option; Every Spring)

Biochemical analysis of processes unique to photosynthetic organisms. Photosynthesis and carbon dioxide fixation. Synthesis of carbohydrates, lipids, and derivatives. Aromatic compounds such as lignin, other natural products. Functions of natural products. prereq: [BIOL 1002 or BIOL 1009 or BIOL 2003], CHEM 2301

PMB 5802. Field Microbiology at Itasca Biological Research Station. (3 cr. ; A-F only; Every Summer)

The microbial world is incredibly diverse: there are estimated to be more microbial cells on Earth than stars in the entire universe. Much of our understanding in microbiology derives from studies of pure cultures; organisms that can easily be grown in the lab. However, it is now clear that the vast majority of microorganisms in nearly every environment are not readily grown under laboratory conditions. We must, therefore, go to them. Field Microbiology will be a three-week intensive course where students will be taught methods of environmental microbiology in both lecture and laboratory format. The goal is to not only quantify who is in a given sample but also to understand something about the conditions they live in (temperature, nutrient availability, etc.). Ecological data and microbial community structure will be generated using Oxford Nanopore sequencing technology - a cutting edge method to generate large sequencing datasets in real-time. Analyses will be integrated with an in situ set of field instrumentation that includes an eddy covariance system for quantifying fluxes of methane and carbon dioxide from Lake Itasca and Elk Lake, as well as in-lake measurements of solar radiation, dissolved organic matter, pH, conductivity, temperature, dissolved oxygen and chlorophyll. A series of field trips will be

scheduled to locations in and around Itasca State Park including Elk Lake, Arco Lake, Iron Springs Bog and Lake Alice Spring. Students will also develop an independent research project that will apply methods learned during the first 1.5 weeks of the course.

PMB 5812. Field Mycology. (3 cr. ; A-F only; Every Spring & Summer)

This class focuses on learning about how to study fungi. Students will gain experience identifying mushrooms and other samples collected during course field trips using macromorphological, microscopic, and molecular techniques. In addition, students will isolate fungi from environmental samples and maintain cultures as well as assess fungal community abundance and composition using both traditional (e.g., root tip colonization) and DNA-based methods (e.g., next-generation sequencing, bioinformatics, and ecological statistics). Course lectures highlight different aspects of fungal diversity (taxonomic, physiological, and ecological) and lab exercises provide hands-on practice. Course writing assignments and presentations emphasize exploring the natural history of fungi as well as critically assessing primary research literature. Permission is required for undergraduates to enroll in the graduate-level of this course (PMB 5812); inquire with the instructor.

Political Science (POL)

POL 1001. American Democracy in a Changing World. (SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course is intended to introduce students to the expressed hopes of the American people for their government and to the institutions and processes that have been created and recreated to achieve these hopes. The course is designed to help students understand what liberal education is by engaging in the study of American politics as a fundamentally critical and creative enterprise, and by grappling with the most complex and challenging problems of political life, such as the sources of political equality and inequality, and the tension between individual aspirations and political control. Questions of power and choice, opportunity and discrimination, freedom and restrictions on freedom are fundamental to the historical development of and current controversies within the American political system, and we will attend to all of these. We will explore topics including the ideas underlying the nation's founding and its constitutional foundations; civil rights and civil liberties; the role of the United States in an increasingly globalized world; the structure and function of American political institutions; and the behavior of American citizens in the political process. In addition, we will learn to think and communicate like political scientists. We will read primary documents, such as the Federalist papers, engage with scholarly arguments about the way the American political system works, and critically evaluate critiques of the American political system that have been offered from a variety of perspectives. By the end of the semester students should

have a basic understanding of the structure and function of American government as well as an increased ability to critically reflect on the degree to which our institutions, processes, and citizens live up to the expectations placed on them. Students will be able to identify, define, and solve problems and to locate and critically evaluate information. Students will have mastered a body of knowledge and a mode of inquiry. This course fulfills the liberal education requirements for the Social Sciences Core.

POL 1001H. Honors Course: American Democracy in a Changing World. (SOCS; 4 cr. ; A-F only; Every Fall & Spring)

Introduction to politics/government in the United States. Constitutional origins/development, major institutions, parties, interest groups, elections, participation, public opinion. Ways of explaining politics, nature of political science. Emphasizes recent trends.

POL 1019. Indigenous Peoples in Global Perspective. (GP; 3 cr. ; A-F or Audit; Every Fall & Spring)

Colonial experiences of selected indigenous peoples in Americas, Euroasia, Pacific Rim.

POL 1025. Global Politics. (GP,SOCS; 3 cr. [max 4 cr.]; Student Option; Every Fall, Spring & Summer)

Global politics is complex, fast-paced, and often confusing. This introductory course explores both the enduring challenges of international politics as well as more recent transformative trends. The course introduces theoretical traditions, but its focus is on making sense of real-world problems, both today and in the past. Why is the world organized into states, and what implications does the states system have for indigenous populations globally? Why and when do states go to war and use military force? Why do they sign international agreements and treaties, on matters from arms control to investment? In what ways do existing systems of international law and trade exacerbate or mitigate global inequities? Why has human rights emerged as a central problem in world politics? What are the prospects for international cooperation to address climate change? How have inequities and prejudices, along the lines of race and other categorical identities, shaped our world - from the practice of global security to the structures of the international political economy? These are among the pressing real-world questions that this course in Global Politics will address and that it will give you the tools to answer - though particular instructors will naturally emphasize different topics and questions. But the course will also highlight how our answers to these questions are changing along with the deep power structures of global politics - as US dominance wanes and others, most notably China, rise; as core ideas and discourses underpinning the international system, such as sovereignty, come under assault; as institutions, such as those governing international law, thicken; and as attention grows to the structuring effects of race and other ascriptive categories. Global Politics is an essential guide to our increasingly globalized world.

POL 1025H. Honors: Global Politics.

(GP,SOCS; 4 cr. ; A-F or Audit; Every Fall & Spring)

Introduction to international relations/issues in contemporary world affairs. War, peace, nuclear proliferation. Politics of humanitarian intervention. Global monetary/trading systems. Activities of international institutions/non-governmental organizations. prereq: Honors student

POL 1026. U.S. Foreign Policy. (; 3 cr. ; Student Option; Every Fall & Spring)

The United States is the most powerful country in the world. This means that how the United States behaves in the world is hugely important. As a result, we should all try to better understand U.S. foreign policy: why the U.S. behaves in the way it does, how the U.S. should behave, and how it has behaved in the past. These are the questions that this class tackles. For example, we'll ask: why does the United States play such an active role in world politics? Might this change in the future and has the United States always behaved in this way? Why is the United States so often at war despite being so militarily powerful and secure? What role has race and racism played in key episodes of U.S. foreign policy? Does the rise of China pose a threat to the United States and if so, what should the United States do about it? Why does the United States care so much about stopping other countries from acquiring nuclear weapons? Should addressing climate change be a key priority of U.S. foreign policy and how should it be addressed?

POL 1054. Politics Around the World.

(GP,SOCS; 3 cr. [max 4 cr.] ; Student Option; Every Fall, Spring & Summer)

This course is an introduction to the study of politics in different countries around the world. It focuses on domestic politics within countries, as opposed to a course in international relations, which focuses on relations between countries. Some of the questions we tackle include: Why are some countries prone to violent conflict while others remain peaceful? Why do some countries grow rich while others remain poor? Why does democracy emerge in some countries, while dictators hold onto power elsewhere? How do attitudes about gender and sexuality influence politics? Do particular religions, or the strength of religious faith, strengthen or weaken democracy? The readings and assignments help you make sense of the complexity of world politics - to sift through and distill the avalanche of information available and learn how to develop your own arguments about pertinent global issues. Upon completion of this course you will be able to understand and provide examples of 1) the difference between strong and weak states; 2) the distinctions between democratic and non-democratic forms of government; 3) the various ways democracies are governed; 4) arguments explaining the origin of democracy and the persistence of non-democracy; 5) the significance of different forms of political identity such as ethnicity, religion, and gender; 6) why some countries are rich while others remain poor; and 7) why some countries tax and spend more than others. Assignments

seek to develop your skills at developing arguments through logic and evidence and to give you the ability to distinguish between a persuasive argument about politics and simply stating an opinion.

POL 1201. Political Ideas. (CIV,HIS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course serves as an introduction to the study of political theory. Political theory analyzes the meaning and significance of fundamental concepts in politics. Starting from such basic concerns as the nature of politics, humans, power and justice, political theorists explore how these basic starting assumptions organize the norms, practices, and institutions of political and social order. To explore these topics, the field turns to key texts, as well as to political and social events and other media (film, historical documents, etc.). In this introductory course, students will investigate some of the basic texts in political theory, with the goal of learning how to read texts more analytically and to address fundamental questions in political theory. Among the topics that might be the nature of justice and injustice, political obligation and civil disobedience, democracy and other forms of governance. Students who complete this course will understand the deep issues about the nature of politics, will have learned to read and to analyze complex texts. They will also have had the opportunity to reflect upon their own ethical engagement in political life and upon the ways in which historically, political ideas change.

POL 3065. Political Engagement Careers: Planning and Preparing For Your Future.

(CIV; 3 cr. ; Student Option; Every Spring)

Are you interested in pursuing a career in public service? Do you plan to run for office in the future, or work in a government agency (such as the State Department or the FBI or the MN DNR), or become a professional campaign manager or lobbyist, or work as an issue activist on a cause important to you? Would you like to learn more about the variety of public service careers open to a college graduate? Do you wonder what motivates people to pursue careers in politics, public administration, and community service, and how these motivations vary across career fields? Would you like to explore some options for future internship or service learning while at the University? Then this course is for you! This course is the Political Science Department's introduction to careers in political and civic engagement. Through readings focused on theories about and case studies of political engagement, and on the ethics of politics and public service, numerous guest speakers with extensive experience as public service professionals, and a discussion-oriented class format, we will explore the meaning of public service and the main types of public service careers that you could pursue. We will think about the virtues and challenges associated with doing public service work, and how these differ across different types of jobs and venues for serving the public. Finally, you will acquire practical knowledge and skills related to the search for public service work opportunities,

including how to write a resume and cover letter, how to conduct an informational interview, networking, and the job search and application process. Intended primarily for first- and second-year undergraduates, but open to students of any major at any point in their undergraduate program.

POL 3080. Internship in Politics or Government. (; 3-13 cr. [max 15 cr.] ; A-F only; Every Fall, Spring & Summer)

Students search for and arrange an internship with an organization or office working in government or politics, and then complete academic coursework in association with their internship. prereq: instr consent, dept consent

POL 3085. Quantitative Analysis in Political Science. (MATH; 4 cr. ; A-F or Audit; Every Fall & Spring)

POL 3085 teaches students how to study politics scientifically and introduces them to how to use quantitative analysis to answer political questions. The first part of the class covers how to formulate a theory (a possible answer to a question), specify testable hypotheses (what you would see if the theory is correct or incorrect), and set up a research design to test those hypotheses. In the second part of the class, we cover quantitative data analysis, beginning from preliminary statistical analysis to multivariate linear regression. There is no mathematical or statistical background required for this course. By the end of the class, students should be able to ask and answer political questions using quantitative data and fluently evaluate statistical analyses of political phenomena in the media and many academic articles.

POL 3085H. Honors Course: Quantitative Analysis in Political Science. (MATH; 4 cr. ; A-F only; Every Fall & Spring)

POL 3085 teaches students how to study politics scientifically and introduces them to how to use quantitative analysis to answer political questions. The first part of the class covers how to formulate a theory (a possible answer to a question), specify testable hypotheses (what you would see if the theory is correct or incorrect), and set up a research design to test those hypotheses. In the second part of the class, we cover quantitative data analysis, beginning from preliminary statistical analysis to multivariate linear regression. There is no mathematical or statistical background required for this course. By the end of the class, students should be able to ask and answer political questions using quantitative data and fluently evaluate statistical analyses of political phenomena in the media and many academic articles. prereq: Honors student

POL 3108H. Honors Tutorial: Thesis Preparation and Political Science Inquiry. (; 3 cr. ; A-F only; Every Spring)

In this course, students will improve their research skills in preparation to write their senior theses. Students will enter with a few ideas for topics about which they might like to write their theses. They will leave the class with a clear and tractable research question, a literature review that describes how this question fits in with the existing scholarly

literature, and a research design that will enable them to answer the question. Along the way, they will advance their understanding of what constitutes political science research and how to conduct political science research. Students will be graded on the basis of drafts of their annotated bibliography, literature review and research design, a class presentation of the "front half" of their senior thesis, and class participation including short weekly assignments. Students are expected to keep up with the reading and, most importantly, to begin to conduct their own independent research. prereq: Pol sci major, honors

POL 3135. Political Dynamics in the Horn of Africa. (GP,SOCS; 3 cr. ; Student Option; Every Spring)

Who wields political power? Who challenges those in power? And how do they legitimize their claims and go about enforcing them? These are the core questions that will guide our exploration of the political dynamics in the Horn of Africa. Just like most regions in Africa, the Horn is home to diverse cultures and languages. What distinguishes it, however, is the contested nature of state borders, which have been redrawn in ways not observed anywhere else in Africa since the end of European colonialism. The purpose of this class is to delve deeper into these conflicts, to examine the interactions between incumbent governments, armed rebel groups, and international actors in shaping war and peace in the Horn. Throughout this journey, we will pay special attention to ideas of sovereignty, identity, and violence and draw on literature outside of the Horn to help us better dissect what is going on within it.

POL 3225. American Political Thought. (CIV; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course provides an introduction to several key periods and some of the leading concepts and debates in American political thought. It might also focus on a broader theme such as: conceptions of destiny, mission, and exceptionalism; arguments over economic development and inequality; or debates over government and corporate power. The course will begin with Puritan religious and political thought, tracing its secularization over time. Considerable attention will be paid to the ideas behind the Declaration of Independence and the Constitution, such as the social contract and the right of resistance to civil authority, civic republicanism, and the founders' new science of politics and government. The course will consider some if not all of the following: debates over slavery and emancipation, women's rights, the rise of imperialism and nationalism, race and racism, and the rise of rule by public and private bureaucratic organizations, and the consequences of these developments for the possibility of continued individual liberty, equality, and justice. This course requires considerable reading of difficult texts. The ultimate goal of this course is for students to gain a deeper understanding of American political thought as a product of the country's ever-evolving political discourse. prereq: Suggested prerequisite POL 1201

POL 3235W. Democracy and Citizenship. (CIV,WI; 3 cr. ; Student Option; Every Fall & Spring)

This course considers the nature of contemporary democracy and the role that members of the political community do, can, and should play. While approaches in teaching the class vary, students can expect to read historical and contemporary texts, see films and videos, to approach questions about the nature of democracy, justifications for democracy, and challenges faced by contemporary democracy as it relates to racial inequality, immigration, gender inequality, and ecological crises. Topics will include: the centrality of social movements for democracies; deliberative and participatory democracy; as well as questions about how members of political communities can best participate in democratic life to address structural inequalities. Students will write a longer essay that allows them to demonstrate their capacities to understand and explain complex ideas and to make a theoretically compelling argument, using appropriate supporting evidence. prereq: Suggested prerequisite 1201

POL 3251W. Power, Virtue, and Vice: Ancient and Early Modern Political Theory. (WI; 3 cr. ; Student Option; Periodic Fall)

Key concepts of contemporary political life such as "democracy", "tyranny", "authority" and indeed "politics" itself? derive from ancient sources. This course offers students an opportunity to return to the foundations of this vocabulary by delving into work by such major thinkers as Plato, Aristotle, Augustine, Aquinas, and Machiavelli. Lectures and discussion shall consider the endurance of certain basic questions of political life, such as: What is justice? What is the best regime? What is the relationship between human nature and political order? Can politics be virtuous and, if so, in what way? The course will also consider the radically diverse responses to these essential questions through examination of a wide range of historical periods and the unique terms of political order each offered. Previous iterations of the course have included examination of the Classical Greek city-state system and its fragile experiments with democracy; the rise and fall of the Roman empire; the establishment of Western Christendom; the Renaissance, so-called "discovery" of the New World, and dawn of the modern era. Students will gain a glimpse into worlds preoccupied by matters of truth, virtue and nobility, but also widely populated by slavery, imperialism, violence, and religious strife. In this way, the study of ancient theory is intended to serve as both supplement and challenge to the terms of contemporary political life.

POL 3252W. Revolution, Democracy, and Empire: Modern Political Thought.

(AH,WI,CIV; 3 cr. ; Student Option; Spring Even Year)
From the seventeenth through the nineteenth centuries, Europe and its colonies were wracked by large scale, sweeping changes: from the violent emergence of the sovereign state, to intense religious conflict, to geographic

expansions at once transformative and brutal in search of new economic markets. These changes posed extraordinary challenges to usual ways of conceiving of political order and governance. Our course this semester will read these changes through three key concepts: revolution, democracy, and empire. Class discussion will seek to understand different meanings of these concepts, their political stakes, and ways of knowing how to move between political ideals and historical examples. Students will read a range of materials: from primary historical sources, to philosophic texts, political pamphlets and treatises, and travel journals? so as to study the effects on both the European context and beyond. prereq: Suggested prerequisite 1201

POL 3265. Ideas and Protest in French Postwar Thought. (AH,CIV; 3 cr. ; Student Option; Every Fall & Spring)

France witnessed a number of extraordinary events in the 20th century: the carnage and trauma of World Wars I and II; the Vichy regime's collaboration with German Nazis; the general strike and student protests of the 1960s; the tensions prompted by anti-colonialism and later decolonization in North Africa; and the challenges of post-colonialism and racial politics. This course will examine these events, the political and ethical challenges they raised, and the intellectuals who shaped the ensuing public debates. It will draw on historical documents, cultural media (e.g. posters, art, film), and philosophical texts to explore contemporary France in its century of politics and protest. Thinkers range from film-maker Gillo Pontecorvo, to philosopher-playwright Jean-Paul Sartre, to philosopher Michel Foucault.

POL 3272. Colonial Encounters. (AH,CIV; 3 cr. ; Student Option; Periodic Fall & Spring)

If politics classically is the exercise of power by rulers over the ruled, how have different communities, traditions, and contexts sought to organize this power and render it just? What are the lessons to be learned from looking to past experiences with political communities ranging in size from the face-to-face polis to the far-flung reaches of empire? How does the "discovery" of other societies disorient our usual frames of reference for thinking about political community? What different frames might we use? What should we make of problems that seem to exceed the capacity of existing institutions to manage, such as mass violence and total war? The aim of this course is to examine exemplary moments that consider the radical conflict of interpretations that can arise when different cultures come into contact with one another (whether through trade, war, intellectual exchange, or the like), and how these exchanges transform the scale of political community (local, regional, global, universal). Here, we are concerned with large-scale upheaval, processes that are more than simply difficult political problems, but in fact transform the very institutions, relationships, and concepts through which we come to understand what political community is and can be. The substantive focus of the course varies according to instructor, and

may include: Colonial Encounters; the Black Atlantic; Revolutionary Moments; Colonialism and the Post-colony.

POL 3282. Black Political Thought:

Conceptions of Freedom. (DSJ,HIS; 3 cr. ; Student Option; Periodic Fall & Spring)

On January 21, 1964, Ella Baker, one of the most important Black leaders of the Civil Rights Movement stood in front of a large crowd in Hattiesburg, Mississippi and said: "Even if segregation is gone, we will still need to be free; we will still have to see that everyone has a job. Even if we can all vote, but if people are still hungry, we will not be free. Remember, we are not fighting for the freedom of the Negro alone, but for the freedom of the human spirit, a larger freedom that encompasses all mankind." With these words, Baker held before the crowd a political vision that went beyond the immediate goals of social struggle and defined one of the central impulses of Black political thought: to articulate a large and expansive conception of freedom. In this course, our main objective is to enter an intellectual terrain of rich and vibrant debates between African American political thinkers over the meaning of Black freedom. We will explore questions about 1) the geographical reach of their visions of freedom 2) their strategies for agitating for and achieving freedom 3) their different understandings of the nature of domination and how this informs their conception of freedom and 4) their emphasis on political affect in the struggle for freedom. Our orientation will be historical and theoretical. To this end, we reconstruct theoretical debates from four important periods of African American history. 1) pre-Civil War debates about the abolition of slavery (1830-1860) 2) Turn of the century debates about racial progress (1880-1910) 3) Civil rights era debates about integration and separatism (1950-1970) and 4) contemporary debates about law enforcement, police killings, mass incarceration, and political disenfranchisement (1990-present).

POL 3306. Presidential Leadership and American Democracy. (; 3 cr. ; Student Option; Spring Odd Year)

To most Americans?if not most human beings? the President of the United States is probably the most powerful person on the planet. This course examines how, why, and whether that is the case. What does the US President do, and why? Why is so much power entrusted to just one person? Students will critically analyze these questions and synthesize answers by evaluating the history, evolution, and current state of the "highest office in the land."

POL 3308. Congressional Politics and Institutions. (SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course is an introduction to the politics of the U.S. Congress and the federal legislative process. Throughout the semester, we will focus on the behavior of individual legislators and the role that they play in crafting federal legislation in policy areas such as healthcare, civil rights and the environment. We will devote special attention to changes in Congress, as well as current political and scholarly controversies such as congressional

confirmation process of Supreme Court justices, congressional war powers, the influence of parties, and campaign finance. The theme of the course is why do legislators behave as they do and who interests do they represent.

POL 3309. U.S. Supreme Court Decision-Making, Process, and Politics. (; 3 cr. ; Student Option; Every Fall & Spring)

The principal purpose of this course is to introduce you to judicial politics and decision-making of the U.S. Supreme Court. Specifically, we will examine theoretical issues regarding judicial process and politics. Unlike constitutional law and civil liberties classes, this course does not study legal doctrine. Rather, it examines political aspects of the legal system with an emphasis on the social scientific literature about how the U.S. Supreme Court functions. Thus, we will cover nominations of justices, decision making models, and how justices interact with one another and the political world beyond the ivory tower. Recommended prerequisite: POL 1001

POL 3310. Topics in American Politics. (; 3 cr. [max 15 cr.] ; Student Option; Every Fall, Spring & Summer)

Topic in American politics, as specified in Class Schedule.

POL 3310H. Topics in American Politics. (; 3 cr. ; A-F only; Periodic Fall & Spring)

Topics in American politics.

POL 3311. Law and Justice: The View From Hollywood. (3 cr. ; Student Option; Every Summer)

Politics and the law have played major thematic roles in American films. This course analyzes eight films that focus on justice, the law, and the legal system, to see what they tell us about political and legal culture, and what messages (if any) they have for contemporary politics. To that end, we will read about, watch, talk about, and write about films. Mostly we will be focusing on questions about the relationship between law and justice, the practice of law, and the role of courts and trials in a political system; however, many other issues will arise in the course of these discussions? race/class/gender and the law, legal ethics, legal education, the adversarial system, the relationship between law and popular culture, among others. You should expect to develop a more in-depth understanding of these issues as well as a better appreciation of the cultural and political significance of the way that law, lawyers, and judges are depicted in the movies.

POL 3317. Food Politics: Actors, Arenas, and Agendas. (SOCS; 3 cr. ; Student Option; Every Fall & Spring)

Food: Everyone eats it but we increasingly fight about how it is grown, transported, processed and consumed. This disagreements find their ways into politics, whether it is neighbors battling over backyard chicken ordinances, Members of Congress arguing over how best to protect the safety of the food supply, or countries engaging in trade wars to limit the importation of agricultural products. This course takes a broad, multi-disciplinary perspective on food politics drawing on concepts and

ideas from political science, sociology, and economics to analyze several contemporary "food fights," including agricultural trade, U.S. farm bills, the National School Lunch Program, proposals for taxing sodas and fatty foods, and the labeling of genetically modified food. Take this course if you want to learn more about the various resources, arguments, evidence, and rules of engagement that structure contemporary food politics. This course satisfies the Social Science Core of the Liberal Education requirements and is an eligible elective for the public health minor in CLA and the Food Systems major in CFANS.

POL 3319. Education and the American Dream. (DSJ,SOCS; 3 cr. ; A-F or Audit; Every Fall)

What role does education play in American democracy? What role should it play? Does American education, particularly public education, live up to its citizens' hopes and expectations? And, perhaps most importantly, what do we mean by a "good education"? This is a question with deep historical roots in this country, one that is the subject of current policy debates and one that cannot be separated from questions of discrimination and inequality. The over-arching theme of the course is to wrestle with what it means to be an educated citizen in the context of historical struggles to achieve that vision in the face of multiple and inter-related inequalities and competing visions about how to make the American dream a reality in the field of public education. No one political perspective will be offered or favored. No magic powder will be revealed on the last day of the course. The fact is that the underlying issues are really complicated, often seemingly intractable, and very, very political. This course is intended as introduction to education politics and policy in the United States. It will focus on K-12 education, especially in the public system. It is designed for any student who might have an interest in exploring education, public policy, or American government. Topics will include equality of educational opportunity, educating democratic citizens, school finance, the role of political institutions in making educational policy, and efforts to reform and remake American education, including charter schools, private school vouchers, and standardized testing. By the end of the course, students should have a basic understanding of the provision of public education in the United States, including the ways in which education is governed and the institutions involved in that governance. Students should be able to critically reflect on the degree to which American education fulfills the sometimes-competing goals Americans have for their schools. This course fulfills the Social Sciences Core of the University liberal education requirements. In this course students will act as policy analysts, with all of the complexity that such a task entails in the field of American public education. This course also fulfills the Diversity and Social Justice in the United States theme of the University liberal education requirements.

POL 3321. Issues in American Public Policy. (; 3 cr. ; Student Option; Periodic Fall)

This course examines the politics of social policy in the United States. Recent controversies over Social Security reform, the Patient Protection and Affordable Care Act (?Obamacare?), and the No Child Left Behind Act and Common Core showcase the profound political and substantive impact of this topic. The first half of the course places the United States in comparative perspective. Scholars typically describe the United States as a ?laggard? where social policies developed relatively late, grew relatively slowly, and are less generous than are corresponding policies in other advanced industrial democracies. Is this an accurate portrayal of American social policy? Recent scholarship challenges the conventional wisdom, suggesting that the United States does not necessarily do less in terms of social policy but that it relies on an unusual set of policy tools to pursue objectives like poverty alleviation. What explains the distinctive shape of American social policy? This course investigates the impact of political culture, the relative power of various interest groups, the American constitutional system, and other factors. The second half of the course examines recent trends in American social policy, focusing on four specific policy areas: pensions, health care, education, and income support. It examines both the historical origins of contemporary American policies and recent reform proposals. A major theme of the course is that it is impossible to understand the contemporary shape of social policy, and the positions of specific stakeholders, without understanding the long-term historical processes that have shaped, and that continue to shape, the present political terrain of preferences and actors. New generations of leaders do not have the opportunity to build social policy from scratch. Rather, they have to react to what already exists. Some reforms will seem like logical extensions of what is already in place, while existing programs might make other alternatives difficult if not impossible to pursue. By understanding the roots of contemporary American social policy it becomes possible to devise a political strategy for major policy change.

POL 3323. Political Tolerance in the United States. (; 3 cr. ; Student Option; Every Spring) Intergroup conflict continues to be one of the defining fault lines in American politics. Most obviously, the existence of racial inequality has consequences for any given individual?s social and economic standing. However, it also has had an enormous impact on the pattern of attitudes and beliefs that have served as the backdrop for many of society?s most pressing political debates and conflicts. The purpose of this course is to provide students with an introduction to how political scientists have studied ethno-racial attitudes and the larger problem of inter-ethnic conflict in American society.

POL 3325. U.S. Campaigns and Elections. (; 3 cr. ; A-F or Audit; Fall Even Year) Presidential/congressional campaigns/elections in the United States. How political scientists study electoral politics. Theoretical generalizations about candidates, voters,

parties, and the media. Ways electoral context and "rules of the game" matter.

POL 3329. The Balance of Power: Federalism & Community in the United States. (3 cr. ; Student Option; Every Spring) The appropriate balance of power between the national government and the states has been the subject of intense debate since the United States became an independent country in the eighteenth century, and it has never been resolved. This unresolved controversy has profound democratic and policy implications. Some of the political and social rights that are part and parcel of what it means to be a member of the American community are influenced by geography and the specific state in which an individual resides. For example, state governments make numerous decisions that define voter eligibility, an especially important form of community membership and political participation. In addition, federalism strongly affects the policymaking process. In fields as diverse as environmental protection and health care, the relationship between the national government and the states affects which policies are adopted and how they work in practice. While federalism is rarely at the forefront of the minds of the American public, it plays a central and increasingly important role in the U.S. political system. This course seeks to give students a better understanding of American federalism. By examining both the historical evolution of intergovernmental relations in the United States and contemporary policy debates, it also aims to help students develop the substantive knowledge and analytical skills they need to become critical thinkers. All of the writing assignments that students will complete in the course have been designed with this objective in mind, and the course will emphasize systematic thinking about politics, the explication of logically coherent arguments, and the use of relevant and appropriate empirical evidence to evaluate those arguments. The successful development of the critical thinking and writing skills emphasized in this course will enable students to communicate effectively in a variety of future roles, including as employees and citizens.

POL 3362. Politics of Race, Class, and US Social Policy. (DSJ,SOCS; 3 cr. ; Student Option; Every Fall) This course examines the causes and effects of the vast social and economic inequalities that exist between blacks and whites in US society. Specifically, the course examines the complex role that federal, state, and local government plays in creating as well as addressing high rates of poverty, unemployment, violent crime, residential segregation, and under performing schools found in African American communities. Students will examine critically whether class-based policies such as Social Security, Medicaid, and unemployment insurance are more effective than race-based affirmative action policies in reducing the racial disparities between blacks and whites. Further, in discussions, the course will emphasize general concepts that recur in the readings and in other

classes. Students will master the key concepts in race and ethnic studies necessary to conduct original research and policy analysis.

POL 3409. Introduction to Authoritarian Politics. (3 cr. ; Student Option; Every Fall) For much of history, states were largely organized along dictatorial principles. There were the days of emperors and empresses, of kings and queens, of rulers who ruled not because they were elected by their subjects, but because they saw it as their right to reign and were shrewd enough to maintain their position in power. While it is true that monarchies have virtually disappeared from the modern political landscape, the same cannot be said about dictatorships. The purpose of this class is to examine this regime type by introducing students to the current literature on dictatorships. The core questions that will be addressed in the class are as follows: Are dictatorships qualitatively different from democracies or do regimes instead lie somewhere on a democracy-dictatorship continuum? How do dictators survive in power? In the absence of free and fair elections, how does the transfer of power occur in this political setting? In asking these questions, the goal is to go beyond the often simplistic descriptions of dictators as the all-powerful and omnipotent tyrant, the one who does as he pleases without having to fear any repercussions for his actions. Instead, we will learn that the dictator is only one among many other political elites that make up the regime and to survive, much less thrive, he must traverse the terrain of power politics with the utmost care.

POL 3410. Topics in Comparative Politics. (; 3 cr. [max 9 cr.] ; Student Option; Every Fall, Spring & Summer) Topics of current analytical or policy importance to comparative politics. Topics vary, as specified in Class Schedule.

POL 3423. Politics of Disruption: Violence and Its Alternatives. (GP; 3 cr. [max 4 cr.] ; Student Option; Periodic Fall & Spring) Political struggles aimed at undermining the existing political order have been a pervasive feature of global politics. Modern states have constantly been sites of relentless challenges from their citizenry, which sometimes take the form of non-violent action while on other occasions manifest in terrorism and violence. This course introduces students to the politics of disruption and violent and non-violent struggles targeted at bringing about political change. We will study a range of manifestations of such struggles focusing on some well-known cases such as the US civil rights movement, the Arab Springs, the Ferguson riots and the Islamic State (ISIS). Can non-violent resistance succeed against a coercive state? Why do individuals and groups participate in high-risk political struggles? What explains patterns of violence in civil conflicts? What are the effects of violence? What facilitates peace? This course will enable you to answer these questions.

POL 3431. Politics of India. (GP; 3 cr. [max 4 cr.] ; Student Option; Every Spring) The course introduces students to the politics of India; a non-Western, parliamentary

political system that stands out as a bastion of democracy in the developing world, despite underdevelopment & significant ethno-religious divisions. By focusing on India, we offer an understanding of the problems of democratization, underdevelopment, governance & political violence. We examine India's political institutions & challenges confronting the institutions such as socio-economic inequalities, social exclusion, social divisions, ethno-religious & ideological insurgencies, criminalization of politics & rampant corruption. The course enables students to answer important questions: Why did democracy endure in post-colonial India when much of the developing world endured authoritarian regimes? What accounts for the persistence of ethno-religious conflict & violence? What determines a country's approach to socio-economic development? What accounts for India's economic development over the last few decades? How do we explain the existence of political democracy and rampant corruption?

POL 3451W. Politics and Society in the New Europe. (GP,WI; 3 cr. ; Student Option; Fall Even, Spring Odd Year)

The devastation of Europe through two World Wars put the deadly results of ultra-nationalism on full display. To avoid such destruction again, a group of European technocrats and leaders embarked on a mission of incrementally deepening economic and later, social partnerships between an ever-expanding number of European countries. These efforts culminated in the birth of the European Union in the late 20th Century. From its inception, the Union has found obstacles in the forms of a weak institutional structure and authority, deep skepticism of a central European authority, financial crisis, ethnic anxiety, and resurgent nationalism. Yet, the continuation and strengthening of the Union is seen as the antidote to the rise of anti-democratic and authoritarian tendencies on the continent. Some of the key questions that we will engage in are: What are the ideological and historical roots of the European Union? What are the structural flaws of the Union? What are the obstacles to a stronger Union? Is the Union still or even more essential than ever? What are the ways the Union could collapse from within and from the intervention of outside forces?

POL 3462. Politics of Race, Class, and Ethnicity. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Is it true that since the election of Donald Trump the United States is more racist than ever? Is racism on the rise elsewhere in the world? Consistent with the goals of liberal education, this course helps students navigate their way through what is often seen as one of the most perplexing and intractable problems in today's world? racial and ethnic conflicts. It supplies a set of theoretical tools that can be utilized in the most diverse of settings? including, though to a lesser extent, gender. Rather than looking at these conflicts, as the media and popular knowledge often does, as centuries-old conflicts deeply set in our

memory banks, a script from which none of us can escape, the course argues that inequalities in power and authority? in other words, class? go a long way in explaining racial and ethnic dynamics. To support this argument, the course examines the so-called "black-white" conflict in three settings, the U.S., South Africa and Cuba. While all three share certain similarities, their differences provide the most explanatory power. Most instructive is the Cuba versus U.S. and South Africa comparison. Specifically, what are the consequences for race relations when a society, Cuba, attempts to eliminate class inequalities? The course hopes to show that while we all carry with us the legacy of the past, we are not necessarily its prisoners.

POL 3464. The Politics of Economic Inequality. (DSJ; 3 cr. ; Student Option; Every Fall & Spring)

Distributional issues are at the core of the study of politics. This is because while democracy is premised on formal political equality, if wealth and property can shape political power then equal rights do not mean equal influence. This class meets the UMN "Race, Power, and Justice in the US" Liberal Education theme by engaging the question of the tension between democracy and economic inequality. What policies increase or decrease inequality? What are the political consequences of rising inequality - in general and particularly for ethnic and racial minorities? The course focuses on the USA but puts American politics in global perspective. To do so, the course explores how dominant socio-economic groups in the US have historically shaped political institutions and attitudes to generate, perpetuate, and defend inequality. We will also explore the extent to which and why white and non-white citizens have bought into the concept of the "American Dream," undermining efforts to redress social injustice.

POL 3471. Dictatorships & Violence in Central Asia. (3 cr. ; Student Option; Every Fall)

This course is an overview of politics in Central Asia, a region of the world that has layers of history, culture, and politics, that extend back to the time of Alexander the Great's conquest, Islamization by the Arabs, Tamerlane's empire, and the Great Game of the 19th Century. Our focus will mainly be on the twentieth century to the present, including the period of control by the Soviet Union, then independence and 30-years of independent nation-states with new forms of political power. Otherwise known as the "stans" (the land of)-this region includes the land of the Kyrgyz, Kazakhs, Uzbeks, Turkmen, Tajiks, Uighurs, and Afghans. We will also discuss Azerbaijan, a Turkic post-Soviet republic in the Caucasus that is a neighbor to the Central Asian region. We will focus on the role of ethnic, religious, and national identities in Soviet and post-Soviet politics. We will explore their history, and especially the legacy of communism for the present day. We will particularly address the problems of the post-Soviet era, including political transition to new regimes, the struggle by some for democracy, human rights issues,

the challenges of economic reform, ethnic conflict, civil war, and the growth of both moderate and radical Islamist movements. We will focus on religious repression by the Central Asian states, and religious and ethnic repression of the Uighurs by the Chinese state. We will consider US policy in the region, and how it has positively or negatively affected political developments. We will also analyze the growing competition between Russia, China, and the US for influence in the region.

POL 3475. Islamist Politics. (; 3 cr. ; Student Option; Every Fall)

The relationship between Islam and politics-both in the Muslim world and in the West-is one of the most important political issues of our day. This class will address these issues by taking a historical and political look at the development of Islam (the religion) and Islamism (Islamic political movements) in many areas of the Muslim world. We will begin by discussing the Islamic faith and historical debates about its relationship to politics. Then we will turn to the twentieth century, and examine the rise of Islamist politics in the Middle East and North Africa (e.g. Saudi Arabia, Egypt, Iran, Sudan) and south central Asia (e.g. Pakistan, Afghanistan). We will study the successes and failures of Islamist revolutions. Then we will focus on the evolution of the "Arab Spring" and its implications for both Islamism and democracy. In doing so, we will discuss debates about the compatibility of Islam and democracy, and examine attempts at democracy in the Muslim World (e.g. Tunisia). We will examine the revival of Islam and rise of post-Soviet Islamism in Eurasia (Central Asia, Russia, and the Caucasus) during the last two to three decades. We will examine the effects of state repression of Islam and religious freedom in those countries. We will also discuss varying ideas about jihad, and the rise of global jihadists and terrorist groups, such as Al Qaeda and ISIS. We will study the jihads waged by Al Qaeda, the Taliban, and ISIS, and the implications of militancy and terrorism for establishing stability and democracy in the Muslim world. We will read both Muslim and non-Muslim, American and non-American perspectives on these problems. Understanding these issues is critical to gaining perspective on the troubling state of today's complex global politics, and US foreign policy in Afghanistan, Iraq, Syria, and elsewhere.

POL 3477. Political Economy of Development. (GP,SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

How can the vast disparities of wealth between countries be explained? Why have some countries in the post-colonial world, in particular, those of East Asia, experienced stunning economic growth, while those in other parts have not? We will explore inequality among nations through an engagement with competing explanations from multiple disciplines. Do free markets, the legacies of colonialism, state power, culture, or geography offer the most persuasive account of current patterns of global inequality? The course also examines what we mean by "development" and exposes students to cutting-edge debates

in contemporary development studies. By the end of the course, students will have a better understanding of the causes of and possible solutions to global inequality.

POL 3479. Latin American Politics. (GP; 3 cr. ; Student Option; Every Fall)

This course offers an introduction to the political history and contemporary politics of Latin America, along with some of the main concepts and theories used by social scientists to explain the region's political dynamics. Through a comparative, historical approach, the course aims to help students understand the continued challenges faced by countries in the region-- to the establishment of security, the rule of law and rights protection, to the stability and quality of democracy, and to sustainable and equitable economic growth? and how these interact. The objective of the course is not only to help students understand the similarities and differences in outcomes in Latin America over time, but also to reflect on what the region's experiences can teach us about the requirements of and barriers to meaningful democracy and sustainable and equitable development around the world, including ?north of the border.? In other words, the course seeks not just to provide students? knowledge about Latin America, but to help them learn from Latin America.

POL 3481H. Comparative Political Economy: Governments and Markets. (; 3 cr. [max 4 cr.] ; A-F only; Periodic Fall & Spring)

This course analyzes the compatibility of democracy and markets-whether democratic institutions undermine (enhance) the workings of market institutions and vice versa. Competing theoretical perspectives in political economy are critically evaluated. And the experiences of countries with different forms of democratic market systems are studied. Among the topics singled out for in-depth investigation are the economics of voting, producer group politics, the politics of monetary and fiscal policy, political business cycles, and trade politics.

POL 3489W. Citizens, Consumers, and Corporations. (CIV,WI; 3 cr. ; Student Option; Spring Even Year)

Corporations are the most powerful actors in the global political economy. They employ millions of people, produce a wide variety of goods, and have massive effects on the communities where they do business. Although considered to be "legal persons," corporations are not living beings with a conscience. Milton Friedman famously proclaimed that the only moral obligation of corporations is the maximize shareholder returns. Yet maximizing financial returns may negatively affect humans, other living beings, and the planet. This potential conflict between profit and ethics is at the heart of this course, which focuses on how people have mobilized as citizens and consumers to demand ethical behavior from corporations. We will explore these different modes of action through an examination of corporate social responsibility for sweatshops, the industrial food system in the United States, and the privatization of life, water, and war.

The course also considers how corporations exploit racial hierarchies and immigration status in their pursuit of profit.

POL 3701. Indigenous Tribal Governments and Politics. (DSJ,HIS; 3 cr. ; A-F or Audit; Fall Even Year)

History, development, structure, politics of American Indian Governments. North American indigenous societies from pre-colonial times to present. Evolution of aboriginal governments confronted/affected by colonizing forces of European/Euro-American states. Bearing of dual citizenship on nature/powers of tribal governments in relation to states and federal government.

POL 3733. From Suffragettes to Senators: Gender, Politics & Policy in the U.S.. (DSJ; 3 cr. ; A-F or Audit; Every Spring)

Overview to field of gender/politics. Examine role women play in U.S. policy process. How public policies are "gendered." How policies compare to feminist thinking about related issue area. Theories of role(s) gender plays in various aspects of politics.

POL 3752. Chicana/o Politics. (DSJ,SOCS; 3 cr. ; Student Option; Every Fall & Spring)

Theory/practice of Chicana/o politics through analysis of Mexican American experience, social agency. Response to larger political systems/behaviors using social science methods of inquiry. Unequal power relations, social justice, political economy.

POL 3766. Political Psychology of Mass Behavior. (SOCS; 3 cr. ; Student Option; Every Fall & Spring)

How do people develop their political opinions? What makes people vote the way that they do? Why do some people love, and other loathe, Donald Trump? Understanding how ordinary citizens engage with the political sphere is essential to understanding how politics work. This course applies a psychological approach to understanding how average people - members of the mass public - think about politics, make political decisions, and decide how (and whether) to take political actions. We will explore arguments about the role that ideology, biological and evolutionary factors, personality, identity and partisanship, racial attitudes, and political discussion play in shaping the opinion and behavior of members of the mass public. In addition, this class introduces students to the methodology of political psychology and how political psychologists approach questions and attempt to understand the political world. Students will exit the class having mastered a body of knowledge about how they and their fellow citizens think about politics and the different approaches that scholars take to study these decisions. They will also gain the critical capacity to judge arguments about politics, the ability to identify, define, and solve problems, and the skill to locate and critically evaluate information relevant to these tasks. Finally, this course takes a cooperative approach to learning, and many course activities will be structured around learning and working with a group of fellow students over the course of the semester.

POL 3767. Political Psychology of Elite Behavior. (CIV; 3 cr. ; Student Option; Fall Odd, Spring Even Year)

Why do some world leaders seek cooperation while others advocate war? Why do some Presidents effect major change while others are relegated to the dustbin of history? How does the personality of leaders affect how they behave in office? In this class, we will address questions like these by exploring the psychology of political elites, those members of society who wield outsized influence over political decisions. This outsized influence means that understanding how elites think is particularly important. It is also unusually difficult, leading some to argue that political psychology can play little role in understanding elite decision-making. Students will exit the class having mastered a body of knowledge about elite decision-making and learned about the different approaches that scholars take to study these decisions. They will also gain the critical capacity to judge arguments about politics, the ability to identify, define, and solve problems, and the skill to locate and critically evaluate information relevant to these tasks. Finally, this course takes a cooperative approach to learning, and many course activities will be structured around learning and working with a group of fellow students over the course of the semester. This course fulfills the Civic Life and Ethics theme requirement.

POL 3769. Public Opinion and Voting Behavior. (SOCS; 3 cr. ; Student Option; Every Fall & Spring)

Polls are ubiquitous, measuring what Americans think on topics big and small. This course examines the nature, measurement, and consequences of public opinion in the contemporary United States, with a particular emphasis on understanding why some voters preferred Donald Trump to Hillary Clinton - vice versa ? in the 2016 presidential election. We? ll address the following questions throughout the term. First, how do pollsters measure what the public thinks about government and public affairs? Second, can we assume that the responses people give to survey questions reflect their true thoughts and feelings about politics? Third, what are the major factors that shape voter decision making in U.S. presidential elections? By the end of this semester you will have a broader and deeper understanding of the nature, measurement, meaning, and consequences of public opinion.

POL 3786. Media and Politics. (3 cr. ; Student Option; Every Fall)

Do facts matter anymore? Is press freedom under threat? Are audiences trapped in filter bubbles? Why do people hate the media, and how can the news be improved to better serve citizens? Explore the historical and contemporary dynamics that shape the relationship between professionals in the media, the mass public, and political actors across different parts of government. Study major forms of mass media, including television and newspapers, alongside new forms such as digital and social media. Look at specific reporting rituals and practices, as well as

issues involving media ownership, regulation, ethics, and press freedom. We will study politicians' efforts to craft messages, advertise strategically, and target select audiences for political gain. The course will focus primarily, but not exclusively, on the United States, and you will be asked to engage with current events and the role of communication technologies in political and civic life.

POL 3810. Topics in International Relations and Foreign Policy. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall & Spring)

Topics courses delve in-depth into important issues in contemporary international politics. They aim to give students the theoretical, conceptual, and historical understanding, and/or empirical tools needed to understand the complexity of international politics today. Topics courses vary substantially from year to year as specified in the class schedule, but recent topics courses have included: 'Technology and War', 'International Law', 'Drones, Detention and Torture: The Laws of War', and 'The Consequences of War.'

POL 3833. The United States and the Global Economy. (3 cr. ; Student Option; Periodic Fall & Spring)

POL 3833 teaches students about the politics of the global economy with a focus on the role the United States plays within it. The class covers a variety of topics in international political economy, including international trade, international investment, and international finance. Students will learn about the factors that drive politicians' decision-making, interest-group stances, and citizens' preferences over such salient issues as tariffs and other forms of trade protection, trade and investment agreements, central banking, interest rates, international migration, and more. No background in economics is required or assumed.

POL 3835. International Relations.

(GP,SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Why do countries go to war? Are individuals, organizations, and states driven by their interests or their ideas? What role does power play in international relations and is there any role for justice in global politics? Do international laws and transnational advocacy groups matter in a world dominated by powerful states? Whose interests are served by a globalizing world economy? These questions are central to the study of international relations, yet different theoretical approaches have been developed in an attempt to answer them. Often these approaches disagree with one another, leading to markedly different policy prescriptions and predictions for future events. This course provides the conceptual and theoretical means for analyzing these issues, processes, and events in international politics. By the end of this class, you will be able to understand the assumptions, the logics, and the implications of major theories and concepts of international relations. These include realism and neorealism, liberalism and liberal institutionalism, constructivism, feminism, Marxism, and critical theory. A special effort is made to relate the course

material to world events, developments, or conflicts in the past decade or so.

POL 3841. The Consequences of War. (3 cr. ; Student Option; Periodic Fall & Spring)

War - both between and within states - is often horrific. With good reason, when the field of international relations emerged in the wake of the world wars, it was centrally preoccupied with shedding light on the causes of war so as thereby to prevent another one. But both interstate and civil wars are remarkably complex affairs. Notwithstanding wars' alarming human costs, their consequences are varied, often cross-cutting, and sometimes contradictory, and they resist our efforts to narrate their consequences in simple and straightforward ways. Wars can increase executive authority and strengthen the state, but they can also undermine inequitable international and domestic political orders, empires, and regimes, and make it possible for more just ones to take their place. Wars can permit repression and exploitation along the lines of race and other categorical identities, but those same experiences can also inspire those groups to demand first-class citizenship. In the name of insecurity and war, governments sometimes trample upon liberties, especially those of the politically weak and unpopular, but those measures may eventually come to seem unwarranted and even provoke a backlash that expands human liberty. War is filled with privation and trauma, but its horrors can also inspire veterans and victims to mobilize and promote more humane norms. We are properly taught to hate war, to avoid it at all costs. Yet social and political good has sometimes, surprisingly, come out of war too. This course explores the consequences of violent conflict in all its dimensions - the threat of conflict, mobilization for conflict, and the experience of warfare - on, among others, international order and norms, the fate of states and empires, population movements, state-building, nationalism, democracy, civil society, the citizenship struggles of racial minorities and other groups, gender roles, economic growth and inequality, the military-industrial complex, public health, and political culture. At this course's end, you will emerge not only with greater substantive understanding of war's consequences, but also with greater appreciation of war's complexity. For better or worse, you will never look at war the same way again.

POL 3843W. Night Raids, Detention, Torture, and Drones: Methods of War. (WI; 3 cr. ; Student Option; Every Fall)

In this class, we will be examining the use of particular tactics of war-night raids, detention, torture, and drones-as deployed, primarily, but not only, in the US-led war on terror. The purpose of this class is to grapple with the fundamental questions such tactics raise about what is right in war, and the costs and consequences of such tactics on both those who choose to use them and those that are targeted by them.

POL 3879. Critical Humanitarianism: Policy and Politics. (3 cr. ; Student Option; Every Spring)

Over the last two centuries the international community established a set of humanitarian norms, principles, and institutions designed to alleviate the suffering and improve the welfare of vulnerable populations. Humanitarianism? the efforts undertaken to relieve suffering for those displaced by war, human rights violations, climate change, and other disasters? has undergone significant development and transformation, with the expansion and institutionalization of humanitarian action now accepted as a normal part of global politics. Humanitarian organizations, such as the International Committee of the Red Cross or Doctors without Borders, are expected to be on the ground in situations of violence and disaster, with humanitarians leading the emergency responses. Their successes and failures inform not only our sense of what humanitarianism is, or what humanitarians do, but the life and death of those individuals whom they are sent to assist. Thus, this course engages the questions of what does it mean to claim humanitarianism, to do humanitarian work, and to be a humanitarian? We will take a historical approach to the rise of humanitarianism and trace its subjects and actors from the early 19th century to today, as one way of gaining purchase on these questions and to chart the practical, political, and ethical issues intrinsic to the promotion and legitimacy of humanitarianism. Students in this course will develop a better understanding of the current themes and debates in the field of humanitarianism, including the decolonization of aid and aid organizations, the relationship of humanitarian aid and military might, the professionalization of humanitarianism and the attendant issues of accountability to vulnerable populations. This course will also analyze the successes and failures of humanitarianism through both historical and contemporary examples.

POL 3994. Directed Research: Distinguished Undergraduate Research Program. (2 cr. [max 4 cr.] ; A-F only; Every Fall, Spring & Summer)

Students accepted into the Distinguished Undergraduate Research Program work closely with a faculty mentor on supervised projects related to faculty research. Through these activities, students will deepen research, organizational, and communication skills that will prove useful for further training in political science or for other careers. Students are chosen through a highly competitive online application the semester prior to registration. Students should check with Political Science advising for details about the application process. This course is only open to Political Science majors.

POL 4210. Topics in Political Theory. (; 3 cr. [max 9 cr.] ; Student Option; Every Fall & Spring)

Topics in political theory, as specified in Class Schedule.

POL 4255. Comparative Real Time Political Analysis: Marxist versus Liberal Perspectives. (GP,HIS; 3 cr. ; Student Option; Every Spring)

Karl Marx and Frederick Engels had better democratic credentials than Alexis de Tocqueville and John Stuart Mill. Vladimir Lenin, too, had better democratic credentials than Max Weber and Woodrow Wilson. That's the provocative argument of this course. Performing what it calls "comparative real-time political analysis," it presents convincing evidence to sustain both claims. When the two sets of protagonists are compared and contrasted in how they read and responded to big political events in motion, in real-time, the Marxists, it contends, proved to be better democrats than the Liberals. Real-time analysis argues that responding to and making decisions about events in motion is the real test of political perspective and theory; on Monday morning, we can all look smart. The writings and actions of all seven protagonists are the primary course materials? reading them in their own words. The European Spring of 1848, the United States Civil War, the 1905 Russian Revolution and, the 1917 Russian Revolution and end of World War I, all consequential in the democratic quest, are the main scenarios the course employs to test its claims. The findings, course participants will learn, challenge assumed political wisdom like never before. Employing the lessons of the comparisons to trying to make sense of current politics?given the unprecedented moment in which we find ourselves?is the other goal of the course.

POL 4267. Imperialism and Modern Political Thought. (CIV,HIS; 3 cr. ; Student Option; Periodic Fall & Spring)

How has political theory been shaped by imperialism? We will investigate this question through a study of such key thinkers as Kant, Mill, Marx, Lenin, C?saire, Fanon, and Gandhi, reading them through the lens of empire. Our goal is to analyze how such thinkers reflected upon, problematized and, at times, justified forms of Western imperialism. We will look at their explicit reflections on empire, as well as more tangential or ostensibly separate themes that may have only been shaped by the imperial context in indirect ways. Finally, we will reflect upon our contemporary location as readers and agents situated in the wake of these political and intellectual developments, analyzed through the question of what it means to engage in anti-colonial, decolonial, and/or postcolonial critique. This course will combine lectures by the professor with student-led seminar discussion.

POL 4275. Domination, Exclusion, and Justice: Contemporary Political Thought. (DSJ; 3 cr. ; Student Option; Periodic Fall & Spring)

Contemporary Political Theory systematically analyzes the meaning and significance of concepts central to current politics: domination, exclusion, and justice. Starting from basic concerns about the nature of politics, humans, power and justice, this course will explore how these basic starting assumptions organize the norms, practices, and institutions of political and social order. To explore these topics, the field turns to key texts, as well as to political and social events and other media (film,

historical documents, etc.). Through this course, students will also be introduced to different interpretive approaches, ranging from democratic theory, feminist, queer and critical race theories, as well as ethics and moral philosophy. Organized around the politics of the twentieth and twenty-first centuries, the course will pursue a range of questions about democratic legitimation, the exclusion of historically marginalized communities, systematic inequalities of different kinds, as well as ideals of democracy and justice. It will range from theoretical inquiry to practical questions of implementing different political projects. Through this course, students will develop skills in critical thinking, careful reading and clear writing, as well as recognizing and constructing arguments. These skills are basic for the critical, lifelong role that all of us play as members of political community. prereq: 1201 recommended

POL 4315W. State Governments:

Laboratories of Democracy. (WI; 3 cr. [max 4 cr.] ; Student Option; Periodic Fall & Spring) State governments are rarely at the forefront of the minds of the American public, but in recent years they have made critical decisions about issues like education, health care, climate change, and same-sex marriage. State governments perform a host of vital services, and they regulate and tax a wide array of business activities. Moreover, the states have adopted a very wide range of approaches in addressing these and other policy issues. This course examines the institutional and political changes that sparked the recent "resurgence of the states," and it investigates why state policies differ so dramatically from one another. In addition to playing a central and increasingly important role in the U.S. political system, the American states provide an unusually advantageous venue in which to conduct research about political behavior and policymaking. They are broadly similar in many ways, but they also offer significant variation across a range of social, political, economic, and institutional characteristics that are central to theories about politics. As a result, it becomes possible for scholars to evaluate hypotheses about cause-and-effect relationships in a valid way. This course pursues two related objectives. Its first goal is to give students a better understanding of American state governments? substantive significance. Its second goal is to use the states as an analytical venue in which students can hone their research and writing skills. Students will design and complete an original research paper on an aspect of state politics of their choosing. They will develop a research question, gather and critically evaluate appropriate and relevant evidence, and discuss the implications of their research. prereq: 1001 or equiv, non-pol sci grad major or instr consent

POL 4317. Becoming Stupid: Anti-Science in American Politics. (3 cr. ; Student Option; Every Fall)

(1) Political attacks on basic science, including climatology & global warming, vaccines, the Big Bang, evolution, human reproduction, sexuality,

and much more. (2) Pseudoscience and anti-intellectualism in American political culture. (3) Money, political interests, and propaganda that drive attacks on science.

POL 4335. African American Politics. (DSJ,SOCS; 3 cr. ; Student Option; Periodic Fall & Spring)

This course examines the historical and contemporary efforts by African Americans to gain full inclusion as citizens in the US political system. Specifically, the course explores advocacy efforts by civil rights organizations and political parties to obtain and enforce civil and political rights for blacks. An examination of these efforts begins in the Reconstruction Era and concludes with the historic election of the nation's first African American president. The course will cover topics such as the politics of the civil rights movement, black presidential bids and racialized voting in federal and state elections. Finally, the course examines how political parties and organized interests used the Voting Rights Act to increase the number of minorities in Congress. The course focuses on whether the growing number of minorities in Congress increases citizens' trust in government and their involvement in voting and participation in political organizations.

POL 4403W. Constitutions, Democracy, and Rights: Comparative Perspectives. (GP,WI; 3 cr. ; Student Option; Fall Even, Spring Odd Year)

Around the world, fundamental political questions are often debated and decided in constitutional terms, and in the United States, the constitution is invoked at almost every turn to endorse or condemn different policies. Is adhering to constitutional terms the best way to safeguard rights and to achieve a successful democracy? When and how do constitutions matter to political outcomes? This course centers on these questions as it moves from debates over how constitutional drafting processes should be structured and how detailed constitutions should be, to the risks and benefits of different institutional structures (federal v. unitary, and the distribution of powers between the executive, legislature, and judiciary), to which rights (if any) should be constitutionalized and when and why different rights are protected, closing with a discussion of what rules should guide constitutional amendment and rewrite. For each topic, we compare how these issues have been resolved in the U.S. with alternative approaches in a wide variety of other countries around the globe. The goal is not only to expose students to the variety of ways, successful or unsuccessful, that other political communities have addressed these issues, but also to gain a more contextualized and clearer understanding of the pros and cons of the U.S. model, its relevance for other democratic or democratizing countries, whether and how it might be reformed, and, generally speaking, when/how constitutions matter for democratic quality and stability.

POL 4410. Topics in Comparative Politics. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Topics of current analytical or policy importance to comparative politics. Topics vary, as specified in Class Schedule.

POL 4461W. European Government and Politics. (GP,WI; 3 cr. ; Student Option; Fall Odd, Spring Even Year)

This course will introduce you to three major topics that shape European social and political life today: 1) the struggle over what makes for a national/European identity: how contested national identities matter to European democratic politics and to the new populist movements, and the historical role of Islam in shaping European identities 2) the role of institutions in shaping popular representation and citizen agency; 3) European Union policies: dealing with immigration, the single currency and foreign and security policy especially in regard to Eastern/Central Europe and Russia. Each section will conclude with a comparative class debate, led by students, on the way contested historical interpretations and identities, institutions and policies matter also to US political and civic life. This is a writing intensive course and you will be asked to write a 12-15 page research essay on a European country of your choice. Several assignments, preceded by a writing workshop, will help you complete your final essay. The course will consist of lectures with PPTs, class discussions and group work, and at least one guest lecturer working in a local business connected with Europe. Indeed this course aims at preparing you to live and work in a deeply interconnected world, with special attention to the historical, social, political and economic ties between the US and Europe. Small changes will be made to the syllabus if current events or unexpected class needs require it, but the main themes, most readings and the assignments will remain as indicated in the syllabus. prereq: 1054 or 3051 or non-pol sci grad or instr consent

POL 4463. The Cuban Revolution Through the Words of Cuban Revolutionaries. (GP; 3 cr. ; Student Option; Every Fall)

Why do policy makers in Washington, D.C. continue to rail against the Cuban Revolution? Despite their best efforts, both Republican and Democratic administrations, the Revolution is still in place after six decades. How to explain? This is the central research question of the course. A definitive answer would require a thorough examination of the revolution from its initiation until today?which is beyond what can be done in a semester. The focus, rather, is more limited. First, how was the revolution made and consolidated?from 1953 until about 1969?and, second, how has it been able to survive and advance since the collapse of the Soviet Union, that is, since 1991? The emphasis here is on the role of leadership and strategy, how the Cubans and their leaders saw and see what they are doing?in their own words. This is an attempt to get into their heads, their understandings, through documents, speeches and writings. In keeping with the goals of liberal education, this course helps students to think outside the box of conventional wisdom. Why, for example, an underdeveloped society lacking many of the characteristics of a liberal democracy can

do a better job in meeting the basic needs of its citizens than its far richer neighbor to the north? What the Cubans seek to do is reorganize human relations on the basis of solidarity and not individual self-interest. How successful they have been in that pursuit is exactly one of the questions to which the course seeks to provide an answer. These questions are not simply of intellectual interest. Given the deepening crisis of world capitalism with the accompanying human misery, to know about Cuba's reality can have life and death consequences. Given, also, that the U.S. government doesn't make it easy for most of its citizens to travel to the island to make up their own minds about its reality, this course is a unique educational opportunity.

POL 4465. Democracy and Dictatorship in Southeast Asia. (GP; 3 cr. ; Student Option; Fall Even Year)

A fundamental question of politics is why some regimes endure for many years while others do not. This course examines the "menu of manipulation" through which dictators and democrats claim and retain power, and the conditions under which average citizens mobilize to challenge their governments, despite the risks and in the face of what may seem to be insurmountable odds. We will explore these political dynamics in Southeast Asia, one of the most culturally and politically diverse regions of the globe. Composed of eleven countries, Southeast Asia covers a wide geographical region stretching from India to China. With a rich endowment of natural resources, a dynamic manufacturing base, and a strategic location on China's southern flank, the region has come to play an increasingly important role in the political and economic affairs of the globe. Culturally and ethnically diverse, hundreds of languages are spoken, and the religions practiced include Buddhism, Catholicism, Hinduism, and Islam. The region is similarly diverse in its political systems, which range from democratic to semi-democratic to fully authoritarian.

POL 4474W. Russian Politics: From Soviet Empire to Post-Soviet State. (WI; 3 cr. ; Student Option; Every Fall & Spring)

Twenty five years ago, Russia appeared to be democratizing and was even on friendly relations with the US and NATO. Now Vladimir Putin runs the state with the FSB (KGB), and US-Russian relations are at their worst point since the 1970s. This course examines major themes and periods in Soviet and Post-Soviet Russian politics. It begins with the Russian Revolution of 1917, and continues with a study of the creation of the USSR and Soviet rule under Lenin, Stalin, and later decades. We look in depth at the economic and political system set up by the Communist Party, and at the causes of its collapse in 1991, which has had profound legacies for the post-Soviet development of Russia. Then in the second half of the course we turn to themes of political, economic, social and civic development under Yeltsin and Putin. We will pose the following questions: Why does democratization begin and why does it fail? How is economic reform undermined? What type of state and regime is

Russia now? What caused the Chechen wars and the massive bloodshed in the Caucasus during this period? Is Putin trying to recreate the Soviet Union and retake control of its neighbors? Are US-Russian relations improving as a result of Obama's "Reset," or are we now in an era of a new Cold War? What is Russia's goal in Syria, Iran, or Central Asia? Is Putin rebuilding Russia, or driving it to disaster, and how will this impact the West?

POL 4478W. Contemporary Politics in Africa and the Colonial Legacy. (GP,WI; 3 cr. ; Student Option; Every Spring)

At the core, this class is about the interaction between the assertion of and challenge to political authority in Africa. Who should have the right to make decisions that structure people's lives? To what extent is ?might? an important source of political authority? How, in turn, do people respond to these different means of establishing political authority? Using these questions as a springboard, this class will examine some broader themes relating to colonialism, state building, conflict and development in Africa. Politics in Africa, just as in any other place in the world, is complex and for that reason, the objective of the class is not to give you answers, but to have you think critically about the issues we cover. Towards this end, this class will draw on different sources ranging from novels to manifestos so as to illustrate both the mundane and extraordinary events that have helped shape the political landscape of the continent.

POL 4481. Comparative Political Economy: Governments and Markets. (3 cr. ; Student Option; Periodic Fall & Spring)

This course analyzes the compatibility of democracy and markets - whether democratic institutions undermine (enhance) the workings of market institutions and vice versa. Competing theoretical perspectives in political economy are critically evaluated. And the experiences of countries with different forms of democratic market systems are studied. Among the topics singled out for in-depth investigation are the economics of voting, producer group politics, the politics of monetary and fiscal policy, political business cycles, and trade politics.

POL 4487. The Struggle for Democratization and Citizenship. (; 3 cr. [max 4 cr.] ; Student Option; Every Spring)

How best to advance democracy?through the ballot box or in the streets? This question more than any other is what informs the course. As well as the streets, the barricades and the battlefields, it argues, are decisive in the democratic quest. If democracy means the rule of the demos, the people, then who gets to be included in ?the people"? An underlying assumption of the course is that the inclusion of previously disenfranchised layers of society into the category of the people, the citizens, is due to social struggles or the threat of such? an assumption to be examined in the course. Struggles refer to any kinds of movement for social change, from protests and strikes to revolutions broadly defined. This course seeks to see if there are lessons of struggle. The

course traces the history of the democratic movement from its earliest moments in human history and attempts to draw a balance sheet. In the process it seeks to answer a number of questions. Did social inequality always exist? How do property rights figure in the inclusion process? What is the relationship between the state, social inequality and democracy? Which social layers played a decisive role in the democratic breakthrough? What are the effective strategies and tactics in the democratic struggle? How crucial is leadership? And lastly, can the lessons of the past inform current practice? A particular feature of the course is to read about the thinking and actions of activists on both sides of the democratic struggle in, as much as possible, their own words.

POL 4492. Law and (In)Justice in Latin America. (; 3 cr. ; Student Option; Every Spring)

This course examines, from various angles, how law and justice function in contemporary Latin America, highlighting similarities and differences within and between countries and issue areas. Students reflect on and debate the causes behind the varied outcomes, as well as the effectiveness, actual and potential, of the different institutional and social change efforts that have been underway in the region since the 1980s. Specific topics addressed include accountability for past and present mass violence; origins of and responses to crime, from "mano dura" policies to criminal justice reform and anti-corruption initiatives; and advances and limitations in equal rights protection. Special attention is paid across the course to issues of indigeneity, race, class, gender, and sexuality. Throughout, students compare situations within Latin America, which is by no means a monolith, as well as consider parallels between Latin America and the United States, where, despite great differences in wealth, history and culture, similar problems of law and justice can be found. The course aims thus not only to teach students about Latin America but also to get students to think about what we might learn from Latin America.

POL 4497W. Patronage & Corruption.

(GP,WI; 3 cr. ; Student Option; Every Spring) This course examines dysfunction within the state apparatus -- in the specific forms of patronage, corruption, and clientalism -- and asks why such dysfunction persists and what factors drive it to change. The first half of the course will be primarily devoted to patronage. It will examine the functioning of the patronage mechanism; ask when and why patronage is abandoned in favor of meritocracy; and will assess the relationship between merit reforms and changes in the quality of governance. The second half of the course will be devoted to corruption. Specific topics to be covered will include: an examination of different forms of corruption, both at the level of political leaders and of bureaucratic officials; the relationship between corruption, democracy, transparency and accountability; governments' manipulation of corruption to provide incentives to bureaucratic and party officials; and different means of combating corruption. The course

will conclude with an examination of the relationship between patronage, corruption, clientalism and party politics, with a particular focus on the mechanisms that cause the correlation between these different forms of mis-governance.

POL 4501W. The Supreme Court and Constitutional Interpretation. (CIV,WI; 3 cr. ; Student Option; Every Fall)

This Course is designed to introduce students to constitutional law, with an emphasis on the U.S. Supreme Court's interpretation of Articles I, II, and III. This means that we will discuss how the nation's Court of last resort has helped shape the powers of and constraints on the three branches of our federal government. We will also discuss and analyze the development of law surrounding the separation of powers, the structure of federalism, congressional power over the commerce clause, and the creation and demise of the concept of substantive due process. Successful completion of this course will satisfy the liberal education requirement of Civic Life and Ethics. Effective citizenship in the 21st century requires an understanding of our how government was created, is structured, and has been interpreted by the Supreme Court over the past two centuries. This course is premised on the notion that such an understanding is best achieved by reading the primary sources that led to these goals ? the opinions handed down by the U.S. Supreme Court.

POL 4502W. The Supreme Court, Civil Liberties, and Civil Rights. (CIV,WI; 3 cr. ; Student Option; Every Spring)

Today, more than anytime since the civil rights movement of the 1960s, individual liberties are at the heart of controversial debate in the U.S. Groups, from the far left and far right of the political spectrum have pushed free speech towards the boundaries set by the Supreme Court. At the same time, the religion clauses have become as controversial as ever, with corporations and local governments using them in ways they have not been used before. Finally, the right to privacy is at a crossroads as the U.S. Supreme Court considers cases about reproductive rights and personal privacy. Given these issues, this course allows students to read all the major cases where the U.S. Supreme Court interprets the balance of protecting civil liberties versus allowing government to limit or suppress such liberties. Specifically, the course covers the 14th Amendment, freedom of speech, press, religion, and the limits of the free speech clause of the 1st Amendment. It also covers the 2nd Amendment and the right to privacy found in the 1st, 3rd, 4th, 5th, 9th, and 14th Amendments.

POL 4525W. Federal Indian Policy. (WI; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)

Formulation, implementation, evolution, comparison of Indian policy from pre-colonial times to self-governance of new millennium. Theoretical approaches to federal Indian policy. Major federal Indian policies. Views/attitudes of policy-makers, reactions of indigenous nations

to policies. Effect of bodies of literature on policies.

POL 4737. American Political Parties. (; 3 cr. [max 4 cr.] ; Student Option; Fall Odd, Spring Even Year)

This course focuses on U.S. political parties. We will cover the following themes this term: (1) what parties are and what they do; (2) party factions and coalitions; (3) social and issue cleavages; (4) how Democratic and Republicans view the world; (5) elite and mass polarization; and (6) the future of the Democratic and Republican parties. By the end of the semester you'll have a broad and deep understanding of the key role parties play in American politics, where they have been, and where they are going. prereq: 1001 or equiv or instr consent

POL 4771. Race and Politics in America: Making Sense of Racial Attitudes in the United States. (DSJ; 3 cr. ; Student Option; Periodic Fall)

Race continues to be one of the defining fault lines in American politics. Most obviously, the existence of racial inequality has enormous consequences for any given individual's social and economic standing. However, it also has had an enormous impact on the pattern of attitudes and beliefs which have served as the backdrop for many of society's most pressing political debates and conflicts. The purpose of this course is to provide students with an introduction to how political scientists have studied racial attitudes and the larger problem of inter-ethnic conflict in American society. We will begin with a look at the historical circumstances which have given rise to the major research questions in the area. From there, we'll look at the major research perspectives in the area, and see how well they actually explain public opinion on matters of race. In doing so, we'll also get a look at some of the major controversies in this area of study, particularly the issues of whether the "old-fashioned racism" of the pre-civil-rights era has been replaced by new forms of racism; and the degree to which debates over policy matters with no apparent link to race - such as crime and social welfare - may actually have a lot to do with racial attitudes. Finally, we will conclude by taking an informed look at racial attitudes in recent American history, focusing on how racial attitudes and their political consequences of have changed - and not changed - over the course of the Obama presidency and the tumultuous 2016 election.

POL 4773W. Advocacy Organizations, Social Movements, and the Politics of Identity. (DSJ,WI; 3 cr. ; Student Option; Every Fall & Spring)

This course introduces students to the major theoretical concepts and empirical findings in the study of U.S interest group politics. Students will read books and articles from a wide range of topics that include how interest groups are formed and maintained; various strategies and tactics that groups use to influence Congress, the courts, and executive branch; and whether those strategies result in fair and effective representation for all citizens

in society. Throughout the semester students will be exposed to research using a variety of methodologies and intellectual approaches. Further, the class discussions will emphasize general concepts that reoccur in the readings and in other classes. The goal is to assist students in mastering the key concepts in group politics. This is also a writing intensive course. Effective writing is encouraged through several writing assignments that require you to think clearly and express your thoughts concisely.

POL 4810. Topics in International Politics and Foreign Policy. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer) Analysis of selected issues in contemporary international relations. Topics vary, as specified in Class Schedule.

POL 4845. The Laws of War in International Politics. (3 cr. ; Student Option; Periodic Fall & Spring)

Is it possible to wage war and to maintain morality? Do the laws of war maintain morality, or do they justify vigorous wars? Do the laws of war even matter? If so, how do they matter? If not, why do they not? These are some of the broader questions that will guide our collaborative exploration and discussion of the laws of war and, importantly, our assessment of the applicability of the laws of war to contemporary topics. We will trace the codification of the laws of war in the 1949 Geneva Conventions and their 1977 Additional Protocols. We will look at their application in practice through the US led war on terror and specific questions such as protection of humanitarian actors, prisoner exchange, destruction of cities in war, protection of medical personnel, and other topics.

POL 4881W. The Politics of International Law and Global Governance. (GP,WI; 3 cr. ; Student Option; Periodic Fall & Spring)

Why do countries go to war? Are individuals, organizations, and governments driven by their interests or their ideas? What role does power play in international relations and is there any role for justice in global politics? What are the causes and consequences of an increasingly globalized world economy? These questions are central to the study of international relations, yet different theoretical approaches have been developed in an attempt to answer them. Often these approaches disagree with one another, leading to markedly different policy prescriptions and predictions for future events. This course provides the conceptual and theoretical means for analyzing these developments in international politics. By the end of this class, you will be able to understand the assumptions, the logics, and the implications of major theories and concepts of international relations. These include realism, liberalism, institutionalism, constructivism, critical security studies, feminist theory, queer IR theory, post-colonial theory, indigenous approaches to international relations, and neo-Marxism. A special effort is made to relate the course material to world events, developments, or conflicts in the past decade or so.

POL 4885W. International Conflict and Security. (GP,WI; 3 cr. [max 4 cr.] ; Student Option; Fall Odd, Spring Even Year)

Why do states turn to military force and for what purposes? What are the causes of war and peace? What renders the threat to use force credible? Can intervention in civil wars stall bloodshed and bring stability? How effective is military force compared to other tools of statecraft? How can states cope with the threat posed by would-be terrorists? What is counterinsurgency doctrine? What is the future of military force in global politics? This course addresses these questions - and others. The course is organized loosely into three sections or themes. The first section explores the causes and consequences of interstate war and peace. We will examine whether and how the international system, domestic institutions and politics, ideas and culture, ethnic and racial prejudice and inequity, and human psychology shape the path to war. Along the way, we debate whether war has become obsolete and why great power rivalry might be raising its ugly head once again. Attention is also devoted to the impact of war on economy and politics as well as the relations between armed forces and civilian government. The second section of the class explores the possibilities, limits, and challenges of more limited uses of force - such as the threat of force (coercion), peacekeeping and humanitarian intervention, and terrorism and counterterrorism. A third theme explores the strategic and ethical implications of the use of force and especially of innovation in military technologies - nuclear weapons, cyber, drones. Across all three sections, we examine how war and society mutually affect each other, including how racial, ethnic, and other categorical identities affect critical dynamics in security, from threat perception to military mobilization. The course is organized around theoretical arguments, historical cases and data, and policy debates. Sessions are deeply interactive, engaged discussion is a must, and the class often divides into smaller groups for more intensive debate. Class time is also devoted to helping students craft an effective final research paper.

POL 4887. Thinking Strategically in International Politics. (MATH; 3 cr. ; Student Option; Fall Odd, Spring Even Year)

The purpose of this class is threefold: First, to introduce students to the use and value of formal models of strategic interaction (game theoretic models) in international relations. Second, to impart some basic tools of such modeling to students. And third, to examine the contribution of theoretical models to substantive areas in international relations. In keeping with these three goals, the course is divided into three sections. The first two weeks will be devoted to such questions as: What is a theoretical model? What are rational choice and game theory? How are game theoretic models employed in international relations and what have been seminal contributions to the literature? The next portion of the class will introduce students to the basic tools employed in game theoretic analysis. The readings will illustrate the use of the tools introduced in class. And five problem sets will

be administered, requiring students to make use of these tools. The final portion of the class will examine substantive questions in international relations through the lens of game theory. The topics to be presented include: Domestic Politics and War, International Agreements and Treaties, International Finance and Trade, Conditionality, Terrorism, and Human Rights.

POL 4891. The Politics of Nuclear Weapons. (3 cr. ; Student Option; Periodic Fall & Spring)

Nuclear weapons have been a feature of international politics since the development of nuclear weapons by the United States during World War II. But how exactly do nuclear weapons affect international politics? This course tackles this question. In doing so, we examine the history of the nuclear era, the theories we can use to try to understand the ways in which nuclear weapons affect international politics, and key current policy challenges associated with nuclear weapons. For example, we'll ask: how do nuclear weapons work and how are nuclear materials created? Are nuclear weapons a force for peace or for instability and war? How likely is a nuclear war and how close did we come to nuclear war in the Cuban Missile Crisis or other crises? How dangerous is nuclear proliferation and why does the United States go to such lengths to stop other countries acquiring nuclear weapons? Why does the United States have so many nuclear weapons and what drove the nuclear arms race between the United States and the Soviet Union? Why have indigenous populations often borne the brunt of nuclear testing and how have issues of race and gender played into the history of nuclear weapons? What role do nuclear weapons play in India-Pakistan relations and what role will they play in future U.S.-China relations? How likely is nuclear terrorism? Is nuclear disarmament possible? Is it desirable?

POL 4910. Topics in Political Science. (3 cr. [max 6 cr.] ; Student Option; Periodic Fall & Spring)

Topics courses provide students the opportunity to study key concepts and themes in political science with an interdisciplinary approach. Subject matter will vary course to course.

POL 4991. Political Science Capstone. (3 cr. ; A-F only; Every Fall & Spring)

The Political Science Capstone is a required course that provides students with a unique opportunity to reflect on, articulate, share, and build on their individual experiences in the major. It invites students to reflect on what they have learned as political science majors; to demonstrate their knowledge through the preparation of a portfolio of materials; and to think about how the knowledge, skills, and insights of acquired in their major experience can be used and applied outside of the University. Students double majoring in Political Science and another discipline may choose to take this course or complete the capstone in their other major. Political Science majors who are writing an Honors thesis are exempt from this capstone requirement, as the department

will recognize the senior thesis as the capstone experience.

POL 4993. Honors Thesis: Directed Studies. (; 1-6 cr. [max 12 cr.] ; A-F only; Every Fall, Spring & Summer)
Individual research/writing of departmental honors thesis.

POL 4994. Directed Research: Individual. (1-4 cr. ; Student Option; Every Fall, Spring & Summer)
Directed individual reading and research between a student and faculty member. Prerequisite instructor and department consent.

POL 5315. State Governments: Laboratories of Democracy. (3 cr. [max 4 cr.] ; Student Option; Every Fall & Spring)
State governments are rarely at the forefront of the minds of the American public, but in recent years they have made critical decisions about issues like education, health care, climate change, and same-sex marriage. State governments perform a host of vital services, and they regulate and tax a wide array of business activities. Moreover, the states have adopted a very wide range of approaches in addressing these and other policy issues. This course examines the institutional and political changes that sparked the recent resurgence of the states, and it investigates why state policies differ so dramatically from one another. In addition to playing a central and increasingly important role in the U.S. political system, the American states provide an unusually advantageous venue in which to conduct research about political behavior and policymaking. They are broadly similar in many ways, but they also offer significant variation across a range of social, political, economic, and institutional characteristics that are central to theories about politics. As a result, it becomes possible for scholars to evaluate hypotheses about cause-and-effect relationships in a valid way. This course pursues two related objectives. Its first goal is to give students a better understanding of American state governments? substantive significance. Its second goal is to use the states as an analytical venue in which students can hone their research and writing skills. Students will design and complete an original research paper on an aspect of state politics of their choosing. They will develop a research question, gather and critically evaluate appropriate and relevant evidence, and discuss the implications of their research. prereq: grad student or instr consent

POL 5403. Constitutions, Democracy, and Rights: Comparative Perspectives. (; 3 cr. ; Student Option; Fall Even, Spring Odd Year)
Around the world, fundamental political questions are often debated and decided in constitutional terms, and in the United States, the constitution is invoked at almost every turn to endorse or condemn different policies. Is adhering to constitutional terms the best way to safeguard rights and to achieve a successful democracy? When and how do constitutions matter to political outcomes? This course centers on these questions as it moves from debates over how constitutional drafting

processes should be structured and how detailed constitutions should be, to the risks and benefits of different institutional structures (federal v. unitary, and the distribution of powers between the executive, legislature, and judiciary), to which rights (if any) should be constitutionalized and when and why different rights are protected, closing with a discussion of what rules should guide constitutional amendment and rewrite. For each topic, we compare how these issues have been resolved in the U.S. with alternative approaches in a wide variety of other countries around the globe. The goal is not only to expose students to the variety of ways, successful or unsuccessful, that other political communities have addressed these issues, but also to gain a more contextualized and clearer understanding of the pros and cons of the U.S. model, its relevance for other democratic or democratizing countries, whether and how it might be reformed, and, generally speaking, when/how constitutions matter for democratic quality and stability.

POL 5465. Democracy and Dictatorship in Southeast Asia. (GP; 3 cr. ; Student Option; Fall Even Year)
A fundamental question of politics is why some regimes endure for many years while others do not. This course examines the "menu of manipulation" through which dictators and democrats claim and retain power, and the conditions under which average citizens mobilize to challenge their governments, despite the risks and in the face of what may seem to be insurmountable odds. We will explore these political dynamics in Southeast Asia, one of the most culturally and politically diverse regions of the globe. Composed of eleven countries, Southeast Asia covers a wide geographical region stretching from India to China. With a rich endowment of natural resources, a dynamic manufacturing base, and a strategic location on China's southern flank, the region has come to play an increasingly important role in the political and economic affairs of the globe. Culturally and ethnically diverse, hundreds of languages are spoken, and the religions practiced include Buddhism, Catholicism, Hinduism, and Islam. The region is similarly diverse in its political systems, which range from democratic to semi-democratic to fully authoritarian.

POL 5492. Law and (In)Justice in Latin America. (3 cr. ; Student Option; Every Spring)
This course examines, from various angles, how law and justice function in contemporary Latin America, highlighting similarities and differences within and between countries and issue areas. Students reflect on and debate the causes behind the varied outcomes, as well as the effectiveness, actual and potential, of the different institutional and social change efforts that have been underway in the region since the 1980s. Specific topics addressed include accountability for past and present mass violence; origins of and responses to crime, from "mano dura" policies to criminal justice reform and anti-corruption initiatives; and advances and limitations in equal rights

protection. Special attention is paid across the course to issues of indigeneity, race, class, gender, and sexuality. Throughout, students compare situations within Latin America, which is by no means a monolith, as well as consider parallels between Latin America and the United States, where, despite great differences in wealth, history and culture, similar problems of law and justice can be found. The course aims thus not only to teach students about Latin America but also to get students to think about what we might learn from Latin America.

POL 5970. Individual Reading and Research. (1-4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)
Guided individual reading or study. Prereq instr consent, dept consent, college consent.

Portuguese (PORT)

PORT 1022. Intensive Beginning Portuguese. (; 6 cr. ; Student Option; Every Fall)
Intensive course for those with no Portuguese background. Develops novice-intermediate low proficiency in listening, speaking, reading, writing. Based on materials from Portugal, Brazil, and Portuguese-speaking Africa. Pair and small-group communicative activities, focused on interpreting and producing audio(visual) and written texts. This class is partially online.

PORT 1101. Beginning Portuguese. (; 5 cr. ; Student Option; Every Fall & Summer)
Listening, speaking, reading, writing. Cultures of Portugal, Brazil, or Portuguese-speaking Africa. Workbook assignments, paired/small group activities.

PORT 1102. Beginning Portuguese. (; 5 cr. ; Student Option; Every Spring)
Reading, writing, speaking, listening. Cultures of Portugal, Brazil, or Portuguese-speaking Africa. Workbook assignments, paired/small group activities. prereq: 1101 or instr consent

PORT 1103. Intermediate Portuguese. (; 5 cr. ; Student Option; Every Fall)
Emphasizes speaking, comprehension. Reading/writing skills based on Portuguese-language materials. Cultures of Portugal, Brazil, or Lusophone Africa. prereq: 1102 or instr consent

PORT 1104. Intermediate Portuguese. (; 5 cr. ; Student Option; Every Spring)
Emphasizes speaking, comprehension. Reading/writing skills based on Portuguese-language materials. Cultures of Portugal, Brazil, or Lusophone Africa. Grammar review. Compositions, short presentations. prereq: 1103 or instr consent

PORT 1911. Black Brazil: The long road to racial justice. (AH,GP; 3 cr. ; A-F only; Periodic Fall & Spring)
Brazil has long been seen as a place where racial mixtures are celebrated and where racism has been non-existent or assumed a "softer" expression than in the US. Due to this myth, known as "racial democracy," it has been difficult for Brazilian Blacks to identify themselves as such and mobilize for representation and equality of rights. This

course is an introduction to the cultural history of that struggle since the 1930s to the present. We will follow the emergence of Black voices denouncing the official racial ideology that aimed to "whiten," exclude and ultimately do away with the reminders (and remainders) of the 5 million African slaves who landed in Brazil between the 16th and 19th centuries. We will study a variety of materials from literature and the arts, including films, pop music, rap, and graffiti; and will also read short texts from journalism, history, and the social sciences. The course will end with the discussion of how the introduction of affirmative action in Brazilian public universities has encouraged a Black/White form of racial identification that many consider foreign to the dominant ethos (i.e. "we are all mixed?").

PORT 3001. Portuguese for Spanish Speakers. (; 4 cr. ; Student Option; Every Fall, Spring & Summer)
Listening, reading, speaking, writing. Uses communicative approach. prereq: SPAN LPE Pass

PORT 3003. Portuguese Conversation and Composition. (; 4 cr. ; Student Option; Every Fall & Spring)
Development of oral/written skills. Cultural information from Portuguese-speaking world. prereq: 1104 or 3001 or Port LPE

PORT 3501W. Global Portuguese: 1300-1900. (WI; 3 cr. ; Student Option; Every Fall)
Expressions of Portuguese and Brazilian cultures from the sixteenth through the nineteenth centuries from an anti-racist, decolonial perspective. Literary, religious, visual, architectonic, and musical works will be studied. prereq: 3003

PORT 3502W. Global Portuguese: 1900-present. (WI; 3 cr. ; Student Option; Every Spring)
Significant expressions of Brazilian culture, from colonial period to present. Emphasizes 20th/21st centuries. Literature, history, visual/sound culture, architecture. prereq: 3003

PORT 3800. Film Studies in Portuguese. (; 3 cr. [max 9 cr.]; A-F or Audit; Periodic Fall & Spring)
Films from Portuguese-speaking world in their historical, (geo)political, and socioeconomic contexts. Films from Brazil, Portugal, or Lusophone Africa analyzed under interdisciplinary framework, noting aspects related to cinematography/rhetoric. prereq: 3003 or instr consent or dept consent

PORT 3910. Topics in Lusophone Literatures. (; 3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring)
Issues studied through literature, visual, sound, media culture from one or more Portuguese-speaking countries. Topics may include gender/sexuality, postcolonialism/globalization, transatlantic studies. prereq: 3003

PORT 3920. Topics in Lusophone Cultures. (; 3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring)
Critical studies of various aspects of Portuguese-speaking cultures (Portugal, Brazil,

or Lusophone Africa). Topics may include popular music, visual/media culture, religion, diaspora, and Amazon. prereq: [1101, 1102, 1103, 1104] or [3001, 3003] or equiv

PORT 3993. Directed Studies. (1-4 cr. [max 9 cr.]; Student Option; Every Fall, Spring & Summer)
Guided individual reading or study. Students enrolling in this directed study/research course will complete the University's common Directed Study/Research contract with the faculty mentor/evaluator. The Faculty member will ensure academic standards are upheld, including: - the work proposed is at the appropriate level for the course, academic in nature, and the student will be involved intellectually in the project. - the project scope is reasonable for one semester and the number of credits specified (42 hours of work per credit) - the faculty mentor is qualified to serve in this role - assessment of student learning and grading criteria are clear and appropriate - the student will be working in a respectful, inclusive environment

PORT 4001. Portuguese for Spanish Speakers and Graduate Student Research. (; 4 cr. ; Student Option; Every Fall, Spring & Summer)
Listening, reading, speaking, writing. Uses communicative approach. prereq: [SPAN 1004 or SPAN 1014 or SPAN 1044, SPAN LPE pass] or instr consent

PORT 4003. Portuguese Conversation and Composition. (3 cr. ; Student Option No Audit; Every Fall & Spring)
The goals of this course are twofold. The first goal is to improve your abilities in the four areas of language (speaking, listening, reading, and writing) to the point that you can communicate advanced ideas in written and spoken Portuguese. The second goal is for you to possess a foundational understanding of Lusophone culture from the 1950s onward that will help generate your enthusiasm for Portuguese and help you understand how the arts are entwined in resistance to injustice throughout the Portuguese-speaking world. As a course that bridges the language courses and the content courses, PORT4003 includes both advanced grammar and critical analysis to prepare you for content courses, such as PORT 3501w, and the longer writing assignments that you will have in such courses. The course will be taught in Portuguese, and the reading, writing, and speaking will be done in Portuguese. prereq: 1104 or 3001 or Port LPE

PORT 4101. Beginning Portuguese for Graduate Student Research. (; 5 cr. ; Student Option; Every Fall)
Listening, speaking, reading, writing. Cultures of Portugal, Brazil, or Portuguese-speaking Africa. Workbook assignments, paired/small group activities. Meets concurrently with 1101.

PORT 4102. Beginning Portuguese for Graduate Student Research. (; 5 cr. ; Student Option; Every Spring)
Reading, writing, speaking, listening. Cultures of Portugal, Brazil, or Portuguese-speaking

Africa. Workbook assignments, paired/small group activities.

PORT 4103. Intermediate Portuguese for Graduate Student Research. (; 5 cr. ; Student Option; Every Fall)
Emphasizes speaking, comprehension. Reading/writing skills based on Portuguese-language materials. Cultures of Portugal, Brazil, or Lusophone Africa. Meets concurrently with 1103.

PORT 4104. Intermediate Portuguese for Graduate Student Research. (; 5 cr. ; Student Option; Every Spring)
Emphasizes speaking, comprehension. Reading/writing skills based on Portuguese-language materials. Cultures of Portugal, Brazil, or Lusophone Africa. Grammar review. Compositions, short presentations. Meets concurrently with 1104.

PORT 5910. Topics in Lusophone Cultures and Literatures. (; 3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring)
Cultural manifestations in Portuguese-speaking world (Portugal, Brazil, Lusophone Africa). Literature, history, film, intellectual thought, critical theory, popular culture. Topics may include writers (e.g. Machado de Assis) groups of writers (e.g. Lusophone women writers), or problematics such as (post-)colonialism or Luso-Brazilian modernities. prereq: Grad student or instr consent

PORT 5993. Directed Studies. (1-4 cr. [max 9 cr.]; Student Option; Every Fall, Spring & Summer)
Lusophone studies (Portuguese-speaking Africa, Brazil, Portugal). Areas not covered in other courses. Students submit reading plans for particular topics, figures, periods, or issues. Prereq MA or PhD candidate, instr consent. Students enrolling in this directed study/research course will complete the University's common Directed Study/Research contract with the faculty mentor/evaluator. The Faculty member will ensure academic standards are upheld, including: - the work proposed is at the appropriate level for the course, academic in nature, and the student will be involved intellectually in the project. - the project scope is reasonable for one semester and the number of credits specified (42 hours of work per credit) - the faculty mentor is qualified to serve in this role - assessment of student learning and grading criteria are clear and appropriate - the student will be working in a respectful, inclusive environment

PORT 5994. Directed Research. (1-4 cr. [max 9 cr.]; Student Option; Every Fall, Spring & Summer)
Graduate-level research in literatures and cultures of the Portuguese-speaking world. Topics vary. Prereq Grad student or instr consent. Students enrolling in this directed study/research course will complete the University's common Directed Study/Research contract with the faculty mentor/evaluator. The Faculty member will ensure academic standards are upheld, including: - the work proposed is at the appropriate level for the course, academic in nature, and the student will be involved intellectually in the project. - the

project scope is reasonable for one semester and the number of credits specified (42 hours of work per credit) - the faculty mentor is qualified to serve in this role - assessment of student learning and grading criteria are clear and appropriate - the student will be working in a respectful, inclusive environment

Postsecondary Tchg and Lrng (PSTL)

PSTL 1211. Sociological Perspectives: A Multicultural America. (DSJ,SOCS; 4 cr. ; Student Option; Every Fall & Spring)

Introduction to sociological thinking through engaged, active learning, including service in community. Interaction of race, class, gender, age with greater societal institutions. Apply foundational understanding of sociology to real world situations.

Poultry Health (POUL)

POUL 5001. Avian Anatomy and Physiology. (; 1 cr. ; A-F or Audit; Every Fall)

This course provides an abbreviated overview of avian anatomy and physiology at the gross and cellular levels. Basic avian anatomy and physiology will be presented in the context of the commercial broiler chicken and turkey.

POUL 5002. Poultry Nutrition. (; 1 cr. ; A-F only; Every Spring)

The purpose of this course is to provide the principles of poultry nutrient metabolism, feed composition, and chemistry as it applies to commercial broiler chickens and turkeys.

POUL 5003. Poultry Diseases. (; 1 cr. ; A-F only; Every Spring)

The purpose of this course is to provide introduction to common diseases of poultry, focusing on commercial broiler chicken and turkey production in the United States. We will start with an introduction to the principles of disease, and the role of the host in susceptibility to disease. Then, specific diseases will be covered, including viral, bacterial, fungal, and protozoal pathogens. Finally, non-infectious disease associated with nutrition, metabolism, and toxins will be covered. The student will gain understanding of the pathogen and host relative to each disease covered.

POUL 5013. Animal Welfare. (; 1 cr. ; A-F only; Every Spring)

This course will cover the basic principles, history, and application of animal welfare science for poultry. Students will learn to assess the welfare of poultry using science-based methods and reasoning. This course will provide background and application of animal welfare science.

POUL 5015. Broiler/Layer/Turkey Rotation. (1 cr. ; A-F only; Every Summer)

This course will serve as the capstone of the Applied/Production track of the Poultry Health Certificate. This one-week, in-person experience will be catered to the student's interest in one of three areas: commercial broiler chicken, chicken layer, or turkey production. The student will choose one of

these three experiences and will learn core competencies in that area over a 1-week intensive hands-on course.

POUL 5016. Capstone in Molecular Technologies. (1 cr. ; A-F or Audit; Every Summer)

This course will serve as the capstone of the Research/Diagnostics track of the Poultry Health Certificate. This one-week, in-person experience will take place at the MCROC laboratory in Willmar, Minnesota. The student will learn about core molecular techniques and gain hands-on experience with these techniques over a 1-week intensive hands-on course.

POUL 5101. Living in a microbial world and raising animals: the poultry perspective. (; 3 cr. ; A-F only; Every Fall)

It's a microbial world. We are just living in it. This statement by Professor Mark Martin could not be more relevant than it is today. In every aspect of life, microbes play a role. This is particularly true in agricultural practices used to grow food for the human population. Good and bad, microbes are intricately linked to the practice of raising meat, fruits, and vegetables for human consumption. The purpose of this online course is to emphasize the holobiont, which is the host itself plus the assemblage of microbes living inside and outside of it. This is different than your typical microbiology course. Yes, we will cover the basics of microbiology, and the role of the microbiome in the maintenance of health and disease. But we will also put this information in the context of ecology. Using the poultry production environment as an example, you will learn about the basics of poultry production and how microbes contribute to every aspect of the production chain - including the bird itself, the barns that birds are grown in, the ecosystem surrounding these barns, the processing plants that produce our meat, and even us as we interface with live production animals and consume their meat. In practical terms, this course will train you to appreciate and understand how normal microbial microbes in the animal and its surrounding environment are important for everyday life, health, and success. This course is suitable for upper-level undergraduate students, graduate students, and non-traditional industry professionals.

POUL 5102. How safe is your chicken? Food safety from a poultry perspective. (; 3 cr. ; A-F only; Every Fall)

The purpose of this course is to provide introduction to food safety with emphasis on poultry production. An emphasis will be given to understanding the major pathogens transmitted through live poultry and products and how they can be controlled or mitigated in live production and processing steps. After completing this course, you will have understanding of the basic food safety principles, major foodborne pathogens in poultry, principles of hazard analysis and critical control points (HACCP)-approach of food safety, meat and egg safety, and major preharvest and post-harvest approaches to

safety of poultry foods. This course is suitable for upper-level undergraduate students, graduate students, and non-traditional industry professionals.

POUL 5103. Poultry biosecurity: framework for healthy production. (; 3 cr. ; A-F only; Every Fall)

In 2015, an avian influenza virus was introduced to poultry production in the upper Midwestern United States. This outbreak resulted in the destruction of more than 43 million chickens and turkeys raised for meat and egg production, devastating these poultry industries. This changed our view of biosecurity forever as it related to protecting the poultry supply. While this virus has subsided, we do not know where or when the next threat will emerge, and as such we need to be prepared for the unknown. The purpose of this course is to provide the principles of biosecurity, with an emphasis on poultry production. This course will cover the basics of biosecurity, and the role of everyone in the maintenance of biosecurity in commercial broiler chickens, turkeys, and egg layers. You will learn about biosecurity and will learn how to develop an effective biosecurity plan while navigating regulations and other logistical challenges. This online course is suitable for upper-level undergraduate students, graduate students, and non-traditional industry professionals.

Product Design (PDES)

PDES 2701. Creative Design Methods. (3 cr. ; A-F only; Every Fall)

This class is an introduction to a variety of tools and methods used in developing new product concepts. The focus of the class is on the early stage of product development which includes user research, market research, idea generation methods, concept evaluation, concept selection, intellectual property, and idea presentation. Students work individually applying the content taught in lecture to a semester-long design project. Students meet in teams bi-weekly to present and critique their work.

PDES 2702. Concept Sketching. (3 cr. ; A-F only; Every Fall)

This class is an introduction to manual sketching techniques, specifically for the communication of conceptual product ideas. The focus of this class is on free-hand perspective drawing. Students begin with basic principles, simple shapes, light and shadow, and later learn how to combine forms to create conceptual objects with realistic perspective. In this class, there are weekly drawing assignments and presentations.

PDES 2703. Concept Visualization and Presentation 1. (3 cr. ; A-F only; Every Spring)

This class builds upon the fundamentals taught in PDES 2702 Concept Sketching. Students learn to draw complex geometries and organic forms and how to add shading, shadow, text and backgrounds to enhance their drawings. Markers and other physical tools are introduced in this class as a means

of further refining a sketch. In the second half of the semester, students learn to digitally improve their sketches and are introduced to the fundamentals of digital sketching with a drawing tablet and digital sketching software. As this class is taught in smaller sections, there are many opportunities for students to present and critique work. The basics of design portfolios are covered at the end of this class.

PDES 2704. Concept Visualization and Presentation 2. (3 cr. ; A-F only; Every Fall) Building upon the principles taught in PDES 2703 Concept Visualization and Presentation 1, this course covers advanced digital sketching and 2D rendering techniques for product designers. The emphasis of this class is placed on refining sketches for professional presentation. As this class is a co-requisite with PDES 2771 Product Design Studio 1, some assignments will compliment projects assigned in studio.

PDES 2771. Product Design Studio 1. (4 cr. ; A-F only; Every Fall) This is the first design studio for product design majors. It is an introduction to user-centered design using industry-standard practices. Students will apply skills learned in their prior core classes towards a semester-long individual product design challenge. The deliverables focus on user research, market research, concept development, lo-fidelity prototyping, and concept presentation.

PDES 2772. Product Design Studio 2. (4 cr. ; A-F only; Every Spring) This is the second studio course for product design majors. This studio explores physical prototype development using industry-standard practices. Students will apply skills learned in their prior core classes towards several individual product design challenges. The deliverables cover human factors & ergonomics, prototype craftsmanship, aesthetics, form giving, functionality, design for manufacture, and presentation skills.

PDES 2777. Product Form and Model Making. (3 cr. ; A-F only; Every Spring) This class is a hands-on introduction to prototyping tools, materials, and techniques for product design. Students learn the basics of working with foam-board, foam, and wood to create physical models and will be introduced to different surface treatments and finishes. Assignments are designed to build a sense of craftsmanship and attention to detail. There are multiple individual projects focusing on different materials and techniques. Each project involves practicing oral presentation and group critique.

PDES 3196. Product Design Internship. (1-2 cr. ; S-N only; Every Fall, Spring & Summer) Supervised work experience relating activity in business, industry, or government to the student's area of study. Integrative paper or project may be required. prereq: PDes major

PDES 3704. Computer-Aided Design 1: Solid Modeling and Rendering. (3 cr. ; A-F only; Every Fall) This class provides an overview of computer-aided design (CAD) methods for product

designers. The primary software covered in this course include Solidworks and Keyshot. These programs are used to make three-dimensional computer generated models of product concepts and render the models to appear photo-realistic. This class may also cover additional 2D and interaction design software.

PDES 3705. History and Future of Product Design. (3 cr. ; A-F only; Every Spring) This class covers critical milestones in the history, evolution, and trajectory of modern product design as well as the human relationships to consumer goods, including production and consumption. In some assignments, students have the opportunity to apply the topics discussed towards imagining the future of the product design industry.

PDES 3706. Designing for Manufacture. (4 cr. ; A-F only; Every Spring) This class is a hands-on overview of common manufacturing methods, tools, and considerations for product designers. The focus is placed on plastic and metal related processes specifically machining, forming, casting, and molding. Throughout the course students apply the theory of design for manufacturing (DFM) and design for assembly (DFA) to a series of design projects. This course also covers related topics such as material identification, bill of material, cost estimation, part drawings, tolerances, fasteners, part finishing, and sourcing parts.

PDES 3711. Product Innovation Lab. (; 4 cr. ; A-F only; Every Spring) A hands-on experience in integrated product design and development processes. Elements of industrial design, engineering, business, and humanities are applied to a semester-long product design project. Cross-functional teams of students in different majors work together to design and develop new consumer product concepts with guidance from a community of industry mentors. prereq: PDes 2772 OR Junior/Senior (any major) or permission from instructor

PDES 3714. Computer-Aided Design Methods 2: Surface Modeling and Rendering. (3 cr. ; A-F only; Every Spring) This class provides an overview of the digital surface modeling of existing products and conceptual objects with complex curves. Students will learn how to use the 3D surfacing software (e.g., Alias or Rhino) and apply material and texture with the rendering software (e.g., KeyShot). They will also gain a basic understanding of the science and logic behind the software. In addition, students will gain hands-on experience with topics closely related to this field including lighting, background, and render post-processing.

PDES 3715. Design and Food. (4 cr. ; A-F only; Every Fall) This class is a hands-on introduction to principles of design applied to the food industry. Students develop new food concepts working in a kitchen classroom with regular advising from local chefs and food industry experts. The class is structured into four modules: creative design process, flavor and

texture, visual aesthetics, and user experience. In each module students learn different design and food preparation methods and apply them to a design challenge. Several restaurant outings are incorporated into the curriculum.

PDES 3737. Product Design Portfolio. (2 cr. ; A-F only; Every Fall & Spring) Portfolio skills specific to the field of product/industrial design. Development and critique of verbal and visual presentation skills. Overview of the breadth and expectations of the profession.

PDES 3771. Product Design Studio 3. (4 cr. ; A-F only; Every Fall) This is the third studio course for product design majors in which students will further develop skills specific to their selected track/sub-plan. Students will apply skills learned in their prior core classes towards several individual product design challenges. Students in the user experience section may explore topics in service design, immersive environments, IoT, digital/physical integration, or smart products. Students in the integrated product development section may explore topics in furniture, medical devices, electromechanical products, consumer electronics, digital/physical integration, or smart products. Both sections will further develop presentation skills.

PDES 3790. Product Design Experience Abroad. (; 1-10 cr. ; A-F or Audit; Periodic Fall, Spring & Summer) Faculty-led study abroad course. Destinations vary by semester offered.

PDES 4193. Directed Study in Product Design. (; 1-4 cr. [max 8 cr.]; A-F or Audit; Every Fall, Spring & Summer) Independent study in product design under tutorial guidance. prereq: Undergrad, instr consent

PDES 4701W. Capstone Research Studio. (WI; 4 cr. ; A-F only; Every Fall) Students synthesize and apply design and research techniques to a senior capstone project. Projects can be student-directed or client-sponsored and are intended to demonstrate competency in fundamental design skills, communicating and documenting design processes, and the ability to apply design processes to develop new products and services while addressing real-world constraints. The first course of the two-course sequence focuses on problem/opportunity identification, user research methodologies, ideation and conceptual design, and early stage prototyping.

PDES 4702W. Capstone Design Studio. (WI; 4 cr. ; A-F only; Every Spring) Students synthesize and apply design and research techniques to a senior capstone project. Projects can be student-directed or client-sponsored and are intended to demonstrate competency in fundamental design skills, communicating and documenting design processes, and the ability to apply design processes to develop new products and services while addressing real-world constraints. The second course of the

two-course sequence focuses on concept refinement, advanced prototyping, detailed design and engineering, user testing, manufacturing, and business and distribution considerations.

PDES 5193. Directed Study in Product Design. (; 1-4 cr. [max 8 cr.]; A-F or Audit; Every Fall, Spring & Summer)
Independent study in product design under tutorial guidance. prereq: Grad, instr consent

PDES 5701. User-Centered Design Studio. (4 cr. ; A-F only; Every Spring)
This class provides a studio-based overview of user-centered product design and development processes. Students will practice both user and market research, creativity and idea generation tools, concept evaluation/selection techniques, prototyping methods for concept development and communication, and user testing. This class will also cover fundamentals of intellectual property and manufacturing. In this studio, students will apply these skills towards the development of a product concept.

PDES 5702. Visual Communication. (3 cr. ; A-F only; Every Fall)
This class provides an overview of sketching, manual rendering and Adobe Photoshop, Illustrator, and InDesign for communication of conceptual product design. Topics covered will include free-hand perspective drawing of simple/complex geometries, line weight/quality, shading/shadow, design details and annotations, as well as image editing, vector graphics, and multi-page layout design. There will be weekly drawing assignments and critique of work.

PDES 5703. Prototyping Methods. (4 cr. ; A-F only; Every Fall)
This class is a hands-on introduction to traditional and digitally interactive prototyping tools and techniques. Through a series of projects students will gain experience with building product models using different materials and tools related to foam core, foam, wood, Arduino, and digital fabrication. In the process, the course covers design topics related to form and function, ergonomics, visual aesthetics, and design critique.

PDES 5704. Computer-Aided Design Methods. (3 cr. ; A-F only; Every Fall)
This class provides an overview of how to make high-quality digital computer-based models of existing and conceptual products and interactions. Students will learn Adobe Photoshop, Adobe Illustrator, and Axure for two-dimensional design and digital prototyping. Students will also learn SolidWorks and KeyShot for three-dimensional solid modeling and rendering. prereq: Senior or grad student

PDES 5705. History and Future of Product Design. (3 cr. ; A-F only; Every Spring)
This class covers critical milestones in the history, evolution, and trajectory of modern product design as well as the human relationships to consumer goods, including production and consumption. In some assignments, students have the opportunity to apply the topics discussed towards imagining the future of the product design industry.

PDES 5706. Designing for Manufacture. (4 cr. ; A-F only; Every Fall)
Hands-on exposure to a number of common manufacturing methods and the considerations in product design. Students will be able to apply the theory of design for manufacturing (DFM) and design for assembly (DFA) to other methods that may not be taught in this course.

PDES 5711. Product Innovation Lab. (; 4 cr. ; A-F only; Every Spring)
A hands-on experience in integrated product design and development processes. Elements of industrial design, engineering, business, and humanities are applied to a semester-long product design project. Cross-functional teams of students in different majors work together to design and develop new consumer product concepts with guidance from a community of industry mentors

Psychology (PSY)

PSY 1001. Introduction to Psychology. (SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer)
Scientific study of human behavior. Problems, methods, findings of modern psychology.

PSY 1001H. Honors Introduction to Psychology. (SOCS; 4 cr. ; A-F only; Every Fall & Spring)
Scientific study of human behavior. Problems, methods, findings of modern psychology. prereq: Honors.

PSY 1010. Topics in Psychology. (; 1-3 cr. ; Student Option; Periodic Fall & Spring)
Introductory topics of current interest in Psychology.

PSY 1916. Race in Everyday Space. (DSJ; 3 cr. ; A-F only; Periodic Fall & Spring)
This seminar examines the nature and meaning of being racial and ethnic minorities in the United States, with a particular focus on immigrant, refugee, second-generation, and adoptee communities that are unique to Minnesota and the Midwest. Students will learn about the unique and common histories, struggles, and successes of Blacks, Asian Americans, Latinx, and American Indians. Drawing upon psychological theory and research, as well as interdisciplinary ethnic studies scholarship, the seminar engages students in a critical analysis of the ways in which race, ethnicity, and migration affect the everyday lives of racial/ethnic minority individuals and families.

PSY 1923. The Freshman 15: Stress and Health Management for College Students. (; 3 cr. ; A-F only; Periodic Spring)
The start of college is a time of significant transition from family home to campus living. The changes across many domains of one's life can disrupt healthy habits and initiate unhealthy ones. Are your stress levels out of control? Are you worried about your college eating habits? Are you planning to catch up on sleep after you graduate? In this seminar we will use a biopsychosocial framework, popular in health psychology, to examine personal health influences and choices. You will gain insight into your own health and learn methods

to improve and sustain health behaviors that will better support your life as a student and your life beyond college.

PSY 1925. Neuroimaging in Psychology: Why Do Psychologists Use Magnets & Electrodes to Look at People's Brains. (; 3 cr. ; A-F only; Periodic Spring)
This seminar explores how people use electricity and magnets to study brains. It seems almost magical that we can use magnets, radio antennae, and electrodes to figure out what people are thinking. But there's no magic about it, and we will spend part of our time together learning about the basic physics and neuroscience that make functional magnetic resonance imaging (fMRI), magnetoencephalography (MEG), and electroencephalography (EEG) possible. We will spend the rest of the time talking about why people want to do this ? and whether or not they should. The central problem is that, once we've collected our data, we have to interpret it. In order to interpret our data, we have to make some assumptions about how things work. The goal of this seminar is to teach students to detect and question those assumptions. Students will use weekly writing assignments to sharpen their thinking on each topic. The midterm exam will be a debate on the topic ?Can we read people's minds??. and the final project will be to explain a popular neuroimaging paper to a stranger.

PSY 1926. Our Innovating Minds: Introducing the Cognitive and Brain Sciences of Individual and Group Creativity. (; 3 cr. ; A-F only; Periodic Fall)
Creativity and innovation are essential to our ability to flexibly and positively make changes in our lives ? both individually and collectively. How do our minds, brains, and environments together enable the generation and shaping of useful and influential novel ideas? This seminar course investigates this question, drawing on research and observations from the cognitive and brain sciences and other disciplines such as design, art, and computer science. Core parts of the course involve reading and discussing original research articles along with active hands-on/minds-on within-class collaborative activities. One integrative theme throughout the course is the ways in which creative thinking/making is boosted when we contextually vary the extent to which we deliberately exert cognitive control in the pursuit of creative goals. A second integrative theme is understanding how we need both concreteness and abstraction to best realize our making/creating endeavors.

PSY 3001V. Honors Introduction to Research Methods. (WI; 4 cr. ; A-F only; Every Spring)
Concepts/procedures used to conduct/evaluate research, especially in social sciences. Benefits/limitations of traditional research methods. Evaluating scientific claims. prereq: [1001, [2081/3801 or equiv]]or dept consent, PSY major, honors student

PSY 3001W. Introduction to Research Methods. (WI; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Concepts/procedures used to conduct/evaluate research, especially in social sciences.

Benefits/limitations of traditional research methods. Evaluating scientific claims. prereq: [1001, [2801 or 3801 or equiv]] or dept consent

PSY 3011. Introduction to Learning and Behavior. (; 3 cr. ; Student Option; Every Fall) Methods/findings of research on learning and behavior change. Twentieth-century theoretical perspectives, including contemporary models. Emphasizes animal learning and behavioral psychology. prereq: 1001

PSY 3031. Introduction to Sensation and Perception. (; 3 cr. ; Student Option; Every Fall & Spring) Psychological, biological, and physical bases of sensory experience in humans and animals. Emphasizes senses of vision/hearing. prereq: PSY 1001

PSY 3051. Introduction to Cognitive Psychology. (; 3 cr. ; Student Option; Every Fall, Spring & Summer) Scientific study of the mind in terms of representation and processing of information. Research and theory on cognitive abilities such as perception, attention, memory, language, and reasoning. Aspects of computational modeling and neural systems. prereq: 1001

PSY 3061. Introduction to Biological Psychology. (; 3 cr. ; Student Option; Every Fall, Spring & Summer) Neurophysiology/neuroanatomy, neural mechanisms of motivation, emotion, sleep-wakefulness cycle, learning/memory in animals/humans. Neural basis of abnormal behavior, drug abuse. prereq: 1001 or BIOL 1009 or NSci 1100 prereq: 1001 or BIOL 1009 or NSci 1100

PSY 3101. Introduction to Personality. (; 3 cr. ; Student Option; Every Fall & Spring) Covers the major issues in personality psychology, including personality traits, their assessment, and their roots in genetic and environmental influences; personality development and the effects of personality on life outcomes; psychological and biological processes related to personality; and the importance of goals, roles, and narrative identity. Various contemporary and historical perspectives are considered, including psychodynamic, humanistic, behaviorist, and evolutionary approaches. prereq: 1001

PSY 3121. History and Systems of Psychology. (; 3 cr. ; Student Option; Every Spring) Survey of the history, methods, and content of modern psychological theory, research, and application. Schools of psychology (e.g., structuralism, functionalism, behaviorism, Gestalt psychology) and central theories of psychology reviewed in their historical and philosophical context. prereq: PSY 1001

PSY 3135. Introduction to Individual Differences. (3 cr. ; Student Option; Every Fall & Spring) Differential methods in studying human behavior. Psychological traits. Influence of age, sex, heredity, environment in individual/group differences in ability, personality, interests,

social attitudes. prereq: [1001, [3801 or equiv]] or instr consent

PSY 3201. Introduction to Social Psychology. (; 3 cr. ; Student Option; Every Fall, Spring & Summer) Overview of theories/research in social psychology. Attitudes/persuasion, social judgment, the self, social influence, aggression, prejudice, helping, and applications. prereq: 1001 or instr consent

PSY 3206. Introduction to Health Psychology. (; 3 cr. ; Student Option; Every Spring) Theories/research in health psychology. Bi-directional relationships between psychological factors and physical health. Stress/coping, adjustment to chronic illness. Psychological factors in etiology/course of disease. Health behavior change. prereq: 1001

PSY 3301. Introduction to Cultural Psychology. (; 3 cr. ; A-F or Audit; Every Fall & Spring) Theories/research on how culture influences basic psychological processes (e.g., emotion, cognition, psychopathology) in domains that span different areas of psychology (e.g., social, clinical, developmental, industrial-organizational) and of other disciplines (e.g., anthropology, public health, sociology). prereq: 1001

PSY 3511. Introduction to Counseling Psychology. (; 3 cr. ; Student Option; Every Fall, Spring & Summer) History, theories, and research related to counseling psychology. Development/application of counseling theories to diverse populations. Psychological research on counseling process. Psychological mechanisms that promote change in people's lives. prereq: 1001

PSY 3604. Introduction to Abnormal Psychology. (; 3 cr. ; Student Option; Every Fall, Spring & Summer) Diagnosis, classification, etiologies of behavioral disorders. prereq: 1001

PSY 3617. Introduction to Clinical Psychology. (; 3 cr. ; Student Option; Every Fall & Spring) Historical developments, contemporary issues. Trends in psychological assessment methods, intervention strategies, and clinical psychology research. Theories behind, empirical evidence for, usefulness of psychological intervention strategies. prereq: 3604 or 5604H

PSY 3621. Japanese Traditions & Psychology of Well-Being. (3 cr. ; Student Option; Periodic Summer) During this class we will travel to the two main regions of Japan, Honshu, and Oki-Shoto. Students will deepen their knowledge of Japanese culture, consider lifespan development within the context of family and examine rituals and traditions within the context of family. To understand these traditions, students will apply their deepening knowledge of the culture. From a lifespan development perspective, we will plan to study some of the common developmental processes that occur, emphasizing individual and family

development. Finally, we will explore family traditions and rituals in Japan including: (a) what function they serve; (b) what factors are associated with tradition adherence; and (c) influences outside (e.g., nuclear war) or inside (e.g., parental mental illness) the family that may promote or interfere with these traditions. No Japanese language knowledge is required.

PSY 3633. Happiness: Integrating Research Across Psychological Sciences. (; 3 cr. ; Student Option; Every Fall) Nature of human happiness/fulfillment. Insights from cognitive, personality, and social psychology, and from biology and economics. Integrative approach to feelings that make life worth living. prereq: 3001W or 3001V or instr consent

PSY 3666. Human Sexuality. (; 3 cr. ; Student Option; Periodic Fall & Spring) Overview of theories, research, and contemporary issues in human sexual behavior from an interdisciplinary perspective. Sexual anatomy/physiology, hormones/sexual differentiation, cross-cultural perspectives on sexual development, social/health issues, and sexual dysfunction/therapy. prereq: 1001

PSY 3711. Psychology in the Workplace. (; 3 cr. ; Student Option; Every Fall & Spring) Application of psychological theory/research to recruitment, personnel selection, training/development, job design, work group design, work motivation, leadership, performance assessment, job satisfaction measurement. prereq: 1001, [2801/3801 or equiv] or SCO 2550 or instr consent

PSY 3801. Introduction to Psychological Measurement and Data Analysis. (MATH; 4 cr. ; Student Option; Every Fall, Spring & Summer) Descriptive/basic inferential statistics used in psychology. Measures of central tendency, variability, t tests, one-way ANOVA, correlation, regression, confidence intervals, effect sizes. Psychological measurement. Graphical data presentation. Statistical software. prereq: High school algebra, [PSY 1001 or equiv]; intended for students who plan to major in psychology

PSY 3801H. Honors Introduction to Psychological Measurement and Data Analysis. (MATH; 4 cr. ; A-F only; Every Fall) Descriptive/basic inferential statistics in psychology. Measures of central tendency, variability, t tests, one-way ANOVA, correlation, regression, confidence intervals, effect sizes. Psychological measurement. Graphical data presentation. Statistical software. prereq: [1001 or equiv], high school algebra, honors; intended for students who plan to major in psychology

PSY 3896. Internship in Psychology. (; 1-4 cr. [max 9 cr.] ; Student Option; Every Fall & Spring) Students first need to secure an internship related to the field of Psychology. Support from Psychology Undergraduate Advising and CLA Career Services is available for this process. Corresponding online coursework includes written goals, journal entries, career development activities, and a culminating paper/project. Credits are variable based on

hours at your site: - 1 credit - 45 hour minimum (average 3-4 hours per week) - 2 credit - 90 hour minimum (average 5-7 hours per week) - 3 credit - 135 hour minimum (average 8-9 hours per week) - 4 credit - 180 hour minimum (average 10-12 hours per week). The classwork (journal entries, final paper, etc.) required is increased relative to your credit registration. Students work with their site supervisors to submit a completed internship contract via Handshake in order to register. <https://handshake.umn.edu/> -- "Request an Experience". Contact the psyadv@umn.edu with any questions. A student may only earn credit for a given internship through one course at a time. prereq: Psychology BA or BS major, Department Permission

PSY 3901W. Capstone in Psychology - Research Laboratory. (WI; 3 cr. ; A-F only; Every Fall, Spring & Summer)

The capstone courses in Psychology synthesize knowledge gained throughout major and create pathways to post-graduation life. Students will reflect on the discipline of psychology and on their experiences in their degree program; class and small group discussions will support this reflection. Students will be provided with access to professionals who are alumni of the psychology program and will have the opportunity to hear these career professionals speak about their varied career paths and to network with them for advice and connections to other professionals. Students will also receive important information regarding graduate school and career preparation from the Psychology Advising Office and CLA Career Services. In this course, you will draw from your experience in a faculty research lab (PSY 4/5993) to help develop the topic of your major project paper. Students complete a research paper based on activities in the lab, or a literature review if the lab did not complete empirical work. Before class begins students must secure a laboratory research experience in a faculty member's lab for PSY 4/5993 credits or enroll in the PSY 5993 class, either the semester prior to or concurrently with your PSY 3901W enrollment. Because research lab positions are not guaranteed, we recommend BA students only select this option if they already have a PSY 4/5993 position secured. prereq: [3801 or equiv], 3001W, completion of five courses from three distribution areas, PSY major, senior

PSY 3902W. Capstone in Psychology - Individual Interests. (WI; 3 cr. ; A-F only; Every Fall, Spring & Summer)

The capstone courses in Psychology synthesize knowledge gained throughout major and create pathways to post-graduation life. Students will reflect on the discipline of psychology and on their experiences in their degree program; class and small group discussions will support this reflection. Students will be provided with access to professionals who are alumni of the psychology program and will have the opportunity to hear these career professionals speak about their varied career paths and to network with them for advice and connections to other

professionals. Students will also receive important information regarding graduate school and career preparation from the Psychology Advising Office and CLA Career Services. In this course, you will develop a project that relates to your personal or occupational interests. It includes extra reading or contact with people working in your area of interest. The most common way to satisfy this requirement is to read a book written by a psychologist for a general audience or to interview at least three professionals working in your area of interest. Other ideas may be discussed with the course instructor. prereq: [3801 or equiv], 3001W, completion of five courses from three distribution areas, PSY major, senior

PSY 3903W. Capstone in Psychology - Community Engagement. (WI; 3 cr. ; A-F only; Every Fall, Spring & Summer)

The capstone courses in Psychology synthesize knowledge gained throughout major and create pathways to post-graduation life. Students will reflect on the discipline of psychology and on their experiences in their degree program; class and small group discussions will support this reflection. Students will be provided with access to professionals who are alumni of the psychology program and will have the opportunity to hear these career professionals speak about their varied career paths and to network with them for advice and connections to other professionals. Students will also receive important information regarding graduate school and career preparation from the Psychology Advising Office and CLA Career Services. In this course, you will have the opportunity to connect your study of psychology to important issues in the local community. The Center for Community-Engaged Learning provides students with the opportunity to work onsite at a nearby community organization for approximately four hours each week throughout the semester. Students draw from this community experience to help identify the topic of their capstone paper. In the first week of classes you will receive instructions from the Center for Community-Engaged Learning regarding community site placement. prereq: [3801 or equiv], 3001W, completion of five courses from three distribution areas, PSY major, senior

PSY 3960. Undergraduate Seminar in Psychology. (; 1-5 cr. [max 45 cr.] ; Student Option; Every Fall, Spring & Summer)

Undergraduate seminars in subjects of current interest in psychology. prereq: 1001

PSY 3993. Directed Study. (1-6 cr. [max 24 cr.] ; Student Option; Every Fall, Spring & Summer)

Independent reading leading to paper or to oral or written exam. Prereq instr consent, dept consent, college consent.

PSY 3996. Undergraduate Fieldwork and Internship in Psychology. (; 1-4 cr. [max 16 cr.] ; Student Option; Every Fall, Spring & Summer)

Supervised fieldwork/internship in community/industry pertinent to formal academic training in

psychology. prereq: 1001, instr consent, dept consent

PSY 4021. Creativity Sciences: Minds, Brains, and Innovation. (3 cr. ; A-F only; Spring Odd Year)

Creativity and innovation play a pivotal role in our individual and collective lives. How do our minds, brains, and environments together enable the generation of useful novel ideas? This course investigates this question, using empirical findings and methods from the cognitive and brain sciences and other disciplines. Both close readings of original empirical research articles and active hands-on/minds-on within-class experiments and collaborative activities are core parts of the course. Two integrative themes throughout the course are the need for dynamically adaptive (contextually sensitive) variation in both levels of cognitive control and goal guidance (deliberate to spontaneous to automatic) and our level of representational specificity (concrete and specific to mid-level to abstract).

PSY 4021. Creativity Sciences: Minds, Brains, and Innovation. (3 cr. ; A-F only; Spring Odd Year)

Creativity and innovation play a pivotal role in our individual and collective lives. How do our minds, brains, and environments together enable the generation of useful novel ideas? This course investigates this question, using empirical findings and methods from the cognitive and brain sciences and other disciplines. Both close readings of original empirical research articles and active hands-on/minds-on within-class experiments and collaborative activities are core parts of the course. Two integrative themes throughout the course are the need for dynamically adaptive (contextually sensitive) variation in both levels of cognitive control and goal guidance (deliberate to spontaneous to automatic) and our level of representational specificity (concrete and specific to mid-level to abstract). prereq: Psy 1001

PSY 4032. Psychology of Music. (; 3 cr. ; Student Option; Every Spring)

Sound, hearing, music perception. Cognitive neuroscience of music appreciation/production. Concepts in perception/production of sound/music. Music psychology topics. Recent primary research. prereq: Grad or [jr or sr], [3011 or 3031 or 3051 or 3061]] or instr consent

PSY 4036. Perceptual Issues in Visual Impairment. (; 3 cr. ; Student Option; Periodic Fall)

Challenges/capabilities of people who are blind or have low vision. Reading, space perception, mobility. Strengths/weaknesses of adaptive technology. prereq: 1001 or instr consent

PSY 4206. Interventions for Health and Wellness. (3 cr. ; Student Option; Every Spring)

This course explores empirically-tested psychological interventions to increase health and happiness. In the first part of the course, the focus will be on interventions to increase happiness, and students will test

different strategies on themselves each week (as well as read the research literature on the strategies) as they attempt to increase happiness. In the second part of the course, students will select a health behavior, and then read about and test interventions (again on themselves) to change health behaviors, aiming to maintain a new health goal. A group project will involve creating an intervention to increase happiness on campus. Course consists of lecture, discussion, group work, and intervention design and testing. PSY 3206 is recommended, but not required.

PSY 4207. Personality and Social Behavior. (3 cr. ; A-F or Audit; Every Fall)

Conceptual/methodological strategies for scientific study of individuals and their social worlds. Applications of theory/research to issues of self, identity, and social interaction. prereq: 3101 or 3201 or honors or grad student or instr consent

PSY 4301. Psychology & Diversity Science. (3 cr. ; A-F only; Periodic Fall & Spring)

This is an advanced course for undergraduate students interested in research, theory, history, and practice related to psychological perspectives in Diversity Science. Diversity Science broadly pertains to understanding causes, consequences, and correlates of human group-based variations, in terms of race, ethnicity, gender, and the like. Students will learn how to adopt a scientific, analytic perspective on current issues and debates related to diversity within both academic research and popular culture. The course consists of lecture, discussion, and a substantial amount of hands-on learning through use and analysis of relevant research data. Prerequisites: Psy 3001W or Psy 3001V and Psy 3801 or Psy 3801H. In addition, completion of Psy 3301 is strongly recommended.

PSY 4501. Psychology of Women and Gender. (3 cr. ; Student Option; Every Spring)

Theory/research regarding psychology of women and psychological sex differences/similarities. Issues unique to women (e.g., pregnancy). Research comparing men/women in terms of personality, abilities, and behavior. prereq: [[Jr or sr], psych major] or instr consent

PSY 4521. Psychology of Stress and Trauma. (3 cr. ; A-F only; Every Spring)

This course covers the major theories and research findings related to stress and trauma, including the effects of stress and trauma on mental and physical health, factors related to more effective coping with stress/trauma and interventions designed to decrease the negative effects of stress and trauma. Course material will highlight research related to stress and coping with the COVID-19 pandemic. The course focuses on both research methods and personal application of research findings. prereq: PSY 1001 and 3001W or PSY 3001V or CPSY 3308W

PSY 4902V. Honors Project. (WI; 1-6 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Critical literature review or empirical study. prereq: instr consent, dept consent

PSY 4960. Seminar in Psychology. (3 cr. ; 1-4 cr. [max 16 cr.] ; Student Option; Periodic Fall & Spring)

Seminars in subjects of current interest in Psychology. prereq: [1001, psych major] or instr consent

PSY 4993. Directed Research: Special Areas of Psychology and Related Sciences. (3 cr. ; 1-6 cr. [max 48 cr.] ; Student Option; Every Fall, Spring & Summer)

Directed research projects in psychology. prereq: instr consent, dept consent

PSY 4994V. Honors Research Practicum. (WI; 4 cr. ; A-F only; Every Spring)

Practical experience conducting psychological research. Preparation for completion of honors thesis. Research ethics, practical aspects of conducting psychological research, writing research reports. Students assist faculty and advanced graduate students in research. prereq: [3001W or 3001V], psych major, honors

PSY 4996H. Honors Internship/Externship. (3 cr. ; 1-6 cr. ; A-F only; Every Fall, Spring & Summer)

Supervised internship/externship experience in a community-service or industrial setting relevant to formal academic training/objectives. prereq: Honors, instr consent, dept consent, college consent

PSY 5014. Psychology of Human Learning and Memory. (3 cr. ; A-F only; Spring Odd Year)

Human memory encoding/retrieval. How we adaptively use memory. Brain systems that support memory. Episodic/semantic memory. Working/short-term memory. Procedural memory. Repetition priming. Prospective remembering. Autobiographical memory. prereq: 3011 or 3051 or honors or grad student

PSY 5015. Cognition, Computation, and Brain. (3 cr. ; Student Option; Spring Even Year)

Human cognitive abilities (perception, memory, attention) from different perspectives (e.g., cognitive psychological approach, cognitive neuroscience approach). prereq: [Honors or grad] or [[jr or sr], [3011 or 3031 or 3051 or 3061]] or instr consent

PSY 5018H. Mathematical Models of Human Behavior. (3 cr. ; A-F only; Periodic Fall)

Mathematical models of complex human behavior, including individual/group decision making, information processing, learning, perception, and overt action. Specific computational techniques drawn from decision theory, information theory, probability theory, machine learning, and elements of data analysis. prereq: Math 1271 or instr consent

PSY 5031W. Perception. (WI; 3 cr. ; Student Option; Fall Odd Year)

Cognitive, computational, and neuroscience perspectives on visual perception. Topics include color vision, pattern vision, image formation in the eye, object recognition, reading, and impaired vision. prereq: 3031 or 3051 or instr consent

PSY 5036W. Computational Vision. (WI; 3 cr. ; Student Option; Fall Even Year)

Applications of psychology, neuroscience, computer science to design principles underlying visual perception, visual cognition, action. Compares biological/physical processing of images with respect to image formation, perceptual organization, object perception, recognition, navigation, motor control. prereq: [[3031 or 3051], [Math 1272 or equiv]] or instr consent

PSY 5037. Psychology of Hearing. (3 cr. ; Student Option; Periodic Fall)

Biological and physical aspects of hearing, auditory psychophysics, theories and models of hearing, recognition of complex sounds including music and speech. Clinical/other applications. Prereq: Instructor permission

PSY 5038W. Introduction to Neural Networks. (WI; 3 cr. ; Student Option; Fall Odd Year)

Parallel distributed processing models in neural/cognitive science. Linear models, Hebbian rules, self-organization, non-linear networks, optimization, representation of information. Applications to sensory processing, perception, learning, memory. prereq: [[3061 or NSC 3102], [MATH 1282 or 2243]] or instr consent

PSY 5052. Psychology of Attention. (3 cr. ; A-F only; Fall Odd Year)

Is attention needed for perception? Are we more likely to attend to locations associated with reward? Does brain training work? Are attention deficits at the root of autism spectrum disorders? This course will introduce students to advanced topics in the psychology of attention. It will combine didactic lecturing, instructor-led discussions, and student-led discussions on core topics of attention and its neural substrates. Students will acquire familiarity with theories, phenomena, and experimental paradigms of attention. prereq: Psy 3051 or equivalent

PSY 5054. Psychology of Language. (3 cr. ; Student Option; Every Fall)

Theories/experimental evidence in past/present conceptions of psychology of language. prereq: Grad or [[jr or sr], [3011 or 3031 or 3051 or 3061]] or instr consent

PSY 5062. Cognitive Neuropsychology. (3 cr. ; Student Option; Every Fall)

Consequences of different types of brain damage on human perception/cognition. Neural mechanisms of normal perceptual/cognitive functions. Vision/attention disorders, split brain, language deficits, memory disorders, central planning deficits. Emphasizes function/phenomenology. Minimal amount of brain anatomy. prereq: Grad or [[jr or sr], [3011 or 3031 or 3051 or 3061]] or instr consent

PSY 5063. Introduction to Functional MRI. (3 cr. ; A-F only; Every Fall)

How to understand and perform a brain imaging experiment. Theory and practice of functional MRI experimental design, execution, and data analysis. Students develop experimental materials/acquire and analyze their own functional MRI data. Lectures/lab exercises. prereq: Jr or sr or grad or instr consent

PSY 5064. Brain and Emotion. (; 3 cr. ; A-F or Audit; Spring Odd Year)

Introduction to affective neuroscience. How brain promotes emotional/motivated behavior in animals/humans. Biological theories of emotion in historical/current theoretical contexts. Fundamental brain motivational systems, including fear, pleasure, attachment, stress, and regulation of motivated behavior. Implications for emotional development, vulnerability to psychiatric disorders. prereq: 3061 or 5061 or instr consent

PSY 5065. Functional Imaging: Hands-on Training. (; 3 cr. ; Student Option; Every Spring)

Basic neuroimaging techniques/functional magnetic resonance imaging (fMRI). First half of semester covers basic physical principles. Second half students design/execute fMRI experiment on Siemens 3 Tesla scanner. prereq: [3801 or equiv], [3061 or NSCI 3101], instr consent

PSY 5066. Neuroscience, Philosophy and Ethics. (3 cr. ; Student Option; Every Spring)

Neuroscience increasingly allows us to explain the human experience in terms of mechanistic, electrochemical processes. The current course explores philosophical issues sparked by these developments in two modules. The first module examines the ways in which human neuroscience may shed new light on age-long philosophical quagmires such as mind-body dualism, free-will, and consciousness. For example, will neuroscience solve the mind-body problem by providing a wholly physical account of human nature? Is the neural view of decision making as a logical consequence of brain states incompatible with free-will? Can all of conscious experience (qualia) be reduced to neurobiology? The second module turns to neuro-ethical questions regarding the potential benefits and harms neuroscience might bring to the moral fabric of society.

PSY 5101H. Honors: Personality: Current Theory and Research. (; 3 cr. ; A-F only; Spring Odd Year)

Current theory and research on personality functioning and personality structure. Descriptive, biological, evolutionary, cognitive, developmental, cultural, and narrative perspectives on personality. prereq: Honors Psychology major OR Psychology PhD student

PSY 5135. Psychology of Individual Differences. (; 3 cr. ; Student Option; Periodic Spring)

Differential methods in study of human behavior. Psychological traits. Influence of age, sex, heredity, and environment in individual/group differences in ability, personality, interests, and social attitudes. prereq: [3001W or equiv] or [5862 or equiv] or instr consent

PSY 5136. Human Abilities. (; 3 cr. ; Student Option; Every Spring)

Theory, methods, and applications of research in human abilities. Intelligence, aptitude, achievement, specific abilities, information processing/learning and intelligence, aptitude/treatment interactions, and quantitative measurement issues. prereq: [3001W or

3001V], [3135 or 5135], [5862 or equiv] or instr consent

PSY 5137. Introduction to Behavioral Genetics. (; 3 cr. ; Student Option; Every Fall)

Genetic methods for studying human/animal behavior. Emphasizes nature/origin of individual differences in behavior. Twin and adoption methods. Cytogenetics, molecular genetics, linkage/association studies. prereq: 3001W or equiv or instr consent

PSY 5202. Attitudes and Social Behavior. (; 3 cr. ; Student Option; Periodic Spring)

Theory/research on social psychology of beliefs/attitudes. Persuasion principles. prereq: 3201 or instr consent

PSY 5204. Psychology of Interpersonal Relationships. (; 3 cr. ; A-F only; Periodic Fall)

Introduction to interpersonal relationship theory/research findings. prereq: Honors or grad student or instr consent

PSY 5205. Applied Social Psychology. (; 3 cr. ; Student Option; Spring Odd Year)

Applications of social psychology research/theory to domains such as physical/mental health, education, the media, desegregation, the legal system, energy conservation, public policy. prereq: 3201 or grad student or instr consent

PSY 5206. Social Psychology and Health Behavior. (3 cr. ; A-F only; Spring Odd Year)

Survey of social psychological theory/research regarding the processes that shape people's beliefs about health and how these beliefs affect and are affected by their health behavior. Consideration of how theory and evidence regarding these processes informs the development and testing of intervention strategies to promote health behavior change. Prerequisite: Psy 3201

PSY 5207. Personality and Social Behavior. (; 3 cr. ; A-F or Audit; Every Fall)

Conceptual/methodological strategies for scientific study of individuals and their social worlds. Applications of theory/research to issues of self, identity, and social interaction. prereq: 3101 or 3201 or honors or grad student or instr consent

PSY 5501. Self, Society and Health - What's Work Got To Do With It?. (; 3 cr. ; Student Option; Every Spring)

Survey of history, concepts, theories, methods, and findings of vocational/occupational health psychology. Burnout, personality, violence, stressors/stress-relations, counter productive behaviors, coping in workplace. Vocational development/assessment, career decision-making/counseling, person-environment fit. prereq: 3001W or equiv or instr consent

PSY 5701. Employee Selection and Staffing. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Application of psychological research/theory to issues in personnel recruitment/selection and to measurement of job performance. Applying principles of individual differences, psychological measurement to decision making in organizations (recruitment, selection, performance appraisal). Prerequisite: Psy 3001W, Psy 3711 or Instructor Permission

PSY 5703. Psychology of Organizational Training and Development. (; 3 cr. ; Student Option; Every Fall)

Theories, methods, research, and practice of improving performance of individuals at work through adult learning and instruction, including needs analysis, learning philosophy, models of program and instructional design, theory of knowledge and training transfer, learning analytics, and training evaluation. Prerequisites: PSY 3801 or equivalent

PSY 5708. Organizational Psychology. (; 3 cr. ; Student Option; Every Spring)

Psychological causes of behavior in work organizations. Consequences for individual fulfillment and organizational effectiveness. Individual differences, social perception, motivation, stress, job design, leadership, job satisfaction, teamwork, organizational culture. Prereq: Psy 3001W or 3001V and 3711 OR Psy grad

PSY 5862. Psychological Measurement: Theory and Methods. (; 3 cr. ; Student Option; Every Fall)

Types of measurements (tests, scales, inventories) and their construction. Theory/measurement of reliability/validity. prereq: 3801H or MATH 1271 or grad student

PSY 5865. Advanced Measurement: Theory and Application. (; 3 cr. ; Student Option; Spring Odd Year)

Topics in test theory. Classical reliability/validity theory/methods, generalizability theory. Linking, scaling, equating. Item response theory, methods for dichotomous/polytomous responses. Comparisons between classical, item response theory methods in instrument construction. prereq: 5862 or instr consent

PSY 5960. Topics in Psychology. (; 1-4 cr. [max 8 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Special course or seminar. Topics listed in Class Schedule. prereq: PSY 1001, [jr or sr or grad student]

PSY 5993. Research Laboratory in Psychology. (; 3 cr. [max 18 cr.] ; Student Option; Every Fall & Spring)

Laboratory instruction and seminars in faculty research areas. prereq: instr consent, dept consent

Public Affairs (PA)

PA 1005. Great Debates of Our Time: U.S. Policy and Politics. (CIV; 3 cr. ; A-F or Audit; Every Spring)

Topical political/policy debates with prominent government officials/experts. Constitutional crisis over authority/roles of legislative/executive branches. Visiting lecturers, in-class simulations, readings.

PA 1401. Public Affairs: Community Organizing Skills for Public Action. (CIV; 3 cr. ; A-F only; Every Fall & Spring)

Public affairs work, roles of citizens in democratic way of life. Community organizing skills, their importance for public affairs. Negotiations among diverse audiences, understanding different interests, mapping

power relationships. Relevant public affairs and governance theory.

PA 3001. Changing the World: Contemporary Public Policy. (; 3 cr. ; A-F only; Every Spring)

Foundation for understanding the what, who, where, and how of public policy making. These components are explored from different perspectives while delving into questions such as: What is public policy good for? Who decides policy priorities? What effect does public policy actually have in solving public problems? How can we improve public policy making? After successfully completing this course, students will understand the process, structure, and context of policymaking; identify who, how, and what influences the policy process; and apply knowledge of public policy and the policymaking process to a specific policy issue. A strong understanding of the American political system is encouraged.

PA 3002. Basic Methods of Policy Analysis. (SOCS; 3 cr. ; A-F or Audit; Every Fall)

Introduction to policy analysis. Theoretical foundations/practical methods of analysis. Tools for problem definition, data collection/analysis, presentation techniques, implementation strategies. Multidisciplinary case-study approach.

PA 3003. Nonprofit and Public Financial Management. (3 cr. ; A-F or Audit; Every Fall)

Concepts/tools for project/budget planning. Program analysis. Interpreting financial reports. Identifying/resolving organizational performance issues. Case studies, real-world exercises. prereq: Jr or sr

PA 3481. Cedar Riverside: Where The World Meets MN. (; 2 cr. ; A-F only; Periodic Spring)

The Cedar Riverside Neighborhood; Where the World Meets Minnesota is an immersion course in our Cedar Riverside neighborhood that parallels the immersion experience of study abroad. The course encourages civic engagement and will provide opportunity to learn and work in the Cedar Riverside community while examining questions of leadership, power, cultural diversity and social change. Students will participate in class-based discussion seminars, neighborhood excursions and community work. Throughout the immersion experience, students are challenged to question, think, and respond thoughtfully to current issues facing the Cedar-Riverside community and cultivate leadership skills. Students can expect to gain new frameworks for understanding leadership and civic engagement in a domestic cultural context, deepened skill in identifying complex problems, strategic questioning, reflection and meaning making, as well as consciousness of relationship between self, world and text/theory.

PA 3852. Social Entrepreneurship & Diplomacy in Ghana. (GP,SOCS; 3 cr. ; A-F only; Every Spring)

This global seminar will take place in Ghana, focusing on visits within the country to the following cities; Accra, Kumasi, Senchi-Ferry, and Elmina/Cape Coast. The course content will focus on social entrepreneurship,

diplomacy, and how public policy and social enterprises are helping shape Ghana as one of the most stable emerging countries in West Africa. During the seminar, students will be engaged in lectures that focus on Ghanaian diplomacy, and the evolving role of social entrepreneurship in Ghana. Academic content will focus on meaningful interactions in the form of lectures, panels, site visits, and excursions with speakers from a variety of institutions in Ghana. Speakers will consist of entrepreneurs, policymakers, faculty from a variety of institutions (the University of Ghana Legon, University of Cape Coast, and Ashesi University) and public servants working in Ghana. Cultural excursion locations will align with the location of the academic content, lectures and site visits, which will enable students to develop a deeper understanding of social life and culture in Ghana. Also, the course will examine private and public sectors of higher education, and youth workforce development in Ghana as an impetus for the emergence of social enterprises. Lastly, students will participate in an educational project that investigates youth development and education within rural and urban communities and the role social entrepreneurs are planning on creating innovative solutions for young people to thrive. The course will have some readings that provide students with background information, history or news related to the lectures, site visits, and excursions that will occur during the seminar. Lecture topics include: Conversational Twi (3-day language course) at the University of Ghana Legon; Diplomacy 101 presented by the State Department at the U.S. Embassy in Ghana; traditional governance role in Ghanaian society; educational policy and workforce development in Ghana; women leadership in Markets: Exploration of a hub of entrepreneurship; impact on social entrepreneurship in Ghana panel of local organizations impacting Ghana. General Outcomes: Upon successful completion, student will be able to: Become familiar with diplomacy from an international context, and the role that they play in practicing diplomacy through their participation in the program and exposure to the role of the State Department; build on the knowledge gained from studying social entrepreneurship and how motivated individuals are developing strategies to address societal challenges; discuss diversity of cultures that exists within a country and how traditional and modern governments work together in order to ensure that the country is thriving, preserving its history and traditions; understand diverse philosophies and cultures within and across societies; and develop skills for effective citizenship and lifelong learning.

PA 3969. Survey of Election Administration. (; 3 cr. ; Student Option No Audit; Every Fall & Spring)

Survey of building blocks of election administration, from voter registration to recounts.

PA 3972. Elections and the Law. (; 2 cr. ; Student Option No Audit; Periodic Fall & Spring)

Theories and basic structure of the American legal system. Experience with basic tools and skills for using the law to understand and analyze issues facing election administrators across the nation. Use of election-related and non-election related materials to prepare election administrators for interacting with counsel, legislators and the courts in carrying out their responsibilities.

PA 3973. Strategic Management of Election Administration. (; 2 cr. ; Student Option No Audit; Every Fall)

Strategic management for election administrators in the political environment. Election official tools and challenges. The role of the lawmaking process in budgeting and organizational planning.

PA 3975. Election Design. (; 2 cr. ; Student Option No Audit; Every Spring)

Election administration design principles, including ballot and polling place design and poll worker training materials. Application of principles of field.

PA 3976. Voter Participation. (; 1 cr. ; Student Option No Audit; Periodic Fall & Spring)

Voter participation issues and challenges including historical survey of voter participation in US and methods to increase voter turnout.

PA 3982. Data Analysis for Election Administration. (; 2 cr. ; Student Option; Periodic Fall & Spring)

Evidence-based election administration. Collection and analysis of quantitative data to solve problems and identify opportunities for improvement. Emphasis on pre-election forecasting for planning purposes and post-election auditing of election results.

PA 3983. Introduction to Election Security. (; 1 cr. ; Student Option No Audit; Every Fall)

This course will examine the history of cyberattacks on the United States and the American election system, with special attention to the 2016 election cycle. Students will explore the types of cybersecurity threats that exist and strategies to protect against them; understand the roles different levels of government can play in the process, and hear from key officials about the issues raised by the official response to election security threats at the federal, state and local levels as well as in related private sector communities.

PA 3984. Elections Security: How to Protect America's Elections. (; 2 cr. ; A-F or Audit; Every Spring)

?Elections Security? uses the Russian efforts to influence the 2016 election as a case study to identify the vulnerabilities of US elections (especially state voter registration databases) as well as catalogue new protections. Readings and discussion will focus on best practices and technology options available to the public (social media) and elections professionals (cybersecurity) in guarding against future influence efforts and assuring public confidence in election outcomes. Special focus will be given to describing how local election officials can protect their election technology, most

notably those vulnerabilities associated with their voting system and voter registration database. ?Elections Security? will draw heavily on concrete cases and challenges facing election professionals, using government and independent reports and an in-depth analysis of new resources created by the US Department of Homeland Security and its collaborations with election professionals.

PA 3985. Physical Election Security. (; 2 cr. ; Student Option No Audit; Periodic Spring & Summer)

U.S. Homeland Security designated election security as a ?critical infrastructure? after threats from foreign governments, and collaborates with states in detecting and responding to foreign interference. This course will provide students with a deeper understanding of the current security context and best practices and processes for physically safeguarding elections based on 2016 and 2020. Students will learn the difference between physical and cyber threats to U.S. systems; tangible steps to protect election offices and their equipment; the use of audits to ensure the accuracy of elections; the integration of security into vendor relationships; and the connection between physical election security and citizen trust in elections. Content will be explored through readings (including government documents and studies), videos, discussions, and writing assignments.

PA 3990. General Topics in Public Policy. (; 1-3 cr. [max 9 cr.]; Student Option; Every Spring & Summer)

General topics in public policy.

PA 3991. Independent Study. (; 1-3 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer)

Independent study. prereq: instr consent

PA 4101. Nonprofit Management and Governance. (; 3 cr. ; Student Option; Every Fall & Spring)

Managing/governing nonprofit/public organizations. Theories, concepts, real-world examples. Governance systems, strategic management practices, effect of different funding environments, management of multiple constituencies.

PA 4200. Urban and Regional Planning. (; 3 cr. ; Student Option; Every Fall & Spring)

Fundamental principles of urban/regional land-use planning. Introduction to planning theory and its applications. Political-economic context of urban/regional planning.

PA 4790. Topics in Science, Technology, and Environmental Policy. (; 1-3 cr. [max 6 cr.]; Student Option; Periodic Fall & Spring)

Selected topics in the field of science, technology, and environmental policy. Topics vary.

PA 4997. Topics in Public Affairs & Politics. (; 1-3 cr. ; Student Option; Periodic Fall & Spring)

Topics in public policy, with emphasis on the politics of public affairs. One topic uses the struggles over national security and liberty to explore core aspects of the politics of public

affairs - power; institutional development; political communications; and democratic accountability. A rigorous understanding of these political dynamics offers a general approach to policy and public affairs that moves beyond superficial impressions to understanding and engaging in the practical work of public affairs. These tools of analysis are indispensable for making sense of America's constitutional crises as well as other issues. Class sessions are organized around interactive discussions of major Supreme Court decisions, debates in Congress, and other original documents that bring students into direct contact with the competing perspectives of each case, and with penetrating studies of politics.

PA 5002. Introduction to Policy Analysis.

(1.5 cr. ; A-F or Audit; Every Fall & Spring)

Process of public policy analysis from problem structuring to communication of findings. Commonly used analytical methods. Alternative models of analytical problem resolution.

PA 5003. Introduction to Financial Analysis and Management. (1.5 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Finance/accounting concepts/tools in public/nonprofit organizations. Fund accounting. Balance sheet/income statement analysis. Cash flow analysis. Public/nonprofit sector budgeting processes. Lectures, discussions. Cases. prereq: Public policy major/minor or major in development practice, public affairs or liberal studies or grad nonprofit mgmt cert or instr consent

PA 5004. Introduction to Planning. (3 cr. ; A-F or Audit; Every Fall)

History/institutional development of urban planning as profession. Intellectual foundations, planning theory. Roles of urban planners in U.S./international settings. Scope, legitimacy, limitations of planning/planning process. Issues in planning ethics/settings of diverse populations/stakeholders. prereq: Major/minor in urban/regional planning or instr consent

PA 5011. Management of Organizations. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Challenges facing higher-level managers in public and nonprofit organizations in mixed economy and democratic republic. Distinctive features of public and nonprofit management, skills necessary for effective management, manager's role as creator of public value. Lectures, case discussions.

PA 5012. The Politics of Public Affairs. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Politics is how we make collective decisions about matters of shared consequence. This course examines politics and introduces students to key concepts and skills needed for effective political analysis. The central themes of the course focus on power; institutions and organizations; discourse; and citizenship.

PA 5013. Law and Urban Land Use. (1.5 cr. ; A-F or Audit; Every Fall)

Role of law in regulating/shaping urban development, land use, environmental quality, local/regional governmental services. Interface

between public/private sector. prereq: Major or minor in urban/regional planning or instr consent

PA 5021. Microeconomics for Policy

Analysis. (3 cr. ; A-F or Audit; Every Fall)

Introduction to tools useful for public policy. Intermediate microeconomics.

PA 5022. Applications of Economics for Policy Analysis. (; 1.5-3 cr. [max 9 cr.]; A-F or Audit; Every Spring)

Application of economic reasoning to a wide range of contemporary public policy issues. The following topically-focused courses also fulfill the MPP economics requirement: PA 5431: Public Policies on Work and Pay, PA 5503: Economics of Development, PA 5521: Development Planning and Policy Analysis, PA 5722: Economics of Natural Resource and Environmental Policy, and PA 5805: Global Economics. prereq: 5021 or equiv

PA 5023. Stratification Economics and Public Policy. (2 cr. ; Student Option No Audit; Every Spring)

Stratification economics differs from conventional neoclassical economics and its related offspring of behavioral economics because it does not assume that the nature of inequality arises solely via rational choices made in competitive markets. Rather, it posits structural and historical processes that impede the ability of marginalized groups to gain access to markets. One of the key insights from stratification economics is that conventional policy mechanisms (e.g. deterrence policies in the criminal justice system) don't work because they fail to take account of the legacy of inequality (e.g. convict lease systems and vagrancy laws). The arguments in favor of reparations, baby bonds, universal health care can be viewed and examined using the methods and techniques of stratification economics. This course introduces students to some new methodologies that complement their training in conventional economic analysis. Topics: ? A review of conventional microeconomic approaches to policy analysis, including the core assumptions and key conclusions ? Summary and critique of the conventional microeconomic approach ? The historical backdrop to the evolution of ?identity economics? and stratification economics for understanding racial disparities ? Core assumptions of stratification economics ? Applications: Housing markets and residential segregation; racial profiling; discrimination in labor markets. ? Policy proposals based on stratification economics ? reparations, baby bonds, universal income and health payments. Advanced undergraduate students may register with permission of the instructor.

PA 5031. Statistics for Public Affairs. (4 cr. ; A-F or Audit; Every Fall)

Basic statistical tools for empirical analysis of public policy alternatives. Frequency distributions, descriptive statistics, elementary probability/probability distributions, statistical inference. Estimation/hypothesis testing. Cross-tabulation/chi-square distribution. Analysis of variance, correlation. Simple/multiple regression analysis.

PA 5032. Applied Regression. (2 cr. ; A-F or Audit; Every Spring)

Bivariate/multivariate models of regression analysis, assumptions behind them. Problems using these models when such assumptions are not met.

PA 5033. Multivariate Techniques. (2 cr. ; A-F or Audit; Every Spring)

Use of bivariate and multivariate statistical approaches for analyzing and evaluating public affairs issues and the assumptions behind the analytical approaches. Designed to help students read, understand, interpret, use, and evaluate empirical work used in social sciences by policy analysts and policy makers. prereq: Students who register for PA 5033 must take PA 5044 and PA 5033 in the same semester. The same grade will be issued for PA 5044 and PA 5033 after PA 5033 is completed.

PA 5035. Survey Research and Data

Collection. (1.5 cr. ; A-F only; Every Spring) Introduction to survey research methods. Emphasizes applications to policy/applied research. Research design choices (e.g., descriptive, experimental, case studies), sampling, variable specification, measurement. Conducting interviews, self-administered questionnaires. Qualitative techniques.

PA 5041. Qualitative Methods for Policy Analysts. (4 cr. ; A-F only; Every Fall)

Qualitative analysis techniques, examples of application. Meet with researcher. Hands-on experience in designing, gathering, analyzing data.

PA 5042. Urban and Regional Economics. (2 cr. ; A-F only; Every Spring)

Evaluation of city existence/growth using economics. Economic forces in development of cities. Economic analysis of urban areas/land market. Economic analysis of planning issues in land use, transportation, housing, environment. prereq: [Major or minor in urban and regional planning, microeconomics course] or instr consent

PA 5043. Economic and Demographic Data Analysis. (2 cr. ; A-F only; Every Spring)

Economic/demographic data analysis techniques for planning. Exposure to most important data sources. Conceptual understanding of range of methods/hands-on experience in applying these methods. prereq: Major or minor in urban/regional planning or instr consent

PA 5044. Applied Regression, Accelerated. (2 cr. ; A-F only; Every Spring)

Bivariate/multivariate models used in regression analysis, including assumptions behind them/problems that arise when assumptions are not met. Course covers similar topics as PA 5032 but delves deeper into theory/application of methods. prereq: Students who register for PA 5044 must take PA 5044 and PA 5033 in the same semester. The same grade will be issued for PA 5044 and PA 5033 after PA 5033 is completed.

PA 5045. Statistics for Public Affairs, Accelerated. (4 cr. ; A-F or Audit; Every Fall)

Introduces a range of quantitative tools that are commonly used to inform issues in public

affairs. The course provides an introduction to descriptive statistics, probability, and statistical inference, with an emphasis on the ways in which quantitative tools are applied to a diverse range of practical policy questions. PA 5045 is an accelerated treatment of applied statistics for public affairs and serves as a more mathematically and conceptually rigorous alternative to PA 5031.

PA 5051. Leadership Foundations. (; 2 cr. ; A-F only; Every Fall)

Leadership concepts, tools, and strategies in a personal, community, and organizational context for mid-career students. prereq: Major in public affairs (cohort) or public affairs certificate (cohort); 5051-5052 must be taken in same academic yr

PA 5052. Public Affairs Leadership. (; 2 cr. ; A-F only; Every Spring)

Continues 5051. Leadership concepts, tools, and strategies in diverse settings for mid-career students. prereq: Major in public affairs (cohort) or public affairs certificate (cohort); 5051-5052 must be taken in same academic yr

PA 5053. Policy Analysis in Public Affairs. (; 2 cr. ; A-F only; Every Fall)

Process of public policy and program analysis, including problem formulation, program design and implementation. Opportunity to draw upon published research and conduct field-based research to understand implementation conditions. Professional communications, including writing of memos, requests for proposals, and implementation briefs, are stressed. prereq: Major in public affairs (cohort) or public affairs certificate (cohort); 5053-5054 must be taken in same academic yr

PA 5054. Program Design and Implementation Analysis. (; 2 cr. ; A-F only; Every Spring)

Continues 5053. Process of public policy and program analysis, including problem formulation, program design and implementation. Opportunity to draw upon published research and conduct field-based research to understand implementation conditions. Professional communications, including writing of memos, requests for proposals, and implementation briefs, are stressed. prereq: Major in public affairs (cohort) or public affairs certificate (cohort); 5053-5054 must be taken in same academic yr

PA 5055. Qualitative Research Methods and Analysis. (2 cr. ; A-F only; Every Fall)

Problem-based learning of analytical reasoning through social science research methods. Systematic review and literature review. Qualitative research including interviews, focus groups, and analysis. Research proposal. prereq: Major in public affairs or public affairs certificate, [5055-5056 must be taken in same academic yr]

PA 5056. Quantitative Research Methods and Analysis. (2 cr. ; A-F only; Every Spring)

Problem-based learning to analytical reasoning through social science research methods. Frequency distributions, descriptive statistics, elementary probability, statistical inference. Hypothesis testing. Cross-tabulation, analysis

of variance, correlation. Simple regression analysis. prereq: Major in public affairs or public affairs certificate, [5055-5056 must be taken in same academic yr]

PA 5080. Capstone Preparation Workshop. (; 1 cr. ; S-N only; Every Fall, Spring & Summer)

Project management, qualitative research, and critical framework to complete Capstone course. Students write draft of client project group norms and client contract.

PA 5081. Understanding Power and Teamwork in Public Affairs Education. (0.5 cr. ; S-N only; Every Fall)

Power and teamwork in public affairs education.

PA 5101. Management and Governance of Nonprofit Organizations. (; 3 cr. ; Student Option; Every Fall)

Theories, concepts, and real world examples of managerial challenges. Governance systems, strategic management practices, effect of funding environments, management of multiple constituencies. Types of nonprofits using economic/behavioral approaches. prereq: Grad student or instr consent

PA 5103. Leadership and Change. (; 1.5-3 cr. ; Student Option; Periodic Spring)

Models of change/leadership. How leaders can promote personal, organizational, and societal change. Case studies, action research. Framework for leadership and change.

PA 5104. Strategic Human Resource Management. (; 3 cr. ; A-F or Audit; Every Fall)

Theory/practice of developing, utilizing, and aligning human resources to improve culture/outcomes of nonprofit/public organizations. HR strategy, individual diversity, leadership, selection, training, compensation, classification, performance appraisal, future HR practices. prereq: Grad student or instr consent

PA 5105. Integrative Leadership: Leading Across Sectors to Address Grand Challenges. (; 3 cr. ; Student Option No Audit; Every Fall)

Are you interested in working across government, business, and the non-profit sector for public good? Are you wondering how you can create sustainable shared leadership on challenges that can best be addressed together? This course explores multi-sector leadership and related governance and management challenges from a variety of perspectives and provides an opportunity for students to work together to apply what they are learning individually and in teams through in-class exercises and a final team project. The course is taught by a team of interdisciplinary faculty and considers different contexts, forms, and specific examples of multisector leadership that can enable transformative action to tackle a significant societal issue and achieve lasting change. Credit will be not be granted if credit has been received for GCC 5023, OLPD 6402, PUBH 6702, MGMT 6402, PA 5130, LAW 6623.

PA 5108. Board leadership development. (; 1 cr. ; S-N only; Every Fall & Spring)

Nonprofit board governance. Governance models, roles/responsibilities, ethics/dynamics. Current research/concepts along with students' current board experiences to illuminate challenges/explore solutions that build board leadership competencies. prereq: Grad student or instr consent

PA 5113. State and Local Public Finance. (; 3 cr. ; Student Option; Every Spring)

Theory/practice of financing. Providing public services at state/local level of government. Emphasizes integrating theory/practice, applying materials to specific policy areas, and documenting wide range of institutional arrangements across/within the 50 states. prereq: Grad or instr consent

PA 5114. Budget Analysis in Public and Nonprofit Orgs. (1.5 cr. [max 3 cr.] ; Student Option; Every Spring)

Techniques, terminology, concepts and skills for developing and analyzing operating and capital budgets in public and nonprofit organizations. Budget analysis using case studies, problem sets, and spreadsheets. Time value of money, cost-benefit analysis, break-even analysis, sensitivity analysis, and fiscal analysis. prereq: PA 5003

PA 5116. Financing Public and Nonprofit Organizations. (1.5 cr. ; Student Option; Every Spring)

Financial resource management for public and nonprofit organizations. Short-term and long-term debt management, retirement financing, and endowment investing. Conceptual frameworks and analytical techniques applied to real-world problems. Financial management in context of national and regional economies. prereq: PA 5003; credit will not be granted if credit already received for: PA 5111

PA 5122. Law and Public Affairs. (; 3 cr. ; Student Option; Every Spring)

Overview of evolution of American legal system. Role of courts, legislatures, and political actors in changing law. How law is used to change public policy. prereq: Grad or instr consent

PA 5123. Philanthropy in America: History, Practice, and Trends. (; 1.5-3 cr. ; Student Option; Every Spring)

Theory/practice of philanthropy. Foundation/corporate/individual giving. History/economic structure/dynamics. Models of philanthropy, components of grant making/seeking. Current debates, career options.

PA 5135. Managing Conflict: Negotiation. (; 3 cr. ; A-F only; Every Fall)

This course teaches the theory and the practice of negotiation strategies with an emphasis on applied, personal skill building constructed on a foundation of research and practice in the field. Students will apply their negotiation skills across interpersonal, public dispute, government, and private sector settings. The course focuses on developing students' personal theory of practice for decision-making, effective communication and impactful leadership through practice of distributive bargaining, value creation, consensus building, facilitation, and mediation exercises and discussions.

PA 5136. Group Process Facilitation for Organizational and Public/Community Engagement. (1 cr. ; Student Option No Audit; Every Summer)

Group process facilitation components, theories, tools, techniques. Facilitator's role in group goals and processes. Facilitation in public policy. Cross-cultural challenges. Topics may include meeting management, group decision-making, conflict, participatory leadership, and other tools.

PA 5137. Project Management in the Public Arena. (1.5 cr. [max 3 cr.] ; Student Option No Audit; Every Spring)

Project management and leadership strategies for implementing public policy, including new or revised government programs, public works, and regulations. Use of project management concepts, principles, and tools, including project definition, scoping, planning, scheduling (using the critical path method), budgeting, monitoring, staffing, and managing project teams. Application of "agile" and "extreme" project management in situations of complexity and uncertainty, including those due to the scrutiny and expectations of elected officials, the media, citizens, and other stakeholders.

PA 5144. Social Entrepreneurship. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

Introduction to field of social entrepreneurship. Prepares current/future managers/leaders to create, develop, lead socially entrepreneurial organizations/initiatives. prereq: Grad student or instr consent

PA 5145. Civic Participation in Public Affairs. (; 3 cr. ; A-F only; Every Spring)

Critique/learn various approaches to civic participation in defining/addressing public issues. Readings, cases, classroom discussion, facilitating/experiencing engagement techniques. Examine work of practitioner, design engagement process.

PA 5151. Organizational Perspectives on Global Development & Humanitarian Assistance. (3 cr. ; A-F only; Every Fall)

Organizational analysis of international development and humanitarian assistance, including perspectives from sociology, political science, psychology, public administration, and management. Examines efforts of multiple organizational players, including NGOs, governments, bi-lateral and multi-lateral organizations, corporations, foundations, and international organizations. Critical analysis of aid organizations, especially regarding ways in which they reflect and create power and privilege, the manner in which individuals' needs and desires interact with, support, or challenge the needs of the organization, and how all of this is influenced by forces outside the boundary of the organization. Students practice developing actionable recommendations to improve the effectiveness of international aid organizations in the context of multiple (and often contested) understandings of global development needs and conflicting stakeholder demands. Readings, class discussions, mini-lectures, simulations, case analyses, group projects, oral presentations, memo writing, opinion writing.

PA 5161. Redesigning Human Services. (; 3 cr. ; A-F or Audit; Every Fall)

This course provides an in-depth examination of the history and institutions delivering human services in the United States, with an emphasis on how human-centered design can help improve service provision and outcomes. It explores how public, nonprofit, and philanthropic structures create unique operational realities and cultures that must be navigated to lead change across institutional boundaries. It also systematically investigates contributors to disparities in the human services system, particularly race. The use of frameworks such as human-centered design, human services value curve, and an equity lens will help us on this exploration. Course learning materials take students through a design process to highlight strategies for systems change and improvement grounded in outcomes. Design processes are iterative and involve understanding and engaging the people and context in problem solving. Through project-based learning approach, students will understand the various constraints that need to be navigated in design: feasibility, viability, and desirability. Students gain experience using design to help appreciate these constraints and develop strategies for overcoming them.

PA 5162. Public Service Redesign

Workshop. (; 3 cr. ; A-F only; Every Spring) Public service delivery innovation and redesign in health and human services fields to improve outcomes. Study and application of theories of organizational development, leadership, and system change. Social system dynamics analysis. Engaging diverse stakeholders. Effects and influence of implicit bias on current and redesigned efforts. Models and tools for public service redesign.

PA 5190. Topics in Public and Nonprofit Leadership and Management. (; 1-3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring) Selected topics.

PA 5205. Statistics for Planning. (4 cr. ; A-F only; Every Fall)

Basic statistical tools for empirical analysis in urban and regional planning, including descriptive statistics, frequency distributions, elementary probability theory, research design and sampling, statistical inference, hypothesis testing, cross-tabulation/chi-square distribution, correlation, and simple/multiple regression analysis.

PA 5206. The City of White Supremacy. (3 cr. ; Student Option; Every Fall)

The title of this course is meant to signal the objective of scrutinizing how systems of white supremacy have shaped the American city and how the American city functions in ways that reproduce and reinforce white supremacy. The colonization of the Americas coincided with the fabrication of racial identities that set the terms for membership in what became a white supremacist/racial state wherein all things, including spatial thinking and design, conformed to a racial calculus. As Lipsitz (2007: 12) tells us, "The lived experience of race has a spatial dimension, and the lived experience of space has a racial dimension."

The core of this class will, however, focus on later developments characteristic of the period of rapid urbanization from the Jim Crow era through the New Deal and Civil Rights periods to today. The first section of the course will focus on frameworks for understanding white supremacy generally, and as it relates to urban development specifically. The second section considers specific domains of urban policy and planning using white supremacy as the analytic framework. In these weeks we examine how white supremacy has been expressed across a range of urban development issue areas, including housing, transportation, the urban environment, education, criminal justice, and urban design, and how policies and planning practice have maintained or disrupted systems of white supremacy.

PA 5209. Urban Planning and Health Equity. (3 cr. ; Student Option; Every Spring)

This interdisciplinary course examines the causes and consequences of place-based health disparities in cities, explores how health disparities can be mitigated and exacerbated by urban planning decisions, and introduces best practices in urban planning for achieving community health equity. The course will involve extensive readings, guest lectures, field-based assignments, data-collection activities, and local community involvement. Twin Cities has one of the largest disparities in health outcomes in the nation and local practitioners are pioneering new urban planning solutions to reduce place-based health disparities. The course will utilize this location advantage and use the region as an immersive learning environment. Students are expected to apply knowledge and skills learned in the class locally in the Twin Cities region. At the end of the course, students will be able to: Understand the historical foundations, current trends and challenges, and international perspectives in connecting urban planning to health equity issues; investigate how various planning sectors and urban environment dimensions, including land use, transportation, open space, housing, food systems, and community social capital, interact to affect health disparities in cities; critically evaluate how existing planning processes and decisions respond to the needs of vulnerable populations and contribute to health equity; and develop skills to engage communities and identifying community-sensitive solutions for reducing place-based health disparities. Fulfills a requirement for graduate Health Equity Minor (<http://www.sph.umn.edu/academics/minor/health-equity/>).

PA 5211. Land Use Planning. (3 cr. [max 6 cr.] ; A-F only; Every Fall)

Physical/spatial basis for land use planning at community/regional level. Role of public sector in guiding private development. Land use regulations, comprehensive planning, growth management, innovative land use planning/policies. prereq: Major or minor in urban/regional planning or instr consent

PA 5212. Managing Urban Growth and Change. (3 cr. ; Student Option; Fall Even Year)

Theory/practice of planning, promoting, and controlling economic growth/change in urban areas. Economic development tools available to state/local policymakers, historic context of their use in the United States. legal, social, and economic implementation constraints. Interactions among economic, social, and demographic trends. prereq: Grad student or instr consent

PA 5213. Introduction to Site Planning. (3 cr. ; Student Option; Every Spring)

Analyzing/preparing graphic plans for development or redevelopment of property. Site planning issues, process, opportunities, details, and techniques. Hands-on preparation of a site plan. Site visits, lectures, research, presentations, exam, in-class exercises. prereq: Grad student or instr consent

PA 5214. Planning & Design for the Urban Public Realm. (1.5 cr. ; A-F only; Every Fall)

The Great Inversion, or what former Minneapolis Mayor RT Rybak called "the flight to the city," has been ongoing for two decades, and to preserve and enhance the quality of life in our cities, we must continue to invest in our urban public realm. Cities must maintain and improve older parks, plazas and streets, but they must also provide new public spaces in developing areas that never had them before - waterfronts, industrial sites, rail yards, and acres of surface parking. Perhaps most important yet easily overlooked is the re-envisioning of the public right-of-way "the street" as a place that accommodates not just cars but multiple transportation modes including buses, rail, bicycles, and scooters and other forms of personal transport, all integrated into an accessible, pedestrian-friendly, safe, and green environment. The greening of city streets is critical for the creation of lush and livable places while also producing social, economic, and environmental benefits. Since the start of the Covid 19 pandemic in March 2020, our collective experience of the urban public realm and its meaning and value to us have changed dramatically. Our use of public places has increased as parkways once dominated by cars were closed off and filled with pedestrians, cyclists, skateboarders, roller skaters, roller skiers, and people on all other sorts of wheeled conveyances. Park spaces that were once often largely empty filled with people getting exercise, enjoying nature, visiting playgrounds, meeting friends, social-distance dating, taking walking happy hours, having picnics, playing spike ball, hula-hooping, and in the case of the homeless, camping out to avoid the dangers of shelters, to socially distance themselves, and in some cases, both. Following the May 2020 death of George Floyd in police custody, our experience of the public realm changed again to include protests, marches, riots, property damage, the creation of new public art, the erection of new monuments, and the removal of old ones. Since March 2020, we have been learning to use our public places many new ways, some traditional, some adaptive, and some temporary. And the economic effects of the Coronavirus "the recession, job losses, reduced spending, and a decline in business"

mean that cities and other governments will likely have less tax revenue and therefore less money to invest in the public realm in the coming years. This will mean not only fewer projects for new or revitalized public places, but also less money for maintenance, operations, and programming of existing places. It is possible that our public realm will become a little worn in the coming years. Now more than ever, the work of improving our public realm requires a commitment to multi-disciplinary collaboration and broad and genuine stakeholder engagement processes at an entirely new level. Complicated public realm projects require a form of project team leadership that looks more like representative democracy than the imposition of a wonderfully pure vision by a single brilliant designer. Facilitating this process successfully requires uniquely skilled and open-minded planners and designers who can help us all envision a better way to live together in our cities. Last but not least, 2020 has shown us that social investment and planning for equity and justice in the public realm is as important, if not more important, than capital investment in the actual physical infrastructure. The purpose of this course is to help planners, designers, and other city builders come to understand the opportunities and challenges of project implementation through the lens of a specific project type: The Urban Public Realm Project. The course integrates theory and practice into a framework for understanding the experience of public places and the role of planning and design in the implementation of urban public realm projects "from inception through construction, start-up, and ongoing operations.

PA 5221. Private Sector Development. (3 cr. ; Student Option No Audit; Every Spring)

Roles of various participants in land development. Investment objectives, effects of regulation. Overview of development process from private/public perspective.

PA 5231. Transit Planning and Management. (3 cr. ; Student Option; Every Fall)

Principles/techniques related to implementing transit systems. Historical perspective, characteristics of travel demand, demand management. Evaluating/benchmarking system performance. Transit-oriented development. Analyzing alternative transit modes. System design/finance. Case studies, field projects. prereq: Grad student or instr consent

PA 5232. Transportation Policy, Planning, and Deployment. (3 cr. ; Student Option; Periodic Fall & Spring)

Development of transportation policy, making of transportation plans, deployment of transportation technologies. Lectures, interactive case studies, role playing.

PA 5233. Sustainable Transportation. (3 cr. ; A-F or Audit; Spring Odd Year)

This course emphasizes the theories and practices associated with a sustainable transportation system, especially pedestrian and bicycle transportation. It covers key concepts of sustainable transportation, climate mitigation and adaptation, and planning for pedestrian and bicycle transportation. The

specific topics regarding pedestrian and bicycle transportation include benefits and advocacy, data collection and performance measures, demand forecasting, behavior and its connection with neighborhood design and zoning, safety, planning, design principles of facilities, equity, and innovations.

PA 5234. Urban Transportation Planning and Policy. (3 cr. ; A-F or Audit; Every Spring)

This course will integrate key theories and practices, traditional and emerging policy instruments, and techniques for urban and transportation planning. The goal is to introduce students to essential concepts, influential thinkers, and important debates associated with the land use-transportation connection as a foundation for both professional and academic work. By the end of the course, students will be able to comprehend urban transportation planning process and demand forecasting; the theories and empirical evidence on land use and transportation interactions; land use and transportation policy instruments and their effectiveness; and land use and transportation planning in developing countries.

PA 5242. Environmental Planning, Policy, and Decision Making. (; 3 cr. ; Student Option; Periodic Spring)

Theory and practice. Ethical, legal, and institutional frameworks relative to a range of environmental issues. Innovative environmental decision making informed by collaboration, conflict resolution, adaptive management, and resilience thinking. prereq: Grad or instr consent

PA 5243. Environmental Justice in Urban Planning & Public Policy. (3 cr. ; A-F or Audit; Every Spring)

Environmental racism can be defined as policies and practices that result in communities of Black, Indigenous and other people of color (BIPOC communities) being overexposed to environmental harms and being denied access to environmental goods. The environmental justice (EJ) movement in the United States was birthed in the 1980s with the aim of ending environmental racism. Early EJ activism was led by Black rural communities protesting the disproportionate presence of toxic waste facilities in their neighborhoods and Latinx migrant farmworkers who were overexposed to harmful pesticides. Central to the course is the understanding that structural racism, in the form of social, political, and economic forces, has denied BIPOC individuals and communities their rights to live in clean environments and access natural resources that allow communities to build and maintain their physical, mental, emotion, and fiscal health. Although the course focuses on race and racism, it takes as axiomatic that racism is intertwined with other systems of oppression including, but not limited to, sexism, classism, ableism, homophobia, and transphobia. The course begins by tracing the history of the EJ movement and unpacking the terms "racism" and "justice." The main body of the course will focus on a series of issues that EJ scholars and activists address including pollution, greening, transportation, disasters, and climate

change. The course ends with discussions and reflections on our roles, responsibilities and possibilities as public policy and planning scholars, researchers and practitioners to work towards ending environmental racism and achieving EJ for all. The required readings for the course will include academic journal articles, news stories, governmental policies, podcasts, videos, poetry, and short stories. This will allow us to understand the theoretical and methodological approaches to EJ activism and research and explore popular and creative forms of knowledge about EJ which will add depth to our understanding and analysis of relevant plans and policies. Our time together in the classroom will primarily be a mix of lectures, group discussions, in-class exercises, and occasionally guest speakers. While we will reflect on some international issues and materials, we will largely focus on EJ in the United States.

PA 5251. Strategic Planning and Management. (; 3 cr. ; Student Option No Audit; Periodic Spring)

Theory and practice of strategic planning and management for public and nonprofit organizations and networks. Strategic planning process, management systems; stakeholder analyses. Tools and techniques such as purpose expansions, SWOT analyses, oval mapping, portfolio analyses, and logic models.

PA 5261. Housing Policy. (; 3 cr. ; A-F or Audit; Every Spring)

Institutional/environmental setting for housing policy in the United States. Competing views of solving housing problems through public intervention in the market. Federal/local public sector responses to housing problems. prereq: Grad or instr consent

PA 5262. Neighborhood Revitalization Theories and Strategies. (3 cr. ; Student Option No Audit; Every Fall)

Policy-making/politics of planning in housing, community development, social policy. Connecting policy to local/regional politics. Role of institutional decision-making structures on policy outcomes. Importance of citizens, social movements, interest groups in policymaking process.

PA 5263. Financing Affordable Multi-Family Rental Hsg in US. (3 cr. ; Student Option No Audit; Every Spring)

Financing affordable multifamily housing in the United States is a complicated endeavor that requires more than just a command of financial principles and analysis but also an appreciation for the nuances and fluidity of policy, public-private-partnership, and public discourse. This course will demystify the financial drivers and consequences in our affordable housing delivery system. It will simultaneously build participants' confidence in basic financial modeling of affordable housing using the most common capital structures, while also exploring the relationship of finance with policy and regulation, real estate and urban planning objectives, design, and program limitations. Participants in this course will emerge with:

- An understanding of the roles, risk sharing and influence of public and private actors in the

financing and provision of affordable housing.

- A practical familiarity with the major financing programs and policies that drive investment in this sector.
- Experience in financial modeling specific to multifamily affordable housing which will prepare them for work in the industry, regardless of role.

PA 5271. Geographic Information Systems: Applications in Planning and Policy Analysis. (; 3 cr. ; Student Option; Every Fall)

Introduction to GIS. Applications in public planning and policy analysis. Operational skills in GIS software. Mapping analysis of U.S. Census material. Local/state government management/planning. Spatial statistical analysis for policy/planning. prereq: Major in urban/regional planning or instr consent

PA 5281. Immigrants, Urban Planning and Policymaking in the U.S.. (3 cr. ; A-F or Audit; Every Fall)

Social, political, economic experiences of contemporary U.S. immigrants. Draws from sociology, economics, demography, political science, public affairs. Local government policies/plans. Cities/suburbs as contexts for immigrants. Interactions between immigrant communities/urban planners/policymakers. prereq: Grad student or instr consent

PA 5290. Topics in Planning. (; 0.5-4 cr. [max 12 cr.] ; Student Option; Periodic Fall & Spring)

Selected topics.

PA 5301. Population Methods & Issues for the United States & Global South. (3 cr. ; Student Option; Every Fall)

Basic demographic measures/methodology. Demographic transition, mortality, fertility. Perspectives on nonmarital fertility, marriage, divorce, cohabitation. Cultural differences in family structure, aging, migration, refugee movements, population policies. Discussion of readings. prereq: Grad student or instr consent

PA 5311. Program Evaluation. (; 3 cr. ; A-F only; Periodic Fall & Spring)

This course covers the core principals, methods, and implementation of evaluation research. Students will learn through an applied partnership with a nonprofit or state/local government clients. The course is designed for both students interested in a potential career in evaluation and those that want to be better consumers of research. Past programmatic/policy areas included health and human services, education, environment science, economic development, transportation, and evidence-based policymaking.

PA 5312. Cost-Benefit Analysis for Program Evaluation. (2 cr. ; Student Option No Audit; Every Fall & Spring)

This class introduces students to cost-benefit analysis, the leading evidenced-based method for determining whether a government program or policy improves the well-being of society. Starting with the foundations of welfare economics, students learn how to monetize important benefits and costs associated with government activities. Topics include discounting future benefits and costs, the roles of standing and risk, ways of valuing human

lives and other benefits that may be hard to value in dollar terms. Students will acquire skills needed to perform relevant calculations needed for the economic assessment of benefits relative to costs and the ability to critique the use of these methods regarding how they may advantage or disadvantage some members of society or particular types of policies. Policy areas include preventive interventions in social, health and education as well as applications in transportation and environmental policy. Prerequisite: PA 5021 or other prior course in microeconomics.

PA 5390. Topics in Advanced Policy Analysis Methods. (; 1-4 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)
Topics in advanced policy analysis methods.

PA 5401. Poverty, Inequality, and Public Policy. (; 3 cr. ; Student Option; Every Fall)
Nature/extent of poverty/inequality in the United States, causes/consequences, impact of government programs/policies. Extent/causes of poverty/inequality in other developed/developing countries. prereq: Grad or instr consent

PA 5405. Public Policy Implementation. (; 3 cr. ; A-F or Audit; Every Fall)
Theory, tools, and practice of the implementation of public policy, particularly in areas involving public, private, and nonprofit organizations. Analytical approach focuses on multiple levels in policy fields to pinpoint and assess implementation challenges and levers for improvement.

PA 5413. Early Childhood and Public Policy. (; 1.5-3 cr. ; Student Option; Every Fall)
State/federal/int'l policies/legislation touching first 5 years of child's life. Family, community, institutional roles in promoting children's social/cognitive/emotional development. Health, mental health, poverty, special needs, economic/social justice. Part of Early Childhood Pol cert. prereq: Grad or instr consent

PA 5415. Effective Policies for Children in the First Decade. (1.5-3 cr. [max 6 cr.] ; Student Option No Audit; Periodic Spring)
Policies to improve the wellbeing of children through the first decade of life are examined using examples from economics and other disciplines. The course focuses on the role of government in helping to promote early childhood development. Readings and projects focus on policies or programs that affect child outcomes from the prenatal period to third grade. Students will become familiar with the importance of rigorous impact evaluations and the use of cost-effectiveness and cost-benefit analysis as a tool for efficient resource allocation. Some familiarity with regression analysis would be helpful.

PA 5416. Economics of U.S. Social Insurance Programs. (3 cr. ; A-F only; Every Spring)
This class will introduce you to the Economics of Social Insurance Programs. It begins by introducing a framework to evaluate the efficiency and equity of social insurance programs, drawing on theory from the economics of insurance programs and behavioral economics. It then applies this

framework to social insurance programs such as workers' compensation, unemployment insurance, health insurance, social security, TANF and Supplemental Nutritional Assistance, and the Earned Income Tax Credit. Prerequisite: PA 5021 or other prior course in microeconomics.

PA 5421. Racial Inequality and Public Policy. (; 3 cr. ; Student Option No Audit; Periodic Fall & Spring)
Historical roots of racial inequality in American society. Contemporary economic consequences. Public policy responses to racial inequality. Emphasizes thinking/analysis that is critical of strategies offered for reducing racism and racial economic inequality. prereq: Grad or instr consent

PA 5422. Diversity and Public Policy. (; 3 cr. ; A-F only; Periodic Fall)
What is diversity? What role does it play in public policy? What role should it play? Whom does diversity include or exclude? In this highly participatory class, we will apply a policy analysis lens to explore how diversity interacts with, contributes to, and is impacted by policy. The interdisciplinary course readings draw from topics such as gender identity, intersectionality, socio-economic class, race and ethnicity, indigenous ways of knowing, sexual orientation, and disability. Students examine the evolution of difference and diversity, explore various domains of diversity (gender, race, ethnicity, sexuality, disability, class), and synthesize and apply this knowledge to the development of a policy brief that focuses on a particular policy or organizational problem.

PA 5426. Community-Engaged Research and Policy with Marginalized Groups. (; 3 cr. ; Student Option; Every Spring)
Marginalized populations tend to be viewed as objects of social policy, passive victims, or a cause of social problems. Processes of marginalization we will explore in this class include: structural racism, colonization, economic exclusion and exploitation, gender bias, and more. Policy and research are typically driven by mainstream/dominant society members with little direct knowledge about the real lives of people on the margins. This can lead to misguided actions, misunderstandings, paternalism, unintended negative consequences, and further marginalization and/or stigmatization. In this course, we will learn about community-engaged research methodologies such as participatory action research (PAR) and community-based participatory research (CPBR). We will use case studies to explore the challenges, rewards, and ethical implications of these community-engaged approaches to research and policy-making. Possible topics include, but are not limited to, sex trafficking, housing, and youth work. Instructors and students in the course will work together on a real-world research and policy challenge so that students contribute to ongoing work in the field in real-time.

PA 5431. Public Policies on Work and Pay. (; 3 cr. ; Student Option; Every Fall)

Public policies affecting employment, hours of work, and institutions in labor markets. Public programs impacting wages, unemployment, training, collective bargaining, job security, and workplace governance. Policy implications of the changing nature of work. prereq: [[PA 5031 or equiv], grad student] or instr consent

PA 5442. Education Law and Policy. (3 cr. ; Student Option No Audit; Periodic Fall)
Education law and policy with focus on elementary/secondary. Topics include governance; interplay of federal, state and local law and policy; education redesign; intersection with workforce development; reform efforts; desegregation; achievement gap; role of teacher unions; and finance. Early childhood education discussed in connection with K-12 issues. Case studies include recently enacted legislation in multiple states.

PA 5480. Topics in Race, Ethnicity, and Public Policy. (; 1-3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)
Link between race/ethnicity and public policy. How to identify/measure racial/ethnic disparities and their historical/cultural origins and policy impacts and to craft politically feasible remedies. Topics may include criminal justice, housing, child welfare, and education. prereq: Jr or sr or grad student or instr consent

PA 5490. Topics in Social Policy. (; 1-4 cr. [max 12 cr.] ; Student Option; Periodic Fall & Spring)
Selected topics.

PA 5501. Theories and Policies of Development. (; 3 cr. ; Student Option; Every Fall)
What makes some countries wealthier than others, one group of people healthier and more educated than another? How does the behavior of rich nations affect poor nations? Origins of development thought, contemporary frameworks and policy debates. Economic, human, and sustainable development. prereq: Grad student or instr consent

PA 5503. Economics of Development. (; 3 cr. ; A-F or Audit; Every Fall)
Economic growth, inequality, poverty, rural/urban labor markets, risk/insurance. Investments in human capital, credit markets, gender/household economics, governance/institutional issues. Microfinance, conditional cash transfers, labor/education policies. prereq: PA 5501 or concurrent registration is required (or allowed) in PA 5501

PA 5504. Transforming Development. (3 cr. ; Student Option; Every Spring)
Emerging infectious diseases such as COVID-19, antimicrobial resistance, climate change, loss of species, and habitats are driven by our dominant definition of development and pose existential challenges to humankind. COVID-19 has laid bare the ethnic, racial, class, and gender inequalities in the ways societies across the globe lead material life (economy). Current social and environmental challenges are global and local in scale and challenge us to consider poverty alleviation not as an international issue and only of concern for low resourced communities

and developing countries, but one in need of attention in every country in the world, including peoples in the wealthy West. This course examines the emerging pluriverse paradigm and some of the models intending to transform development: nature rights movement, community economy, solidarity movement, degrowth, transition design, and ontologies and epistemologies of First Nations in North and South America. We will contrast these development models to sustainable development goals and the green growth approach.

PA 5511. Community Economic Development. (; 3 cr. ; Student Option; Every Fall)

Contexts/motivations behind community economic development activities. Alternative strategies for organizing/initiating economic development projects. Tools/techniques for economic development analysis/planning (market analysis, feasibility studies, development plans). Implementation at local level. prereq: Grad or instr consent

PA 5512. Workforce and Economic Development. (3 cr. ; A-F or Audit; Spring Even Year)

Economic and workforce development examined from a U.S. context, exploring how rural and urban regional economies grow, why industries/employers locate where they do, and how workers decide where to live and work. Government and economic development practices related to businesses and innovation will also be addressed. prereq: Grad or instructor consent

PA 5521. Development Planning and Policy Analysis. (; 4 cr. ; Student Option; Every Spring)

Techniques of development planning/policy analysis at national, regional, and project levels. Effects of external shocks and government interventions on national/regional economies. Macroeconomic modeling, input-output analysis, social accounting matrices/multipliers, project evaluation. prereq: 5031 or equiv recommended or instr consent

PA 5522. International Development Policy, Families, and Health. (; 3 cr. ; Student Option; Periodic Fall)

Implications of paid/unpaid labor for development policy, using household as prism. Legal/cultural use of property rights. Financial effects of ill health. Caregiving. Work-family conflict, policies that alleviate it. Role of gender. Qualitative/quantitative methods. Readings, lectures, discussions. prereq: Grad student or instr consent

PA 5561. Gender and International Development. (; 3 cr. ; Student Option; Periodic Spring)

Women and men are affected differently by development and participate differently in policy formulation and implementation. Gender-sensitive perspective. Historical, political context. Global South. Policy, practice, and experience (theory and measurement; international, national, local stakeholders; effects of policy and practice on development). prereq: Grad or instr consent

PA 5590. Topics in Economic and Community Development. (; 1-3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)

Selected topics.

PA 5601. Global Survey of Gender and Public Policy. (3 cr. ; Student Option; Periodic Fall)

Introduction to the key concepts and tools necessary for gender policy analysis. Survey of the major findings in the field of gender and public policy in policy areas such as poverty alleviation, health, international security, environment and work-family reconciliation. Scope includes local, national, and global policy arenas as well as exploration of gender and the politics of policy formulation.

PA 5622. GAINS: Gender and Intersectional Network Series, Leadership Workshop I. (0.5-1 cr. ; S-N only; Fall Odd Year)

GAINS: Gender and Intersectional Network Series, Leadership Workshop prepares students with the skills to lead effectively and challenge institutional norms and practices that perpetuate disparities based on gender, race and other structural inequalities. Women, racially marginalized individuals, and LGBTI-identified individuals are still disproportionately underrepresented in leadership roles in public, private, and nonprofit institutions in spite of high rates of educational attainment and equal opportunity legislation. Women of color and indigenous women face even greater obstacles to advancement compared to white women. Barriers to diverse leadership today stem less from overt discrimination and more from "second generation" forms of bias often invisible but still powerful cultural beliefs as well as workplace structures and practices. Achieving leadership parity thus entails individual, collective and institutional change. Course pedagogy includes case studies, group discussions, self-reflection and simulations that have been proven to have a lasting impact on individual leaders in developing their own leadership capacity. Guest speakers offer potential role models and share their leadership perspectives.

The workshop and two-semester format of the course allows students to benefit from a cohort model of learning and develop their own network of practice. Moreover, GAINS focuses not just on individual leadership development, but also organizational and systems level change. Students of all genders interested in addressing personal and institutional barriers to advancement that are rooted in gender inequalities and their intersections with race and other forms of inequality are welcome to enroll. To get the most out of the network and cohort development aspects of this course, students are encouraged to participate for two semesters.

PA 5623. GAINS: Gender and Intersectional Network Series, Leadership Workshop II. (0.5-1 cr. ; S-N only; Spring Odd Year)

GAINS: Gender and Intersectional Network Series, Leadership Workshop prepares students with the skills to lead effectively and challenge institutional norms and practices that perpetuate disparities based on gender,

race and other structural inequalities. Women, racially marginalized individuals, and LGBTI-identified individuals are still disproportionately underrepresented in leadership roles in public, private, and nonprofit institutions in spite of high rates of educational attainment and equal opportunity legislation. Women of color and indigenous women face even greater obstacles to advancement compared to white women. Barriers to diverse leadership today stem less from overt discrimination and more from "second generation" forms of bias often invisible but still powerful cultural beliefs as well as workplace structures and practices. Achieving leadership parity thus entails individual, collective and institutional change. Course pedagogy includes case studies, group discussions, self-reflection and simulations that have been proven to have a lasting impact on individual leaders in developing their own leadership capacity. Guest speakers offer potential role models and share their leadership perspectives. The workshop and two-semester format of the course allows students to benefit from a cohort model of learning and develop their own network of practice. Moreover, GAINS focuses not just on individual leadership development, but also organizational and systems level change. Students of all genders interested in addressing personal and institutional barriers to advancement that are rooted in gender inequalities and their intersections with race and other forms of inequality are welcome to enroll. To get the most out of the network and cohort development aspects of this course, students are encouraged to participate for two semesters.

PA 5631. LGBTQ Politics & Policy. (1.5 cr. ; A-F only; Every Spring)

The advancement of LGBTQ rights in the United States has experienced unprecedented success over the last twenty years, shifting both public attitude towards and legal protection for LGBTQ Americans. This course will provide an in-depth analysis of current LGBTQ policy achievements in the United States, including the recognition of marriage equality in all 50 states, the repeal of Don't Ask, Don't Tell, increased anti-discrimination protections, and rights for people who are transgender or gender non-conforming. Emphasis will be placed on how these victories were achieved, including background on the strategies and tactics used to generate policy results. We will also take a critical look at such milestones and examine what they mean for the entire LGBTQ population, including queer people of color, transgender and gender nonconforming individuals, the disabled, and economically disadvantaged. Intersectionality will be a key aspect of the course, in particular, analysis on how the differential effects of policy among segments of the population that may not experience the benefits of policy passage as quickly or as broadly. Incorporated into this analysis will be readings from queer liberation scholars to help us evaluate the pros and cons of existing LGBTQ policy gains. The course will explore what full equality might look like for LGBTQ people in the United States with an examination of what can and cannot be

achieved through policy. Practical application on how policy is made will be intertwined throughout the course. Topics to be covered include the meaning and measurement of LGBTQ identity; estimates of those who identify as LGBTQ; the measurement of Americans' attitudes on LGBTQ issues and how these attitudes have changed over the past few decades; assessment of changes in law and policies at the national, state and local levels; and the implications of these changes for the lived experience of LGBTQ people and their families, including health, well-being, stigma and discrimination.

PA 5683. Gender, Race and Political Representation. (3 cr. ; A-F only; Spring Even Year)

Explores intersection of gender, race and political issues to identify best practices for strengthening roles of under-represented groups in governance. Individual, structural and institutional factors attributed to increasing the election and appointment of under-represented groups. Theories of citizen representation. Global approach with cross-national evidence and comparative country studies.

PA 5690. Topics in Women, Gender and Public Policy. (; 0.5-3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)

Selected topics. prereq: Grad student or instr consent

PA 5711. Science, Technology & Environmental Policy. (; 3 cr. ; Student Option; Every Fall)

Interplay of science, technology, the environment, and society. Approaches from across the social sciences will cover how science and technology can create new environmental pressures as well as policy challenges in a range of spheres from climate change to systems of intellectual property and international development.

PA 5715. Deliberating Science, Technology, and Environmental Policy. (; 1.5 cr. [max 6 cr.] ; A-F only; Periodic Fall & Spring)

Exploration of the conceptual and ethical dimensions of science, technology, and environmental policy. Discussion-based course with rotating topics.

PA 5721. Energy Systems and Policy. (; 3 cr. ; Student Option; Every Fall)

Impact of energy production/consumption choices on environmental quality, sustainable development, and other economic/social goals. Emphasizes public policy choices for energy/environment, linkages between them.

PA 5722. Economics of Environmental Policy. (; 3 cr. ; Student Option; Every Fall)

Introduction to economic principles and methods as they apply to environmental issues such as climate change, biodiversity conservation, and water quality. Course will cover benefit-cost analysis, methods of environmental valuation, as well as critiques of market-based solutions to environmental challenges.

PA 5723. Water Policy. (; 3 cr. ; Student Option; Every Spring)

Sociocultural, legal, economic, and environmental forces affecting supply/use of water by individuals, sectors, and governance institutions. Historical trends; water laws in United States and internationally. Institutional structures for managing water at federal, state, and local levels. Current water-related issues/policies. prereq: Grad student or instr consent

PA 5724. Climate Change Policy. (3 cr. ; Student Option; Every Fall)

Existing and proposed approaches to mitigate and adapt to climate change through policies that cross scales of governance (from local to global) and impact a wide range of sectors. Exploration of climate change policy from a variety of disciplinary approaches and perspectives, emphasizing economic logic, ethical principles, and institutional feasibility. How policy can be shaped in the face of a variety of competing interests to achieve commonly desired outcomes. Students develop a deep knowledge of climate change in particular countries through a team final project. prereq: Intro microecon (such as Econ 1101 or equiv)

PA 5731. Emerging Sciences and Technologies: Policy, Ethics and Law. (; 3 cr. ; Student Option; Periodic Fall & Spring)

This interdisciplinary course will examine issues at the nexus of public policy, ethics, law, and emerging sciences and technologies (ES&T) including nanotechnology, genetic and biomedical engineering, synthetic biology, and artificial intelligence. Topics we will explore include the role of science and technology as both a tool for and the subject of policy and law; the policy, ethical, economic, and legal implications of ES&T research and development; environmental and human health risk analysis and regulation (e.g., EPA, FDA, OSHA, and state and local regulatory mechanisms); intellectual property issues; liability issues; and global impacts. Topics will be approached from the perspective of different stakeholders (e.g., federal agencies, industry, academic researchers, the environment, international organizations, and the public) and in the context of different application areas (e.g., drugs, devices, food, agriculture, energy, environmental remediation) using a variety of interdisciplinary approaches. Students with a broad range of interests are encouraged to enroll.

PA 5741. Risk, Resilience and Decision Making. (; 1.5 cr. [max 3 cr.] ; Student Option No Audit; Every Spring)

Interplay between risk analysis, decision making, and policy in the context of new and emerging technologies, environmental and human well-being, risk and resilience. Assessment methods; risk management processes, issues and methods; role/treatment of uncertainty; factors in decision making; risk-based rule making; public values; risk communication and perception. Scientific, technical, social, political, and ethical issues. prereq: Grad student or instr consent

PA 5751. Addressing Climate and Energy Challenges at the Local Scale. (3 cr. ; A-F or Audit; Every Spring)

Examine energy and climate innovations at local and community scales. Understand how to implement local policies, projects, and programs with a diverse set of perspectives on energy issues. Develop professional and analytical skills that support solutions to energy and climate challenges.

PA 5761. Environmental Systems Analysis at the Food-Energy-Water Nexus. (3 cr. ; Student Option; Every Spring)

Agricultural lands, water resources, and energy production and transport are interconnected systems with implications for policy and management at local to global scales. This course will explore contemporary issues at the nexus of food, energy, and water with a focus on Midwestern landscapes. Specific topics include farm policy, permitting of pipelines and energy production, mitigation of air and water pollution, and strategies to incentivize the conservation and restoration of landscapes. Students will develop professional skills in systems thinking, scenario analysis, science communication, facilitation, and collective leadership.

PA 5771. Change Leadership for Environmental, Social and Governance Action. (; 3 cr. ; Student Option No Audit; Every Fall)

Sustainability is increasingly being defined broadly to include the environmental, social and governance (ESG) actions, and effects of organizations. ESG concepts integrate environmental sustainability with diversity, equity, and inclusion. Individuals working within organizations or seeking to join those organizations have expressed desires to affect the actions of an organization. This course aims to give students hands-on experience with a project investigating, designing, advocating for and implementing an ESG improvement in an existing or new organization. We imagine students in this course as future intrapreneurs (an employee of an organization who creates new opportunities or products in the style of an entrepreneur) transforming practices in existing organizations or as entrepreneurs seeking to create new sustainable organizations, or both. Non-degree-seeking students possessing a bachelor's degree are encouraged to contact the instructor for permission to register.

PA 5790. Topics in Science, Technology, and Environmental Policy. (; 1-3 cr. [max 9 cr.] ; Student Option; Periodic Fall & Spring)

Selected topics.

PA 5801. Global Public Policy. (3 cr. ; Student Option; Every Spring)

Creation of rules, norms, institutions to regulate global activities. Policy making. How global policy making regulates interstate, national, transnational activities. Creation/enforcement of global rules. Applications to international security, political economy. prereq: Grad or instr consent

PA 5805. Global Economics. (3 cr. ; A-F only; Every Fall)

Global trade, exchange rates, finance, international business, and migration in context of theories and evidence that inform the

policies pursued at national level. Operation of main international organizations dealing with these issues will also be examined. prereq: [5021 or equivalent] or instr consent

PA 5813. US Foreign Policy: Issues and Institutions. (3 cr. ; Student Option No Audit; Every Fall)

Taught by the Humphrey School diplomat in residence, this course helps students develop a deep understanding of how US foreign policy institutions function, how that is being challenged, and the broader global implications of those changes. Through readings, class discussions, and guest lectures, we look at the institutions and processes involved in developing and managing US foreign policy, and use case studies to advance students' knowledge, including of how the Department of State works, and the expanding role of the Department of Defense, the National Security Council, and intelligence agencies. We examine how economic instruments like sanctions are used to advance policy; and how American citizens, lobbyists, and foreign governments influence policy. We incorporate discussions of current events into each class. Students develop writing and presentation skills critical to foreign policy careers.

PA 5814. Global Diplomacy in a Time of Change. (3 cr. ; Student Option No Audit; Every Spring)

Taught by the Humphrey School's diplomat in residence, this course examines the changing world of twenty-first century global diplomacy and how state and nonstate actors are challenging the status quo. We look at the dynamics behind major international developments with case studies including BREXIT, the Iran Agreement, climate negotiations, and China's global initiatives? placed in the context of an examination of how states operate in the international diplomatic sphere and how multilateral organizations enhance or challenge the concept of state sovereignty. Students gain knowledge about the complexities of diplomacy and negotiation through readings, classroom discussions, and guest speakers and develop professional skills through writing and presentation assignments.

PA 5823. Human Rights and Humanitarian Crises: Policy Challenges. (3 cr. ; Student Option No Audit; Periodic Fall & Spring) Examines response of governments, international organizations, NGOs, and others to global humanitarian and human rights challenges posed by civil conflict and other complex emergencies in places such as Syria, Ukraine, South Sudan, Somalia, Burma, and elsewhere. Course will also consider and assess UN and other institutions established to address these issues (like UNOCHA and UNHCR). In addition, course will examine US policy toward humanitarian issues and refugees (including US refugee admissions).

PA 5825. Crisis Management in Foreign Affairs. (1.5 cr. [max 3 cr.] ; Student Option; Every Spring) Crisis decision making in foreign policy. Examination of the organization and structure of crisis decision-making within U.S. national

security apparatus. Analysis of in-depth four foreign policy crises (Cuban Missile Crisis, Vietnam ? Tet, Iraq, and a current crisis). Crisis simulation with students in the role of national security leaders.

PA 5826. National Security Policy. (3 cr. ; Student Option; Every Fall)

This course will analyze U.S. national security policy and process from the viewpoint of the National Security Council staff. Students will examine the organization and structure of the U.S. national security apparatus and the national security decision-making process, including individual and political factors; assess central threats to U.S. and international security and develop and discuss policy options to deal with those threats; undertake a major policy review on a specific national security challenge facing the United States, including analysis and recommendations; produce products, both written and oral, crucial to national security policy making (e.g., concise information and action memorandum), and put themselves in the position of national security leaders as part of a policy simulation. Grades will be based on oral participation, papers, and class reports.

PA 5880. Exploring Global Cities. (; 1-3 cr. [max 6 cr.] ; Student Option; Every Spring) Study abroad offered in cities across globe. Opportunities to study policy/planning issues in varied contexts from comparative/inter-cultural perspective. Study/work with practitioners/peers in field. Tanzania odd years/Austria even years. Additional countries may be added in future.

PA 5885. Human Rights Policy: Issues and Actors. (3 cr. ; Student Option; Every Fall) Politics of human rights issue emergence; relevant international, regional, and domestic norms; correlates of state repression; measurement of human rights abuse and remedies; human rights promotion by states, political parties, international organizations, NGOs, social movements, faith-based organizations, and providers of international development assistance.

PA 5886. Master of Human Rights Cohort Seminar I. (1 cr. ; S-N only; Every Fall)

The Master of Human Rights Cohort Seminar is a required course for all first-year MHR students. The course is intended to create a cohort group and ensure that all MHR students have an opportunity to work together to explore current issues related to human rights practice, focusing on emerging events or crises, and debates over policy, practice, or theory and for direct contact with and networking particularly with counterparts in the Global South. This course is in a series with, and taken before, PA 5887. prereq: First-year MHR

PA 5887. Master of Human Rights Cohort Seminar II. (1 cr. ; S-N only; Every Spring)

The Master of Human Rights Cohort Seminar is a required course for all first-year MHR students. The course is intended to create a cohort group and ensure that all MHR students have an opportunity to work together to explore current issues related to human rights practice, focusing on emerging events or crises, and

debates over policy, practice, or theory and for direct contact with and networking particularly with counterparts in the Global South. This course is in a series with, and taken after, PA 5886.

PA 5890. Topics in Foreign Policy and International Affairs. (; 0.5-5 cr. [max 15 cr.] ; Student Option; Periodic Fall & Spring) Selected topics.

PA 5910. Developing Your Public Service Career. (; 1 cr. ; S-N or Audit; Every Fall) Students investigate/analyze interests, skills, and abilities and combine them in a career plan. Develop tools to demonstrate abilities, document experiences/knowledge, and explore public service career options.

PA 5920. Skills Workshop. (; 0.5-4 cr. [max 48 cr.] ; Student Option; Every Fall & Spring) Topics on public policy or planning skills. Topics specified in Class Schedule.

PA 5926. Presentation Skills: How to Inspire Your Audience and Change the World. (1 cr. [max 2 cr.] ; Student Option No Audit; Every Fall)

Learn techniques for making effective, persuasive presentations to different kinds of audiences. Practice is essential to improve speaking skills and reduce anxiety. Students practice by recording brief weekly presentations and making class presentations in a supportive environment. Techniques for using Powerpoint to create effective slides are practiced. Course components include presentation assignments; peer reviews; readings/videos and reflections; and class participation. May be repeated once.

PA 5927. Effective Grantwriting for Nonprofit Organizations. (; 1.5 cr. ; Student Option No Audit; Every Spring)

Grantwriting skills, processes, problems, and resources for nonprofit organizations. Researching and seeking grants. Communication with potential funders and generating financial support. Collaborating effectively with the organization and clients to create substantive, fundable proposals.

PA 5928. Data Management and Visualization with R. (1 cr. ; Student Option; Every Fall)

Introduction to R Studio software. Use of R Studio to carry out R file and related database management functions. Tools and techniques for data analysis and statistical programming in quantitative research or related applied areas. Topics include data selection, data manipulation, and data and spatial visualization (including charts, plots, histograms, maps, and other graphs). Prerequisite knowledge: Introductory statistics; ability to create bar graphs, line graphs, and scatter plots in MS Excel; and familiarity with principles of data visualization.

PA 5929. Data Visualization: Telling Stories with Numbers. (; 2 cr. ; Student Option; Every Fall & Spring)

Tools for communicating quantitative information in an intelligent, effective and persuasive way. Topics covered include 1)

writing and speaking about data; 2) data management in Excel in order to prepare data for charting; 3) understanding and ability to deploy core concepts in of design, layout, typography and color to maximize the impact of their data visualizations 4) determining which types of statistical measures are most effective for each type of data and message; 5) determining which types of design to use for communicating quantitative information; and 6) designing graphs and tables that are intelligent and compelling for communicating quantitative information.

PA 5932. Working with Data: Finding, Managing, and Using Data. (1.5 cr. ; Student Option; Every Spring)

Hands-on experience with common issues that arise when using secondary data sets. After successful completion of the course, students should be able to: 1. Determine where to find data and information about data (metadata) for policy-related topics. 2. Repurpose, manipulate, and/or clean data collected by someone else or for a different purpose in order to answer questions. 3. Determine appropriate units of analysis, weights, data structure, and variables of interest in order to answer policy-related questions. 4. Document workflow to allow reproducibility and protect the confidentiality of the data. 5. Conduct basic data manipulation tasks (making tables) using existing software including Excel and Stata. 6. Learn how to find answers for questions through online support. This course will focus on Excel and Stata equally. Previous experience in Stata is preferred, but the course will include a brief introduction to relevant skills.

PA 5933. Survey Methods: Designing Effective Questionnaires. (2 cr. [max 3 cr.] ; A-F only; Periodic Fall & Spring)

Applied (hands-on) introduction to survey questionnaire design. Student teams design a questionnaire for a client. For example, students may draft and revise questions about respondents' demographics and employment; life histories; knowledge, use, and opinions about services; and/or anxiety and well-being. The syllabus evolves depending on the needs of the client and the class' decisions about how to build the survey; a complete syllabus will not be available at the beginning of class for this reason. Readings include a textbook and articles related to the client's survey. Students actively engage in class and in groups about draft questions, thus learning how to improve them, with regular feedback from the instructor. Questions are tested on volunteers. Students learn: the process of questionnaire design in a team; pitfalls of survey design; and how to track questions, coded responses, and prompts for interviewers. This class is not a substitute for a comprehensive survey research class or a statistical course on sampling and weighting. Students will learn: - The process of questionnaire design in a team - Basic pitfalls of survey design ? names, definitions, examples. - How to use Excel to track questions, coded responses, and prompts for interviewers - How to use interviewing software SurveyToGo This class is not a substitute for a comprehensive survey research

class or a statistical course on sampling and weighting.

PA 5934. HPAR - Humphrey Public Affairs Review Board Seminar. (1.5 cr. [max 3 cr.] ; S-N only; Every Fall)

This course provides a seminar context for the work of members of the editorial board for the Humphrey Public Affairs Review (HPAR). It meets seven times over the course of Fall semester to provide logistical and technical guidance for the Board as it produces the online journal. Students engage in the various activities required to publish the journal. In the beginning of the semester, students conduct outreach to solicit submissions and discuss the selection criteria for submissions. They work closely with the conventions of APA style and citations, while developing their copyediting abilities. Central to journal production is engaging with the peer-review process, through providing feedback to authors and discussing critiques with editing teams. Finally, students submit their own pieces of writing to the journal for publication. As a result, students participate in peer-review as both an editor and an author.

PA 5951. Humphrey International Fellows Seminar. (; 1 cr. ; S-N only; Every Fall)

This seminar introduces Humphrey International Fellows to the public policy landscape of Minnesota and the US, and provides opportunities for professional growth. Through a series of discussions, trainings, and site visits, fellows will be exposed to professional development, skills building, and networking opportunities. The seminar provides a forum for fellows to exchange views with one another and with guest speakers.

PA 5962. State Governing and Legislating: Working the Process. (3 cr. ; A-F only; Every Spring)

The Minnesota Capitol and rules and reality of state governance and legislating. Classroom discussions, high-profile guest speakers (including legislators, lobbyists and potentially the governor), and an extensive State Capitol practicum to explore state politics and policies.

PA 5971. Survey of Election Administration. (; 3 cr. ; Student Option No Audit; Every Fall & Spring)

Survey of building blocks of election administration, from voter registration to recounts.

PA 5972. Elections and the Law. (; 2 cr. [max 3 cr.] ; Student Option No Audit; Periodic Fall & Spring)

Theories and basic structure of the American legal system. Experience with basic tools and skills for using the law to understand and analyze issues facing election administrators across the nation. Use of election-related and non-election related materials to prepare election administrators for interacting with counsel, legislators and the courts in carrying out their responsibilities.

PA 5973. Strategic Management of Election Administration. (; 2 cr. ; Student Option No Audit; Every Fall)

Strategic management for election administrators in the political environment.

Election official tools and challenges. The role of the lawmaking process in budgeting and organizational planning.

PA 5975. Election Design. (; 2 cr. ; Student Option No Audit; Every Spring)

Election administration design principles, including ballot and polling place design and poll worker training materials. Application of principles of field.

PA 5976. Voter Participation. (; 1 cr. ; Student Option No Audit; Periodic Fall & Spring)

Voter participation issues and challenges including historical survey of voter participation in US and methods to increase voter turnout.

PA 5982. Data Analysis for Election Administration. (; 2 cr. ; Student Option No Audit; Periodic Fall & Spring)

Evidence-based election administration. Collection and analysis of quantitative data to solve problems and identify opportunities for improvement. Emphasis on pre-election forecasting for planning purposes and post-election auditing of election results.

PA 5983. Introduction to Election Security. (; 1 cr. ; Student Option No Audit; Every Fall)

This course will examine the history of cyberattacks on the United States and the American election system, with special attention to the 2016 election cycle. Students will explore the types of cybersecurity threats that exist and strategies to protect against them; understand the roles different levels of government can play in the process, and hear from key officials about the issues raised by the official response to election security threats at the federal, state and local levels as well as in related private sector communities.

PA 5984. Elections Security: How to Protect America's Elections. (; 2 cr. ; A-F or Audit; Every Spring)

?Elections Security? uses the Russian efforts to influence the 2016 election as a case study to identify the vulnerabilities of US elections (especially state voter registration databases) as well as catalogue new protections. Readings and discussion will focus on best practices and technology options available to the public (social media) and elections professionals (cybersecurity) in guarding against future influence efforts and assuring public confidence in election outcomes. Special focus will be given to describing how local election officials can protect their election technology, most notably those vulnerabilities associated with their voting system and voter registration database. ?Elections Security? will draw heavily on concrete cases and challenges facing election professionals, using government and independent reports and an indepth analysis of new resources created by the US Department of Homeland Security and its collaborations with election professionals.

PA 5985. Physical Election Security. (; 2 cr. ; Student Option No Audit; Periodic Spring & Summer)

U.S. Homeland Security designated election security as a ?critical infrastructure? after threats from foreign governments, and

collaborates with states in detecting and responding to foreign interference. This course will provide students with a deeper understanding of the current security context and best practices and processes for physically safeguarding elections based on 2016 and 2020. Students will learn the difference between physical and cyber threats to U.S. systems; tangible steps to protect election offices and their equipment; the use of audits to ensure the accuracy of elections; the integration of security into vendor relationships; and the connection between physical election security and citizen trust in elections. Content will be explored through readings (including government documents and studies), videos, discussions, and writing assignments.

PA 5990. Topics: Public Affairs - General Topics. (; 0-3 cr. [max 18 cr.]; Student Option; Periodic Fall & Spring)
General topics in public policy.

PA 5993. Directed Study in Public Affairs. (1-3 cr. ; Student Option; Periodic Fall, Spring & Summer)
Self-directed study, with faculty advice.

Public Health (PUBH)

PUBH 1001. Success Over Stress (SOS). (; 1 cr. ; Student Option; Every Fall, Spring & Summer)

Success Over Stress (SOS) covers the stress process, the physical signs and symptoms of stress, and long-term outcomes of chronic stress. Students will learn various strategies to cope with stress associated with time management, academic pressures, interpersonal relationships, financial strain, grief, and college transitions. Assignments ask students to reflect about their current stressors as well as the effectiveness of the coping strategies they most frequently use. SOS leverages trained peer educators as TAs who provide personalized feedback on each reflection to encourage experimentation with new, adaptive coping strategies. SOS is offered as a 15-week full term version and 7-week B-term version. prereq: Undergrad or PSEO student

PUBH 1002. Personal Technology and Wellbeing. (; 1 cr. ; Student Option; Every Fall, Spring & Summer)

Our devices are important tools. They provide connection, allow us to complete academic and career-based work and engage in hobbies, and provide a way to find answers and generate ideas, to name a few. Use of technology can also negatively impact overall wellbeing psychologically, physically, socially, and academically. This course addresses the ways in which technology can detract from and contribute to a person's overall wellbeing and strategies for engaging with technology in ways that are safe, private, productive, and helpful. Public health and psychology frameworks will help students explore society's ties to technology and empower students to examine their own relationship with technology and the ways in which it influences wellbeing. Prerequisite: Undergraduate or PSEO student.

PUBH 1003. Alcohol and College Life (ACL). (; 1 cr. ; Student Option; Every Fall & Spring)
Alcohol and College Life was developed to address some of the issues many students face in college and reinforce personal prevention strategies to maximize student and campus safety. The course provides college students with factual information about how alcohol and other substances affect college life and counters dangerous myths regarding substance use. We want to present students with unbiased information to help them make responsible decisions. Course content highlights stories and information pertinent to all students, regardless of whether or not they choose to drink or use substances. In addition, the course incorporates strategies to enhance academics, time management, self-care, financial wellness, and interpersonal communication. Students are encouraged to think about how the modules apply to their own experiences. prereq: Undergrad or PSEO student.

PUBH 1004. Sexuality Matters. (; 1 cr. ; Student Option; Every Fall, Spring & Summer)
Sexuality Matters takes a comprehensive and inclusive approach to equip students with the knowledge and skills necessary to lead healthy sexual lives. Using unbiased, medically accurate, and evidence-based information, the course meets students where they are at to clarify personal values, increase self-efficacy, and make decisions that are in alignment with their values. Course topics include: socio-ecological influences on sexuality; sex, gender, attraction, and identity; positive embodiment; sexual expression; communication and decision-making skills; healthy relationships; safer sex; reproductive life planning; sexual assault; harassment, and stalking; and advocacy and strategies for intervention. Prereq: Undergrad or PSEO student

PUBH 1005. Sleep, Eat, and Exercise. (; 1 cr. ; Student Option; Every Fall, Spring & Summer)
Sleep, Eat, and Exercises covers basic concepts in nutrition, sleep, and physical activity and incorporates a variety of techniques to promote self-awareness and reflection, goal setting, and action toward wellness. Inactivity, poor nutrition, and inadequate sleep are common problems among college students and are leading contributors to a variety of short- and long-term consequences. Research indicates that, in addition to improving physical health, healthy habits can reduce stress and improve academic performance. Sleep, Eat, and Exercise is an introductory level course designed to provide you with the knowledge and skills you need to live a balanced life while in college. prereq: [Undergrad or PSEO] student

PUBH 3001. Personal and Community Health. (2 cr. ; Student Option; Every Fall & Spring)
Fundamental principles of health conservation and disease prevention.

PUBH 3003. Fundamentals of Alcohol and Drug Abuse. (2 cr. ; Student Option; Every Fall & Spring)

Scientific, sociocultural, and attitudinal aspects of alcohol and other drug abuse problems. Emphasizes incidence, high-risk populations, prevention, and intervention.

PUBH 3004. Basic Concepts in Personal and Community Health. (; 4 cr. ; Student Option; Every Fall & Spring)
Scientific, sociocultural, and attitudinal aspects of communicable and degenerative diseases, environmental and occupational health hazards, and alcohol and drug problems. Role of education in health conservation, disease control, and drug abuse.

PUBH 3011. Public Health Approaches to HIV/AIDS. (; 2 cr. ; Student Option; Every Fall)
Primary, secondary, and tertiary prevention. Community responses to HIV/AIDS in Minnesota. Medical, social service, and political responses.

PUBH 3051. Practicum in Peer Education I. (; 2 cr. ; A-F or Audit; Every Fall)
Multiple factors that influence health. Through various health promotion strategies, students build upon or gain skills such as public speaking, needs assessments, program planning, interpersonal communication, and program evaluation. prereq: Selected to serve as a hlth advocate, instr consent

PUBH 3052. Practicum in Peer Education II. (; 2 cr. ; A-F or Audit; Every Spring)
Multiple factors that influence health. Through health promotion strategies, students gain/build skills such as public speaking, needs assessments, program planning, interpersonal communication, and program evaluation. prereq: Undergrad student, demonstrated hlth sci or hlth ed interest, selected to serve as a hlth advocate, instr consent

PUBH 3093. Directed Study: Public Health. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)
Directed study in selected public health problems or current issues. prereq: instr consent

PUBH 3100. Topics: Environmental Health. (; 1-3 cr. [max 40 cr.]; Student Option No Audit; Every Fall & Spring)
Topics of interest in environmental health.

PUBH 3102. Issues in Environmental and Occupational Health. (; 3 cr. ; Student Option; Every Fall & Spring)
This course is an introduction to the field of Environmental and Occupational Health (EOH), the impact of environmental and occupational hazards on individuals and communities, the approaches taken to address EOH issues at the community level, and the challenges that must be overcome to ensure success in dealing with EOH issues. Students will review scientific literature to learn about interventions for environmental health problems, and practice identifying environmental health problems and interventions in their communities. The focus of this course will be on the interaction between humans and the environment and how this interaction affects human health. Online Course.

PUBH 3104. Environmental Health Effects: Introduction to Toxicology. (2 cr. ; Student Option; Every Spring)

This course is designed for students who are interested in public health and environmental issues. Toxicology is a multidisciplinary experimental science that combines chemistry, biology, and physiology to determine whether substances we are exposed to in the environment are likely to harm our health. Students will learn how toxicology is used to understand how humans respond to chemicals in the environment. In addition, students will learn how toxicology is applied to protect human health through safety evaluation. prereq: Previous coursework in biology and chemistry; biochemistry is recommended. Ability to analyze data, and understand the basic functions of DNA, enzymes and other proteins, and lipids.

PUBH 3106. Making Sense of Health Studies. (2 cr. ; Student Option; Every Fall & Spring)

How to critically evaluate health news (and the health research reports on which they are based) to make good, well informed decisions about your health and well-being.

PUBH 3107. Global Public Health and the Environment. (2 cr. ; A-F only; Every Fall)

Environmental determinants of health and of well-being of populations. Role of environment in public health. Population burden of disease. Variation of environmental public health determinants across globe. Interconnectedness of activities and actions of people in different countries. prereq: public health minor, instr consent

PUBH 3120. Injury Prevention in the Workplace, Community, and Home. (2 cr. ; Student Option; Every Spring)

Injury Epidemiology: Analyses of major injury problems, affecting the public in the workplace, community, and home, using the epidemiologic model and conceptual framework; emphasis on strategies/program development for prevention and control. For students involved in the field of Occupational Health and Safety, this course provides a foundation essential to the development of programs for Occupational Injury Prevention and Control. prereq: Basic epidemiology course preferred but not required

PUBH 3123. Violence Prevention and Control: Theory, Research and Application. (2 cr. ; Student Option No Audit; Every Spring)

The course will cover a range of topics including: definitions and characteristics of various forms of violence, prevalence and risk factors, health effects, and prevention initiatives. Sources and limitations of existing epidemiologic data, analytic challenges, research quality and ethics will be examined throughout the course. prereq: None

PUBH 3193. Environmental Health: Directed Studies. (1-3 cr. ; S-N only; Every Fall, Spring & Summer)

Directed study, directed readings, and directed research offers opportunities for students to work individually with a faculty member and to earn credit for individually designed content. The instructor and the student

must have a written contract in place that specifies the student's responsibilities for the courses and the name of the instructor who is responsible for turning in the student's grade for the course, as part of the enrollment in the course. Instructors must provide a copy of the contract to the academic department in which the registration for the course occurs. Expected student academic work per credit: at least 3 hours of work per week per credit for undergraduate students; Only one Directed Study, Directed Readings, or Directed Research is allowed per semester.

PUBH 3202. What is Public Health?. (; 2 cr. ; Student Option No Audit; Every Fall)

Overview of public health: what it is, its origins, evolution, how it is structured/administered in the U.S. Mission, concepts, principles, and practices of population-based public health. Case studies. Career opportunities.

PUBH 3210. Topics: Public Health Practice. (; 1-3 cr. ; Student Option No Audit; Periodic Fall, Spring & Summer)

New courses or topics of interest in Public Health

PUBH 3212. Infectious Disease Outbreaks: Review of Public Health Investigation, Response, & Prevention Strategy. (2 cr. ; A-F only; Every Spring)

We share the planet with a myriad of living things. The smallest of those are the ones that may impact our lives the most. These creatures are in the news nearly every day: Ebola virus in Africa, measles outbreaks in large cities, norovirus outbreaks on cruise ships, Zika virus precautions for pregnant women. This course will focus on the principles of outbreak investigation and response at the local, state, and national public health level through lectures and interactive experiences led by former public health leaders from the Minnesota Department of Health, editors and reporters from Center for Infectious Disease Research and Policy (CIDRAP) News, and current leaders of the University of Minnesota public health response system. Students will explore the many facets of infectious disease outbreak investigation, response, and prevention operations and decision-making which are often behind the scenes and not well understood by the general public. prereq: BIOL 1xxx or equivalent Honor students who have completed HSEM 2707H are NOT eligible to register for this course.

PUBH 3351. Epidemiology: People, Places, and Disease. (; 2 cr. ; Student Option; Every Fall & Spring)

How diseases are distributed among us. Epidemiology terminology, methods, critical thinking, and analysis. Intended for students interested in a health science career or in a career that may need to evaluate epidemiologic evidence such as health journalism or public policy or litigation. prereq: Undergrad statistics course is recommended

PUBH 3365. Modeling and Mapping for Infectious Disease Epidemiology. (2 cr. ; Student Option; Every Fall)

Infectious disease epidemiology is a topic within the field of epidemiology that covers:

1) Principles and concepts of infectious disease transmission dynamics necessary to understand how and why diseases spread, and 2) Epidemiologic methods, including study designs, needed to quantify key aspects of an infectious disease. This course will also discuss: 1) How to use modeling to gain insight into the spread and control of infectious disease, and 2) The role that geography and GIS plays in gaining insights into the emergence and spread of an infectious disease. Students will learn key epidemiologic concepts that determine who is at risk for acquiring an infectious disease, how infectious diseases spread and what measures can be taken to prevent or control the spread of an infectious disease. We will also learn how simulation models can provide insights into the spread and control of an infectious disease as well as learn about the use of geographic information systems software for identifying in whom and where a disease occurs. This course will focus on principles, concepts, and methods in epidemiology with an application to infectious diseases. In addition, students will learn how to read and critically review peer-reviewed publications on infectious disease epidemiology, and understand how models and geographic information systems software are used to identify populations. This course will include examples that are from the local, national, and international literature.

PUBH 3415. Introduction to Clinical Trials - Online. (; 3 cr. ; A-F only; Every Fall & Summer)

Phases of trials, hypotheses/endpoints, choice of intervention/control, ethical considerations, blinding/randomization, data collection/monitoring, sample size, analysis strategies. Protocol development/implementation, interactive discussion boards. prereq: PUBH 3415 enrollees must have one semester of undergraduate level introductory biostatistics or statistics (STAT 3011, EPSY 3264, SOC 3811, BIOL 3272, or instr consent) AND junior or senior standing or instr consent.

PUBH 3601. Global Public Health Issues. (; 2 cr. ; A-F only; Every Fall & Spring)

This is a global impact course designed for public health minors providing an introduction to key global health history, concepts, structures, and stakeholders. The course content articulates a myriad of population health determinants and explores risk and protective factors shaping global health. Students will explore global health equity and engage with inequity and disparity in health access and outcomes as well as relevant research, policy, and programmatic solutions. Evidence, perspectives, and application opportunities related to critical issues and solutions in the organization and delivery of global public health are examined and offered. prereq: Public Health minor requirements or instr consent, [3202 or 3001 or 3004], [3351 or 3106]

PUBH 3801. Health Economics and Policy. (; 3 cr. ; Student Option; Every Spring)

Economics of health care markets. Problems faced by consumers/health care services. Builds on principles of supply/demand

for health, health care/insurance, and role of government. Theoretical/empirical models/applications. prereq: Course on microeconomics, course on basic statistics

PUBH 3893. Directed Study: Health Services Research and Policy. (1-4 cr. [max 16 cr.]; Student Option; Periodic Fall, Spring & Summer)
tbd prereq: instr consent

PUBH 3954. Personal, Social, and Environmental Influences on the Weight-Related Health of Pediatric Populations. (; 2 cr. ; Student Option; Every Fall)
Public health strategies for prevention of pediatric obesity. Includes overview of epidemiology of child/adolescent obesity focusing on social-ecological risk factors. Discussion of implications of risk factors for developing environmentally-focused interventions/programs. prereq: Students should have completed one basic, introductory nutrition course or equivalent or permission by instructor

PUBH 3955. Using Policy to Address the Weight-Related Health of Child and Adolescent Populations. (; 1 cr. ; Student Option; Every Spring)
Overview of federal, state, local policy approaches. National initiatives for prevention of child/adolescent obesity. Specific policies will be discussed at local, state, federal levels. Extensive discussion on evidence of impact of policies on child/adolescent weight.

PUBH 3956. Public Health Approaches to Addressing Food Insecurity in U.S. Populations and Developing Nations. (; 2 cr. ; Student Option; Every Spring)
The course Public Health Approaches to Addressing Food Insecurity in U.S. Populations and Developing Nations provides an introduction to the burden of food insecurity and its impact on health disparities. Assumptions of the course include (1) having a dignified manner to access adequate food to support one's health is a basic human right and (2) improving access to nutritionally-dense foods and potable water will lead to reduced rates of pediatric health problems as well as chronic diseases of adulthood. With this perspective, there is a need to support, evaluate, and strengthen existing strategies and policies to prevent food insecurity. There will be extensive discussion of social-ecological factors risk factors for food insecurity and implications for the development of interventions and policies.

PUBH 5231. Emergency Preparedness: A Public Health Perspective. (; 2 cr. ; A-F only; Every Spring)
Public health emergency preparedness, response, recovery. Introduction to field's core competencies. Various components of course, including online modules, intended to stimulate interactions among learners. Purpose, history, organization, functions, tools, activities used in field. prereq: Upper-level undergraduate students and grad/professional students in academic health sciences and fields related to public health emergency preparedness,

response, and recovery. Credit will be not granted if student has completed the PubH 5230 topic course with same title.

Rehabilitation Science (RSC)

RSC 5058. Anatomy for Rehabilitation Science. (6 cr. ; Student Option; Every Summer)
Study of gross human anatomy through lecture/laboratory experiences that include cadaver dissection of extremities, head, neck, back, abdomen, thoracic, pelvic regions with correlation to clinical conditions. prereq: Student enrolled in Rehabilitation Science Program, instr consent, dept consent

RSC 5060. Lower Extremity Anatomy Intensive. (2 cr. ; Student Option; Every Summer)
Intensive and focused study of lower extremity gross human anatomy for graduate students. The content is presented through lecture and laboratory experiences that include cadaver dissection of human lower extremities with correlation to clinical conditions.

RSC 5065. Upper Extremity Anatomy Intensive. (2 cr. ; Student Option; Every Summer)
Intensive and focused study of upper extremity gross human anatomy for graduate students. The content is presented through lecture and laboratory experiences that include cadaver dissection of human upper extremities with correlation to clinical conditions.

RSC 5101. Mathematical Tools for Research Applications in Health, Rehab, and Human Movement Sciences. (; 1 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Quantitative research approaches in health, rehabilitation, human movement sciences. Application examples/practice problems focus of the course. Basic algebra/geometry, solving equations for unknowns, logarithmic transforms, derivatives/integrals, matrix methods, use of macros in research applications. prereq: Basic algebra, trigonometry, and geometry. Pre-calculus or calculus is helpful but not required.

RSC 5106. Introduction to Rehabilitation Science. (1 cr. ; Student Option; Periodic Fall)
This is one of a series of seminar courses that prepares students to think critically in reading and discussing the literature in rehabilitation science and to speak and write persuasively on scientific topics. This semester, the seminar will focus on the past, present, and future of rehabilitation science. This course will include lecture presentations from rehabilitation science faculty for the first 50 minutes of the weekly class time, as well as discussion/interaction sessions planned jointly by assigned students and faculty for the second 50 minute session each week.

RSC 5135. Advanced Biomechanics I: Kinematics. (3 cr. ; A-F or Audit; Fall Odd Year)
How to describe/measure movement. Basic/applied biomechanics, pathokinesiology, and rehabilitation literature. Lecture, lab, seminar

discussion. Meets with RSC 8135. prereq: instr consent

RSC 5200. Introduction to Neuromodulation. (1-3 cr. ; A-F or Audit; Fall Even Year)
This course will provide training in the theory, biophysics and evidence-based application of non-invasive magnetic and electric brain stimulation in humans. Course content will be delivered in three modules: (1) safety and administration of non-invasive brain stimulation, (2) neuromodulation methods, and (3) advanced assessment and modeling techniques. All registered students must take module #1. Testing methods will include various methods to assess intracortical, transcallosal and interhemispheric excitability. Neuromodulation methods presented will include non-invasive and invasive forms of brain stimulation. Hands-on instruction and laboratory applications will be provided for cortical excitability testing using transcranial magnetic stimulation (TMS) as well as for other non-invasive forms of brain stimulation. Those enrolled will both administer and receive non-invasive brain stimulation and will be asked to sign a consent form. Specific safety exclusion criteria for receiving non-invasive brain stimulation exist and enrollees who have questions should contact the Division of Rehabilitation Science.

RSC 5206. Academic Ethos. (1 cr. ; A-F or Audit; Periodic Spring)
Explicit/implicit culture unique to academia. Early understanding within/beyond rehabilitation science. Role of higher education in society, academic freedom, tenure, corporatization of education, accreditation, globalization of education, regulatory monitoring of research, faculty scholarship/governance.

RSC 5231. Clinical Biomechanics. (2-5 cr. ; A-F only; Every Fall)
Biomechanics. Internal/external forces/structures responsible for normal/abnormal human movement. Joint and tissue mechanics, muscle function, task analysis, and gait mechanics. Lecture and lab practice. prereq: concurrent registration is required (or allowed) in PT 6231, general physics, [intro or short] calculus, anatomy; intensive anatomy course in human cadaver dissection recommended

RSC 5235. Advanced Biomechanics II: Kinetics. (3 cr. ; A-F or Audit; Spring Even Year)
Forces that create human motion and are produced within body as a result. Measuring human motion. Clinical movement assessment, Exercise, sport, and activities of daily living. Two-dimensional rigid body dynamics models, forward/inverse dynamics solutions, hypotheses to describe whole body/joint kinetics. Lectures, lab, discussion. prereq: 5135 or equiv or instr consent

RSC 5281. Physiology for Physical Rehabilitation. (2-4 cr. ; A-F or Audit; Every Fall)
This course provides an in-depth presentation of fundamental concepts in tissue and organ system physiology as it relate to general health,

aging, and physical exercise. Emphasis is on the following systems: muscle, bone & connective tissue, endocrine, immune, renal, gi, and hematology. Influence of aging on these systems will be addressed as well. prereq: Rehabilitation Science grad student

RSC 5294. Independent Study in

Rehabilitation Science. (1-3 cr. [max 9 cr.] ; Student Option; Every Fall, Spring & Summer) Independent exploration into topics related to rehabilitation science. prereq: Rehabilitation science student or program approval

RSC 5300. Autonomic Nervous System

(ANS) Function. (; 2 cr. ; A-F or Audit; Every Fall)

This course is designed to advance the student's knowledge on how the autonomic nervous system (ANS) functions to maintain homeostasis. The student will have a strong understanding of the components of the ANS and how the ANS contributes to blood pressure regulation and control of circulation. Students will read book chapters, journal reviews, and original articles and engage in weekly discussions on topics related to the listed course objectives. In addition, students will have the opportunity to present on specific topics that will be related to their current work.

RSC 5306. Scientific and Professional

Presentation. (1 cr. ; A-F or Audit; Periodic Spring)

This course will focus on the process and practice of oral presentation of scientific inquiry and discoveries. These skills are essential for scientists in all disciplines, yet often guidelines for optimal scientific presentation are not taught or practiced in an educational setting. Specific areas to be covered in this course include presentation intent, audience analysis, timing, content, keys to effective communication, vocal behavior, and important things to avoid. Context will include conference-style platform or podium presentations, poster presentations, and seminar presentation. The course will involve opportunities to prepare and practice presentation skills and receive constructive feedback in a safe, supportive environment. It is appropriate for students from all disciplines and levels of PhD study.

RSC 5310. Cardiopulmonary Physiology

and Rehabilitation. (2-4 cr. ; A-F or Audit; Every Spring)

This course conveys foundational information regarding human basic physiology cardiovascular and pulmonary physiology. In addition, fundamental principles of cardiac and pulmonary systems as it relates to physical therapy and will be known in the clinic to the physical therapist as Cardiac and Pulmonary Rehabilitation will be addressed. A focus of this course is on normal and abnormal responses to exercise and the pathophysiology, assessment, evaluation, and rehabilitation of patients with cardiopulmonary disorders.

RSC 5402. The Shoulder in Sports

Rehabilitation Science. (; 3 cr. ; A-F or Audit; Every Spring & Summer)

A three-credit online course for students who are interested in investigating the

biomechanical and epidemiological aspects of the shoulder in athletics. The course will explore the unique demands placed on the shoulder in sports that involve throwing, swimming, swinging, and bodily impacts.

The course begins with an investigation into sport-specific biomechanics, pathomechanics, and epidemiology and progresses to applied problem solving for rehabilitation and research scenarios. prereq: (1) an undergraduate or graduate human anatomy course and (2) an undergraduate or graduate biomechanics course. It is recommended, but not required, you have an anatomy course including a detailed shoulder anatomy section and a biomechanics course including a detailed shoulder biomechanics section. Consent from course instructor or Rehabilitation Science graduate program is required.

RSC 5404. Applied Shoulder Anatomy and

Biomechanics. (; 1 cr. ; A-F or Audit; Every Fall)

The shoulder is capable of more range of motion than any other joint in the human body. It is involved in virtually any motion that places the hand in space. Subsequently, the shoulder is prone to injury. There are many mechanisms of shoulder injury, and many are related to the anatomy of the shoulder joint and the anatomical relationship to movement. This course will serve as an overview of the anatomy and biomechanics of the shoulder joint complex. Students taking this course will have the opportunity to explore the intricate anatomy of the shoulder complex. In doing so, students will create their own anatomical-reference-guide that they will use beyond this class. We will build upon this anatomical knowledge and apply the purpose of these structures in the context of functional movement. Lastly, we will examine how these relationships may be altered during several common surgical techniques.

RSC 5814. Age, Exercise, and

Rehabilitation. (2 cr. ; Student Option; Every Fall)

Overview of normal physiological responses to exercise in the elderly. Comparison of exercise-induced responses of physiological systems throughout aging process. Focuses on importance of exercise from rehabilitation perspective. Offered Fall semesters of even-numbered years. prereq: Rehabilitation science student or program permission

RSC 5841. Applied Data Acquisition and

Processing. (3 cr. [max 4 cr.] ; A-F or Audit; Spring Odd Year)

This course will introduce students to collecting and processing biomedical time series data. Students will gain experience using data acquisition hardware common in many laboratories, as well as related software for acquisition of the data and digital signal processing. Data sources will include electromyography (EMG), wearable sensors, motion capture, and data from other systems based on the background and interests of students in the class. The overall goal of this course is to provide students with the necessary, fundamental skills to run a

successful experiment, troubleshoot errors, and produce high quality data sets. prereq: prefer students to have completed general physics, introductory of short calculus

RSC 5842. Teaching and Learning in

Rehabilitation Science. (; 1 cr. ; Student Option; Every Spring & Summer)

Introduction to the roles of an academic educator and the basic principles of adult education, active learning, course design, and teaching in academic environments.

RSC 5901. Scholarly Inquiry in Health

Sciences. (4 cr. ; A-F or Audit; Every Spring)

How research evidence is developed, disseminated, utilized in health sciences. Qualitative/quantitative scholarly project proposal. Critique studies/peer proposals. Explore conduct of research. prereq: Three credits of undergraduate statistics. instr consent, dept consent.

Religious Studies (RELS)

RELS 1001. Introduction to the Religions of

the World. (GP; 3 cr. ; Student Option; Every Fall & Spring)

Introduction to major religions of world/ academic study of religion. Hinduism, Buddhism, Judaism, Christianity, Islam, some pre-Christian religions of Antiquity.

RELS 1002. Contemporary Issues in

Religion, Culture, and Society: An Introduction to Religion. (AH; 3 cr. ; Student Option; Every Fall)

Through examination of several contemporary issues this course introduces students to the complex ways in which religion functions in everyday life. The course will examine the intersection of religion with several cultural and social contexts and issues, such as gender, the environment, politics, power, race, ethnicity, health, medicine, food, art, and entertainment. It will draw upon the practices, texts, communities, and institutions of several religious traditions and familiarize students with interdisciplinary, humanistic methods for studying religion.

RELS 1034. Introduction to Jewish History

and Culture. (HIS; 3 cr. ; Student Option; Every Fall)

This course traces the development of Judaism and Jewish civilizations from their beginnings to the present. With over three millennia as its subject, the course must of necessity be a general survey. Together we will explore the mythic structures, significant documents, historical experiences, narratives, practices, beliefs, and worldviews of the Jewish people. The course begins by examining the roots of Judaism in the Hebrew Bible and the history of ancient Israel but quickly focuses on the creative forces that developed within Judaism as a national narrative confronted the forces of history, especially in the forms of the Persian, Greek, and Roman empires. Rabbinic Judaism becomes the most dominant creative force and will receive our greatest attention, both in its formative years and as it encounters the rise of Christianity and Islam.

After studying the Jewish experience in the medieval world, we will turn to Judaism's encounter with the enlightenment and modernity. The historical survey concludes by attending to the transformations within Judaism and Jewish life of the last 150 years, including a confrontation with the experience of the Holocaust. Woven throughout this historical survey will be repeated engagements with core questions: ?Who is a Jew?? ?What do Jews believe?? ?What do Jews do?? ?What do we mean by ?religion??? ?How do Jews read texts within their tradition?? And perhaps most importantly, ?How many answers are there to a Jewish question?? Students in this course can expect to come away with some knowledge of the Bible in Judaism, rabbinic literature and law, Jewish mysticism and philosophy, Jewish nationalism and Zionism, Jewish culture, ritual, and worship in the synagogue, the home, and the community, and Jewish celebrations of life cycle events and the festivals.

RELS 1082. Jesus in History, Art & Culture. (HIS; 3 cr. ; Student Option; Every Spring)

Who was Jesus? While there has been some basic consistency in the depictions of Jesus throughout history, there has also been lots of variety. We will look at the stories and writings of the New Testament. We will look at ancient and medieval art and music. We will look at modern literature, film, and music. We will learn about how cultures and social groups from around the world have portrayed Jesus in their own contexts and for their own purposes. Students will leave the course with a sense of the diversity of depictions of Jesus and how this diversity correlates with the peoples that portray him and with the cultural and historical moments in which he is portrayed. Come and grapple with the question of who Jesus really was for ancient peoples and who he is for many today. Intended as a course of interest to undergraduates in all colleges of the TC campus. Students of any, all, or no religious background are welcome.

RELS 1201. The Bible: Context and Interpretation, World of the Hebrew Bible. (LITR; 3 cr. ; Student Option; Every Fall)

The Hebrew Bible and Old Testament are literary collections that modern Jewish and Christian traditions maintain as important, but these collections were initially produced by ancient Israelite scribes who composed and/or compiled the biblical texts at particular time periods in the ancient Near East. This course will introduce the academic study of biblical texts, which demands critical analysis of the literature and an openness to reading the literature from the perspective of ancient Israelite writers (who lived in a world far different from today). The course will spend considerable time on the literary (and scribal) composition of biblical prose texts; time will also be spent on the historical circumstances of biblical prophets and other writers of the biblical texts. This course will only address the ancient setting of the biblical texts and not re-interpretations in Jewish or Christian traditions. Given the scope of the course, modern interpretations of the biblical literature will not be discussed; we will only focus on

this literature in its ancient setting. prereq: Knowledge of Hebrew not required

RELS 1544W. Martyrs, Monks, Crusaders: World Christianity, 100-1400. (GP,WI,HIS; 4 cr. ; Student Option; Fall Odd, Spring Even Year)

This course surveys the history of Christianity from its status as a persecuted minority religion of the Roman Empire to its dominant role in medieval Europe and Byzantium. We study Christian traditions in Asia and Africa as well as Europe with special attention to the relationship between Christianity and culture in the ancient and medieval world.

RELS 3001W. Theory and Method in Religion: Critical Approaches to the Study of Religion. (WI; 3 cr. ; Student Option; Every Spring)

Theoretical/methodological issues in academic study of religion. Theories of origin, character, and function of religion as a human phenomenon. Psychological, sociological, anthropological, and phenomenological perspectives.

RELS 3013W. Biblical Law and Jewish Ethics. (WI; 3 cr. ; Student Option; Periodic Fall & Spring)

This course introduces students to the original meaning and significance of religious law and ethics within Judaism. Law is the single most important part of Jewish history and identity. At the same time, law is also the least understood part of Judaism and has often been the source of criticism and hatred. We shall therefore confront one of the most important parts of Jewish civilization and seek to understand it on its own terms. In demonstrating how law becomes a fundamental religious and ethical ideal, the course will focus on the biblical and Rabbinic periods but spans the entire history of Judaism. Consistent with the First Amendment, the approach taken is secular. There are no prerequisites: the course is open to all qualified students. The course begins with ideas of law in ancient Babylon and then studies the ongoing history of those ideas. The biblical idea that a covenant binds Israel to God, along with its implications for human worth - including the view of woman as person - will be examined. Comparative cultural issues include the reinterpretations of covenant within Christianity and Islam. The course investigates the rabbinic concept of oral law, the use of law to maintain the civil and religious stability of the Jewish people, and the kabbalistic transformation of law. The course concludes with contemporary Jewish thinkers who return to the Bible while seeking to establish a modern system of universal ethics. The premise of the course is the discipline of academic religious studies. The assumptions of the course are therefore academic and secular, as required by the First Amendment. All texts and all religious traditions will be examined analytically and critically. Students are expected to understand and master this approach, which includes questioning conventional cultural assumptions about the composition and authorship of the Bible. Willingness to ask such questions and openness to new ways of thinking are essential

to success in the course. Old: Significance of religious law in Judaism. Babylonian background of biblical law. Biblical creation of the person as a legal category. Rabbinic transformations of biblical norms. Covenant in Christianity/Islam. Contemporary Jewish literature/philosophy.

RELS 3034. Introduction to Jewish History and Cultures. (HIS; 3 cr. ; Student Option; Every Fall)

This course traces the development of Judaism and Jewish civilizations from their beginnings to the present. With over three millennia as its subject, the course must of necessity be a general survey. Together we will explore the mythic structures, significant documents, historical experiences, narratives, practices, beliefs, and worldviews of the Jewish people. The course begins by examining the roots of Judaism in the Hebrew Bible and the history of ancient Israel but quickly focuses on the creative forces that developed within Judaism as a national narrative confronted the forces of history, especially in the forms of the Persian, Greek, and Roman empires. Rabbinic Judaism becomes the most dominant creative force and will receive our greatest attention, both in its formative years and as it encounters the rise of Christianity and Islam. After studying the Jewish experience in the medieval world, we will turn to Judaism's encounter with the enlightenment and modernity. The historical survey concludes by attending to the transformations within Judaism and Jewish life of the last 150 years, including a confrontation with the experience of the Holocaust. Woven throughout this historical survey will be repeated engagements with core questions: ?Who is a Jew?? ?What do Jews believe?? ?What do Jews do?? ?What do we mean by ?religion??? ?How do Jews read texts within their tradition?? And perhaps most importantly, ?How many answers are there to a Jewish question?? Students in this course can expect to come away with some knowledge of the Bible in Judaism, rabbinic literature and law, Jewish mysticism and philosophy, Jewish nationalism and Zionism, Jewish culture, ritual, and worship in the synagogue, the home, and the community, and Jewish celebrations of life cycle events and the festivals.

RELS 3070. Topics in Religious Studies. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Diverse topics in Religious Studies. Please see below for this semester's selection title.

RELS 3071. Greek and Hellenistic Religions. (HIS; 3 cr. ; Student Option; Fall Even Year)

Greek religion from the Bronze Age to Hellenistic times. Literature, art, archaeology. Homer/Olympian deities. Ritual performance, prayer, sacrifice. Temple architecture. Death/afterlife. Mystery cults. Philosophical religion. Near Eastern salvation religions. Meets with 3171.

RELS 3072. The Birth of Christianity. (AH; 3 cr. ; Student Option; Periodic Fall & Spring)

Early Jesus movement in cultural/historical setting. Origins in Judaism. Traditions about Jesus. Apostle Paul, controversies/interpreters.

Authority, religious practice, structure. Emergence of canon. Contemporary methods of New Testament study. Biblical writings as history/narrative. CNES 3072/CNES 5072/RELS 3072/RELS 5072 meet together.

RELS 3076. The Apostle Paul: Life, Letters, and Legacy. (3 cr. ; Student Option; Fall Odd, Spring Even Year)

How/what can we know about Paul. What his message was. What he was fighting. How he was later understood by friends/foes.

RELS 3079. Muslims and Jews: Conflict and Co-existence in the Middle East and North Africa since 1700. (GP,HIS; 3 cr. ; Student Option; Fall Odd Year)

Diversity of social/cultural interactions between Muslims and Jews and between Islam and Judaism since 1700. What enabled the two religious communities to peacefully coexist? What were causes of conflict? Why is history of Muslim-Jewish relations such a contested issue?

RELS 3092. Jesus in History, Art & Culture. (HIS; 3 cr. ; Student Option; Every Spring)

Who was Jesus? While there has been some basic consistency in the depictions of Jesus throughout history, there has also been lots of variety. We will look at the stories and writings of the New Testament. We will look at ancient and medieval art and music. We will look at modern literature, film, and music. We will learn about how cultures and social groups from around the world have portrayed Jesus in their own contexts and for their own purposes. Students will leave the course with a sense of the diversity of depictions of Jesus and how this diversity correlates with the peoples that portray him and with the cultural and historical moments in which he is portrayed. Come and grapple with the question of who Jesus really was for ancient peoples and who he is for many today. Intended as a course of interest to undergraduates in all colleges of the TC campus. Students of any, all, or no religious background are welcome.

RELS 3113. History of Modern Israel/Palestine: Society, Culture, and Politics. (GP; 3 cr. ; Student Option; Fall Odd Year)

History of Zionism/Israel. Arab-Jewish conflict, tensions between religious/secular Jews. Relationships between Mizrahi, Ashkenazi, Russian, Ethiopian, Arab citizens. Israeli cultural imagery. Newsreels, political posters, television shows, films, popular music.

RELS 3115. Midrash: Reading and Retelling the Hebrew Bible. (3 cr. ; Student Option; Periodic Fall & Spring)

How did the Jews of the first seven centuries of the common era read and understand the Hebrew Bible? What were the problems they faced -- interpretive, historical, theological -- in trying to apply their holy scriptures? This course explores key issues that led to the development of a new form of Judaism in late antiquity, rabbinic Judaism, and its methods of scriptural interpretation. The course's study will focus on the forms and practices of rabbinic scriptural interpretation (midrash) as it developed in Roman Palestine and Sasanian Babylonia, focusing on key narrative and legal

passages in the Five Books of Moses (Torah). A main focus of the course will be on the ways the rabbis adapted the Hebrew Bible to express their own core concerns.

RELS 3121. Gender and Body in Early Christianity. (AH; 3 cr. [max 30 cr.] ; Student Option; Fall Odd Year)

Ancient Christians, like any other social group in the ancient world, represented themselves through images, stories, and discourses using the cultural tools available to them in their own contexts. In this course, we will explore two key texts of early Christianity (1 Corinthians and the Gospel of Mark) with special attention to how representations of the body and gender served to communicate the nature of what it meant to be Christian for these authors. The study of ancient material offers a space to acquire the skills of critical analysis of body and gender dynamics so that we can better understand the roles that the body and gender play in shaping our self-identity, social interaction, and societal structures.

RELS 3182. Egypt and Western Asia: Art and Archaeology of Ancient Egypt and Western Asia. (AH,GP; 3 cr. ; Student Option; Every Fall & Spring)

This course will provide students with foundational knowledge in the art, architecture and archaeology of Egypt, East Africa, Asia Minor, Mesopotamia, Iran and Central Asia from the Neolithic through Late Antiquity (ca. 7,000 B.C.E. - 650 C.E.). Students will gain an understanding of the relationship between the visual material and the social, intellectual, political and religious contexts in which it developed and functioned. In this regard, students will also gain an understanding of the evolution of, and exchanges and differences among, the visual cultures of these time periods and regions. It will also expose them to the preconditions for contemporary geopolitics in the region.

RELS 3201. The Bible: Context and Interpretation, World of the Hebrew Bible. (LITR; 3 cr. ; Student Option; Every Fall)

The Hebrew Bible and Old Testament are literary collections that modern Jewish and Christian traditions maintain as important, but these collections were initially produced by ancient Israelite scribes who composed and/or compiled the biblical texts at particular time periods in the ancient Near East. This course will introduce the academic study of biblical texts, which demands critical analysis of the literature and an openness to reading the literature from the perspective of ancient Israelite writers (who lived in a world far different from today). The course will spend considerable time on the literary (and scribal) composition of biblical prose texts; time will also be spent on the historical circumstances of biblical prophets and other writers of the biblical texts. This course will only address the ancient setting of the biblical texts and not re-interpretations in Jewish or Christian traditions. Given the scope of the course, modern interpretations of the biblical literature will not be discussed; we will only focus on this literature in its ancient setting. prereq: Knowledge of Hebrew not required

RELS 3202. Bible: Prophecy in Ancient Israel. (3 cr. ; Student Option; Every Spring)

Survey of Israelite prophets. Emphasizes Amos, Hosea, Isaiah, Jeremiah, Ezekiel, Second Isaiah. Prophetic contributions to Israelite religion. Personality of prophets. Politics, prophetic reaction. Textual analysis, Biblical scholarship. Prophecy viewed cross-culturally. prereq: [RELS 1001] or [CNES 1201 or JWST 1201 or RELS 1201 or CNES 3201 or JWST 3201 or RELS 3201]

RELS 3205. Women, Gender, and the Hebrew Bible. (AH; 3 cr. ; Student Option; Spring Odd Year)

How men, women, gender, sexuality is portrayed in Hebrew Bible. Social/religious roles/status of women in ancient Israel. Read biblical texts from academic point of view.

RELS 3206. Sex, Murder, and Bodily Discharges: Purity and Pollution in the Ancient World. (3 cr. ; Student Option; Every Spring)

"Dirt is dangerous" wrote Mary Douglas more than 50 years ago in her groundbreaking study, *Purity and Danger: An Analysis of Concept of Pollution and Taboo*. Her work has been influential in ancient Near Eastern and Mediterranean studies when dealing with issues of sacred/profane, purity/pollution, and ritual sacrifice and purification. Douglas' work provides a framework within which to understand ancients' thinking about these concepts that range from the sacredness of space and of bodies to perceived pollutions caused by bodily leakage or liminal stages of life and death. In this course, we will examine Douglas' theory in light of ancient evidence, with special attention to ancient Israelite literature (the Tanakh or Old Testament) and ancient Jewish literature (the Dead Sea Scrolls), but we will also analyze other ancient Near Eastern and Mediterranean examples of purity and pollution (from epigraphical and documentary evidence).

RELS 3254. Archaeology of Ritual and Religion. (3 cr. ; Student Option; Fall Even Year)

The course discusses evidence for the origins of religion and its diverse roles in human societies over millennia. It focuses on how artifacts and architecture are essential to religious experience. It asks: What constitutes religion for different cultures? Why is religion at the heart of politics, social life, and cultural imagination?

RELS 3321. American Indian Philosophies. (AH,DSJ; 3 cr. ; Student Option; Every Fall, Spring & Summer)

World views of indigenous people of Americas. Topics include native medicines/healing practices, ceremonies/ritual, governance, ecology, humor, tribal histories, status of contemporary native people.

RELS 3371. Buddhism. (GP; 3 cr. ; Student Option; Periodic Summer)

Historical and contemporary account of the Buddhist religion in Asia/world in terms of its rise, development, various schools, practices, philosophical concepts, and ethics. Current

trends in the modern faith and the rise of "socially engaged" Buddhism.

RELS 3373. Religion and Society in Imperial China. (HIS; 3 cr. ; Student Option; Periodic Fall & Spring)

Varieties of religious experience in imperial China. Religion as lived practices. Textual traditions. Buddhism, Daoism, Confucianism, relations among them. Western missionary enterprise in China.

RELS 3374. Introduction to Japanese Religions. (3 cr. ; Student Option; Periodic Fall)

An introduction to the development of different forms of religious practice in Japan over the past fourteen hundred years. A survey of the Japanese religions and their development will be combined with specific examples (past and present) that demonstrate the way that religious belief has manifested itself in various forms of cultural practice.

RELS 3377. A Thousand Years of Buddhism in China: Beliefs, Practices, and Culture. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Buddhism in China, 4th-15th centuries. Introduction of Buddhism to China. Relevance of Buddhist teaching to indigenous thought (e.g., Taoism, Confucianism). Major "schools": Tiantai, Huayan, Chan/Zen, etc.. Cultural activities of monks, nuns, and lay believers.

RELS 3415W. Art of India. (AH,WI,GP; 3 cr. [max 4 cr.] ; Student Option; Every Spring)

Indian sculpture, architecture, and paintings from the prehistoric Indus Valley civilization to the present day.

RELS 3502W. Ancient Israel: From Conquest to Exile. (WI; 3 cr. ; Student Option; Periodic Spring)

Israel and Judah were not states of great importance in the ancient Near East. Their population and territory were small, and they could not resist conquest by larger, more powerful states like Assyria and Rome. Yet their ancient history matters greatly today, out of proportion to its insignificance during the periods in which it transpired. The historical experiences of the people of Israel and Judah were accorded religious meaning and literary articulation in the Hebrew Bible (the Old Testament), which became a foundational text for Judaism, Christianity, and Islam. Essential features of Western as well as Islamic civilization are predicated on some element of Israel's ancient past, as mediated through the Bible; therefore it behooves us to understand that past. But the Bible is a religious work, not a transcript of events, and the history of ancient Israel is not derived merely from reading the biblical accounts of it. Archaeological excavations have revealed the physical remains of the cultures of Israel and neighboring lands, as well as bringing to light inscriptions, documents, and literary works produced by those cultures. These sources, which complement and sometimes contradict the accounts conveyed in the Bible, provide the basis for reconstructing a comprehensive history of ancient Israel. This course covers the history of Israel and Judah from the Late

Bronze Age (c. 1550-1200 BCE), by the end of which Israel had emerged as a distinct ethnic entity, to the period of Roman rule (63 BCE-330 CE), which saw the final extinction of ancient Israel, represented by the kingdom of Judea, as a political entity. Knowledge of this history is based on archaeological, epigraphic, and literary sources, including the Hebrew Bible. N.B.: Students should be aware that the study of history, like all the human and natural sciences, is predicated on inquiry, not a priori judgments. Accordingly, the Bible is not privileged as an intrinsically true or authoritative record. No text is presumed inerrant, and all sources are subject to scrutiny, in the context of scholarly discourse. Biblical texts are treated just like all other texts, as the products of human beings embedded in a historical context, and as the subject of analysis and interpretation. Persons of all faiths and of no faith are equally welcome to participate in such scholarly discourse. However, students who feel that their own religious beliefs require an understanding of the Bible that is antithetical to the foregoing statements are cautioned that they may find themselves uncomfortable with this course.

RELS 3504. Apocalypticism, Cosmic Warfare, and the Maccabees: Jewish Strategies of Resistance in Antiquity. (3 cr. ; Student Option; Periodic Spring)

The rise of Hellenistic kingdoms in the ancient Mediterranean and Near East created a variety of responses from local, subjugated peoples, and some of the most documented cases are those of Jewish populations in Koel-Syria/Palestine. The main objective of this course is to analyze Jewish responses to imperial rule and military conflict during the Hellenistic and early Roman periods (c. 300 B.C.E. - 150 C.E.), but we will also spend time examining the broader picture of how local, ancestral groups fared under foreign rule. Along with discussing pertinent archaeological evidence, we will discuss Jewish literature and documentary material from this period, including, the sectarian documents of the Dead Sea Scrolls, the Book of Judith (a Jewish "novel"), the Books of Daniel and the Maccabees (all of which provide historical information about the Maccabean revolt and rise of the Hasmoneans), and the writings of Josephus (a Jewish writer who witnessed the Roman takeover of Palestine in the first century C.E.). This course will stay within the confines of the ancient evidence and not examine later interpretations when analyzing each historical period; it will begin with Ptolemaic control of the region and conclude with the Bar Kokhba revolt, its aftermath, and the resilience of Jewish populations in northern Palestine. Topics that will be examined in depth are messianism and apocalypticism, the Jerusalem Temple, Jewish ancestral traditions (which include "biblical" literature), and theoretical models used by scholars to analyze power relationships in antiquity.

RELS 3520. History of the Holocaust. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Study of 1933-1945 extermination of six million Jews and others by Nazi Germany on basis of

race. European anti-Semitism. Implications of social Darwinism and race theory. Perpetrators, victims, onlookers, resistance. Theological responses of Jews and Christians.

RELS 3535. Death and the Afterlife in the Ancient World. (AH; 3 cr. ; Student Option; Fall Odd Year)

Beliefs, attitudes, and behaviors related to death and afterlife found in cultures of ancient Mediterranean and Near East. Literature, funerary art/epitaphs. Archaeological evidence for burial practices and care of dead.

RELS 3543. Pagans, Christians, Barbarians: The World of Late Antiquity. (GP,HIS; 3 cr. ; A-F or Audit; Fall Odd Year)

Between classical and medieval, pagan and Christian, Roman and barbarian, the late antique world was a dynamic age. This course focuses on the Mediterranean region from the 2nd to the mid-7th century exploring such topics as the conversion of Constantine, the fall of Rome, barbarian invasions, the spread of Christianity, and the rise of Islam.

RELS 3544W. Martyrs, Monks, Crusaders: World Christianity, 100-1400. (GP,WI,HIS; 4 cr. ; Student Option; Fall Odd, Spring Even Year)

This course surveys the history of Christianity from its status as a persecuted minority religion of the Roman Empire to its dominant role in medieval Europe and Byzantium. We study Christian traditions in Asia and Africa as well as Europe with special attention to the relationship between Christianity and culture in the ancient and medieval world.

RELS 3609. Medieval Art. (AH; 3 cr. ; Student Option; Every Fall & Spring)

Medieval art in Western Europe, from around 1000 to the mid-14th century. Works from France, Spain, Germany, Italy, and England examined in their historical context. Cross cultural relations, development of completely new forms of art and techniques, and the processes of realization.

RELS 3611. Eastern Orthodoxy: History and Culture. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Development of orthodox church in Byzantium, Islamic Near East, Slavic world, and diaspora. Impact of orthodoxy on political/cultural institutions. Interaction with other Christian/non-Christian communities. Orthodox spirituality/aesthetics.

RELS 3612. Baroque Rome: Art and Politics in the Papal Capital. (HIS; 3 cr. ; Student Option; Fall Even Year)

Center of baroque culture--Rome--as city of spectacle and pageantry. Urban development. Major works in painting, sculpture, and architecture. Ecclesiastical/private patrons who transformed Rome into one of the world's great capitals.

RELS 3622. Religious Encounters in Early America. (; 3 cr. ; Student Option; Periodic Fall & Spring)

The United States is home to an astonishing array of religious beliefs and institutions, yet mutual toleration has historically been harder

to achieve. This upper-level course, which is run as a discussion seminar, uses case studies to investigate how people of differing faiths perceived, reacted to, and changed each other, between the arrival of Jesuits and Puritans in the early 17th century and the US-Dakota War of 1862. People who hailed from North America, Europe, and Africa had divergent ideas about the divine and its presence on Earth, about life and life after death, about religious rituals and relations of authority. Their struggles with one another were partly struggles over religiously inflected ways of being in the world. The course explores how religion shaped people's responses to European colonization, the growing slave-labor system, industrialization, immigration, and westward expansion. A religious lens onto American history reveals religion as an element of struggle and shows that freedom of conscience has been continually contested rather than easily assured. prereq: Non-fr or instr consent

RELS 3623. Religion and the American Culture Wars. (HIS; 3 cr. ; Student Option; Every Fall)

Thomas Jefferson, Benjamin Franklin, James Madison, Thomas Paine, George Washington, and John Adams on religion, faith, and religion in politics. Deism. Enlightenment-era discussions about rational religion. Rise of evangelicalism. Separation of church/state, framers' original intent for first amendment. Religious Right.

RELS 3623H. Religion and the American Culture Wars. (; 3 cr. ; A-F only; Every Fall)

Thomas Jefferson, Benjamin Franklin, James Madison, Thomas Paine, George Washington, and John Adams on religion, faith, and religion in politics. Deism. Enlightenment-era discussions about rational religion. Rise of evangelicalism. Separation of church/state, framers' original intent for first amendment. Religious Right.

RELS 3624. Atheists as "Other": Religious and Nonreligious Outsiders in the US. (DSJ; 3 cr. ; Student Option; Periodic Spring)

What does it mean to be an atheist in the United States today? Atheists comprise a small percentage of the American population, but one with an increasingly visible presence in popular culture, political discourse, & everyday life. How do atheists organize into groups oriented toward identity-formation, social connection, and political action? prereq: 1001 recommended

RELS 3625. Magic and Medicine. (3 cr. ; Student Option; Spring Odd Year)

Course examines how the line between magic and medicine has changed over time. From accusations of witchcraft to proclamations of scientific breakthrough, we will examine the relationship between the supernatural and the natural from the early modern period to today. Specific topics include the practice of exorcism, the concept of the "four humors," the persecution of witches, the development of "voodoo," the effectiveness of placebos, and the professionalization of medicine. Throughout, we will ask how gender, class, and

race have affected the construction of "magic" and "medicine."

RELS 3626W. Witches, Seers, and Saints: Women, Gender, and Religion in the U.S.. (WI; 3 cr. ; Student Option; Periodic Fall & Spring)

This course examines the development and ramifications of gender ideologies within several religious groups in North America from the colonial period to the present and explores women's strategies that have contributed to and resisted these ideologies.

RELS 3627. The End of the World in Literature and History. (HIS; 3 cr. ; Student Option; Periodic Fall & Spring)

For at least two and a half millennia, prophets, politicians, and poets have crafted terrifying accounts about the end of the world. This comparatist seminar examines the way different cultures have imagined a final apocalypse with particular attention to the political and social consequences of their visions. Students will read texts that focus on pandemic, extraterrestrial attack, nuclear holocaust, prophecy, cybernetic revolt, divine judgment, resource depletion, meteoric impact, or one of the many other ways in which humans write of their demise. They will use literary analysis to explore the many historical and contemporary wastelands they will encounter. They will write short papers and give in-class presentations on different kinds of apocalypse.

RELS 3628. Jewish American Literature: Religion, Culture, and the Immigrant Experience. (DSJ,HIS; 3 cr. ; Student Option; Every Spring)

Immigrant? Jewish? American? What do these labels mean, why are they applied, and do they ever cease to be applicable? Can we distinguish religion from culture, and what are the implications when we try? Why is it frequently asked whether Saul Bellow was really? a Jewish writer, but it is impossible to read Philip Roth as anything other than that? How does Grace Paley's Jewishness? come through even when she is writing about non-Jewish characters? We will address these issues and others as we explore the literature growing out of the Jewish immigrant experience in America, as well as the literature by Jewish writers more firmly, though still sometimes anxiously, rooted in American soil. In this course we will engage in a highly contextualized and historicized study of Jewish American literature from the 19th century to today. We will discover in these texts how inherited Jewish culture and literary imaginings, developed over centuries of interaction between Jewish communities and the "outside world," get reexamined, questioned, rejected, reimagined, reintegrated, and transformed within the crucible of American experience. The discussions that ensue will also provide a framework for engaging with the creative energies and cultural productivity of more recent immigrant communities in the United States and beyond. Immigration and the experience of immigrant communities continues to be at the forefront of American consciousness, as immigrants work to create

new meanings and new narratives for their lives, and as those who immigrated before them provide contested meanings for the impact of immigration on their own narratives. This course, though grounded in Jewish narratives, will therefore provide students with an expanded vocabulary and perspective for engaging in this central and very current debate within the American experience.

RELS 3631. Islam in America: A History of the Present. (3 cr. ; A-F or Audit; Periodic Fall & Summer)

From the "Age of Discovery" and the African slave trade, to Malcolm X and the War on Terror, Islam has long been an integral part of the American landscape. In this course students will examine the history of Islam and social formation of Muslim communities in the United States. We will approach this history in the plural: as histories of Islam in America, paying particular attention to the different local and global dynamics that led to the migration of this racially, ethnically, and class variegated community. This course will explore how racial, national, cultural, and sectarian differences within and between Muslim communities shape and challenge the notion of a singular Islam or Muslim community. We will ask how and why Islam and Muslims have been characterized - both historically and today - as a "problem" in/for America. What does the emergence of terminology like "American Muslim" and "American Islam" tell us about these historical tensions, conceptions of good/bad citizenship, and identity politics more broadly, in the United States today?

RELS 3671. Hinduism. (3 cr. ; Student Option; Periodic Fall & Spring)

Development of Hinduism focusing on sectarian trends, modern religious practices, myths/rituals, pilgrimage patterns/ religious festivals. Interrelationship between Indian social structure/Hinduism.

RELS 3679. Religion and Society in Modern South Asia. (AH,GP; 3 cr. ; A-F only; Periodic Fall & Spring)

Survey of religious formations in premodern India (Hindu, Islamic, Sikh). Transformation of religious practice/thought. Religion and nationalism. Geopolitical dimensions of religious transformation in South Asia.

RELS 3704. Exploring the Quran: An intellectual odyssey with Islam's holy scripture. (AH; 3 cr. ; A-F or Audit; Every Spring)

This course explores the contents of the Quran and probes its place in the history of human civilization. Students will learn about, and critically reflect on, the following subjects: 1) the Quran's core ideas, stories, laws, parables, and arguments, 2) the historical context in which the Quran was first promulgated and codified, 3) the relationship between the Quran and the preceding literary traditions of the ancient world, in particular, the Bible and post-biblical Jewish and Christian writings, 4) Muslim utilization of the Quran towards intellectual, social, religious, cultural, and political ends, and 5) the pre-modern and modern scholarly traditions of interpreting the Quran.

RELS 3706W. Art of Islam. (AH,WI,GP; 3 cr. ; Student Option; Every Fall)

Architecture, painting, and other arts from Islam's origins to the 20th century. Cultural and political settings as well as themes that unify the diverse artistic styles of Islamic art will be considered.

RELS 3707W. Anthropology of the Middle East. (GP,WI,SOCS; 3 cr. ; Student Option; Fall Even Year)

Anthropological field methods of analyzing/interpreting Middle Eastern cultures/societies.

RELS 3708. The Cultures of the Silk Road.

(3 cr. ; Student Option; Every Fall & Spring) Past/present state of cultures that flourished in Central Asia (present-day CA republics, Iran, Afghanistan) after Alexander the Great. Decline with opening of sea routes.

RELS 3711. The Islamic World. (GP,SOCS; 3 cr. ; Student Option; Every Fall)

Foundation of Islam in Arabian Peninsula, its spread to Asia and Africa. Islamic civilization, influence on Europe. Rise of capitalism, colonization. Islamic resurgence. State-society and development. Culture/conflict in Moslem societies. Gender and Islam. Islam and the West. Case studies.

RELS 3712. Islam: Religion and Culture. (; 3 cr. ; Student Option; Every Fall)

This course is a brief survey of the religion and civilization of Islam. It introduces students to 1) Islamic history from its inception in the seventh century CE to the present, with emphasis on the life of the Prophet Muhammad and the early Caliphate; 2) The authoritative texts of Islam, i.e. the Quran and Prophetic traditions (Hadith); 3) The institutions and discourses characteristic of Islamic civilization; and 4) The transformation of Muslim life and thought in the modern period. By taking this course, students become familiar with the chief ideas, characters, narratives, rites, localities, and movements associated with Islam. prereq: Soph or jr or sr

RELS 3714. Islam and the West. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Cultural/intellectual trends that have defined differences between Islam and the West. Development of historical, philosophical, and intellectual mindset of both spheres. Factors in tension, anxiety, and hatred between Muslim world and Europe and the United States.

RELS 3715. History of the Crusades.

(GP,HIS; 3 cr. ; Student Option; Every Fall, Spring & Summer) Crusading spirit in Europe. Results of classic medieval crusades ca 1095-1285. States established by crusaders in Near East. Internal European crusades. Chronological prolongation of crusading phenomenon.

RELS 3716. Gender and the Family in the Islamic World. (; 3 cr. ; A-F only; Periodic Spring)

This course explores the experiences of Muslim women and Muslim families from a historical and comparative perspective. Expanding the discussion on Muslim women's lives and experiences beyond the Middle East, by also centralizing on the experiences

of Muslim women and families outside of this geographical area highlights the complex and diverse everyday experiences of Muslim women around the world. This wider lens exposes the limitations intrinsic in the stereotypical representation of Muslims in general and Muslim women in particular. We will explore the intricate web of gender and family power relations, and how these are contested and negotiated in these societies. Some of the themes the course explores include the debates on Muslim women and colonial representations, sexual politics, family, education and health, women and paid work, gender and human rights, and Islamic feminisms debates. prereq: At least soph; 1001 recommended

RELS 3717. Christians, Muslims, and Jews in the Middle Ages. (GP,HIS; 3 cr. ; Student Option; Fall Even, Spring Odd Year)

A Pew Research survey of the global religious landscape in 2010 found 2.2 billion Christians (31.5% of the world's population), 1.6 billion Muslims (23.2%), and 14 million Jews (.2%). In this class, we explore how the histories of these religious communities became deeply entangled in an age of diplomacy, trade, jihad, and crusade.

RELS 3718W. Christ in Islamic Thought.

(WI; 3 cr. ; Student Option; Periodic Spring) Course examines the history of the figure of Christ in Islamic thought, from the beginnings of Islam in the Qur'an and the Hadith to the recent 2013 book by Reza Aslan, *Zealot*. The course is based on close reading of primary sources from regions extending from Spain to Iran, and in various languages (in translation): Arabic, Greek, French, Farsi, and Italian. Course demonstrates how much the interpretation of the figure of Christ in Islamic thought belonged to specific historical contexts.

RELS 3721. North Africa since 1500: Islam, Colonialism, and Independence. (3 cr. ; Student Option; Spring Odd Year)

History of Maghrib (Morocco, Algeria, Tunisia, Libya, disputed territories of Western Sahara) from time of Ottoman expansion/Sharifian dynasties (Sa'dian/Alawid) in 16th/17th Centuries to end of 20th century. Focus on encounter of Islamic cultures/societies of Maghrib with Africa/Europe.

RELS 3722. The Ottoman Empire. (GP,HIS; 3 cr. ; Student Option; Every Fall & Spring)

Survey of Islam's most successful empire, from its founding circa 1300 to its demise in 1923. Lands, institutions, peoples, historical legacy.

RELS 3777. The Diversity of Traditions: Indian Empires after 1200. (3 cr. ; Student Option; Periodic Fall & Spring)

This class considers the development of Indian and Pakistani art and architecture from the introduction of Islam as a major political power at the end of the 12th century to the colonial empires of the 18th century. We will study how South Asia's diverse ethnic and religious communities interacted, observing how visual and material cultures reflect differences, adaptations, and shared aesthetic practices within this diversity of

traditions. Students in this class will have mastered a body of knowledge about Indian art and probed multiple modes of inquiry. We will explore how Muslim rulers brought new traditions yet maintained many older ones making, for example, the first mosque in India that combines Muslim and Indic visual idioms. We will study the developments leading to magnificent structures, such as the Taj Mahal, asking why such a structure could be built when Islam discourages monumental mausolea. In what ways the schools of painting that are the products of both Muslim and Hindu rulers different and similar? The course will also consider artistic production in the important Hindu kingdoms that ruled India concurrently with the great Muslim powers. In the 18th century, colonialist forces enter the subcontinent, resulting in significant innovative artistic trends. Among questions we will ask is how did these kingdoms influence one another? Throughout we will probe which forms and ideas seem to be inherently Indian, asking which ones transcend dynastic, geographic and religious differences and which forms and ideas are consistent throughout these periods of political and ideological change. To do all this we must constantly consider how South Asia's diverse ethnic and religious communities interact. There are no prerequisites for this course.

RELS 3779. Visions of Paradise: The Indian Temple. (3 cr. ; Student Option; Periodic Fall & Spring)

This course traces the development and diversity of the Indian temple, focusing the ways in which people interact with sacred space and how religious art addresses its viewers. We primarily focus on Hinduism, but also include Buddhism and Jainism. We will discuss the role of sculpture, painting, textiles, dance, and food within the temple. We will also examine how the legacy of colonial and orientalist scholarship inflects our study of these traditions and monuments. Although the architecture of both structural and rock-cut temples will be our main object of study, we will also discuss the role of sculpture, painting, textiles, and food within the temple. Our consideration of the structures will be attentive to the ways in which people interact with the space and how objects of sacred art address their viewers. In classroom discussions, we will work together to create an interpretive model that is synthetic, critical, and appreciative of the enormously diverse field that is South Asian Art. Lectures will move from explanatory descriptions of objects and histories that are covered in the textbook to critical interpretations of the historiographies that shape their contemporary reception. Class discussions and assignments are intended to encourage students to bring their own ways of looking at this art, to read critically in light of what they see, and to consider new approaches to the material. No prior experience in the history of art or religions of South Asia is required for this course.

RELS 3896. Internship in Religion, Society, and Culture. (; 1-4 cr. [max 20 cr.] ; Student Option; Every Fall & Spring)

Guided academic and vocational reflection on an internship supervised by a religious studies faculty member. Intended to support an applied learning experience in an agreed-upon, short-term, supervised workplace activity, with defined goals which are related to the academic study of religion, society, and culture. A student may only earn credit for a given internship through one course at a time.

RELS 3993. Directed Studies. (; 1-4 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer)

Student works with faculty on a subject decided upon by both.

RELS 4309. Religion in American Public Life: Culture, Politics, and Communities. (CIV; 3 cr.; A-F or Audit; Periodic Fall & Spring)

How diversity/vitality of American religion shape public life. How religious groups engage in political action, foster understandings of democracy/styles of civic participation. Volunteering/service activities. Race, poverty, the family, sexuality. prereq: Soc majors/minors must register A-F

RELS 4993. Capstone: Directed Study. (1-4 cr.; Student Option; Every Fall & Spring)

This Directed Study is an independent research project developed and completed by the student in consultation with a faculty member of their choice who serves as the capstone project advisor and project evaluator. The Capstone should be a culminating project of the student's learning in Religious Studies, focused on a topic related to the Area Concentration section of the student's individual major program. Students enrolling in this directed study/research course will complete the University's Directed Study/Research contract with the faculty mentor/evaluator. The mentor/evaluator should have expertise in the chosen topic area and will ensure that academic standards are upheld, that the research proposed is at the appropriate level for the course and academic in nature, that the project is developed and executed by the student, and that the project scope is reasonable for one semester. Students should expect to devote 42 hours of work per credit to the project. The faculty mentor/evaluator will consult regularly with the student and

RELS 5001. Theory and Method in the Study of Religion: Critical Approaches to the Study of Religion. (; 3 cr.; Student Option; Every Spring)

Theoretical/methodological issues in academic study of religion. Theories of origin, character, and function of religion as a human phenomenon. Psychological, sociological, anthropological, and phenomenological perspectives. prereq: Sr or grad student or instr consent

RELS 5013W. Biblical Law and Jewish Ethics. (WI; 3 cr.; Student Option; Periodic Fall & Spring)

This course introduces students to the original meaning and significance of religious law and ethics within Judaism. Law is the single most important part of Jewish history and identity. At

the same time, law is also the least understood part of Judaism and has often been the source of criticism and hatred. We shall therefore confront one of the most important parts of Jewish civilization and seek to understand it on its own terms. In demonstrating how law becomes a fundamental religious and ethical ideal, the course will focus on the biblical and Rabbinic periods but spans the entire history of Judaism. Consistent with the First Amendment, the approach taken is secular. There are no prerequisites: the course is open to all qualified students. The course begins with ideas of law in ancient Babylon and then studies the ongoing history of those ideas. The biblical idea that a covenant binds Israel to God, along with its implications for human worth - including the view of woman as person - will be examined. Comparative cultural issues include the reinterpretations of covenant within Christianity and Islam. The course investigates the rabbinic concept of oral law, the use of law to maintain the civil and religious stability of the Jewish people, and the kabbalistic transformation of law. The course concludes with contemporary Jewish thinkers who return to the Bible while seeking to establish a modern system of universal ethics. The premise of the course is the discipline of academic religious studies. The assumptions of the course are therefore academic and secular, as required by the First Amendment. All texts and all religious traditions will be examined analytically and critically. Students are expected to understand and master this approach, which includes questioning conventional cultural assumptions about the composition and authorship of the Bible. Willingness to ask such questions and openness to new ways of thinking are essential to success in the course.

RELS 5071. Greek and Hellenistic Religions. (; 3 cr.; Student Option; Periodic Spring)

Greek religion from Bronze Age to Hellenistic times. Literature, art, archaeology. Homer/Olympian deities. Ritual performance, prayer, sacrifice. Temple architecture. Death/afterlife. Mystery cults. Philosophical religion. Near Eastern salvation religions. Meets with 3071.

RELS 5072. The Birth of Christianity. (AH; 3 cr.; Student Option; Periodic Fall & Spring)

Early Jesus movement in cultural/historical setting. Origins in Judaism. Traditions about Jesus. Apostle Paul, controversies/interpreters. Authority, religious practice, structure. Emergence of canon. Contemporary methods of New Testament study. Biblical writings as history/narrative. CNES 3072/CNES 5072/RELS 3072/RELS 5072 meet together.

RELS 5115. Midrash: Reading and Retelling the Hebrew Bible. (; 3 cr.; Student Option; Periodic Fall & Spring)

How did the Jews of the first seven centuries of the common era read and understand the Hebrew Bible? What were the problems they faced -- interpretive, historical, theological -- in trying to apply their holy scriptures? This course explores key issues that led to the development of a new form of Judaism in late antiquity, rabbinic Judaism, and its methods of scriptural interpretation. The course's

study will focus on the forms and practices of rabbinic scriptural interpretation (midrash) as it developed in Roman Palestine and Sasanian Babylonia, focusing on key narrative and legal passages in the Five Books of Moses (Torah). A main focus of the course will be on the ways the rabbis adapted the Hebrew Bible to express their own core concerns.

RELS 5121. Gender and Body in Early Christianity. (AH; 3 cr.; Student Option; Fall Odd Year)

Ancient Christians, like any other social group in the ancient world, represented themselves through images, stories, and discourses using the cultural tools available to them in their own contexts. In this course, we will explore two key texts of early Christianity (1 Corinthians and the Gospel of Mark) with special attention to how representations of the body and gender served to communicate the nature of what it meant to be Christian for these authors. The study of ancient material offers a space to acquire the skills of critical analysis of body and gender dynamics so that we can better understand the roles that the body and gender play in shaping our self-identity, social interaction, and societal structures.

RELS 5204. The Dead Sea Scrolls. (; 3 cr.; Student Option; Periodic Fall & Spring)

Introduction to Dead Sea Scrolls and Qumran. Contents of Dead Sea Scrolls, significance for development of Bible. Background of Judaism and Christianity. Archaeological site of Qumran. The course will focus on the material in translation and academic scholarship on the literature and archaeological site. Open to graduate students across the college; knowledge of classical Hebrew will not be required. The course is open to upper level undergraduate students with permission of the instructor.

RELS 5254. Archaeology of Ritual and Religion. (3 cr.; Student Option; Fall Even Year)

The course discusses evidence for the origins of religion and its diverse roles in human societies over millennia. It focuses on how artifacts and architecture are essential to religious experience. It asks: What constitutes religion for different cultures? Why is religion at the heart of politics, social life, and cultural imagination?

RELS 5612. Baroque Rome: Art and Politics in the Papal Capital. (; 3 cr.; Student Option; Fall Even Year)

Center of baroque culture--Rome--as city of spectacle and pageantry. Urban development. Major works in painting, sculpture, and architecture. Ecclesiastical/private patrons who transformed Rome into one of the world's great capitals.

RELS 5707W. Anthropology of the Middle East. (GP,WI,SOCS; 3 cr.; Student Option; Fall Even Year)

Anthropological field methods of analyzing/interpreting Middle Eastern cultures/societies.

RELS 5777. The Diversity of Traditions: Indian Empires after 1200. (3 cr.; Student Option; Periodic Fall & Spring)

This class considers the development of Indian and Pakistani art and architecture from the introduction of Islam as a major political power at the end of the 12th century to the colonial empires of the 18th century. We will study how South Asia's diverse ethnic and religious communities interacted, observing how visual and material cultures reflect differences, adaptations, and shared aesthetic practices within this diversity of traditions. Students in this class will have mastered a body of knowledge about Indian art and probed multiple modes of inquiry. We will explore how Muslim rulers brought new traditions yet maintained many older ones making, for example, the first mosque in India that combines Muslim and Indic visual idioms. We will study the developments leading to magnificent structures, such as the Taj Mahal, asking why such a structure could be built when Islam discourages monumental mausolea. In what ways the schools of painting that are the products of both Muslim and Hindu rulers different and similar? The course will also consider artistic production in the important Hindu kingdoms that ruled India concurrently with the great Muslim powers. In the 18th century, colonialist forces enter the subcontinent, resulting in significant innovative artistic trends. Among questions we will ask is how did these kingdoms influence one another? Throughout we will probe which forms and ideas seem to be inherently Indian, asking which ones transcend dynastic, geographic and religious differences and which forms and ideas are consistent throughout these periods of political and ideological change. To do all this we must constantly consider how South Asia's diverse ethnic and religious communities interact.

RELS 5781. Age of Empire: The Mughals, Safavids, and Ottomans. (3 cr. ; Student Option; Periodic Fall)

Artistic developments under the three most powerful Islamic empires of the 16th through 19th centuries: Ottomans of Turkey; Safavids of Iran; Mughals of India. Roles of religion and state will be considered to understand their artistic production.

RELS 5993. Directed Studies. (; 1-4 cr. [max 24 cr.] ; Student Option; Every Fall & Spring) TBD prereq: instr consent

Retail Merchandising (RM)

RM 1201. Fashion, Ethics, and Consumption. (CIV; 3 cr. ; Student Option; Every Fall & Spring)

Apparel business. Overview of steps in the process of creating, merchandising, selling, and consuming apparel. Various ethical positions reflected in manufacturer, retailer, and consumer decision making are considered.

RM 2196. Work Experience in Retail Merchandising. (; 1-4 cr. [max 8 cr.] ; S-N only; Every Fall, Spring & Summer)

Supervised work experience in business, industry, or government, related to student's area of study. Integrative paper or project. prereq: Plan submitted/approved by [adviser,

internship supervisor], written approval of supervisor, instr consent

RM 2215. Introduction to Retail Merchandising. (; 3 cr. ; A-F or Audit; Every Spring)

Overview of retailing management. Aspects of retailing management in global, multi-channel retail environment. Strategies/tactics to make decisions to operate retail business. Retail management principles covered.

RM 2234. Retailing in a Digital Age. (TS; 3 cr. ; A-F only; Every Spring)

Students will explore and evaluate the impact of emergence of retail technology on the retail industry and consumers as well as on the society at large. Changes in the retail business and consumer behaviors will be examined in relation to emerging technologies. Both benefits and concerns related to digital retailing will be discussed.

RM 3124. Consumers of Design. (3 cr. ; A-F only; Every Fall & Spring)

Contemporary approaches to consumer behavior. prereq: retail merchandising major or minor

RM 3170. Topics in Retail Merchandising. (; 1-4 cr. [max 16 cr.] ; A-F or Audit; Periodic Fall, Spring & Summer)

In-depth investigation of specific topic.

RM 3196. Field Study: National or International. (; 1-4 cr. [max 10 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Faculty-directed field study in national or international setting. prereq: instr consent

RM 3201. Career and Internship Preparation for Retail Merchandising. (; 1 cr. ; A-F only; Every Fall & Spring)

Research career opportunities related to retail industry, set career objectives based on an assessment of individual skills/interests, and identify job search skills to implement a transition from college to employment. prereq: Retail merchandising major

RM 3242. Retail Buying. (; 3 cr. ; A-F or Audit; Every Fall)

Principles/mathematics of merchandise inventory control, merchandise selection. prereq: [2215 or DHA 2215], [MATH 1031 or MATH 1051 or MATH 1142 or MATH 1151 or MATH 1155 or MATH 1271 or CALG student group], [jr or sr], retail merchandising [major or minor] or instr consent

RM 3243. Visual Merchandising. (2 cr. [max 3 cr.] ; A-F or Audit; Every Spring)

Retail store environment. Physical/psychological effects that initiate/motivate consumer behavior. Merchandise display: creativity, department layout, fixturing, lighting, cross merchandising, visual resources, signing, maintenance. prereq: 2215, [DHA major or minor or instr consent]

RM 3244. Virtual Reality Retailing. (; 2 cr. ; A-F only; Every Fall & Spring)

Students will use a virtual 3D store modeling software package, to conceptualize and design store interior, layout, fixtures, lighting, signs, merchandising planograms based on

an understanding of visual merchandising foundational knowledge.

RM 4117W. Retail Environments and Human Behavior. (WI; 3 cr. ; A-F only; Every Spring)

Theory/research related to designed environments across retail channels. prereq: 2215 or DHA 2215, [jr or sr or grad student], [design major or minor or instr consent]

RM 4123. Living in a Consumer Society. (; 3 cr. ; A-F only; Fall Odd Year)

Consumerism within U.S. society. Commodification of health care, education, and production of news. Commercialization of public space/culture. What drives consumer society. How meaning is manufactured. What the lived experiences are of consumers today. Postmodern market. Alternatives to consumer society. prereq: Sr, retail merchandising major or minor

RM 4193. Directed Study in Retail Merchandising. (; 1-4 cr. [max 8 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Independent study in retail merchandising under tutorial guidance. prereq: Undergrad, instr consent

RM 4196. Internship in Retail Merchandising. (1-2 cr. ; S-N only; Every Fall, Spring & Summer)

Supervised work experience relating activity in business, industry, or government to student's area of study. Integrative paper or project may be required. prereq: Completion of at least one-half of professional sequence, plan submitted/approved in advance by [adviser, internship supervisor], written consent of faculty supervisor, instr consent

RM 4212W. Dress, Society, and Culture. (WI; 3 cr. ; A-F or Audit; Every Fall)

Contemporary dress from diverse cultures within/outside USA analyzed using social science concepts. Dress as nonverbal communication system. prereq: [Jr or sr or grad student], [design major or minor or instr consent]

RM 4216. Retail Promotions. (3 cr. [max 4 cr.] ; A-F or Audit; Every Fall)

Role of integrated marketing communications in retail businesses. Promotion techniques/media characteristics. Application of theories behind consumer decision making. prereq: 2215, [jr or sr or grad student], [DHA major or minor or instr consent]

RM 4217. International Retail Markets. (GP; 3 cr. ; A-F or Audit; Every Spring)

Operating a retail business in foreign countries. How international markets differ from U.S. market. Effects of sociocultural systems within foreign countries. Theories of international trade. Interface between countries and firms. Strategic alternatives. prereq: 2215 or DHA 2215, [jr or sr or grad student], [DHA major or minor or instr consent]

RM 4234. Digital Retail Analytics and Social Media. (3 cr. ; A-F only; Every Fall)

In this digital era, a large volume of digital footprints of users is being generated. The characteristics of users and their behaviors are

tracked through various digital media such as websites, social media, and mobile platforms. Using quantitative methods to measure and analyze this "big data" has become crucial as it allows retailers and marketers to make informed decisions concerning consumer behavior. This course is designed to prepare students to become leaders in the digital retail world by leveraging various digital metrics and insights related to sales, reach, customers, and other important aspects of the retailer's decision-making process. The course will consist of lectures, hands-on exercises, discussion, and quizzes.

RM 4247. Advanced Buying and Sourcing. (3 cr. ; A-F or Audit; Every Spring)

Technology application for buying/sourcing. Six-month dollar merchandise planning, assortment planning, market purchase and sales promotions planning, inventory management, costing, markdowns, timing, and sourcing. prereq: RM 2215, RM 3242, [DHA major or minor or instr consent]

RM 4248. Creative Leadership in Retailing. (3 cr. ; A-F only; Every Fall)

Theory/research on creative leadership. Opportunities to apply knowledge to contemporary issues facing practicing retail leaders.

Robotics (ROB)

ROB 5994. Directed Research. (1-3 cr. [max 9 cr.] ; A-F only; Every Fall, Spring & Summer) Directed research arranged with faculty member.

ROB 5996. Curricular Practical Training. (1-2 cr. [max 3 cr.] ; S-N only; Every Fall, Spring & Summer)

Industrial work assignment involving advanced computer technology. Reviewed by a faculty member. Grade based on a final report covering work assignment. prereq: robotics major, instr consent

Russian (RUSS)

RUSS 1101. Beginning Russian I. (5 cr. ; Student Option; Every Fall) Listening, speaking, reading, writing.

RUSS 1102. Beginning Russian II. (5 cr. ; Student Option; Every Spring) Listening, speaking, reading, writing. prereq: 1101 or equiv

RUSS 3001. Intermediate Russian I. (5 cr. ; Student Option; Every Fall) Conversation, composition, grammar review, translation, readings in literature. prereq: 1102 or instr consent

RUSS 3002. Intermediate Russian II. (5 cr. ; Student Option; Every Spring) Expansion of experience in speaking, reading, and understanding Russian. Reading contemporary texts. prereq: 3001 or instr consent

RUSS 3101. Advanced Russian I. (4 cr. ; Student Option; Every Fall)

Advanced grammar, conversation, composition, reading. prereq: 3002 or 4104 or instr consent

RUSS 3102. Advanced Russian II. (4 cr. ; Student Option; Every Spring) Advanced grammar, conversation, composition, reading. prereq: 3101 or 4111 or instr consent

RUSS 3105. Russian Poetry and Prose. (3 cr. ; Student Option; Periodic Fall) Appreciation of literary values through stylistic analysis and literary interpretation; analysis of humanistic elements. Readings in Russian. prereq: Russ 3102 or concurrent enrollment in Russ 3102 or permission

RUSS 3311V. Honors Major Project in Russian. (WI; 3-4 cr. ; A-F only; Every Fall & Spring)

Directed research/writing in student's chosen field. prereq: Advanced Russian major

RUSS 3311W. Russian Major Project. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring) Directed research and writing in student's chosen field. prereq: Advanced Russian major

RUSS 3404. Tolstoy in Translation. (GP,LITR; 3 cr. ; Student Option; Spring Odd Year) Novels, stories, and philosophical writings of Leo Tolstoy.

RUSS 3411. Dostoevsky in Translation. (GP,LITR; 3 cr. ; Student Option; Spring Even Year) Novels, stories, and miscellaneous writings of Fyodor Dostoevsky.

RUSS 3421. Literature: Middle Ages to Dostoevsky in Translation. (LITR; 3 cr. ; Student Option; Every Fall) Russian literature from about 1000 A.D. to mid-19th century; emphasizing writers of the first half of the 19th century.

RUSS 3422. Literature: Tolstoy to the Present in Translation. (LITR; 3 cr. ; Student Option; Every Spring) Survey of Russian literature from mid-19th century to the present: realism, modernism, feminism and other trends.

RUSS 3512. Russian Art and Culture. (AH,GP; 3 cr. ; Student Option; Fall Odd Year) Major trends in Russian visual arts in context of social, political, and ideological questions.

RUSS 3604. Russia At The Movies: A Survey Of The History Of Russian Cinema. (AH; 3 cr. ; Student Option; Every Spring) This course is designed to provide a chronological overview of major developments, trends, experiments, searches, traditions, and conventions of Russian cinematic art examined in the context of the historical and cultural background of the 20th and early 21st centuries. The history of cinema is intrinsically connected to political, historical, cultural and social developments. For each epoch of development we will first outline the historical and cultural context before investigating the major films and themes of the period. We will elaborate on those films that have made

an important contribution to cinematic or cultural history, both in Russia and the world. RUSS 3604/5604 meets the Liberal Education core requirement in Arts and Humanities. Through a close study of film we learn about how this art medium reflects and expresses human experience and engages us through the exploration of the formal and aesthetic dimensions of film, as well as the study of cultural, social, and historical background in which it is deeply steeped.

RUSS 3900. Topics in Russian Language, Literature, and Culture. (1-4 cr. [max 16 cr.] ; Student Option; Periodic Fall & Spring) Variable topics in Russian language, literature, and culture. Consult department for details. prereq: 1102 for language topics

RUSS 3993. Directed Studies. (1-4 cr. [max 16 cr.] ; Student Option; Every Fall & Spring) Guided individual study. Prereq instr consent, dept consent, college consent.

RUSS 4101. Beginning Russian for Graduate Research I. (5 cr. ; Student Option; Every Fall) Listening, speaking, reading, writing.

RUSS 4102. Beginning Russian for Graduate Research II. (5 cr. ; Student Option; Every Spring) Listening, speaking, reading, writing. prereq: 4101

RUSS 4103. Intermediate Russian for Graduate Research I. (5 cr. ; Student Option; Every Fall) Conversation, composition, grammar review, translation, readings in literature. prereq: 4102

RUSS 4104. Intermediate Russian II. (5 cr. ; Student Option; Every Spring) Speaking, reading, and understanding Russian. Reading contemporary texts. prereq: 4103

RUSS 4111. Advanced Russian for Graduate Research I. (4 cr. ; Student Option; Every Fall) Advanced grammar, conversation, composition, reading. prereq: 3002 or 4104 or instr consent

RUSS 4112. Advanced Russian for Graduate Research II. (4 cr. ; Student Option; Every Spring) Advanced grammar, conversation, composition, reading. prereq: 3101 or 4111 or instr consent

RUSS 5404. Tolstoy in Translation. (GP,LITR; 3 cr. ; Student Option; Spring Even Year) Novels, stories, and philosophical writings of Leo Tolstoy.

RUSS 5411. Dostoevsky in Translation. (GP,LITR; 3 cr. ; Student Option; Spring Even Year) Novels, stories, and other writings of Fyodor Dostoevsky.

RUSS 5421. Literature: Middle Ages to Dostoevsky in Translation. (LITR; 3 cr. ; Student Option; Every Fall) Russian literature from about 1000 A.D. to mid-19th century; emphasizing writers of the first half of the 19th century.

RUSS 5422. Literature: Tolstoy to the Present in Translation. (LITR; 3 cr. ; Student Option; Every Spring)
Survey of Russian literature from mid-19th century to the present: realism, modernism, feminism and other trends.

RUSS 5604. Russia At The Movies: A Survey Of The History Of Russian Cinema. (AH; 3 cr. ; Student Option; Every Spring)
This course is designed to provide a chronological overview of major developments, trends, experiments, searches, traditions, and conventions of Russian cinematic art examined in the context of the historical and cultural background of the 20th and early 21st centuries. RUSS 5900. Topics in Russian Language, Literature, and Culture. (; 1-4 cr. [max 3 cr.] ; Student Option; Periodic Fall)
Variable topics in Russian language, literature, and culture. prereq: 1102 for language topics

RUSS 5993. Directed Studies. (1-4 cr. [max 16 cr.] ; Student Option; Every Fall & Spring)
Guided individual study. Prereq instr consent, dept consent, college consent.

Scandinavian (SCAN)

SCAN 3011W. Readings in Scandinavian Languages. (WI; 4 cr. ; Student Option; Every Fall)
Reading/composition in Danish, Norwegian, and Swedish for advanced proficiency. Introduction to differences between the three languages. prereq: [Dan or Nor or Swed][1004 or 4004] or instr consent

SCAN 3013. Advanced Scandinavian Languages: Contemporary Scandinavia in Prose, Poetry, and Film. (3 cr. ; Student Option; Every Spring)
Scandinavia of today is a progressive and multi-cultural society as opposed to a hundred years ago. Through prose, poetry, and film, we will explore Scandinavia of today and the changes it has gone through. The purpose of Scan 3013W is to help you gain more advanced knowledge of speaking, reading, and writing skills in your primary Scandinavian language and to build a more advanced reading knowledge of the other Scandinavian languages. The course build on Scan 3011W, through the reading, screening, and analysis

of various texts in Swedish, Norwegian and Danish, both as a whole class and in smaller groups. The class explores multi-ethnic and multicultural identity, childhood, globalization, crime fiction, news events of the moment, culture and society in contemporary Scandinavia through a variety of media. Students will actively take part in discussion and give oral presentations in addition to writing papers.

SCAN 3501W. Scandinavian Culture Past and Present. (GP,WI; 3 cr. ; Student Option; Fall Even, Spring Odd Year)
Cultural, social, and political developments; principal views and core values; major cultural figures; Scandinavian mentality. Readings in translation for nonmajors. Invited lectures on central topics within selected areas of study.

SCAN 3502. Scandinavian Myths. (GP,LITR; 3 cr. ; Student Option; Fall Odd, Spring Even Year)
Literary and cultural investigation of the popular beliefs, myths, and religion of the medieval Scandinavians; the interaction of paganism and Christianity; the reflection of myths in Old Scandinavian literature and art. All readings in English.

SCAN 3503. Scandinavian Folklore. (GP,LITR; 3 cr. ; Student Option; Fall Odd, Spring Even Year)
Literary and folkloric investigation of Scandinavian folktales and legends. Readings in translation for nonmajors.

SCAN 3504. Emigration, Immigration, Integration: The Nordic Experience. (GP,HIS; 3 cr. ; Student Option; Every Fall & Spring)
Issues of origin/language, immigration/settlement, traditions/values, culture/politics, and transgressions of boundaries from the old to the new studied through photos, diaries, letters, stories, and novels by Moberg, Rolvaag, Ager, and other pioneers. All readings in translation.

SCAN 3505. Scandinavian Fiction From 1890 to Present. (LITR; 3 cr. ; Student Option; Fall Odd, Spring Even Year)
Modernity's search for new forms to represent changing historical situations. Ibsen, Strindberg, Hamsun, Selma Lagerlof, Hjalmar Bergman, Paar Lagerkvist, Karen Blixen, Moa Martinson, Tarjei Vesaas, Edith Sodergran, Ingmar Bergman, Lars Gustafsson. All readings in translation.

SCAN 3601. Great Literary Works of Scandinavia. (LITR; 3 cr. ; Student Option; Fall Odd Year)
Major literary works from the Middle Ages to the present. Readings in translation.

SCAN 3602. The Literary Fairy Tale in Scandinavia. (LITR; 3 cr. ; Student Option; Fall Even, Spr & Summer Odd Yr)
Literary fairy tales from Scandinavia, especially Hans Christian Andersen. Readings in translation for non-majors.

SCAN 3604W. Living Pictures: An Introduction to Nordic Cinema. (AH,WI; 3 cr. ; Student Option; Spring Odd Year)

Since the early days of the twentieth century, debates have proliferated in the Nordic countries about film's nature and function, whether as popular entertainment, high art, or a dynamic cultural artifact important in defining national and regional identities. In this course, History of Nordic Cinema, we will survey discrete moments in Nordic film history (viewing films from Denmark, Finland, Iceland, Norway and Sweden) and contextualize them within broader developments in global cinema. Particularly important in this regard will be Nordic Cinema's love-hate relationship with Hollywood and its complicated status as European Cinema. We will begin in the beginning, with examples of Scandinavia's often-underestimated role as an international, artistic, and popular culture powerhouse in the silent era up through WWI. We'll go on to explore Nordic film productions intended mainly for domestic audiences and juxtapose these with the emergence of a compelling modernist, art-house cinema tradition revolving around the international figure of the auteur director, including Ingmar Bergman and later, Aki Kaurismäki. We'll present examples of 60s and 70s political, avant-garde cinema (reverberations of the French Nouvelle Vague); talk about the unique development of state-funded structures for film production in these small countries; and end with a survey of recent Nordic films and movements such as Dogme 95 that illustrates ways in which small national cinemas continue to grapple with new iterations of globalization. In this course, students will be exposed to visual cultures from all five Nordic countries and consider the implications of reading film at regional, national and global levels. In short, Nordic Cinema provides a vital and vibrant case study with which to consider a broad range of issues involving the aesthetics and politics of cinema in the world.

SCAN 3605. The Scandinavian Short Story. (LITR; 3 cr. ; Student Option; Fall Even, Spring Odd Year)
Short stories by important 19th/20th-century authors from five Scandinavian countries. Genre theory/practical criticism. Readings in English for non-majors.

SCAN 3613. Children's Literature in Scandinavia. (LITR; 3 cr. ; Student Option; Fall Even Year)
Analysis and discussion of representative works in Scandinavian children's literature from picture books to young adult books using a variety of critical methods of interpretation. Taught in English.

SCAN 3614. Blood on Snow: Scandinavian Thrillers in Fiction and Film. (GP,LITR; 3 cr. ; Student Option; Periodic Fall & Spring)
Scandinavian crime novels/films against background of peaceful welfare states. Readings in translation for non-majors. Scandinavian majors/minors read excerpts in specific languages.

SCAN 3617. Scandinavian Gothic: Horror and the Uncanny in Nordic Literature and Media. (AH,GP; 3 cr. ; Student Option; Spring Even Year)

Scandinavia is popularly thought of as a bastion of social democracy, gender equality, and sleek modern design. Despite this well-earned reputation for political and aesthetic progressivism, there has also been a significant undercurrent of anti-rationalism and supernatural horror in Nordic culture. In Gothic fiction, the unwelcome appearance of primitive, irrational, and malevolent forces often takes the form of supernatural or monstrous figures?ghosts, vampires, witches, and trolls. As conventions established abroad mingled with a home-grown tradition of social realism, the Scandinavian Gothic became a vehicle for representing marginalized voices and revealing the shortcomings of Nordic societies. We will examine Gothic works of literature, film, television, popular music, and visual art. Through this examination, we will build an analytical vocabulary to formally analyze works of Gothic art in all of these media, and will practice that through in-class discussions as well as formal and informal writing.

SCAN 3634. Scandinavian Women Writers. (GP,LITR; 3 cr. ; Student Option; Spring Odd Year)

Investigation of issues important to women as articulated by Scandinavian women writers. Historical overview of women's writing in Scandinavia and in-depth investigation of texts by contemporary women writers. All readings in translation.

SCAN 3670. Topics in Scandinavian Studies. (; 3 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring)

Topic may focus on a specific author, group of authors, genre, period, or subject matter. Topics specified in Class Schedule. Readings in English for nonmajors. May meet with 5670.

SCAN 3993. Directed Studies. (1-4 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer)

Guided individual reading and study. Prereq instr consent, dept consent, college consent.

SCAN 4011. Readings in Scandinavian Languages. (; 2 cr. ; Student Option; Every Fall)

Meets with 3011W. See 3011W for description. prereq: Grad student

SCAN 5502. The Icelandic Saga. (; 3 cr. ; Student Option;)

Study of the sagas written in 13th-century Iceland. Discussion includes cultural and historical information about medieval Iceland and analysis of a selection of saga texts using contemporary critical approaches. All readings in translation.

SCAN 5604W. Living Pictures: An Introduction to Nordic Cinema. (AH,WI; 3 cr. ; Student Option; Spring Odd Year)

Since the early days of the twentieth century, debates have proliferated in the Nordic countries about film's nature and function, whether as popular entertainment, high art, or a dynamic cultural artifact important in defining national and regional identities. In this course, History of Nordic Cinema, we will survey discrete moments in Nordic film history (viewing films from Denmark, Finland, Iceland,

Norway, and Sweden) and contextualize them within broader developments in global cinema. Particularly important in this regard will be Nordic Cinema's love-hate relationship with Hollywood and its complicated status as European Cinema. We will begin in the beginning, with examples of Scandinavia's often-underestimated role as an international, artistic, and popular culture powerhouse in the silent era up through WWI. We'll go on to explore Nordic film productions intended mainly for domestic audiences and juxtapose these with the emergence of a compelling modernist, art-house cinema tradition revolving around the international figure of the auteur director, including Ingmar Bergman and later, Aki Kaurism?ki. We'll consider examples of 60s and 70s political, avant-garde cinema (reverberations of the French Nouvelle Vague); talk about the unique development of state-funded structures for film production in these small countries; and end with a survey of recent Nordic films and movements such as Dogme 95 that illustrates ways in which small national cinemas continue to grapple with new iterations of globalization. In short, Nordic Cinema provides a vital and vibrant case study with which to consider a broad range of issues involving the aesthetics and politics of cinema in the world.

SCAN 5605. The Scandinavian Short Story. (LITR; 3 cr. ; Student Option; Fall Even, Spring Odd Year)

Short stories by 19th-20th century authors from all five Scandinavian countries. Genre theory/practical criticism. Readings in English for nonmajors.

SCAN 5614. Blood on Snow: Scandinavian Thrillers in Fiction and Film. (3 cr. ; Student Option; Periodic Fall & Spring)

Scandinavian crime novels/films against background of peaceful welfare states. Readings in translation for non-majors. Scandinavian majors/minors read excerpts in specific languages.

SCAN 5617. Scandinavian Gothic: Horror and the Uncanny in Nordic Literature and Media. (AH,GP; 3 cr. ; Student Option; Spring Even Year)

Scandinavia is popularly thought of as a bastion of social democracy, gender equality, and sleek modern design. Despite this well-earned reputation for political and aesthetic progressivism, there has also been a significant undercurrent of anti-rationalism and supernatural horror in Nordic culture. In Gothic fiction, the unwelcome appearance of primitive, irrational, and malevolent forces often takes the form of supernatural or monstrous figures?ghosts, vampires, witches, and trolls. As conventions established abroad mingled with a home-grown tradition of social realism, the Scandinavian Gothic became a vehicle for representing marginalized voices and revealing the shortcomings of Nordic societies. We will examine Gothic works of literature,

film, television, popular music, and visual art. Through this examination, we will build an analytical vocabulary to formally analyze works of Gothic art in all of these media, and will practice that through in-class discussions as well as formal and informal writing.

SCAN 5634. Scandinavian Women Writers. (GP,LITR; 3 cr. ; Student Option; Fall Even, Spring Odd Year)

Issues important to women as articulated by Scandinavian women writers. Historical overview of women's writing in Scandinavia. In-depth investigation of texts by contemporary women writers. All readings in translation.

SCAN 5670. Topics in Scandinavian Studies. (; 3 cr. [max 12 cr.]; Student Option; Periodic Fall & Spring)

Topic may focus on a specific author, group of authors, genre, period, or subject matter. Topics specified in Class Schedule. Readings in English for nonmajors. May meet with 3670.

SCAN 5701. Old Norse Language and Literature. (; 3 cr. ; Student Option; Every Fall)

Acquisition of a reading knowledge of Old Norse; linguistic, philological and literary study of Old Norse language and literature.

SCAN 5703. Old Norse Poetry. (3 cr. ; Student Option; Periodic Fall)

Reading and analysis of either eddic poetry from the Poetic Edda or skaldic poetry. Texts read in Old Norse.

SCAN 5993. Directed Studies. (1-4 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer)

Guided individual reading and study. Prereq instr consent, dept consent, college consent.

School for Field Studies (SFS)

SFS 2001. Language, Culture and Society of Chile. (2 cr. ; Student Option; Every Fall, Spring & Summer)

The Language, Culture, and Society of Chile course is provided in two integrated modules: I. Chile: History, Culture, and Society. Rodrigo Hernandez & Guest Lecturers I. Spanish The Spanish module is designed to provide students with working knowledge of the Spanish language for communication, according to their initial level of competence. The Society and Culture module aims to provide students with an initial national and local historical and cultural context for understanding the cultural and political complexities of contemporary Chile. The Spanish module comprises 20 hours and the Society and Culture module comprises 10 hours, for a total of 30 instructional hours, equivalent to 2 credits. Instructional parts of the course will be complemented by opportunities for participation in community and cultural activities. The course does not provide cultural immersion, rather it aims to provide students with initial tools they can build on outside class.

SFS 2010. Religion and Culture of Bhutan. (2 cr. [max 4 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course

SFS 2050. Language, Culture, and Society of Costa Rica. (2 cr. [max 4 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SFS 2060. Introduction to Swahili Language and East African Tribal Communities. (2 cr. [max 4 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SFS 2070. Language, Culture, and Society of Panama. (2 cr. [max 4 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SFS 2080. Language and Culture of Cambodia. (2 cr. [max 4 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SFS 2090. Language, Culture and Society of Peru. (2 cr. [max 4 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SFS 3000. Tourism and Island Systems: Assessment of Sustainable Practices. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

SFS 3020. Environmental Policy and Socioeconomic Values. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SFS 3021. Environmental Sustainability and Socioeconomic Values . (SOCS; 4 cr. ; Student Option; Every Fall & Summer)
The Environmental Sustainability and Socio-Economic Values course explores the contemporary environmental and sustainability issues and also touches broadly on the historical, social-cultural, economic and political factors that determine the use of natural resources, with particular emphasis on, but not limited to, the Wet Tropics of Australia. Topics to be covered in this course include; environmentalism, sustainable food production and livelihoods, the impact of human activities on terrestrial and marine biomes, conservation conflicts, resource governance and so on. In addition, students will be introduced to social science research methods, while a visit to a local Aboriginal community will help them gain a better understanding of the first Australian's enviro-cultural heritage values.

SFS 3030. Economic and Ethical Issues in Sustainable Development. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SFS 3040. Political and Socioeconomic Dimensions of Environment. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

SFS 3050. Land Use, Natural Resources and Conservation. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

SFS 3060. Mountain Ecology. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course

SFS 3070. Field Practicum in Public Health and Environment. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SFS 3071. Human Dimensions of Conservation. (ENV,SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer)
The concepts of human dimensions in conservation dates back to Aldo Leopold, one of the key pioneers of land ethics and conservation. Conservation is a complex undertaking and partly entails involving humans. It has therefore increasingly become important to address or relate human dimensions to conservation and management of natural resources. This course will examine the relationship between people, the environment and associated natural resources. In the process, it will explore how people's behavior, values and knowledge, influence and are affected by decisions on management of natural resources and conservation of wildlife. It will use social science knowledge and tools to effectively incorporate societal values into conservation planning and decision-making, and to build stronger and more diverse partnerships. Students will also learn human dimensions concepts, the tools and methods that can be used in conservation outreach and communication. This course will focus on the human dimensions on conservation in the Amboseli Ecosystem in the South-eastern rangelands of Kenya. Students and Faculty will examine the cultural, economic, political and social context of the Maasai people and other ethnic groups in relationship to wildlife and natural resources utilization and conservation. To understand the current and future management and conservation of wildlife and other natural resources in the region, students will also examine the influence of traditional beliefs and attitudes in natural resource use and conservation practices. The influence of modern lifestyle, conservation and management practices, national policies and laws as well as land uses and socio-political and economic changes among the Maasai people will be evaluated. Specifically, human dimensions of conservation issues will focus on the Maasai Group Ranches, national parks, wildlife sanctuaries or conservancies especially those in the former Kimana Group Ranch, and the expansive private land parcels along the Kenya-Tanzania border. At the end of the semester, students will use and apply the human dimensions aspects learned in their directed research work which will be guided the Faculty in-charge of the course. The findings will be presented to diverse stakeholders comprising of community members, local leaders, national and Kajiado County government officials.

SFS 3081. Political and Social Dimensions of Conservation. (ENV; 4 cr. ; Student Option; Every Fall, Spring & Summer)
This course explores the decision-making apparatus within Chile and Argentina and delves into the complexity of why humans decide to conserve or not; which places/things we choose to conserve or not, what is the

cost (in human capital, economic capital, and to ecosystem services) when we choose to conserve or not, and who ultimately are the power brokers of the conservation movement in Patagonia (corporations, government entities, NGOs, foreigners, etc.). And by extension, how do the Chilean conservation management objectives and operations map onto the broader world stage. This is a very transformative time in Chilean conservation management. The ministries are under re-organization; those that hold political influence now may not be the ones in office next year. Many media outlets such as CNN, the New York Times, and The Economist have had recent profiles on the influence of foreign private entities largely shaping the conservation scene in Chile. This course will allow stimulating debate and exploration and send students home with unprecedented insight. While the course will expose students to broad conservation issues that face the entire planet, we will ground these topics in case studies from the diverse locations we visit. Students will learn concepts in conservation both theoretical and practical from lectures and field trips. Throughout the semester, students will be exposed to a wide range of conservation practices, policies and critiques through discussions, direct observations, and assessments of various conservation initiatives that are being implemented and co-managed by diverse stakeholders including: local government agencies, international governments and investors, private companies, local and international organizations, and researchers. The course will provide students with a background to engage in a nuanced discussion of conservation at multiple scales. Students will gain first-hand information about different conservation challenges and approaches from diverse perspectives such as decision makers; park rangers; educators; and conservation activists who are active in the conservation field in both Chile and Argentina.

SFS 3111. Ecology and Conservation of Southeast Asian Elephants. (4 cr. ; Student Option; Every Fall, Spring & Summer)
This course will focus on the ecology and conservation of the Asian elephant (*Elephas maximus*). Due to a drastic decrease in wild elephant populations, the reality of a world without these charismatic megafauna is becoming a likely possibility. In Asia this is primarily due to a booming human population and increased demand for space. Elephants are of great scientific interest due to their complex behaviors associated with intelligence and social interactions, forming deep family bonds and displaying empathy by recognizing and responding to another elephant's pain or problem and showing signs of grief after the loss of a family member. Saving the elephants requires improved scientific understanding of the species and the increasingly complex environment that they inhabit.

SFS 3121. African Large Carnivores: Ecology and Conservation. (BIOL,ENV; 4 cr. ; Student Option; Every Summer)
This course will focus on the behavioral ecology and conservation challenges facing

large carnivores in Africa using Northern Tanzania as a case study. SFS center for wildlife management studies in Tanzania is an ideal location to explore the ecological and human aspects of large carnivore conservation. The center is located between the Ngorongoro-Serengeti (NSE) and Tarangire-Manyara (TME) ecosystems in northern Tanzania. Both ecosystems have largely intact carnivore guilds that occur within and outside the protected areas. The large carnivores are one of the main attractions to a vibrant photographic tourism industry. In addition, large carnivores attract high premiums among the trophy hunters in the area. Despite the high economic values, carnivores in northern Tanzania are under immense threats from human-related effects such as habitat loss, and conflicts with pastoralists. In order to address these challenges, large carnivores have attracted high interest among conservationists and scientists in Northern Tanzania. African wild dogs, African lions, spotted hyenas, cheetahs and leopards have received high attention due to their charismatic appeal and the manifold threats facing them. Among those species, lions and leopards are among the big five and are highly sought after by tourists. In order to address the conservation threats and better understand the ecology of these large carnivore species in Northern Tanzania, several conservation and research projects have been initiated. These include: The Tarangire Lion Research Project in Tarangire/Manyara National Parks and the surrounding areas, Kope Lion project in Ngorongoro Conservation Area, and species-specific projects in Serengeti National park focusing on lion, cheetah, spotted hyena and African wild dog.

SFS 3131. Marine Megafauna Ecology and Conservation. (BIOL,ENV; 4 cr. ; Student Option; Every Summer)

In this course, we will explore the ecological importance and conservation status of megafauna that are prominent in the coastal waters of the tropics, namely elasmobranchs (sharks and rays), large oceanic and reef fishes, marine and coastal reptiles (sea turtles, island iguanas), and marine mammals. The course will consist of lectures, workshops and field-based activities that provide students with an understanding of the diversity and ecological characteristics of these animals. Furthermore, the workshops and field activities will introduce students to the practical techniques that are commonly employed to study and assess megafauna. The course will take place on the island of South Caicos, which is at a pivotal time in its development. Until recently, the island's economy centered around small-scale local fisheries, but a growing tourism industry and recent devastation from Hurricanes Irma and Maria have meant major changes to the community and marine ecosystem. As climate events continue to perturb the marine environment and the economy and the population grow and diversify, so too do the demands on the marine environment. Marine megafauna play important roles in the TCI, both ecologically and economically, making this

the perfect place to take a deep dive into their characteristics, threats, and conservation.

SFS 3141. Coffee, Chocolate and Sustainable Development. (ENV,GP; 4 cr. ; Student Option; Every Summer)

Coffee (*Coffea arabica*, *Coffea canephora*) and chocolate / cacao (*Theobroma cacao*) are iconic food crop species in the Tropics. Their emotionally and physically addictive components have led to \$98.2 billion in annual sales of chocolate (International Cacao Organization, Statistics, 2016) and coffee exports totaling \$30.6 billion (World's Top Exporters, Coffee, 2016). These tropical crops are intimately intertwined with the natural and political history, culture, and ecology of Costa Rica. This is an interdisciplinary summer program aiming to explore the deeper social and ecological components that intertwine these crops to our lives and the natural and political history of Costa Rica. We consider how the relations between slavery as part of early cacao production, and the transformation of forested lands to coffee plantations owned by elites, intertwine with current questions of cultural representation, agro-tourism, land use strategies, and agricultural certifications. We will conduct site visits to a variety of coffee and cacao farms and producers to learn how various production methods and policies impact the local flora, fauna, and society. Through field research in small groups, we will focus on data collection to conduct an in-depth exploration of the relations between cacao and coffee production and climate change, social justice movements, and species conservation.

SFS 3151. Primate Behavioral Ecology in East Africa. (BIOL,ENV; 4 cr. ; Student Option; Every Fall, Spring & Summer)

This course focuses on primate behavioral ecology in southern Kenya focusing on Amboseli Tsavo Ecosystem (ATE). In Africa, there are about 94 species of primates, with Kenya having 19 species. These include some of the world's most endangered and rare species such as the Tana River red colobus, Tana River mangabey, Percival's black and white colobus, and de Brazza's monkeys. Globally and across the continent, most primate populations are declining due to habitat loss, and poaching for bush meat and other products. In most regions of Kenya, habitat loss, habitat fragmentation and human primate conflicts are the major challenge to primate conservation. These effects have been amplified by a continuously increasing human population particularly in the rural areas where there most natural areas for wildlife occur. The increased human population is associated with activities such as agriculture, charcoal burning and conversion of land for human settlement which have led to loss and degradation of primate habitats. The loss of habitat has resulted to fragmentation and reduced populations of primates as critical habitats becoming scarce. Today the scenario is that of isolated populations of primates, with more habitat specific species getting confined mostly to within protected areas. However due to their broad habitat and long ranging movement of a number of primates, areas

outside protected areas are still very critical to primate conservation.

SFS 3161. Wet Tropics Watershed Ecology and Conservation. (ENV,GP; 4 cr. ; Student Option; Every Summer)

The Great Barrier Reef and its catchments (watersheds) are an inter-connected system. In this course we will follow a river's journey from the World Heritage listed rain forest ranges to the Great Barrier Reef as we explore the connections between land and sea. Students will learn about the ecological processes and socio-economic factors that shape rain forest, watershed, and reef management in Queensland's tropical north, and the factors needed to maintain healthy ecosystems in the face of climate change, development and increasing urbanization.

SFS 3181. Himalayan Forests & Gross National Happiness. (ENV; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Bhutan is internationally famous for its development concept of Gross National Happiness (GNH). GNH, which has its underpinnings in the Buddhist philosophy of the Middle Path, is the guiding principle of development in Bhutan, and is understood to have four pillars: good governance, cultural protection and preservation, sustainable development, and environmental conservation. GNH and a leadership committed to conservation has led to Bhutan having more than 70% forest cover and about 50% of its land area under formal protection. Bhutan's forests which fall within the eastern Himalayan region is characterized by extensive and numerous mountains and valleys, hosting some of the world's highest peaks and a diversity of vegetation and wildlife. Bhutan's natural landscapes host an estimated 770 species of birds and other diverse fauna, including the takin, snow leopard, golden langur, blue sheep, and tiger. Ecosystems range from subtropical broadleaf forests in the south, to subalpine conifer forests, alpine shrub, and high-mountain meadows. The highest elevations comprise rock and ice. These forests and natural landscapes are integral to Bhutan's development, and key to ensuring food, water and energy security. Over four weeks, students will learn about the interplay between GNH, resource use and development. Through travel to various parts of the country, students will be exposed to the culture and history, religious traditions, environmental issues, and conservation policies. Students will stay in Bhutanese villages and trek across Himalayan landscapes to experience and understand rural livelihoods and their connection to the natural environment. Academically, students will develop skills in assessing environmental problems, designing socio-economic surveys, conducting resource assessments, and communicating results. Students will be guided to appreciate the complexities and challenges involved in meeting development goals while simultaneously ensuring the adequate conservation of natural resources in a rapidly changing region. SFS partners with the Ugyen Wangchuck Institute for Conservation

and Environment Research (UWICER), an international research and training facility in Bumthang, Bhutan and the Bhutan Ecological Society (BES), a Civil Society Organization promoting environmental sustainability in Bhutan. SFS students and faculty will collaborate with UWICER and BES to advance its research agenda in several priority areas, including forest management, community resource assessment, and development policy.

SFS 3191. Tracking and Conservation of Big Cats in the Himalayas. (ENV; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Within the Eastern Himalayas, Bhutan is increasingly seen as the last biodiversity refugia. In particular, Bhutan is home to 10 wild cat species, with the Snow Leopard, Tiger and the Clouded Leopard being the most charismatic big cat species. With 70% of its land under forests, and over 50% conserved under a well networked protected area system, these wild cats and associated species continue to thrive in Bhutan. A deep spiritual and cultural reverence for life and nature has aided in the persistence of biodiversity. However, climate change and human-wildlife conflicts continue to pose serious threats to the long term health of Bhutan's landscapes and species therein. Tracking the status of important keystone species, such as Tigers and Snow Leopards, and understanding threats and opportunities will be crucial in helping to adequately mitigate threats and implement effective adaptation strategies to ensure the long term survival of species in the wild. The summer course on Tracking and Conservation of Big Cats in the Himalayas will focus on understanding key issues and challenges associated with conservation of wild cats and associated species. Students will be introduced to the socio-political and cultural significance of Himalayan landscapes and biodiversity, with a special focus on charismatic species such as the Tigers and Snow Leopards. Interactions with stakeholders from the Government, academia, local people and civil society will allow students to understand environmental governance frameworks and better appreciate on-the-ground conservation challenges associated with climate change, human-wildlife conflicts, and limited financing and capacity. The four-week course will be a mix of classroom lectures and field trips to different parts of Bhutan. Traveling through Bhutan, students will learn about conservation challenges, culture and history, religious traditions, and environmental issues. Students will stay in Bhutanese villages and trek across Himalayan landscapes to experience and understand rural livelihoods and their connection to the natural environment. Academically, students will develop skills in assessing environmental problems, designing socio-economic surveys, conducting resource assessments, and communicating results. Students will learn camera trapping techniques and associated data analysis skills to estimate population sizes and map species distribution ranges in a GIS. Students will also be introduced to radio-telemetry and estimation of home ranges. Throughout the course, students will be guided

to appreciate the complexities and challenges involved in effective conservation of wildlife. SFS partners with the Ugyen Wangchuck Institute for Conservation and Environment Research (UWICER), an international research and training facility in Bumthang, Bhutan, and the Bhutan Ecological Society (BES), a Civil Society Organization promoting environmental sustainability in Bhutan. SFS students and faculty will collaborate with UWICER and BES to advance its research agenda in several priority areas, including conservation, forest management, community resource assessment, and development policy.

SFS 3211. Freshwater Ecosystems. (ENV; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Freshwater ecosystems are amongst the most important and productive ecosystems. They support tremendous biodiversity and provide food security to millions of people, many of whom live in some of the world's poorest nations. Despite this, the millennium development goals for biodiversity completely neglected freshwater systems, and it is only now emerging on the global agenda. This lack of attention has resulted in fewer freshwater protected areas compared to terrestrial biome. In addition, a critical knowledge gap in the conservation of freshwater ecosystems exists because the majority of research and conservation efforts have concentrated on terrestrials or marine systems. Cambodia is home to one of the highest levels of biodiversity and productivity of freshwater ecosystems in the world. The Cambodian Tonle Sap-Lower Mekong River system is driven by an annual flood pulse hydrological system which results in rich spawning grounds for fishes and high nutrient loads for rice production. This system produces one of the world's largest inland fisheries and an importance source of food security to the Cambodians: over 70% of the population's protein intake derive from fisheries resources from this system.

SFS 3232. Environmental Justice from the Ground Up. (ENV; 4 cr. ; Student Option; Every Fall, Spring & Summer)

The concept of environmental justice (EJ) refers to equal sustainable access to natural resources that are vital for human groups to achieve a meaningful, fulfilling, and happy life, such as access to clean water, to nutritious and pesticide-free food, clean air, and to the benefits of sustainable use of biodiversity. The concept of environmental justice (EJ) combines notions of environmental sustainability and everyday environments with demands for social justice (Agyeman 2013, Walker G. 2012). EJ focuses on the unequitable distribution of environmental risks and governmental protection among people of different economic and ethnic backgrounds (Schlosberg 2009). This concept has a long history in conservation and sustainable development. The modern view derived from the US civil rights movement and advocates calls for racial equality with environmental action. Socioeconomically disadvantaged groups across the world have harnessed social justice action to fight against unequitable environmental outcomes, although

its origin is much older and can be traced back to historical conflicts for limited natural resources.

SFS 3252. Elephant Ecology and Conservation in Kenya. (ENV; 4 cr. ; Student Option; Every Fall, Spring & Summer)

The African elephant (*Loxodonta africana*) is an important keystone species in Africa and has profound influence on the structure and dynamics of landscapes where it co-exists with other species. It's one of the most charismatic and charming species but its conservation and population status has continued to attract a lot of concern within and beyond Africa. A key worry is that it's conservation is increasingly becoming uncertain across the entire African continent as due illegal poaching, landscape fragmentation, and retaliatory attacks by local communities due to prevalence of human-elephant conflicts. At the beginning of the 20th century, there were several millions of elephants roaming across Africa (Douglas-Hamilton 1979), but today, they have declined rapidly, and are estimated to be nearly 450,000 - 700,000 (Stephenson, 2007). Illegal poaching has been and remains the biggest threat to the survival of elephants, and this threat is rampant throughout the entire continent (Douglas-Hamilton et al. 1992). Habitat loss, associated with anthropogenic effects is the second biggest threat to the future conservation of the species, and in the last century, large swathes of elephant natural habitats have been converted into human dominated landscapes (Esikuri 1998). This not only leads to loss, reduction, and degradation of elephant prime habitats, but curtails their free movement, reduces their home range, blocks their movement corridors and routes but increases conflicts with humans (Spinage 1990). Collectively, this matrix creates a very inhabitable and hostile environment for elephant survival and conservation programs in all its range in Africa.

SFS 3262. Rainforests of Australia. (4 cr. ; Student Option; Every Fall, Spring & Summer)

In Rainforests of Australia, you will obtain a broad appreciation of the diversity and dynamics of tropical terrestrial biomes and marine life. You will be introduced to the current and past distributions of tropical rainforests, their biodiversity, and their relationships with the abiotic environment, human use, present threats, and restoration practices. This course aims to bring together an understanding of the underlying ecological processes that affect rainforests (and other tropical vegetation) with the role of human society in shaping the present and future rainforests of the Wet Tropics. The course will take the Australian Wet Tropics as a case study to investigate this field, yet many of the skills you learn here can be transferred to other systems. Topics covered will include: biophysical determinants of which vegetation type occurs where; past, present, and future threats to Wet Tropics rainforests; and the theory and practice of rainforest restoration. The course also has a practical component. You will be taught field techniques for carrying out field research, data analysis, and

communication of results. The course is a mixture of class lectures, field lectures, field laboratory courses, workshops, field trips, and readings to complement the material presented in the lectures. A major emphasis is on field skills, the collection, management and analyses of data, and skills of writing a scientific paper. A wide range of material will be provided and should be used to study the class topics and to acquire the desired skills. Be aware that all material covered in class, lectures, field lectures, and field trips will be required.

SFS 3272. Marsupials of Australia. (ENV; 4 cr. ; Student Option; Every Fall, Spring & Summer)

This course will focus on the evolution, biogeography, ecology, behaviour, and conservation of marsupials of Australia. Australia is one of the most ancient continents on our planet with geological features dating back to more than 1.7 billion years. Its history was influenced by long periods of isolation from other land masses while uplifts and erosion of mountains, forming, and disappearance of inland seas and cycles of fires, drought, cyclones, and flooding shaped this land. This long history resulted in a unique diversity of plants and animals. Ancient forms of mammals, such as egg-laying monotremes and some small marsupials lived amongst Australia's dinosaurs about 110 million years ago and formed part of the ancient Gondwana fauna. After the extinction of the dinosaurs and when Australia finally broke away from Gondwana it took with it its unique array of mammals into isolation. Freed from the past dominating dinosaurs and finding themselves on a vast continent with no competing intruders, Australia's ancient marsupials could thrive and diversify. Marsupial 'hippos', 'rhinos' and 'tapirs' occupied the land while killer-kangaroos targeted the weakest of these herds of grazing marsupials.

SFS 3282. Patagonian Winter. (ENV; 4 cr. ; Student Option; Every Summer)

The Patagonian winter is a defining aspect of the ecological and social systems of the region. This course will examine the different ways that winter affects human and non-human systems. This course brings you to the world-famous Torres del Paine National Park in the stillness of winter, to observe the camelid guanacos and flightless 'and's as they get ready for the approaching winter. The shortening days drive changes in the ranching practices in the estancias in the area as they move their livestock to winter pastures. The approaching Winter Solstice also connects indigenous communities as they make ready for the coming New Year. Finally, the winter brings the season when glaciers would normally be recovering their mass. However, climate change is creating changes in all of these interactions. High-latitude regions, such as Patagonia, are often more prone to the effects of climate change, making changes more apparent and significant. Indeed, climate change in Patagonia is quite clear, and one of the seasons that have seen the most marked change is the winter. There has been

less precipitation, and higher temperatures, meaning that there is less overall precipitation, and that which falls tends more to be rain. This is leading to changes in ecological and social contexts of the Patagonian winter that we will explore in this course. This course covers past adaptations to historic winter climates, from plant and animal community distributions and the human settlement patterns driven by climate conditions for the maintenance of communities. We examine how the Patagonian winter drives the ecology and social contexts of the region.

SFS 3500. Wildlife Management and Conservation. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer) Study abroad course.

SFS 3502. Foundations of Wildlife Management and Conservation. (ENV; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Conservation is a deeply human endeavor in multiple dimensions. In this regard, this course will examine the relationship between people, the environment and associated natural resources in the Amboseli Ecosystem. It will explore how people's behavior, values, and knowledge influence and are affected by decisions on management of environmental resources. Overall, the course will provide students with in-depth understanding on the climate, ecology, and dynamics of East Africa Savanna Ecosystems and their linkage to wildlife and natural resources conservation in the predominantly Maasai inhabited Kenya-Tanzania borderland of the Amboseli Ecosystem. It will also use social science knowledge and tools to effectively incorporate societal values into conservation planning and decision-making, and to build stronger and more diverse partnerships. Students will learn and apply in the field multiple approaches and techniques to studying wildlife, natural resources conservation, community socio-economic aspects and ecological sampling techniques. They will also explore application of ecological and wildlife management concepts and principles in sustainable management of wildlife, water, and other natural resources through lectures, field exercises, and experiential hands-on learning. Students will learn about concepts of human dimensions of conservation, the tools and methods that can be used in conservation outreach and communication. The course will be done in the rapidly changing Maasai landscape of the Amboseli Ecosystem situated in the Southeastern sector of Kenya, along the Kenya-Tanzania border. Field lectures, exercises and DR will be done in the Maasai Group Ranches, private and community owned conservancies including private land in the former Kimana Group Ranch. Field trips to protected areas mainly; Amboseli, Chyulu Hills and Tsavo West National Parks will be used to further student's field experiential learning. Field exercises will be used for acquisition of multiple skills such as; planning and designing fieldwork, field sampling techniques, data management, analysis and synthesis, report writing, and application of research in

promoting sustainable management of wildlife and natural resources in general. Overall, the course aims at equipping students with knowledge on wildlife and natural resources conservation, imparting problem-solving scientific/social skills and techniques that are needed to understand the complex interactions affecting wildlife and natural resources. It offers practical, hands-on experiences inside and outside the classroom.

SFS 3510. Marine Protected Areas: Management Techniques and Policies. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer) Study abroad course.

SFS 3520. Sustaining Tropical Ecosystems: Biodiversity, Conservation, and Development. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer) Study abroad course.

SFS 3530. Tropical Marine Ecosystems: Monitoring and Management. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer) Study abroad course

SFS 3532. Foundations of Tropical Marine Ecosystems. (ENV; 3 cr. ; Student Option; Every Fall, Spring & Summer)

The Turks and Caicos Islands (TCI) advertises itself to tourists as 'Beautiful by Nature.' Indeed, the tourism that the country's economy is heavily dependent on is driven by its stunning marine environment, which is characterized by extensive coral reefs, seagrass meadows and mangrove forests. However, the health of these ecosystems, and therefore the 'Beautiful by Nature' motto, is under threat. At the local level, unsustainable and damaging fishing practices, increased water-based recreational activities, and coastal development are potentially major sources of disturbance. Furthermore, the ocean impacts of global climate change will continue to negatively affect marine organisms and ecosystem processes, adding an additional layer of complexity to the problem. Foundations of Tropical Marine Ecosystems: Monitoring and Management is an interdisciplinary three-week winter term course that highlights the ecological characteristics and current threats to coastal ecosystems, in addition to exploring existing and potential environmental management approaches that would encourage the sustainable development of small island nations such as the TCI. Course participants will gain knowledge of tropical marine ecosystem function and connectivity and will be introduced to the most pressing threats at the intersection of marine conservation and economic development. The course will take place on the island of South Caicos which is at a pivotal time in its development. Until recently, the island's economy centered around small-scale local fisheries, but tourism is now a growing industry and South Caicos is experiencing major changes to its social and structural fabric. As the economy and the population grow and diversify, so too do the demands on the marine environment, making this the perfect location to study a small, tropical island in transition.

SFS 3540. Rainforest Management Studies in Australia and New Zealand. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course.

SFS 3550. Techniques for Rainforest Research in Australia. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course.

SFS 3560. Applied Marine Research Techniques. (4 cr. [max 8 cr.] ; Student Option; Every Spring & Summer)

Study abroad course

SFS 3570. Techniques for Wildlife Field Research. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course.

SFS 3580. Himalayan Forests, Watersheds, and Rural Livelihoods. (6 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course.

SFS 3601. Earth Systems and Climate Science. (ENV,PHYS; 4 cr. ; Student Option; Every Fall, Spring & Summer)

This course focuses on the physical nature of landscapes and the geologic and seismic complexity of a region firmly situated along the ?ring of fire,? the edge of the Pacific Ocean basin where tectonic activity generates earthquakes and volcanic activity. On a planet whose surface is more than 70% ocean, we will also explore the important role of the oceans in the Earth Systems. We will study the science of climate past and current and the evidence for anthropogenic climate change. As we build our understanding of how the globe functions, we will consistently ground our learning with our location in Patagonia. From the base of Puerto Natales, many national parks are only kilometers away. Glaciers that belong to the Southern Patagonian Ice Field, the world?s second largest contiguous ice field outside the polar regions, will be visited. Chile?s dynamic Andes range ? which is still growing ? and the active volcanoes of the lakes region of Chile are open to discovery. Fragile forests susceptible to wildfire will be examined. One focus of this course will be the science of climate change, understanding the dynamics of the Quaternary Period (the time when periodic pulses of warm and cold influenced most earth systems; e.g., the ice ages) and the Anthropocene (the period where humans have begun to dominate earth systems). The Chilean Patagonia region, like other high-latitude regions, is hyper-susceptible to changes in climate, and the Southern Patagonian icefield is shown to be more vulnerable to climate change than other glaciers. Unpredictable rain- and snow-fall, glacial melt, temperature shifts, fires and droughts can wreak havoc on slow-growing plant ecosystems. Climatic shifts have effect on the trophic webs, freshwater catchments, and farming and ranching operations. Understanding the geosphere, biosphere, the cryosphere (the frozen environment) and their interactions, we will weave the study of human action and impact throughout Earth Systems: our food

systems, energy systems, and the nexus of water/energy/agriculture and climate. Chile is where climate change can be observed and measured in palpable ways.

SFS 3690. Rainforest Ecology. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course.

SFS 3691. Tropical Biome Ecology & Climate Change. (ENV; 4 cr. ; Student Option; Every Fall, Spring & Summer)

In Tropical Biome Ecology & Climate Change, you will obtain a broad appreciation of the diversity and dynamics of tropical terrestrial & marine biomes. You will be introduced to the current and past distributions of tropical rainforests, dry forest, savannas and coastal biomes, their biodiversity, and their relationships with the abiotic environment, human use, present threats, and restoration practices. This course aims to bring together an understanding of the underlying ecological processes that affect different biomes with the role of human society in shaping the present and future rainforests of the Wet Tropics & the coral reefs of the Great Barrier Reef. The course will take the rainforest Australian Wet Tropics & the coral reefs of the Great Barrier Reef (GBR) as case studies to investigate this field, yet many of the skills you learn here can be transferred to other systems. Topics covered will include: biophysical determinants vegetation and coral reef distribution; past, present, and future threats to Wet Tropics rainforests & GBR; and the theory and practice of rainforest and coral restoration. The course also has a practical component. You will be taught field techniques for carrying out field research, data analysis, and communication of results.

SFS 3700. Principles of Forest Management. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course.

SFS 3701. Wildlife and Conservation Biology. (ENV; 4 cr. ; Student Option; Every Fall, Spring & Summer)

This component of the program focuses on identifying threats to wildlife populations, how to obtain data on the impact of these threats on wildlife populations and how to select and apply appropriate conservation methods to mitigate these threats. We will look at these aspects in general and then demonstrate them in case studies of species in the Wet Tropics. To formulate a background understanding of habitats of the Wet Tropic?s wildlife, we will explore the origin of the main landscape formations of this part of Australia by looking at geological and biogeographical factors that shaped the landscape and its biota. You will be introduced to Australia?s flora and fauna and the unique species that inhabit the diverse habitats of the Wet Tropics. We then will deal with some basic ecological concepts of biodiversity and why so many species can co-exist in one place. This will also involve learning skills to obtain data on various parameters of wildlife populations to assess the impact of habitat loss, fragmentation,

introduced species and climate change on them. Field trips and field work in various parts of the Atherton Tablelands will help you in learning these skills. Using the obtained data on wildlife populations we will explore various conservation techniques in order to mitigate these threats to the flora and fauna of the Wet Tropics, how to identify partners and resources for conservation work, how to triage conservation needs, and how to best advocate conservation. We will consider the role of corridors or landscape linkages, particularly along riparian areas, and ways in which restoration and landscape rehabilitation can overcome negative effects of human driven landscape modification and climate change on these ecosystems. We will consider options on how to efficiently control pest animals and their impacts on native flora and fauna.

SFS 3710. Techniques in Wildlife Management. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course.

SFS 3720. Wildlife Ecology. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course.

SFS 3730. Tropical Marine Ecology. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course.

SFS 3740. Principles of Resource Management. (4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course.

SFS 3751. Techniques in Wildlife and Natural Resource Management. (ENV; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Globally, most natural resources face enormous pressure from multiple direct and indirect human activities, with delirious consequences for humans and natural life. Further, most of the resources are limited, and thus easily prone to any disturbance by humans. In this regard, a lot of effort has gone to promote sustainable utilization of natural resources with emphasis on minimizing damaging human activities and overexploitation. Most parts of East Africa, Kenya included are dominated by Savanna or rangeland environments which are naturally dry for most of the year due to scanty annual rainfall. However, these are the same landscapes where diverse biota endowments are found but which are currently under siege and near extermination by rapid human population growth and unregulated land-use changes. The Amboseli Ecosystem is characterized by a semi-arid environment, and rainfall is received twice a year but it?s scarce, unpredictable and low (300-800mm per year). This creates a water deficient landscape, and most of the water is found in scattered rivers, streams, springs, and wetlands like swamps, all linked to the hydrology of the neighboring Mt. Kilimanjaro. These conditions tend to favour wildlife conservation and pastoralism, the latter being the historical key land use by the local pastoral Maasai people. However, immigration into the region by agricultural communities

starting in the 1960 through the 1980s saw introduction of farming as a new land use along the wet and arable slopes of Mt. Kilimanjaro along the Kenya-Tanzania border. Thereafter, irrigated agriculture mostly for commercial purposes was introduced in the water systems of the Maasai Group Ranches where rain-fed farming is not possible. This lifestyle shift has seen pastoralism nearly replaced and dominated by agro-pastoralism among the Maasai. Today, the dominant human activities, mostly irrigated farming and livestock in the Maasai group ranches and the former Kimana Group Ranch keeping rely on the springs and rivers emanating from Mt. Kilimanjaro. The wildlife ecological dynamics in the ecosystem is also entirely dependent on these wetlands, which are the predominant dry season concentration areas as water and forage resources elsewhere diminish. Consequently, management of water resources is a major conservation and livelihood issue. Often there are conflicts associated with water use among humans and between humans and wildlife, which is attributed to diminished availability of this vital resource. Resolving these conflicts and promoting wise use of available water resources is a major preoccupation of wildlife and natural resources managers in the area, Water Resource Users Associations (WRUAs) and the Water Resources Authority (WRA), the lead Kenya Government agency on water management. The Amboseli Ecosystem lies contiguous to the Tsavo West and Chyulu Hills National Parks which are part of the Tsavo Conservation Area, the largest wildlife conservation landscape in Kenya. Chyulu Hills was gazetted as a protected area in 1983 to enhance protection of its wildlife resources and watershed services. It's recognized as one of the important water catchment areas situated in the dry lands of the country and provides water to a vast landscape and diverse beneficiaries including Mombasa County. However, this service is threatened by destruction and general environmental degradation of the hills by livestock grazing, charcoal burning, and accidental fires. Neighboring the Chyulu Hills N. Park is the expansive Tsavo West N. Park, which covers more than 9,000Km, and it's one of the important wildlife conservation areas in the country. Prior to its gazettement as a protected area in 1948, the area was used by pastoral communities like the Maasai. Over the years, human population and land use changes especially farming, adjust the park boundaries have increased significantly. This has led to escalation of human-wildlife..

SFS 3770. Tropical Ecology and Sustainable Development. (4 cr. [max 8 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SFS 3781. Patagonian Ecology. (ENV; 4 cr. ; Student Option; Every Fall, Spring & Summer)
This course focuses on ecology as a discipline, biodiversity, and the Patagonian ecoregions and habitats that have evolved with short growing seasons, tenacious southwesterly winds, and fierce winters. We will examine the ecology and evolution of faunal species such as Guanaco (related to the llama), Magellanic

and King penguins, and the flightless Rhea, most of them endemic to the region, and the largest animal of them all, the Blue Whale. We will explore ecological succession, including primary succession, which is how life recruits into new environments, such as bare rock after glacial retreat, or new, igneous rock after volcanic eruption. Though flora is not particularly diverse here in southern Patagonia (save for the lichens and bryophytes), the floral structural complexity is fascinating. We will explore a remarkable latitudinal gradient from Cape Horn in the south to Chilo Island's milder, temperate climate? a latitudinal change equivalent to traveling from Massachusetts to Florida. Thematically, we will traverse alpine ecology, exposed terrestrial ecology, coastal ecology, marine ecology, and fire ecology. From the central focus on the theory and practice of ecology, we will expand to investigate relationships between people and nature in conservation, resilience, and environmental challenges. We will explore the role of protected areas in conservation, including private protected areas that have emerged in Chile; invasive species; human history on landscapes; agriculture, plantation forests, and aquaculture; and current and predicted changes due to climate change. The course is constructed so that the lens of climate shifts and perturbations will be central to discussions and observations; it will encompass not only climate threats, but an understanding of the role of nature in climate adaptation and mitigation, and the role of Chilean climate policy and commitments in an international community.

SFS 3782. Foundations of Patagonian Ecology. (ENV; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course focuses on ecology as a discipline, biodiversity, and the Patagonian ecoregions and habitats that have evolved with short growing seasons, tenacious southwesterly winds, and fierce winters. We will examine the ecology and evolution of faunal species such as guanaco (related to the llama), Magellanic penguins, and the flightless Rhea, most of them endemic to the region. We will explore ecological succession, including primary succession, which is how life recruits into new environments, such as bare rock after glacial retreat. Thematically, we will traverse alpine ecology, rangeland ecology, coastal ecology, and fire ecology. From the central focus on the theory and practice of ecology, we will expand to investigate relationships between people and nature in conservation, resilience, and environmental challenges. We will explore the role of protected areas in conservation, invasive species, human-landscape interactions, and current and predicted changes due to climate change.

SFS 3790. Tropical Coastal Ecology. (4 cr. [max 8 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SFS 3800. Conservation Science and Practice. (4 cr. [max 8 cr.]; Student Option; Every Fall, Spring & Summer)

Study abroad course.

SFS 3810. Ecosystems and Livelihoods. (4 cr. [max 8 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SFS 3820. Environmental Ethics and Development. (4 cr. [max 8 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SFS 3831. Tropical Ecology of the Amazon. (4 cr. [max 8 cr.]; Student Option; Every Fall, Spring & Summer)

The term biodiversity refers to the variety of life on Earth at all its levels, from genes to ecosystems. Ecology is the scientific study of interactions of organisms with one another and with the physical and chemical environment around them. In this course Tropical Ecology of the Amazon we will be looking at the biodiversity of the region and the processes that originate and sustain it at multiple scales: regional, landscape, ecosystem, habitat, communities, and species. The overarching goal of this course is for students to be able to identify and characterize the diversity of non-human life in the Amazon region, and to understand the patterns and processes that support this diversity. Students will learn the fundamental principles of ecology through studying a diverse mosaic of ecosystems, habitats, and species along elevation gradients, succession gradients, and geomorphic features.

SFS 3840. Political Ecology of Developing Landscapes: Peru. (4 cr. [max 8 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SFS 3911. Fundamentals of Environmental Inquiry. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Research takes many forms. Though the SFS model emphasizes field-based methodologies, there is much to be learned in those aspects of research that lie beyond the fieldwork: building a robust question, vetting sources of information to produce a high-quality literature review, placing novel inquiry within a theoretical and empirical context and analyzing existing data to create a strong discussion of the research question. The aim of this course is to provide students the opportunity to explore existing Center resources and develop methods of inquiry to analyze environmental issues relevant to the communities in which we operate. We will investigate the ways that various methods and theories distinguish (or not) fact from interpretation, cause from correlation, and advocacy from objectivity. Through their research projects, students will contribute to a growing body of scientific research that informs local conservation and resource management decisions near SFS Centers around the world. Each student will be led by a faculty advisor that will produce research questions and methods, analyze data, and communicate results in one or across several of the following disciplines: ecology, conservation, earth sciences, natural resource management, anthropology, human

geography, and environmental policy. All FEI projects are collaborative in process, but individual in outputs. Depending on the project, students may work together on the development and analysis of questions, but individual students must submit final assignments independently. The course is designed to build on the information students have learned in their disciplinary courses at each Center. In addition, faculty will provide lectures and workshops specifically designed to assist students in understanding the scientific process and presenting results in both written, spoken, and visual formats.

SFS 4910W. Directed Research. (WI; 4 cr. [max 8 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SFS 4930. Applied Research Techniques and Strategies Toward Sustainability in Costa Rica. (4 cr. [max 8 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

Senegal (SNGL)

SNGL 1001. Beginning French I. (4-5 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SNGL 1002. Beginning French II. (4-5 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SNGL 1003. Intermediate French I. (4-5 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SNGL 1004. Intermediate French II. (4-5 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SNGL 1101. Beginning Wolof. (4 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SNGL 3001. Senegal: Culture and Society. (3 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SNGL 3002. Entrepreneurship & Marketplace. (3 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SNGL 3015. Advanced French I. (3-4 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SNGL 3016. Advanced French II. (3-4 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SNGL 3101. Intermediate Wolof. (4 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SNGL 3102. Advanced Wolof. (4 cr. ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SNGL 3201. Advanced Language Through Current Events. (4 cr. ; Student Option; Every Fall, Spring & Summer)

Study abroad course

SNGL 3202. Reading and Writing through Current Events. (4 cr. ; Student Option; Every Fall, Spring & Summer)

This course is a continuation of SNGL 3201, Advanced Language through Current Events. Students examine contemporary issues in Senegal through the lens of Senegalese newspapers, journals, films, radio, and TV broadcasts.

SNGL 4001. International Development: Human Rights: Policy, & Practice. (SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer)

The Political Economy of International Development (PIED) critically explores the role of the international development agenda, with a specific focus on its impact on the African continent. Students will acquire knowledge on the foundation of this agenda while capturing the complexity and paradoxes of its implementation. Students will also build on this understanding to analyze the power relationships at stake between the various actors (donors, governments, international institutions, development beneficiaries, private sector, etc.). Grounded in a theoretical approach, this course will nevertheless explore practical case studies and experiences to favor in-depth analysis. This course will dedicate particular attention to the social experiences of the populations in developing countries from a political and historical perspective. Furthermore, students will be better inclined to critically appreciate the contribution of institutional mechanisms in the bi-lateral, multilateral, and non-government sectors in the development of Sub-Saharan African nations. Students will examine multidisciplinary ways of thinking that can be used to synthesize and analyze local, national, and global issues, and the connections among these experiences. Students will then examine constructs of human rights and services in developing countries in general and Senegal in particular. As background to the course, we will attempt to create a common understanding of key concepts such as human rights, social justice, human services, social services, social welfare, community development, and social work. Students will then look at how these ideals are implemented in Senegal and the limitations and challenges of the implementation.

SNGL 4002. International Development: Entrepreneurship & Inclusive Finance. (SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer)

The Political Economy of International Development (PIED) critically explores the role of the international development agenda, with a specific focus on its impact on the African continent. Students will acquire knowledge on the foundation of this agenda while capturing the complexity and paradoxes of its implementation. Students will also build on this understanding to analyze the power relationships at stake between the various actors (donors, governments, international institutions, development beneficiaries, private sector, etc.). Grounded in a theoretical

approach, this course will nevertheless explore practical case studies and experiences to favor in-depth analysis. This course will dedicate particular attention to the social experiences of the populations in developing countries from a political and historical perspective. Furthermore, students will be better inclined to critically appreciate the contribution of institutional mechanisms in the bi-lateral, multilateral, and non-government sectors in the development of Sub-Saharan African nations. Students will examine multidisciplinary ways of thinking that can be used to synthesize and analyze local, national, and global issues, and the connections among these experiences. This course will then examine constructs of inclusive finance in developing countries in general and Senegal in particular. It will challenge students to understand development policy tools that use microfinance as a strategy for economic growth in the war on poverty. A critical reflection on the limits of microfinance as a durable development approach will allow students to better understand attempts at innovation that respond to specific problems related to microfinance, and the course will introduce them to diverse perspectives on microfinance in the contemporary global economy. Students will engage with topics such as microfinance, social entrepreneurship, access to capital, and financial services.

SNGL 4003. International Development: Public & Community Health. (SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer)

The Political Economy of International Development (PIED) critically explores the role of the international development agenda, with a specific focus on its impact on the African continent. Students will acquire knowledge on the foundation of this agenda while capturing the complexity and paradoxes of its implementation. Students will also build on this understanding to analyze the power relationships at stake between the various actors (donors, governments, international institutions, development beneficiaries, private sector, etc.). Grounded in a theoretical approach, this course will nevertheless explore practical case studies and experiences to favor in-depth analysis. This course will dedicate particular attention to the social experiences of the populations in developing countries from a political and historical perspective. Furthermore, students will be better inclined to critically appreciate the contribution of institutional mechanisms in the bi-lateral, multilateral, and non-government sectors in the development of Sub-Saharan African nations. Students will examine multidisciplinary ways of thinking that can be used to synthesize and analyze local, national, and global issues, and the connections among these experiences. Students will then examine constructs of public and community health in developing countries in general and Senegal in particular. This course will present students with an overview of the social-health system in Senegal and critically discuss the main obstacles that Senegal has had to overcome in the realm of public health. It will highlight health determinants, explain the choice of the Senegalese to prioritize the fight against certain

illnesses, and present the organization of its public health services.

SNGL 4004. International Development: Sustainable Development & Climate Change. (ENV,SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer)

The Political Economy of International Development (PIED) critically explores the role of the international development agenda, with a specific focus on its impact on the African continent. Students will acquire knowledge on the foundation of this agenda while capturing the complexity and paradoxes of its implementation. Students will also build on this understanding to analyze the power relationships at stake between the various actors (donors, governments, international institutions, development beneficiaries, private sector, etc.). Grounded in a theoretical approach, this course will nevertheless explore practical case studies and experiences to favor in-depth analysis. This course will dedicate particular attention to the social experiences of the populations in developing countries from a political and historical perspective. Furthermore, students will be better inclined to critically appreciate the contribution of institutional mechanisms in the bi-lateral, multilateral, and non-government sectors in the development of Sub-Saharan African nations. Students will examine multidisciplinary ways of thinking that can be used to synthesize and analyze local, national, and global issues, and the connections among these experiences. Students will then examine constructs of sustainable development and climate change in developing countries in general and Senegal in particular. Students will look at the human and natural environments in urban and rural Dakar. Students will engage with topics such as waste management in urban settings, mangrove swamps, coastal preservation in Senegal (maritime erosion, the loss of biodiversity, difficulties accessing fishing waters), flooding in Dakar neighborhoods, recycling, and the repurposing of waste objects. Students will consider a variety of solutions to these challenges, wrestle with the questions of balance between practical needs and preservation, and propose ways to best implement these solutions in the Senegalese value context.

SNGL 4101. Historical & Political Context of Senegal. (HIS; 4 cr. ; Student Option; Every Fall, Spring & Summer)

This course provides a broad historical overview of Senegal and in-depth analysis of the cultural underpinnings that have shaped the country. Using this rich history and diverse culture, students will explore and analyze the structure of the political, socio-economic, and social policies that characterize Senegal today. The course will look at Senegalese history and culture from the original Kingdoms and cover more modern periods from the slave trade to colonization through decolonization. Students will examine the human past, study the beliefs, practices, and relationships that shaped the human experience over time in Senegal. Students will analyze the place of Senegal in the broader West African sub region; discuss

the physical and human resources available for Senegal's development and the major challenges and constraints it faces; and take a critical look at the country's economic policy and political system. Students will discuss Senegalese cultures, cultural values, arts, and lifestyles using literature, visuals, and the performing arts. They will consider how literature forges the conscience of a nation and how the encouragement of thriving artistic expression can help the development efforts and the carving of a national identity.

SNGL 4201. Research in Senegal. (4 cr. ; Student Option; Every Fall, Spring & Summer)

In this course, the MSID student will learn about various research concepts and practices; make decisions involved in research, including selecting a topic and title for their study, developing statements of problems, and choosing research questions and appropriate research design; learn about issues related to research ethics; and develop their skills in choosing data collection instruments and analysis of the data they collect for their research. The course does this by introducing various topics in the research cycle and providing a forum in which students can share with one another their research experience at each stage of the process. Students will learn to develop, defend, and challenge their own values and beliefs. Research projects in this course are ideally projects that fit with the development agency's goals and activities; therefore, the student's research interests must blend with what is realistically happening at the development agency. Students must have approved proposals before proceeding onto their research sites to allow them collect necessary data and complete data analysis before heading back to Dakar at the end of the six-week field period. It is likely that students will participate in field activities, meetings, and other forms of engagement that will be indirectly related to and could inform their research projects. Students will be presented with concrete opportunities to identify and apply their knowledge of ethics, both in solving short-term problems and in creating long-term forecasts. As stated on the MSID website, the governments of the United States and MSID countries have laws protecting human subjects of research. Due to the timeline for gaining the necessary permissions for doing research with human subjects, such research cannot be conducted while abroad on LAC programs. However, there are still a wide variety of projects, that include interaction with people, that are available. See more information on options for Undergraduate Research Abroad. The course will also include 15 hours of French or Wolof instruction to prepare students with practical vocabulary for the workplace.

SNGL 4896. Internship in Senegal. (4 cr. ; Student Option; Every Fall, Spring & Summer)

This course provides a cross-cultural experience of working on various development issues with a regional nonprofit organization. The course focuses on guiding students to understand their own identity as they integrate theory with reality through participation in local development sites. Students are

prepared for entering into their community work through discussions on stakeholder and agency analysis, culture specific gender and diversity context, and power and privilege. Students will learn to develop, defend, and challenge their own values and beliefs. The mentoring continues while students are at their internship placement. They come in contact with social actors, community organizations, and local and national authorities in various regions of Dakar at the marginal urban and rural levels. The students are urged to play an active role in their internships by providing suggestions and solutions, discussing alternatives, and investigating all areas of their internship placement to garner a holistic experience of the realities of development work. Through practical internship experiences as well as readings, discussions, and written assignments, students will deepen their understanding of the host-country cultural context and development work from an international perspective, as well as critically examine their own worldview. Students will be presented with concrete opportunities to identify and apply their knowledge of ethics, both in solving short-term problems and in creating long-term forecasts. The course will also include 15 hours of French or Wolof instruction to give students practical vocabulary for the workplace.

Slavic (SLAV)

SLAV 3900. Topics in Slavic Languages & Literatures. (; 3 cr. [max 12 cr.] ; Student Option; Periodic Fall & Spring)
Topics specified in Class Schedule.

SLAV 5900. Topics in Slavic Languages and Literatures. (; 3 cr. [max 12 cr.] ; Student Option; Periodic Fall & Spring)
Topics specified in Class Schedule.

Social Work (SW)

SW 1501. Introduction to Peace Studies. (GP; 3 cr. ; A-F only; Every Fall & Spring)
Interdisciplinary field that considers questions such as how human conflicts can be resolved in ways that promote justice/peace. Definitions, conditions, and causes of violence, nonviolence, war, and peace between nations, groups, or individuals.

SW 2501W. Introduction to Social Justice. (WI,DSJ; 4 cr. ; A-F only; Every Fall & Spring)
Meanings of social justice. Ways in which social justice advocates work for social change. Criminal justice, globalization, and social welfare. Students do service learning in a social justice organization.

SW 3501. Theories and Practices of Social Change Organizing. (; 4 cr. ; A-F only; Every Fall & Spring)
Concepts, theories, and practices of social change organizing. U.S. power relations. How people organize. Cross-class, multi-racial, and multi-issue organizing. Students do service learning in social justice organization.

SW 3601. Solidarity & Community-led Transformation in South Africa. (CIV,GP; 3 cr. ; A-F only; Every Spring)

Though the magnificence of South Africa's people and landscapes is vast, it is often said that visitors ignore the view by overlooking the juxtaposition between acute poverty in the townships and immensely affluent neighborhoods (built for-and-by the white minority during Apartheid). Mindful visitors often put into question the free market and recognize that Apartheid's history of racism and classism still exists in all fabrics of life; and, many westerners try to assist through service or volunteerism without fostering real change. In Africa, service is a billion-dollar industry. Abuse by western volunteer organizations and other programs has included half-finished work, time and resources drained from communities, and unchanged volunteers. But, do we do nothing? In this course, we will explore the dynamics of power, privilege, and repression through social justice advocacy and scholarly analysis of the oppressive savior complex.

SW 3701. Introduction to Child Maltreatment: Intervention and Prevention. (; 3 cr. ; Student Option; Every Fall & Spring) Child abuse/neglect as form of family violence. Prevalence, scope, dynamics, responses, and prevention strategies. Individual, familial, and community analyses using ecological perspective and risk/resilience framework.

SW 3702. Introduction to Adult Intimate Partner Violence: Intervention and Prevention. (; 3 cr. ; Student Option; Every Fall & Spring) Theories, research, intervention, and prevention strategies regarding violence against women and the abuse of vulnerable adults in the United States. Issues of gender, race, culture, age, physical ability, SES, and sexual orientation. Includes service learning.

SW 3703. Gender Violence in Global Perspective. (; 3 cr. ; Student Option; Every Fall & Spring) Theories/research on violence in intimate domestic relationships examined through multiple lenses. Overview of interventions in Minnesota, United States, and other societies.

SW 4501. Senior Seminar in Social Justice. (; 4 cr. ; A-F only; Every Spring) Capstone course. Students complete a social justice portfolio, do service learning in a social justice organization. prereq: 2501, 3501

SW 4693. Directed Studies. (; 1-10 cr. ; Student Option; Every Fall, Spring & Summer) Guided individual reading or study related to social issues, social work methods, or social work history. prereq: instr consent

SW 4694. Directed Research. (; 1-10 cr. ; Student Option; Every Fall, Spring & Summer) Guided research related to social issues, social work methods, or social work history. prereq: instr consent

SW 5051. Human Behavior and the Social Environment. (; 2 cr. ; A-F or Audit; Every Fall & Spring) Social, psychological, biological, and cultural factors of individual and group development as applied to social work practice. Behavior and life-cycle development focusing on diversity

and each stage of life. Discuss development in terms of the individual, and in terms of overlapping social systems such as the multi-generational family, culture, community, and society.

SW 5101. Historical Origins and Contemporary Policies in Social Welfare. (; 3 cr. [max 4 cr.] ; A-F or Audit; Every Fall) Contemporary policies and programs in social welfare are examined in light of their historical origins and evolution. A framework is then developed for analysis of concepts and principles in contemporary social policy for social welfare programs and services. The emergence of the profession of social work also examined.

SW 5562. Global Social Work and Social Development. (3 cr. ; Student Option; Every Fall) Theories/strategies of social work and social development in industrial/developing countries. Applying international perspective and comparative framework to analyze basic human needs, social problems, and social work and social development strategies in different countries.

SW 5903. Substance Abuse and Social Work. (; 2 cr. ; Student Option; Every Fall) Students gain skills in eliminating the detrimental impact of substance use disorders at multiple levels (families, groups, organizations, and communities) through an ability to identify, assess, intervene, and evaluate those struggling with substance abuse and dependency throughout the life span.

SW 5904. Facilitation and Conflict Management: Humanistic Approach. (; 2 cr. ; Student Option; Every Spring) Humanistic approach to facilitating meetings in small human service organizations and units within large bureaucratic structures. Managing conflict among individuals, groups, and communities in multiple settings.

SW 5905. Permanency in Child Welfare. (; 2 cr. ; A-F or Audit; Every Spring) Depth/breadth in knowledge/skill acquisition in achieving permanency for children receiving services within public, tribal, and private child welfare systems. Out-of-home/permanency placements, specific permanency interventions, and child/family responses to different permanency options.

SW 5907. School Social Work. (; 1 cr. ; Student Option; Periodic Fall, Spring & Summer) Apply social work knowledge/skills in school settings through prevention, assessment, intervention, and evaluation from an ecological multilevel approach focused on students, families, and the school community.

SW 5912. Grief and Loss in Social Work Practice. (1 cr. ; Student Option; Every Fall & Spring) Review current concepts of grief/loss. Historical/modern views, symptoms of grief, implications of diverse losses, including expected, sudden, or traumatic losses, ambiguous grief.

SW 5913. Working with Immigrant Populations. (; 2 cr. ; Student Option; Periodic Fall & Spring) Trends in immigration to US and public policy responses. Acculturation processes, issues, problems. Common social service needs of immigrants/refugees. Skills for engagement/interventions with immigrants and refugees across main fields of social work.

SW 5991. Independent Study in Social Work. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer) Independent study in areas of special interest to students and faculty. This course is open to graduate students in the School of Social Work with an approved independent study proposal. MSW students may apply a maximum of 4 credits of SW 5991 to their program of study.

Social/Administrative Pharmacy (SAPH)

SAPH 5100. Pro-Seminar. (; 1 cr. ; A-F or Audit; Every Fall) History, foundational frameworks, and key research domains for social and administrative pharmacy through examining landmark literature. Students think critically, reflect on important works, and create a cognitive map of the discipline and their own focus for study.

SAPH 5610. Pharmacoepidemiology. (3 cr. ; A-F only; Fall Odd Year) Application of epidemiologic principles to study/use. Beneficial/adverse outcomes of drugs in human populations.

Sociology (SOC)

SOC 1001. Introduction to Sociology. (DSJ,SOCS; 4 cr. ; Student Option; Every Fall, Spring & Summer) This course is designed to introduce you to the study of society and what sociologists call the "sociological imagination:" a way of viewing the events, relationships and social phenomena that shape our individual lives and much of our collective experience. Through the course we will examine some of the central concepts and problems that have preoccupied both classical and contemporary sociologists and gain a sense of how the sociological imagination can illuminate the social forces that have a concrete impact on our everyday lives. Throughout the course you will be asked to consider the ways in which society affects your life, and how you, in turn, affect society. prereq: Soc Majors/Minors must register A-F

SOC 1011V. Honors: Introduction to Sociology. (DSJ,WI,SOCS; 4 cr. ; A-F only; Every Fall & Spring) This course is designed to introduce you to the study of society and what sociologists call the "sociological imagination:" a way of viewing the events, relationships, and social phenomena that shape our individual lives and much of our collective experience. Through the course we will examine some of the central concepts and problems that have preoccupied both classical and contemporary sociologists and gain a sense of how the sociological imagination can

illuminate the social forces that have a concrete impact on our everyday lives. Throughout the course you will be asked to consider the ways in which society affects your life and how you, in turn, affect society.

SOC 1101. Law, Crime, & Punishment. (3 cr. ; A-F or Audit; Every Spring)

Introductory course designed to provide students with a general understanding of the main theoretical perspectives and empirical findings that dominate socio-legal studies and contemporary criminology. We examine the connections and relationships between law, crime, and punishment using an interdisciplinary social science approach.

SOC 3003. Social Problems. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

In this course, we will engage in a sociological examination of major social problems facing the contemporary US and abroad. We explore the origins and causes of different social problems, seek to understand how they impact individuals, groups, and the society as a whole, and evaluate solutions. We ask how an issue becomes defined as a "social problem," discuss the social construction of reality and deviance, and consider the primary frameworks under which societies have organized their responses to different social problems. prereq: 1001 recommended; soc majors/minors must register A-F

SOC 3005. Social Science Fiction. (3 cr. ; A-F or Audit; Periodic Spring)

This course applies theories, concepts, and principles from social science disciplines such as sociology, political science, and anthropology, to social science fiction novels, stories, and films, to understand how soc-sci-fi contributes to knowledge about current societal conditions. Soc majors/minors must register A-F.

SOC 3090. Topics in Sociology. (; 3 cr. [max 6 cr.] ; Student Option; Periodic Spring)

Topics specified in Class Schedule. prereq: 1001 recommended; soc majors must register A-F; cr will not be granted if cr has been received for the same topics title

SOC 3093. Directed Study. (1-4 cr. ; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study at sophomore level. Prereq 1001, instr consent, dept consent, college consent; soc majors/minors must register A-F.

SOC 3094. Directed Research. (; 1-4 cr. ; Student Option; Every Fall & Spring)

Guided research experience at sophomore level. prereq: 1001, instr consent; soc majors/minors must register A-F

SOC 3101. Sociological Perspectives on the Criminal Justice System. (CIV; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

This course introduces students to a sociological account of the U.S. criminal justice system. We will critically examine the components, dynamics, and effects of policing, criminal courts, community supervision, jails, and prisons. Throughout the course, we focus on sociological understandings of these

processes, with particular attention to ethnic, racial, class, and gender inequalities as well as long-term problems associated with the high rate of criminal justice supervision in the U.S. prereq: [SOC 1001] recommended, Sociology majors/minors must register A-F

SOC 3101H. Honors: Sociological Perspectives on the Criminal Justice System. (CIV; 3 cr. ; A-F only; Every Fall, Spring & Summer)

This course introduces students to a sociological account of the U.S. criminal justice system. We will critically examine the components, dynamics, and effects of policing, criminal courts, community supervision, jails, and prisons. Throughout the course, we focus on sociological understandings of these processes, with particular attention to ethnic, racial, class, and gender inequalities as well as long-term problems associated with the high rate of criminal justice supervision in the U.S. Additional special assignments will be discussed with honors participants who seek to earn honors credit toward the end of our first class session. Examples of additional requirements may include: ? Honor students will be expected to interview a current Sociology graduate student working on a LCD topic. Following this, each student will individually be expected to do an in-class power-point presentation explaining how the interviewees? research relates with themes presented in the course. Students will also be expected to meet as a group and individually with the professor four times during the course semester. ? Sign up and prepare 3-4 discussion questions in advance of at least one class session. ? Work with professor and TA on other small leadership tasks (class discussion, paper exchange, tour). ? Write two brief (1-page) reflection papers on current news, or a two-page critique of a class reading ? Attend a presentation, workshop, or seminar on a related topic for this class and write a 2 page maximum reflective paper. prereq: [SOC 1001] recommended, Sociology majors/minors must register A-F, honors

SOC 3102. Criminal Behavior and Social Control. (3 cr. ; Student Option; Every Fall & Spring)

This course will address the social and legal origins of crime and crime control with a focus on general theories of deviance/crime and present an overview of forms of social control. We will critically examine criminological, sociological and legal theories that explain the causes of crime and other misdeeds. prereq: Soc majors/minors must register A-F

SOC 3201. Inequality: Introduction to Stratification. (; 3 cr. ; Student Option; Periodic Fall)

Why does inequality exist? How does it work? These are the essential questions examined in this class. Topics range from welfare and poverty to the role of race and gender in getting ahead. We will pay particular attention to social inequities ? why some people live longer and happier lives while others are burdened by worry, poverty, and ill health. prereq: soc majors/minors must register A-F

SOC 3207. Global Islamophobia. (3 cr. ; A-F only; Periodic Spring)

Throughout the world, anti-Muslim activists and politicians have been increasingly attacking Muslims and Islam. And, international organizations have reported human rights violations against Muslims worldwide. Recently, in the United States, there have been calls to ban Muslims, as well as register American Muslims. In France, Muslim women are prohibited to wear a headscarf in high school. And in Myanmar, a genocide against Muslim minorities is currently underway. While anti-Islamic discourses have a long history in many societies worldwide (including Muslim-majority countries), the course seeks to explore the global rise of these discourses since September 11, 2001. The course examines the cultural, political, and historical origins of Islamophobic discourses that cast Muslims as "violent," "hateful," and "uncivilized." Class sessions will include some lecture but will be largely discussion based. Assignments will ask students to think and write critically about course concepts, debate and participate in simulation exercises, and reflect on personal thoughts and feelings about course content.

SOC 3211W. Race and Racism in the US. (DSJ,WI; 3 cr. ; A-F or Audit; Every Fall & Spring)

We live in a society steeped in racial understandings that are often invisible?some that are hard to see, and others that we work hard not to see. This course will focus on race relations in today's society with a historical overview of the experiences of various racial and ethnic groups in order to help explain their present-day social status. This course is designed to help students begin to develop their own informed perspectives on American racial ?problems? by introducing them to the ways that sociologists deal with race, ethnicity, race relations and racism. We will expand our understanding of racial and ethnic dynamics by exploring the experiences of specific groups in the U.S. and how race/ethnicity intersects with sources of stratification such as class, nationality, and gender. The course will conclude by re-considering ideas about assimilation, pluralism, and multiculturalism. Throughout, our goal will be to consider race both as a source of identity and social differentiation as well as a system of privilege, power, and inequality affecting everyone in the society albeit in different ways.

SOC 3215. Supercapitalism: Labor, Consumption & the Environment in the New Global Economy. (3 cr. ; A-F only; Every Fall)

From the jeans you buy online to the place mats you purchase at Target, most of the items we consume are made somewhere else. Global production networks link consumers of fresh green beans in Britain with growers, pickers, and packers in Zambia. And it isn't only products that move around the globe; so do people. Thanks to immense economic inequalities, wealthy families in the global North enjoy the cheap labor of Eastern European, Filipino, and Honduran nannies, house cleaners, and gardeners. How did this global economy come to be, how has it impacted

workers, consumers, and ecosystems, and what are its ethical and political implications? This course focuses on the changes that have occurred over the last 70 years in the realms of labor, consumption, and the environment. We'll examine the movement away from regulated national economies to an integrated global economy; changing patterns and organization of production, distribution, consumption, and waste disposal; and new forms of capital-labor-state relations. Some of the topics we explore include the global trade in body parts; the rise of shareholder capitalism; the new "platform" economy; the growing insecurity of work; and the environmental changes global capitalism has wrought. We end by considering alternatives to the "business-as-usual" (BAU) economy.

SOC 3221. Sociology of Gender. (3 cr. ; A-F or Audit; Periodic Spring)

Gender is something so fundamental to our lives, to our identities, and how we interact with others that we often take it for granted. However, understandings of gender vary across time and place, and even within cultures, making it clear that our understandings of gender are not universal or timeless. In this class, we will examine how gender intersects with race and sexuality, as well as how it impacts areas of our lives such as child socialization, family structure, the media, intimate relationships, and the workplace. Prereq: 1001 recommended; soc majors/minors must register A-F

SOC 3225. The Power of the 1%: Global Philanthropy and the Making of a New World. (3 cr. ; Student Option; Periodic Fall & Spring)

Philanthropy has come to play an increasingly important role in the economy and society, on both a national and global level. Americans gave away \$450 billion in 2019, or a little over 2 percent of our country's GDP (Giving USA 2020). A few mega-philanthropists, such as Bill Gates, Warren Buffett, Michael Bloomberg, and others donated mind-boggling sums of money. These individuals and their foundations are having a significant impact around the world, changing the way public education is carried out in many countries, how global health priorities are defined, how public policies are made, and how African agricultural systems are organized. Forbes magazine reports that there are 1,645 billionaires in the world today, 80% more than a decade ago. While some observers look positively on this philanthropic outpouring, others suggest it may be eroding democracy. In this course, we study philanthropy from a variety of perspectives, exploring who gives away money and why, how this "gift" impacts givers, receivers, and taxpayers, and what the relationship is between global philanthropy and power. Specific topics include the history of foundations; religion and charity; philanthropy and politics; consumption-based giving (or "brand aid"), and philanthropy and social policy. We'll examine case studies such as the Gates Foundation's role in African agriculture. Students will do "participant observation" in a local charity, and a research project on the philanthropic foundation or giving

practice of their choice. Pre-req: Soc Majors must register A-F.

SOC 3241. Sociology of Women's Health: Experiences from Around the World. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

Health care is a fundamental right, but access to it is not shared evenly by all. This course considers women's and men's health needs, and how health systems assign priority to those needs. The course also covers how differences in health policy, national medical systems, levels of wealth, and cultural contexts around the world affect women's health and treatment and their experiences of wellness and illness. Women are taking an active role in shaping healthy societies. The final portion of this course looks at the goals and successes of women's movements in the health sphere. Throughout the course, there will be an emphasis on how sociological approaches to health differ from medical or epidemiological approaches, the advantages of the sociological approaches, and the respective advantages and disadvantages of qualitative versus quantitative approaches to studying women's health. Pre-req: Soc majors and minors must register A-F; Soc 1001 recommended.

SOC 3243W. On Drugs: Pleasures, Panics & Punishments. (WI; 3 cr. ; Student Option; Periodic Fall & Spring)

In this course we are going to study and reflect on the immense popularity of mood-enhancing drugs, legal and illegal, around the world today. Why do we want to modify our moods, and how do we set about it? Why do some people throw themselves into drug use while others fearfully avoid it? And why do many more of us feel worried about "addiction" to shopping, sex, or gambling? Together we will build a comparative analysis of drug cultures and practices? understanding the place of "journey" and "possession" inebriation across time, and how the temporal and ritual boundaries delimiting substance use get broken down by the mass commoditization of alcohol and other drugs by 19th century capitalism. From there we trace the amazingly confused development of addiction and changing forms of intervention, from alarmist educational campaigns and the militarized maneuvers of the drug war to the drug court movement, and from the twelve-step cure to alternative harm reduction approaches. This class will offer you a mixture of accessible and detailed material, together with some theoretical work which will help you grasp the subject on a deeper level. As a writing intensive class you will develop a three-stage paper with feedback at each stage, producing a strong writing sample. Pre-req: Soc 1001 recommended; Soc majors/minors must register A-F.

SOC 3246. Diseases, Disasters, & Other Killers. (ENV,HIS; 3 cr. ; A-F or Audit; Every Fall)

This course studies the social pattern of mortality, beginning with demographic transition theory. Students will study specific causes of death or theories of etiology, including theories about suicide, fundamental cause theory, and the role of early life

conditions in mortality. Students learn tools for studying mortality, including cause of death classifications and life tables. Soc majors/minors must register A-F.

SOC 3251W. Sociological Perspectives on Race, Class, and Gender. (DSJ,WI,SOC; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

In the midst of social unrest, it is important for us to understand social inequality. In this course we will analyze the impact of three major forms of inequality in the United States: race, class, and gender. Through taking an intersectional approach at these topics, we will examine the ways these social forces work institutionally, conceptually, and in terms of our everyday realities. We will focus on these inequalities as intertwined and deeply embedded in the history of the country. Along with race, class, and gender we will focus on other axes of inequality including sexuality, citizenship, and dis/ability. We will analyze the meanings and values attached to these social categories, and the ways in which these social constructions help rationalize, justify, and reproduce social inequality. Prereq: Soc majors/minors must register A-F

SOC 3301W. Politics and Society. (WI; 3 cr. ; A-F or Audit; Periodic Spring)

Political sociology is concerned with the social bases of power and the social consequences of the organization of power, especially how power operates in relationship to various forms of inequality and different institutions. We will explore political socialization, electoral politics and voting, social movements, the media and framing, and politics of inequality, poverty, and welfare. Prereq: 1001 recommended; soc majors/minors must register A-F

SOC 3309. Atheists as "Other": Religious & Nonreligious Outsiders in the US. (DSJ; 3 cr. ; A-F or Audit; Periodic Spring)

What does it mean to be an atheist in the United States today? Atheists comprise a small percentage of the American population, but one with an increasingly visible presence in popular culture, political discourse, & everyday life. How do atheists organize into groups oriented toward identity-formation, social connection, and political action? Prereq: 1001 recommended

SOC 3311W. Hard Times & Bad Behavior: Homelessness & Marginality in the United States. (WI; 3 cr. ; Student Option; Periodic Spring)

As we read about hobos and sailors, opium users and saloon girls, and contemporary experiences on the streets, we trace themes about marginality in the US, such as rootlessness produced by labor market, the love-hate relationship between elites and marginal populations in popular culture, and the complex mixture of freedom and deprivation of people on the edge. Prereq: 1001 recommended, soc majors/minors must register A-F

SOC 3322W. Social Movements, Protests, and Change. (CIV,WI; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Focusing on the origins, dynamics, and consequences of social movements,

this course explores debates about the dilemmas and challenges facing movement organizations, the relationship between social movements and various institutions, and the role of social movements and protest in bringing about change. The course is organized around general theoretical issues concerning why people join movements, why they leave or remain in movements, how movements are organized, the strategies and tactics they use, and their long-term and short-run impact. prereq: 1001 recommended; soc majors/minors must register A-F

SOC 3411W. Organizations and Society. (WI; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

This course introduces undergraduates to contemporary theories and debates about formal organizations in an international context, including such forms as large corporations, small businesses, public bureaucracies, nonprofits, voluntary associations, social movement organizations, terrorist networks and counterterror organizations. prereq: 1001 recommended; soc majors/minors must register A-F

SOC 3412. Social Networking: Theories and Methods. (TS; 3 cr. ; A-F only; Periodic Spring)

Network analysis spans a diverse range of phenomena from ego-centric ties, to small work-team sociograms, to organizational relations, to trade and military alliances among nation states. This course introduces undergraduate students to theories and methods for studying social networks, the ties connecting people, groups, and organizations. Topics include friendship, communication, small group, health, sexual and romantic, corporate, social movement, public policy, innovation diffusion, criminal and terrorist, and Internet networks.' prereq: [SOC 1001] recommended, Sociology majors/minors must register A-F

SOC 3412H. Honors: Social Networking: Theories and Methods. (TS; 3 cr. ; A-F only; Periodic Spring)

Network analysis spans a diverse range of phenomena from ego-centric ties, to small work-team sociograms, to organizational relations, to trade and military alliances among nation states. This course introduces undergraduate students to theories and methods for studying social networks, the ties connecting people, groups, and organizations. Topics include friendship, communication, small group, health, sexual and romantic, corporate, social movement, public policy, innovation diffusion, criminal and terrorist, and Internet networks. Honors students are expected to demonstrate greater depth of discussion, depth and to a degree length of writing assignments, presentations, and leadership of the students. Additional special assignments will be discussed with honors participants who seek to earn honors credit toward the end of our first class session. Students will also be expected to meet as a group and individually with the professor four times during the course semester. Examples of additional requirements may include: ? Sign up and prepare 3-4 discussion questions

in advance of at least one class session. ? Work with professor and TA on other small leadership tasks (class discussion, paper exchange, tour). ? Write two brief (1-page) reflection papers on current news, or a two-page critique of a class reading ? Attend a presentation, workshop, or seminar on a related topic for this class and write a 2 page maximum reflective paper. ? Interview a current Sociology graduate student and present briefly in class or write a reflective piece, not more than 2 pages in length, to be submitted to the Professor. prereq: [SOC 1001] recommended, Sociology majors/minors must register A-F, honors

SOC 3415. Consume This! The Sociology and Politics of Consumption. (; 3 cr. ; A-F or Audit; Periodic Fall)

How symbols are created, acquired, diffused, and used for organizing personal identity and maintaining group boundaries. Fashion. Socialization. Structure of retail trade. Role of mass media, advertising, marketing/production strategies. Implications of worldwide markets. prereq: 1001 recommended; soc majors/minors must register A-F

SOC 3417W. Global Institutions of Power: World Bank, International Monetary Fund, and World Trade Organization. (GP,WI; 3 cr. ; A-F or Audit; Periodic Fall)

This course will introduce students to some of the world's most powerful global institutions -- such as the World Bank (IBRD), the International Monetary Fund (IMF), the World Trade Organization (WTO), the United Nations, and affiliated agencies such as UNHCR (for refugee support). We will follow their efforts to promote a style of global development practices -- large-scale capital lending and global expertise building -- that has crystallized into a common understanding of how global north-south dynamics should progress. Cases pursued in class may include their lending and debt policies, dam building and energy projects, climate resilience and water loans, and the ways they mediate free trade agreements among competing countries. We will also hear from the multitude of voices, theories, and practices that offer alternative visions as to how people strive to produce a more just, socially equitable, and climate-safe world. We will use books, articles, films, in-class debates, case study exploration, small-group projects, and guest speakers to create a lively discussion-based classroom environment.

SOC 3421W. Sociology of Work: Good Jobs, Bad Jobs, No Jobs?. (WI; 3 cr. ; A-F or Audit; Periodic Spring)

Work is central to individuals, economy, and society. This course introduces students to sociological perspectives and analyses of work. We will look at what makes a good job good, a bad job bad, and impacts of joblessness on society. prereq: 1001 recommended, Soc majors/minors must register A-F

SOC 3446. Comparing Healthcare Systems. (GP; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Examination of national health systems from an international comparative perspective,

emphasizing social, organizational, political, economic, cultural, and ethical dimensions of healthcare policies and programs to deliver services and their impacts on the health of population groups. The comparative approach will enable students to acquire a better understanding of the problems and potential for reforming and improving US healthcare delivery. Pre-req: Soc majors/minors must register A-F

SOC 3451W. Cities & Social Change. (WI; 3 cr. ; A-F or Audit; Spring Odd Year)

The core themes of this class will provide an essential toolkit for approaching broad questions about social justice, culture, work, housing and service provision on multiple levels and across the globe. This course will have units on economic development, inequality, the interaction between design and human action, inclusive and exclusive cultural formations, crime and cultures of fear, social control and surveillance. prereq: 1001 recommended, Soc majors/minors must register A-F

SOC 3452. Education and Society. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Everyone thinks they know what "education" is. We've all been in schools, and we think we know how they work. We all have opinions about why some people go farther in school than others and why some people learn more than others. We all think we know what role education plays in shaping who gets good jobs, who has a good life, and who has more knowledge. This course is designed to challenge and expand what we think we know about all of these things. Students (and instructor) will critically engage scientific research in sociology, education, economics, public policy, and elsewhere. The goal will be to educate everyone about the current state of knowledge about how "education" works: what shapes educational achievement; where sex and racial/ethnic and socioeconomic inequalities in educational achievements come from; what role education plays in economic development; how and why educational accomplishments result in better social and economic outcomes; and how educational institutions might be improved. prereq: Soc majors/minors must register A-F.

SOC 3461. Sociology of Neighborhoods: People, Place, Housing, and Community. (3 cr. ; A-F or Audit; Periodic Fall)

This course is an introduction to the sociological study of neighborhoods, exploring how sociologists study people in their local communities. Generally the course focuses on neighborhoods in American society, and may explore broader issues with a research focus on neighborhoods in the Twin Cities area which students can study using a range of sociological research methods. Students will learn about a range of methods for studying neighborhoods including analysis of local area statistics, ethnographies, and interviews, and how to analyze different forms of data to meet the Data Analysis requirements for the BS in Sociology. Important themes which are addressed in the class include the composition and population structure of communities, racial

and ethnic segregation, associational and civic life, municipal government and politics, community folklore and memory, housing, and local environmental issues. Soc 1001 recommended; Soc Majors and Minors must register A-F

SOC 3501. Sociology of Families.

(DSJ,SOCS; 3 cr. ; Student Option; Fall Odd, Spring Even Year)

Family has long been a significant experience in human societies; much of what we understand ourselves to be, arises in family life. But family also varies widely in composition across time and place. We will learn how sociologists study and understand families theoretically, as social institutions, as well as sites and sources of social problems. prereq: 1001 recommended; soc majors/minors must register A-F

SOC 3503. Asian American Identities, Families & Communities. (SOCS,DSJ; 3 cr. ; A-F or Audit; Periodic Spring)

This course provides a sociological overview of Asian American identities, families and communities. To place these experiences within a broader historical, structural, and cultural context the course will begin with a brief introduction to the history of Asians and Asian Americans in the United States and sociological theories about incorporation and racial stratification. We will then examine the diversity of Asian American communities and families, highlighting ethnic, gender, and class variations. Other topics of focus include racialization and discrimination, education, ethnic enclaves, family and intergenerational relationships, identity, media, culture, and politics and social action. Throughout the course we will consider the ways in which society affects individuals, and how in turn, individuals affect society. Students will have an option to do community-engaged learning or another course project. prereq: SOC 1001 recommended, Sociology majors/minors must register A/F

SOC 3503H. Honors: Asian American Identities, Families & Communities. (SOCS,DSJ; 3 cr. ; A-F only; Periodic Spring)

This course provides a sociological overview of Asian American identities, families, and communities. To place these experiences within a broader historical, structural, and cultural context the course will begin with a brief introduction to the history of Asians and Asian Americans in the United States and sociological theories about incorporation and racial stratification. We will then examine the diversity of Asian American communities and families, highlighting ethnic, gender, and class variations. Other topics of focus include racialization and discrimination, education, ethnic enclaves, family and intergenerational relationships, identity, media, culture, and politics and social action. Throughout the course, we will consider the ways in which society affects individuals, and how in turn, individuals affect society. Students will have an option to do community-engaged learning or another course project. Honors students are expected to demonstrate a greater depth of discussion, depth and to a degree length

of writing assignments, presentations, and leadership of the students. Additional special assignments will be discussed with honors participants who seek to earn honors credit toward the end of our first class session. Students will also be expected to meet as a group and individually with the professor four times during the course semester. Examples of additional requirements may include: - Sign up and prepare 3-4 discussion questions in advance of at least one class session. - Work with professor and TA on other small leadership tasks (class discussion, paper exchange, tour). - Write two brief (1-page) reflection papers on current news, or a two-page critique of a class reading - Attend a presentation, workshop, or seminar on a related topic for this class and write a 2-page maximum reflective paper. - Interview a current Sociology graduate student and present briefly in class or write a reflective piece, not more than 2 pages in length, to be submitted to the Professor. prereq: [SOC 1001] recommended, honors

SOC 3505. Migrations: People in Motion.

(GP; 3 cr. ; A-F or Audit; Periodic Fall & Spring) Students in this course will tackle debates related to migration from a variety of disciplinary perspectives and will compare and connect diverse migration trends around the world (Asia, Africa, Latin America, and North America). Students will critically engage with various paradigms on the geopolitical, racial, and gender power dynamics that anchor migration processes and outcomes. Why would the movement of individuals from some parts of the world (often from the least developed regions to the highly developed Western nations) create such strong and highly charged debates? How are cross border social and economic relations of individuals and households maintained and perpetuated? What are particular governments doing to either encourage or hinder these movements? How are current migrations different from earlier eras? Is this gendered, and if so, how and why? The objective of this course is to explore the above questions through academic and policy published literature. prereq: Soph, jr, or sr

SOC 3507. Immigration to the United States: Beyond Walls. (DSJ; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Immigration is one of the most politically and emotionally charged issues in the United States today. It is also poorly understood. Assumptions, myths, and misinformation about US immigration and immigrants are routinely and increasingly manifested in acrimonious political debates, news stories and sound bites, and our daily conversations and interactions with one another in the very communities in which we live and work. At the same time, US immigration and immigrants have been, are, and will continue to be an essential and vibrant part of our lived and shared experiences as individuals and communities, Minnesotans and Americans, and global citizens.

SOC 3511. World Population Problems.

(GP; 3 cr. ; A-F or Audit; Periodic Fall & Summer)

This class is an introduction to the contemporary issues that accompany such dramatic population change, including fertility change, disease experiences, migration as opportunity and challenge and human-environment conflict. Further, we will examine the roles of global organizations, national governments, and culture in shaping and reshaping populations. prereq: [SOC 1001] recommended, Sociology majors/minors must register A-F

SOC 3511H. Honors: World Population Problems. (GP; 3 cr. ; A-F only; Periodic Fall & Spring)

This class is an introduction to the contemporary issues that accompany such dramatic population change, including fertility change, disease experiences, migration as opportunity and challenge and human-environment conflict. Further, we will examine the roles of global organizations, national governments, and culture in shaping and reshaping populations. Additional special assignments will be discussed with honors participants who seek to earn honors credit toward the end of our first class session. Students will also be expected to meet as a group and individually with the professor four times during the course semester. Examples of additional requirements may include: ? Sign up and prepare 3-4 discussion questions in advance of at least one class session. ? Work with professor and TA on other small leadership tasks (class discussion, paper exchange, tour). ? Write two brief (1-page) reflection papers on current news, or a two-page critique of a class reading ? Attend a presentation, workshop, or seminar on a related topic for this class and write a 2-page maximum reflective paper. ? Interview a current Sociology graduate student and present briefly in class or write a reflective piece, not more than 2 pages in length, to be submitted to the Professor. prereq: [SOC 1001] recommended, Sociology majors/minors must register A-F

SOC 3613V. Honors: Stuffed and Starved: The Politics of Eating. (GP,WI,SOCS; 3 cr. ; A-F only; Periodic Fall & Spring)

The course takes a cross-cultural, historical, and transnational perspective to the study of the global food system. Themes explored include: different cultural and social meanings attached to food; social class and consumption; the global food economy; global food chains; work in the food sector; the alternative food movement; food justice; environmental consequences of food production. Additional special assignments will be discussed with honors participants who seek to earn honors credit toward the end of our first class session. Students will also be expected to meet as a group and individually with the professor four times during the course semester. Examples of additional requirements may include: - Sign up and prepare 3-4 discussion questions in advance of at least one class session. - Work with professor and TA on other small leadership tasks (class discussion, paper exchange, tour). - Write two brief (1-page) reflection papers on current news or a two-page critique of a class reading - Attend a

presentation, workshop, or seminar on a related topic for this class and write a 2-page maximum reflective paper. - Interview a current sociology/Global Studies graduate student and present briefly in class or write a reflective piece, not more than 2 pages in length, to be submitted to the professor.

SOC 3613W. Stuffed and Starved: The Politics of Eating. (GP,WI,SOCs; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

This course takes a cross-cultural, historical, and transnational perspective to the study of the global food system. Themes explored include: different cultural and social meanings attached to food; social class and consumption; the global food economy; global food chains; work in the food sector; the alternative food movement; food justice; environmental consequences of food production. prereq: Soc majors/minors must register A-F

SOC 3641. Understanding New Zealand: Culture, Society, and Environment.

(CIV,GP; 3 cr. ; A-F only; Periodic Summer)
This course introduces students to New Zealand society in a 3-week global seminar, covering political structures, indigenous rights, immigration trends, and environmental politics. New Zealand is one of the world's most remote inhabited land-masses, and this remoteness has had a significant impact on its environmental and human history. Like the United States, New Zealand is thought of as a "settler society" that is now largely populated by descendants of people who migrated from Europe in the last couple of centuries. Like the United States it is a long-established democracy, with significant levels of immigration from Europe and Asia. Unlike the United States, the indigenous Maori population comprise around 1/6 of the population giving indigenous issues an unusual prominence in politics and society compared to peer countries such as the US, Canada, Australia, or Scandinavia to which NZ is often compared by social scientists. The predominant language spoken in the country is English, giving students the ability to quickly engage with the local population in formal and informal settings, and access local resources for study such as libraries, archives, speakers from universities, civic organizations, and government. Thematically the course has a continuing focus on indigenous rights, immigration, and the environment in a long-established democracy. Methodologically the course gives students an opportunity to engage with several important social research methods including reading comparative social science that puts New Zealand in context with similar countries; archival and biographical research, and social observation of public spaces. Through the instructor's contacts with colleagues in New Zealand, students also have the opportunity to engage in joint discussions with New Zealand university students about shared assigned readings about New Zealand society, and meet community members in a range of informal and formal settings. Assignments have students undertake reflective journaling on their observations of New Zealand, write a biographical profile

from archival sources, and complete a short research paper on a topical issue of the students' choice using academic literature, official statistics, and news media.

SOC 3671. Chinese Society: Culture, Networks, & Inequality. (3 cr. ; A-F or Audit; Periodic Fall)

Introduces students to sociological perspectives and analyses of cultures, social networks, and socioeconomic inequalities in post-1980 China. In addition to lectures, the instructor will show video clips about various backgrounds of China and group discussions will be organized to exchange opinions about issues of common interest. Students will gain a basic understanding of how Chinese society operates today. prereq: 1001 recommended, soc majors/minors must register A-F

SOC 3681. Gender and the Family in the Islamic World. (; 3 cr. ; A-F only; Periodic Spring)

This course explores the experiences of Muslim women and Muslim families from a historical and comparative perspective. Expanding the discussion on Muslim women's lives and experiences beyond the Middle East, by also centralizing on the experiences of Muslim women and families outside of this geographical area highlights the complex and diverse everyday experiences of Muslim women around the world. This wider lens exposes the limitations intrinsic in the stereotypical representation of Muslims in general and Muslim women in particular. We will explore the intricate web of gender and family power relations, and how these are contested and negotiated in these societies. Some of the themes the course explores include the debates on Muslim women and colonial representations, sexual politics, family, education and health, women and paid work, gender and human rights, and Islamic feminisms debates. prereq: At least soph; 1001 recommended

SOC 3701. Social Theory. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

This course provides an introductory overview of major social theories ranging from the foundational sociological theories of Marx, Weber and Durkheim to contemporary theories of postmodernism and globalization. We will examine a range of theories with particular attention to their treatments of core sociological questions and concerns. prereq: 1001 recommended; soc majors/minors must register A-F

SOC 3721. Principles of Social Psychology. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Social psychology is at the intersection of macro and micro sociology, linking social structures, interpersonal relationships and interactions, attitudes, values and the self-concept. Principles of social psychology are drawn from multiple theoretical perspectives, including symbolic interactionism, expectation states theory, social structure and personality, and the life course. This course covers a broad range of topics as well as the diverse methods that social psychologists use to study them (for example, experiments, surveys, ethnographic

observation). prereq: 1001 recommended; soc majors/minors must register A-F

SOC 3801. Sociological Research Methods. (; 4 cr. ; A-F or Audit; Every Fall & Spring)

This course provides an introduction to the materials and methods of social science research in a comprehensive and critical way. The course begins by introducing social science research, including philosophical and theoretical foundations. The course then covers the primary components of research design, including conceptualization, operationalization and measurement, primary and secondary data collection and sources, sampling, and the logic of comparison(s). prereq: 1001 recommended; soc majors must register A-F

SOC 3811. Social Statistics. (MATH; 4 cr. ; Student Option; Every Fall, Spring & Summer)

This course will introduce majors and non-majors to basic statistical measures and procedures that are used to describe and analyze quantitative data in sociological research. The topics include (1) frequency and percentage distributions, (2) central tendency and dispersion, (3) probability theory and statistical inference, (4) models of bivariate analysis, and (5) basics of multivariate analysis. Lectures on these topics will be given in class, and lab exercises are designed to help students learn statistical skills and software needed to analyze quantitative data provided in the class. prereq: Undergraduates with strong math background are encouraged to register for 5811 in lieu of 3811 (Soc 5811 offered Fall terms only). Soc Majors/Minors must register A-F.

SOC 4090. Topics in Sociology. (; 3 cr. [max 6 cr.] ; Student Option; Periodic Fall & Spring)
Topics specified in Class Schedule. prereq: 1001 recommended; soc majors/minors must register A-F; cr will not be granted if cr has been received for the same topics title

SOC 4093. Directed Study. (1-4 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study at junior or senior level. Prereq instr consent, dept consent, college consent; soc majors/minors must register A-F.

SOC 4094W. Capstone Experience: Directed Research (4 cr.). (WI; 4 cr. ; A-F only; Every Fall & Summer)

Faculty guided and self directed research experience at junior/senior level. This is designed to: a) provide students with an opportunity to reflect on what they have learned as a sociology major; b) use that knowledge to write a sociological analyses; and c) think about how the knowledge, skills, and insights of the sociological enterprise can be used and applied outside of the University. Through this one:one capstone experience majors will emphasize the relationship between a sociological perspective and critical thinking, effective communication, and meaningful civil engagement. This Capstone Experience: Directed Research is to include but not limited to: bi-weekly meetings, literature review, multiple drafts and revisions, etc. prereq: 1001,

3701, 3801, 3811, at least 12 cr upper div sociology electives, dept & instructor consent.

SOC 4101V. Honors: Sociology of Law. (WI; 3 cr. ; A-F only; Every Fall & Spring)

This course will consider the relationship between law and society, analyzing law as an expression of cultural values, a reflection of social and political structure, and an instrument of social control and social change. Emphasizing a comparative perspective, we begin by discussing theories about law and legal institutions. We then turn our attention to the legal process and legal actors, focusing on the impact of law, courts, and lawyers on the rights of individuals. Although this course focuses on the US legal system, we will explore issues of the relationship between US law and global law and concepts of justice. Additional special assignments will be discussed with honors participants who seek to earn honors credit toward the end of our first class session. Examples of additional requirements may include: - Honors students will be expected to interview a current Sociology graduate student working on a LCD topic. Following this, each student will individually be expected to do an in-class power point presentation explaining how the interviewees' research relates with themes presented in the course. Students will also be expected to meet as a group and individually with the professor four times during the course semester. - Sign up and prepare 3-4 discussion questions in advance of at least one class session. - Work with professor and TA on other small leadership tasks (class discussion, paper exchange, tour). - Write two brief (1-page) reflection papers on current news, or a two-page critique of a class reading - Attend a presentation, workshop, or seminar on a related topic for this class and write a 2-page maximum reflective paper. prereq: honors student, [[SOC 1001] and [SOC 1101 or 3101 or 3102]] recommended, Sociology majors/minors must register A-F

SOC 4101W. Sociology of Law. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)

This course will consider the relationship between law and society, analyzing law as an expression of cultural values, a reflection of social and political structure, and an instrument of social control and social change. Emphasizing a comparative perspective, we begin by discussing theories about law and legal institutions. We then turn our attention to the legal process and legal actors, focusing on the impact of law, courts, and lawyers on the rights of individuals. Although this course focuses on the US legal system, we will explore issues of the relationship between US law and global law and concepts of justice. prereq: [[SOC 1001] and [SOC 1101 or 3101 or 3102]] recommended, Sociology majors/minors must register A-F

SOC 4102. Criminology. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

This class seeks to develop an understanding of patterns of crime and punishment in the United States (including American particularities in international comparison), their social, political, economic, cultural,

and institutional conditions, and how these patterns relate to broader sociological themes. We will examine a cross-section of most outstanding recent and some (by now) classical criminological and sociological books and a few articles that have attracted much attention among scholars and/or the broader public. prereq: [SOC 3101 or SOC 3102 or instr consent], Sociology majors/minors must register A-F

SOC 4102H. Honors: Criminology. (; 3 cr. ; A-F only; Periodic Fall & Spring)

This class seeks to develop an understanding of patterns of crime and punishment in the United States (including American particularities in international comparison), their social, political, economic, cultural, and institutional conditions, and how these patterns relate to broader sociological themes. We will examine a cross-section of most outstanding recent and some (by now) classical criminological and sociological books and a few articles that have attracted much attention among scholars and/or the broader public. Additional special assignments will be discussed with honors participants who seek to earn honors credit toward the end of our first class session. Examples of additional requirements may include: ? Honors students will be expected to interview a current Sociology graduate student working on a LCD topic. Following this, each student will individually be expected to do an in-class power point presentation explaining how the interviewees' research relates with themes presented in the course. Students will also be expected to meet as a group and individually with the professor four times during the course semester. ? Sign up and prepare 3-4 discussion questions in advance of at least one class session. ? Work with professor and TA on other small leadership tasks (class discussion, paper exchange, tour). ? Write two brief (1-page) reflection papers on current news, or a two-page critique of a class reading ? Attend a presentation, workshop, or seminar on a related topic for this class and write a 2 page maximum reflective paper. prereq: Honors student, [SOC 3101 or SOC 3102 or instr consent], Sociology majors/minors must register A-F

SOC 4104. Crime and Human Rights. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

This course addresses serious violations of humanitarian and human rights law, efforts to criminalize those violations (laws and institutions), and consequences of these efforts. Special attention will be paid to the impact interventions have on representations and memories of atrocities on responses and the future of cycles of violence. Case studies on Holocaust, Balkan wars, Darfur, My Lai massacre, etc. Criminal justice, truth commissions, vetting, compensation programs. prereq: SOC 1001, at least one 3xxx SOC course recommended, Sociology majors/minors must register A-F

SOC 4104H. Honors: Crime and Human Rights. (; 3 cr. ; A-F only; Periodic Fall & Spring)

This course addresses serious violations of humanitarian and human rights law, efforts to criminalize those violations (laws and institutions), and consequences of these efforts. Special attention will be paid to the impact interventions have on representations and memories of atrocities on responses and the future of cycles of violence. Case studies on Holocaust, Balkan wars, Darfur, My Lai massacre, etc. Criminal justice, truth commissions, vetting, compensation programs. Additional special assignments will be discussed with honors participants who seek to earn honors credit toward the end of our first class session. Examples of additional requirements may include: ? Honors students will be expected to interview a current Sociology graduate student working on an LCD topic. Following this, each student will individually be expected to do an in-class PowerPoint presentation explaining how the interviewees' research relates to themes presented in the course. Students will also be expected to meet as a group and individually with the professor four times during the course semester. ? Sign up and prepare 3-4 discussion questions in advance of at least one class session. ? Work with professor and TA on other small leadership tasks (class discussion, paper exchange, tour). ? Write two brief (1-page) reflection papers on current news or a two-page critique of a class reading ? Attend a presentation, workshop, or seminar on a related topic for this class and write a 2-page maximum reflective paper. prereq: SOC 1001, at least one 3xxx SOC course recommended, Sociology majors/minors must register A-F

SOC 4105. Sociology of Punishment. (; 3 cr. ; A-F or Audit; Periodic Spring)

The purpose of this class is to develop a working understanding of the sociology of punishment. To that end, the course focuses on three interrelated questions: How do various social factors (the economy, culture, crime, media, race relations, etc.) shape the development of criminal punishment? Why does punishment differ across time and place? How do penal laws, practices, and institutions affect individuals, groups, and communities? The course combines lectures and small and large group discussions. prereq: 3101 or 3102 recommended; soc majors/minors must register A-F

SOC 4106. Crime on TV. (3 cr. ; Student Option; Every Fall)

This course uses television shows to explore sociological perspectives on crime and punishment. We will critically examine how (and to what extent) four television series represent or distort prevailing knowledge about crime and punishment. prereq: recommended [1001 or 1011V, 1101 or 3101 or 3102]; Soph or above or instr consent; soc majors/minors must register A-F.

SOC 4108. Current Issues in Crime Control. (; 3 cr. ; Student Option; Periodic Spring & Summer)

Selected current criminal justice policies from perspective of courts, legislature, community, and interest groups. Impact of criminal justice

policy changes on society and on social control agencies. prereq: Soc majors/minors must register A-F

SOC 4111. Sociology of Deviance. (; 3 cr. ; A-F or Audit; Periodic Fall)

This course considers why and how certain attributes and behaviors are defined as deviant, the consequences of deviant labels, and how norms, values, and rules are made and enforced. We will discuss basic concepts that cut across deviance theories and research, including social control, subcultures and deviant careers. We will explore theories of and societal reaction to deviant behavior. We will also discuss methodology and how the "social facts" of deviance are determined and disseminated. Finally, we will examine case studies addressing crime, organizational and occupational deviance, substance use, sexuality, body image, and more. prereq: Soc 3101 or 3102 recommended; Sociology majors/minors must register A-F

SOC 4113. Sociology of Violence: Bedrooms, Backyards, and Bars. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

This course looks at violent behavior across a wide variety of social arenas, bedrooms, backyards, and bars, being some common places where violence occurs. Students will wrestle with definitions of violence and the circumstances in which behavior is or isn't categorized as violent. A major theme will be how violence operates as a property of institutional arrangements, organizational practices, and interpersonal situations. Subtopics intersecting violence include cohorts (race, class, & gender), sport, sex, emotion, the State, and the environment. Soc Majors and Minors must register A/F. Pre-req of Soc 1001, Soc 1101, 3101 or 3102 is recommended.

SOC 4125. Policing America. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

This course is an in-depth sociological analysis of the origins, composition, and effects of policing in contemporary U.S. society. Throughout the course, we focus on using a social science lens to understand policing dynamics and how policing shapes social life. We will pay particular attention to the ways in which race, class, and gender inequalities are reflected in and reshaped by policing practices. Throughout the course, we will draw on contemporary media stories, podcast, documentaries, and guest visitors to connect scholarship with the world around us. prereq: 3101 or 3102 recommended or instr consent, soc majors/minors must register A-F

SOC 4133. Sociology of Gender, Sex, and Crime. (3 cr. ; A-F or Audit; Periodic Spring)

Crime and criminal justice is a gendered phenomena. In this seminar course, we will examine the contribution of feminist theoretical work to the field of criminology and to our understanding of how gender prescriptives are embedded in and influence criminal behaviors, the operation of the criminal justice system, and our conceptualizations of both. In so doing, we will critically assess the experiences of women, men and transgender persons in the criminal justice system as victims,

offenders, and defendants. The readings are drawn from a broad range of interdisciplinary empirical works. Students should critically assess both the strengths and limitations of the research. Lecture will be accompanied by class discussion, film segments (as well as legal proceedings), and small group work. Soc 1001 or Soc 1101 recommended; Soc majors/minors must register A-F

SOC 4135. Sociology of White-Collar Crime. (3 cr. ; A-F or Audit; Periodic Spring)

This course deals with diverse types of white-collar crime (high status, occupational, organizational crimes), their causation, the damage they cause, and their control. We will read some of the outstanding literature on these issues and explore well-known cases in depth. There will be lectures and discussion in the classroom. We will explore what white-collar crime teaches us about the nature and explanation of crime and about the nature of criminal justice and other government social control. prereq: [SOC 3101 or SOC 3102 or instr consent]; soc majors/minors must register A-F

SOC 4135H. Honors: Sociology of White-Collar Crime. (; 3 cr. ; A-F only; Periodic Spring)

This course deals with diverse types of white-collar crime (high status, occupational, organizational crimes), their causation, the damage they cause, and their control. We will read some of the outstanding literature on these issues and explore well-known cases in depth. There will be lectures and discussion in the classroom. We will explore what white-collar crime teaches us about the nature and explanation of crime and about the nature of criminal justice and other government social control. Additional special assignments will be discussed with honors participants who seek to earn honors credit toward the end of our first class session. Examples of additional requirements may include: ? Honors students will be expected to interview a current Sociology graduate student working on a LCD topic. Following this, each student will individually be expected to do an in-class power point presentation explaining how the interviewees' research relates with themes presented in the course. Students will also be expected to meet as a group and individually with the professor four times during the course semester. ? Sign up and prepare 3-4 discussion questions in advance of at least one class session. ? Work with professor and TA on other small leadership tasks (class discussion, paper exchange, tour). ? Write two brief (1-page) reflection papers on current news, or a two-page critique of a class reading ? Attend a presentation, workshop, or seminar on a related topic for this class and write a 2 page maximum reflective paper. prereq: Honors, [SOC 3101 or SOC 3102 or instr consent]

SOC 4141. Youth Crime & Punishment. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

This course offers an overview of social theory and research on youth crime, punishment, and delinquency. We start by critically examining the social facts surrounding the measurement, extent, and distribution of delinquency.

Next, we study the principal sociological explanations of delinquent behavior. These theories provide conceptual tools for analyzing delinquency and punishment among groups such as gang members. We then trace youth experiences in the juvenile justice system, from policing, to juvenile court, to probation, and institutionalization. Throughout, we analyze the success or failure of key programs implemented in attempts to prevent or reduce delinquency. prereq: Soc 3101 or 3102 recommended; Sociology majors/minors must register A-F

SOC 4141H. Honors: Youth Crime & Punishment. (; 3 cr. ; A-F only; Periodic Fall & Spring)

This course offers an overview of social theory and research on youth crime, punishment, and delinquency. We start by critically examining the social facts surrounding the measurement, extent, and distribution of delinquency. Next, we study the principal sociological explanations of delinquent behavior. These theories provide conceptual tools for analyzing delinquency and punishment among groups such as gang members. We then trace youth experiences in the juvenile justice system, from policing, to juvenile court, to probation, and institutionalization. Throughout, we analyze the success or failure of key programs implemented in attempts to prevent or reduce delinquency. Additional special assignments will be discussed with honors participants who seek to earn honors credit toward the end of our first class session. Examples of additional requirements may include: ? Honors students will be expected to interview a current Sociology graduate student working on a LCD topic. Following this, each student will individually be expected to do an in-class power-point presentation explaining how the interviewees' research relates with themes presented in the course. Students will also be expected to meet as a group and individually with the professor four times during the course semester. ? Sign up and prepare 3-4 discussion questions in advance of at least one class session. ? Work with professor and TA on other small leadership tasks (class discussion, paper exchange, tour). ? Write two brief (1-page) reflection papers on current news, or a two-page critique of a class reading ? Attend a presentation, workshop, or seminar on a related topic for this class and write a 2-page maximum reflective paper. prereq: honors student, Soc 3101 or 3102 recommended; Sociology majors/minors must register A-F

SOC 4147. Sociology of Mental Health & Illness. (; 3 cr. ; A-F or Audit; Periodic Spring)

This course is designed to give you an overview of the ways a sociological perspective informs our understanding of mental health and illness. While sociologists, psychologists, psychiatrists, social workers, and others all deal with issues of mental illness, they often approach the topic in very different ways. In general, a sociological perspective tends to focus on aspects of the social environment that we often ignore, neglect, or take for granted. It calls attention to how society or groups are organized, who benefits or is hurt

by the way things are organized, and what beliefs shape our behaviors. In viewing mental illness, sociologists have primarily challenged dominant views of mental illness, examined how social relationships play a role in mental illness, questioned the goals and implications of mental health policy and researched how mental health services are organized and provided. prereq: Soc 1001 recommended, Soc majors/minors must register A-F

SOC 4161. Criminal Law in American Society. (3 cr.; A-F or Audit; Every Fall) Purposes of criminal law and of principles of criminal liability, justification, and excuse. Applications to law of criminal homicide, sexual assault, drugs, and crimes against property, public order, and morals. prereq: Soc 3101 or 3102 recommended; soc majors/minors must register A-F

SOC 4162. Criminal Procedure in American Society. (3 cr.; A-F or Audit; Every Spring) How constitutional democracy balances need to enforce criminal law and rights of individuals to be free of unnecessary government intrusion. prereq: Soc 3101 or 3102 recommended; soc majors/minors must register A-F

SOC 4171. Sociology of International Law: Human Rights & Trafficking. (GP; 3 cr.; A-F or Audit; Periodic Fall & Spring) This course takes a sociological approach to international law, considering how history, institutions, power, and interests shape the phenomenon. What is international law, where does it come from, and how does it work? What does international law tell us about globalization and nation-states? Does it make a difference in the world? Does it have a real impact on the day-to-day lives of individuals? When is it followed; when is it ignored? This course takes a broad sociological view of international law. We analyze the actors and processes that constitute international law and then focus on particular substantive areas, including human rights, economic development, environmental concerns, trafficking, and drug interdiction. prereqs: 1001 or 3101 or 3102 or instr consent; soc majors/minors must register A-F

SOC 4190. Topics in Sociology With Law, Criminology, and Justice Emphasis. (3 cr. [max 6 cr.]; Student Option; Periodic Fall, Spring & Summer) Topics specified in Class Schedule. prereq: [1001, [3101 or 3102]] recommended; soc majors/minors must register A-F; cr will not be granted if cr has been received for the same topics title

SOC 4243W. Brewing Society: Alcohol & Social Life. (WI; 3 cr.; A-F or Audit; Periodic Fall) What does our relationship with drink have to tell us about contemporary society and our own lives? The history of alcoholic drink is entwined with the history of human society itself. We use drinking as a window through which we can better understand roles, relationships, social boundaries, and cultural change. We bring sociological perspectives to bear on alcohol advertising, campus drinking, and more. There

are reasons why alcoholic beverages have played a role in almost all human societies. Social barriers can be lowered, new friendships made, and old relationships reestablished when people get together over a drink. Cultural and political battles about alcohol can also be a way to see social divisions, power struggles, and hierarchies. And of course, drinking can be a route to all sorts of bad behavior and social problems too. We look at all of this, first in historical and cross-cultural perspective and then focusing on our own contemporary society. Pre-req: Soc 1001 recommended, Soc majors must register A-F

SOC 4246. Sociology of Health and Illness. (3 cr.; A-F or Audit; Periodic Spring) This course is an introduction to the importance of health and illness in people's lives, how social structures impact who gets sick, how they are treated, and how the delivery of health care is organized. By the end of the course you will be familiar with the major issues in the sociology of health and illness, and understand that health and illness are not just biological processes, but profoundly shaped by the organization of society. prereq: One sociology course recommended; soph or above; soc majors/minors must register A-F

SOC 4305. Environment & Society: An Enduring Conflict. (ENV; 3 cr.; A-F or Audit; Every Fall) Examines the interaction between human society and the natural environment, focusing on the contemporary and global situation. Takes the perspective of environmental sociology concerning the short-range profit-driven and ideological causes of ecological destruction. Investigates how society is reacting to that increasing destruction prereq: 1001 recommended or a course on the environment, soc majors/minors must register A-F

SOC 4309. Religion in American Public Life: Culture, Politics, & Communities. (CIV; 3 cr.; A-F or Audit; Periodic Fall & Spring) How diversity/vitality of American religion shape public life. How religious groups engage in political action, foster understandings of democracy/styles of civic participation. Volunteering/service activities. Race, poverty, the family, sexuality. prereq: Soc majors/minors must register A-F

SOC 4309H. Honors Religion in American Public Life - Culture, Politics, & Communities. (CIV; 3 cr.; A-F only; Periodic Fall & Spring) How diversity/vitality of American religion shape public life. How religious groups engage in political action, foster understandings of democracy/styles of civic participation. Volunteering/service activities. Race, poverty, family, sexuality. Additional special assignments will be discussed with honors participants who seek to earn honors credit toward the end of our first class session. Students will also be expected to meet as a group and individually with the professor four times during the course semester. Examples of additional requirements may include: ? Sign up and prepare 3-4 discussion questions

in advance of at least one class session. ? Work with professor and TA on other small leadership tasks (class discussion, paper exchange, tour). ? Write two brief (1-page) reflection papers on current news, or a two-page critique of a class reading ? Attend a presentation, workshop, or seminar on a related topic for this class and write a 2 page maximum reflective paper. ? Interview a current Sociology graduate student and present briefly in class or write a reflective piece, not more than 2 pages in length, to be submitted to the Professor.

SOC 4311. Power, Justice & the Environment. (DSJ; 3 cr.; A-F or Audit; Periodic Spring) This course introduces students to the theoretical and historical foundations of environmental racism and environmental inequality more broadly. We will examine and interrogate both the social scientific evidence concerning these phenomena and the efforts by community residents, activists, workers, and governments to combat it. We will consider the social forces that create environmental inequalities so that we may understand their causes, consequences, and the possibilities for achieving environmental justice prereq: SOC 1001 recommended

SOC 4315. Never Again! Memory & Politics after Genocide. (GP; 3 cr.; A-F or Audit; Spring Odd Year) Course focuses on the social repercussions and political consequences of large-scale political violence, such as genocide, war crimes, and crimes against humanity. Students learn how communities and states balance the demands for justice and memory with the need for peace and reconciliation and addresses cases from around the globe and different historical settings. prereq: SOC 1001 or 1011V recommended, A-F required for Majors/Minors.

SOC 4319. ?Jews will not replace us!? Global Antisemitism from its Origins to the Present. (3 cr.; A-F or Audit; Periodic Fall & Spring) This course will explore the topic of antisemitism, its history and cultural logic, and the relation to other forms of exclusion tied to race, religion, and citizenship in modern times. Starting with the history of Jewish emancipation in Europe and the subsequent debates about the ?Jewish Question,? students will learn to identify the key features of political antisemitism and the ways that antisemitism has been explained by different social theories, including Marxism, Functionalism, and Critical theory. The course will examine the differences and continuities between older theological forms of anti-Judaism and modern antisemitism, the connections between antisemitism, nativism, and xenophobia in the US and globally, and engage with current debates regarding the correlation between anti-Zionism and antisemitism. We will also explore Jewish social, political, and ideological responses to antisemitism in Europe and the US, from the Holocaust to the present. Pre-reqs: sophomore or above; Soc 3701 recommended; soc majors/minors must register A-F

SOC 4321. Globalize This! Understanding Globalization through Sociology. (GP; 3 cr. ; A-F or Audit; Periodic Fall)

From the city streets of Bangalore to the high plateaus of La Paz to the trading floors of New York City, people from around the world are becoming increasingly interdependent, creating new and revitalizing old forms of power and opportunity, exploitation and politics, social organizing and social justice. This course offers an overview of the processes that are forcing and encouraging people's lives to intertwine economically, politically, and culturally. prereq: Soc majors/minors must register A-F

SOC 4411. Terrorist Networks & Counterterror Organizations. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

Terror involves using violent actions to achieve political, religious, or social goals. This course examines theories and evidence about the origins, development, and consequences of terrorist networks. It analyzes efforts to prevent, investigate, and punish terrorists by counterterror organizations, including law enforcement, security, and military forces. Graduate and honors students are expected to demonstrate greater depth of discussion, depth and, to a degree, length of writing assignments, presentations, and leadership of the students. Prereq: Sociology majors/minors must register A-F

SOC 4411H. Honors: Terrorist Networks & Counterterror Organizations. (; 3 cr. ; A-F only; Periodic Fall & Spring)

Terror involves using violent actions to achieve political, religious, or social goals. This course examines theories and evidence about the origins, development, and consequences of terrorist networks. It analyzes efforts to prevent, investigate, and punish terrorists by counterterror organizations, including law enforcement, security, and military forces. Graduate and honors students are expected to demonstrate greater depth of discussion, depth and, to a degree, length of writing assignments, presentations, and leadership of the students. Honors students registering for Soc 4411H: Additional special assignments will be discussed with honors participants who seek to earn honors credit toward the end of our first class session. Students will also be expected to meet as a group and individually with the professor four times during the course semester. Examples of additional requirements may include: ? Sign up and prepare 3-4 discussion questions in advance of at least one class session. ? Work with professor and TA on other small leadership tasks (class discussion, paper exchange, tour). ? Write two brief (1-page) reflection papers on current news or a two-page critique of a class reading ? Attend a presentation, workshop, or seminar on a related topic for this class and write a 2-page maximum reflective paper. ? Interview a current Sociology graduate student and present briefly in class or write a reflective piece, not more than 2 pages in length, to be submitted to the Professor. Prereq: Honors

SOC 4451. Sport, Culture & Society. (3 cr. ; A-F or Audit; Periodic Fall)

This course is intended to stimulate critical, sociological thinking about sport? how it is socially organized, who participates in what and why, what role (or roles) sport plays in society, and what sporting practices tell us about contemporary social life more generally. It begins from and is grounded in the notion that sport is one of the most powerful and paradoxical institutions in the modern world. The course is intended for a wide range of undergraduates, though some familiarity with basic social scientific thinking and techniques will be helpful. prereq: SOC 1001 recommended, Sociology majors/minors must register A-F

SOC 4461. Sociology of Ethnic and Racial Conflict. (DSJ; 3 cr. ; A-F or Audit; Periodic Fall)

We will examine conceptual and theoretical approaches to the sociological study of ethnic and racial conflict around the globe, looking at ethnicity and race as distinctive but overlapping social constructions of collective identity that underpin patterns of social conflict and systems of power and privilege. We will also explore the difference between race and ethnicity, the various ways in which racial, ethnic, and national identities are constructed in different countries, individual versus group approaches to the study of prejudice and discrimination, and the racialization of ethnic and religious groups prereq: 1001 recommended; soc majors/minors must register A-F

SOC 4511. Sociology of Children & Youth. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

This course examines the lives of youth in today's society. It explores the influence of social contexts, institutions, social structures, and social location (e.g. social class, race, gender) on youth experiences and differential opportunities and outcomes. The course also considers how youth act as agents in their own lives and shape their social worlds and society. Additionally, the course looks at some of the problems or challenges that contemporary children, adolescents, and young adults encounter, and considers social policies and interventions aimed to address these and support young people. prereq: 1001 recommended, soc majors/minors must register A-F

SOC 4521. Love, Sex, & Marriage. (3 cr. ; A-F or Audit; Periodic Fall)

This course will provide an overview of sociological approaches to intimate human relationships. What can sociology and related disciplines tell us about these seemingly intensely personal subjects? More than you might think! Specific topics we will cover include love and romance, dating and mate selection, sexuality, cohabitation, marriage, and divorce. The focus is on contemporary American society, but current U.S. practices are placed in historical and cross-cultural context. prereq: [1001 or instr consent], soc majors/minors must register A-F

SOC 4521H. Honors: Love, Sex, & Marriage. (; 3 cr. ; A-F only; Periodic Fall)

This course will provide an overview of sociological approaches to intimate human

relationships. What can sociology and related disciplines tell us about these seemingly intensely personal subjects? More than you might think! Specific topics we will cover include love and romance, dating and mate selection, sexuality, cohabitation, marriage, and divorce. The focus is on contemporary American society, but current U.S. practices are placed in historical and cross-cultural context. Honors students registering for Soc 4521H: Additional special assignments will be discussed with honors participants who seek to earn honors credit toward the end of our first class session. Students will also be expected to meet as a group and individually with the professor four times during the course semester. Examples of additional requirements may include: - Sign up and prepare 3-4 discussion questions in advance of at least one class session. - Work with professor and TA on other small leadership tasks (class discussion, paper exchange, tour). - Write two brief (1-page) reflection papers on current news or a two-page critique of a class reading - Attend a presentation, workshop, or seminar on a related topic for this class and write a 2-page maximum reflective paper. - Interview a current sociology graduate student and present briefly in class or write a reflective piece, not more than 2 pages in length, to be submitted to the professor. prereq: Honors

SOC 4551. Sociology of Sexualities. (DSJ,SOCS; 3 cr. ; A-F or Audit; Periodic Spring)

In this course we will examine social theories and sociological research on the topic of sexuality. We will explore the concept of sexuality as it intersects with race, gender, age, and class. This course is designed to give you a basic understanding of sociological implications of sexuality in the United States. This course is intended to help you develop your analytical and critical thinking skills. You will be asked to move beyond your own experience and perspectives to sociologically analyze and evaluate over-simplified explanations of past and contemporary issues as they appear in our course readings. Prereq: Sociology majors/minors must register A-F

SOC 4551H. Honors: Sociology of Sexualities. (DSJ,SOCS; 3 cr. ; A-F only; Periodic Spring)

In this course we will examine social theories and sociological research on the topic of sexuality. We will explore the concept of sexuality as it intersects with race, gender, age, and class. This course is designed to give you a basic understanding of sociological implications of sexuality in the United States. This course is intended to help you develop your analytical and critical thinking skills. You will be asked to move beyond your own experience and perspectives to sociologically analyze and evaluate over-simplified explanations of past and contemporary issues as they appear in our course readings. Additional special assignments will be discussed with honors participants who seek to earn honors credit toward the end of our first class session. Students will also be expected to meet as a group and individually

with the professor four times during the course semester. Examples of additional requirements may include: ? Sign up and prepare 3-4 discussion questions in advance of at least one class session. ? Work with professor and TA on other small leadership tasks (class discussion, paper exchange, tour). ? Write two brief (1-page) reflection papers on current news, or a two-page critique of a class reading ? Attend a presentation, workshop, or seminar on a related topic for this class and write a 2 page maximum reflective paper. ? Interview a current Sociology graduate student and present briefly in class or write a reflective piece, not more than 2 pages in length, to be submitted to the Professor. prereq: Honors

SOC 4703. A Nation Divided: Identity, Precarity, & Polarization. (CIV; 3 cr. ; Student Option; Periodic Fall)

This course explores how individuals and groups experience and understand current economic and political polarization in their daily lives. Our explorations will roam across changes in media and popular culture, work, religion, family, and social movements. prereq: 1001 recommended, soc majors/minors must register A-F

SOC 4821. Measuring the Social World: Concepts and Analysis. (3 cr. ; A-F only; Periodic Spring)

In this course, you will develop practical social science data analysis skills for use in the non-profit or corporate workplace or in a graduate program of research. You will assess the measurement of important social concepts, like race, health, or education, in large social surveys, and the strengths and weaknesses of those different measurement techniques. You will conduct data analysis on large datasets (see, e.g., www.ipums.org) using a statistical software program, such as STATA. You will develop a substantive, empirical final project (poster and paper) based on your analysis. prereq: SOC 3801 or equiv, and SOC 3811 or equivalent

SOC 4881. Population Studies Research Practicum. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

Students enrolled in this course will gain hands-on experience with population studies research by (1) working under the mentorship of an individual researcher or a research team at the Minnesota Population Center (MPC) and (2) attending and reflecting in writing on MPC's weekly research seminar. In addition, students in the course will meet weekly with the instructor to discuss their research experiences and to develop and present a final research poster.

SOC 4966W. Capstone Experience: Seminar. (WI; 3 cr. [max 4 cr.]; A-F only; Every Fall & Spring)

This course is designed to: a) provide students with an opportunity to reflect on what they have learned as a sociology major; b) use that knowledge to write a sociological analyses - often based on community service learning; and c) think about how the knowledge, skills, and insights of the sociological enterprise can be used and applied outside of the

University. Through this course sociology majors will emphasize the relationship between a sociological perspective and critical thinking, effective communication, and meaningful civic engagement. This class is the final step in the sociology undergraduate major. prereq: 1001, 3701, 3801, 3811, 12 cr upper div sociology, dept consent

SOC 4977V. Senior Honors Proseminar I. (WI; 3 cr. ; A-F or Audit; Every Fall)

Exploring contemporary research for senior thesis. Guidance in defining a problem and reviewing prior theory/research. Presentation/discussion with faculty researchers. prereq: 3701, 3801, 3811, 9 additional upper div sociology cr, sr soc honors major, dept consent

SOC 4978V. Honors Capstone Experience: Proseminar II. (WI; 3 cr. [max 4 cr.]; A-F only; Every Spring)

This is the second course in the two-course Honors Capstone Experience. In Soc 4978V, students will complete their data collection and analysis while the focus of the seminar turns to scholarly writing, and particularly to drafting and refining arguments. The Department of Sociology does not make any initial distinction between Honors students who are seeking cum laude, magna cum laude, or summa cum laude levels of Latin Honors. Instead, our focus is on helping students to develop ambitious and high-quality original research papers of which they can be justifiably proud and which can serve as testaments to their abilities. The Department of Sociology's approach is to support every Honors student as they plan and conduct summa-level work. The ultimate recommendation for level of latin honors is made by the committee at the time of the thesis defense. In addition to the Honors thesis requirements, the recommendation for summa-level honors is reserved for the papers that demonstrate the following criteria: - Tight integration between a clearly defined question or thesis and the research presented; - Ambitious original research design, with research completed on time and analyzed appropriately; - Integration of ongoing conversations in the research literature into the design and analysis of the data gathered; - Powerful and precise prose which weaves together evidence and argument and which is attentive to both the lessons and limits of the data. Students will do an Oral Defense and participate in a panel presentation at the spring Sociological Research Institute (SRI). The Sociology Department requires completion of Soc 4977V/4978V to graduate with Latin Honors. prereq: 1001/1011V, 3701, 3801, 3811, 4977V, and at least 12 upper-division SOC credits; Sociology honors major & department consent

SOC 4994W. Capstone Experience: Directed Research (1 cr.). (WI; 1 cr. ; A-F only; Every Fall & Spring)

Guided individual research for the sociology major's Capstone requirement, conducted in conjunction with enrollment in an upper division sociology elective. This is designed to: a) provide students with an opportunity to reflect on what they have learned as a sociology major; b) use that knowledge to write

a sociological analyses; and c) think about how the knowledge, skills, and insights of the sociological enterprise can be used and applied outside of the University. Through this one:one capstone experience, using the structure and foundation of the 6th Sociology elective, majors will emphasize the relationship between a sociological perspective and the emphasis of the course. The final paper created for 4994W is in addition to the other 6th Sociology elective course requirements. prereq: 1001/1011V, 3701, 3801, 3811, and at least 12 cr upper div sociology electives; dept & instructor consent. Students are only authorized to register for Soc 4994W in conjunction with a 6th Sociology Elective.

SOC 5090. Topics in Sociology. (; 1-3 cr. [max 9 cr.]; Student Option; Periodic Spring) Topics specified in Class Schedule. prereq: Undergrad soc majors/minors must register A-F

SOC 5101. Sociology of Law. (3 cr. ; A-F or Audit; Every Fall & Spring)

This course will consider the relationship between law and society, analyzing law as an expression of cultural values, a reflection of social and political structure, and an instrument of social control and social change. Emphasizing a comparative perspective, we begin by discussing theories about law and legal institutions. We then turn our attention to the legal process and legal actors, focusing on the impact of law, courts, and lawyers on the rights of individuals. Although this course focuses on the U.S. legal system, we will explore issues of the relationship between U.S. law and global law and concepts of justice. prereq: graduate student

SOC 5104. Crime and Human Rights. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

This course addresses serious violations of humanitarian and human rights law, efforts to criminalize those violations (laws and institutions), and consequences of these efforts. Special attention will be paid to the impact interventions have on representations and memories of atrocities on responses and the future of cycles of violence. Case studies on Holocaust, Balkan wars, Darfur, My Lai massacre, etc. Criminal justice, truth commissions, vetting, compensation programs. prereq: at least one 3xxx SOC course recommended

SOC 5171. Sociology of International Law: Human Rights & Trafficking. (GP; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

This course takes a sociological approach to international law, considering how history, institutions, power, and interests shape the phenomenon. What is international law, where does it come from, and how does it work? What does international law tell us about globalization and nation-states? Does it make a difference in the world? Does it have a real impact on the day-to-day lives of individuals? When is it followed; when is it ignored? This course takes a broad sociological view of international law. We analyze the actors and processes that constitute international law and then focus on particular substantive areas, including human rights, economic

development, environmental concerns, trafficking, and drug interdiction. prereqs: Graduate student or instructor consent

SOC 5221. Sociology of Gender. (3 cr. ; A-F or Audit; Periodic Spring)

Gender is something so fundamental to our lives, to our identities, and how we interact with others that we often take it for granted. However, understandings of gender vary across time and place, and even within cultures, making it clear that our understandings of gender are not universal or timeless. In this class, we will examine how gender intersects with race and sexuality, as well as how it impacts areas of our lives such as child socialization, family structure, the media, intimate relationships, and the workplace.

SOC 5315. Never Again! Memory & Politics after Genocide. (GP; 3 cr. ; A-F or Audit; Spring Odd Year)

Course focuses on the social repercussions and political consequences of large-scale political violence, such as genocide, war crimes, and crimes against humanity. Students learn how communities and states balance the demands for justice and memory with the need for peace and reconciliation and addresses cases from around the globe and different historical settings. prereq: SOC 1001 or 1011V recommended, A-F required for Majors/Minors.

SOC 5411. Terrorist Networks & Counterterror Organizations. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

Theories/evidence about origins, development, and consequences of terrorist networks. Efforts to prevent, investigate, and punish terrorists by use of law enforcement, security, and military forces. Terror involves using violent actions to achieve political, religious, or social goals. This course examines theories and evidence about the origins, development, and consequences of terrorist networks. It analyzes efforts to prevent, investigate, and punish terrorists by counterterror organizations, including law enforcement, security, and military forces. Graduate and honors students are expected to demonstrate greater depth of discussion, depth and to a degree length of writing assignments, presentations, and leadership of the students. Prereq: Sociology Major/Minors must register A-F

SOC 5446. Comparing Healthcare Systems. (GP; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Examination of national health systems from an international comparative perspective, emphasizing social, organizational, political, economic, cultural, and ethical dimensions of healthcare policies and programs to deliver services and their impacts on the health of population groups. The comparative approach will enable students to acquire a better understanding of the problems and potential for reforming and improving U.S. health care delivery. Students enrolled in Soc 5446 (graduate level) are expected to demonstrate greater depth of discussion, depth and to a degree length of writing assignments, presentations, and leadership of the students. prereq: Soc majors/minors must register A-F

SOC 5455. Sociology of Education. (; 3 cr. ; Student Option; Every Fall)

Structures and processes within educational institutions. Links between educational organizations and their social contexts, particularly as these relate to educational change. prereq: 1001 or equiv or instr consent; soc majors/minors must register A-F

SOC 5811. Social Statistics for Graduate Students. (3 cr. ; Student Option; Every Fall)

In this course, students will learn core statistical and computations principles that will allow them to perform quantitative analyses using social data. The course is designed for social science students at the beginning of their graduate school careers. However, advanced undergraduates can take the course, which will involve a few modifications to the assignment schedule. Sociology 5811 will review basic probability, and then move on to univariate inference, the linear regression model, and introductory lessons of causal inference. In doing so, students will explore statistical concepts and methods that provide the foundation sociologists use to most commonly collect and analyze numerical evidence. Sociology 5811 will also provide the foundation for data management and statistical inference using Stata, a statistical computing environment that is popular in the social sciences. prereq: Undergraduate students are expected to have familiarity with the materials taught in the equivalent of 3811. Students who are unsure of the course requirements should contact the instructor. Undergraduates with a strong math background are encouraged to register for 5811 in lieu of 3811. Soc majors must register A-F. 5811 is a good social statistics foundation course for MA students from other programs. 5811 will not count for credits towards the Soc PhD program requirements.

Software Engineering (SENG)

SENG 5115. Graphical User Interface Design, Evaluation, and Implementation.

(; 2 cr. [max 3 cr.]; A-F or Audit; Every Fall & Spring)

Design and evaluation of interactive application interfaces, user- and task-centered approaches to design, guidelines for graphical design, interface evaluation techniques, current interface trends, including web interfaces and information visualization. Group projects that include designing, prototyping, and implementing an application interface. prereq: Grad SEng major

SENG 5116. Graphical User Interface

Toolkits. (; 2-3 cr. ; A-F or Audit; Periodic Fall)

Toolkit-centered introduction to GUI implementation technology. Students learn to use a GUI toolkit to implement a graphical application. Introduction to advanced techniques, including constraint-based data management, 3D visualization tools, and toolkit structure and design. prereq: Grad SEng major

SENG 5130. Introduction to Internet of Things: Systems-Level Design and

Experimentation. (3 cr. ; A-F or Audit; Every Spring)

Project-based examples from modern "Internet of Things" (IoT) systems. Hands-on experiments with core wireless hardware, sensors, and software elements. Students will gain the practical system-level skills and understandings able to be applied to any IoT system, and walk away with an IoT project created themselves. There will be discussions and team-centric activities focused on market trends, ground-breaking tech and products, security, communication protocols, and exciting emerging technologies related to IoT including machine learning, artificial intelligence, and augmented reality.

SENG 5131. Distributed Application Design and Development. (; 3 cr. ; A-F or Audit; Every Spring)

Java programming, concurrent programming, workflow, distributed database, security, collaborative computing, object-oriented architecture/design, network publishing, messaging architecture, distributed object computing, and intranet. prereq: Grad SEng major

SENG 5132. Web Application Development. (3 cr. ; A-F or Audit; Every Spring)

This course is an in-depth discussion of the challenges and complexities involved in designing and implementing modern web applications. Students will gain experience designing and implementing a project during in the course of the semester.

SENG 5133. Cloud Computing - Leading Technical Change. (3 cr. ; A-F only; Periodic Spring)

Today most organizations make use of the "Cloud" in some way and it is, understandably, changing the way we architect our systems. But there is confusion around cloud native, 12 factors, modular monoliths, serverless, etc. How does a busy technologist make sense of it all? In this course, using cloud computing as a lens, we will explore the broader impact of technology change. We discuss how a technology radar can help a technologist stay marketable as well as to help an organization stay informed of important changes in the technology landscape. Expected topics: Docker; Kubernetes; Google Kubernetes Engine, Amazon EKS, Amazon Fargate; Cloud Foundry; Functions as a service; Amazon Lambda, Google Cloud Functions, Azure. This course will consist of discussion, hands on assignments, papers, presentations, and use of sample applications.

SENG 5199. Topics in Software Engineering. (; 2-3 cr. [max 6 cr.]; A-F or Audit; Every Spring)

Topics specified in Class Schedule. prereq: SEng grad student

SENG 5271. Cybersecurity. (3 cr. ; A-F or Audit; Every Spring)

This course introduces the major topics of cyber security. Class time will focus on demonstrations, exercises, mini-projects, and discussions. Topics include authentication, access control, file system forensics, symmetric and asymmetric cryptography, network monitoring and controls, dynamic web site attacks, and network cryptography.

SENG 5511. Artificial Intelligence. (; 2-3 cr. ; A-F or Audit; Periodic Spring)

Introduces ideas and theories of AI. Problem solving, search, inference techniques. Logic and theorem proving. Knowledge representation, rules, frames, semantic networks. Planning and scheduling. Introduces Lisp programming language. prereq: Grad SEng major

SENG 5551. Introduction to Intelligent Robotic Systems. (; 3 cr. ; A-F or Audit; Periodic Fall)

Transformations, kinematics and inverse kinematics, dynamics, and control. Sensing (robot vision, force control, tactile sensing), applications of sensor-based robot control, robot programming, mobile robotics, and micro-robotics. prereq: Grad SEng major

SENG 5707. The Principles of Database Systems. (; 3 cr. ; A-F or Audit; Every Fall)

Fundamental concepts; representing instances; prototypic model shapes; model evolution; interviewing user skills, reverse engineering; mapping to DBMS schema; database querying. prereq: Grad SEng major

SENG 5708. Data Analytics. (; 2-3 cr. ; A-F or Audit; Every Spring)

Applications/motivation. Extended relational, object-relational, and object-oriented data models. Object identifier, types/constructors. Versions, schema evolution. Query language (e.g., recursion, path expressions). Object indices, buffer management, and other implementation issues. Triggers, rules, complex objects, and case studies. prereq: Grad SEng major

SENG 5709. Big Data Engineering and Analytics. (3 cr. ; A-F or Audit; Every Spring)

This course aims to teach students how to evaluate and engineer solutions that traditional data systems cannot handle, as well as various real-world use cases related to big data problems. This course will integrate theory and hands-on learning of various big data systems like NoSQL, streaming architectures, along with popular industry tools for scalable analytics. The focus of the course is largely around big data engineering, with some coverage of data science and analytics.

SENG 5801. Software Engineering I: Overview, Requirements, and Modeling. (; 3 cr. ; A-F or Audit; Every Fall)

Software engineering as a discipline. Preview of topics to be covered in subsequent courses in master of science in software engineering program; in-depth study of requirements engineering; modeling techniques applicable to requirements and specification, including UML and formal modeling. prereq: Grad SEng major

SENG 5802. Software Engineering II: Software Design. (; 3 cr. ; A-F or Audit; Every Spring)

Software design quality, processes that produce quality design, graphical and textual representations, including UML, common problems and patterns that solve them, refactoring. Students develop fluency in object-oriented design, and ability to read, critique, and advocate design ideas. Students work

in teams to complete a multiphase project. prereq: Grad SEng major

SENG 5811. Software Testing and Verification. (; 3 cr. ; A-F or Audit; Every Spring)

Theoretical/practical aspects of testing software. Analyzing a requirements document for test conditions. Writing a test plan. Designing, creating, and executing test cases. Recording defects. Writing a test report. prereq: 5801, grad SEng major

SENG 5831. Software Development for Real-Time Systems. (; 2-3 cr. ; A-F or Audit; Periodic Fall)

Analysis, design, verification, and validation of real-time systems. Periodic, aperiodic, and sporadic processes, scheduling theory. Pragmatic issues. prereq: Grad SEng major

SENG 5841. Model-based Development. (; 3 cr. ; A-F or Audit; Every Spring)

Formal specification of software artifacts. Applicability of formal specifications. Methods such as Z, SCR, and Satecharts. Formal analysis. Theorem proving. Reachability analysis. Model checking. Tools such as PVS, StateMate, SPIN, and SMV. prereq: Grad SEng major

SENG 5851. Software Project Management. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Concepts used to manage software projects. Project management cycle: initiation, planning/control, status reporting, review, post-project analysis. Leadership and motivation strategies. Lecture, discussion, individual/team presentations/projects. prereq: Grad SEng major

SENG 5852. Quality Assurance and Process Improvement. (; 2 cr. [max 3 cr.] ; A-F or Audit; Every Fall & Spring)

Theory and application of capability maturity model: process assessment, modeling, and improvement techniques. Life cycle issues related to development and maintenance; quality, safety, and security assurance; project management; and automated support environments. Group projects and case studies. prereq: Grad SEng major

SENG 5861. Introduction to Software Architecture. (; 3 cr. ; A-F or Audit; Periodic Fall)

Software/systems architecture. Representation/design, how they fit into software engineering process. Description of architectures, including representation and quality attributes. prereq: 2nd year, MSSE grad student

SENG 5899. Software Engineering Seminar. (; 1 cr. [max 2 cr.] ; Student Option; Every Fall)

Software engineering trends. Talks by invited speakers, selected readings. prereq: Grad SEng major, instr consent

SENG 5900. Directed Study. (; 1-3 cr. ; Student Option; Every Fall & Spring)

Directed study/research in software engineering. Topics/scope decided in collaboration with instructor.

SOIL 2125. Basic Soil Science. (ENV,PHYS; 4 cr. ; A-F or Audit; Every Fall & Spring)

Basic physical, chemical, and biological properties of soil. Soil genesis classification, principles of soil fertility. Use of soil survey information to make a land-use plan. WWW used for lab preparation information. prereq: [CHEM 1015, CHEM 1017] or CHEM 1021 or equiv

SOIL 2601. The Social Life of Soil. (ENV; 3 cr. ; Student Option; Every Fall)

Soil microorganisms can either promote plant health or wage chemical warfare. And alliances can turn on a dime. Learn about this fascinating dog-eat-dog world and how we can support a rich soil ecosystem that benefits plants and humans.

SOIL 3416. Plant Nutrients in the Environment. (; 3 cr. ; Student Option; Every Spring)

Fundamental concepts in soil fertility and plant nutrition. Discuss dynamics of mineral elements in soil, plants, and the environment. Evaluation, interpretation, and correction of plant nutrient problems. prereq: SOIL 2125

SOIL 3521. Soil Judging. (; 1 cr. [max 3 cr.] ; A-F or Audit; Every Fall)

A field-based course which requires students to apply fundamental knowledge obtained from Basic Soil Science and Field Study of Soils to the description of soils in the field. This course includes an inter-collegiate Soil Judging contest that takes during the course of the class. prereq: An introductory soils course and field studies course.

SOIL 3993. Directed Study. (; 1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: Department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements

SOIL 3994. Directed Research. (; 1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: Department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

SOIL 4111. Introduction to Precision Agriculture. (; 3 cr. ; A-F or Audit; Every Spring)

Soil, Water, and Climate (SOIL)

Soil, landscape, and crop spatial variability. GIS, DEM, GPS technologies. Variable rate machinery, PA software, remote sensing. Geostatistics, sampling, experimental designs. Precision integrated crop management. Data acquisition, processing, and management. Socio-economical and e-marketing aspects. prereq: Basic sciences, statistics, soil, agronomy

SOIL 4511. Field Study of Soils. (; 2 cr. ; A-F or Audit; Every Summer)

Learn to write soil profile descriptions in the field. Class requires hands-on experience to determine soil texture, color, and horizon designations in the field. prereq: 2125

SOIL 5125. Soil Science for Teachers and Professionals. (; 4 cr. ; Student Option; Every Fall & Spring)

Basic physical, chemical, and biological properties of soil. Soil genesis classification, principles of soil fertility. Use of soil survey information to make a land-use plan. WWW used for lab preparation information.

SOIL 5232. Vadose Zone Hydrology. (; 3 cr. ; Student Option; Every Fall)

Basic soil physical properties/processes governing transport of mass/energy in soils. Emphasizes water/solute transport through unsaturated root/vadose zones, their impact on subsurface hydrology and on water quality. Lectures, hands-on laboratory exercises, discussion of real world problems, problem solving. prereq: [Math 1271 or equiv], [Phys 1042 or equiv]

SOIL 5555. Wetland Soils. (; 3 cr. ; A-F or Audit; Every Fall)

Morphology, chemistry, hydrology, formation of mineral/organic soils in wet environments. Soil morphological indicators of wet conditions, field techniques of identifying hydric soils for wetland delineations. Peatlands. Wetland benefits, preservation, regulation, mitigation. Field trips, lab, field hydric soil delineation project. prereq: SOIL 1125 or 2125 or equiv or instr consent; concurrent registration is required (or allowed) in SOIL 4511 recommended

SOIL 5611. Soil Biology and Fertility. (; 4 cr. ; Student Option; Every Fall)

Properties of microorganisms that impact soil fertility, structure, and quality. Nutrient requirements of microbes and plants, and mineral transformations in biogeochemical cycling. Symbiotic plant/microbe associations and their role in sustainable agricultural production. Biodegradation of pollutants and bioremediation approaches. prereq: Biol 1009 or equiv, Chem 1021 or equiv; Soil 2125 recommended

SOIL 5993. Directed Study. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed

study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

SOIL 5994. Directed Research. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

Somali (SMLI)

SMLI 1221. Beginning Somali. (; 5 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Comprehension, speaking, reading, writing.

SMLI 1222. Beginning Somali II. (; 5 cr. ; A-F only; Every Fall, Spring & Summer)
Comprehension, speaking, reading, writing. prereq: 1221

SMLI 1225. Accelerated Beginning Somali I. (; 5 cr. ; A-F only; Every Fall & Spring)
Review of grammar/usage, practice in reading/writing. Introduction to Somali literature and formal writing. Topics in Somali culture. prereq: EPT Placement of SMLI 1225 and ability in basic spoken Somali

SMLI 1226. Accelerated Beginning Somali II. (; 5 cr. ; A-F only; Every Fall & Spring)
Review of grammar/usages, practice in reading/writing. Introduction to Somali literature and formal writing. Topics in Somali culture. prereq: 1225 or instr consent

SMLI 3227. Intermediate Somali I. (; 5 cr. ; A-F only; Every Fall)
Intermediate level Somali language for undergraduate students. prereq: SMLI 1222

SMLI 3228. Intermediate Somali II. (; 5 cr. ; Student Option; Every Spring)
Intermediate Somali language for undergraduate students.

SMLI 4227. Intermediate Somali for Graduate Research I. (5 cr. ; A-F only; Every Fall)
Intermediate Somali language for graduate students.

SMLI 4228. Intermediate Somali for Graduate Research II. (; 5 cr. ; A-F only; Every Spring)
Intermediate Somali II for graduate students.

Spanish (SPAN)

SPAN 1001. Beginning Spanish. (; 5 cr. ; Student Option No Audit; Every Fall)
Listening, speaking, reading, writing. Emphasizes development of communicative competence. Cultural readings. prereq: Less

than 2 yrs of high school Spanish and/or three or more years away from Spanish language study; and dept consent

SPAN 1002. Beginning Spanish. (; 5 cr. ; Student Option No Audit; Every Spring)
Listening, speaking, reading, writing. Emphasizes development of communicative competence. Cultural readings. prereq: A grade of C- or better in SPAN 1001 completed at UMNTC, and dept consent

SPAN 1003. Intermediate Spanish. (; 5 cr. ; Student Option No Audit; Every Fall, Spring & Summer)
Speaking/comprehension. Developing reading/writing skills based on materials from Spain/Spanish America. Grammar review. Compositions, oral presentations. prereq: A grade of C- or better in SPAN 1002 or SPAN 1022 or EPT placement of SPAN 1003

SPAN 1004. Intermediate Spanish. (; 5 cr. ; Student Option No Audit; Every Fall, Spring & Summer)
Speaking/comprehension. Developing reading/writing skills based on materials from Spain/Spanish America. Grammar review. Compositions, oral presentations. prereq: A Grade of C- or better in SPAN 1003 or EPT placement of SPAN 1004

SPAN 1014. Business Spanish. (; 5 cr. ; Student Option; Every Fall, Spring & Summer)
Vocabulary, report writing skills. Proper format for business communications. Conversational fluency on trade-related topics. prereq: 1003

SPAN 1022. Alternate Second-Semester Spanish. (; 5 cr. ; Student Option No Audit; Every Fall & Spring)
For students who have studied Spanish in high school or at community college, or who are transfer students. Begins with accelerated review of 1001 followed by material covered in 1002. prereq: Placement above 1001 (Span 1022 is designed for students who have had two or more years of high school Spanish, or one semester of college Spanish).

SPAN 1044. Intermediate Medical Spanish. (5 cr. ; Student Option; Every Fall & Spring)
Language needed by health-care workers who interact with Spanish-speaking patients. Basic medical vocabulary, questions/answers in common medical situations. Vocabulary/phrases to conduct patient interviews and physical exams. Readings on Latin American view of health and health care. prereq: 1003 or equiv

SPAN 1912. Plague, Pestilence, and Pandemic in Modern Iberian and Latin American Literature. (; 3 cr. ; A-F only; Periodic Fall & Spring)
"Over the course of the 20th and 21st centuries, contagious illness, both fictional and real, has served as a literary vehicle for authors in Spain, Portugal, and Latin America to engage with the ways the human body intersects with political power, technology, the environment, and webs of social contact and exclusion. For the Catalan author Blai Bonet, a tuberculosis ward becomes a place to explore the origins of community; for Gabriel García Márquez, the melancholy of inaccessible love

drains the body of vitality like cholera; for the Portuguese writer Jos? Saramago, an outbreak of an invented disease causing blindness allows for an exploration of human nature and the 20th-century?s worst excesses of violence, to name three examples studied in the course. This Freshman Seminar will explore the literary treatment of infectious disease across a broad spectrum of geographical and temporal signposts. Given the topicality of the course to the present moment, I plan to incorporate the RATE tool to give students an occasional opportunity to reflect on the utility of the humanities and literary criticism for analytically reflecting on their own pandemic experiences. "

SPAN 3011W. Spanish Grammar and Composition Workshop. (WI; 4 cr. ; Student Option; Every Fall & Spring)

Real-world writing, speaking, reading. Writing summaries of lectures by native speakers. Two papers. Reader's journals. Oral presentation. Grammar review. Audio exercises, paired/ small-group work. Discussions. Peer editing. Process writing. prereq: [1004 or 1014 or 1044], LPE pass

SPAN 3015V. Honors: Spanish Composition and Communication. (WI; 4 cr. ; A-F or Audit; Every Fall & Spring)

Comprehension of written/spoken text. Speaking/reading/ writing. prereq: SPAN LPE pass, Honors student

SPAN 3015W. Spanish Composition and Communication. (WI; 4 cr. ; Student Option; Every Fall & Spring)

Comprehending written/spoken texts. Speaking, reading, writing beyond intermediate level. prereq: SPAN LPE pass

SPAN 3019W. Composition and Communication for Spanish Speakers of the U.S. (WI; 4 cr. ; Student Option; Every Fall)

Students in this course will further develop the main linguistic skills taught in the foundational SPAN 1001-1004 sequence, modified appropriately for students born and/or raised in the US and who speak/spoke Spanish in the home. Instruction will target the linguistic forms and rhetorical organization necessary for the genres of narration, exposition, and comparison-contrast while exploring cultural texts. Through guided activities, students will identify their linguistic and communicative strengths and weaknesses and also steps that they can take to advance in their language development. This course may be used as a substitute for SPAN 3015W or SPAN 3011W, but cannot be used for both. prereq: Instructor consent (recommended SPAN 1004 Pass or SPAN LPE Pass)

SPAN 3034. Advanced Business Spanish. (; 4 cr. ; Student Option; Every Spring)

Major issues of culture in relation to business in context of Spanish-speaking world. Important historical-social factors that contribute to understanding of economy/business relationships with industrialized nations. prereq: A C- or better in SPAN 3015W or SPAN 3015V or SPAN 3019W or TLDO 3231 or ECDR 3015W or ARGN 3015W

SPAN 3044. Advanced Medical Spanish. (4 cr. ; Student Option; Every Fall & Spring)

How to communicate more effectively in linguistic/cultural terms with Spanish speaking patients. Advanced/specific medical vocabulary, communication strategies, and related cultural aspects. Conducting patient interviews/medical history. Using vocabulary/ conversation to conduct physical exams. Latin American views on health/health care. prereq: a grade of C- or better in SPAN 3015W or 3015V

SPAN 3104V. Honors: Introduction to the Study of Hispanic Literatures. (LITR,WI; 3 cr. ; A-F only; Periodic Fall & Spring)

Structures, meaning, and social/historical function of diverse literary texts. prereq: 3015, Spanish [major or minor]or Span-Port major

SPAN 3104W. Introduction to the Study of Hispanic Literatures. (LITR,WI; 3 cr. ; Student Option; Every Fall & Spring)

This course will introduce the principal literary genres--narrative prose, poetry, and theater? and the methods used to study literary art produced in a Hispanic context across the centuries. Structures, meaning, and social/ historical function of diverse literary texts. Prereq: a grade of C- or better in SPAN 3015W or 3015V or 3019W

SPAN 3105V. Honors: Introduction to the Study of Hispanic Cultures. (WI; 3 cr. ; A-F only; Periodic Fall & Spring)

Span 3105V is a writing-intensive course centered on major issues of culture in the context of the Spanish-speaking world. It is not a history of civilization, nor is it a survey of either Latin American or Peninsular literature. Rather, our objective here is to familiarize ourselves with the different issues central to the development of the Hispanic world as a cultural entity, and to practice analyzing and questioning received notions of culture in this context. We will examine all sorts of texts-- literary, visual, musical, and filmic--from all periods of both Latin American (including Brazil) and Peninsular history, reading them through the lens of a series of topics. These topics are as follows: Mapas del mundo hispanico/Maps of the Hispanic world, Pol?tica y legado del encuentro cultural/Politics and legacies of cultural encounter, Discursos de identidad social/Discourses of social identity, Coerci?n y subversion/Coercion and subversion, Las naciones modernas/Modern nations, and Cultura ?lite-cultura popular-cultura de masas/High culture-popular culture-mass culture.

SPAN 3105W. Introduction to the Study of Hispanic Cultures. (WI; 3 cr. ; Student Option; Every Fall & Spring)

This course familiarizes students with different issues central to the development of the Hispanic world as a cultural entity, and to practice analyzing and questioning received notions of culture in this context. Cultural issues pertaining to Spain or Spanish America. prereq: a grade of C- or better in SPAN 3015W or 3015V or 3019W

SPAN 3107W. Introduction to the Study of Hispanic Linguistics. (WI; 3 cr. ; Student Option; Every Fall & Spring)

Structure of Spanish. Phonetics, phonology, morphology, syntax, pragmatics, language acquisition, language/gender, sociolinguistics. History of Spanish. prereq: a grade of C- or better in SPAN 3015W or 3015V or 3019W

SPAN 3211. Interpreting Imperial Spain, 1492-1800. (3 cr. ; Student Option; Every Fall)

Novels, places, poems, aphorisms, emblems, letters, and political treatises. Questions of ethnicity, gender, class, colonization, early mass culture, and subjectivity. prereq: A C- or better in SPAN 3104W or SPAN 3104V or TLDO 3104W or ARGN 3104W or SPAN 3105W or TLDO 3105W or SPAN 3105V

SPAN 3221. Interpreting Colonial Latin America: Empire and Early Modernity. (3 cr. ; Student Option; Periodic Fall)

Conquest, colonization, and forms of resistance in Latin America. prereq: A C- or better in SPAN 3104W or SPAN 3104V or TLDO 3104W or ARGN 3104W or SPAN 3105W or TLDO 3105W or SPAN 3105V

SPAN 3222. Interpreting Modern and Contemporary Latin America. (3 cr. ; Student Option; Every Spring)

Late modern and contemporary discourses in literature, popular culture, mass media, and film. prereq: A C- or better in SPAN 3104W or SPAN 3104V or TLDO 3104W or ARGN 3104W or SPAN 3105W or TLDO 3105W or SPAN 3105V

SPAN 3301. Advanced Oral Proficiency Workshop. (3 cr. ; A-F only; Periodic Fall & Spring)

The main goal of this course is to advance students' oral proficiency in Spanish in a variety of genres of spoken discourse, including description, narration, argumentation, explanation, and hypothesizing. In addition, instruction will focus on developing the range of topics about which students can speak and the internal organization of discourse produced by students. These functions are characteristic of speakers at the advanced level of proficiency on the ACTFL scale. Students will engage in a variety of activities, among which are discussions, debates, oral presentations, and analysis of oral speech samples. Prereqs: Span 3104W, or 3105W, or 3107W AND Span 3211, or 3212, or 3221, or 3222, or 3502, or 3503, or 3510, or 3512, or 3701, or 3702, or 3703, or 3704, or 3706, or 3707, or 3730, or 3800, or 3910, or 3920, and oral interview required.

SPAN 3401. Latino Immigration and Community Engagement. (CIV; 3 cr. [max 6 cr.] ; Student Option; Every Fall & Spring)

Students analyze US power structures associated with emigration from Latin America and issues confronting societies with a rapid demographic change such as has been the case with Latino immigration in the U.S. Students have many opportunities to engage in dialogue with Latino immigrants. Topics include: the relationship between the global economic system and emigration from Latin America, human rights along the U.S./Mexican border, and US federal immigration policies. 33 hours of volunteer work outside of class

required in the Latino immigrant community. Prerequisite: ARGN 3015W or ECDR 3015W or SPAN 3015 or SPAN 3015W or SPAN 3015V or TLDO 3231 or VENZ 3015

SPAN 3403. Latino Immigration on US/ Mexican Border. (CIV; 3 cr. ; Student Option; Periodic Summer)

This course takes place off campus, through an organization called "Border Links" that is located in Tucson and works with migrants. Students will experience firsthand many issues that directly affect the migrant journey and meet with many immigrants to hear their personal stories. In addition to learning the history of the situation on the border, students will take a tour of the border wall, visit neighboring communities that work with immigrants, do a legal immigration simulation, walk the migrant trails in the Sonoran Desert and leave water there with Humane Borders, go to a Operation Streamline Deportation Court hearing, visit migrants seeking political asylum in Florence Detention Center, talk with a leader in Southside Workers Center, meet with an author focusing on Border Patrol, and more. Themes explored in this course include the connection between the roots of emigration and the global economy of violence in Central America; human rights on the border; and issues immigrants face in the US such as immigrants living in the US with or without legal documents, detention and deportation and the work they are doing to make a more just immigration system. Students will gather information during their stay and create a presentation to be shown to people in Minnesota upon returning from the border.

SPAN 3404. Medical Spanish and Community Health Learning. (; 3 cr. ; Student Option No Audit; Every Fall & Spring) Medical Spanish and Community Health Service an advanced language and culture course is designed to train Spanish Studies majors/ minors to work with materials to achieve effective communication with Spanish-speaking patients. In addition, Span 3404 has a service-learning component in which students apply academic knowledge to work done with community health care partners that work with the Latin American immigrant population at Minnesota. It should be noted that students in Span 3404 will not be involved in direct patient health care. prereq: SPAN 3015W with grade of at least C- or better and instructor permission. Recommended one additional upper division Spanish class.

SPAN 3502. Modern Spain. (; 3 cr. ; Student Option; Periodic Fall & Spring) Spanish culture, from beginning of 19th century to present. Cultural change and its conflicts as represented in Spanish art, literature, film, and diverse political developments. prereq: A Grade of C- or better in SPAN 3104W or TLDO 3104W or ARGN 3104W or SPAN 3105W or TLDO 3105W

SPAN 3503. Pre-modern Spanish Culture and Thought. (HIS; 3 cr. ; Student Option; Periodic Fall & Spring) Notions of nation, empire, and race precipitated by presence of Muslims, Jews, and Christians

in Iberia in 12th and 13th centuries. Toledo as center of translation, technology, innovation, design, and philosophical inquiry for all of Europe. How Iberian literary works differed from those produced in the rest of Western Europe. Readings from Saint Isidore, Ibn Hazm, Averroes (Ibn Rushd), and Maimonides. prereq: A Grade of C- or better in SPAN 3104W or SPAN 3104V or TLDO 3104W or ARGN 3104W or SPAN 3105W or TLDO 3105W or SPAN 3105V

SPAN 3510. Issues in Hispanic Cultures. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Analysis of practices that have shaped cultural identity of Spanish or Portuguese-speaking areas. Topics vary. prereq: A grade of C- or better in Span 3104W or Span 3105W or Tldo 3104 or Tldo 3105 or Venz 3104 or Venz 3512 or Argn 3104W or Span 3104v or Span 3105v

SPAN 3512. Modern Latin America. (; 3 cr. ; Student Option; Periodic Fall & Spring) Impact of various forms of modernization on cultural production in Latin American racial, ethnic, class relations, institutional, and ideological structures. prereq: A C- or better in SPAN 3104W or SPAN 3104V or TLDO 3104W or ARGN 3104W or SPAN 3105W or TLDO 3105W or SPAN 3105V

SPAN 3603. Jews and Muslims in Medieval Iberia. (AH; 3 cr. ; Student Option; Periodic Fall & Spring)

Cultural production of Sephardic Jews and Andalusí Muslims. Andalusí poetry. Fiction of al-Saraqusti, Judah al-Harizi and Juan Ruiz. Treatises of Averroes and Maimonides. How cultural assimilation in medieval al-Andalus complicates notions of identity, subalterity, and postcoloniality. How literary, historical, philosophical, and theological works of major Jewish/Muslim thinkers survived among later Spanish Christian intellectuals.

SPAN 3606. Human Rights Issues in the Americas. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Human rights movement. International law of human rights and the justice system. Focuses on human rights cases in the Americas and on cultural practices related to human rights.

SPAN 3612. Don Quijote and the Novel. (LITR; 3 cr. ; Student Option; Spring Even Year)

How Cervantes' text enters in dialogue with prevalent novelistic and social discourses of Spain's Renaissance and Baroque periods (sixteenth/seventeenth century). How novel has managed to interest succeeding generations of readers. Taught in English.

SPAN 3653. Latinx Cultural Narratives in the US. (DSJ; 3 cr. ; Student Option; Periodic Fall)

A wide variety of Latino groups have used the stage to explore identity issues in a public forum and have developed nontraditional approaches which have altered the nature, quality and substance of recent theater in the U.S. Off-Broadway, regional troupes, and groups and have attempted to break the mainstream theater's hegemony by addressing the audience's desire to see their problems

enacted in understandable and creative terms. Through an interdisciplinary approach which will include lectures, discussions, performance and visual materials, the course will introduce established and work-in-progress plays of the most active Latin (O) playwrights in the country, along with the historical, political and cultural development framework which made it possible. THIS CLASS IS TAUGHT IN ENGLISH

SPAN 3699. Study of Advanced Spanish Language Abroad. (; 1-5 cr. ; Student Option; Every Fall & Spring)

Study of advanced Spanish language in a Spanish-speaking country. prereq: Two yrs college-level Spanish, dept consent

SPAN 3701. Structure of Spanish: Phonology and Phonetics. (; 3 cr. ; Student Option; Periodic Fall & Spring) Analysis of phonetics/phonology of modern Spanish. Regional/social variants of the language in Spain and Spanish America. Emphasizes improving Spanish pronunciation. prereq: A C- or better in Span 3107W or TLDO 3107W

SPAN 3702. Structure of Spanish: Morphology and Syntax. (; 3 cr. ; Student Option; Periodic Fall & Spring) Using linguistic concepts such as morpheme, flexional affix, noun phrase, subject, subordination, and coordination to identify different morphological/syntactic components of Spanish. prereq: A C- or better in SPAN 3107W or TLDO 3107W

SPAN 3703. Origins and History of Spanish and Portuguese. (; 3 cr. ; Student Option; Every Fall & Spring) Development of Spanish from its Latin roots. Phonetic, morphological, syntactic, and sociolinguistic aspects of language variations over time. prereq: A Grade of C- or better in Span 3107W or TLDO 3107W

SPAN 3704. Sociolinguistics of the Spanish-Speaking World. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Spanish dialects. Spanish in contact with other languages. Bilingualism, language attitudes. Pragmatic analysis of Spanish. Impact of recent cultural, political, and socioeconomic transformations on language. prereq: A C- or better in Span 3107W or TLDO 3107W

SPAN 3706. Spanish Applied Linguistics. (; 3 cr. ; Student Option; Periodic Fall & Spring) Introduction to second language acquisition processes as they relate to fundamental analysis of linguistic concepts of Spanish. Features that present difficulties for English speakers. Sociolinguistic aspects of language learning. Application to Spanish language teaching. prereq: A C- or better in Span 3107W or TLDO 3107W

SPAN 3707. Linguistic Accuracy Through Translation. (; 3 cr. ; A-F only; Periodic Summer)

Analysis of style/audience/lexicon of various texts in Spanish (popular press, business, academic) examined as framework for training to communicate with accuracy in different contexts. Students apply lexical/grammatical

choices in translating texts. prereq: A grade of C- or better in SPAN 3104W or SPAN 3104V or TLDO 3104W or ARGN 3104W or SPAN 3105W or TLDO 3105W or SPAN 3105V or 3107W or instr consent

SPAN 3708. Spanish in the United States. (3 cr. ; Student Option; Periodic Spring)
Sociolinguistic overview of Spanish-speaking communities in the US; language use patterns in bilingual communities; linguistic characteristics of Spanish in the US; use of Spanish in schools and public life; language ideologies. prereq: A C- or better in SPAN 3107W or TLDO 3107W

SPAN 3730. Topics in Hispanic Linguistics. (; 3 cr. [max 9 cr.]; A-F only; Periodic Fall & Spring)
Topics specified in Class Schedule. prereq: SPAN 3107W or TLDO 3107W or VENZ 3107 or instr consent

SPAN 3800. Film Studies in Spanish. (; 3 cr. [max 9 cr.]; A-F only; Every Fall & Spring)
Films from Spain or Spanish-speaking world in their historical, (geo)political, and socioeconomic contexts. Films analyzed under interdisciplinary frameworks, noting aspects related to cinematography/rhetoric. prereq: Span 3104W or Span 3105W or Tldo 3104 or Tldo 3105 or Venz 3104 or Venz 3512 or Argn 3104W or Span 3104v or Span 3105v

SPAN 3807. Medical Humanities and Latin American Film: Narratives of Health, Illness & Trauma. (AH; 3 cr. ; Student Option; Periodic Fall & Spring)
In this course, we will study the representations of health, illness, and trauma in Latin American films. We will focus on the different ways in which the moving image account for different stories and perspectives. We will pay particular attention to the use of the camera in relation to the stories told by the different characters of the film, in particular, doctors and health workers, patients and their families. We will focus on the process of storytelling of illness and trauma, and on the essential role that the study of cultural and socio-political frameworks have in the study of narratives. Our objective will be to explore the visual, acoustic and narrative strategies through which pain, illness, trauma, and death are represented, as well as the role of those who listen to these narratives (friends, family, health professionals and, of course, ourselves as spectators) in the process of interpretation (and the cultural aspects of interpretation). In this course, students will reflect on the human condition, and in the use of storytelling to understand and communicate one's life story, focusing on the moments in which that the experience of illness or trauma interrupts and transforms a life story. Students will work in groups to create narratives based on the films studied in class and to analyze films (and their own narratives) with critical approaches coming from, visual and acoustic studies, philosophy, literary studies, and narrative medicine. prereq: A Grade of C- or better in SPAN 3104W or SPAN 3104V or TLDO 3104W or ARGN 3104W or SPAN 3105W or TLDO 3105W or SPAN 3105V or instr consent

SPAN 3910. Topics in Spanish Peninsular Literature. (; 3 cr. [max 9 cr.]; A-F or Audit; Periodic Fall & Spring)
Focus on central theme related to important groups of writers, literary movements, trends, critical approaches, methods. Topics specified in Class Schedule. prereq: SPAN 3104W or SPAN 3104V or TLDO 3104W or ARGN 3104W or SPAN 3105W or TLDO 3105W or SPAN 3105V or VENZ 3512 or instr consent

SPAN 3920. Topics in Spanish-American Literature. (; 3 cr. [max 9 cr.]; A-F or Audit; Periodic Fall & Spring)
Focus on central theme related to important groups of writers, literary movements, trends, critical approaches, and methods. Topics specified in Class Schedule. prereq: SPAN 3104W or TLDO 3104 or VENZ 3104 or ARGN 3104W or SPAN 3105W or TLDO 3105 or VENZ 3512 or instructor consent

SPAN 3970. Directed Studies. (1-4 cr. [max 9 cr.]; Student Option; Every Fall, Spring & Summer)
Guided individual reading/study in Hispanic linguistics, cultural studies, or peninsular, Latin American, or U.S. Latino theater or literatures. Prereq instr consent, dept consent, college consent.

SPAN 3972W. Capstone Seminar. (WI; 3 cr. ; A-F only; Every Spring)
Completion of a research paper on cultural, literary, or artistic issue in Spanish or Portuguese speaking worlds or on a topic related to Hispanic linguistics. In-depth research/consultation with instructor. SPAN 3972W needs to be taken during the semester in which student completes major course work. Prereq: Spanish Studies Major (for those who declared before Fall 2018): C- or better in SPAN 3015w, 3104w, 3105w, 3107w and 3 SPAN electives with a critical analysis prerequisite. Spanish Studies major (for those who declare Fall 2018 and after): C- or better in Span 3015w, 2 Span 31xx courses, and 4 electives with a Critical Analysis prerequisite. Spanish/Portuguese Studies Majors (for those who declared before Spring 2022): C- or better in SPAN 3015w, PORT 3003, SPAN 3104w, 3107w, 1 PORT 35xx class, 2 upper level SPAN or PORT electives. Spanish/Portuguese Studies Majors (for those who declared Spring 2022 and after): C- or better in SPAN 3015W, PORT 3003, SPAN 3104W or 3105W & 3107W, 1 PORT elective, 2 additional upper level Spanish or Portuguese electives

SPAN 3993. Directed Studies. (1-4 cr. [max 9 cr.]; Student Option; Every Fall, Spring & Summer)
Guided individual reading or study. Students enrolling in this directed study/research course will complete the University's common Directed Study/Research contract with the faculty mentor/evaluator. The Faculty member will ensure academic standards are upheld, including: - the work proposed is at the appropriate level for the course, academic in nature, and the student will be involved intellectually in the project. - the project scope is reasonable for one semester and the number of credits specified (42 hours of work per credit)

- the faculty mentor is qualified to serve in this role - assessment of student learning and grading criteria are clear and appropriate - the student will be working in a respectful, inclusive environment

SPAN 3994. Directed Research. (1-4 cr. [max 9 cr.]; Student Option; Every Fall, Spring & Summer)
Guided Research. Students enrolling in this directed study/research course will complete the University's common Directed Study/Research contract with the faculty mentor/evaluator. The Faculty member will ensure academic standards are upheld, including: - the work proposed is at the appropriate level for the course, academic in nature, and the student will be involved intellectually in the project. - the project scope is reasonable for one semester and the number of credits specified (42 hours of work per credit) - the faculty mentor is qualified to serve in this role - assessment of student learning and grading criteria are clear and appropriate - the student will be working in a respectful, inclusive environment

SPAN 4001. Beginning Spanish for Graduate Student Research. (; 5 cr. ; Student Option No Audit; Every Fall)
Listening, speaking, reading, writing. Emphasizes development of communicative competence. Cultural readings. Prereq: Less than 2 yrs of High School Spanish, and dept consent

SPAN 4002. Beginning Spanish for Graduate Student Research. (; 5 cr. ; Student Option No Audit; Every Spring)
Listening, speaking, reading, writing. Emphasizes development of communicative competence. Cultural readings. Meets concurrently with 1002. Prereqs: A Grade of C- or better in SPAN 1001/4001 completed at UMNTC and department consent

SPAN 4003. Intermediate Spanish for Graduate Student Research. (; 5 cr. ; Student Option No Audit; Every Fall, Spring & Summer)
Speaking/comprehension. Developing reading/writing skills based on materials from Spain/Spanish America. Grammar review. Compositions, oral presentations. Meets concurrently with 1003. Prereq: A Grade of C- or better in SPAN 1002 or SPAN 4002 or SPAN 1022 or SPAN 4022 or EPT placement of SPAN 1003

SPAN 4004. Intermediate Spanish for Graduate Student Research. (; 5 cr. ; Student Option No Audit; Every Fall, Spring & Summer)
Speaking/comprehension. Developing reading/writing skills based on materials from Spain/Spanish America. Grammar review. Compositions, oral presentations. Meets concurrently with 1004.

SPAN 4014. Business Spanish for Graduate Student Research. (5 cr. ; Student Option; Every Spring)
Vocabulary, report writing skills. Proper format for business communications. Conversational fluency on trade-related topics. Meets with SPAN 1014.

SPAN 4022. Alternate Second-Semester Spanish for Graduate Student Research.

(; 5 cr. ; Student Option No Audit; Every Fall, Spring & Summer)

For students who have studied Spanish in high school or at community college, or who are transfer students. Begins with accelerated review of 1001/4001 followed by material covered in 1002/4002. Meets concurrently with 1022.

SPAN 5150. Contemporary Spanish

Literature. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Major literary works/movements in Spain from 1915 to 2000. Neomodernism, surrealism, social realism, literatures of dictatorship/exile. Postmodernism. Poetry, novel, drama, essays, film, video/TV. Problems of literary history. prereq: Grad student or instr consent

SPAN 5160. Medieval Iberian Literatures and Cultures.

(; 3 cr. ; Student Option; Periodic Fall & Spring)

The major literary genres developed in Spain from the Reconquest to 1502, with reference to the crucial transformations of the Middle Ages, including primitive lyric, epic, clerical narrative, storytelling, debates, collections, chronicles, "exempla," and the *Celestina* (1499-1502).

SPAN 5170. The Literature of the Spanish Empire and Its Decline.

(; 3 cr. ; Student Option; Periodic Fall & Spring)

Major Renaissance/Baroque works of Spanish Golden Age (16th-17th-century poetry, nonfiction prose, novel, drama) examined against historical background of internal economic decline, national crisis, ideological apparatus developed by modern state. prereq: Grad student or instr consent

SPAN 5180. Don Quixote.

(; 3 cr. ; Student Option; Periodic Spring)

Analysis of Cervantes' [Don Quixote] in its sociohistorical context; focus on the novel's reception from the romantic period to postmodern times. prereq: Grad student or instr consent

SPAN 5190. The Crisis of the Old Regime: Spanish Literature of the Enlightenment and Romanticism.

(; 3 cr. ; Student Option; Periodic Fall & Spring)

Major literary works/intellectual movements/conflicts represented in written culture, of 18th/early 19th centuries (1680-1845), examined as expressions of long crisis of Spain's Old Regime and rise of bourgeois liberalism. prereq: Grad student or instr consent

SPAN 5550. Caribbean Literature: An

Integral Approach. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Literature of Spanish-speaking Caribbean. Emphasizes historical legacy of slavery, African culture, independence struggles. prereq: Grad student or instr consent

SPAN 5560. Global Colonial Studies in the Hispanic World.

(; 3 cr. ; Student Option; Periodic Fall & Summer)

Discourse production in Spanish America between 1492 and 1700. Conquest/colonial writing/counter writing. Historical origin, evolution, impact of cultural, political,

socioeconomic factors. prereq: Grad student or instr consent

SPAN 5570. Nineteenth Century Latin America: Enlightened Thought, Nation Building, Literacy, Cultural Discourse.

(; 3 cr. ; Student Option; Periodic Spring)

Political/economic contexts. Capitalism, liberalism, conservatism, their discursive media. Essay, journalism, literature, expression of everyday life. Wheels of commerce, progress, industrialization. Romanticism, realism, positivistic faith.

SPAN 5580. Latin American Cultural

Integration in the Neocolonial Order. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Modernismo, historical vanguard, impact of populist politics in patterns of culture/literature. 1900-50. prereq: Grad student or instr consent

SPAN 5590. The Impact of Globalization in Latin American Discourses.

(; 3 cr. ; Student Option; Every Fall & Spring)

Second half of 20th century critical culture. Neo-indigenism, new novel, poetry/antipoetry, theater/drama. Pragmatic search for past/identity. Globalization, its impact in literature.

SPAN 5701. History of Ibero-Romance.

(; 3 cr. ; Student Option; Periodic Spring)

Origins and developments of Ibero-Romance languages; evolution of Spanish, Portuguese, and Catalan. prereq: Grad student or instr consent

SPAN 5714. Theoretical Foundations of Spanish Syntax.

(; 3 cr. ; Student Option; Periodic Fall & Spring)

Linguistic types/processes that appear across languages. Grammatical relations, word order, transitivity, subordination, information structure, grammaticalization. How these are present in syntax of Spanish. prereq: Grad student or instr consent

SPAN 5716. Structure of Modern Spanish: Pragmatics.

(3 cr. ; Student Option; Periodic Fall)

Concepts in current literature in Spanish pragmatics. Deixis, presupposition, conversational implicature, speech act theory, conversational structure. prereq: Grad student or instr consent

SPAN 5717. Spanish Sociolinguistics.

(; 3 cr. ; Student Option; Periodic Spring)

Sociolinguistic variation, cross-dialectal diversity in different varieties of Spanish in Latin America and Spain. Impact of recent cultural, political, and socioeconomic transformations on language. prereq: Grad student or instr consent

SPAN 5718. Spanish Language Contact.

(; 3 cr. ; Student Option; Periodic Fall & Spring)

Analysis of different types/results of Spanish language contact globally, taking into account varying social conditions under which contact occurs. prereq: Grad student or instr consent

SPAN 5721. Spanish Laboratory Phonology.

(; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Core literature on Spanish laboratory phonology. Phonology from a laboratory perspective. Students evaluate laboratory research methodologies, perform basic

acoustic analyses, and design laboratory phonology studies. prereq: Grad student or instr consent

SPAN 5920. Topics in Spanish-American

Studies. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Fall, Spring & Summer)

Spanish-American literature analyzed according to important groups, movements, trends, methods, and genres. Specific approaches depend on topic and instructor. Topics specified in Class Schedule. prereq: Grad student or instr consent

SPAN 5930. Topics in Ibero-Romance

Linguistics. (; 3 cr. [max 9 cr.] ; Student Option; Periodic Spring & Summer)

Problems in Hispanic linguistics; a variety of approaches and methods.

SPAN 5985. Sociolinguistic Perspectives on Spanish in the United States.

(; 3 cr. ; Student Option; Periodic Spring)

Sociolinguistic analysis of issues such as language maintenance/shift in U.S. Latino communities, code switching, attitudes of Spanish speakers toward varieties of Spanish and English, language change in bilingual communities, and language policy issues. prereq: Grad student or instr consent

SPAN 5991. The Acquisition of Spanish as a First and Second Language.

(; 3 cr. ; Student Option; Periodic Spring)

Analysis of issues such as the acquisition of Spanish and English by bilingual children; Spanish in immersion settings; developmental sequences in Spanish; classroom language learners' attitudes, beliefs, and motivation; development of pragmatic competence. prereq: Grad student or instr consent

SPAN 5993. Directed Studies.

(1-4 cr. [max 9 cr.] ; Student Option; Every Fall, Spring & Summer)

Students must submit reading plans for particular topics, figures, periods, or issues. Readings in Spanish and/or Spanish-American subjects. Students enrolling in this directed study/research course will complete the University's common Directed Study/Research contract with the faculty mentor/evaluator. The Faculty member will ensure academic standards are upheld, including: - the work proposed is at the appropriate level for the course, academic in nature, and the student will be involved intellectually in the project. - the project scope is reasonable for one semester and the number of credits specified (42 hours of work per credit) - the faculty mentor is qualified to serve in this role - assessment of student learning and grading criteria are clear and appropriate - the student will be working in a respectful, inclusive environment prereq Grad student or instr consent.

SPAN 5994. Directed Research.

(1-4 cr. [max 9 cr.] ; Student Option; Every Fall, Spring & Summer)

Directed research. Students enrolling in this directed study/research course will complete the University's common Directed Study/Research contract with the faculty mentor/evaluator. The Faculty member will ensure academic standards are upheld, including: - the work proposed is at the appropriate

level for the course, academic in nature, and the student will be involved intellectually in the project - the project scope is reasonable for one semester and the number of credits specified (42 hours of work per credit) - the faculty mentor is qualified to serve in this role - assessment of student learning and grading criteria are clear and appropriate - the student will be working in a respectful, inclusive environment prereq: Grad student or instr consent

Spanish and Portuguese (SPPT)

SPPT 3600. Topics in Spanish and Portuguese Studies (Taught in English). (3 cr. ; Student Option; Periodic Fall & Spring) Latin American, Iberian, or Lusophone topics related to culture, society, art, or linguistics. Taught in English.

SPPT 3601. 'Race' in Brazil & Latin America. (3 cr. ; Student Option; Periodic Fall & Spring) As cultural, national and racial mixings have become the celebrated norm in our society, it is instructive to reflect upon the radically historical, contingent role that the idea of racial mixings has played in the construction of national imaginaries. The idea that Latin America is a continent of mestizos looms large in the US as elsewhere, but generally without the contextual understanding of how that racial category came to be, and as imaginaries of national mesti?agem/ mestizaje were consolidated, developed and questioned in the twentieth century and, finally, transplanted to other geographical and epistemological sites, as is the case with Chicax in the USA. Rather than contributing to the invisibility of Brazil by generalizing from Spanish-speaking Latin America, the present course aims to introduce students to racial thinking in Brazil, from the mid-nineteenth century to the present in a comparative frame with racial thinking elsewhere in Latin America, particularly in Mexico. Aside from understanding how the Spanish ?mestizo? construction is not equivalent to that of ?mesti?o? or ?pardo? or ?mulato? in Portuguese, nor to contemporary multicultural US-branded notions of racial mixings, the course aims to query how the imaginaries of nationhood that have prevailed in Latin America contribute not only to the social exclusion of black people, even where they are a majority, but also to the systematic racism that is still dominant and difficult to combat. We will go over the social and anthropological concepts, the literary and artistic representations, and the political uses of racial ascriptions with attention to changing historical contexts and locations. The main topics covered are the idea of the mixed-race nation in romanticism; post-emancipation, modern nation-making and whitening; modernism and the ideals of ?la raza c?smica? (Jos? Vasconcelos, in Mexico) and racial democracy (Gilberto Freyre, in Brazil); the problem of forging a black consciousness in an officially mixed-race nation; and the appropriation of a modernist, Mexican notion of ?mestizaje? to forge a Chicax identity in the old one-drop rule USA. Classes will

be conducted in English, but students have the option to read some of the originals in Portuguese or Spanish; sometimes we will cite the originals in class to have students listen to ? and hopefully appreciate ? the sounds and nuances of Portuguese and Spanish. Classes will be interactive, with a combination of lecture and discussion; oral presentations, viewing of art, music and film clips and discussion thereof; and group activities. Depending on students? language abilities, small group discussions in class can be in Spanish, Portuguese or English. All texts are considered a valid object of study and discussion, in whatever language and from whatever disciplinary perspective they are written. I have deliberately mixed literature, anthropology, sociology, art history and so-called mass culture in order to expose students to a variety of disciplinary perspectives. The point is to see how insistent notions of ?race? are integrally related to the way that nations are imagined and controlled but also appropriated and potentially questioned.

SPPT 5930. Selected Topics in Hispanic and Lusophone Cultural Discourse. (1-3 cr. [max 9 cr.] ; A-F or Audit; Periodic Fall & Spring)

Cultural discourses in Spanish- and Portuguese-speaking areas. Historical intersections/divergences. Taught in Spanish or Portuguese, and in English when cross-listed. Topics specified in Class Schedule. prereq: Reading knowledge of Spanish and Portuguese

SPPT 5995. Directed Teaching. (1 cr. ; S-N only; Every Fall)

Taken in conjunction with SPPT 5999. Language acquisition theory as applied to foreign language instruction at college level. How current theory translates into practice through hands-on practical application particular to communicative language instruction practiced in Department of Spanish/ Portuguese Studies. prereq: Grad student with concurrent enrollment in 5999

SPPT 5999. The Teaching of College-Level Spanish: Theory and Practice. (3 cr. ; Student Option; Every Fall)

Theoretical grounding in the general principles of second language acquisition and guidance with their practical applications to the teaching of first- and second-year Spanish at the college-level. prereq: Grad or instr consent

Speech-Language-Hearing Sci (SLHS)

SLHS 1301V. Physics and Biology of the Voice Honors. (PHYS,WI; 4 cr. ; A-F or Audit; Every Fall & Spring)

The goal of this course is to provide students with a background of the core physical, linguistic, and perceptual concepts related to speech. This course talks about the acoustics of speech as well as the main principles that are used to describe articulation and phonetics. We will examine the aerodynamic and acoustic principles that underlie sound production. The course also covers basics of auditory perception and how computers can be used

to analyze and manipulate speech. Through an emphasis on physical analysis grounded in scientific principles, this course satisfies the university's physical sciences with laboratory liberal education requirement.

SLHS 1301W. Physics and Biology of the Voice. (PHYS,WI; 4 cr. ; Student Option; Every Fall & Spring)

The goal of this course is to provide students with a background of the core physical, linguistic, and perceptual concepts related to speech. This course talks about the acoustics of speech as well as the main principles that are used to describe articulation and phonetics. We will examine the aerodynamic and acoustic principles that underlie sound production. The course also covers basics of auditory perception and how computers can be used to analyze and manipulate speech. Through an emphasis on physical analysis grounded in scientific principles, this course satisfies the university's physical sciences with laboratory liberal education requirement.

SLHS 1302. Rate Your World: Quantifying Judgments of Human Behavior. (MATH; 3 cr. ; Student Option; Every Fall & Spring)

This 3-credit course meets the UMN liberal education requirements in the area of mathematical thinking. As specified on the university web site, the courses that were approved to fulfill the liberal education requirements aim to ?guide you through the ?why? and ?how? of different academic disciplines? and to ?equip you with a broad range of tools that you can use to approach problems in your everyday life and work, and ultimately to make a positive difference in your communities, your society, your state, and your world.? This course was initially developed by Professors Peggy Nelson and Leslie Glaze, and its contents have been substantially revised by Professor Yang Zhang to meet the requirements of the college curriculum review committee. Current materials for the course are based in part on a course at another Big Ten University, Ohio State, which was originally developed by Professor Mary EBeckman.

SLHS 1401. Introduction to Speech-Language Pathology & Audiology. (SOCS; 3 cr. ; Student Option; Every Fall & Spring)

In this course students will be provided an introduction to the diverse field of speech-language pathology and audiology. Case studies, documentaries, and patient testimonials will be used to orient students to the clinical significance of impairments that contribute to deficits in cognition, communication, and deglutition. Students will gain an understanding of associated assessments and interventions to mitigate these deficits from experts practicing in the field. Lastly, students will be introduced to career paths in speech language pathology and audiology, as well as their associated practice setting and remuneration specifications.

SLHS 1402. The Talking Brain. (SOCS; 3 cr. ; Student Option; Every Fall & Spring) How the brain produces/understands speech/ language, including various aspects of the nervous system involved in producing/

understanding speech/language. Differences in brain structure/function among individuals with and without brain injury, based on scientific versus historical, mass media and literature portrayals.

SLHS 1914. Communication Disorders and Neurodiversity. (; 3 cr. ; A-F only; Every Fall)

This discussion-based Freshman seminar is about how communication disorders resulting from a variety of causes, including Autism, Aphasia, Stuttering, Motor Speech Disorders, Traumatic Brain Injury, and Hearing loss, are perceived in the 21st century. Topics including the evolution of frameworks to understand disabilities and barriers, ableism, neurodiversity, intersectionality, disability policies and accommodations, role of stakeholders, and the lived experiences of individuals with disabilities, will be discussed to contextualize communication disorders within the field of Disability Studies. Instructor-based lectures will be augmented through discussions, guest lectures, written assignments, and group projects.

SLHS 3302. Anatomy and Physiology of the Speech and Hearing Mechanisms. (; 3 cr. ; Student Option; Every Fall)

Survey of anatomy and physiology of the auditory and speech production systems, including the nervous, respiratory, laryngeal, velopharyngeal and orofacial subsystems. Emphasis on normal processes and functions.

SLHS 3303. Language Acquisition and Science. (; 3 cr. ; Student Option; Every Spring)

Survey of typical language development, major theoretical perspectives about development, and analyses of children's language.

SLHS 3304. Phonetics. (3 cr. ; Student Option; Every Spring)

What is a click sound? Why is it that people who learned to speak English in New York City are more likely to produce the words Mary, merry, and marry differently than people who learned English in Minneapolis? Why does the name 'Beto' produced by a native speaker of English sound so much like the word 'pero' produced by a native speaker of Spanish? How is English-accented Japanese different from Japanese produced by a native speaker? How does one write the sounds of speech using the international phonetic alphabet? Phonetics is the science of speech production. In this course in phonetics, you will develop skills in phonetic transcription, and you will apply those new skills to understanding differences across languages, speech development, dialects, and individual speech styles. By the end of the course, you will be a skilled phonetic transcriber, and you will have used those skills to understand aspects of speech that can't be understood without a knowledge of phonetics. Your new knowledge of the sound structure of human languages will make you a more flexible listener when you encounter new languages, or new varieties of languages you already know. The skills in this course will be taught with a variety of in-person and on-line tools, including lectures, small group work, on-line self-paced modules, and interactive transcription practice.

SLHS 3305W. Speech Science. (WI; 3 cr. ; Student Option; Every Fall)

Because speech is the acoustic representation of language, we will examine the time varying acoustic signal ?speech production - and the reception, separation and decoding of this signal into language? speech perception. For this class you will be presented with: (a) the basic principles of acoustics; (2) the physiology that produces the acoustic features that comprise speech; (3) basic theories of speech-motor control; (4) basic principles of speech perception; and (5) overview of current theories of speech perception, especially as they pertain to development of language in the first year of life.

SLHS 3306. The Sense of Hearing. (; 3 cr. ; Student Option; Every Spring)

Have you ever wondered how the sense of hearing works? This course will give you a deep look at the science behind the sense of hearing. You will learn about how sound is created, and transmitted from the air to our ears. Once sound enters our ears, it makes an impressive journey through many stations along the auditory pathway... all the way up to our brains. In addition to the physiological process of sound transmission through the auditory system, this course also covers psychoacoustics measures that provide non-invasive techniques and methods to evaluate the transmission of sound through the auditory system. prereq: [3302, 3305W] or instr consent

SLHS 3401. Introduction to Speech-Language Pathology & Audiology. (SOCS; 3 cr. ; Student Option; Every Fall & Spring)

In this course, students will be provided an introduction to the diverse field of speech-language pathology and audiology. Case studies, documentaries, and patient testimonials will be used to orient students to the clinical significance of impairments that contribute to deficits in cognition, communication, and deglutition. Students will gain an understanding of associated assessments and interventions to mitigate these deficits from experts practicing in the field. Lastly, students will be introduced to career paths in speech language pathology and audiology, as well as their associated practice setting and remuneration specifications.

SLHS 3402V. Capstone Project in Speech-Language-Hearing Sciences Honors. (WI; 3 cr. [max 6 cr.] ; A-F only; Every Spring)

This final year writing intensive course provides students foundational knowledge on evidence-based practice in the fields of Speech Language Pathology and Audiology. The course has a research and a service learning module. The research module includes lectures and group activities designed to promote critical thinking in evaluating research evidence and will enable students to generate evidence maps to support clinical decision making. The service learning module requires students to complete 20 hours of volunteering with an organization of choice. Reflective writing and research writing activities are designed to enable students to make connections between classroom learning and field work. Students will participate in a final capstone presentation day

involving group and individual presentations to showcase their work throughout the semester.

SLHS 3402W. Capstone Project in Speech-Language-Hearing Sciences. (WI; 3 cr. ; S-N or Audit; Every Spring)

This final year writing intensive course provides students foundational knowledge on evidence-based practice in the fields of Speech Language Pathology and Audiology. The course has a research and a service learning module. The research module includes lectures and group activities designed to promote critical thinking in evaluating research evidence and will enable students to generate evidence maps to support clinical decision making. The service learning module requires students to complete 20 hours of volunteering with an organization of choice. Reflective writing and research writing activities are designed to enable students to make connections between classroom learning and field work. Students will participate in a final capstone presentation day involving group and individual presentations to showcase their work throughout the semester.

SLHS 3555H. Honors Thesis. (; 1-2 cr. ; A-F or Audit; Every Fall & Spring)

Research/writing under direction of faculty member. Details of work are determined in consultation with faculty thesis adviser selected based on availability/topic. prereq: See dir of undergrad studies for [thesis adviser, forms]

SLHS 3994. Directed Research. (; 1-12 cr. [max 24 cr.] ; Student Option; Every Fall, Spring & Summer)

tbd prereq: Undergrad doing research

SLHS 4301. Introduction to the Neuroscience of Human Communication. (; 3 cr. ; Student Option; Periodic Fall)

Basic neuroanatomy and neurophysiology, especially as they relate to normal speech, language, and hearing processes.

SLHS 4402. Clinical Methods in Speech-Language Pathology. (3 cr. ; A-F or Audit; Every Fall)

This course illustrates assessment and treatment methods in speech-language pathology. Students will gain a solid foundation for clinical practice with clients across the lifespan and across a range of communication impairments. The course is designed to prepare advanced undergraduate majors in SLHS and entry-level graduate students for entry into clinical settings in speech-language pathology. prereq: [1401 OR 3401, 3302, 3303, 3304, 4301 (either before registration for 4402 or concurrent registration is required (or allowed) in 4402)], or grad student, or instr consent

SLHS 4801. Clinical methods in assessing auditory function and disorders. (; 3 cr. ; Student Option; Every Fall)

Have you ever wondered why some people have normal hearing and others do not? This course will cover different methods (i.e. visual, behavioral, and physiological measures) that are used to assess auditory function in the outer, middle, inner ear, and beyond. Students will gain a solid introductory foundation on clinical methods that are used

and how information gained from different assessment methods are combined to assess overall auditory function. In addition, students will also learn about genetic and non-genetic disorders that impact auditory function. prereq: [3302, 3305W] or instr consent

SLHS 4802. Clinical Methods for Treating Hearing Disorders. (; 3 cr. ; Student Option; Every Spring)

Ever wondered how hearing loss is treated? This course will present an introductory foundation on treatment options for individuals with different types of hearing loss. The three Ts of rehabilitating hearing loss are covered. The first T includes how diagnostic visual, behavioral, and physiological tests results are interpreted and used in the design of treatment plans for individuals with hearing loss. The second T will cover technology that is used to treat hearing loss. This section will provide details on how hearing aids, cochlear implants, and other implantable hearing devices work and how clinical decisions are made with regards to who gets a hearing aid vs. a cochlear implant. Hearing assistive technology and wireless devices such as FM, loop and infrared systems will all be covered. The third T will cover treatment options for adults and children with hearing loss. This section will provide details on informational and personal-adjustment counseling, non-technology treatment options, and person-centered and family-centered intervention and training plans for adults as well as children with hearing loss.

SLHS 5401. Counseling and Professional Issues. (; 3 cr. ; Student Option; Every Fall)

Basic counseling principles and current professional issues related to practice in a dynamic multicultural environment. Application of counseling theory to clinical practice. Analysis of regulation, practice, and future direction of communication disorders. prereq: [[concurrent registration is required (or allowed) in 8720 or concurrent registration is required (or allowed) in 8820], grad student] recommended

SLHS 5502. Voice and Cleft Palate. (3 cr. ; Student Option; Every Spring)

Disordered voice and resonance. Presentation and discussion of the nature of etiologies, assessment and management of organic/functional voice disorders and cleft palate to meet clinical competencies for speech-language pathology. prereq: [3305, 4301] or [CDIS 3305, CDIS 4301] or instr consent

SLHS 5503. Stuttering Motor Speech Disorders. (; 3 cr. ; Student Option; Every Fall)

SLHS 5503 is designed for graduate students who wish to increase their understanding of stuttering and motor speech disorders. Its goal is to provide students with a strong foundation on the basics of the physiology, diagnosis, assessment, and treatment of these communication disorders and to provide working knowledge of current trends in related fields. prereq: graduate SLHS student or department permission, [3305, 4301] or instr consent

SLHS 5504. Evaluation and Management of Dysphagia. (3 cr. ; Student Option; Every Fall)

Normal/disordered aspects of swallowing. Nature, etiologies, evaluation, management of swallowing disorders.

SLHS 5602. Speech Sound Disorders: Assessment and Treatment across Languages. (3 cr. ; Student Option; Every Fall)

Nature, assessment, and treatment of speech sound disorders in children. Assessment and treatment of phonological awareness and pre-literacy skills. This course covers cross-linguistic issues in speech sound disorders, including characteristics of speech sound disorders in a variety of languages, and the differential diagnosis of speech sound disorder from the effects of normal second-language acquisition. Emphasis on functional speech sound disorders, with some coverage given to disorders of a clear organic origin, like cerebral palsy, hearing impairment, and cleft palate. prereq: [3303, 3304, 4601] or instr consent

SLHS 5603. Assessment and Intervention of Language Disorders in Children. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Assessment and intervention techniques approaches for treating language impairment in children with disabilities, such as specific language impairment, developmental delays, and autism spectrum disorder. prereq: 3303 or CDIS 3303 or equiv or grad student or instr consent

SLHS 5605. Language and Cognitive Disorders in Adults. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Acquired cognitive and communicative disorders in the adult population specifically including: stroke/aphasia, right hemisphere dysfunction, traumatic brain injury, and dementia. Consideration of neurological substrates, disorder symptomology, assessment, clinical intervention, and functional impact across the lifespan and amongst diverse populations. prereq: [3302, 4301] or [CDIS 3302, CDIS 4301] or instr consent

SLHS 5606. Introduction to Augmentative and Alternative Communication. (; 3 cr. ; Student Option; Every Fall & Spring)

Description of the range of augmentative and alternative communication applications for persons with developmental and acquired disabilities. Topics include assessment, intervention strategies, progress monitoring, generalization, and maintenance; collateral behavior resulting from AAC applications.

SLHS 5609. Child Language Disorders in Diverse Populations. (3 cr. [max 6 cr.] ; Student Option; Every Spring)

This course covers topics across three broad areas of child language: cultural and linguistic diversity, early intervention, and social communication. The first section will address multicultural issues and bilingualism. The second section will focus on assessment and treatment of language disorders from birth through preschool. Finally, we will address the assessment and treatment

of social communication and pragmatic language deficits across disorders and developmental levels, including early prelinguistic communication. The course will include both theoretically and clinically motivated content.

SLHS 5801. Advanced Audiologic Assessment. (; 3 cr. ; Student Option; Every Fall)

Basic audiometric battery, including pure tone thresholds, measures of speech understanding, masking and immittance in adults. Topics include video otoscopy, ototoxicity, functional hearing loss, and identification of middle-ear fluid. Students enrolled in this course concurrently enroll in SLHS 5810. prereq: 4801 or CDIS 4801 or instr consent

SLHS 5802. Hearing Aids I. (; 3 cr. ; Student Option; Every Fall)

Survey of modern hearing aids including history of development, electroacoustic functions, clinic and laboratory measurement techniques, sound field acoustics, techniques for selection. prereq: [[3305, 4801] or [CDIS 3305, CDIS 4801], SLHS grad] or instr consent

SLHS 5803. Pediatric Audiology. (; 3 cr. ; Student Option; Fall Odd Year)

Behavioral, physiological approaches to assessment and identification, development of the auditory mechanism, etiologies of hearing losses in infants, children, principles of case management with children and families. prereq: [[4801 or CDIS 4801], SLHS grad] or instr consent

SLHS 5804. Cochlear Implants. (; 3 cr. ; A-F or Audit; Spring Odd Year)

Implantable auditory prostheses. History of device development, including cochlear implants and auditory brainstem implants. Signal processing. Techniques for selection, fitting, and rehabilitation. Behavioral/physiological changes across life span. prereq: [[4802, 5801, 5802] or [CDIS 4802, CDIS 5801, CDIS 5802], SLHS grad] or instr consent

SLHS 5805. Advanced Rehabilitative Audiology. (; 3 cr. ; A-F only; Spring Even Year)

Analysis of speech perception/production. Communication skills/strategies. Sensory modalities. Rehabilitative techniques in adults, children, and infants with hearing losses. Tinnitus management. Audiology telepractice.

SLHS 5806. Auditory Disorders in Children. (3 cr. ; A-F or Audit; Every Fall)

In this course students learn about assessing hearing and listening difficulties in children ? beyond the audiogram?, as well as the pediatric-specific considerations for intervention and management of identified hearing difficulties. This course covers the anatomy and physiology of the central auditory pathway, assessments to evaluate auditory disorders and processing skills, and techniques to address auditory processing weaknesses and disorders in children. Additional topics include normal and disordered auditory processing abilities, current and historical theories and controversies surrounding auditory assessment beyond the audiogram, and advances in the

assessment and management of childhood hearing disorders. prereq: [4802 or CDIS 4802, SLHS grad] or instr consent

SLHS 5807. Noise and Hearing

Conservation. (; 3 cr. ; A-F or Audit; Every Fall)

Students in this course will learn to: Describe the auditory and nonauditory effects of noise on humans, Design a successful hearing conservation program, Measure noise levels in a variety of settings, Monitor hearing, Measure hearing protection devices, Develop educational materials, and Describe federal and state regulations as they relate to hearing conservation. prereq: [8801, 8802] or [CDIS 8801, CDIS 8802]

SLHS 5808. Pathophysiology of Hearing Disorders. (; 3 cr. ; A-F or Audit; Fall Odd Year)

Disorders of auditory system, including anatomical, physiological, perceptual, and audiological manifestations of pathologies affecting hearing. Focus will be on understanding current data on physiology, pharmacology, and novel treatment alternatives prereq: [[8801, 8802] or [CDIS 8801, CDIS 8802], SLHS grad] or instr consent

SLHS 5810. Laboratory Module in

Audiology. (; 1-2 cr. [max 10 cr.] ; A-F only; Every Fall & Spring)

Intensive study of clinical methods in audiology. Supplements didactic courses in audiology curriculum. Laboratory study, individually or in small groups. Students enroll in this course concurrently with SLHS 5801, 5802, 8801, 8802. prereq: [4801 or CDIS 4801, SLHS grad] or instr consent

SLHS 5820. Clinical Research and Practice: Grand Rounds. (; 1-6 cr. ; S-N or Audit; Every Fall & Spring)

Group discussions of current professional issues in audiology. Case presentations, guest presentations on current technology, clinical/research ethics. Group meets for an hour weekly with faculty coordinator who leads discussion. Integrates academic/clinical education. prereq: [[4801 or CDIS 4801 or equiv], SLHS grad] or instr consent

SLHS 5830. Clinical Foundations in

Audiology. (; 1-8 cr. [max 24 cr.] ; S-N or Audit; Every Fall & Spring)

Clinical foundations in audiology for first year AuD graduate students. prereq: Grad SLHS major

SLHS 5900. Trends in Telepractice in Communication Sciences and Disorders. (; 2 cr. [max 4 cr.] ; Student Option; Periodic Fall & Spring)

Topics listed in Speech-Language-Hearing Sciences office. prereq: SLHS grad student or instr consent

SLHS 5993. Directed Study. (; 1-12 cr. [max 18 cr.] ; Student Option; Every Fall, Spring & Summer)

Directed readings and preparation of reports on selected topics. prereq: SLHS grad or instr consent Students enrolling in this directed study/research course will complete the University's common Directed Study/Research

contract with the faculty mentor/evaluator. The Faculty member will ensure academic standards are upheld, including: *the work proposed is at the appropriate level for the course, academic in nature, and the student will be involved intellectually in the project. *the project scope is reasonable for one semester and the number of credits specified (42 hours of work per credit) *the faculty mentor is qualified to serve in this role *assessment of student learning and grading criteria are clear and appropriate *the student will be working in a respectful, inclusive environment

Sport Management (SMGT)

SMGT 1701. Introduction to Sport

Management. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Scope/motive of the study of sport from sociological, psychological, historical, economic, and scientific perspective. Issues in sport.

SMGT 2751. Sport and Wellness in China.

(3 cr. ; A-F only; Every Summer)

Course covers international and governing body selection of host market, economic impact of hosting a sport event, media, communications, working with athletes, marketing, event operations, host politics and culture. Students will also participate in wellness and rec as presented by our Chinese partners.

SMGT 3111. Sports Facility and Event

Management. (; 3 cr. ; A-F only; Every Fall & Spring)

This course is designed to provide the student with knowledge pertaining to the various aspects of managing a sport facility and the events which take place within these facilities. Some of the topics discussed include operations, scheduling, marketing, ticketing, finance, sponsorship, risk, security, and event management. Students will have the opportunity to discuss and present viewpoints as it relates to the management of sport facilities and event management. In addition, students will have the opportunity to apply knowledge gained through lecture and in class exercises by viewing a sports event and critiquing various facility management functions during the event, and by developing a sports event management plan. prereq: SMGT major or SMGT minor or CEHD IDP or instructor consent and 45 credits completed or in progress.

SMGT 3143. Organization and Management of Sport. (; 3 cr. ; A-F only; Every Fall & Spring)

This course is designed to provide the student with knowledge pertaining to the various aspects of organization, management, and administration within the sport industry. Students will have the opportunity to hear, learn, and share viewpoints as they relate to sport management through lectures, discussions on current events, and case study analysis. prereq: SMGT major or SMGT minor or CEHD IDP or instructor consent, and 45 credits completed or in progress.

SMGT 3421. Business of Sport. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

This course is designed to provide students with an introduction to the business activity of the sports industry. Topics include sports and its business ecosystem, basic economic principles, revenue management, ticketing, sponsorships and other revenue sources, and expenditure management. prereq: SMGT or KIN or REC major or SMGT minor or CEHD IDP or instructor consent and 45 credits completed or in progress.

SMGT 3501. Sport in a Diverse Society.

(DSJ,SOCS; 3 cr. ; A-F only; Every Fall & Spring)

Relationship between sport and contemporary social institutions. Groups/individuals who have historically been marginalized or excluded from sport participation. Race, sex, social class, sexual orientation, physical (dis)abilities.

SMGT 3501H. Sport in a Diverse Society:

Honors. (DSJ,SOCS; 3 cr. ; A-F only; Every Fall & Spring)

Pervasive and significant relationships between social constructions of sport and physical activity to contemporary social institutions such as politics, religion, economics, education, and mass media. Social issues related to sport. How specific social categories (e.g., age, gender, race, social class) intersect to influence participation/experiences of individuals within sport/physical activity contexts. prereq: Honors student

SMGT 3601. Ethics and Values in Sport. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

In sport management we have many opportunities to ask questions regarding acts and decisions as right or wrong. What does it mean to act in a way that characterizes good behavior? How do we develop morally? What are our personal values and moral orientations? Does sport perpetuate violence in society? What is moral and ethical conduct in sport management? What is meant by the term social responsibility? Do professional sport team owners have a responsibility to the community? How do we make decisions that are good, right and authentic? These questions and other ethical issues in sport will be explored from historical, philosophical, and sociological perspectives. The process of critical reading, thinking, writing, and discussion will be emphasized. Thoughtful reflection and respectful dialogue are encouraged. Critical thinking is a learned process and two activities are central to this process: 1) identifying and challenging assumptions and 2) exploring and imagining alternatives (Brookfield, 1987). prereq: SMGT major and 60 credits completed or in progress.

SMGT 3631. Sport Marketing. (; 3 cr. ; A-F only; Every Fall & Spring)

This course provides an overview of sport marketing management in sport organizations. The most basic objectives of the course provide you with a broad introduction to sport marketing concepts, the role of sport marketing in society, and the various factors that influence marketing decision making. Like other introductory survey courses, you

will be exposed to and expected to learn the "language" of the industry (i.e., terms, concepts, and frameworks) used by practicing marketing professionals. However, it is also expected that by the end of the course you will have a solid understanding of the major decision areas under marketing, the basic interrelationships of those decision areas, and an appreciation of how to apply key frameworks and tools in analysis of customers, competition, and marketing strengths and weaknesses. With this combination, the course should help you develop insight about creative selection of target markets and blending decisions related to product, price, promotion, place, and PR (i.e., the marketing mix) to meet the needs of a target market. It is important that sport management students understand the vital role of marketing within the sport industry. Marketing may take several forms in sport businesses. Students must be able to differentiate between use of marketing to sell sport products and/or services (marketing of sport) from the use of sport and sport personality marketing to sell general or sport-related products or services (marketing through sport). These objectives can only be achieved through a joint effort. I will work to stimulate your interest and learning in these areas, but you will be expected to display initiative and a program of self-study. In that sense, a complementary objective of the course is to provide you with an environment that will encourage and reward your own intellectual effort, while simultaneously maintaining rigorous standards that identify those who are motivated to pursue excellence in their own educational preparation for a sport business career. prereq: SMGT Major or SMGT Minor, or instructor consent AND 45 credits completed or in progress.

SMGT 3632. Sport Sales and Fund-raising. (; 3 cr. ; A-F only; Every Fall & Spring)
Foundation of revenue production in sport management. Necessary skills related to revenue production and sales processes as they apply to the business of sport. prereq: Sport Management major or minor or instr consent

SMGT 3826. Research Methods in Sport Management. (3 cr. ; A-F only; Every Fall & Spring)
A solid understanding of research methods in sport management is becoming more and more important for students pursuing their career in the world of sport. This course is intended to provide students with an overview of research philosophy and useful research methods in Sport Management in academia and in practice. Students will have the opportunity to learn appropriate skills to conduct effective research on problems facing the decision-makers and practitioners in the sport industry. This course will begin with an overview of research concepts and topics in sport management, along with a discussion of the ethical issues with research projects. It will move on to examine the research process, including selecting a topic, reviewing the literature, formulating research questions, developing a conceptual framework,

and establishing the research design. The course will then address qualitative research in sport management, including introducing basic qualitative data collection methods and analysis/coding strategies. The course will then shift to discussing quantitative research paradigms and introducing basic quantitative data analysis techniques.

SMGT 3861. Sport and Recreation Law. (3 cr. ; A-F only; Every Fall & Spring)
This course is designed to acquaint the students to the US legal system, structure, process and terminology. The course provides an introduction of the legal aspects of contract law, tort law, statutory law, negligence, and constitutional law. A student upon completion of the course will understand basic legal aspects of sport and physical activity and will be able to provide managerial analysis and decision making based upon a legal aspects of sport knowledge, therefore providing a competitive advantage of the organization of which are involved. The course instruction relies heavily on court case studies and the legal implications in a sport setting. prereq: SMGT major or REC major or SMGT minor or Health and Wellness Promotion minor and 60 credits completed or in progress.

SMGT 3881W. Senior Seminar in Sport Management. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)
This course addresses the applicability of research in the management of sport through the culmination of a senior research project as well as providing students with career development. The course will engage participants in the systematic inquiry into their own understanding of various components in delivering a sports program. A major segment of course work involves working with a team of peers on a collaborative research project that will address an organization's key business/management problem. Each group will identify a sport organization and work collaboratively with them to develop a plan that addresses the respective problem the organization is experiencing.

SMGT 3993. Directed Study in Sport Management. (; 1-4 cr. ; A-F only; Every Fall, Spring & Summer)
Students have the opportunity to earn credit while working in a lab or field research setting to carry out scholarly or creative activities while under the guidance of a School of Kinesiology Sport Management faculty member. Students can assist with faculty scholarship or carry out projects of their own. To earn credit in this course, students must talk with the faculty member and then fill out a Directed Activity Contract (z.umn.edu/Directed_Activity) online. This contract is an agreement between the student and faculty member and should establish expectations, credits, and the grading basis for the work.

SMGT 3996. Practicum: The Sport Experience. (; 2-8 cr. ; S-N only; Every Fall, Spring & Summer)
Practical experience in one or more sport settings. prereq: 3881, SMGT major, instr consent

Statistics (STAT)

STAT 1001. Introduction to the Ideas of Statistics. (MATH; 4 cr. ; Student Option; Every Fall, Spring & Summer)
Graphical/numerical presentations of data. Judging the usefulness/reliability of results/inferences from surveys and other studies to interesting populations. Coping with randomness/variation in an uncertain world. prereq: Mathematics requirement for admission to University

STAT 3011. Introduction to Statistical Analysis. (MATH; 4 cr. ; Student Option; Every Fall, Spring & Summer)
Standard statistical reasoning. Simple statistical methods. Social/physical sciences. Mathematical reasoning behind facts in daily news. Basic computing environment.

STAT 3021. Introduction to Probability and Statistics. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)
This is an introductory course in statistics whose primary objectives are to teach students the theory of elementary probability theory and an introduction to the elements of statistical inference, including testing, estimation, and confidence statements. prereq: Math 1272

STAT 3022. Data Analysis. (4 cr. ; Student Option; Every Fall & Spring)
Practical survey of applied statistical inference/computing covering widely used statistical tools. Multiple regression, variance analysis, experiment design, nonparametric methods, model checking/selection, variable transformation, categorical data analysis, logistic regression. prereq: 3011 or 3021 or SOC 3811

STAT 3032. Regression and Correlated Data. (4 cr. ; Student Option; Every Fall & Spring)
This is a second course in statistics with a focus on linear regression and correlated data. The intent of this course is to prepare statistics, economics and actuarial science students for statistical modeling needed in their discipline. The course covers the basic concepts of linear algebra and computing in R, simple linear regression, multiple linear regression, statistical inference, model diagnostics, transformations, model selection, model validation, and basics of time series and mixed models. Numerous datasets will be analyzed and interpreted using the open-source statistical software R. prereq: STAT 3011 or STAT 3021

STAT 3301. Regression and Statistical Computing. (4 cr. ; A-F only; Every Fall & Spring)
This is a second course in statistics for students that have completed a calculus-based introductory course. Students will learn to analyze data with the multiple linear regression model. This will include inference, diagnostics, validation, transformations, and model selection. Students will also design and perform Monte Carlo simulation studies to improve their understanding of statistical concepts like coverage probability, Type I error probability, and power. This will allow

students to understand the impacts of model misspecification and the quality of approximate inference. prereq: Stat 3021 and (CSci 1113 or CSci 1133), and co-requisite (CSci 2033 or Math 2142 or Math 2243 or Math 2373)

STAT 3701. Introduction to Statistical Computing. (4 cr. ; A-F only; Every Fall & Spring)

Elementary Monte Carlo, simulation studies, elementary optimization, programming in R, and graphics in R. Prerequisites: (MATH 1272 or 1372 or 1572H), CSCI 1113, and STAT 3032

STAT 3896. Internship for Academic Credit. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)

An applied learning experience in an agreed-upon, short-term, supervised workplace activity, with defined goals, which may be related to a student's major field or area of interest. The work can be full or part time, paid or unpaid, primarily in off-campus environments. Internships integrate classroom knowledge and theory with practical application and skill development in professional or community settings. The skills and knowledge learned should be transferable to other employment settings and not simply to advance the operations of the employer. Typically the student's work is supervised and evaluated by a site coordinator or instructor.

STAT 4051. Applied Statistics I. (4 cr. ; A-F or Audit; Every Fall & Spring)

This is the first semester of the Applied Statistics sequence for majors seeking a BA or BS in statistics. The course introduces a wide variety of applied statistical methods, methodology for identifying types of problems and selecting appropriate methods for data analysis, to correctly interpret results, and to provide hands-on experience with real-life data analysis. The course covers basic concepts of single factor analysis of variance (ANOVA) with fixed and random effects, factorial designs, analysis of covariance (ANCOVA), repeated measures analysis with mixed effect models, principal component analysis (PCA) and multidimensional scaling, robust estimation and regression methods, and rank tests. Numerous datasets will be analyzed and interpreted, using the open-source statistical software R and Rstudio. prerequisites: (STAT 3701 or STAT 3301) and (STAT 4101 or STAT 5101 or MATH 5651)

STAT 4052. Introduction to Statistical Learning. (4 cr. ; A-F only; Every Fall & Spring)

This is the second semester of the core Applied Statistics sequence for majors seeking a BA or BS in statistics. Both Stat 4051 and Stat 4052 are required in the major. The course introduces a wide variety of applied statistical methods, methodology for identifying types of problems and selecting appropriate methods for data analysis, to correctly interpret results, and to provide hands-on experience with real-life data analysis. The course covers basic concepts of classification, both classical methods of linear classification rules as well as modern

computer-intensive methods of classification trees, and the estimation of classification errors by splitting data into training and validation data sets; non-linear parametric regression; nonparametric regression including kernel estimates; categorical data analysis; logistic and Poisson regression; and adjustments for missing data. Numerous datasets will be analyzed and interpreted, using the open-source statistical software R and Rstudio. prerequisites: STAT 4051 and (STAT 4102 or STAT 5102)

STAT 4101. Theory of Statistics I. (; 4 cr. ; Student Option; Every Fall & Spring)

Random variables/distributions. Generating functions. Standard distribution families. Data summaries. Sampling distributions. Likelihood/sufficiency. prereq: Math 1272 or Math 1372 or Math 1572H

STAT 4102. Theory of Statistics II. (; 4 cr. ; Student Option; Every Fall & Spring)

Estimation. Significance tests. Distribution free methods. Power. Application to regression and to analysis of variance/count data. prereq: 4101

STAT 4893W. Consultation and Communication for Statisticians. (WI; 3 cr. ; A-F only; Every Fall & Spring)

This course focuses on how to interact and collaborate as a statistician on a multidisciplinary team. Students will learn about all aspects of statistical consulting by performing an actual consultation. This includes: understanding the needs of the researcher, designing a study to investigate the client's needs, and communicating study results through graphs, writing, and oral presentations in a manner that a non-statistician can understand. Students will also discuss how to design research ethically (respecting the rights of the subjects in the research), how to analyze data without manipulating results, and how to properly cite and credit other people's work. Students will also be exposed to professional statisticians as a means of better understanding careers in statistics. prereq: Senior Statistics Major

STAT 5021. Statistical Analysis. (; 4 cr. ; Student Option; Every Fall & Spring)

Intensive introduction to statistical methods for graduate students needing statistics as a research technique. prereq: college algebra or instr consent; credit will not be granted if credit has been received for STAT 3011

STAT 5052. Statistical and Machine Learning. (3 cr. [max 4 cr.]; A-F only; Every Fall)

The material covered will be the foundations of modern machine learning methods including regularization methods, discriminant analysis, neural nets, random forest, bagging, boosting, support vector machine, and clustering. Model comparison using cross-validation and bootstrap methods will be emphasized.

STAT 5101. Theory of Statistics I. (; 4 cr. ; Student Option; Every Fall)

Logical development of probability, basic issues in statistics. Probability spaces. Random variables, their distributions and expected values. Law of large numbers, central limit theorem, generating functions, multivariate

normal distribution. prereq: (MATH 2263 or MATH 2374 or MATH 2573H), (CSCI 2033 or MATH 2373 or MATH 2243)

STAT 5102. Theory of Statistics II. (; 4 cr. ; Student Option; Every Fall & Spring) Sampling, sufficiency, estimation, test of hypotheses, size/power. Categorical data. Contingency tables. Linear models. Decision theory. prereq: 5101 or Math 5651

STAT 5201. Sampling Methodology in Finite Populations. (; 3 cr. ; Student Option; Every Spring)

Simple random, systematic, stratified, unequal probability sampling. Ratio, model based estimation. Single stage, multistage, adaptive cluster sampling. Spatial sampling. prereq: 3022 or 3032 or 3301 or 4102 or 5021 or 5102 or instr consent

STAT 5302. Applied Regression Analysis. (; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Simple, multiple, and polynomial regression. Estimation, testing, prediction. Use of graphics in regression. Stepwise and other numerical methods. Weighted least squares, nonlinear models, response surfaces. Experimental research/applications. prereq: 3032 or 3022 or 4102 or 5021 or 5102 or instr consent Please note this course generally does not count in the Statistical Practice BA or Statistical Science BS degrees. Please consult with a department advisor with questions.

STAT 5303. Designing Experiments. (; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Analysis of variance. Multiple comparisons. Variance-stabilizing transformations. Contrasts. Construction/analysis of complete/incomplete block designs. Fractional factorial designs. Confounding split plots. Response surface design. prereq: 3022 or 3032 or 3301 or 4102 or 5021 or 5102 or instr consent

STAT 5401. Applied Multivariate Methods. (; 3 cr. ; Student Option; Periodic Fall)

Bivariate and multivariate distributions. Multivariate normal distributions. Analysis of multivariate linear models. Repeated measures, growth curve, and profile analysis. Canonical correlation analysis. Principal components and factor analysis. Discrimination, classification, and clustering. pre-req: STAT 3032 or 3301 or 3022 or 4102 or 5021 or 5102 or instr consent Although not a formal prerequisite of this course, students are encouraged to have familiarity with linear algebra prior to enrolling. Please consult with a department advisor with questions.

STAT 5421. Analysis of Categorical Data. (; 3 cr. ; Student Option; Every Fall & Spring)

Varieties of categorical data, cross-classifications, contingency tables. Tests for independence. Combining 2x2 tables. Multidimensional tables/loglinear models. Maximum-likelihood estimation. Tests for goodness of fit. Logistic regression. Generalized linear/multinomial-response models. prereq: STAT 3022 or 3032 or 3301 or 5302 or 4051 or 8051 or 5102 or 4102

STAT 5511. Time Series Analysis. (; 3 cr. ; Student Option; Every Fall)

Characteristics of time series. Stationarity. Second-order descriptions, time-domain representation, ARIMA/GARCH models. Frequency domain representation. Univariate/multivariate time series analysis. Periodograms, non parametric spectral estimation. State-space models. prereq: STAT 4102 or STAT 5102

STAT 5601. Nonparametric Methods. (; 3 cr. ; Student Option; Every Fall & Spring)
Order statistics. Classical rank-based procedures (e.g., Wilcoxon, Kruskal-Wallis). Goodness of fit. Topics may include smoothing, bootstrap, and generalized linear models. prereq: Stat classes 3032 or 3022 or 4102 or 5021 or 5102 or instr consent

STAT 5701. Statistical Computing. (3 cr. ; A-F or Audit; Every Fall)
Statistical programming, function writing, graphics using high-level statistical computing languages. Data management, parallel computing, version control, simulation studies, power calculations. Using optimization to fit statistical models. Monte Carlo methods, reproducible research. prereq: (Stat 5102 or Stat 8102) and (Stat 5302 or STAT 8051) or consent

STAT 5731. Bayesian Astrostatistics. (4 cr. ; A-F only; Every Fall)
This course will introduce Bayesian methods for interpreting and analyzing large data sets from astrophysical experiments. These methods will be demonstrated using astrophysics real-world data sets and a focus on modern statistical software, such as R and python. Prerequisites: MATH 2263 and MATH 2243, or equivalent; or instructor consent Suggested: statistical course at the level of AST 4031, AST 5031, STAT 3021, or STAT 5021

STAT 5931. Topics in Statistics. (; 3 cr. ; Student Option; Periodic Fall)
Topics vary according to student needs and available staff.

STAT 5993. Tutorial. (; 1-6 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
Directed study in areas not covered by regular offerings. prereq: instr consent

Stem Cell Biology (SCB)

SCB 5051. Stem Cell Biology Practical Training Module. (1 cr. ; A-F only; Every Fall)
Intensive two-week course. Hands-on instruction in techniques of tissue culture. Conventional, fluorescence, and confocal microscopy. Flow cytometry for both analysis of cell populations and sorting of cells. prereq: Acceptance into stem cell biology master's program

SCB 5054. Stem Cell Institute Research Seminar and Journal Club. (; 2 cr. [max 6 cr.] ; A-F or Audit; Every Fall & Spring)
Students attend weekly Stem Cell Institute research seminars and journal clubs, write brief summaries, participate in journal club, and present original research paper. prereq: Acceptance into stem cell biology [master's prog or PhD minor prog] or instr consent

SCB 5900. Master's Plan B Research Paper and Presentation. (; 2 cr. ; A-F only; Every Fall, Spring & Summer)

Students write research paper based on primary literature on stem cell biology topic of interest, mentored by faculty member. prereq: Admission to stem cell biology master's plan B program

Studies in Cinema Media Cultur (SCMC)

SCMC 1201V. Honors Course: Cinema. (AH,WI; 4 cr. ; Student Option; Every Fall & Spring)

Introduction to the critical study of the visual in modernity, presented through sustained analysis of the cinema and cinematic codes. Emphases on formal film analysis and major film movements and conventions in the international history of cinema. Students develop a vocabulary for formal visual analysis and explore major theories of the cinema. *Students will not receive credit for SCMC 1201V if they have already taken CSCL 1201V, CSCL 1201W, SCMC 1201W, ARTH 1921W, CSCL 1921W, CSCL 1201 or SCMC 1201

SCMC 1201W. Cinema. (AH,WI; 4 cr. ; Student Option; Every Fall & Spring)

Introduction to the critical study of the visual in modernity, presented through sustained analysis of the cinema and cinematic codes. Emphases on formal film analysis and major film movements and conventions in the international history of cinema. Students develop a vocabulary for formal visual analysis and explore major theories of the cinema. *Students will not receive credit for CSCL 1201W if they have already taken SCMC 1201W, ARTH 1921W, CSCL 1921W, CSCL 1201 or SCMC 1201

SCMC 1202W. Media: Word, Image, Sound. (AH,WI,TS; 4 cr. ; Student Option; Every Fall & Spring)

Introduction to the critical and theoretical study of media and technology from Aristotle to the modern world. The first half of the course emphasizes theoretical readings in dialogue with historical apparatuses (printing press, photography, radio, cinema, television) and various expressive objects (the bible, early film, ethnographic sound recordings). The second half turns to the modern culture industry since World War II, and introduces students to the critical study of mass culture, the concept of ideology, and of the relationship between corporate power and media conglomerates.

SCMC 3001W. History of Cinema and Media Culture. (WI; 4 cr. ; Student Option; Every Fall)

Genealogy of cinema in relation to other media, notably photography, radio, television/video, and the Internet. Representative films from decisive moments in global development of cinema. Rise/fall of Hollywood studio system, establishment of different national cinemas, cinematic challenges to cultural imperialism, emergence of post-cinematic technologies.

SCMC 3201. Fundamentals of Digital Filmmaking. (; 4 cr. ; A-F only; Every Fall)

Practice of digital filmmaking. Digital techniques, practical tools required to produce films. Optical/digital devices as artistic tools. Historical/theoretical issues of cinema, its relation to other art forms.

SCMC 3202. Intermediate Digital Filmmaking. (; 4 cr. ; A-F only; Every Spring)

Students complete a film of any length, 24 frames or feature-length. Emphasizes formal analysis of frames, shots, sequences, and relations of unit (frame or shot) to whole. prereq: 3201 or instr consent

SCMC 3210. Cinema and Ideology. (AH; 4 cr. ; Student Option; Every Fall & Spring)

The cinema as a social institution with emphasis on the complex relations it maintains with the ideological practices that define both the form and the content of its products. Specific films used to study how mass culture contributes to the process of shaping beliefs and identities of citizens.

SCMC 3211. Global and Transnational Cinemas. (GP; 4 cr. ; Student Option; Every Fall & Spring)

This course explores Global and Transnational Cinemas as alternative traditions to the dominant Hollywood-centered accounts of film history. Students will grapple with the historical, social, and political motivations of cinematic projects that critique traditions of national cinema, or that resist the hegemonic force of neocolonial cultural centers. Italian Neo-realism and the French New Wave will be examined as movements that challenge politics and mass culture. Third Cinema in Latin America and pan-African cinematic movements will be examined through their struggles with both colonialism and the rise of post-colonial dictatorships. Indian and Japanese cinemas of the 50s & 60s will mark out new possibilities of filmmaking and distribution. Finally, counter-hegemonic and experimental movements in U.S.-based film, such as the L.A. Rebellion and Fluxus, will allow students to understand how opposition to Hollywood style could exist within the very centers of cultural power while also reaching out to larger global communities.

SCMC 3212W. Documentary Cinema: History and Politics. (AH,WI,CIV; 4 cr. ; Student Option No Audit; Periodic Fall & Spring)

This course explores the ethics and aesthetics of documentary cinema, arguably the very first genre of film. We will track the way documentary has widened from largely instructional and experimental uses early in its history to become a distinct genre among today's familiar feature films. We will screen early documentaries, which may include shocking ethnographies (Nanook of the North, The Mad Masters). Over the course of the term, the syllabus makes its way to recent exemplars of the genre (films may include: Amy, American Teen, I Am Not Your Negro, A Jihad for Love, Generation Wealth, Fetish, Blackfish and so on). One of our aims will be to explore students' relations as viewers and documentarians themselves (via smartphones, Instagram, etc.) to this participatory, revelatory, and always controversial, politically fraught film

practice. Documentary Cinema includes both full class lectures and discussions as well as small group discussion of films and readings, and may include the opportunity for students to create their own personal documentary. Intellectually, the course balances out a study of the grammar of documentary as an artistic practice with explorations of the ways the genre reflects broader currents of cinematic and cultural history. By the end of the semester, students should have a stronger understanding of the ways documentary cinema opens our senses to the world around us.

SCMC 3220W. Screen Cultures. (AH,WI,TS; 3 cr. ; Student Option; Every Spring)

Screens increasingly define the ways that we communicate with one another and how we encounter the world. This course will offer a critical, historical approach to the emergence of "screen cultures" from the beginning of photography and cinema to our own age of ubiquitous touch screen displays. We will pay a great deal of attention to the ways that such technologies drive our patterns of consumption and production as well as how they create and define our social environments.

SCMC 3221. On Television. (CIV; 3 cr. ; Student Option; Every Fall & Spring)

We will study writings on television and specific TV shows from a variety of angles to understand the rise of American broadcast technologies, how race and class are crafted on TV, representations of gender and the home, postmodernity and late capitalism, the rise and demise of taste, global television and the public sphere, the production of "reality" in our present historical moment, and changes in televisual technologies. Throughout the course, we will also consider what constitutes television? the technology, the form, and the content? and learn to read these three facets of it concurrently.

SCMC 3896. Internship for Academic Credit. (; 1-4 cr. ; Student Option; Every Fall, Spring & Summer)

An applied learning experience in an agreed-upon, short-term, supervised workplace activity, with defined goals, which may be related to a student's major field or area of interest. The work can be full or part time, paid or unpaid, primarily in off-campus environments. Internships integrate classroom knowledge and theory with practical application and skill development in professional or community settings. The skills and knowledge learned should be transferable to other employment settings and not simply to advance the operations of the employer. Typically the student's work is supervised and evaluated by a site coordinator or instructor.

SCMC 3910. Topics in Studies in Cinema and Media Culture. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Topics specified in Class Schedule.

SCMC 3993. Directed Study. (1-3 cr. [max 6 cr.] ; Student Option; Every Fall & Spring)
Guided individual reading or study.

SCMC 4993. Directed Study. (1-3 cr. [max 6 cr.] ; Student Option; Every Fall & Spring)

Guided individual reading or study.

SCMC 5001. Critical Debates in the Study of Cinema and Media Culture. (; 4 cr. ; Student Option; Every Fall)

This course serves as a capstone within the Studies in Cinema and Media Culture program as well as an advanced seminar in cinema and media theory. It covers such topics as contemporary cinema, transnational television, video games, digital networks, and surveillance technologies. It builds on the knowledge of cinema and media studies that students have developed over their undergraduate education. Students are given the resources and encouragement to construct larger reading and viewing lists that will further develop their knowledge of media and cinema. The final grade is based on participation, critical essays, weekly viewing assignments, and an individualized project that can include creative and professional interests.

SCMC 5002. Advanced Film Analysis. (; 4 cr. ; A-F only; Every Spring)

Application of textual analysis to the reading of a film. Students work collaboratively to discern and interpret all component aural/visual elements of what the film says and how it says it.

SCMC 5303. Sound Studies. (3 cr. ; A-F or Audit; Fall Odd Year)

What is sound? Among the various ways of absorbing the world through the senses (looking, reading, watching, touching, tasting), what is unique to the actions of listening and hearing? And over the course of human history, how has sound been variously deployed, framed, and constructed? This course covers a diverse range of topics in the fast-developing interdisciplinary field of Sound Studies from the philosophy of sound to psychoanalytic theories of the voice, the gendered histories of telephones, accounts of radio and decolonization, film sound, sonic expressions of race, the politics of global popular music, mobile media technologies, and cutting-edge approaches to sound art.

SCMC 5993. Directed Study. (1-3 cr. [max 6 cr.] ; Student Option; Every Fall & Spring)
Guided individual reading or study.

Study Abroad in Argentina (ARGN)

ARGN 1000. Language and Culture in Buenos Aires Program. (; 1-18 cr. [max 54 cr.] ; A-F only; Every Fall & Spring)

ARGN 1001. Beginning Spanish I. (; 5 cr. ; A-F only; Every Fall & Spring)
Listening, speaking, reading, writing. Some cultural readings.

ARGN 1002. Beginning Spanish. (; 5 cr. ; A-F only; Every Fall & Spring)
Listening, speaking, reading, writing. Some cultural readings.

ARGN 1003. Intermediate Spanish III. (; 5 cr. ; A-F only; Every Fall & Spring)
Conversation, comprehension proficiency. Reading/writing through literary analysis and grammar review.

ARGN 1004. Intermediate Spanish IV. (; 5 cr. ; A-F only; Every Fall & Spring)
Conversation, comprehension proficiency. Reading/writing through literary analysis and grammar review.

ARGN 1022. Alternate Second Semester Spanish. (; 5 cr. [max 10 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad.

ARGN 3000. Language and Culture in Buenos Aires Program. (; 1-18 cr. [max 54 cr.] ; A-F only; Every Fall & Spring)

ARGN 3001. Colloquial Spanish. (; 3 cr. ; A-F only; Every Fall & Spring)
Spanish language in its spoken colloquial form. Variations based on age, social status, and regional background. Vocabulary, grammar, language characteristics.

ARGN 3003. Politics and Society in Latin America. (; 3 cr. ; A-F only; Every Fall & Spring)

Comparative analysis of social/political structures of Argentina and Latin America in 20th century. Taught in English.

ARGN 3004. Latin American Economy: The Argentine Perspective. (; 3 cr. ; A-F only; Every Fall & Spring)

Privatization, industrialization, and economic reforms in Latin America and Argentina. Inflation, structural change, poverty, changes in the external/rural sector. Taught in English.

ARGN 3005. Buenos Aires: City of the Arts. (; 3 cr. ; A-F only; Every Fall & Spring)
Unique artistic side of Buenos Aires. Theory classes, art/literature workshops. Excursions to museums, theaters, tango clubs, and opera houses. European and Latin American influences that make the city unique. Taught in English.

ARGN 3006. Topics in Argentine History. (; 3 cr. ; A-F only; Every Fall & Spring)
Study Argentina's history. Main topics include the legacy of Peron, the army in politics and government, the return of democracy, and current events. Taught in English.

ARGN 3008. Latin American Literature and Cinema. (GP,LITR; 3 cr. [max 6 cr.] ; A-F only; Every Fall & Spring)
Offered jointly by Fundaci?n Jose Ortega y Gasset and Learning Abroad Center. Located in downtown Buenos Aires. Spanish language. Global/cultural issues. Sampling food, reading literature, experiencing music/dance. Argentine culture.

ARGN 3009. Argentina: Stereotypes and Identity. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)
Intercultural perspectives on Argentina. How others perceive Argentines and how Argentines perceive themselves, through literature, humor, art, music, and history. prereq: 1004

ARGN 3011. Buenos Aires - City of the Arts: Spanish. (3 cr. ; Student Option; Every Fall, Spring & Summer)
This course focuses on the art and architecture of Argentina. Learn about the different artistic movements in the country and visit museums,

private art collections, and public monuments. The city becomes your classroom. At the same time, get a broader perspective of world art that serves as a background for a better understanding of the art and architectural scene in Argentina throughout the past 300 years.

ARGN 3012. Paradox of Mental Health - Biological or Cultural?. (GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course looks at the biological basis for mental health, applying basic concepts of neurobiology. It explores the causal mechanisms of various mental health issues from autism to anxiety. The course will compare Argentina's and the United States' approaches to mental health, exploring the relationship between culture and mental health (e.g., ?culture-bound syndromes?) over time. In addition, the course will compare the use of therapy versus pharmacological approaches in treating mental illness, looking at the medicalization of mental health in Argentina as compared to the United States.

ARGN 3015W. Spanish Composition and Communication. (WI; 4 cr. ; Student Option; Every Fall, Spring & Summer)

Writing, speaking, reading, and understanding modern Spanish at level of majors/minors. Students generate compositions and read texts from Spain and Latin America. Grammar review, audio tape exercises, paired work, small group work, discussion, oral presentations, peer editing, process writing.

ARGN 3104W. Introduction to the Study of Hispanic Literatures. (WI; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer) Study abroad course.

ARGN 3301. Cross-Cultural Psychology. (GP,SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course's aim is to understand how cultural factors influence human behavior and development. Additionally, the course may discuss interaction between different cultures and how to solve the difficulties that may arise during the acculturation process. The course studies the vision and treatment of mental disorders in different cultures, especially the differences and similarities between Argentinian and North American cultures. It will also analyze and compare mental health systems of both countries.

ARGN 3302. Understanding Argentina. (1 cr. ; Student Option; Every Fall, Spring & Summer)

This course seeks to provide students with an intercultural understanding of contemporary Argentina through classes, site visits, and critical analysis, all of which will allow them to draw comparisons to their own home country. The syllabus also focuses on the different spheres where the individual and the social intersect in Argentina: the private space, the public space, the political space (which may differ from the students' home country). The departing point of this course will be a synchronic overview of Argentina nowadays. The fact that students will be culturally immersed in the host country for

a whole semester will strengthen their self-awareness and global perspective. Students will learn about the interplay of some issues in today's Argentinian society: identity, politics, gender, ethnicity, migrations, education, culture, power relations, and similarities and differences with the USA.

ARGN 3640. Service Learning in Buenos Aires: ENG. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Students work with non-governmental and community service organizations devoted to helping children/adults in impoverished urban areas, immigrants from border countries, and groups at high risk (women, children, seniors).

ARGN 3641. Service Learning in Buenos Aires: SPANISH. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Students work with non-governmental organizations and community service organizations to help children/adults in impoverished urban, immigrants from border countries, and groups at high risk (women, children, seniors).

ARGN 3752. International Marketing. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course.

ARGN 3896. Internship in Buenos Aires. (GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

The Buenos Aires internship course is designed to provide students with the opportunity to become more knowledgeable regarding the local culture, organizational cultures, and the professional environment. Through practical internship experiences as well as readings, discussions, and written assignments, students will deepen their understanding of the host country's cultural context and critically examine their own worldview. The course is designed to guide students in the internship experience and create a foundation for a successful professional career. In addition to gaining a cross-cultural comparative view on work, the topics and assignments will deepen students' insights about themselves, professional expectations, and being successful in the workplace. Students are expected to make a valuable contribution to the internship site through the completion of major projects or tasks. This course focuses on themes students are expected to develop and enhance over the course of the semester through class seminars and on-the-job experience, particularly characteristics of work dynamics in Argentina; work relations, work protocol, and hierarchy; differences between Argentina and the US, notions of leadership in Argentina, and local cultural traits that are unique to the country; and multiculturalism, age, gender, and communication in the workplace.

ARGN 4621. The Global Economy. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course.

DBLN 1101. University College Dublin Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin and Business in Dublin study abroad programs to represent a course taken at University College Dublin. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

DBLN 1102. University College Dublin Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin and Business in Dublin study abroad programs to represent a course taken at University College Dublin. The specific course title will appear for each student in the Notes field directly underneath this course on their UMN transcript.

DBLN 1103. University College Dublin Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin and Business in Dublin study abroad programs to represent a course taken at University College Dublin. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

DBLN 1104. University College Dublin Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin and Business in Dublin study abroad programs to represent a course taken at University College Dublin. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

DBLN 1105. University College Dublin Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin and Business in Dublin study abroad programs to represent a course taken at University College Dublin. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

DBLN 1201. Dublin City University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin study abroad program to represent a course taken at Dublin City University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

DBLN 1202. Dublin City University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin study abroad program to represent a course taken at Dublin City University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

Study Abroad in Dublin (DBLN)

DBLN 1203. Dublin City University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin study abroad program to represent a course taken at Dublin City University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

DBLN 1204. Dublin City University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin study abroad program to represent a course taken at Dublin City University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

DBLN 1205. Dublin City University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin study abroad program to represent a course taken at Dublin City University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

DBLN 2051. Financial Accounting. (GP; 4 cr. ; Student Option; Every Fall, Spring & Summer)

This course is concerned with providing students with an understanding of and ability to apply the fundamentals of accounting. It presumes no prior knowledge of accounting from previous levels, however there is material that students who have studied the subject before will find challenging. The student is introduced to the key concepts underlying accounting and recording business transactions. It also encompasses the preparation of financial statements for different business entities. It sets the foundation for further study in the area and assist with the student underlying understanding of accounting. There is also a strong emphasis on financial statement analysis and understanding annual reports.

DBLN 2551. Business Statistics, Data Sources, Presentation and Analysis. (GP,MATH; 4 cr. ; Student Option; Every Fall, Spring & Summer)

This course is concerned with providing students with an understanding of and ability to apply (1) exploratory data analysis, (2) basic inferential procedures, (3) regression analysis, and (4) experimental design. The methods to be covered have been selected for their relevance to managerial decision making, and problem solving, and to other courses in the undergraduate curriculum. Beyond simply teaching the application of these methods, a primary objective of the course is to improve students' "statistical thinking abilities."

DBLN 3010W. The Playwright in Practice: Writing for the Stage in 21st Century Ireland. (WI; 3 cr. ; Student Option; Every Fall & Spring)

Irish playwrights have contributed disproportionately to the output of English-language drama over the course of the 20th

century, creating some of the most memorable dramatic literature of the last hundred years.

With that in mind, this intensive practical playwriting course will interrogate the tradition of theatrical writing in the Irish capital of Dublin by engaging comprehensively with a variety of modes and disciplines specific to the act of writing for the Irish stage. Contemporary Dublin has undergone an unprecedented process of modernization rarely seen in the developed world, with the city becoming in just twenty years a multicultural, cosmopolitan space that is embracing provocative ways of seeing and creating work meant for theatrical performance. Questions about the relevancy of the practice of writing in creating performance, how authorship of a play is determined, and the slipperiness of language are now at the heart of Irish theatre's drive to redefine itself. Challenged by a wide range of disciplinary approaches to writing and rewriting, students will be exposed to a host of methodologies for creating dramatic literature for the stage specific to this unique moment in Irish theatrical history and, in the process, gain an appreciation for the important role writers still play in making theatrical performance.

DBLN 3011. Storytelling: Writing Irish Cultural Narratives. (3 cr. ; Student Option; Every Fall & Summer)

Study abroad course. What does it mean to tell a story? Does it matter why or how someone tells a story? Storytelling is an Irish oral tradition that dates back to Celtic mythology, but is also important to modern day Ireland. This course will examine how storytelling brings Ireland to life, and how Dublin and Ireland are represented in stories. How can you use a building, a street, a painting, or a performance to construct a story that can be shared with others, and that creates a narrative that resonates with the specific time and history of that place? The course will look at the tradition of the short story in Irish writing, and also the development of the Irish novel. Students will also think about their own stories, and how they can be told.

DBLN 3012. Engaging Ireland: Past, Present and Future. (3 cr. ; Student Option; Every Fall & Summer)

Study abroad course. All students studying in Dublin will take this course, regardless of their track choice. This course has three main components: gain knowledge of Ireland past and present through modules focused on areas such as economics, religion, language, sports, and education; engage with the host-country with activities such as internship, research, performance, volunteer, sports team, or teaching practicum; and explore Ireland through a range of study tours to Western Ireland and Northern Ireland.

DBLN 3013. Performance in Irish Context.

(3 cr. ; Student Option; Every Fall & Summer) Study abroad course. Students will study and actively participate in the art of performance, focusing on Irish writers like Samuel Beckett, Brian Friel, Conor McPherson, Martin McDonough and more. Actor training, and so this course, is physical, emotional and

intellectual. The work will include vocal training and expression, dynamic conditioning of the instrument of the body, and textual analysis. In addition the course will help actors unlock the specific voices of Irish playwrights. Students will work on scenes and monologues as well as their own improvisations. This will be an acting class, and will require one previous fundamentals of acting or performance class at your home institution, or permission by the instructor.

DBLN 3014. Dublin Internship: Learning through Experience. (3 cr. ; Student Option; Every Fall & Summer)

Study abroad course. This course explores the world of work in Ireland and how students respond to the challenges that they can expect to encounter while interning in Dublin.

DBLN 3015. Irish Literature and Film. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This course will examine dominant images of Ireland in film and literature from Romantic Ireland and the images of the Celtic Revival, to the harsher realities of Irish life and the transformations of Irish society under modernity and globalization. Issues discussed will include emigration and immigration; nostalgia and loss; gender, family and community; Church and State; politics and violence; language and communication, and the country and city.

DBLN 3016. International Marketing. (3 cr. ; A-F only; Every Fall, Spring & Summer)

This International Marketing course will help you develop an understanding of the scope and challenges of marketing in the international context. The course examines how the global dimensions technology, research, capital investment, and production impact marketing, distribution, and communication networks. The breadth of this course will provide insights into the increasingly interdependent global economic and physical environment and its impact on international marketing. Globalisation has led to increasing interdependence. ? Connecting the dots? has thus become essential to the survival and success of businesses, even those not operating in the international arena. By examining these linkages, students will gain an understanding of how companies develop strategic plans that are competitive to survive and succeed in these global markets. The unique localised content provided by the CAPA centres will present further regional insights into the key issues surrounding marketing from an international perspective. With its global presence, CAPA offers students the opportunity to enrich their academic experience by exposing and exploring the localised context of the CAPA Dublin Centre. Ireland is a small open economy, and its financial well-being depends largely on international trade and influenced by global markets. As one of the 27 member states of the European Union (EU), Ireland has a modern economy based on free trade and foreign direct investment (FDI) as the pathways to growth. Ireland's high competitiveness ranking is attributed to three key areas, including access to talent, openness to foreign ideas, and agility to respond to new challenges.

Dublin is an entrepreneurial city and home to many of the world's top players in technology, finance, professional services, and science and health. The vibrant culture, creative economy, and business-friendly environment make it the ideal location for students to immerse themselves while exploring a city that consistently ranks as one of the top European cities of culture and competitiveness.

DBLN 3017. International Economics. (3 cr. ; Student Option; Every Fall, Spring & Summer)

The International Economics module provides an understanding of the key economic issues in the global business environment. The course provides an understanding of how global businesses are impacted by real world developments in economics, politics, and finance. The business environment is dynamic in nature. The course coverage is therefore updated periodically to include current real-world evidence as well as recent academic and empirical findings. The five broad topics covered in the course are: Globalisation, Country Differences, Cross-Border Trade and Investment, the Global Monetary System, and Competing in a Global Market Place.

DBLN 3018. Analyzing and Exploring the Global City. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Cities around the world are striving to be ? global.? This interdisciplinary course focuses on the physical, socio-economic, political, and cultural development of Dublin through space and time. Before students explore the city, chronologically they will examine ancient Ireland's globality in terms of its educational and religious influences, particularly on mainland Europe. Then, starting from the 10th Century, students will retrace the Viking city through to the city's current form that is characterised by urban sprawl, multiculturalism, and its connection to Europe and the global economy. Much of the first half of the course will explore the creation of the colonial city (Georgian Dublin) and, following independence from Britain, the creation of the postcolonial city. Each of these phases in the city's morphology can be witnessed/read through an examination of the city's architecture, nomenclature, museums, art, and in relation to the post-colonial city, oral histories, which requires an interdisciplinary toolkit for city exploration and analysis. The second section of the course will explore the policies that fostered the rapid speed at which Dublin grew from being a sparsely populated, non-industrial and disconnected urban space in the 1970s to a post-industrial/post-modern relatively highly populated dense plural space in the 1990s. Students will investigate the relationship between these policies and the devastating recession of the 2000s. Students will also explore the result of these rapid physical and socio-economic and cultural changes in terms of gentrification, immigration, and the complicated and contested nature of inner city residents' notions of place, space, and identity. Students will also explore the creation of new multiethnic spaces and the city's rebranding as a literary-cultural space (tourist Dublin). Finally,

students will investigate the processes that occur in most global cities, which contribute to the creation of invisible spaces and subcultures that are found on the physical and cultural margins.

DBLN 3019. Ethics in the Media. (CIV; 3 cr. ; Student Option; Every Fall, Spring & Summer) This course will address the principal ethical issues facing journalism, advertising, entertainment media, and online content. It will examine the moral obligations of the producers as well as the responsibilities borne by consumers. The course will provide an overview of the applicable ethical principles and philosophies, then apply these to present-day cases in the media through case studies. Finally, students will learn to critically engage with the content to analyse for themselves the ethical issues that are present in the production and consumption of the media on an individual and societal level.

DBLN 3101. University College Dublin Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin and Business in Dublin study abroad programs to represent a course taken at University College Dublin. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

DBLN 3102. University College Dublin Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin and Business in Dublin study abroad programs to represent a course taken at University College Dublin. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

DBLN 3103. University College Dublin Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin and Business in Dublin study abroad programs to represent a course taken at University College Dublin. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

DBLN 3104. University College Dublin Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin and Business in Dublin study abroad programs to represent a course taken at University College Dublin. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

DBLN 3105. University College Dublin Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin and Business in Dublin study abroad programs to represent a course taken at University College Dublin. The specific course title will appear for each student in the

Notes field directly underneath this course on their transcript.

DBLN 3201. Dublin City University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin study abroad program to represent a course taken at Dublin City University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

DBLN 3202. Dublin City University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin study abroad program to represent a course taken at Dublin City University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

DBLN 3203. Dublin City University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin study abroad program to represent a course taken at Dublin City University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

DBLN 3204. Dublin City University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin study abroad program to represent a course taken at Dublin City University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

DBLN 3205. Dublin City University Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study Abroad in Dublin study abroad program to represent a course taken at Dublin City University. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

DBLN 3375. Global Internship: Dublin. (3-6 cr. ; Student Option; Every Fall, Spring & Summer)

The Global Internship Course (GIC) provides a unique and innovative opportunity for students to engage in an internship (and living abroad experience) while supported by academic in class and online educational sessions to further develop their personal and professional skills while earning academic credit. GIC students also partake in out-of-class guided and self-guided activities and excursions that have been devised to enable students to become more comfortable with, and knowledgeable of, their internship locations/neighbourhoods. Furthermore, a day-long field trip illustrates how socio-political and economic factors, such as the effects of housing costs in global cities, necessitate commuting and changing work practices such as flexible working hours and working remotely that embody best practice in well-being. Field excursions vary and may

also include a focus on, for example, corporate social responsibility and sustainability. The GIC fits in with CAPA's philosophy and practice of enabling students to learn about the social and cultural context of their internship placement and the host region and country, as well as other GIC themes, through comparative global analysis. At times, this analysis will be facilitated through a small selection of CAPA Masterclasses and our ?In Conversation with:_____? series given by leading professionals from a diverse range of fields. The in-class active learning approach gives students the opportunity to discuss and analyze theories and models of work, organizational behavior and management in a cross-cultural context. COVID-19 has, by necessity, and in time, by choice, increased the extent to which employees work remotely. The GIC will help students to work effectively in a partial and/or, if required, full-time remote capacity should the need arise and to demonstrate to students the competencies and skills that they will gain and demonstrate through remote engagement. A variety of teaching and learning activities will be used; for example: lecture, workshop, discussion, informal and formal presentations, self-guided and guided research, and mock (recorded) interviews. The assessment mechanisms are all designed to support learning, using the internship and living abroad experience as a vehicle. Above all, the in-class CAPA sessions give students the opportunity to listen to individual experiences, compare and contrast activities with others, and consider the experience in terms of their personal and professional development. At the beginning we focus on self-reflection, and at the end of this process we challenge each student to focus on self-projection. At its core, GIC provides an opportunity for students to unpack, synthesise, and articulate (the value of) their learning. It is, therefore, our intention that students will treat these on-site sessions with the same dedication and professionalism that we expect the students to display at their internships. Students will undertake an intensive orientation session to help them prepare for and integrate into their placements. Additional resources and readings to aid students' personal and professional development will be provided. Central to the pedagogy of GIC is self-reflection and collaboration; we value the diverse socio-cultural and academic backgrounds our students bring to the course and see the multi- and interdisciplinary nature of GIC as a plus for discussion and collaboration. Students with prior knowledge of certain topics covered in class are encouraged to share their knowledge in a mentoring capacity with their peers and to build upon their knowledge by considering such topics from other academic disciplines and global and practical perspectives. The content of this course is arranged around three key themes: Personal and Professional Development, Intercultural Competence, and Comparative Analysis.

Study Abroad in Florence (FLOR)

FLOR 1001. Beginning Italian. (; 3 cr. ; Student Option; Every Fall & Spring)

Listening, speaking, reading, communicative competence.

FLOR 1002. Beginning Italian. (; 5 cr. ; Student Option; Every Fall, Spring & Summer)

This second beginning level course of Italian uses a communicative approach to help you quickly develop the ability to communicate in Italian in everyday practical situations as well as to acquire the skills necessary to read and write effectively in Italian. From the start, you will be expected to comprehend and produce some Italian by actively engaging in communicative activities that have real world relevance. Role-plays, pair and group work, and specific tasks and assignments carried out in and out of class will provide you with numerous opportunities for learning the language while interacting with locals and other learners in Italian. Listening, reading, speaking, and writing are integrated into all activities and are tested in compositions, oral presentations, grammar tests, and exams. Special emphasis is placed on the expansion of communicative functions and of the vocabulary. Finally, class and home assignments and projects will encourage you to become acquainted with various aspects of Florentine life and with the culture and society of Italy at large.

FLOR 1003. Intermediate Italian. (; 5 cr. ; Student Option; Every Fall & Summer)

This communication-based intermediate course of Italian helps you develop the ability to communicate effectively in everyday, practical situations and to read authentic materials in Italian. The course reviews and completes all basic grammar structures, reinforces the mastering of these elements in real life situations, and expands your vocabulary and knowledge of more complex grammar and syntax structures. As the language learning progresses, you will be expected to produce more Italian while actively engaging in communicative activities that have real world relevance both in and out of class, and practice all four linguistic abilities. You will be encouraged though a variety of in- and out-of-class activities to explore the city of Florence and engage in guided interactions with the local culture. You will also be exposed to a variety of registers and uses of the language. Site visits and authentic materials in a variety of media are used extensively in order to facilitate your communication and comprehension skills and with the culture and society of Italy at large.

FLOR 1004. Intermediate Italian. (; 5 cr. ; Student Option; Every Fall, Spring & Summer)

This communication-based intermediate course of Italian helps you develop the ability to communicate effectively in everyday practical situations and to read authentic materials in Italian. The course reviews and completes all basic grammar structures, reinforces the mastering of these elements in real life situations, and expands your vocabulary and knowledge of more complex grammar and syntax structures. As the language learning progresses, you will be expected to produce more Italian while actively engaging in communicative activities that have real world relevance both in and out of class, and

practice all four linguistic abilities. You will be encouraged though a variety of in- and out-of-class activities to explore the city of Florence and engage in guided interactions with the local culture. You will also be exposed to a variety of registers and uses of the language. Site visits and authentic materials in a variety of media are used extensively in order to facilitate your communication and comprehension skills with the culture and society of Italy at large.

FLOR 1201. Beginning Drawing Studio. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

FLOR 3004. Photography: Exploring Society Through the Camera's Lens. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

FLOR 3005. History and Sociology of Modern Consumerism. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

FLOR 3006. Cross Cultural Psychology. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

FLOR 3007. Made in Italy: Retail Merchandising in Florence. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

FLOR 3008. Entrepreneurship: Small Businesses in Florence. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad.

FLOR 3009. Internships in Florence: A Comparative Approach to the Italian Workforce. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

FLOR 3010W. Literary Representations of Florence: Space, Self & Other. (WI); 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

FLOR 3012. Florence and the Mediterranean: A Sea of Culture. (3 cr. ; Student Option; Every Fall, Spring & Summer)
During the Middle Ages and in the early Modern Age, three great civilizations clashed for the control of the Mediterranean basin: the Latin West, the Byzantine Empire, and the Muslim world. But the sea was not just a theatre of war, it was also a lively economic area, with trade routes crossing it from north to south, from east to west. Moreover, it was the place where different cultures met: This course will explore their reciprocal influence, with a special focus on art history and a mainly Italian and Florentine point of view. Topics will include: the impact of Islamic art on Western culture; the role of Byzantine art in the development of Florentine painting; the rediscovery of Greek classical culture and its importance in Renaissance civilization; the consequences of the fall of Constantinople

and of the expansion of the Ottoman Empire. Students will explore Florentine churches, palaces, and museums in search of visual evidence of the links between the city and the diversity of Mediterranean culture.

FLOR 3014. Fashion & Arts Communication. (GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course was structured out of four core ideas: how fashion designers and artists communicate and market their art; how institutions communicate and market the fashion items and artworks they have on display; how the audience communicates their experience of fashion and of art and how this influences marketing and promotional strategies; and how these three processes are implemented through communication and marketing channels and for which purposes. The course will explore its core ideas integrating theoretical and experiential-learning approaches. Starting from the fundamentals of communication theory, with a focus on listening skills and effective storytelling, students will draw from case studies to understand the underlying core of communication activities in fashion and the arts. The promotional process in both industries will be analyzed in its main parts (research, planning, execution, evaluation), as well as in its ethical and legal implications. Students will experiment with promotional tools to understand the connection between public relations and the media, and explore the blurred line between public relations and marketing when dealing with social media contents and strategic planning. Ultimately, they will learn the fundamentals to develop and design a communication campaign.

FLOR 3015. Food & Identity in the Mediterranean: A Cultural History. (GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course is an investigation into how the identities of different peoples in the Mediterranean can be understood through the lens of the food they cultivate, trade, and eat. After an introduction to different definitions of identity, with a particular focus on the formation, maintenance, and evolution of group identity through cultural practices, the course will analyze the history and culture of food in different civilizations of the Mediterranean basin: Phoenicians, Ancient Hebrews, Greco-Romans, and others. Study of the different diets of the Byzantines and the Venetian merchants, and the influence of the spice trade and nascent Islam during the Middle Ages, will show how identities are formed, consolidated, and changed through food. The Renaissance, especially in Florence, will be the object of an in-depth analysis as a pivotal time in Western food culture and in the arts. The course will then investigate the relationship between Florentine and French elite identities via the birth of modern table manners (and dishes) and their connection with the rise of the first nation states. The last part of the course will consider modern states, migration, and how these interconnect with agricultural practices and industrial food processes that

have changed the nature of food production in the Mediterranean.

FLOR 3016. Photography for Social Media. (AH; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course introduces students to the principles of photography for social media and how essential it is to learn about storytelling. Students will also learn about the power of imagery and its wider impact in the digital world. While an increasing amount of people carry around a phone every day, how many really know the potential of these powerful cameras, and how to use them to create and share images that make an impact with social media audiences? The course will appeal to students majoring in communication, marketing, design, journalism, and sociology and to all students interested in learning practical skills in photography, including compositional and technical information about apps, smartphone settings, and gear. There will also be time dedicated to analyzing social media impact on data, privacy, image protection, and intellectual property. This is not a social media marketing course but is designed as a creative exploration that will help students develop their eye for exciting imagery and improve their shooting skills.

FLOR 3017W. The Traveling Self: Writing Autobiography in Italy & Florence. (WI; 3 cr. ; Student Option; Every Fall, Spring & Summer)

?I did not then represent to myself towns, landscapes, monuments, as pictures more or less attractive, cut out here and there of a substance that was common to them all, but looked on each of them as on an unknown thing, essentially different from all the rest, a thing for which my soul thirsted and which it would benefit from knowing.? (Marcel Proust, *Swann's Way*. In *Search of Lost Time*. Volume 1) ?What I write about myself is never the last word: the more ?sincere? I am, the more interpretable I am.? (R. Barthes, *Roland Barthes* by Roland Barthes, trans. R. Howard, McMillan, London 1977) Travel experience in Italy has been for centuries an inspirational path for writers, novelists, and journalists from all over the world. The deep history and the most significant places in this relevant European country?connected both to the Northern cultures and at the crossroads with the Mediterranean ones?has prompted new narrative strategies, peculiar fictional characters, and innovative plots. Authors have been travelling the country by different means of transportation?carriages, trains, but also on foot?that have influenced their perspectives. They have walked into churches, squares, gardens, and museums to explore a flourishing collection of symbols and values from the past and to foresee the complexity of the future of Western civilization. They have tasted delicious and repellent flavors in Italian markets, shops, and restaurants and discussed Italian society and its issues. They have changed their personal mindsets, exploring new maps of their own cultural identity. Traveling abroad has always been, in fact, an experience of enrichment,

enhancement, and transformation of a traveler?s identity and intimate self. Starting from this assumption, this creative writing course will use the narrative strategies offered by modern and contemporary autobiography to draw inspiration from the students? Italian and European travel experience. At the same time, a ?classic? field in literature and a flourishing contemporary trend, the genre of autobiography defies categories. It allows us to experiment with innovative forms?from diary to travelogue, from literary nonfiction to the so-called ?autofiction??that are also currently evolving under the influence of the social networks and the possibilities of augmented experience offered by the Web.

FLOR 3100. Advanced Italian Grammar and Conversation. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer) Study abroad course.

FLOR 3201. Intermediate Drawing Studio. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer) Study abroad course.

FLOR 3346. Sociology of Crime: Mafia and the Media in Italy. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer) Study abroad course

Study Abroad in London (LNDN)

LNDN 1101. Queen Mary University of London Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in London study abroad program to represent a course taken at Queen Mary University of London. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

LNDN 1102. Queen Mary University of London Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in London study abroad program to represent a course taken at Queen Mary University of London. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

This is a course shell that will be used on the Study & Intern in London study abroad program to represent a course taken at Queen Mary University of London. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

LNDN 3103. Queen Mary University of London Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in London study abroad program to represent a course taken at Queen Mary University of London. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

LNDN 3104. Queen Mary University of London Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in London study abroad program to represent a course taken at Queen Mary University of London. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

LNDN 3105. Queen Mary University of London Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in London study abroad program to represent a course taken at Queen Mary

University of London. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

LNDN 3201. Integrated Course. (; 1-6 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad.

LNDN 3202. Integrated Course. (; 1-6 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad.

LNDN 3203. Integrated Course. (; 1-6 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad.

LNDN 3204. Integrated Course. (; 1-6 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad.

LNDN 3205. Integrated Course. (; 1-6 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad.

LNDN 3210. Historical Backgrounds of English Literature. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

LNDN 3211. Terror and the Witch: Fictions of Witchcraft from Shakespeare to Harry Potter. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

LNDN 3212W. Travel Writing: Topics in Composition. (WI; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

LNDN 3213. 20th and 21st Century Art. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)
Art movements and major artists of Modern period, 1900-1970. Various visual media in relation to theories, historic events, scientific/technological changes, and literature. Emphasizes European art. Influences from other cultures.

LNDN 3214. Modern Acting. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

LNDN 3215. British Theatre Now and Then. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

LNDN 3216. Practical Shakespeare Acting. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

LNDN 3217W. Writing the City: London. (WI; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

LNDN 3218. Contemporary British Film. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

LNDN 3219. London Across History, Literature and Film. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad.

LNDN 3220W. Contemporary World Architecture in London. (WI; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

LNDN 3221W. Writing a Play. (WI; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

LNDN 3222. Detective Fiction: Crime and the City. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

LNDN 3223. Special Studies in Economics: Globalization Studies. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

LNDN 3224. International Dimensions of Organizational Behavior. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

LNDN 3225. Issues in Global Economic Development. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

LNDN 3226. Religion in Modern Britain: A Comparative Perspective. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

LNDN 3227. Global Workforce Management. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

LNDN 3228. Managing Global Supply Chains. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

LNDN 3229. Dateline London: Reporting and News Writing in a European Context. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

LNDN 3230. The Aesthetics of Power, Prestige and Social Change: A Survey of Renaissance through Modern Art Hist. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

LNDN 3231. Internet 2.0. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

LNDN 3232. Modern Art in London: From the Sublime to the Ridiculous. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

LNDN 3233. Queer Studies and LGBTQ Life in London and the Global World. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

LNDN 3234. Styles of Acting. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course

LNDN 3235. Witchcraft and Magical Performance in London. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course

LNDN 3236. The Law of Wrongful

Convictions. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Wrongful convictions are a universal problem that in recent years has received a great deal of attention from the media, legislatures, and courts around the world. From the Netflix series "The Making of a Murderer" to the NPR podcast "Serial" there is a growing fascination with how people are wrongfully convicted and the processes and procedures used to right these wrongs. This course is taught by a law professor who has spent his career litigating wrongful conviction cases and directing the California Innocence Project. It is designed to provide students with an overview of the issues and case law related to wrongful convictions through the use of interactive exercises, lectures, readings, videos, and case studies.

LNDN 3237. International Comparative Studies of Issues Impacting Education Systems. (3 cr. ; Student Option; Every Fall, Spring & Summer)

The course provides students with an introduction to the school system in their study location and that of the other CAPA study locations. There will then be opportunities to compare it to the American system and to other learning communities in the world to better understand how they reflect and perpetuate the cultural values and identity of a country. Students will explore current educational issues from an intercultural perspective and develop their own informed views. At the end of the course, students are expected to have acquired a basic knowledge and understanding about the structure and content of contemporary school systems and a capacity to use this knowledge for cross-national comparisons. The insights gained will allow students to consider a key question: how can we all contribute to the school of the future? This course is designed as a CAPA Globally Networked Programme (GNL) connecting CAPA students in different study locations in order to examine issues from a transnational perspective. It will provide a unique opportunity to broaden critical understanding of the school system role in the identity building process at an individual, social, political, and national level. Through collaborative and comparative learning processes in both local environments and transnational communities, students will develop a deeper understanding of the school system role in shaping values, societies, and cultures.

LNDN 3238. Literature and the Environment. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This course examines the ways in which writers in English have engaged with the natural environment. We will read a range of

authors, from the advent of industrialization in the late eighteenth century up to the present age of climate change, to consider how they have celebrated the "natural world," and looked critically at human effects on ecosystems. Throughout, we will be attentive both to the literary qualities of writings about the environment and to their historical and political contexts. We will be studying a range of genres, including poetry, fiction, nonfiction, websites and photographic texts. The course will be organized chronologically, with units on key ideas in the study of literature in relation to the environment: pastoral, wilderness, pollution, apocalypse, and ecosystems. Since the course will be set in London, we will also consider the design and representation of "urban nature," including parks, gardens, zoos, riverbanks, and art exhibits. There will be some out-of-class visits and walks (with attention to accessibility, as needed).

LNDN 3239. Theatre in the City. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Plays are written to be appreciated in performance, not only to be read; a play does not truly come to life until it appears on a stage. The course will introduce students to the current variety of theatre being produced in London. The course aims to provide multiple levels of theatre appreciation, and is therefore open to students who both have a background in theatre and those who have a general interest in expanding their knowledge.

LNDN 3240. Arts Administration: The Creative Industries in a Digital World. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Arts and culture are rapidly growing sectors of the economy in the UK and worldwide. This course will focus on the ways in which the Creative Industries are structured, and how arts administrators successfully share creativity with the public and leverage the commercial opportunities of creative production. Key topics to be explored will include the arts as a business; managing financial imperatives and the artistic process; promoting and presenting cultural products. Case studies will be drawn from a variety of fields such as film, digital media, gaming, theatre, museums, and publishing, and students will have the opportunity to engage directly with practitioners successfully working in various fields of arts and culture and those managing the interface between creativity and business in London. It is an industry that is growing year on year, but it can be a difficult market to navigate and capture economical value, as "cultural goods" are less fixed, or less concrete than other measurable areas of exchange. Students will examine the history of the Creative Industries to understand the current environment in an historical context. They will focus specifically on the shifting creative industries in a digital world with the advent of social media, streaming services, revolutionary marketing techniques, crowd-sourcing, and audience creation. Students will explore key concepts and theories, but they will also explore the practical applications of the industries in action. They will gain a deeper

understanding of the media they consume via interaction with professionals, venues, and event opportunities highlighted in this module. Throughout this course, students will be encouraged to explore their own interests of the Creative Industries. By bringing personal experience and interest into an analytical environment, this module will allow students to gain a deeper understanding of media artifacts, and provide them with the tools and skills to expand their understanding and engagement with their chosen sectors.

LNDN 3241. Integrating Character through Voice and Movement. (3 cr. ; Student Option; Every Fall, Spring & Summer)

In this performance-based theatre course, students will engage in acting techniques that utilize psycho-physical training, integrating their voice and body as they create characters from modern and contemporary texts. Students will begin by examining and building awareness of their own vocal and physical apparatus through solo and ensemble exercises. Students will learn the anatomy, physiology and physicality of the voice and build healthy and effective methods of vocal projection through a progression of exercises developed by Kristin Linklater and Patsy Rodenburg. Students will be concurrently introduced to various physical theatre training techniques such as Michael Chekhov, Jacques Lecoq, and Vsevolod Meyerhold. For the final project, students will integrate these vocal and physical techniques through creating characters from selected scenes. Throughout the course, the actor-student's journey will be focused on mind-body connection, self-awareness, relaxation, presence, emotional vulnerability, and clarity in verbal and non-verbal communication.

LNDN 3242. Global Perspectives on Human Rights in Action. (3 cr. ; Student Option; Every Fall, Spring & Summer)

The notion of human rights has become central to global politics today. It is not a single subject but a broad field of potential investigation: this intensive seminar provides a multi-disciplinary introduction to the topic, critically examining the politics of human rights, their contentious nature and uneven global implementation. Throughout, the focus will be on practical issues and the contested politics of human rights in action through a range of topical case studies. Students will evaluate key debates about the politics and morality of human rights, analyze and explore the theoretical foundations of human rights concepts and topical issues relating to human rights from a variety of global, regional and local perspectives. The course critically examines the history and development of concepts of human rights and the philosophies underpinning them, as well as current frame-works of international human rights law and the relationship among current debates in human rights, political power and social injustice. Topics to be covered will include human rights and international relations; humanitarian intervention and the responsibility to protect; postcolonial and feminist critiques of human rights; the intersection of human rights with gender,

sexuality, ethnicity and class; the relationship between human and civil rights; women's, children's and indigenous peoples' rights; and the practical implementation and enforcement of human rights.

LNDN 3243. London Museums: Introduction to British Museology, Society and Culture. (3 cr. ; Student Option; Every Fall, Spring & Summer)

In the early twenty-first century, museums are becoming increasingly more relevant to all parts of society, exhibition displays are often controversial and politically charged. This course is an introduction to both British society, culture and museology. The course considers museums as reflections of the British psyche, unique cultural constructs that help us understand "Britishness". We will also be looking at museums as institutions of "global" heritage in the context of a global city, with a unique British perspective. As an introduction to museology, the course will look at the development of the modern museum and its operation, as well as interrogate the different types of museums. We will look at the impact British history, society and politics have had on London museums, their creation and their day to day operations and audiences. Taking advantage of our location, we will do field work in eight different museums, from the famous and vast "global" British Museum to the small and privately-owned Saatchi Gallery. Students will analyze the ways in which imperialism and its legacy, as well as Britain's global relationships have influenced museum development and how this gives rise to the politics of patrimony. We will look at questions of cultural appropriation and the political debate on repatriation versus protection. This debate has recently been energized by the depredations of IS on what many would call the global heritage of Iraq and Syria. We will also be looking at material culture and what it says about individuals and society. Students will examine the choices, ethics and political and social meanings of both creating material culture and collecting it, and the ethics of preservation and restoration. While the creation of material culture has specific psychological, social and often political meanings; collecting, preserving and displaying one particular object involves a very complex decision-making process which is influenced by the cultural values of the decision maker. We will examine, for example, the impact of the Classical period on British society in the past and present, its importance to class and education in Britain, and how this is reflected in museum collections. Students will also look at the complex decision making of conservators and restorers. These decisions have social and political impact, choosing to emphasize one period and use over another. The course will also look closely at decision makers and their role in the museum industry, the origins of museums from individuals to trade exhibitions and current museum professionals, as well as the impact museum audiences have on the work of museums. Students will also examine the impact of communities on museum development, on exhibition creation, how engaged museums are with their communities,

and how the unique diversity of London is reflected (or not) in its museums.

LNDN 3244. Shakespeare at Play: Performing the Bard using Folio and Physical Techniques. (3 cr. ; Student Option; Every Fall, Spring & Summer)

In this performance-based theatre course, students will engage in acting techniques that utilize mind/body awareness as well as analyzing acting clues from the First Folio (the first printed collection of plays published in 1623). Using vocal and physical exercises, students will perform hands-on practical activities to playfully engage with their acting partners and the text, immediately putting into practice these clues in a similar style as Shakespeare's company working at the Globe Theater of the 16th century. In addition to textual analysis, students will engage in physical theatre techniques such as those used by Meyerhold, Lecoq and Boal to engage in story, character and to physicalize the given circumstances of the text. Topics covered in this class include: breathing and phrasing on the line, punctuation, capitalization, rhythm & meter, line endings, rhetoric, antithesis, and caesura. Students will work on one monologue and two scenes, both in verse and in prose, as well as attend performances and events at the Globe and the Royal Shakespeare Company in Stratford.

LNDN 3245. Comparative Health Systems. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Health care systems are having to respond to a number of competing challenges. The pressures of globalization, aging populations, increasing patient demands and the rising costs of research and medical treatments are forcing us to look more critically at how healthcare is delivered to devise changes for the future. Changes made to health systems are often based on economic and political rationale and with many countries currently experiencing significant changes to the way in which health care systems have historically been funded and delivered. This course will introduce students to the healthcare system in the UK and the context within which it operates. It will start by looking at the introduction of the National Health System (NHS) in 1948 and take students through the key changes that have taken place right up to the present day. Drawing on a series of cases studies, students will be able to compare the UK model of healthcare with other healthcare systems such as in the USA, France, Sweden and/or from low and middle-income countries. Students will explore a range of key concepts and themes in comparative healthcare from a multidisciplinary perspective. They will also develop critical appraisal skills to assess the quality of evidence used to support developments in healthcare policy and practice and help students to look critically at the role that governmental and non-governmental organizations play in healthcare. Throughout this course, special attention will be paid to comparisons between the UK, USA and low and middle-income countries to allow students to directly relate their learning to

their own educational and healthcare setting and contrasting health systems worldwide. Emphasis will be placed on the multiple factors that determine health at the individual and population levels. By comparing patterns of health across different demographic groups, immigration status and so on, students will explore a range of different intersections to expand their understanding of impacts of health inequalities on different populations, and how different countries have sought to address these inequalities.

LNDN 3246. Global Perspectives on Nursing and History of Midwifery. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This course is an exciting opportunity to experience nursing and midwifery history in the UK and further afield. The course will focus on major influences in the development of nursing and midwifery practice from the perspectives of medical, nursing and midwifery history. Case studies will be drawn from London, the UK and continental Europe, with comparative perspectives from the rest of the world where appropriate. Topics will include the impacts of social change, evolving attitudes to social care, and the role of the Enlightenment, French revolution and American Independence, as well as the transition from Agrarian to Industrial Society in shaping cultures and practices of nursing care. The course will also consider the contributions made by Florence Nightingale, Mary Seacole and Mrs. Bedford-Fenwick to nursing practice. It will also look at pioneers like Sir Frederick Truby King who set up the Plunket Society in New Zealand in 1907, from which sprung Plunket nurses, maternity and childcare still in practice today. The course will examine the ways in which medical breakthroughs, public health, epidemiology (social determinants of health), religion, philosophy, ethics, law, sociology and economics have played a part and influenced and affected clinical practice and in turn the influences on the professional role and practice of nurses and midwives. Students will be encouraged to reflect on the historical changes that have had a particular impact on patients, their families and the wider public. This will enable students to gain a deeper understanding of historical reasoning and insight into a variety of forms of historical evidence. In turn, this will enable students to consider the ways in which history has underpinned past healthcare provision, and the potential that exists for history to affect healthcare in the future and if and how far lessons can be incorporated into modern clinical practice. Speakers will include staff from Public Health and Epidemiology at a major London University and Medical school. The course will also enable students to access a broad range of distinctive museums and galleries to consider a wide range of healthcare history.

LNDN 3247. Communicate: Basic Acting Techniques for Confidence-Building and Better Presentations. (AH,GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course introduces the student to the basic skills of acting and shows how acting

techniques can be used to improve self-confidence, presence, and vocal presentation in a range of different work and life scenarios. Over the semester, students will learn to improvise, undertake creative challenges and begin to master a range of techniques. Students will keep a developmental journey during the semester, and also perform a dramatic monologue. For the final assessment, students will write a 5-10-minute speech about something they feel passionate about, then deliver it at Hyde Park's famous Speaker's Corner to fellow students and an audience of Londoners.

LNDN 3248. Community Engagement: Service-Learning in London. (3-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is an interdisciplinary course providing a unique opportunity to become directly involved in the realities of community engagement and grassroots activism and project work. It is designed to stimulate critical thought and reflection on the challenges and opportunities of community service and support your personal and professional development, as well as introducing you to topical debates about how best to manage and respond to the challenges of a diverse, unequal city. The course will explore the historical, sociological, and political context of community and service in the United Kingdom (UK) and theories and models of leadership, organizational behaviour, and management in the context of community work. It will also examine in depth forms of social, economic, and political exclusion, such as uneven access to health care, education, financial resources, and political representation, and analyse the social dynamics within and between the multiple communities which co-exist in London.

LNDN 3249W. Experiencing Globalization: Society, Space and Everyday Life in London. (CIV,WI,SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

What is globalisation? How is it transforming the world and everyday life, and why has it become so controversial? Who are the winners and losers in a globalising world and what are the implications for our shared global future? How do developments in London relate to major shifts in the workings of the world over the last four decades? As a city with complex global connections, London has been enmeshed in deepening global social, political and ecological crises, as well as becoming an important arena of conflict over efforts to address them. This course critically explores these issues by examining the city's complex relationship with the forces of globalisation and the ways in which everyday life and experience in London, as well as its people, institutions, and organizations, have been shaped by - and are contributing to - global change. Emphasis will be placed on critically examining the effects of neoliberal globalisation, the growing (though uneven) global dominance of projects promoting increasing freedoms for capital under the banners of 'free markets' and 'free trade.' This course also highlights a variety of collective challenges to these projects, some of which operate largely within the confines

of London, others organized along trans-local and transnational lines. Their economic, political, cultural, and ecological aspects will be analyzed, examining the importance of class dynamics and their intersection with gender, ethnicity and other processes of hierarchical ordering. Theoretical and conceptual concerns will also be addressed, such as relations between the local and the global, the workings of power and contestation under neoliberal conditions, the interplay of space, class, and gender, and questions of responsibility within and beyond the limits of community and place.

LNDN 3251. Strategic Communication and Social Media: Theory and Practice. (GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This class combines theoretical analysis, case studies, and hands-on practice to understand and execute traditional and online communications strategies. The course will begin with a literature review of theories and principles relevant to the practice of strategic communication and social media practices including media effects, Internet effects, and uses and gratification theory. Second, cases studies will be utilized to investigate the effectiveness of messaging strategies employed by not-for-profit and commercial organizations as well as individual actors such as businesses, politicians, and influencers. Finally, students will work for a real-world client and their own portfolios to formulate an overarching communication strategy inclusive of recommendations for messaging strategies across all platforms (traditional messaging, website, Facebook, YouTube, Instagram, press releases, e-blasts, and speeches.)

LNDN 3252. Childhood's Books. (GP,LITR; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course examines writing for young people, with a focus on children's books about cities. We will consider how representations of childhood in literature change over time and in response to specific historical and cultural events, with special focus on literary representations of children in urban environments and the role of the city in the development of children's literature as a genre. We will explore the relationship between books for children and the historical experiences of children in London. Readings will include classic and contemporary children's literature by British, American, and African authors, including Peter Pan; The Lion, the Witch and the Wardrobe; and Zarah the Windseeker, including novels and picture books. The class will take field trips to notable sites in London relevant to the history of childhood and children's literature. Students will write regularly in response to course readings, field trips, and lectures, and they will conduct original research about the relationship between the history of children's literature and the city of London, then present that research in class.

LNDN 3253W. Contemporary Issues through Community Engagement: Social Dynamics of London. (CIV,WI,GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This is an interdisciplinary course with a sociological focus, as well as a unique opportunity to become directly involved in the realities of community engagement and grassroots politics. It is designed to stimulate critical thought and reflection on urban inequalities in London and to introduce students to topical debates about how best to manage the challenges of a diverse city. The course will explore the historical, sociological, and political context of community and service in the United Kingdom (UK). It will also examine in depth forms of social, economic, and political exclusion, such as uneven access to health care, education, financial resources and political representation, and analyse the social dynamics within and between the multiple communities which co-exist in London. The course therefore combines classroom learning with practical exposure in placements to foster knowledge and understanding of community service in the UK today. Weekly seminars and readings enable participants to understand contemporary social dynamics and illuminate such issues as the history of welfare provision, urban regeneration, political power, social deprivation, and the interplay of class, gender, and ethnicity in the city. Three key interrelated themes will be followed throughout the semester in order to provide a structured reflection on questions which affect society today: urban life including topical issues such as social polarization and neighbourhood change; super-diversity/multiculturalism and the impact of immigration on identity politics and community relations; welfare and exclusion/marginalized groups, uneven access to services, the changing role of the state, poverty, housing, and homelessness.

LNDN 3254W. Introduction to Science Fiction. (LITR,WI; 3 cr. ; Student Option; Every Fall, Spring & Summer)

What lies beyond? The Final Frontier? Why does it matter if androids dream of electric sheep? What will our future look like and who will be there to enjoy it? What role do technology, ethics, and/or politics play in imagining our future? Why has science fiction become such a central metaphor for our daily, lived experiences? Introduction to Science Fiction discusses them all. This course is designed to expose students to a broad spectrum of science fiction. We will examine representative texts from each of the modern, roughly defined 'periods' of the genre. The class will discuss the ongoing debate surrounding the 'work' performed by the genre, as well as its themes, and stylistic movements.

LNDN 3255. Moving Images Editing: Theory and Practice. (AH; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Moving images are ubiquitous. As one of the most pervasive manifestations of the digital age, they broke out with the confines of the cinema theatre and show up on the multitude of screens around us. Just as we are surrounded by many forms of the audio-visual, we also encounter a multitude of editing practices. From blockbusters to YouTube videos, we experience images that are carefully selected

and artfully cut in a way that is entertaining, persuasive, or simply moving. The course is designed to introduce students to the theory, practice, and art of editing. It intertwines historical accounts of editing practice with media analysis and hands-on exercises. Each of the first nine sessions is devoted to one of the key concepts that illuminates intersections between media and culture: conversation, gaze, action, persuasion, story, beat, humour, metaphor, and voice. Each session is then divided into three distinctive parts. The first uses film excerpts to showcase editing devices employed in relation to the theme of the class. The second introduces a theoretical understanding of the pertinent editing procedures and instigates a discussion around them. In the last part of the session, students will use a pre-selected set of clips to create their own edit. The course is based on an innovative approach to editing techniques that sees them in a close dialogue with the underlying cultural phenomena that shape the current media landscape.

LNDN 3256. Digital Media Practice. (3 cr. ; Student Option; Every Fall, Spring & Summer) Digital media permeate most social and economic interactions of today. Still and moving images not only serve entertainment but also inform the way we communicate, learn about the world, purchase goods, and express our identities. This course focuses on digital media as a contemporary means of communication placing them in the context of remix culture. It will take students through the core themes of narrative, rhetoric, remix, and voice, exploring them through two areas of practice-based investigation: composition and audio-visual techniques. This intensive and comprehensive course will allow students to create their own portfolio, including a selection of digital media techniques used in a wide range of settings, from marketing videos to audio-visual essays. Quickly and efficiently students will learn how to produce videos for social media, conduct interviews, and present themselves in front of the camera. The course will offer basic skills in digital photography, camerawork, editing and podcast production. Students will also be able to choose one of the four specialised areas which include VR production, social media advertising, audiovisual essay filmmaking, and digital journalism. The content of the students' portfolios will be produced as part of weekly assignments throughout the course, as students develop their skills, with a final project in their area of specialisation. While the emphasis is on practice, each class includes a theoretical discussion that provides a critical framework for working with visual media. Topics explored include copyright and political aspects of the online, as well as its business and marketing side. This will allow students to both understand the cultural context of digital media and use them effectively.

LNDN 3257. Cybersecurity and Privacy Regulation. (3 cr. ; Student Option; Every Fall, Spring & Summer) Cybercrime is a global threat to national security, essential services, businesses,

and private individuals, costing billions of dollars in damage around the world. Recent years have seen significant growth in the scale and complexity of cyber criminality as cybercriminals are becoming more sophisticated in exploiting security vulnerabilities online, such as the massive breach of personal data stored online and recent coordinated ransomware campaigns against organisations around the world. Cybercrime is also transnational, with criminals and technical infrastructure operating across and between national jurisdictions, requiring international collaboration to combat multiple threats. This course examines current frameworks of US cyberlaw, procedures, and key legal cases and their implications for future practice and policy, and compares and contrasts US, UK, and EU law at the interface of criminal law, technology, and information sciences.

LNDN 3258. Introduction to Astronomy: British Contributions and Developments. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This course will explore human knowledge of the solar system and of the night sky, as well as the growth of astronomy as a science. The development of astronomy in England has been influenced by many factors and represents a rich microcosm of the evolution of astronomy in the western world. British contributions to astronomy will be used to exemplify the progress and achievements of this field of science. Throughout history astronomy has been intertwined with both time-keeping and navigation, and we will explore these connections in and around London. The passage of time is manifested through the motions of the sun which we will investigate when we visit sundials throughout London. More elaborate structures, like Stonehenge (which we will discuss and visit), can be used to mark the passage of time on greater scales. The importance of astronomy to time-keeping also made it invaluable to navigation. When we visit the National Maritime Museum, we will examine and discuss the instruments in their Astronomical and Navigational Collection to elucidate the link between astronomy and navigation. This link between the two areas meant that the interests of astronomers intersected with the interests of the government, leading to the development of the Royal Observatory at Greenwich, which we will also visit and explore. Lastly, when we visit Westminster Abbey, we will see that the importance of the work of astronomers was so valued that the scientists themselves were esteemed.

LNDN 3259. Finance for Entrepreneurs and Start Ups. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This course provides an understanding of how new ventures founded by entrepreneurs obtain financing in their quest to expand. In a global world dominated by high tech ventures of the likes of Apple, Amazon, Facebook, Netflix, Google, Alibaba, and TenCent to name but a few, how do these ventures become so successful in the marketplace and have

a market value worth in excess of hundreds of billions of dollars? Apple is the world's 1st \$2 trillion company. The course exposes you to the opportunities and risks associated with new entrepreneurial ventures, how to obtain financing, who are the venture capital investors, and the stages of a successful venture. Localized Context: With its global presence, CAPA offers the opportunity to enrich your academic experience by exposing and exploring the localized context of the CAPA London Centre. London is the leading venture capital of Europe and second only behind Silicon Valley as a world-renowned venture capital center. London has the benefit of being host to the financial center of the City of London with a host of world-class universities in London such as University College London, Imperial College, and London School of Economics producing world class research. Together with the cities of Cambridge and Oxford, London is at the heart of the Golden Triangle of leading universities, entrepreneurs and a global financial center. You will be expected to develop and expand your understanding of this local context of the UK's role in the global and European venture capital marketplace. The 'Business Plan for New Venture' project provides you an opportunity to explore the opportunities for creating a new venture in this localized context and to demonstrate your learning outcomes from this unique opportunity provided through studying Entrepreneurial Finance at the CAPA London Centre while the 'Group Pitch to Investors' hopes to simulate the tension of a real live pitch for funds to investors.

LNDN 3261. Principles of International Business. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This course explores the important concepts and perspectives for international business in the 'age of coronavirus.' It examines the external and internal conditions that multinational enterprises must recognize, interpret, and steer to prosper and thrive. Globalization will be introduced and interpreted alongside the world's systems, frameworks, structures, patterns, strategies, approaches, and channels for achieving organizational success in the global marketplace. In addition to examining the established theory and application behind the management of political, economic, socio-cultural, and technological factors, the course will investigate the effects of the coronavirus pandemic on global commerce. Emerging concepts around crisis response management, black risk management, and preparedness will be covered for each topic. You will be expected to increase your understanding of international business across all theoretical areas in the context of global events of the last 12 months. Localized content: The United Kingdom (UK) and mainland Europe offer interesting perspectives to understand and appreciate the demanding challenges of global management. In addition to the 'wicked' problems posed by the 2020 pandemic, the UK and Europe must navigate economic, political and social issues problems of a scale not witnessed since the middle of the 20th Century. London, with the presence

of British, other European, American, and Asian global corporations, its multicultural environment, and diverse population, provides an ideal setting for exploring international business. Multinational enterprises both define and are defined by their host national and city cultures and are the mechanism by which commercial enterprises have become increasingly interlinked through connection, collaboration and competition. The course explores the most important and influential multinational enterprises for the host city and country, through case studies, group work, and field studies.

LNDN 3262. City Symphony: Experimental Cinema. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Painters of every nationality depict the city, but only a succession of images can bring it to life. Alberto Cavalcanti, *Rien que les heures* (1926) The city symphony film emerged in the 1920s, when filmmakers were experimenting with the mobility of viewpoint enabled by the portable film camera and more sensitive panchromatic film stock. The city, in particular its interwar technologies of urban transport and machinery, provided the ideal testing ground for the newly sensitive and mobile camera. It demanded to be seen, and shown, in a new mode that for Brazilian director Alberto Cavalcanti, only film could provide. The city has been an integral part of the filmmaker's vocabulary since cinema's genesis in the late 19th Century. The urban environment and the craft of film grew up together in the 20th Century. This course takes examples of city films from throughout that century and encourages you to investigate the urban contexts and subjectivities explored therein.

LNDN 3263. Feminist London: Activism in the City. (3 cr. ; Student Option; Every Fall, Spring & Summer)

The 21st Century is witnessing a remarkable resurgence of feminism around the globe. In London, the annual Women's March unites feminists from across the UK and internationally, highlighting the dynamic nature of their voices and campaigns. Such events pay homage to the women's suffrage demonstrations in the city a hundred years earlier, not only reinforcing the connections between historical and contemporary campaigns for gender equality, but also revealing the diversification and progression of feminism. Throughout London's history, feminists of various classes, races, nationalities, and cultural backgrounds have utilized the city as a space, physical and imaginary, to devise and implement their ideas through a series of campaigns, crusades, and political movements. This course investigates the relationship between feminism and London: how feminists drew their inspiration from its slums, alleyways, and workplaces; its markets and marketplaces; its domestic spaces; its artistic hubs; and its private members-only clubs. Focusing on the period from the mid-18th Century to the present, it examines both individual activists and writers as diverse as Mary Wollstonecraft, Annie Besant, Olive Morris, and Bernadine Evaristo, as well as

collective campaigns around issues such as workers' rights, birth control, and racial discrimination to chart the ways in which feminists appropriated the terrain of urban space to advance their appeals for equality. Topics we will explore include: women's writing, sexuality, consumerism, class dynamics, campaigns for political rights and representation, fashion and style, imperialism and its legacies, feminism and popular culture, Black & Asian feminisms, and the impact of social media upon feminist activism and discourse.

LNDN 3264. Political Media. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Broadly this class focuses on how media are used to facilitate and sustain exploitative political and economic practices?e.g., how media helped facilitate imperialism and, dialectically, how media have been used by individuals and groups to contest or speak back to power. Our focus traverses history but increasingly comes to focus on the present moment, which is characterized by rapid changes in media practices such as the relatively recent emergence of social media and complexly related transformations in political and economic practices and systems (e.g., the election of Donald Trump, the Brexit? referendum, the rise of new forms of popular? nationalism, and new practices of propaganda). This course focuses more closely on these contemporary transformations as they happen in front of our eyes with bewildering pace. Our goals are to foster interesting explorations and conversations about media and our political and economic realities. Our (expansive) goals are to understand the role film and media plays in the orchestration of power, and how this has been contested and transformed. The film material and scholarship will also enable us to learn about political struggles mostly occluded in mainstream corporate media. In the midst of these broad agendas, the class pursues some pragmatic objectives: it will expand knowledge of cinema history, including different histories of production, distribution, and exhibition. (We understand ?cinema? here broadly to refer to the production and dissemination of moving pictures, and cinema to be a form of mass media that is inherently inter-medial.) It will explore different forms of this cinema (documentary, experimental, propagandistic, fictional) and lead us to examine the politics of form across history. It will explore the writings of cultural activists and academics as they examine questions about media, power, and influence. It will produce knowledge about past political struggles as mediated through film (and push us to learn about the socio-political contexts in which the films were made and circulated). Plus it will necessarily prompt questions about how different state systems engage with media and how the production and regulation of media are political acts that shape the possible public sphere. In pursuing these lines of enquiry our work will necessarily be interdisciplinary, and we will draw in particular (but not exclusively) from scholarship in political history and political science, public policy, film, media, and cultural studies, history,

and broadly progressive traditions of historical, cultural, and media analysis. The class contributes to larger curricular goals in various ways: It explores the international history of cinema, in its political contexts in particular, draws on concepts across the humanities and social science of use to the study of cinema, and it will encourage and foster the production of scholarly work that clearly and coherently addresses issues important to the study of cinema and the modern world.

LNDN 3265. Urban Scavenger. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course in critical filmmaking?the exercise of the camera and the edit suite in the service of ideas and analysis. A degree of familiarity with DSLR cameras and editing software is assumed, but support will be on hand for those who are new to filmmaking. The main objective of the course is to produce a 5- to 10-minute essay film about some aspect of London. We combine practical exercises in filming and editing with a close look at the tradition of the essay film, and a consideration of how the essayistic might also infuse contemporary screen culture. By closely integrating practical elements with theoretical sessions, we hope to draw connections between the discourse on urban consumer society and the images surrounding it, between collecting objects and editing, between the order of things and creating a political narrative. You will be asked to gather ? fragments??one or several shots and/or audio recordings?in response to themes. The fragments will be uploaded to a dedicated video blog and reviewed by the whole group at different points during the term. We aim to build a habit of constructive criticism so that you are comfortable sharing work-in-progress and improving it. You will then move on to planning and producing your essay film, with a number of deadlines built in for footage reviews and rough-cut screenings to ensure progress and development. Your essay films will be screened for a final assessment with all faculty in the last session of term. The final assessment is a critical text documenting the experience of making, refining, and screening the film, so that you can reflect on your process.

LNDN 3266. A City Made Strange: London on Screen in Horror and Science Fiction Cinema. (AH; 3 cr. ; Student Option; Every Fall, Spring & Summer)

London has existed for more than two thousand years, and the ghosts of the recent and ancient past remain in its streets and its culture. This course aims to explore the deep funds of strangeness and otherness that permeate London's places and spaces, through examining films and television series that show the city as a brimming reservoir of past and future shocks. The course will examine science fiction, horror, and noir/neo-gothic cinema and television from all eras, with a particular emphasis on works that take London itself as a major part of their story. These might be disaster or alien invasion films that see the city as a site of destruction or devastation, horror films which render a familiar city frightening and strange, or noir explorations

of London's underbelly that expose sides of the city that are normally hidden. The course will both present an alternative history of London on film and provide you with rich possibilities for the analytic study of film and television. Horror and science fiction are notorious as vessels for the expression of both social and political anxieties, and the selection of films would encourage analyses of both psychological content and broader contexts (areas might include, for instance, Cold War-era fears, body horror, racial or class concerns). Readings will be both critical and complementary, and hope to locate uncanny London on film in relation not only to American cinematic tropes in genres such as horror, but also to the large fictional and occult literature which features London as a place of archaic energies and occult forces. All students develop their basic skills in analyzing film texts and will also develop a good grasp of long-trends and recent themes in British horror and science fiction cinema. You will gain insight into the ways that film can reflect and respond to contemporary social and political conditions and events, and the way that film and television relate to literature. You will gain an understanding of horror and science fiction as key genres in British film, and gain awareness of some key points at which these genres in British cinema and television differ from their counterparts in US film.

LNDN 3267. Diversity in British Cinema, Race, Gender and Class. (AH; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This intensive and comprehensive course will allow students to take an innovative approach that sees race, gender, and class in close dialogue with the underlying cultural phenomena that shape the British cinematic landscape. The course is designed to introduce students to British cinema whilst engaging in theory, practice, and analysis. It intertwines historical accounts with film screenings and lectures as well as discussions with filmmakers and curators. This course introduces students to the question of diversity in relation to Britain and British cinema over the last 50 years. There are three different emphases in the course: race, gender, and class, although we will be closely looking at their intersectionality. The first section of the course will examine race and multiculturalism in British film with an emphasis on the works of Isaac Julien. This section will cover the last forty years in British cinema with some of its major participants in the form of historians, filmmakers, and curators. The second section of the course will look at films dealing with questions of gender and class and their modes of representation. The final section of the course will introduce students to the British class system through its modern representations and contestations.

LNDN 3268. New World (Dis)order: The State and Society in an Age of Populism and Protest. (CIV; 3 cr. ; Student Option; Every Fall, Spring & Summer)

The year 2020 saw America and most of the world convulsed by two major events: the global health pandemic of the COVID-19 virus, which was worldwide in scope; and

the spontaneous spread of protests for racial justice in America and many other countries in the democratic world that were triggered by the killing of George Floyd by police in the city of Minneapolis. Both these events, coming as disrupting forces to the established political and economic order, underscore longstanding questions for political, economic, and philosophical debate: Where should power and decision-making take place? Is human nature noble, but enchained by corrupted institutions or is it brutish and violent, requiring a social contract with an authority to safeguard the rights of all? If we accept the second proposition, who guards the guards? The tensions between national and supra-national governance, exemplified by the US withdrawal from the World Health Organisation, appear to echo the trend to increasing nationalism, autonomy and populism that influenced the UK decision on Brexit (Britain exiting the European Union). The organic and viral movement of activism in support of Black Lives Matter may share some of the characteristics of Extinction Rebellion inasmuch as the concerns for immediate action on racial injustice, the climate crisis, and other issues, have seen large numbers of people, including a significant proportion of the youth demographic, take to the streets, and mobilise for direct action for social change. This course will explore historic, recent, and contemporary trends in the political authority invested in the nation-state and its agencies and contrast this with social and political forces expressing discontent with the status quo. One section of the syllabus will examine ideas for greater global governance, such as the League of Nations, the UN, and new bodies such as the International Criminal Court. The second section of the syllabus will explore ideas for local autonomy, and radical action on such matters as policing, systemic racism, carbon consumption, the rising use of surveillance technology, and the free-market assumptions that underpin Western societies. Other modules in the course will examine the phenomenon that has been labelled ? populism? and the discontent with current form of globalization, both from the political right and the political left. A further module will explore the fragmentation of the West-centric global order in light of an increasing multipolar world and the rising economic and political dynamism of China.

LNDN 3323. Shakespeare in London. (; 3 cr. ; A-F only; Every Fall, Spring & Summer) Representative sampling of Shakespeare, including the four major tragedies. Some attention to English Renaissance period and Shakespeare's time.

LNDN 3324. 20th Century British Fiction. (; 3 cr. ; A-F only; Every Fall, Spring & Summer) Responses to colonialism, impact of World War I, changing conditions for women and for contemporary multicultural Britain. Literary movements/styles (realism, modernism), narrative techniques/perspectives (1st/3rd person, limited point-of-view, stream of consciousness). Use of symbolism, imagery, irony, etc. Role of author/reader. Problems of interpretation.

LNDN 3328. British Cinema. (; 3 cr. ; A-F only; Every Fall, Spring & Summer) Major works of 20th century British drama. Focuses on postwar period. Students read/see plays.

LNDN 3333. Understanding Modern Britain. (; 3 cr. ; A-F only; Every Fall, Spring & Summer) Introduction to social/cultural differences between Britain and the United States. British class/culture, monarchy/aristocracy, education system, media.

LNDN 3342. European Economic History. (; 3 cr. ; A-F only; Every Fall, Spring & Summer) European economic history, 1000 AD to today. Industrial revolution, development of capitalism from feudalism. Reasons Europe took world technological lead during Middle Ages. Factors affecting economic growth, prosperity, and technological change.

LNDN 3343W. Post War Popular Culture. (WI; 3 cr. ; Student Option; Every Fall, Spring & Summer) London as center for international popular culture, from WWII to present.

LNDN 3355. London Through Internships. (; 3-6 cr. [max 12 cr.] ; A-F only; Every Fall, Spring & Summer) British work and social structure. Cross-cultural issues surrounding integration into workforce. Internships from various fields of study.

LNDN 3375. Global Internship Course: London. (3-6 cr. ; Student Option; Every Fall, Spring & Summer) 3 Credit Course: The Global Internship Course (GIC) provides a unique and innovative opportunity for students to engage in an internship (and living abroad experience) while supported by academic in-class and online educational sessions to further develop their personal and professional skills while earning academic credit. GIC students also partake in out-of-class guided and self-guided activities and field studies that have been devised to enable students to become more comfortable with, and knowledgeable of, their internship locations/neighbourhoods. Furthermore, a day-long field trip illustrates how socio-political and economic factors, such as the effects of housing costs in global cities, necessitate commuting and changing work practices such as flexible working hours and working remotely that embody best practice in well-being. Field studies vary depending on location and may also include a focus on, for example, corporate social responsibility and sustainability. The GIC fits in with CAPA's philosophy and practice of enabling students to learn about the social and cultural context of their internship placement and the host region and country, as well as other GIC themes, through comparative global analysis. Where appropriate, this analysis will be facilitated through a small selection of CAPA Masterclasses given by leading professionals from a diverse range of fields. The in-class active learning approach gives students the opportunity to discuss and analyse theories and models of work, organisational behaviour, and management in a cross-cultural context. 6 Credit Course: The Global Internship

Course (GIC) provides a unique and innovative opportunity for students to engage in an internship (and living abroad experience) while supported by academic in-class and online educational sessions to further develop their personal and professional skills while earning academic credit. GIC students also partake in out-of-class guided and self-guided activities and field studies that have been devised to enable students to become more comfortable with, and knowledgeable of, their internship locations/neighborhoods. Furthermore, a day-long field trip illustrates how socio-political and economic factors, such as the effects of housing costs in global cities, necessitate commuting and changing work practices such as flexible working hours and working remotely that embody best practice in well-being. Field studies vary depending on location and may also include a focus on, for example, corporate social responsibility and sustainability. The GIC fits in with CAPA's philosophy and practice of enabling students to learn about the social and cultural context of their internship placement and the host region and country, as well as other GIC themes, through comparative global analysis. Where appropriate, this analysis will be facilitated through a small selection of CAPA Masterclasses given by leading professionals from a diverse range of fields. The in-class active learning approach gives students the opportunity to discuss and analyse theories and models of work, organisational behaviour, and management in a cross-cultural context.

LNDN 3412. British Broadcasting Today. (; 3 cr. ; A-F only; Every Fall, Spring & Summer) Introduction to international broadcasting. Social, cultural, and political conditions that have created selected world broadcasting systems. Focuses on broadcasting system of host country. Current system trends, governmental relationships, administration, domestic/foreign programming.

LNDN 3432. Western European Government and Politics. (GP,SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer) Where and what is Europe? Who are the Europeans? What is Europe's future? ? Europe? has been a cultural idea that European elites have struggled to impose on the chaotic diversity of their continent. How has the concept ?European? been defined historically, and in relation to whom? This interdisciplinary course addresses these fundamental questions of geography, society and identity by tracing the history of ? Europe? as a cultural and political idea and the cultural, political and economic factors that have shaped modern Europe. Such issues have been brought into close focus by the implications of European integration, destabilising assumptions about the territorial extent of Europe and the scales at which government, sovereignty, and citizenship should operate. This course investigates the various processes that have made Europe such a distinctive, dynamic, and highly varied region and examines the historical roots of current tensions between ? and within - the nation-states of Europe, such as ethnic nationalism and imperial competition.

LNDN 3500. CAPA Seminar in London. (3 cr. [max 6 cr.] ; Student Option; Every Summer) Study abroad course

LNDN 3501. Telling the Story - London. (1 cr. [max 2 cr.] ; Student Option; Every Summer) Study abroad course

LNDN 3523. Theatricality: Understanding the Possibilities in Theater. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer) In-depth understanding of art of theater via survey of historical influences, changing styles/approaches to theater. Concept of theatricality.

LNDN 3524. Theatre Production Management. (; 3 cr. ; A-F only; Every Fall, Spring & Summer) Lecture/seminar from professional theatre practitioner on their job specialization. Structure of theatrical organizations. Development/marketing of theatrical productions. Wider factors that influence theatrical organizations/productions. Workshops. Visits to various venues to see how they operate.

LNDN 3530. Ethical Issues and the Media. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer) Principal ethical issues facing print/broadcast journalism. Practical dilemmas, moral framework. Real time arguments that arise in media coverage of matters of public controversy. Regulation, codes of practice. Case studies, visits, guest lectures.

LNDN 3531. Advertising and Marketing in Britain. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer) Forms of advertising and public relations techniques used by organizations to communicate with stakeholders. Consumer motivation/appeal. Media structures, effectiveness. Target audiences. Print/broadcast production, budgeting and promotion mix planning. Students design, cost, and implement an advertising campaign, and project the likely success rate.

LNDN 3532. Visualizing Britain: Film and Television Documentaries. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer) Canon of British film/television documentary from end of the 19th century to beginning of 21st Century. Drama-documentaries tackling/attracting major public controversies.

LNDN 3533. Women in Britain in the 21st Century. (; 3 cr. ; A-F only; Every Fall, Spring & Summer) Momentous changes in women's lives during 20th Century. Impact of two world wars, economic dislocation/recovery, revolutions in colonial states, super power rivalry, proxy wars, end of cold war, new international alliances/collectivities.

LNDN 3534. Criminal London: Aspects of Crime and Criminal Justice in Britain. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer) Late Middle Ages, Tudor/Stuart periods. Eighteenth, nineteenth, and twentieth centuries. Evolution of courts/criminal procedure. Debates, including death penalty

and jury system. Visits to courts and places of interest.

LNDN 3536. Child Development in a British Context. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer) Scio-cultural approach to contemporary issues of children's development. How life in the UK shapes children's development. Early attachments. Development of the self. Emergence of consciousness. Role of play. Origins of disturbing behavior.

LNDN 3613. Analyzing and Exploring the Global City: London—Modernity, Empire, and Globalization. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer) Study abroad course.

LNDN 3614. Citizenship and Gender in Modern Europe. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer) Study abroad course.

LNDN 3615. Urban Underworlds in Medieval and Early Modern London: A Literary Exploration. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer) Study abroad course.

LNDN 3616. Global Mental Health Professions: A Comparison of U.S. and U.K.. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer) Study abroad course.

LNDN 3650. Research Methods: Directed Research Project - London. (3 cr. ; Student Option; Every Fall, Spring & Summer) This course provides undergraduate students with the opportunity to undertake a research project in the context of their international education experience. Students opting for this course will be guided towards opportunities recommended by CAPA and determined by local resources and expertise. In most cases, CAPA will define potential projects generated by senior academic staff and faculty on site and suggest relevant sources: students will apply to do those projects. This would not preclude student proposals or projects suggested by home universities for individual or group study. Students will be introduced to core research concepts and will develop research skills through designing, executing, writing, and presenting their own research project within frameworks designed by CAPA. The topics that students will explore will be consistent with their majors and their own individual interests but will exploit the overseas experience. A variety of research methods employed in geographical, historical, political, sociological, cultural studies, and digital humanities will be introduced that may be applied to multidisciplinary topics, including qualitative and quantitative methods, as well as mixed methods research as appropriate to students' research themes. In collaboration with their instructor, students will develop appropriate research methodologies that will engage with a range of local sources, as well as online resources. These will include archival documents such as official records, maps, and personal accounts as well as basic ethnographic techniques such

as questionnaires, interviews, and oral histories. Students will also be introduced to contemporary social investigation and the use of artistic/fictional representations of place and environment, and the use of photographs and other multimedia sources as tools for analysis.

LNDN 3733. International Finance. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)
Focuses on Europe. International marketing strategies of European companies. Special features of European Common Market, business environment.

LNDN 3752. International Marketing. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)
Focuses on Europe. International marketing strategies of European companies. Special features of European Common Market and business environment.

LNDN 3753. International Economics. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)
Comparative advantage, classical/neoclassical models, distribution consequences of trade. Resource endowments, technological gaps, economies of scale, product differentiation, location. Tariffs, quotas, other forms of intervention. Preferential trading arrangements.

LNDN 3754. Creative Writing. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)
Creative writing course for the Study and Internships in London program.

LNDN 3756. Topics in London. (; 3 cr. [max 12 cr.]; A-F only; Every Fall, Spring & Summer)
Topics course for the Study and Internships in London program.

LNDN 3757. British History in the 20th Century. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)
British history course for the Study and Internships in London program.

LNDN 3758. International Business Environment. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)
Study abroad course on Study and Internships in London program.

LNDN 3759. Islam, Politics, and Britain: A Case Study of London's East End. (; 3 cr. [max 6 cr.]; A-F only; Every Fall & Spring)
Study abroad course.

LNDN 3975. Social Dynamics of London: Contemporary Issues Through Service-Learning. (; 3-6 cr. [max 12 cr.]; A-F only; Every Fall, Spring & Summer)
Study Abroad Course

Study Abroad in Montpellier (MONT)

MONT 1000. Intensive French Session Lower Division. (; 3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad.

MONT 1001. Beginning French. (5 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer)
Study Abroad Course

MONT 1002. Beginning French. (5 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 1003. Intermediate French. (5 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 1004. Intermediate French. (5 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 1151. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 1152. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 1153. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 1154. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 1155. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The

specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 1157. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 1158. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 1159. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 1251. University of Montpellier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at the University of Montpellier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 1252. University of Montpellier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at the University of Montpellier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 1253. University of Montpellier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at the University of Montpellier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 1254. University of Montpellier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a

course taken at the University of Montpellier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 1255. University of Montpellier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at the University of Montpellier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 1256. University of Montpellier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at the University of Montpellier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 1257. University of Montpellier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at the University of Montpellier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 1258. University of Montpellier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at the University of Montpellier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 1259. University of Montpellier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at the University of Montpellier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 1301. Intermediate French Grammar. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This course will help students to improve their written and oral skills in French and train them to develop an approach to various writing assignments. This is designed to broaden the range of options available to them for expressing themselves in the language.

MONT 1302W. Intermediate Academic Writing in French. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This class is designed to introduce students to the techniques and tools required for both academic and personal writing. Over the

course of the semester, students will learn how to write a variety of different types of texts including: the description, the compte rendu universitaire, the journalistic portrait, and other textual genres.

MONT 1309. Intermediate French Conversation. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This class is built as a series of discussion sessions. Throughout group discussions about news and precise topics (gastronomy, French music, immigration) students will acquire basic vocabulary and learn more about social and cultural facts and French contemporary civilization. We will study topics such as immigration in France, the French social system, cinema, leisure and provide the students with basic information in everyday life. Learning will be based on listening and speaking with material such as songs, TV shows, and movie extracts. A vocabulary sheet will provide basic vocabulary about the topic studied. Focus will be put on correct vocabulary and pronunciation.

Study abroad course.

MONT 3020. French Comprehension. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad course.

MONT 3021W. Medieval French Literature: Mysteries, Marvels, & Monsters. (LITR,WI; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

The focus of this course is an exploration of the creative work of a period of history that remains to this day shrouded in mystery. There are strong parallels between the Medieval era and the present day: It is a time when many live in fear. Power, often wielded tyrannically, lies in the hands of a fortunate few, and those at the

bottom of the social pyramid are cowed into submission. The Church, seeking to expand its social control, reinforces that terror through cryptic and troubling iconography. Just as in the present day, fear drives superstitions about marvels and monsters to society's surface. Yet at the same time, a developing curiosity for the world but also a desire for conquest emerge and encounter the Other. Understanding the context and forces at work in this period will provide students with tools to analyze contemporary societal shifts; in other words, exploring the myths of the past will shed a light on those that govern the present. During the semester, students will discover the mysteries, marvels, and monsters of this period through literature and visual media. The goal will be to study these works from diverse perspectives, but also to see how this imagery and these legends have persisted through the ages to the present day (for example Victor Hugo's 19th-Century romantic poetry and Alexandre Astier's popular 21st-Century series *Kamelott*). Students will explore changes in the literature from the past to the present (theater, poetry, prose) as well as architecture and the arts in an attempt to access a deeper comprehension of this often misunderstood time that can inform our understanding of the present. This is a writing-intensive course, offering a broad introduction to the critical methods, standards of scholarship, and body of knowledge specific to the discipline of French and francophone studies. The course will train students to understand and analyze texts and visual media, including sculpture, painting, manuscript illuminations, and film. Since it is writing intensive, particular attention is given to the content, style, and format of written assignments.

MONT 3022. France and its Mediterranean Neighbors: A Relationship of Exchange. (3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course

MONT 3023. History of Theater. (3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course

MONT 3024W. Medieval French Literature: The Once & Future King. (LITR,WI; 3 cr.; Student Option; Every Fall, Spring & Summer)
Who was King Arthur? How is it that a legendary figure from such a distant time still exists today in such a vibrant manner within the collective mind? From the Middle Ages to the present day in such popular works as George RR Martin's *Game of Thrones*, the myths and folklore surrounding the king have been ceaselessly renewed. Beginning with the pseudo-historical origins of Arthur and his knights in the old French literary tradition as depicted by Chr?tien de Troyes and in iconic works of the *mati?re de Bretagne*, and ending with Alexandre Astier's wildly popular television series, *Kamelott*, this course will seek to shed light on the popularity and the mystery surrounding le roi Arthur. Over the course of the semester we will explore the legendary material in detail, constantly

comparing and contrasting contemporary works with their Medieval forbears with the ultimate goal of understanding how these creations function within a socio-cultural framework.

MONT 3025W. French [R]evolutions: Transformations in French Society from 1945-Now through the Eyes of Filmmakers. (AH,WI,GP; 3 cr.; Student Option; Every Fall, Spring & Summer)

Through the lens of cinema and documentary film, this course explores the changes in French society from the period of the Second World War to the present day. Beginning with the trauma of the Nazi occupation, students will look at how French cinema over the years has served as a mirror on society, reflecting cultural, social, and political evolutions. Students will examine key moments in France's history that have left a mark: the period of Nazi occupation and the conflict between collaborators and resistance fighters (as portrayed in Louis Malle's *Au Revoir les Enfants*, Jacques Audiard's *Un H?ros tr?s discret* or Joseph Losey's *Mr. Klein*), France's departure from Indochina (Pierre Schoendorffer's *Di?n Bi?n Phu*), the Algerian war (Gillo Pontecorvo's *La Bataille d'Alger*), the cultural revolution of May 1968 (Ducastel and Martineau's *N?s en 68*), evolving family models and changing visions of socialism in the 1980s (Pinoteau's *La Boum*), social upheaval and exclusion in the 1990s (Kassovitz's *La Haine*, Lisa Azuelos's *LOL*, Mounia Meddour's *Papicha*). Recent film and text will engage with an exploration of contemporary France (the 2000s and 2010s) around issues such as francophone multiculturalism, societal unrest (the yellow-jacket movement) and the terror attacks (Audiard's *Un Proph?te*, *Ladj Ly's Les Mis?rables*, Houda Benyamina's *Divines*, Emmanuel Leconte's *Humour ? mort? the Charlie Hebdo attacks*), but also France's continuing mission to promote the arts and humanities and make them accessible to every socioeconomic corner of the population (e.g., through nationwide events such as the annual *F?te du Cin?ma*, the *Journ?es du Patrimoine*, and once-a-month free access to museums). The course aims to provide students with tools for understanding a culture through an exploration of its creative artifacts.

MONT 3026W. French Writers: Transformations in Society from 1945-Now through the Eyes of Novelists. (LITR,WI; 3 cr.; Student Option; Every Fall, Spring & Summer)

Through the lens of literature, this course explores the changes in French society from the period of the Second World War to the present day. Beginning with the trauma of the Nazi occupation, students will look at how French literature over the years has served as a mirror on society, reflecting cultural, social, and political evolutions. Students will examine key moments in France's history that have left a mark: the period of Nazi occupation and the conflict between collaborators and resistance fighters (as portrayed in Tatiana de Rosnay's *Sarah's Key*), France in Indochina and the underpinnings of its postcolonial legacy (Marguerite Duras's *Sea Wall*), the

cultural revolution of May 1968 (Annie Ernaux's *The Years*), evolving family models and changing visions of the world in the 1980s (Tahar Ben Jelloun's *The Sand Child*), social upheaval and exclusion from the 1990s to the present day (Edouard Louis's *Ending Eddy*, Michel Houellebecq's *Platform*, Mounia Meddour's *Papicha*). Recent texts and film will engage with an exploration of contemporary France around issues such as francophone multiculturalism, societal unrest (the yellow-jacket movement) and the terror attacks (Marie N?Diaye's *Ladivine*, Jacques?s Audiard's *Un Proph?te*, *Ladj Ly's Les Mis?rables*, Emmanuel Leconte's *Humour ? mort?the Charlie Hebdo attacks*), but also France's continuing mission to promote literature through the Prix Goncourt. The course aims to provide students with tools for understanding a culture through an exploration of its creative artifacts.

MONT 3101. French Cinema. (3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 3102. Southern French Civilization. (1.5 cr. [max 3 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 3103. French Culture and Heritage. (1.5 cr. [max 3 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 3104. French History of Art. (1.5 cr. [max 3 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 3105. Scientific French. (1.5 cr. [max 3 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 3106. French Literature and Oral Expression. (1.5 cr. [max 3 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 3107. French Literature. (1.5 cr. [max 3 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 3108. Southern French Literature. (1.5 cr. [max 3 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 3109. Business French. (1.5 cr. [max 3 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 3110. French for Science and Technology. (3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course

MONT 3119. Learning, Cognition, and Assessment. (3 cr.; Student Option; Every Fall, Spring & Summer)
This course is designed to provide students with the theoretical tools for learning (behaviorism, constructivism, and socio-constructivism) and to understand the link

with specific teaching contexts. In addition, students will learn about various approaches to evaluating students and the notions behind competency acquisition. Finally, students will explore the relevant areas of the field of neurosciences with the goal of developing appropriate methodological tools for learning assessment.

MONT 3121. Language Development from a Cross-Cultural Perspective. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This is an introductory and exploratory course to second language learning for teachers. Students are expected to master basic linguistic concepts to analyze second language productions through the study of their linguistic components. In addition, this course provides an introduction to second language acquisition theories, with attention being given to both child and adult learners. Major debates within the field of second language learning will be discussed and their implications for classroom-based language teaching will be explored. These include the role of implicit and explicit learning mechanisms and teaching approaches, the impact of age of acquisition, the role of learning context, and the impact of individual differences on second language acquisition. In addition, this course will devote time to exploring certain aspects of language learning in the European context, notably with respect to evaluation (CEFR) and as concerns plurilingualism initiatives that have been pursued in the French education system. In addition, a component of this course will explore the importance of incorporating culture in second language teaching and highlight the crucial interaction between language and culture in the classroom. Students will acquire tools for developing lesson plans that incorporate culture and promote cross-cultural comprehension.

MONT 3151. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 3152. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 3153. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student

in the Notes field directly underneath this course on their transcript.

MONT 3154. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 3155. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 3156. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 3157. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 3158. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 3159. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 3211. Introduction to Elementary School Teaching. (3 cr. ; Student Option; Every Fall & Summer)

This course will provide students with the tools for becoming an effective teacher, by underlining and exploring certain areas of the field of pedagogy. Major topics include: ?

Exploring the field of teaching foreign languages (with focus on English as a Foreign Language) ? Underlying principles related to how teachers learn to teach ? Pedagogical theories ? Personal values impacting the work of a teacher and ethical guidelines for the teaching profession ? Schools and the teacher?s world of work ? Teaching as a career development

MONT 3212. Teaching Practicum. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Under the supervision of University of Montpellier education faculty, students participate in a substantive teaching practicum in the English classroom in the local Montpellier schools. Students are also supervised and mentored by the English teacher in the local school. Group reflection meetings and one-on-one feedback from the University of Montpellier faculty provide context and mentoring.

MONT 3213. Comparative Education and Pedagogy. (3 cr. ; Student Option; Every Fall & Summer)

This course compares educational practices in the United States and in France. Major topics include: the beliefs, practices, and relationships that shaped human experience over time, methods and concepts employed in producing historical knowledge, how to do the interpretive work that makes meaning out of historical materials, and finally uses limitations of certain primary resources.

MONT 3251. University of Montpellier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at the University of Montpellier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 3252. University of Montpellier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at the University of Montpellier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 3253. University of Montpellier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at the University of Montpellier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

Study abroad course.

MONT 3311W. La France Mosaïque/French Multiculturalism. (WI; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

This course examines the cultural identity of France's inhabitants in detail. After all, why do we call it la France plurielle ? What does it mean to be French? Is that even a valid question? What are the origins of the French, and specifically how might a work of literature or a film reveal the various dimensions of their cultural identity? With these questions in mind, the first third of the course focuses on the history of immigration in France and the complex nature of the issue as it stands at the beginning of the 21st Century. The second third of the course is centered on mainland France, with a particular focus on those regions and populations asserting claims of independence (Pays Basque, La Corse, la Bretagne) or with strong cultural identities; we will also examine the role of minority languages, and a selection of literary works and films will serve to illustrate some of the distinctive features of each region. A similar approach will be used in the final part of the course, which will examine the rich diversity of the francophone world, and consider its influence on France's pluralistic identity. This is a writing-intensive course, offering a broad introduction to the critical methods, standards of scholarship, and body of knowledge specific to the discipline of French and francophone studies. The course will train students to understand and analyze texts and visual media, including sculpture, painting, manuscript illuminations, and film. Since it is writing intensive, particular attention is given to the content, style, and format of written assignments.

MONT 3312. Contemporary French Civilization. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

Study abroad.

MONT 3505W. Writing in French: Tools and Techniques. (WI; 3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer)

This class is designed to introduce students to the techniques and tools required for both academic and personal writing. Over the course of the semester, students will learn how to write a variety of different types of texts including: the description, the compte rendu universitaire, the journalistic portrait, and other textual genres. The course consists of an analytic component in which students will be asked to study a text corresponding to a specific style. Students are then asked to explore the writing techniques employed in each type: reformulation, synthesis, rhetorical figures, persuasive language, expressing an opinion via judgment or values, impersonal language, inverted questioning of the reader, etc. and subsequently write in those styles. Students will be expected to complete numerous writing assignments during the semester. These exercises will be collected and graded on a regular basis, with the possibility for students to revise and improve each project. Course objectives include: learning how to write different types of documents, with different content, using different styles, applying the knowledge acquired in the grammar/methodology course, mastering the stylistic tools and techniques for writing in French (e.g., the use of hyperbole, metaphor, personification, diction, symbolism) acquiring the ability to think in French and write directly in the target language without translating.

MONT 3506. Directed Research. (; 1-6 cr. [max 12 cr.]; Student Option; Every Fall, Spring & Summer)

Study abroad course.

MONT 3507. Special Course for Americans. (; 0-10 cr. [max 20 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad.

MONT 3508. Special Course for Americans. (; 0-10 cr. [max 20 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad.

MONT 3509. Special Course for Americans. (; 0-10 cr. [max 20 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad.

MONT 3601. Institute Course. (; 1-8 cr. [max 16 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 3602. Institute Course. (; 1-8 cr. [max 16 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 3603. Institute Course. (; 0-8 cr. [max 16 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 3604. Institute Course. (; 1-8 cr. [max 16 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 3605. Institute Course. (; 1-8 cr. [max 16 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 3650. Topics in French Culture. (; 3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 3701. Sports and Culture in France. (; 3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

MONT 3801. Comparative Business Environment: France, Europe and the US. (3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course

MONT 3802. Global Business and Industry: France at the Crossroads. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This course will examine similarities and differences among US, French and global business and industry environments and cultures. Topics will include the European Union (EU), as well as institutional, political, legal and socio-cultural factors at work in the contemporary business and industrial landscape. Students will learn and examine various contexts in business, education, workplace culture, and career pathways and options in France and abroad.

MONT 3886. Community Engagement in Montpellier. (CIV,GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)
This course will explore the historical, sociological, and political context of the French community but also in relation to Europe and

with a comparison with the American system. It will provide an opportunity for students to reflect on their community engagement in the host country environment. Students will engage in charities/French schools and then share their experience in a classroom. They will discuss topics linked to French society at large, approaching diverse subjects such as the youth in French society, the way the education system works in France and how it differs from the US, the French social system, the concept of ?la?cit?? (secularism) in France, the history of immigration from the 19th Century until today with the new waves of immigrant population, and race and gender issues. Students will have a closer look at French charity organization, NGO, and see how they work here in France. They will also examine leadership values in their country and see how they can adapt and develop them in their new environment. This course and students' engagement in the community will deepen their understanding of the host country cultural context and will lead them to critically examine their own worldviews. Topics explored will include ethnic and social responsibility, leadership, French social systems, multiculturalism in the French society, place of secularism (la?cit?) in the French society, history of immigration, and gender equality.

MONT 4151. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 4152. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 4153. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 4154. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpellier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 4155. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpelier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 4156. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpelier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 4157. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpelier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 4158. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpelier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 4159. University Paul Valery Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpelier program to represent a course taken at University Paul Val?ry. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 4251. University of Montpelier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpelier program to represent a course taken at the University of Montpelier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 4252. University of Montpelier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpelier program to represent a course taken at the University of Montpelier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 4253. University of Montpelier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpelier program to represent a course taken at the University of Montpelier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 4254. University of Montpelier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpelier program to represent a course taken at the University of Montpelier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 4255. University of Montpelier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpelier program to represent a course taken at the University of Montpelier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 4256. University of Montpelier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpelier program to represent a course taken at the University of Montpelier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 4257. University of Montpelier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpelier program to represent a course taken at the University of Montpelier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 4258. University of Montpelier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpelier program to represent a course taken at the University of Montpelier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 4259. University of Montpelier Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on all LAC programs and tracks related to the Study Abroad in Montpelier program to represent a course taken at the University of Montpelier. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

MONT 4303. Adolescent Psychology. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This course is designed to provide an introduction to the science of development during the period known as ?adolescence?? from the beginnings of the biological processes involved in puberty to sociocultural adulthood? and applications of that knowledge in practice and policy. Students will gain a foundational understanding of what is currently known about the transformational processes that shape human development as children mature into adults.

MONT 4312. Resilience in Children & Youth:Global Perspectives. (GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

How do children overcome hazardous experiences to succeed in life? What can be done to protect young people at risk from trauma, war, disasters, and other adversities? This course examines the global literature on resilience in children and youth. We will focus on the origins, methods, findings, controversies, and future of research on how young people overcome adversity, as well as the implications of this body of knowledge for fostering resilience in children and societies. This course combines a classroom seminar with a 6-module massive open online course (MOOC). The MOOC, Resilience in Children Exposed to Trauma, Disaster and War: Global Perspectives, is taught by Professor Ann S. Masten, Ph.D., LP from the University of Minnesota. Students will participate fully in the MOOC (see the detailed MOOC syllabus) in addition to attending seminar sessions in France (see schedule below). Students will experience global interaction by participating in a live MOOC online with other participants around the world combined with face-to-face dialogue in a seminar at the Program Center.

Study Abroad in Sydney (SDNY)

SDNY 1101. University of Technology Sydney Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Sydney study abroad program to represent a course taken at the University of Technology Sydney. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

SDNY 1102. University of Technology Sydney Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Sydney study abroad program to represent a course taken at the University of Technology Sydney. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

SDNY 1103. University of Technology Sydney Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Sydney study abroad program to represent a course taken at the University of Technology Sydney. The specific course

title will appear for each student in the Notes field directly underneath this course on their transcript.

SDNY 1104. University of Technology Sydney Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Sydney study abroad program to represent a course taken at the University of Technology Sydney. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

SDNY 1105. University of Technology Sydney Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Sydney study abroad program to represent a course taken at the University of Technology Sydney. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

SDNY 1201. Integrated Course. (1-6 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SDNY 1202. Integrated Course. (1-6 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SDNY 1203. Integrated Course. (1-6 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SDNY 1204. Integrated Course. (1-6 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SDNY 3002. Art Down Under: From the Dreamtime to the Present. (; 3 cr. ; Student Option; Every Fall & Spring)
Works of art produced during the last century. Controversial contemporary Aboriginal art. Major 20th century art movements in relation to advances in technology, historical events, and sociological changes.

SDNY 3003. Australian Cinema: Representation and Identity. (; 3 cr. ; Student Option; Every Fall & Spring)
Personal/collective identity via film narratives. Extent to which Australian films reflected/determined Australian identities. What it means to be Australian. Concepts of national identity, imagined community.

SDNY 3004. International Business and Trade: Australia and the Pacific Rim. (; 3 cr. ; Student Option; Every Fall & Spring)
Establishment/growth of Australia's contemporary economic structure. How it relates to history of Australia's relationship with Asia. Dynamic of Australian economy, policies it faces. Changing context of Australia's identity and its political/economic policies toward Asia. Role of wars. Labor market. Immigration.

SDNY 3006. Learning Through Internships in Sydney. (; 3-6 cr. [max 12 cr.] ; A-F only; Every Fall, Spring & Summer)

Internship course for Sydney program.

SDNY 3007. The Aboriginal Experience: An Anthropological View. (; 3 cr. ; A-F only; Every Fall & Spring)
Trends in contemporary Australian society. Emphasizes struggles of indigenous peoples.

SDNY 3008. Understanding Australia from a Sociological Perspective. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall & Spring)
Sociological analysis of peoples, movements, and contemporary issues. Perspectives between culture and society. Constructions of Australian identity. Notions of ethnicity, gender, migration, crime, and the media.

SDNY 3009. Human Resource Management in the Australia/Pacific Rim Context. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall & Spring)
How Australian and Pacific Rim companies are attempting to achieve competitive advantage in domestic/international markets through HRM. Structural changes HRM is undergoing in Singapore, Hong Kong, and Japan. Increased responsibility of line managers for HRM. Talent/performance/industrial relations management.

SDNY 3011. Australian Government and Politics in the Pacific Rim. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)
History, concepts, and structures of politics/government in Australia. Debates, problems, and changes in relation to Pacific Rim. Discussing these issues critically.

SDNY 3012. Intercultural Communication: Theories, Practices, Factors. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)
Communication between people from different racial, ethnic, and cultural backgrounds within Australia, including Aboriginal, and immigrant populations. Theory/research in intercultural communication. Improving human interaction in study-abroad environment and international contexts.

SDNY 3013. Analyzing and Exploring the Global City: Sydney. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SDNY 3014. Australian History: Aboriginal History to Colonization--Current Issues in Historical Perspective. (GP,HIS; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SDNY 3015. International Marketing. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SDNY 3016. Australian, Asian and Pacific Literatures. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SDNY 3017W. Writing the City - Sydney. (WI; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SDNY 3018. Advertising and Promotions. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SDNY 3019. Advertising and Society. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SDNY 3020. Indigenous Peoples and Modernity: Culture, Rights and Development in a Globalizing World. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

SDNY 3021. International Finance. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

SDNY 3022. International Economics. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

SDNY 3023. International Dimensions of Organizational Behavior. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

SDNY 3024. Global Workforce Management. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

SDNY 3025. Managing Global Supply Chains. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

SDNY 3026. People, Place and Culture: Environmental Debates in Australia, New Zealand and the Pacific. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

SDNY 3027. Investment Management. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

SDNY 3028. Gender, Culture and Society. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

SDNY 3029. Campaigning for Change: Advocacy, Activism and Policy in the Digital Age. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

SDNY 3030. Project Management Practicum. (3 cr. ; Student Option; Every Fall, Spring & Summer)
The Project Management Practicum enables students to apply the principles and practices of project management learned in the Project Management course to a project conducted in an organization by working through the design, implementation, monitoring, completion and evaluation stages of project management for the project. This practicum will run in a primarily concurrent fashion with the Project Management course?the two combine for a total of 90 hours during the intensive program. The two courses (Project management course/ Project Management Practicum) plus an internship form a track, however each course can be separately taken.

SDNY 3031. Skills and Challenges of Project Management. (3 cr. ; Student Option; Every Fall, Spring & Summer)

The project management course is designed as an introductory program specifically targeting students who intend to pursue careers in which the management of projects and/or programs is an area of responsibility. The course is designed to provide potential project managers with a systematic, structured framework and processes for the management of projects through the design, implementation, monitoring, completion and evaluation stages of project management.

SDNY 3032. Sports in Australian Society. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Sports hold a central role in the development of the Australian character and identity, through the interaction with the expanse of the new environment of the early settlers, evolving during the colonial era of the nineteenth century. Sports helped forge and provide a focus for Australian nationalism whether that be individual achievements or as a team, projecting Australians internationally on the global sporting stage. This course studies sports in Australian culture; the historical context through to its importance in today's Australian society; sports as a reflection of the masculine mono culture; Australian identity of 19th Century and early 20th Century through to diversity of modern Australia multiculturalism; and indigenous recognition and social structures will be studied. Themes covered in this course include volunteerism, gender, race, ethnicity, sexuality, amateurism and professionalism, globalization, integrity in sports (drugs in sports, influence of gambling on results, gene manipulation, and bio medical enhancements), trends and challenges of the future of sports, including doping in sports, rise of corporatization of sports, innovation and technology impact on sports, and the impact on Australian sports of the current Asian Century.?

SDNY 3033. Sports Management. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This course provides undergraduate students with the critical understanding of the theories, concepts, knowledge and skills for managers in commercialized and community-based sports in the Australian context. The course considers the ranges of challenges facing the 21st-Century sports manager including a complex sociocultural environment, competitive business markets, managing a range of key stakeholders, the future of sports management, and strategic planning to meet future sporting organizations objectives. The course also evaluates how public policy, sports governance, and legislative requirements impact the management of sporting organizations. Finally, the course examines the wider social utility of sport in Australia, such as its role in community and the forming of national identity, as an opportunity for social improvement and general community well-being.

SDNY 3034. Sports Marketing. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This course examines in detail the various techniques and strategies of sports marketing. The issue of professionalism and the corporatization of sport will be addressed. The focus on the necessity of securing various revenue streams including sponsorships, investment opportunities, government grants and fundraising potential of individuals, teams, clubs and facilities in the broad arena of sport. Students will examine the promotion of sports through various channels, including traditional media and the rise of digital marketing in its various forms. The ability to develop and implement marketing strategies and plans to present to individuals or organizations will be based around practical application using Australian case studies.

SDNY 3035. The Australasian Nightmare: Horror Films and the Traumatic Imagination on the Pacific Rim. (3 cr. ; Student Option; Every Fall, Spring & Summer)

The classic American horror film is derived from a gothic heritage, an inheritor of a European context and its tropes: the disintegration of civilization through wars, disease, economic collapse, and associated social traumas. The horror that the current, post-9/11 generation has produced is notably different; it plays upon central themes that derive from an Australasian context, driven by the recent horror films of Australia, Japan, and Korea. These influential films have been made and distributed outside of an American context but then repackaged for the West in remakes and variations that awaken an American audience to themes of horror that are decidedly non-European in substance. This course will examine these films, comparing and contrasting European and Australasian tropes for horror as well as their reflection of and impact on society.

SDNY 3036. Race and Ethnicity in Australia and the US. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This course examines and compares race and ethnicity in Australia and the U.S. Similarities and differences in racial/ethnic historic and current conditions, causes, consequences, and policies in the two countries will be identified. By the end of the course, students will have greater understanding of the role of race and ethnicity in determining group and individual opportunities, restrictions, and life experiences. Students will become aware of the continuing importance of cultural and political factors in the salience of race/ethnicity in the two societies. Solutions for racial problems will also be emphasized.

SDNY 3037. Australia in the Global Political Context. (GP; 3 cr. ; Student Option; Every Fall & Summer)

This course examines the government and politics of Australia and Australian engagement in the Asia-Pacific region. It does so by surveying similarities with and differences from the North American democratic model and by examining Australia's substantial and abiding interests in the Asia-Pacific region. By the end of the course, students will be aware of the importance of geographical distance and location in the Australian story.

Students will also be aware of the continuing importance of cultural and political inheritance in the development of Australian public and foreign policy. Students will be encouraged to make comparisons with the US system of government and politics.

SDNY 3038W. Immigration: People Moving, Moving People. (CIV,WI,SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course will explore the causes and consequences of migration for communities, personal identities, national identities, politics, ethics, and the environment. The various reasons for people-moving and moving people across borders will be examined, as will the myths and controversies involved. How notions of belonging, citizenship, nationality, nationhood, and 'the other' are constructed, proliferated, and manipulated will be key themes throughout the course. Case studies will be drawn from both Australian and international examples, which field trips will supplement. Grades will be based on class and online participation, evidence of reading and independent research, and assessments both written and oral.

SDNY 3039. Abnormal Psychology. (SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course provides a contemporary overview of the psychological, biological, and experiential factors thought to influence human mental disorders. It will address questions such as 'What is 'abnormal'?' 'What causes mental illness and how do we treat them?' Each week students will explore a different disorder (for example, depression, anxiety, eating disorders, schizophrenia) and discuss the symptoms, causes, and empirically supported treatments.

SDNY 3041. Resilient Cities. (ENV,GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course is an introductory course on urban resilience and concepts in sustainability and its principles and the sustainable development of cities in the global, regional, and local contexts. The course will cover the environmental, socio-economic, and structural problems of contemporary cities and their consequences on natural systems and built communities. It provides a framework to examine the challenges of urbanism, issues facing cities, and an opportunity to evaluate and explore solutions.?

SDNY 3042W. Writing for Environmental Advocacy. (ENV,WI,GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course focuses on writing in response to the natural environment, primarily as a tool to raise awareness of environmental challenges and to advocate for ways to meet those challenges. We'll read a variety of voices and styles of advocacy writing, always with a strong focus on the craft of language: How does the writing reach its target and accomplish its goal? What makes the writing persuasive? Students will practice several modes of advocacy writing, via several shorter assignments, and the writing will be a central text of the course; that is, we will investigate and critique student writing in much the same way we do the assigned

published pieces. Students will devote much of the second half of the term to researching and writing a first-person article and presentation focusing on a specific environmental problem and advocating for a potential solution/s.

SDNY 3043W. Sports as Soft Power.

(GP,WI; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course examines sports as soft power (persuasion, influence, and attraction) in the attempt to bridge communities and cultures and on the local, national, and global stages. Case studies demonstrate the attraction and effectiveness of sports as a communication strategy utilized by local, national, and international governments and NGOs as part of a strategic communication plan, as well as its role in spontaneous grassroots movements. Critical to our studies is the appreciation that sport may challenge/reinforce social and cultural values at the local, national, and international levels.

SDNY 3044. Innovation and

Entrepreneurship. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This unit introduces you to the nature and characteristics of entrepreneurship and innovation and explores the interrelationship between the two within global and contemporary economies. The nature of enterprise behavior and the characteristics of entrepreneurs in both large and small organizations in Asia-Pacific and Western-based organizations are examined, as are the policy issues associated with encouraging enterprise and innovation within the wider community. The fundamentals of opportunity recognition and screening of new venture ideas are examined from both a local and global perspective.

SDNY 3045. Creative Thinking in New

Product and Service Innovation. (3 cr. ;

Student Option; Every Fall, Spring & Summer)

In increasingly competitive global markets, innovation in new product and service development has become a key success factor in delivering growth for the firm. However, despite a global push by organizations to foster innovation in new product development, many new products and services continue to fail. This highlights the need for managing the creative and commercialization process in new product and service development to optimize in-market success, across global markets. The focus of this unit is to inspire creativity in reframing problems that open disruptive opportunities and inspire novel product and service ideas that cross geographic boundaries. It also explores how to measure purchase intent amongst the desired target audience, identify predictive models of sales forecasting, develop prototyping, and prepare for a successful commercial launch.

SDNY 3046. Australia and The World:

Politics and International Relations. (GP;

3 cr. ; Student Option; Every Fall, Spring & Summer)

This course examines the government and politics of Australia and Australian engagement in the Asia-Pacific region. It does so by

surveying similarities with and differences from the North American democratic model and by examining Australia's substantial and abiding interests in the Asia-Pacific region.

By the end of the course, you will be aware of the importance of geographical distance and location in the Australian story. You will also be aware of the continuing importance of cultural and political inheritance in the development of Australian public and foreign policy. You will be encouraged to make comparisons with the US system of government and politics.

SDNY 3047. Global Health in a Post

Covid-19 World. (GP; 3 cr. ; Student Option; Every Fall, Spring & Summer)

COVID-19 has been described as a "once-in-a-generation" global emergency that has reverberated all aspects of global health practice. This course is designed to increase your awareness and appreciation for the deep and emerging ways in which individual countries and the global community have responded. We will examine the impact of the virus and its management on communications, communities, and health and development systems. Comparisons between the US, Australia, Italy, and China will be made to directly relate learning to your local setting as well as contrasting responses internationally. This will be a Globally Networked Learning experience with experts drawn from Australia, Italy, and China.

SDNY 3048. Locating Social Inequality.

(SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course focuses on the experiences of cultural and socio-economic difference in Sydney, and through global comparative analyses. This includes applied social science approaches to inequality, diversity, community, sense of place, and environmental sustainability in the urban setting. There is an emphasis upon spatial literacy for social scientists (fieldwork, mapping, data analysis, and place description).

SDNY 3101. University of Technology

Sydney Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Sydney study abroad program to represent a course taken at the University of Technology Sydney. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

SDNY 3102. University of Technology

Sydney Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Sydney study abroad program to represent a course taken at the University of Technology Sydney. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

SDNY 3103. University of Technology

Sydney Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Sydney study abroad program

to represent a course taken at the University of Technology Sydney. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

SDNY 3104. University of Technology

Sydney Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Sydney study abroad program to represent a course taken at the University of Technology Sydney. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

SDNY 3105. University of Technology

Sydney Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Sydney study abroad program to represent a course taken at the University of Technology Sydney. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

SDNY 3201. Integrated Course. (1-6 cr. [max

12 cr.]; Student Option; Every Fall, Spring & Summer)

Study abroad course.

SDNY 3202. Integrated Course. (1-6 cr. [max

12 cr.]; Student Option; Every Fall, Spring & Summer)

Study abroad course.

SDNY 3203. Integrated Course. (1-6 cr. [max

12 cr.]; Student Option; Every Fall, Spring & Summer)

Study abroad course.

SDNY 3204. Integrated Course. (1-6 cr. [max

12 cr.]; Student Option; Every Fall, Spring & Summer)

Study abroad course.

SDNY 3375. Global Internship Course:

Sydney. (3-6 cr. ; Student Option; Every Fall, Spring & Summer)

3 Credit Course Option: The Global Internship Course (GIC) provides a unique and innovative opportunity for students to engage in an internship (and living abroad experience) while supported by academic in-class and online educational sessions to further develop their personal and professional skills while earning academic credit. GIC students also partake in out-of-class guided and self-guided activities and excursions that have been devised to enable students to become more comfortable with, and knowledgeable of, their internship locations/neighbourhoods. Field studies vary depending on location and may also include a focus on, for example, corporate social responsibility and sustainability. The GIC fits in with CAPA's philosophy and practice of enabling students to learn about the social and cultural context of their internship placement and the host region and country, as well as other GIC themes, through comparative global analysis. At times, this analysis will be facilitated through a small selection of CAPA Masterclasses given by leading professionals

from a diverse range of fields. The in-class active learning approach gives students the opportunity to discuss and analyze theories and models of work, organizational behavior, and management in a cross-cultural context. A variety of teaching and learning activities will be used, for example: lecture, workshop, discussion, informal and formal presentations, self-guided and guided research, and mock (recorded) interviews. The assessment mechanisms are all designed to support learning, using the internship and living abroad experience as a vehicle. Above all, the in-class CAPA sessions give students the opportunity to listen to individual experiences, compare and contrast activities 6 Credit Course Option The Global Internship Course (GIC) provides a unique and innovative opportunity for students to engage in an internship (and living abroad experience) while supported by academic in-class and on-line educational sessions to further develop their personal and professional skills while earning academic credit. GIC students also partake in out-of-class guided and self-guided activities and excursions that have been devised to enable students to become more comfortable with, and knowledgeable of, their internship locations / neighbourhoods. Field studies vary depending on location and may also include a focus on, for example, corporate social responsibility and sustainability. The GIC fits in with CAPA's philosophy and practice of enabling students to learn about the social and cultural context of their internship placement and the host region and country, as well as other GIC themes, through comparative global analysis. At times, this analysis might be facilitated through a small selection of CAPA Masterclasses given by leading professionals from a diverse range of fields. The in-class active learning approach gives students the opportunity to discuss and analyze theories and models of work, organizational behavior and management in a cross-cultural context such as Australia's historical place within a pan Asian market. A variety of teaching and learning activities will be used, for example: lecture, workshop, discussion, informal and formal presentations, self-guided and guided individual and team research, and mock (recorded) interviews. The assessment mechanisms are all designed to support learning, using the internship and living abroad experience as a vehicle. Above all, the in-class and supplementary on-line CAPA sessions give students the opportunity to listen to individual experiences, compare and contrast activities with others, and consider the experience in terms of their personal and professional development ? at the beginning we focus on self-reflection, and at the end of this process we challenge each student to focus on self-projection. At its core, GIC provides an opportunity for students to unpack, synthesis and articulate (the value of) their learning.

SDNY 3500. CAPA Seminar in Sydney. (3 cr. [max 6 cr.]; Student Option; Every Summer) Study abroad course

SDNY 3501. Telling the Story - Sydney. (1 cr. [max 2 cr.]; Student Option; Every Summer)

Study abroad course

SDNY 3895. Directed Research Project for Study Abroad. (3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer) Study abroad course.

Study Abroad in Venezuela (VENZ)

VENZ 1002. Beginning Spanish. (; 5 cr. ; A-F only; Every Fall, Spring & Summer) Reading, speaking, listening, writing. prereq: Span 1001

VENZ 3015. Spanish Composition and Communication. (; 4 cr. ; A-F only; Every Fall, Spring & Summer) Development of communication skills. Comprehending written/spoken texts. Speaking, reading, and writing in Spanish, beyond intermediate level.

VENZ 3512W. Spanish-American Civilization: Modern Latin America. (WI; 3 cr. ; A-F only; Every Fall, Spring & Summer) Summary of history of countries of Latin America. Pre-Hispanic indigenous cultures, principal features of colonial society. Analysis of socio-cultural situation of Latin American countries in 20th century. Emphasizes artistic developments. prereq: Two yrs college-level Spanish

VENZ 3520. Geography of Venezuela in Spanish. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Venezuelan geography in its international context. Outstanding physical features. Socioeconomic patterns. prereq: Two yrs college-level Spanish

VENZ 3705. Structure of Spanish: Phonology and Phonetics. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Theoretical background in phonetics. Practice in oral articulation. Differences between Spanish spoken in Spain and in Hispanic America. Emphasizes Spanish spoken in Venezuela. prereq: Two yrs col-lev Span

Summer Study in Rome (ROME)

ROME 1001. Beginning Italian I. (; 5 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer)

Basic listening, speaking, reading, writing, and communication skills. Cultural readings.

ROME 1002. Beginning Italian II. (; 5 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer)

Basic listening, speaking, reading, writing, and communication skills. Cultural readings.

ROME 1003. Intermediate Italian I. (; 5 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer)

Conversation/comprehension proficiency. Reading/writing skills. Grammar review.

ROME 1004. Intermediate Italian II. (; 5 cr. [max 10 cr.]; Student Option; Every Fall, Spring & Summer)

Conversation/comprehension proficiency. Reading/writing skills. Grammar review.

ROME 1200. Intensive Italian Language and Culture. (; 3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer) Study abroad.

ROME 1300. Italian for Design. (1 cr. [max 2 cr.]; Student Option; Every Fall, Spring & Summer) Study abroad course.

ROME 1500. Survival Italian. (1 cr. ; Student Option; Every Fall, Spring & Summer) This course is designed as a survival language course with emphasis on developing the necessary language skills to handle the most frequent situations encountered while staying in Rome. It focuses on communication in everyday practical situations and aims at getting students started in learning Italian.

ROME 3001. Society, Citizenship, and Ethics in Post-Unification Italy. (; 3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer) Culture/identity from Italian historical perspective. Students visit Orvieto, a medieval hilltop town famous for its paintings, frescos, and 'underground city' of tunnels/passageways.

ROME 3002. Roman Art. (; 3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer) Uses Rome as a campus to address role of patrons, nationality of artists, and actual technical production of works of art. Students visit Pompeii, a city frozen in time that reveals the historical heritage of ancient Rome.

ROME 3003. Made in Italy. (; 3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer)

"Made in Italy" as brand and lifestyle. Lectures, site visits, development of a student group marketing plan. Students visit Castello Banfi Winery in Tuscany.

ROME 3004. Italian Communications: Popes, Politicians, and Popular Culture. (; 3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer) Study abroad course.

ROME 3005. The History of Art and Design in Italy: From Pompeii to Present. (; 3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer) Study abroad course.

ROME 3006. Community Engagement in Rome. (; 3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer) Study abroad course.

ROME 3007. Design Theory, Technology, and the Environment. (; 3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer) Study abroad course.

ROME 3008. Sustainable Foods of Italy. (; 3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer) Study abroad course.

ROME 3009. Italian Cinema. (; 3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer) Study abroad course.

ROME 3010. Neighborhoods of Modern

Rome. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

ROME 3011. Roman Design Studio. (; 6 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

ROME 3012. Intensive Italian Language and Culture. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

ROME 3013. Internships in Rome: A Comparative Approach to the Italian Workforce. (3-6 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

ROME 3014. Sport and Society in Modern Italy. (3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course

ROME 3191. Materials and Design: Integrity and Innovation. (2 cr. [max 4 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

ROME 3192. Remapping of a Neighborhood for Students of Architecture. (2 cr. [max 4 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

ROME 3193. Exploring Identity: Community Design for Marginalized Groups. (2 cr. [max 4 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

ROME 3194. As if People Mattered: Architectural & Urban Lessons in the Eternal City. (2 cr. [max 4 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

Summer in Sicily (SCLY)

SCLY 1201. Survival Italian Language. (1 cr. ; Student Option; Every Fall, Spring & Summer)

The course is designed for college students who are approaching the study of the Italian language for the first time. Lessons are held exclusively in Italian and take into consideration the need to combine the study of lexis and grammar with the development of communication skills and cultural awareness. The instructor encourages students to put the language structures and vocabulary studied in class into practice in real-life situations, thus accelerating the learning process and bringing students into contact with local society so that they may fully appreciate the way of life and cultural differences. This knowledge is an integral part of linguistic competence.

SCLY 3201. Sicily Design Lab. (3 cr. ; Student Option; Every Fall, Spring & Summer)
Physical making remains central to how we understand and design the world around us, even as we become a more digitally connected,

global world. These project-based, making-intensive courses celebrate the act and craft of individual hand-making in community with other makers. The specific theme and project change each year and are determined by the expert instructors in consultation with MADE Academy leadership. They are taught by international designers at the MADE Academy, at the Academy of Fine Arts in Syracuse, Italy. Students in these workshops will learn in the tradition of the expert and apprentice, working side by side with peers and expert art and design instructors from around the world. Each workshop will focus on a single team project; the prompt is issued at the start of the week, students work through the design and making throughout the week, and the project is reviewed five days later. At mid-week, students have a brief, independent assignment that extends the specific ideas of the workshop in the context of the learning abroad experience and the concurrent summer MADE Academy symposium content.

SCLY 3202. Migration, Human Rights & the Media. (CIV; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course is offered to undergraduate students interested in furthering their knowledge on migration, asylum, and human rights in Europe and in the Mediterranean. The course engages students through an interactive learning approach which takes place in Sicily, as one of the most crucial locations to directly observe, live, and experience migration challenges in the Mediterranean, as well as get the real sense of what managing migration ? crises? practically means. Located in the heart of the Mediterranean Sea, Sicily in recent years has become a critical southern borderland at the crossroad of migratory flows and one of the main gateways to Italy and the European Union (EU). While Italy is among the EU Member States that received the highest number of sea arrivals, within Italy Sicily was the major disembarkation location, accounting for 68% of the total number of sea arrivals in the country between 2014 and 2018. By receiving a large flow of people on the move, Sicily stands out as a crucial venue where to interact and engage with contemporary migration challenges and narratives. It offers the opportunity to study the many aspects of migration in Europe and in the Mediterranean in terms of politics, policies, and polity and in terms of the convoluted interaction among different narratives, discourses and actors (migrants and civil society?s voices, politicians, border guards, sea rescuers, human smugglers, media, etc.). Moreover, it allows comparative reflections with other critical southern borders.

SCLY 3203. Entrepreneurship in Southern Italy: Small Businesses as the Drivers of Social Development. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Building a new business is a difficult endeavor anywhere in the world; tenacity, creativity, and endless intrinsic motivation are needed to drive the entrepreneurial spirit. Successful entrepreneurship also requires government and institutional support, infrastructure, and investment. This is clear in the development

of ?hubs? ?tech, finance, AI, etc.?in urban centers around the globe. Such factors create business ecosystems where new entrants to a specific field can thrive. This is also true in Italy. As one of the world?s most industrialized economies, Italy has important manufacturing, finance, and agricultural hubs that foster entrepreneurial growth. However, in Southern Italy, the obstacles to entrepreneurship are outsized in comparison to Northern Italy. Poor infrastructure, low cooperation, and a lack of entrepreneurial education have helped to perpetuate the slow development of the South. Young people often move north or abroad to study and work. This phenomenon, oftentimes dubbed the ?brain drain,? can also be seen replicated in other highly industrialized countries, where capital, knowledge, and labor end up concentrating in specific geographical areas creating social divides. Nonetheless, entrepreneurship in Southern Italy is growing. In recent years, over 50% of new small businesses registered in Italy were concentrated in the South and Island regions of the country. Thanks to focused national and regional funding initiatives and collective advocacy movements for business development in Southern Italy, new companies have been able to take root.

SCLY 3204. Ethics & Integrity in Supply Chain: Fair Trade, Corruption, & Labor Rights in Sicily. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Ethics and integrity in supply chain management (SCM) are continually coming into question as global discussions of fair trade, labor practices, and corruption are more frequently exposed to be connected to business-as-usual practices. Sicily can be viewed as a microcosm of global supply chain challenges and as a laboratory for ethical business practices. From international labor market competition and inequality to the logistics of operating from an island and the implications of corruption and organized crime, businesses of all scales find themselves benefitting from the island?s geopolitical integration in the European Union but also struggling with poor infrastructure, transnational competition, complex transportation logistics, and shifting cultural beliefs. This course focuses on the language and tools of sustainability and responsibility as new standard currencies in business and challenges students to consider complex issues of ethics and integrity within real-world business cases in the Sicilian economic and socio-cultural context. As a result of this analysis, students will better understand the realities of applying ethical frameworks to complex, global business environments, and also recognize the medium- and long-term impacts of corporate decisions that can lead to not only thriving businesses ready to adapt to the demands of new and evolving markets, but also to sustain local communities and address complex economic and social challenges through innovation.

SCLY 3895. Research in Sicily. (4 cr. ; Student Option; Every Fall, Spring & Summer)
This course is an intensive research program offered to undergraduate students interested

in furthering their knowledge on migration, asylum, and human rights in Europe and willing to take part in a comparative research experience through field-based learning. The course engages students through an interactive learning approach which takes place in Sicily, as one of the most crucial locations to directly observe, live, and experience migration challenges in the Mediterranean, as well as get the real sense of what managing migration? crises? practically means. Moreover, it offers the chance to develop comparative research designs with other countries, regions, or critical southern borders elsewhere (e.g., US-Mexico border; Myanmar-Thailand border, etc.). Building on this background, this research program aims to introduce undergraduate students to some of the main research methods that are used to explain and do research on migration, asylum, and human rights in the Mediterranean. As there are many ways to do research on these topics, methodologies here included are not intended to be exhaustive. The program delves into the methodology and the research process and offers students the opportunity to learn some of the analytical methods and data collection techniques adopted to investigate migrants and asylum seekers, as well as to implement comparative research designs. Moreover, the course focuses on the ethical challenges which arise for researchers engaged in the study of migration and conducting fieldwork with migrants, including the vulnerability of the research subjects, the issue of transparency, the kind of language adopted, the potential unintended negative consequences for vulnerable actors, and the delicate relationship between the research and the migrant. Overall, the course aims to bridge the gap between theory and practice, giving students some guidance to understand, learn and experience some of the main appropriate research approaches, methodological and data-collection techniques in relation to the many aspects of migration. Moreover, students will have the possibility to shape their own questions and ensuing analysis, taking advantage of resources in Sicily as well as, possibly, analyzing data and sources in the US and implement a comparative research approach. Note that the Migration, Human Rights, & the Media course is a co-curricular course to this one. Any students taking this research course will also need to take the Migration, Human Rights, & the Media course to gain the relevant contextual knowledge of this complex topic.

SCLY 3896. Internship in Sicily. (3 cr. ; Student Option; Every Fall, Spring & Summer) The Sicily internship course is designed to provide students with an opportunity to reflect on the intercultural context of the host country's work environment. Through practical work experiences as well as readings, discussions, and written assignments, students will deepen their understanding of the host-country cultural context and critically examine their own worldview. The course is designed to provide students with the opportunity to become more knowledgeable regarding the local culture, organizational cultures, and the Italian

business environment in the urban context. It also offers them the unique opportunity to master teamwork and communicate in Italian and/or English. The course is designed to guide students in the workplace/internship experience and create a foundation for a successful professional career. The topics and assignments will help students gain a cross-cultural comparative view on work and deepen their insights about themselves, their area of study, and professional practice. This course focuses on themes students are expected to develop and enhance over the course of the program through class seminars and the internship experience, particularly work ethic; leadership; communication; multiculturalism; media and politics; and gender and the workplace.

Supply Chain and Operations (SCO)

SCO 3001. Sustainable Supply Chain and Operations. (3 cr. ; A-F or Audit; Every Fall & Spring)

Sustainable Supply Chain and Operations Management focuses on the design and management of transformation processes to provide products and services to create value for the people, planet, and firm prosperity. On the one hand, supply chain and operations management involves the integration of activities and processes, to facilitate the flows of materials, services, finances, and information to convert inputs into the firms' primary products and services. Operational issues include the design of products and processes, the procurement of raw materials, the control of inventories, the maintenance of quality, the planning of human resources and facilities, and the delivery of products or services, so that customer expectations and needs are met. Operations also have significant interactions with other functional areas of the firm (e.g., finance, marketing, strategy, and accounting). Therefore, understanding the role of the operations function and its impact on the competitiveness of the firm from both tactical and strategic aspects is an important part of any manager's training. This course will introduce students to the fundamental concepts, operations practices, and models in both manufacturing- and service-oriented firms. The course will cover both quantitative and qualitative methods.

SCO 3041. Project Management. (2 cr. ; A-F or Audit; Every Fall)

Principles and methods useful for planning and controlling a project, including development of project plan, resource planning and scheduling, and project monitoring and control. Selected computerized packages are studied, including PERT and CPM, and examples of different types of projects from manufacturing and service industries are used. prereq: 3000 or instr consent

SCO 3045. Sourcing and Supply Management. (2 cr. ; A-F only; Every Fall & Spring)

Strategic/operational role of purchasing/supply. Supply management. Supplier-selection criteria such as quantity, quality, cost/price considerations. Buyer-supplier relationships. prereq: 3001

SCO 3048. Transportation and Logistics Management. (2 cr. ; A-F only; Every Fall & Spring)

Linkages between logistics/transportation and marketing, operations, and finance. How different industries integrate logistics, warehousing, transportation, and information systems. prereq: 3001

SCO 3051. Service Management. (2 cr. ; A-F only; Every Fall)

Issues unique to managing service processes. Identifying service needs, designing services, and managing services. prereq: 3001

SCO 3056. Supply Chain Planning and Control. (4 cr. ; A-F or Audit; Every Fall & Spring)

This course teaches the essential tools and tasks to design an efficient supply chain planning and control system, including ERP, integrated business planning, forecasting, inventory management, capacity/production/material planning, and scheduling. prereq: 3001 or instr consent

SCO 3059. Quality Management and Lean Six Sigma. (4 cr. ; A-F or Audit; Every Fall & Spring)

Concepts and principles of Quality Management and Lean Six Sigma. Process improvement is an important part of every manager's job. Both the managerial and the technical aspects of quality improvement are considered. Three tiers of the quality field are presented including; quality frameworks, quality methodologies, and quality tools. The foundation starts with learning the overarching quality frameworks such as the Malcolm Baldrige Performance Excellence framework, Six Sigma process improvement, and ISO 9001. Next the course examines quality methodologies such as the six sigma DMAIC methodology, Rummler-Brache process improvement methodology, Lean Thinking, Plan-Do-Check-Act, and the Theory of Constraints. Applications of process improvement are conducted using the many tools of process improvement; SIPOC diagram, Critical-to-Quality Tree, cross-functional process maps, project charter, affinity diagram, quality function deployment, cycle of service, moments of truth, service recovery plan, control plan, statistical process control, control charts, process capability, balanced scorecard, performance metrics matrix, design of experiments. Lean tools such as; Kaizen, Kanban, Five Why, Andon, 5S, Gemba, 8 wastes, Takt time, standardized work, bottleneck analysis, poka-yoke, root causal analysis, and visual control. prereq: 3001 or equiv or instr consent

SCO 3072. Managing Technologies in the Supply Chain. (2 cr. ; A-F only; Every Fall & Spring)

Technologies and technological change within/between firms as opportunities for professional

leadership. Selecting technologies, nurturing their adoption, and ensuring their exploitation. prereq: 3001

SCO 4065W. Supply Chain and Operations Strategy. (WI; 4 cr. ; A-F only; Every Fall & Spring)

Senior capstone. How to achieve/sustain competitive advantage through consistent decisions in manufacturing/service operations. Marketing/business strategy in global context. Vertical integration, capacity, facilities, technology/infrastructure. prereq: 3001, 3056, 3059, 4 [OMS or SCO] elective cr

Sustainability Studies (SUST)

SUST 3003. Sustainable People, Sustainable Planet. (ENV; 3 cr. ; Student Option; Every Fall & Spring)

Introduction to interdisciplinary Sustainability Studies minor. Scientific, cultural, ethical, and economic concepts that affect environmental sustainability and global economic justice. Key texts. Participatory classroom environment. prereq: Soph or jr or sr

SUST 3017. Environmental Justice. (DSJ; 3 cr. ; A-F only; Every Spring)

With a focus on understanding environmental justice, including interconnections between health, economic and environmental disparities, this course shows students how they can take action for sustainability. Students synthesize multiple disciplinary perspectives and participate in small group collaborative activities, service learning, and digital mapping, all related to contemporary challenges.

SUST 3480. Topics in Sustainability. (; 1-4 cr. [max 24 cr.] ; A-F only; Every Fall, Spring & Summer)

Topics in sustainability encompass special courses related to issues such as renewable energy, food and waste systems, sustainable planning, water and climate change.

SUST 3501. Environmental and Cultural Diversity in China. (ENV,GP; 3 cr. ; A-F only; Every Spring & Summer)

This Global Seminar takes place in southwest China's Yunnan Province, a region of natural beauty and home to 26 ethnic minority groups. The program explores how an emerging international ecotourism sector affects the livelihoods and culture of remote ethnic communities at the edge of the Tibetan plateau. The ecology of the communities the class will visit, which are among the most biodiverse in the world, will be a focus for the program. Spectacular snow-capped mountains, alpine meadows, river gorges and grasslands are present. The climate is moderate and the air is clean in this region of China. A trek to a village not accessible by road and a homestay with a Tibetan farm family will be highlights for students in the course.

SUST 4004. Sustainable Communities. (; 3 cr. ; A-F only; Every Fall & Spring)

Students synthesize multiple disciplinary perspectives and integrate insights gained from various approaches/methods. Concepts/scholarship related to sustainability. Applying

knowledge/experience to real sustainability problems. prereq: [3003 or GLOS 3304, [jr or sr] in sustainability studies minor] or instr consent

SUST 4096. Sustainability Internship. (; 2-4 cr. [max 8 cr.] ; A-F only; Every Fall & Spring)

Four to ten hour per week internship experience related to a sustainability theme or approach, such as sustainable foods, green building, renewable energy or environmental justice. Intern in a nonprofit, governmental, educational or business organization, from choices provided or approved by instructor. prereq: Familiarity with sustainability concepts through academic work or other experiences

SUST 5480. SUST 5480 Topics in Sustainability. (; 1-4 cr. [max 24 cr.] ; A-F only; Every Fall, Spring & Summer)

Topics in sustainability encompass special courses related to issues such as renewable energy, food and waste systems, sustainable planning, water and climate change.

Sustainable Agricultural Syst (SAGR)

SAGR 4096. Professional Experience Program: Internship in Sustainable Agriculture. (1-3 cr. [max 6 cr.] ; S-N or Audit; Every Fall, Spring & Summer)

Professional experience in sustainable agriculture attained through supervised practical experience. Students create a learning agreement specific to their internship host and project, consulting with faculty advisers/hosts. This course meets the internship requirement for the Undergraduate Minor in Sustainable Agriculture. Prereq: Undergraduate minor in sustainable agriculture

Sustainable Systems Management (SSM)

SSM 1004. Sustainable Systems Management Orientation. (1 cr. ; S-N only; Every Fall)

Students will receive an introduction to the Sustainable Systems Management Major. They will learn about internships in the field and about career paths that they may follow. There will also be presentations and assignments on preparing resumes and finding jobs in this area. Graduates and professionals in the related fields of sustainable systems will present for the class. Combining course work and field trips, this class will provide students with the opportunity to meet their fellow students and to form a cohort of students with similar interests and career aspirations. prereq: None

SSM 2003. Systems Thinking: Development and Applications in Sustainability. (3 cr. ; A-F only; Every Fall)

This course will provide introduction to basic systems thinking fundamentals: defining a systems perspective about any situation or problem, solving problems with that perspective, describing and modeling problems, and designing and improving upon system solutions.

SSM 3093. Directed Study. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

SSM 3094. Directed Research. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

SSM 3301. Global Water Resource Use and Sustainability. (ENV; 3 cr. ; Student Option; Every Fall & Spring)

What is the value of clean water? Explore the many facets of water, earth's most abundant resource. Ponder the value water for you, society, a region or nation; the complexities of ownership and protection; the influence of culture and traditions; and potential impacts of climate change. Consider realistic and holistic solutions to water issues.

SSM 3503. Marketing of Bio-based Products. (; 4 cr. ; A-F or Audit; Every Fall)

Intro to marketing function as it relates to current/emerging bio-based products industries (building materials, paper, fuels, etc.). Product positioning, pricing, promotion, and channel management within strategic planning and environmental marketing management.

SSM 3612. Systems Approach to Building Science and Construction. (; 4 cr. ; Student Option; Every Fall)

Dynamic/interrelated issues of energy, moisture control, indoor air quality in residential bldgs. Design, construction, and operational aspects for energy efficient, durable structure/ healthy living environment. Interaction between moisture and wood products within building system. prereq: Upper div or instr consent

SSM 4407W. Sustainable Manufacturing Principles and Practices. (WI; 3 cr. ; A-F only; Every Fall)

In this course students will learn about ways in which companies are embracing sustainability in their strategy and operations to increase growth and global competitiveness, including manufacturing processes for major sustainable products and biobased products. This includes

processes and approaches for environmental mitigation and "green" manufacturing, reduce industrial waste and emissions, environmental footprint, and associated costs through more efficient manufacturing practices and incorporate bio-based product formulation. Students will acquire a working knowledge of management policies, tools and techniques to improve operational and environmental performance. prereq: Junior/Senior Status, Introductory Chemistry or instr consent

SSM 4416. Building Testing and Diagnostics. (; 2 cr. ; Student Option; Spring Even Year)

Theoretical basis for performance testing. Diagnostics applications for residential structures. Existing structures, retrofit/remedial applications. Digital differential pressure gauges, blower doors, airflow hoods/grids, duct pressure testing, infrared thermography. Hands-on equipment use, problem solving. prereq: 4413

SSM 4504W. Sustainable Products Systems Management. (WI; 3 cr. ; A-F only; Every Spring)

Concepts of new-product development and product management, their application to biobased products. prereq: Jr or Sr or instr consent

SSM 4506W. Sustainable Systems Management Capstone. (WI; 3 cr. ; A-F only; Every Spring)

This course provides students with an opportunity to conduct solutions-driven research in sustainable systems management. Students will work in groups on real-world problems that will require them to integrate the knowledge and skills they have developed in their previous coursework and internship experiences. Project topics will be solicited annually from industrial, corporate, governmental, and other external partners. All projects will require that students take an interdisciplinary systems thinking approach. Strong analytical and communicative skills will be emphasized and developed through iterative assignments. The course will be run by faculty teaching in the Sustainable Systems Management major. prereq: ESPM 3603 concurrent registration is required (or allowed) in Major seniors within two semesters of graduation.

SSM 4616. Building Science I: Fundamentals. (4 cr. ; Student Option; Fall Even Year)

Theory, advanced applications for residential buildings. Focuses on heat/mass transfer. Prereq: SSM 3612/5612 & SSM 4614/5614

SSM 4618. Building Science II: Applications. (3 cr. ; A-F or Audit; Spring Odd Year)

A capstone applications course, where students will learn how to apply key building science principles (from SSM 4616/5616 Building Science I: Fundamentals) to common building enclosure and mechanical system problems. Students will be guided to develop both qualitative and quantitative solutions for many common energy, moisture, and indoor air quality problems facing contemporary buildings. prereq: SSM 4616/SSM 5616

SSM 5093. Directed Study. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

A course in which a student designs and carries out a directed study on selected topics or problems under the direction of a faculty member; eg, literature review. Directed study courses may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed study will be required to use the University-wide on-line directed study contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed study counts towards CFANS major requirements.

SSM 5094. Directed Research. (1-4 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)

An opportunity in which a student designs and carries out a directed research project under the direction of a faculty member. Directed research may be taken for variable credit and special permission is needed for enrollment. Students enrolling in a directed research will be required to use the University-wide on-line directed research contract process in order to enroll. Prereq: department consent, instructor consent, no more than 6 credits of directed research counts towards CFANS major requirements.

SSM 5407. Sustainable Manufacturing Principles and Practices. (3 cr. ; A-F only; Every Fall)

In this course, students will learn about ways in which companies are embracing sustainability in their strategy and operations to increase growth and global competitiveness, including manufacturing processes for major sustainable products and biobased products. This includes processes and approaches for environmental mitigation and "green" manufacturing, reduce industrial waste and emissions, environmental footprint, and associated costs through more efficient manufacturing practices and incorporate bio-based product formulation. Students will acquire a working knowledge of management policies, tools and techniques to improve operational and environmental performance.

SSM 5503. Marketing of Bio-based Products. (; 4 cr. ; A-F or Audit; Every Fall)

Introduction to marketing function as it relates to current/emerging bio-based products industries (building materials, paper, fuels, etc.). Product positioning, pricing, promotion, and channel management within strategic planning and environmental marketing management.

SSM 5504. Sustainable Products Systems Management. (3 cr. ; A-F only; Every Spring)

Concepts of new product development and product management and their application to bio-based products.

SSM 5612. Systems Approach to Building Science and Construction. (; 4 cr. ; Student Option; Every Fall)

Dynamic/interrelated issues of energy, moisture control, indoor air quality in residential

bldgs. Emphasizes design, construction, and operational aspects to provide an energy efficient, durable structure, and healthy living environment. Interaction between moisture and wood products within building system. prereq: Graduate Student

SSM 5614. Building Systems Performance: Testing & Diagnostics. (; 2 cr. ; Student Option; Spring Even Year)

Theoretical basis for performance testing. Diagnostics applications for residential structures. Focuses on existing structures and retrofit/remedial applications. Digital differential pressure gauges, blower doors, airflow hoods/grids, duct pressure testing, infrared thermography. Hands-on sessions for equipment use, problem solving. prereq: Grad student or instr consent

SSM 5616. Building Science I: Fundamentals. (; 4 cr. ; Student Option; Fall Even Year)

Building science theory, advanced applications for residential buildings. Focuses on heat/mass transfer. prereq: Grad student or instr consent

SSM 5618. Building Science II: Applications. (3 cr. ; A-F or Audit; Spring Odd Year)

This course is intended to be a capstone applications course, where students will learn how to apply key building science principles (from SSM 4616/5616 Building Science I: Fundamentals) to common building enclosure and mechanical system problems. Students will be guided to develop both qualitative and quantitative solutions for many common energy, moisture, and indoor air quality problems facing contemporary buildings. prereq: Graduate Student

Swahili (SWAH)

SWAH 1221. Beginning Swahili, Semester I. (; 5 cr. ; Student Option; Every Fall)

Comprehension, speaking, reading, writing.

SWAH 1222. Beginning Swahili II. (; 5 cr. ; Student Option; Every Spring)

Continuation of skill development from 1221. prereq: 1221 or equiv

SWAH 3225. Intermediate Swahili. (; 5 cr. ; Student Option; Every Spring)

Readings of contemporary Swahili texts. Review of grammar and complex verb forms. Vocabulary, communication skills. prereq: 1 yr Swahili or equiv

SWAH 3226. Intermediate Swahili II. (; 5 cr. ; Student Option; Every Spring)

Continuation of skill development from 3225. prereq: 3225 or equiv

SWAH 3425. Advanced Swahili. (5 cr. ; A-F only; Every Fall)

Speaking, reading, writing. An emphasis on vocabulary development and refining of grammar points and cultural issues. The materials to supplement the standard textbook include literary texts, film, music, newspaper articles, radio and TV broadcasts, audio, video and computer interactive material, and government documents. This course presumes

completion of intermediate level Swahili or its equivalent.

SWAH 4221. Beginning Swahili for Graduate Research I. (; 5 cr. ; Student Option; Every Fall)

Comprehension, speaking, reading, writing. Meets with 1221.

SWAH 4222. Beginning Swahili for Graduate Research II. (; 5 cr. ; Student Option; Every Spring)

Comprehension, speaking, reading, writing. Continuation of skill development from 1221. Meets with 1222.

SWAH 4225. Intermediate Swahili for Graduate Research. (; 5 cr. ; Student Option; Every Spring)

Readings of contemporary Swahili texts. Review of grammar and complex verb forms. Vocabulary, communication skills.

SWAH 4226. Intermediate Swahili for Graduate Research II. (; 5 cr. ; Student Option; Every Spring)

Continuation of skill development from 4225. prereq: 4225 or equiv

SWAH 4225. Advanced Swahili for Graduate Research. (5 cr. ; A-F only; Every Fall)

Speaking, reading, writing. An emphasis on vocabulary development and refining of grammar points and cultural issues. The materials to supplement the standard textbook include literary texts, film, music, newspaper articles, radio and TV broadcasts, audio, video and computer interactive material, and government documents. This course presumes completion of intermediate level Swahili or its equivalent.

Swedish (SWED)

SWED 1001. Beginning Swedish. (; 5 cr. ; Student Option; Every Fall)

Emphasis on working toward novice-intermediate low proficiency in all four language modalities (listening, reading, speaking, writing). Topics include everyday subjects (shopping, directions, family, food, housing, etc.).

SWED 1002. Beginning Swedish. (; 5 cr. ; Student Option; Every Spring)

Continues the presentation of all four language modalities (listening, reading, speaking, writing), with a proficiency emphasis. Topics include free-time activities, careers, and Swedish culture. prereq: 1001

SWED 1003. Intermediate Swedish. (; 5 cr. ; Student Option; Every Fall)

Emphasis on intermediate proficiency in listening, reading, speaking, and writing. Contextualized work on grammar and vocabulary is combined with authentic readings and essay assignments. prereq: 1002

SWED 1004. Intermediate Swedish. (; 5 cr. ; Student Option; Every Spring)

Emphasis on developing intermediate mid-high proficiency in listening, reading, speaking, and writing. Contextualized work on grammar and vocabulary is supported by work with authentic readings and essay assignments. prereq: 1003

SWED 4001. Beginning Swedish for Graduate Research. (; 5 cr. ; Student Option; Every Fall)

Emphasis on working toward novice-intermediate low proficiency in all four language modalities (listening, reading, speaking, writing). Topics include everyday subjects (shopping, directions, family, food, housing, etc.). Meets concurrently with 1001.

SWED 4002. Beginning Swedish for Graduate Research. (; 5 cr. ; Student Option; Every Spring)

Continues the presentation of all four language modalities (listening, reading, speaking, writing), with a proficiency emphasis. Topics include free-time activities, careers, and Swedish culture. Meets concurrently with 1002.

SWED 4003. Intermediate Swedish for Graduate Research. (; 5 cr. ; Student Option; Every Fall)

Emphasis on intermediate proficiency in listening, reading, speaking, and writing. Contextualized work on grammar and vocabulary is combined with authentic readings and essay assignments. Meets concurrently with 1003.

SWED 4004. Intermediate Swedish for Graduate Research. (; 5 cr. ; Student Option; Every Spring)

Emphasis on developing intermediate mid-high proficiency in listening, reading, speaking, and writing. Contextualized work on grammar and vocabulary is supported by work with authentic readings and essay assignments. Meets concurrently with 1004.

Theatre Arts (TH)

TH 1101V. Honors Section: Introduction to the Theater. (AH,WI; 3 cr. [max 4 cr.]; A-F only; Every Fall & Spring)

What is theatre? And what can it be? In this introductory course, we investigate the idea that while theatre is art, it also has consequences. Theatrical performance reflects, resists, and rewrites culture; it can (and does) perform the political by reimagining and transforming society. Through exciting examples of plays and productions from around the world, we investigate the history, politics, and aesthetics of theatre. We explore how the different components of theatre (from directing to acting, costume, and lighting design) come together to create powerful impact on stage. We read and discuss plays in class, see performances on stage, and hear from some of the Twin Cities's most dynamic and committed artists. And we work on valuable writing skills that help us to deepen our understanding of theatre and communicate our insights to others. At the end of the class, we bring together everything we have been learning to make theatre in small groups. No previous theatre experience is needed. Prereq: Honors student

TH 1101W. Introduction to the Theatre.

(AH,WI; 3 cr. [max 4 cr.]; Student Option; Every Fall & Spring)

What is theatre? And what can it be? In this introductory course, we investigate the

idea that while theatre is art, it also has consequences. Theatrical performance reflects, resists, and rewrites culture; it can (and does) perform the political by reimagining and transforming society. Through exciting examples of plays and productions from around the world, we investigate the history, politics, and aesthetics of theatre. We explore how the different components of theatre (from directing to acting, costume, and lighting design) come together to create powerful impact on stage. We read and discuss plays in class, see performances on stage, and hear from some of the Twin Cities's most dynamic and committed artists. And we work on valuable writing skills that help us to deepen our understanding of theatre and communicate our insights to others. At the end of the class, we bring together everything we have been learning to make theatre in small groups. No previous theatre experience is needed.

TH 1102. Stage, Screen, Society: Performance in the Media Age. (AH,CIV; 3 cr. ; Student Option; Every Fall)

From viral memes to 'fake news,' from video-gaming to vlogging, our rapidly changing media-scape is at the center of public debates about everything from mental health to the future of democracy. This course engages with these debates to understand the power of new media to shape our identities and values, our cultural habits and communities, our economy and political life. We discuss how we 'perform ourselves' through media, giving rise to social anxieties about truth, authenticity, equality, and belonging, but also to tremendous opportunities for self-expression and connection. And we investigate how our performances are monetized or instrumentalized by governments, social movements, or corporations. How did our current media system develop, and whose interests has it served? How, for better or worse, has the social media age changed us and the world we live in? And how can we make sure that in the future that change is for the better?

TH 1301. Acting/Non-Majors. (; 3 cr. ; Student Option; Every Fall & Spring)

Background/techniques of acting as viewed/practice in theatre, society, and student's own relationships.

TH 1321. Fundamentals of Acting & Performance. (; 3 cr. ; Student Option; Every Fall & Spring)

A fundamental overview of acting that focuses on strengthening the vital connection between physical and vocal expression and uniting instinct and intellectual analysis. Classes focus on ensemble awareness, situation and script analysis, character development and dramaturgical skills. In this course students develop their 'acting instrument': body, voice and imagination; they learn to make bold, specific choices in scripted and improvisational circumstances, they explore a range of physical and vocal expression, they develop the ability to respond and adapt to other performers onstage, and intensify their focus and presence in performance. Technique, theory and structured improvisation are incorporated with

scene work and collaborative performance projects, offering an opportunity to assimilate the principles covered. The course explores scripted scenes and monologues as well as original-student generated work.

TH 1322. Creating the Performance. (; 3 cr. ; Student Option; Every Fall & Spring)

An introduction to techniques of creating and directing performance, this course introduces students to the multiple paradigms of creating new and scripted work. Students examine the shifting role of the playwright, actor, and director as primary creator, interpreter, collaborator, and interdisciplinary artist and their relationship to a variety of performance modes. Students will direct traditional scripted scenes and collaborate to devise new work, exploring acting, writing, directing, and design to create solo and group performances. This course may be taken concurrently with some upper division courses. Specific approach may vary by instructor.

TH 1361. Singing for Musical Theatre. (; 3 cr. ; A-F or Audit;)

Beginning singing, interpretation, part singing, phonetics, and audition techniques for Musical Theatre. Solo and ensemble presentations at final class performance.

TH 1362. Dance for Musical Theatre. (; 2 cr. ; A-F or Audit;)

Movement based lab. Dance skills in musical theatre performance. Focuses on various styles/disciplines of dance throughout its culturally diverse heritage. Character development necessary to execution of various dance styles.

TH 1381. New Voices. (; 1 cr. ; S-N only; Every Fall)

Instructors lead students in four Saturday workshop intensives. Student forge interdisciplinary collaborations as they journey through their respective programs. prereq: [Fr or transfer] student from BFA actor training or BA or BFA dance or BA theater

TH 1391. BFA Acting I. (; 3 cr. ; A-F or Audit; Every Fall)

Acting. prereq: Accepted into BFA acting program

TH 1392. BFA Voice and Speech I. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Study/practice in breath centering/expansion; vocal resonance, musicality, placement; ear training; strengthening and making more flexible the muscles of speech. prereq: Accepted into BFA acting program

TH 1393. BFA Movement I. (; 2 cr. ; A-F or Audit; Every Fall)

Focuses on building a foundation for further work in program. prereq: BFA-acting major

TH 1395. BFA Acting II. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Continuing the process of interpreting dramatic material. prereq: 1391

TH 1396. BFA Voice and Speech II. (; 2 cr. ; A-F or Audit; Periodic Fall & Spring)

Building a foundation for further work in the program. Emphasizes practicing the sounds

of good American speech and of the written phonetic alphabet. prereq: 1392

TH 1397. BFA Movement II. (; 2 cr. ; A-F or Audit; Periodic Fall & Spring)

May include sections such as African dance, yoga, movement for actors, and circus techniques. Focuses on building a foundation for further work in the program. prereq: 1393

TH 1501. Introduction to Design for the Theatre. (; 3 cr. ; A-F only; Every Fall & Spring)

Introduction to Design for the Theatre explores the collaborative process of theatre making with a focus on theatrical design. Students will investigate scenic, costume, lighting, and sound design in an active environment through lectures, discussions, reading assignments, writing exercises, workshops, and experiential projects. This course aims to challenge students as creative thinkers and problem solvers along with preparing them for a future as collaborative theatre makers.

TH 1911W. Attending (to) Theater. (WI; 3 cr. ; A-F only; Every Fall)

How do we attend and attend to theater in the Twin Cities? This seminar introduces non-theater (and potential) majors to the richness of small and mid-sized theater in the Twin Cities such as Penumbra, Open Eye, and Ten Thousand Things, attending 8-10 performances together. Workshops and discussions with theater professionals will help us to develop critical and creative language to think, write about, and potentially create live performance. We'll think together about how theater might forge a different kind of "commonwealth."

TH 1912. Art Laboratory: A Place to Play. (; 3 cr. ; A-F only; Periodic Fall & Spring)

How do you define collaboration? This seminar presents the characteristics and the challenges of collaboration through representative approaches from the visual arts, music, literature, media, and theater. The seminar content is designed upon three pillars: the collaborative space, flow, and gesture. Through concrete problematic situations, in-class discussion, readings, and proposed themes students will work collaboratively to create a series of events/works to be presented in class. The art of collaboration is a laboratory, a place to play, inspire, question, and fail. It is a platform to unlock personal images, and to cross boundaries to further understand the role of creativity, and innovation while discovering expression across disciplines.

TH 1914. Cyborgs and Hackers: The Ethics of Digital Life. (; 3 cr. ; A-F only; Every Fall)

Beings with artificial intelligence have raised ethical questions ever since they were fictional characters, such as the robot in the silent film *Metropolis* (1927). As contemporary technology expands the use of artificial intelligence, principles of ethical responsibility are up for constant debate. We explore ethics in the age of technology by examining how humanity is imagined in the art, science, and everyday life of artificial intelligence. Theater plays and films about cyborgs invest them with feelings, and question their exploitation by

humans. Meanwhile, contemporary drones and robots are programmed with data drawn from humans, and evoke different fears of machines taking over the planet. We compare cyborg and hacking cultures to see how human and artificial intelligence engage with each other, and how their battles shape our concepts of intention and responsibility.

TH 2391. BFA Acting III. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Applying concepts of first year of training to an ensemble performance project. Beginning of Shakespeare foundation unit. prereq: BFA student in theatre arts

TH 2392. BFA Voice and Speech III. (; 2 cr. ; A-F or Audit; Periodic Fall & Spring)

Continuing to build a strong, healthy voice. Mastering written phonetics, sounds of good American speech for stage. Students begin to explore speaking of heightened verse, particularly Shakespearean text. prereq: BFA student in theatre arts

TH 2393. BFA Movement III. (; 2 cr. ; A-F or Audit; Periodic Fall & Spring)

Deepens/refines foundation laid in BFA Movement I/II. prereq: BFA student in theatre arts

TH 2395. BFA Acting IV. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

Application of process towards performance. Emphasizes Shakespeare. prereq: BFA-Acting sophomore

TH 2396. BFA Voice and Speech IV. (; 2 cr. ; A-F or Audit; Periodic Fall & Spring)

Continuing to build a strong, healthy voice. Mastering written phonetics and the sounds of good American speech for the stage. Students begin basic dialect acquisition work for the stage. Emphasizes English/Irish dialects. prereq: BFA-acting, sophomore

TH 2397. BFA Movement IV. (; 2 cr. ; A-F or Audit; Periodic Fall & Spring)

May include sections such as jazz dance, partner dances, and movement for actors. prereq: BFA-acting sophomore

TH 3100. Theatre Lab Practicum. (; 1 cr. [max 4 cr.] ; S-N or Audit; Every Fall & Spring)

This course is for the student to gain more experience, develop new skills, or possibly hone current ones through practical application in the Theatre Arts Shops. Students will complete hours in the Scenery/Properties shop, Costume Shop, Sound/Media Lab, or Light Lab throughout the semester. Registration in TH 3100 is also available for students using show hours to serve in a production capacity on a main stage show, such as technical direction or master electrician.

TH 3115. Introduction to Playwriting. (; 3 cr. ; Student Option; Every Fall & Spring)

Study of traditional play structure, characterization, dialogue, dramatic action, and theme. Final project is a one-act play.

TH 3120. Theatre: Theory and Practice. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall & Spring)

Introduction to diverse ways of thinking about theatre and its representational practices.

Students explore traditional/non-traditional modes of performance through readings, discussions, and hands-on performance projects. Seminar-style course. prereq: 1101

TH 3152W. Global Avant-Gardes: Theatre, Music, Modernity. (HIS,WI; 3 cr. ; Student Option; Every Spring)

What does it mean to be an avant-garde artist in the Global South? In postcolonial Africa and Asia, where arts were linked to national modernization projects, artists have played a key role in shaping citizens' identity, alongside schools and universities. While participating in modernizing projects, avant-garde artists maintained independence from state institutions and voiced criticism of dictators. This course examines avant-garde performance in several locations of the Global South, analyzing dramas of national history, modernist music, activist theater, cosmopolitan dance, transnational cultural circuits, and politically radical performances. Reading historical, social, and performance studies, we will develop methods for analyzing performances that aim to make transformative social interventions. These include textual analysis, ethnography, performance analysis, and tracking transnational cultural exchange. You will apply select methods in your final research paper, which centers on an avant-gardist cultural phenomenon in the contemporary Global South.

TH 3171. Western Theatre & Performance Historiography: Part I. (; 3 cr. ; Student Option; Every Fall)

What does it mean to represent? By focusing on a critical examination of this and similar questions, this course will investigate how performance events from the Ancient Greece to the French Revolution are brought to our attention, how they are made worthy of notice, and how they are rationalized as significant for theatre and performance history. By studying the theories of the Western origins of theatre and drama, the censoring of creative activities in the Ancient Rome or in the Renaissance England, the appearance of female actors and playwrights in Restoration, and the fashioning of a new economic type the eighteenth century, this course will ask: what are the consequences today of using or promoting these and not other representational practices?

TH 3172. Western Theatre & Performance Historiography: Part II. (; 3 cr. ; Student Option; Every Spring)

?Dare to Think? is the motto for a critical examination of representational practices from the Age of Enlightenment until the Postmodern Condition today. We will discuss how theatre makers and thinkers responded to this call by offering playtexts and performance practices which challenged mainstream theatre in the era of the revolutions in time and space? Symbolism, Futurism, Dada, Surrealism; Agit-Prop, Theatre of the Oppressed, Theatre for Social Change; Black, Feminist, Queer Theatres; and Pixelated Revolutions. We will investigate histories, politics, and aesthetics of theatre and performance in a variety of cultural and ideological contexts.

TH 3300. Performance & Production Practicum. (1 cr. [max 8 cr.]; S-N only; Every Fall & Spring)

This course is for students to gain more experience or hone their skills through participation in a main stage production. Students cast as an actor in a main stage production or participating in the process through tech and performance as run crew, assistant stage managers, or a board operator would participate through TH 3300.

TH 3314. Text and the Actor. (; 3 cr. ; A-F or Audit; Every Fall & Spring)

Standard stage speech, international phonetic alphabet transcription, and textual analysis to perform heightened language texts such as Shakespearean/Shavian monologues, Chaucer's Canterbury Tales, and Beowulf. Videos viewed/discussed. prereq: 1101, 1321, 1322

TH 3316. Voice for the Actor. (; 3 cr. ; A-F only; Every Fall & Spring)

Anatomy/physiology of vocal/respiratory mechanisms. Abdominal breathing, forward tonal placement, articulation of consonants, vocal projection. IPA phonetic transcription and vowel standardization for American Standard Stage Speech. Techniques applied to performance of monologues. prereq: 1101, 1321, 1322

TH 3321. Acting I. (; 3 cr. ; Student Option; Every Fall)

Acting I explores the acting process using the canon of 20th century realism. The class will cover the basics of embodiment for the actor, observation as the root of character creation, analysis of text from an actors perspective, and rehearsal techniques. The core of the course is the preparation of scenes and monologues in class. Students will also complete a variety of class compositions, readings, and will see and analyze live performances.

TH 3322. Acting II. (; 3 cr. ; Student Option; Every Spring)

Acting II explores the acting process using scripts from primarily heightened or non-realistic texts. This can include a range of genres from Shakespeare to absurdism to contemporary performance and plays. This course covers the basics of embodiment for the actor, creativity and observation as the roots of character creation, analysis of text from an actors perspective and rehearsal techniques. The core of the course is the preparation of scenes and monologues in class. Students will also complete a variety of class compositions, readings and will see and analyze live performances.

TH 3330. Physical Approaches to Acting. (; 3 cr. [max 6 cr.]; Student Option; Every Fall & Spring)

Dynamic physical approach to acting. Expanding expressiveness/creativity. Strengthening connections between physical/vocal expression. Uniting instinct and intellectual analysis. Techniques as advanced by Delsarte, Meyerhold, Grotowski, Kantor, Suzuki, Barba, etc., and structured improvisation, are incorporated in solo/ collaborative performance projects. prereq:

1322, [3314 or concurrent registration is required (or allowed) in 3314], audition, instr consent

TH 3332. Circus Performance. (; 1 cr. ; A-F only; Every Spring)

Strength/conditioning, aerial techniques. Acrobatics to improve timing/muscular structure. Juggling to improve hand-eye coordination and showmanship.

TH 3361. Introductory Musical Theater. (; 3 cr. ; A-F or Audit; Periodic Fall & Spring)

History of American musical theater. Videos/discussions, basic music theory, voice, dance, acting, audition techniques. Solo/ensemble presentations for public class performance.

TH 3365. Intermediate Musical Theatre. (3 cr. ; A-F or Audit; Periodic Fall & Spring)

Musical theatre varying styles. Incorporating music into devised work, as well as strategies on updating traditional performance. Singing, interpretation, dance techniques. Culminates in presentations in public class performance. prereq: 3361 or instr consent

TH 3370. BA Masterclass. (1 cr. [max 4 cr.]; A-F only; Every Fall & Spring)

Prepare BA theatre performance majors/minors with essential skills that will enhance performing careers as actors, directors, playwrights. Attend non-traditional performances by national/international touring companies. Engage in vigorous discussions led by those artists who are at the forefront of creation models. Rigorous skill-building workshops led by artists, scholars, technicians.

TH 3381. Theater Storytelling and Solo Performance. (; 3 cr. ; Student Option; Every Spring)

Live storytelling and solo performance as theatrical art form. How to turn personal experiences into stage stories. Guests perform, discuss their work, and critique student work. Students develop short monologues/performances and conclude with original solo theater performance/story.

TH 3391. BFA Acting V. (; 3 cr. ; A-F or Audit; Every Fall)

Experiencing a foreign theater culture/history. Applying process of interpreting dramatic material to plays of that culture.

TH 3392. BFA Voice and Speech V. (; 2 cr. ; A-F or Audit; Every Fall & Spring)

Experiencing a foreign theater culture/history. Applying voice training to dramatic material of that culture.

TH 3393. BFA Movement V. (; 2 cr. ; A-F or Audit; Every Fall)

Experiencing a foreign theatre culture/history, applying training to dramatic material of that culture. prereq: BFA student in theatre arts

TH 3395. BFA Intensive I. (; 2 cr. ; A-F or Audit; Every Spring)

Incorporating disciplines of acting/voice/movement. prereq: BFA-acting jr

TH 3398. BFA Rehearsal & Performance I. (; 2 cr. ; A-F or Audit; Periodic Fall & Spring)

Continuing the application of process towards performance. prereq: BFA-acting jr

TH 3399. BFA Rehearsal and Performance II. (2 cr. ; A-F or Audit; Periodic Fall & Spring) Continuing the application of process towards performance. prereq: BFA-acting jr

TH 3500. Design Practicum. (1-2 cr. [max 16 cr.] ; A-F only; Every Fall & Spring)

This course is for undergraduate students to gain more experience and hone their skills through design of a main stage or studio production. Students would participate as a main stage designer (2 credits), main stage assistant designer (1 credit), or studio project designer (1 credit) for one of the following: Scenery/Properties, Costumes, Lighting, Sound, or Media.

TH 3521. Introduction to Scenic Design for Theatre and Performance. (3 cr. ; Student Option; Every Spring)

This course explores the role of the scenic designer in imagining theatre in space and time. We will shape the arena of dialogue between performer and audience. We will propel action through spatial composition. We will make concrete the tensions and conflicts of the play. We will investigate the composition of emotional and visual space of the theatre. We will communicate ideas by honing skills of drawing, drafting, rendering, modeling, and presentation.

TH 3531. Introduction to Theatrical Costume Design. (3 cr. ; Student Option; Every Spring)

Costume design process, including, researching, script analysis, the costume designer's role throughout the production process, and design problems. prereq: TH 3571

TH 3541. Introduction to Lighting Design for the Theatre. (3 cr. ; Student Option; Every Spring)

Principles and processes in lighting design and lighting technology. Collaborative process of the lighting designer through individual and group projects in a theater, including script analysis and visual literacy through sketching, drafting, and light lab projects. Individual and group projects in composition, color theory, instrumentation, control (dimming), and programming as they apply to theater, opera, and dance.

TH 3559. Introduction to Sound Design for the Theatre. (3 cr. ; Student Option; Every Fall & Spring)

Basics of audio design for theatre. Script analysis, audio editing, music research, basic system design, paperwork, cue building. Basic components of audio design. Final project will involve applying skills to partially realized design. prereq: 1501

TH 3571. Introduction to Technology for the Theatre. (3 cr. ; A-F only; Every Fall & Spring)

This course is constructed to help each student experience the processes of theater production by working hands-on with production technologies & methodologies. Students will be divided into three teams for the entire semester which will move through several production disciplines & instructors; Scenic, Costumes,

& Lighting in rotations of eight class sessions each, and Audio for two class sessions. These classroom projects are reinforced with 4 hours per week of Lab [practical application and practice] in one of the shops. We will explore the interrelationship of Production Practice through three key elements; Production Processes & Modes of Communication - [Visual, Narrative, Data Sets]. Production Space Systems & Equipment - [Large Tools, Permanent Infrastructure, Auxiliary/ Temporary Infrastructure]. Production Skills & Techniques - [Small Tools, Proprietary Theater Equipment, Construction/ Installation Techniques]. prereq: 1501

TH 3700. Directing & Dramaturgy Practicum. (1 cr. [max 8 cr.] ; A-F only; Every Fall & Spring)

This course is for students to gain more experience or hone their skills through participation on a main stage production. Students would participate through one of the following: as an Assistant Director to a faculty director or guest artist OR as a dramaturg for the process.

TH 3711. Beginning Directing. (3 cr. ; Student Option; Every Fall & Spring)

The goal of this class is to introduce you to the basic work and process of the stage director. We will emphasize the practical tasks of analysis, casting, rehearsing, and staging. Our stylistic focus will be on contemporary realistic/naturalistic theater (rather than experimental forms or verse plays). The coursework will invite you to explore many aspects of the craft of directing, including the following: ? Defining the role of the director: responsibility & relationships to playwright/actors/audience. ? How to think and conceptualize like a director. ? What is blocking? How does it work? Who creates it? Staging actions and events. ? Understanding the building blocks of life on stage through composition & scene work. ? Analysis of dramatic text from the director's point of view (and expressing it in writing). ? Preparation in the role of the director ? historical/textual/ visual research. ? Rehearsing and working with actors - What makes a good rehearsal? What is the relationship between actors and director?

TH 3716. Stage Management. (4 cr. ; A-F only; Every Fall & Spring)

Production process, pre-production to maintaining/closing. Managing rehearsals, communication, conflict resolution. Individual/group projects: promptbook building, blocking notation, Cue placement/execution, scene breakdowns, creating/maintaining checklist, building a form library. prereq: 1501 or instr consent

TH 3760. Project Stage Management. (2 cr. [max 4 cr.] ; Student Option; Every Fall & Spring)

Practical application course of stage managing a BFA studio project or TH 4380 Creative Collaboration project, or a project of similar workload at the discretion of the instructor.

TH 3896. Internship for Academic Credit. (1-4 cr. ; Student Option; Every Fall, Spring & Summer)

An applied learning experience in an agreed-upon, short-term, supervised workplace activity, with defined goals, which may be related to a student's major field or area of interest. The work can be full or part time, paid or unpaid, primarily in off-campus environments. Internships integrate classroom knowledge and theory with practical application and skill development in professional or community settings. The skills and knowledge learned should be transferable to other employment settings and not simply to advance the operations of the employer. Typically the student's work is supervised and evaluated by a site coordinator or instructor.

TH 3950. Topics in Theatre. (1-4 cr. [max 8 cr.] ; Student Option; Every Fall & Spring) Topics specified in Class Schedule.

TH 3993. Directed Study. (1-6 cr. [max 18 cr.] ; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study. prereq: 6 Th cr, instr consent, dept consent, college consent

TH 4115. Intermediate Playwriting. (3 cr. ; Student Option; Every Spring)

New methods of play construction. How characteristic plays from particular contemporary styles create original theatrical effects by using/breaking dramatic conventions. Writing exercises, workshoping of student plays. prereq: 3115 or [writing sample, instr consent]

TH 4177W. Analysis of Dramatic Literature. (WI; 3 cr. ; Student Option; Every Fall)

This course trains students in the analysis of dramatic literature and develops their research skills in theatre studies, helping them understand plays within their contexts of origin and production. Taking a single theme (ex. madness, or death and mourning) the class brings together contemporary and historical plays from around the world, exploring how theatre offers a unique site to stage differences, understand marginalized experiences, and imagine alternative visions of the world. Assignments break down the writing process into its component parts, and guide students in developing a sustained interpretation of a play of their choice.

TH 4181. Convicts, Crocodiles, and Contrasts: Exploring Australian Identity in Film and Literature. (GP; 3 cr. ; A-F only; Periodic Spring)

What is "Australian"? The content of this course will employ a cultural, literary, and film studies approach to exploring the development and representation of Australian identity through the lens of film, drama, and literature. The course will be a 3-week long study abroad course with pre-departure readings and films, on-site readings and activities, and a final project due upon return. Australia is an isolated place considered to be on the "edge of the world," simultaneously the oldest continent and a young civil society. It is a place evocative of wild stunning landscape, exotic wildlife, and a history as a convict colony. Since the birth of the Australian film industry in the 1950's

Australian filmmakers have sought to tell their own stories and to interrogate the idea of Australian culture. The global success of films such as *Mad Max*, *Crocodile Dundee*, and *Priscilla Queen of the Desert* have served to reinforce and disrupt stereotypes of Australia as a place and culture. In contrast, films such as *Rabbit Proof Fence*, *Animal Kingdom* and *The Sapphires* seek to tell alternative narratives. Themes such as the urban and rural divide, conquering nature, the place in society of indigenous communities, and fatalism are interrogated. Similarly, Australian writers such as Colleen McCullough, Kate Grenville, Tim Winton, and Liane Moriarty have gained international readership. Their novels, as well as others, use landscape and storytelling to create and challenge simplistic ideas of Australian history and culture. By studying the history and works engaged in creating and interpreting this idea of Australian identity, from Australian artists, students will be asked to engage in a more complex way with the ideas of heritage, culture, and national identity in general. Students will also read selected essays on Australian history and culture. The IDI (Intercultural Development Inventory) will also be used as a tool to engage with the dialogue on identity and culture in general.

TH 4321. Career Preparation for the Theatre Artist. (; 3 cr. ; Student Option; Every Spring)

From personal reflection to real-world insights and hands-on experiences, this course will delve deeply into the skill sets and mindsets important for arts professionals in theater and related fields. I envision our time together as a combined exploration of philosophical, political, and practical questions, thinking through who you want to BE as an artist, what you want your art to DO, and the TOOLS you'll need to manifest that vision in the world. The course will connect you with resources on and off campus, introduce you to professionals working in various facets of the field, engage you in readings and hands-on workshops to deepen your thinking and expand your toolkit, and will culminate in a portfolio project that you can take with you as you transition to life after college. Most importantly, I want this course to be useful and valuable to you, so I will be seeking your input about what you most need, and we'll shape the course accordingly.

TH 4322. Acting for the Camera. (; 3 cr. ; Student Option; Every Fall & Spring)

Differences between stage acting and acting for camera. Hands-on experience with film equipment. Scenes/monologues rehearsed/performed for camera. Videotape playback for class critique. prereq: 1301 or 3321

TH 4380. BA Studio Production: Creative Collaboration. (; 1-3 cr. [max 12 cr.] ; Student Option; Every Fall & Spring)

Creative Collaboration is the cornerstone class for BA Performance, turning research into practice through scripted and devised performance paradigms. Each semester students will work with practitioners from eclectic backgrounds to develop original or scripted work focused in one of the six areas of performance; directing; physical theater;

realism, playwriting, music driven theater, and object/puppet theater. Classes will culminate in a formal or workshop performance, depending on the goal of each specific collaboration. Non-performers such as designers, dramaturgs and technicians may take the course for credit and serve as part of the collaborative team. The course is open to any University of Minnesota student through the audition or interview process.

TH 4382. Inventing Ireland. (GP,LITR; 3 cr. ; A-F only; Periodic Spring)

What does the idea of being Irish? mean? The content of this course will employ a cultural studies and performative theory approach to exploring the development and representation of Irish identity and Irishness? in the 20th Century through the lens of literature, drama, and film. The course will be a three-week long study abroad course with pre-departure readings and films, on-site readings of plays and short stories, and a final project due upon return. By studying the history and works engaged in creating and interpreting this idea of Irish identity, both from and external to Ireland, students will be asked to engage in a more complex way with the ideas of heritage, culture, and national identity in general. Students will also read selected of essays on culture and Irish history.

TH 4391. BFA Intensive II. (; 2 cr. ; A-F or Audit; Every Fall)

Applying first three years of training toward performance. Seventh in sequence of eight. Acting, voice, and movement. Integrating the disciplines. prereq: BFA student in theatre arts

TH 4393. BFA Rehearsal and Performance III. (; 2 cr. ; A-F or Audit; Periodic Fall & Spring)

Acting, voice, movement. Application of process toward performance. prereq: BFA student in theatre arts

TH 4394. BFA Rehearsal and Performance IV. (; 2 cr. ; A-F or Audit; Periodic Fall & Spring)

Acting, voice and movement. Application of process toward performance. prereq: BFA student in theatre arts

TH 4395. BFA Intensive III. (; 2 cr. ; A-F or Audit; Every Spring)

Incorporating the disciplines of acting/voice/movement. prereq: BFA-acting sr

TH 4398. BFA Rehearsal and Performance V. (; 2 cr. ; A-F or Audit; Periodic Fall & Spring)

Acting, voice and movement. Continuing the application of process towards performance. prereq: BFA-acting sr

TH 4399. BFA Rehearsal and Performance VI. (; 2 cr. ; A-F or Audit; Periodic Fall & Spring)

Acting, voice, and movement. Continuing the application of process towards performance. prereq: BFA-acting sr

TH 4532. Makeup for the Actor. (; 2 cr. ; Student Option; Every Fall & Spring)

Topics vary. May include functions/aesthetics of stage makeup, application techniques, prosthetics, and facial hair.

TH 4555. Audio Technology. (3 cr. ; Student Option; Periodic Fall)

Sound as science. Technology to create/manipulate sound. Recording techniques. Effects/signal processing. Microphone/mixing techniques. prereq: 1501 or instr consent

TH 4711. Intermediate Stage Direction. (; 3 cr. ; Student Option; Every Fall & Spring)

Coordinating/guiding collaborative artistic team. Script selection, textural analysis, concept development, space use, composition, movement, dialogue. Final presentation of scene. Intensive research, textural examination, journal. prereq: 1322 or instr consent

TH 4901. Capstone Project for Theater. (; 2 cr. ; S-N or Audit; Every Fall)

Development of senior project, alone or in groups, under guidance of faculty members. prereq: Sr, [Th or Dnce major]

TH 4905H. Honors: Tutorial Seminar in Theatre Arts. (; 2-4 cr. ; A-F only; Every Fall & Spring)

Independent reading/research in preparing honors thesis or selected creative project. prereq: Credit will not be granted if credit has been received for: 4905; honors, theatre arts, dept consent; limit [2 cr for [cum laude or magna cum laude], 4 cr for summa cum laude]

TH 5100. Theatre Practicum. (; 1-4 cr. [max 20 cr.] ; Student Option; Every Fall & Spring)

Individual creative projects in production of approved plays as an actor, director, dramaturg, or playwright. (See 5500 for design practicums.) prereq: instr consent, dept consent; 4 cr of 3100 for undergrads

TH 5103. The Theatre Dramaturg. (; 3 cr. ; Student Option; Periodic Spring)

Theoretical/practical aspects of dramaturgy in American theater. Historical perspectives. Research/production history of classics. Development of new scripts. Dramaturgical structure and interpretive choices. Dramaturgy as it relates to playwrights/directors. Preparing/editing the rehearsal script. Production dramaturgy.

TH 5117. Performance and Social Change. (; 3 cr. ; A-F or Audit; Periodic Fall)

Reading, writing, research, presentations and workshops explore activist performance projects. Theories of social formation and ideology provide framework to discuss/animate theater's potential for social change. prereq: Jr or sr or grad student

TH 5179W. Text and Performance. (WI; 3 cr. ; A-F or Audit; Every Fall)

How to read texts toward performance in various dramatic/nondramatic material. Method of unlocking metaphorical energy of texts. Vocabulary/techniques of analysis that transform text from page to stage. prereq: [1322, [3171 or 3172]] or grad student

TH 5181W. Blacks in American Theatre. (WI; 3 cr. ; Student Option; Periodic Spring)

Historical survey of significant events in the development of American black theatre traditions. Essays, plays, playwrights, and

theatres from early colonial references to the Black Arts Movement.

TH 5182W. Contemporary Black Drama and Dramaturgies. (WI; 3 cr. ; Student Option; Every Spring)

This course is an exploration of the impact and evolution of Black Theatre in America, covering the period rising from the Black Arts Movement to the present. The exploration will entail an understanding of cultural and socio-political issues as they are reflected in key and significant plays written and produced from the late 1950's to the present. The plays and essays will be read against the background of significant cultural, social and literary movements - the Civil Rights Movement, Cold War politics, the Women's Movement, Gay Liberation, the Culture Wars, post-modernism, deconstruction, multiculturalism, afro-futurism, etc. as well as the evolution of identity nomenclature and racial classification from Colored to Negro to Black to African American. In addition to play analysis and criticism, students will garner a knowledge of significant Black cultural institutions and their impact on the ever-changing American theatre landscape.

TH 5183. Critical Literacy, Storytelling, and Creative Drama. (; 3 cr. ; Student Option; Every Summer)

This course examines and embodies how storytelling and creative drama can be used as tools to help develop students' critical literacy and to assist them in becoming more fluent readers and writers. Critical literacy is the focus; theater and storytelling are the vehicles. Key topics to be covered include: 1) A historical background on fairy and folk tales, legends, fables, myths, and the different oral traditions; 2) Tools for developing a critical view of diverse tales; 3) Practical instruction on how to use storytelling and story genres in the classroom to develop critical literacy; 4) Assessing storytelling work in the classroom. Students will meet in the first week at the University to learn tools of the Neighborhood Bridges program and in the second week will practice and observe each other's teaching with local school classrooms. In the past we have worked with 4th graders and 6th graders, though we will also discuss how course content applies to high school students. The class meets for two intensive weeks in person, however, we additionally assign pre-readings and post-class reflections and papers.

TH 5330. Comedy: Advanced Physical Performance Studio. (; 3 cr. [max 9 cr.]; A-F only; Every Spring)

Mechanics of creating physical comedy. Focuses on process using clown, Comedia dell'arte, Bouffons, or improvisational comedy. Exercises on how comedy is born from tragedy and state of conflict within one's self. prereq: 3330, audition

TH 5340. Tragedy/Poetry: Advanced Physical Performance Studio. (; 3 cr. [max 6 cr.]; A-F only; Every Fall)

Specific tragic/poetic training paradigms in physical theater employed by Stanislavski, Grotowski, Brecht, Lecoq, etc. Psychological,

emotional, technical, and physical work. Tragic action in Greek tragedy, Shakespeare, Melodrama, operatic characterization, Brecht. Original tragic/poetical work. prereq: [3322, 3331, grad student] or instr consent

TH 5355. Puppetry: Techniques and Practice in Contemporary Theater. (; 3 cr. ; Student Option; Every Fall & Spring)

Fundamentals of puppet and object theater/performance are introduced through traditional/contemporary puppetry forms. Focuses on object theater, toy theater, hand puppets, and shadow/Bunraku-style puppets. Readings, in-class screenings of videos/slides. Students build/create series of short works for in-class performance. prereq: [[3513 or concurrent registration is required (or allowed) in 3513], instr consent] or grad student

TH 5370. Hand, Mind, and Gesture: An Independent Study in the Creation of Image Driven Performance. (3 cr. ; Student Option; Every Spring)

Create single or collaborative performance/event that lives in time/space. Work will draw from personal investigation, amplify personal signature, explore modalities of image driven forms. Propose, develop, construct, rehearse, present finished public performance. prereq: 5355, instr consent

TH 5500. Theatre Design Practicum. (1-3 cr. [max 20 cr.]; Student Option; Every Fall, Spring & Summer)

Individual projects in production of approved plays as a designer of scenery/properties, costumes, lighting, or sound. (See 5100 for other creative practicums.) prereq: Th 3521, 3531, or 3541

TH 5510. Drawing, Rendering, and Painting for the Theatre Designer I. (3 cr. ; Student Option; Periodic Fall & Spring)

Development of skills necessary for presentation of theatre scene/costume designs. Materials, layout, and techniques in scene painting. Basic drawing/graphic skills. prereq: 1501 or grad

TH 5520. Scene Design. (3 cr. [max 9 cr.]; Student Option; Every Fall & Spring)

Conceiving/communicating design ideas in both two-dimensional sketches and three-dimensional models for theatre and allied venues. Drafting. prereq: 3521

TH 5530. Costume Design. (3 cr. [max 9 cr.]; Student Option; Every Fall)

Theory and process of costume design for theatrical productions (e.g., dance, opera, film) through hypothetical productions. prereq: 3531

TH 5540. Lighting Design for the Theatre. (3 cr. [max 9 cr.]; Student Option; Every Spring)

Design aesthetics and exploration of design for various stage forms and venues. Development of the lighting plot and paperwork; use of the computer in lighting design. prereq: 3541

TH 5545. Stage Lighting Technology. (; 3 cr. ; Student Option; Periodic Fall)

The lighting technician's skills and crafts: equipment, techniques, control operation, wiring, and maintenance. prereq: 3515 or grad or instr consent

TH 5554. Multimedia Production for Live Performance. (; 3 cr. ; Student Option; Periodic Fall)

Use of multimedia production technologies in actual production. Students apply knowledge/skill in conjunction with an artistic team on a production and are an integral part of the development/realization of that production. prereq: 5553 or instr consent

TH 5556. Audio Engineering. (; 3 cr. ; Student Option; Periodic Spring)

Miking/recording techniques specific to music/dramatic dialogue. Recording different styles of music. Hands-on recording of bands, doing final mixes to demo CD. Field trips to professional studios and club/concert recordings. prereq: 4555, instr consent

TH 5559. Sound Design for Performance. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Audio technology/psychology, their impact on audience in a performance. Communication, design process, psychoacoustics, script analysis. prereq: 4555 or instr consent

TH 5560. Drawing, Rendering, and Painting for the Theatre Designer II. (; 3 cr. ; Student Option; Periodic Spring)

Development of skills necessary for presentation of theatre scene/costume designs. Materials, layout, and techniques in scene painting. Rendering and scene painting skills. prereq: 5510

TH 5570. Properties/Scenery Technology. (; 1-3 cr. [max 15 cr.]; Student Option; Every Fall & Spring)

Management, structures, upholstery, mask-making, furniture construction, stage mechanics, soft properties, faux finishes. Topics specified in Class Schedule. prereq: 3515 or grad or instr consent

TH 5580. Costume Technology. (; 3 cr. [max 15 cr.]; Student Option; Every Fall & Spring)

Fabric enhancement techniques, masks, wig-making, millinery, makeup prosthetics, pattern drafting, and draping. Topics specified in Class Schedule. prereq: 3571 or grad or instr consent

TH 5590. Theatre Technology Practicum. (; 1-3 cr. [max 15 cr.]; Student Option; Every Fall, Spring & Summer)

Individual creative project in technology/craft area of theatre. Practical work in costume, lighting, makeup, props, scenery, sound, or theatre management. prereq: 3515, instr consent, dept consent; 4 cr max for undergrads

TH 5711. Advanced Stage Direction. (; 3 cr. ; Student Option; Periodic Fall & Spring)

Realistic/non-realistic dramatic forms. Theory/technique of rehearsal. Production problems. Includes directing of three one-act plays. prereq: [4711, instr consent] or grad student

TH 5716. Stage Management for the Theatre. (; 4 cr. ; Student Option; Every Fall)

Theories, practicalities, and techniques for rehearsal/performance. Organizing/managing various types of performance venues. prereq: [1101, 1321, soph] or grad

TH 5718. Principles of Arts Management. (3 cr. ; Student Option; Periodic Spring)

This course will introduce students to the practical skills required for the successful management of arts organizations. Areas covered will include marketing/publicity, fundraising, audience development, board governance, and issues associated with the founding of a nonprofit arts organization. Each class we will engage in discussion relating to articles shared by the instructor. You will participate in group and solo projects aimed to hone your skills in various areas of management. Additionally, students will engage in discussions with a number of professionals in the field of arts administration, and discover advanced concepts applied by arts administrators.

TH 5760. Advanced Stage Management. (; 2 cr. [max 6 cr.]; Student Option; Every Fall & Spring)

TH 5760 is practical experience in stage management for specific productions of the University Theatre with emphasis on rehearsal and performance. In addition to rehearsals, design meetings, and performances, the students will meet with the Production Stage Manager weekly. The purpose of this weekly meeting (class) is to mentor a lead Stage Manager of a TAD Mainstage. The Mainstage Stage Manager and PSM will meet weekly for 90 minutes. Each weekly meeting time will be determined based on the individual students' schedule. Weekly meetings will begin two weeks prior to their first rehearsal and end one week after the final project performance. Attendance of individual weekly meetings are required and expected. Please be on time. Always bring your promptbook and laptop. Be prepared for weekly discussion. PSM will visit rehearsals weekly.

TH 5950. Topics in Theatre. (; 1-4 cr. [max 80 cr.]; Student Option; Every Fall, Spring & Summer)

Topics specified in Class Schedule.

TH 5993. Directed Study. (1-5 cr. [max 20 cr.]; Student Option; Every Fall, Spring & Summer)

Guided individual reading or study. Prereq 6 Th cr, instr consent, dept consent, college consent.

Toledo International Program (TLDO)

TLDO 1401. University of Castilla La Mancha Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Toledo study abroad program in Toledo, Spain, to represent a course taken at the University of Castilla La Mancha. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

TLDO 1402. University of Castilla La Mancha Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Toledo study abroad program in Toledo, Spain, to represent a course taken

at the University of Castilla La Mancha. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

TLDO 1403. University of Castilla La Mancha Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Toledo study abroad program in Toledo, Spain, to represent a course taken at the University of Castilla La Mancha. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

TLDO 1404. University of Castilla La Mancha Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Toledo study abroad program in Toledo, Spain, to represent a course taken at the University of Castilla La Mancha. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

TLDO 1405. University of Castilla La Mancha Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Toledo study abroad program in Toledo, Spain, to represent a course taken at the University of Castilla La Mancha. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

TLDO 3001. 20th Century Spanish Literature. (; 3 cr. [max 6 cr.]; A-F only; Every Fall, Spring & Summer)
Spanish literature.

TLDO 3002. Survey of Spanish American Colonial Literature. (; 3 cr. [max 6 cr.]; A-F only; Every Fall, Spring & Summer)
Spanish American literature.

TLDO 3004. Marketing in European Business. (3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course.

TLDO 3005. Introduction to Interpretation for Spanish Speakers. (3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course

TLDO 3006. The Camino de Santiago: Past and Present. (3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer)
Study abroad course

TLDO 3007. Comparative Public Health. (GP,SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer)
Public health systems are facing an increasing number of challenges: the pressures of globalization, aging populations, and the increase in patient lawsuits, as well as the high costs of medical research and treatments. With these issues in mind, we must critically analyze the manner in which medical care is provided in different systems so that we can design and adapt systems that provide high quality, effective, and efficient health care.

Changes made to health care systems are frequently based on economic and political considerations, and many countries are currently experiencing significant challenges in health care that depart from the way their health care has been financed and provided in the past. This course will introduce students to the Spanish health care system and the context in which it is developing, studying the key changes that have taken place up to the present day. Based on a series of case studies, students will be able to compare the Spanish health care model with other models like those of the United States, the United Kingdom, France, Sweden, and/or developing nations. You will compare health care systems and performance on a variety of topics including morbidity and mortality, disease ranking, health system cost, quality, and safety to name a few. You will also develop your critical evaluation skills to analyze the quality of the evidence used to support the policies and practice of health care. This will enable you to critically observe the role governmental and non-governmental organizations play with regard to health care and health status. Throughout the course, special attention will be paid to comparisons between Spain and the United States with a focus on identifying and understanding health disparities and how each country and their health system are addressing elimination of health disparities. Health disparities exist for a variety of reasons, and this course will help you understand what those factors are, and how each country is attempting to improve the social determinants that directly contribute to health disparities.

TLDO 3008. Healthcare Marketing and Communication. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This course centers around the knowledge, analysis, and management of communication and marketing in the healthcare setting, and how it is applied to different audiences? from specialized groups, such as healthcare professionals, to more general audiences, such as the society at large?to communicate the importance of healthcare policies in an increasingly global atmosphere that requires patient-centered care, incorporation of innovation and efficiency, as well as a goal of sustainability. In Europe, in general, and in Spain, in particular, the healthcare systems are primarily public, and the communication objectives created by institutions are primarily directed toward spreading information, creating awareness, and managing reputation, in contrast with other healthcare systems, such as the American system, which are based on a system of private insurance. Thus, European healthcare institutions, in addition to their large responsibility to manage healthcare, place great importance on communication and marketing policy, on issues of managing and maintaining resources, communicating results, prevention campaigns, and campaigns to create awareness of public expense. At the same time, there is a component of policy-related and institutional communication with regards to advancing the healthcare system, which includes topics that are difficult to transmit to the citizen such as the system's

short-term and long-term sustainability and equality within the system. Complementing the public European healthcare systems, private or civil organizations such as private health centers, the pharmaceutical industry, and patient and professional associations play an important role. Among the primary parties with which they interact to maintain functioning and protect their interests is the government administration. For this reason, their efforts in institutional relationships, reputation management, and communication with the society at large plays an important role in their daily workings and their place in the healthcare system. In addition, all these organizations have an ongoing relationship with the media, both general media as well as those specialized in healthcare correspondence, and, at this time, are facing the same business model changes in the area of communication. Those changes are leading them to develop and expand in the realm of digital communication.

TLDO 3009. Diversity in Global Health.

(GP,SOCS; 3 cr. ; Student Option; Every Fall, Spring & Summer)

This course will dive into sociological diversity and existing culture in order to reflect on the influence of global and local dynamics on the health of different populations. Beginning with a historical overview that will bring us to the paradigm of social determinants of health and its successive reformulations (Dahlgren & Whitehead, 1991; Acheson, 1998; OMS, 2005), we will begin to study the topic of equity in health, defined as the absence of potentially remediable, systematic differences in one or more aspects of health across socially, economically, demographically, or geographically defined population groups or subgroups. (Maconko & Starfield, 2002). At the same time, we will study the topic of health inequities, which consist of health differences between different populations that are important, systematic, avoidable, and unjust (Whitehead, 1992).¹ We will learn about the ecological and sociological dimensions using models like Sustainable Development Goals or questioning supposedly universal constructs like the Human Development Index, while remembering to reflect on concrete social situations and the cultural setting in which they develop. The concept of health will be approached from its widest and most holistic dimension to introduce the contribution of the social sciences, from a global perspective on health to more specific contexts, and the differentiation between disease, discomfort, and illness. We will debate on the importance of terms like health care systems, pluralism, and alternative therapies and, finally, we will be introduced to a socio-cultural perspective to help us rethink concepts like health, hygiene, or care. The health care mechanism, the institutionalization of care, and the functioning of these institutions will be another focus of our attention, analyzing the characteristics of teamwork, leadership or the formation of stereotypes. In this sense, we will try to bring together a dual perspective which includes a reflection on society and patients, and the continual questioning of our function as

professionals in the area of health care and research. In a more practical sense, we will analyze perspectives on determinants of health in groups made vulnerable by their condition or stigmatization in a determined society (we will focus on the local situation but also extend the comparison and reflection to other places), also questioning the acceptance of terms which we hear often as health care professionals and in coordination with other disciplines such as dependency or normality. ?????????? 1 Quotation translated from Spanish by translator. Original English quotation could not be found and may differ somewhat from translation above.

TLDO 3012. Global Bioethics. (CIV; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Bioethics was initially projected with very wide objectives. V.R. Potter understood it as a dialogue between scientists and humanists to preserve humanity from its self-destruction and promote quality of life. In his words, "Mankind is urgently in need of a new wisdom that will provide the knowledge of how to use knowledge for man's survival and for improvement in the quality of life." I therefore propose the term bioethics in order to emphasize the two most important ingredients in achieving the new wisdom that is so desperately needed: biological knowledge and human values. The Encyclopedia of Bioethics, edited by Warren Reich in 1978, suggests the following definition of bioethics: "systematic study of human conduct in the area of the life sciences and health care, insofar as this conduct is examined in the light of moral, values, and principles." The complex, multi-disciplinary model of modern healthcare creates numerous ethical conflicts. When the values of all the actors are taken into account when making decisions, there is inevitably disparity of criteria. The conflicts generated are not merely technical; they are also ethical, because the values of the people or institutions involved can be in conflict. In these instances, it is important that the medical professional knows to consider technical issues (the medical facts) and the values at play (the preferences of those involved, principles, norms, etc.), in order to make a good decision. At present, bioethics is considered a practical or applied ethics (to biomedicine), that attempts to resolve ethical dilemmas present in biomedicine. There are various fields within bioethics. The most relevant are foundational bioethics (which deals with the philosophical foundations of bioethics), environmental bioethics, clinical bioethics, and the bioethics of research. Bioethical issues tend to be complex problems that extend beyond the limits of a sole profession, for which reason it is essential to consider the input of healthcare professionals, philosophers, lawyers, psychologists, social workers, sociologists, and any other profession involved in the most hot-button ethical issues relating to the life sciences. All the fields mentioned have great relevance due to the importance and prevalence of the issues taken on by bioethics. There are a great number of publications that indicate how numerous professionals confront common, difficult-to-regulate bioethical dilemmas in the clinical sphere as well as

the in the area of research or in relation to the environment, but the formation needed to tackle these problems is insufficient. In a significant number of these articles, it is concluded that it is necessary to improve the bioethical formation of future professionals to be able to better address these issues. For this reason, education in bioethics has become a priority both in the United States and in Europe, as well as the rest of the world, as these issues are not limited to a specific area, but rather are global.

TLDO 3022. Spanish for Business and Professional Life Development. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer) Vocabulary/usage of interest in business, economics, international relations, or tourism. prereq: Two yrs of college-level Spanish

TLDO 3023. Cross Cultural Business: Business in Spain and the United States Compared. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Contemporary business environment of Spain. Social, economic, and political context. Labor market, financial markets, legal framework. Impact of European single market.

TLDO 3024. Tracing Three Cultures in Spain. (; 3 cr. [max 6 cr.] ; A-F only; Every Spring & Summer)

Three-week intensive course. Lectures, discussions, field trips, including Madrid's 'Museo del Prado', 'El Escorial' Palace, Guided Tours of Judaic Toledo and Mozarabic Segovia. Christian, Muslim, and Jewish culture in literature/art, how they conform to identity of modern Spain. Sephardic heritage in literature/architecture in Toledo. Interaction between Islamic/Hispano-Mozarabic artists. Role of Epic/Reconquest in medieval Spanish literature. Religious painting, Christian iconography during Baroque/Counter-reformation periods.

TLDO 3025. Exploring Spanish Culture Through Digital Technology. (; 3 cr. [max 6 cr.] ; A-F only; Every Summer) Study abroad course.

TLDO 3044. Medical Spanish. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This class is designed for students at the advanced Spanish level who want to learn specific medical vocabulary, concepts, and expressions used in Spanish language health systems. An additional goal of the course is to improve students' knowledge about Spanish society and culture because of the key role this plays in working effectively as a health professional in such a context.

TLDO 3104W. Art of Reading Literary Texts. (WI; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Critical reading of Spanish and Spanish-American texts. Novels, dramas, poetry, essays. Diverse approaches. Terminology of criticism, literary problems, techniques. prereq: Two yrs of college-level Spanish

TLDO 3105W. Cultural Heritage of Spain. (WI; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Main periods of Spanish history. Political, social, anthropological, and economic characteristics of each. Spanish culture/society, from beginning of Franco regime in 1939 to present. Cultural trends in literature/arts in relation to social phenomena. prereq: Two yrs of college-level Spanish

TLDO 3107W. Introduction to the Study of Hispanic Linguistics. (WI; 3 cr. ; A-F only; Every Fall, Spring & Summer)
Phonology, morphology, syntax, semantics, lexicology, pragmatics, discourse analysis, sociolinguistics. History of Spanish language. Introduction to Hispanic linguistics as a discipline in relation to social, cultural, and literary studies.

TLDO 3211. Writers of the Spanish Empire and Its Decline. (; 3 cr. ; A-F or Audit; Every Fall)

Masterpieces of Spain's most significant renaissance and golden age writers, including Lope de Vega, Calderon, Cervantes, Garcilaso, Gongora, Quevedo, and authors of picaresque novels and mystic poetry.

TLDO 3213. Spanish Feudal Society and Literature. (; 3 cr. ; A-F or Audit; Every Spring)
Major works of medieval Spain in connection with its social background, from Auto de los Reyes Magos and Cantar del Mio Cid to Celestina and other pre-Renaissance literature.

TLDO 3214. The Age of Don Quijote. (; 3 cr. ; A-F or Audit; Every Spring)
Major works of Cervantes, Don Quijote de la Mancha, and Novelas Ejemplares as stepping stones to understanding 16th/17th century Spain.

TLDO 3215. Spanish Golden Age Theater. (; 3 cr. ; A-F or Audit; Every Spring)
Spanish Baroque theater. Plays by Lope De Vega, Cervantes, Tirso de Molina, Calderon de la Barca, or Luis Velez de Guevara are read/discussed. Students attend theater in Toledo or Madrid.

TLDO 3216. Contemporary Spanish Women Writers. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)
Literary works by women writers of last three decades. Spanish history of 20th century. Women's participation across political spectrum. Feminist movement. Sociopolitical/cultural changes since Franco's death in 1975. Role of Spanish women writers in transition to democracy and social change.

TLDO 3217. Directed Studies in Literature. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)
Individual research projects or readings in literature, under faculty direction, to meet objectives not covered by regular curriculum.

TLDO 3218. Discovering the Hispanic World Through the Baroque. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

TLDO 3222. Narrative in Spanish America. (; 3 cr. ; A-F or Audit; Every Fall & Spring)
Narrative currents in Spanish America, from Carpentier and emergence of magical realism to present day. Authors studied include Garcia

Marquez, Borges, Fuentes, Vargas Llosa, and Cortazar.

TLDO 3230. Advanced Spanish Conversation. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)
Contemporary issues in Spain, other subjects of interest. Error evaluation. Review of frequent structural/grammatical problems. prereq: Two yrs of college-level Spanish

TLDO 3231. Spanish Composition and Communication. (; 3-4 cr. ; Student Option; Every Fall, Spring & Summer)
Difficult aspects of Spanish grammar/structures mastered through composition writing. Problems of style/language. Several compositions written outside class. Common errors. prereq: Two yrs of college-level Spanish

TLDO 3232. Art and Architecture in Spain: Periods and Styles. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)
Characteristics of major periods in Spanish art/architecture. Greek, Roman, Romanesque, Gothic, Baroque, Neo-Classical, Romanticism, Modernism, 20th century avant-garde.

TLDO 3233. Christian, Muslim, Jewish Art: Toledo. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)
Art of three cultures are studied in/around Toledo.

TLDO 3234. Master Painters of Spain. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)
Development of Spanish painting studied in works of El Greco, Velazquez, Goya, Picasso, and Dali. Visits to Madrid's Museo del Prado and Centro de Arte Reina Sofia.

TLDO 3235. Politics and Society in Latin America. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)
Contrasts in political/social structures of various Spanish-American nations in 20th century. Their diversity, common problems.

TLDO 3236. Structure of Spanish: Phonology and Phonetics. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)
Practical/theoretical aspects of Spanish phonetics. Correcting specific pronunciation problems of non-native speaker. Small practice groups divided according to native languages.

TLDO 3237. Spanish Transition Toward Democracy. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)
Changes in Spain from Franco's death in 1975 to Law for Political Reform and Constitution of 1978. Role of Monarchy, Army, political parties, and trade unions in shaping Constitution and defining Spain as semi-federal state.

TLDO 3238. Spain and the European Union. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)
Formation of EU. Impact of building a single European market on Spanish and greater European economies. Readings from daily press.

TLDO 3239. Management of Cultural Heritage. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)

Theoretical/practical approach to managing Spain's cultural heritage. Historical, artistic, social, and economic aspects of life in a patrimonial city.

TLDO 3240. Advanced Problems in Spanish Grammar. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)

Aspects of Spanish syntax in context of written language. Different methods in teaching Spanish grammar. prereq: Two yrs of college-level Spanish

TLDO 3241. Directed Studies in Art History. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)
Individual research projects or readings in art or archeology, under faculty direction, to meet objectives not covered by regular curriculum. prereq: Two yrs of college-level Spanish

TLDO 3242. History and Memory. (; 3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Study abroad course.

TLDO 3301. Archaeology of the Iberian Peninsula. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Diverse cultures of Iberia as seen through an analysis of most important archaeological sites of the peninsula. prereq: Two yrs of college level Spanish

TLDO 3302. Ethnology and Folklore of the Iberian Peninsula. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Traditional forms of life in Iberian Peninsula in terms of social/economic features. Literary, artistic, and religious aspects. prereq: Two yrs of college level Spanish

TLDO 3303. Directed Studies in Anthropology and Archeology. (; 1-4 cr. ; A-F or Audit; Every Fall, Spring & Summer)
Individual research projects or readings in anthropology or archeology, under faculty direction, to meet objectives not covered by regular curriculum. prereq: Two yrs of college-level Spanish

TLDO 3314. 20th Century Spanish Art. (3 cr. ; A-F or Audit; Every Spring)
Spanish artists who were most affected by European avant-garde movements and have greatly affected art in/outside Spain (e.g., Pablo Picasso, Salvador Dali, Juan Miro, Juan Gris).

TLDO 3401. University of Castilla La Mancha Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)
This is a course shell that will be used on the Study & Intern in Toledo study abroad program to represent a course taken at the University of Castilla La Mancha. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

TLDO 3402. University of Castilla La Mancha Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)
This is a course shell that will be used on the Study & Intern in Toledo study abroad program to represent a course taken at the University of Castilla La Mancha. The specific course title will appear for each student in the Notes

field directly underneath this course on their transcript.

TLDO 3403. University of Castilla La Mancha Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Toledo study abroad program to represent a course taken at the University of Castilla La Mancha. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

TLDO 3404. University of Castilla La Mancha Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Toledo study abroad program to represent a course taken at the University of Castilla La Mancha. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

TLDO 3405. University of Castilla La Mancha Course. (1-6 cr. ; Student Option; Every Fall, Spring & Summer)

This is a course shell that will be used on the Study & Intern in Toledo study abroad program to represent a course taken at the University of Castilla La Mancha. The specific course title will appear for each student in the Notes field directly underneath this course on their transcript.

TLDO 3502. Spain Since 1936. (; 3 cr. ; A-F or Audit; Every Fall, Spring & Summer)

Main features and social significance of General Franco's authoritarian regime as opposed to German/Italian models. Origins of the Civil War. Later social/economic development Problems in political/constitutional transition since Franco. prereq: Two yrs of college level Spanish

TLDO 3503. Directed Studies in History. (; 1-3 cr. ; A-F only; Every Spring)

Individual research projects or readings in history, under faculty direction, to meet objectives not covered by regular curriculum.

TLDO 3515. Theology of Spanish Mysticism. (; 3 cr. ; A-F or Audit; Every Spring)

Historical, social, cultural, and theological basis of Spanish mysticism. Carmelites, Franciscans, Jesuits. prereq: Two yrs of college level Spanish

TLDO 3516. Spanish Philosophical Thought. (; 3 cr. ; A-F or Audit; Every Fall)

Characteristics of Spanish Renaissance (16th century), influence of Erasmus, mysticism, philosophy of Juan Luis Vives. Overview of philosophical development from 17th to 20th centuries. Contemporary Spanish philosophy, focusing on Unamuno, Ortega y Gasset, and Zubiri. prereq: Two yrs of college level Spanish

TLDO 3517. Introduction to the History and Present Situation of Spanish Women. (; 3 cr. ; A-F only; Every Fall & Spring)

Theoretical/practical approach to fundamental transformations that have conditioned lives of Spanish women, from Golden Age to present. Aspects of women's participation in economic world and in culture.

TLDO 3699. Advanced Individualized Spanish. (; 1-4 cr. ; A-F only; Every Fall & Spring)

Directed study with individual tutoring to improve specific language skills identified by student and supervising professor. prereq: Two yrs of college-level Spanish

TLDO 3703. History of the Spanish Language. (; 3 cr. ; A-F only; Every Spring & Summer)

Trends in historical development of Spanish. Emphasizes grammar and Spanish sound system.

TLDO 3706. Colloquial Spanish. (; 3 cr. ; A-F only; Every Fall, Spring & Summer)

Characteristic phenomena of Spanish in its colloquial spoken form. Variations based on age, social, and regional background. New lexical, morphological, and syntactical coinages.

TLDO 3800. Society Through Spanish and Latin American Film. (; 3 cr. ; A-F only; Every Fall)

Contemporary Spanish and Latin American societies explored through films with Spanish and Latin American artists. Approximately 10 films are analyzed from historic-sociological point of view. prereq: Two yrs of college level Spanish

TLDO 3810. Seminar: Spanish Language Film. (3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)

Contemporary cultural/aesthetic trends in Spanish film industry. Viewing/analysis of most significant films of Saura, Bardem, Gurierrez, Aragon, and other directors.

TLDO 3896. Internship in Toledo. (3 cr. ; Student Option; Every Fall, Spring & Summer)

This course grants students the opportunity to reflect on the Spanish work environment in an international context. Through the internship, proposed readings, participation in classroom debates, and written assignments, students will increase their knowledge of Spanish culture and improve their ability to critically examine the worldview that surrounds them. This course is designed to guide students through their internship and build a foundation for a successful professional career. Through assignments and class discussions, students will gain a comparative multicultural perspective on the world labor force, deepening their self-knowledge, their understanding of the work environment, and their perception of success in the workplace. With its multidisciplinary focus, the course seeks to give students the tools they need to analyze the modern Spanish society in which they will find themselves immersed through their internship. With an introduction to modern history, students will analyze different economic, political, and cultural elements that influence society at large and the workplace in particular. In this course, students will discuss many topics involving Spanish society, including the changing role of women, the role of civil servants, immigration, and the solidity of the family structure. In addition, students will analyze potential intercultural communication problems that may arise during their internship,

and they will discuss strategies for adapting to their work experience in order to take full advantage of it.

TLDO 3900. Topics in Toledo. (; 1-6 cr. [max 12 cr.] ; A-F only; Every Fall, Spring & Summer)

Study abroad course.

TLDO 3970. Internships in Spain. (3-6 cr. [max 12 cr.] ; Student Option; Every Fall, Spring & Summer)

Experiential learning in many fields. Classroom component on meaning of work in Spain and social organizational structure/culture of workplace. prereq: Two yrs of college-level Spanish

TLDO 3975. Service-Learning and the Immigrant Experience in Spain. (3-4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Students volunteer at one of several Toledo institutions and collaborate with immigrant population or with Spaniards who work with the immigrant community. Weekly seminar, readings, discussion, reflection, presentations.

Toxicology (TXCL)

TXCL 5000. Directed Research in Toxicology. (; 1-5 cr. [max 80 cr.] ; A-F or Audit; Every Fall & Spring)

Special project that addresses specific issue in toxicology. Under guidance of faculty member. prereq: instr consent

TXCL 5011. Principles of Toxicology. (; 2 cr. ; A-F or Audit; Periodic Fall)

Introduction to fundamentals of poisoning in individuals and the environment, assessment of potential health hazards, and application of toxicology in various professional careers. prereq: Grad txcl major or instr consent

TXCL 5012. Principles of Toxicology. (; 3 cr. ; A-F or Audit; Every Spring)

Science of toxicology. Biomedical principles. Regulatory practices governing protection of human health and environmental quality. prereq: At least one semester [biochemistry, calculus, cell biology]; at least one semester of [human or animal] physiology recommended

TXCL 5013. Chemical Toxicology. (; 3 cr. ; A-F or Audit; Every Fall)

Signs, symptoms, and mechanism of toxicity of different classes of chemicals spanning several organ systems, including chemical carcinogenesis. prereq: 5012, instr consent

TXCL 5101. Molecular and Cellular Basis of Nanoparticle Toxicology. (; 3 cr. [max 6 cr.] ; A-F or Audit; Fall Odd Year)

Introduction to science of nanotoxicology. Nanotechnology in scientific research. Assessment of impact on biological systems. prereq: Introductory toxicology course

TXCL 5195. Veterinary Toxicology. (; 3 cr. ; A-F or Audit; Every Fall)

Toxicology of minerals, pesticides, venoms, and various toxins. Identification of poisonous plants. Recognition, diagnosis, and treatment of animal poisons. prereq: Grad student or instr consent

TXCL 5545. Introduction to Regulatory Medicine. (; 2 cr. ; A-F or Audit; Periodic Spring)

Explanation of products requiring pre-market approval and those that may be marketed without approval. Post-market surveillance. Adverse reactions, removal of product from market. prereq: Grad student or instr consent

Undergraduate Summer Research (UGRD)**UGRD 4999. Undergraduate Summer Research.** (; 0 cr. ; No Grade Associated; Every Summer)

Undergraduate Summer Research

University College (UC)**UC 1005. Global Perspectives on Higher Education.** (; 2 cr. [max 4 cr.] ; Student Option; Every Fall & Spring)

This course provides international students with the skills to understand and think critically about the academic norms, culture, and resources of the U.S. and other higher education systems. Students will analyze how core values, beliefs, and thought patterns inform cultural norms and behaviors, and they will compare and contrast their experience at a U.S. university with their previous educational experiences. Students will investigate university resources and conduct field research in order to find ways to be successful in their current and future intercultural environments. The instructor will support students as they develop their ability to communicate clearly in academic writing, presentations, and small group projects. prereq: International student

UC 4301. Perspectives: Interrelationships of People and Animals in Society Today. (; 2 cr. [max 3 cr.] ; Student Option; Every Spring)

Interrelationships of people and animals from several viewpoints. Social, economic, and health consequences of these relationships, including issues such as pets and people sharing an urban environment, animal rights, and the influence of differences in cultures on animal-human relationships.

UC 5075. Directed Study. (; 1-8 cr. ; Student Option; Every Fall, Spring & Summer)

Directed study.

Urban Studies (URBS)**URBS 1001W. Introduction to Urban Studies: The Complexity of Metropolitan Life.** (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)

Interdisciplinary course, ranging across spatial, historical, economic, political, and design perspectives, among many others.

URBS 3001W. Introduction to Urban Studies: The Complexity of Metropolitan Life. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)

Interdisciplinary course, ranging across spatial, historical, economic, political, and design perspectives, among many others.

URBS 3200. Urban Studies Colloquium. (; 1 cr. [max 4 cr.] ; A-F or Audit; Every Fall & Spring)

Urban/metropolitan issues. Topics vary to reflect current concerns. In-depth reading, intensive group discussion. prereq: dept consent

URBS 3500. Urban Studies Workshop. (; 3 cr. [max 9 cr.] ; A-F or Audit; Every Fall & Spring)

Links academic learning to actual urban problems/issues. Focuses on specific topic using local community as laboratory. Field work, contact with local institutions/agencies. prereq: instr consent

URBS 3751. Understanding the Urban Environment. (ENV; 3 cr. ; A-F or Audit; Every Spring)

Examine links between cities and the environment with emphasis on air, soil, water, pollution, parks and green space, undesirable land uses, environmental justice, and the basic question of how to sustain urban development in an increasingly fragile global surrounding.

URBS 3771. Fundamentals of Transit. (; 3 cr. ; A-F only; Spring Odd Year)

Importance of transit to an urban area. Issues surrounding development/operation of transit. Defining various modes of transit, evaluating why/where each may be used. Making capital improvements to transit system. Finance, travel demand forecasting, environmental assessment, scheduling, evaluation of effectiveness/accessibility.

URBS 3861. Financing Cities. (; 3 cr. ; A-F only; Every Spring)

The most critical question in government is how you are going to pay for something. There is a plethora of good ideas but only so much money. This class looks at how cities are funded. It looks at tax systems, fee systems, grants, special revenues, private development funding and other ways that we pay for cities. It provides practical knowledge on how city activities are funded.

URBS 3871. A Suburban World. (; 3 cr. ; Student Option; Fall Odd Year)

Suburbs as sites of urgent battles over resources, planning practices, land use, and economic development. How suburban life shapes values, political ideals, and worldviews of its populations.

URBS 3896. Urban Studies Internship Seminar. (; 2 cr. [max 4 cr.] ; A-F or Audit; Every Fall, Spring & Summer)

Weekly seminar integrates internship experience with academic program. prereq: Sr, internship placement, dept consent, instr consent

URBS 3955W. Senior Paper Seminar. (WI; 2 cr. ; A-F or Audit; Every Fall & Spring)

Methods/resources for research. Substantial writing. prereq: dept consent

URBS 3993. Urban Studies Directed Study. (1-3 cr. [max 9 cr.] ; Student Option; Every Fall, Spring & Summer)

For students with a specific educational objective that cannot be satisfied through

regular curriculum (e.g., foreign study) and for honors students to complete an honors opportunity. Prereq UrbS majors, instr consent, dept consent.

Urdu (URDU)**URDU 1011. Beginning Urdu I.** (; 5 cr. ; Student Option No Audit; Every Fall)

Basic listening, speaking, reading, and writing skills. Emphasizes development of communicative competence.

URDU 1012. Beginning Urdu II. (; 5 cr. ; Student Option No Audit; Every Spring)

Basic listening, speaking, reading, and writing skills. Emphasizes development of communicative competence.

URDU 1015. Accelerated Beginning Urdu.

(5 cr. ; Student Option No Audit; Every Fall) Designed for students who already have good speaking skills (mainly heritage students) or those who studied Urdu in the past and can review basic knowledge of the language at a faster pace than that of regular language classes. This course focuses on all four skills (including cultural skills) to develop communicative competence at a novice-high level. The Urdu script will be introduced right from the beginning. Students will learn materials that are normally covered in a full academic year.

URDU 3016. Accelerated Intermediate Urdu.

(5 cr. ; Student Option No Audit; Every Spring) This course continues the accelerated Urdu curriculum and covers the same material as URDU 3021 and 3022 (Intermediate Urdu I and II). Designed for heritage speakers or students who have completed the beginning courses in Urdu (1102 or 1015) and can handle a faster pace. This course aims to refine and expand previously acquired language skills. Prior knowledge of Urdu at the levels of listening, speaking, reading, and writing is essential. In this course, special focus is directed to developing vocabulary and mastering relatively complex grammatical structures used in appropriate socio-cultural environments. Class sessions will be interactive. Students will engage with audio and video material to develop language skills in the class and at home as well as measure language comprehension.

URDU 3021. Intermediate Urdu I. (; 5 cr. ; Student Option No Audit; Every Fall)

Development of reading, writing, speaking, and listening skills. Grammar review, basic compositions, oral presentations.

URDU 3022. Intermediate Urdu II. (; 5 cr. ; Student Option No Audit; Every Spring)

Development of reading, writing, speaking, and listening skills. Grammar review, basic compositions, oral presentations.

URDU 3031. Advanced Urdu I. (4 cr. ; Student Option No Audit; Every Fall)

Continued emphasis on development of communication skills, ability to comprehend both written/spoken texts. Speak, read, write in Urdu beyond intermediate level. Prereq: 3022 or instr consent

URDU 3032. Advanced Urdu II. (4 cr. ; Student Option No Audit; Every Spring)
This course is intended for students who have already completed four semesters of study in Urdu or have an equivalent Hindi-Urdu proficiency. The course builds on the skills acquired in speaking, listening, reading, and writing in the first semester of Advanced Urdu instruction (URDU 3031/4005) and provides a more advanced foundation in Urdu. The course aims for the students to acquire an advanced-level proficiency in Urdu by developing language functions such as narration, description, and comparison. Students will be introduced to different genres and styles of spoken and written Urdu as well as grammatical details that facilitate accuracy and fluency. The students are expected to read and write coherent Urdu paragraphs and further develop and hone their conversational skills. We will also review and continue the study of Urdu grammar. prereq: URDU 3031 or instructor consent

URDU 3993. Directed Studies. (1-5 cr. [max 15 cr.] ; Student Option No Audit; Periodic Fall, Spring & Summer)
Guided individual study of Urdu language or linguistics. prereq: instr consent, dept consent, college consent

URDU 4001. Beginning Urdu I for Graduate Student Research. (; 5 cr. ; Student Option No Audit; Every Fall)
Basic listening, speaking, reading, and writing skills. Emphasizes development of communicative competence. Meets with URDU 1011.

URDU 4002. Beginning Urdu II for Graduate Student Research. (; 5 cr. ; Student Option No Audit; Every Spring)
Basic listening, speaking, reading, and writing skills. Emphasizes development of communicative competence. Meets with URDU 1012.

URDU 4003. Intermediate Urdu I for Graduate Student Research. (; 5 cr. ; Student Option No Audit; Every Fall)
Development of reading, writing, speaking, and listening skills. Grammar review, basic compositions, oral presentations. Meets with URDU 3021.

URDU 4004. Intermediate Urdu II for Graduate Student Research. (; 5 cr. ; Student Option No Audit; Every Spring)
Reading, writing, speaking, and listening. Grammar review, basic compositions, oral presentations. Meets with URDU 3022.

URDU 4005. Advanced Urdu I for Graduate Research. (4 cr. ; Student Option No Audit; Every Fall)
Continued emphasis on development of communication skills, ability to comprehend both written/spoken texts. Speak, read, write in Urdu beyond intermediate level. Meets with URDU 3031.

URDU 4006. Advanced Urdu II for Graduate Research. (4 cr. ; Student Option No Audit; Every Spring)
This course is intended for students who have already completed four semesters of

study in Urdu or have an equivalent Hindi-Urdu proficiency. The course builds on the skills acquired in speaking, listening, reading, and writing in the first semester of Advanced Urdu instruction (URDU 3031/4005) and provides a more advanced foundation in Urdu. The course aims for the students to acquire an advanced-level proficiency in Urdu by developing language functions such as narration, description, and comparison. Students will be introduced to different genres and styles of spoken and written Urdu as well as grammatical details that facilitate accuracy and fluency. The students are expected to read and write coherent Urdu paragraphs and further develop and hone their conversational skills. We will also review and continue the study of Urdu grammar. Meets with URDU 3032.

URDU 4015. Accelerated Beginning Urdu for Graduate Research. (5 cr. ; Student Option No Audit; Every Fall)

Designed for students who already have good speaking skills (mainly heritage students) or those who studied Urdu in the past and can review basic knowledge of the language at a faster pace than that of regular language classes. This course focuses on all four skills (including cultural skills) to develop communicative competence at a novice-high level. The Urdu script will be introduced right from the beginning. Students will learn materials that are normally covered in a full academic year. Meets with URDU 1015.

URDU 4016. Accelerated Intermediate Urdu for Graduate Research. (5 cr. ; Student Option No Audit; Every Spring)
This course continues the accelerated Urdu curriculum and covers the same material as URDU 4003 and 4004 (Intermediate Urdu I and II). Designed for heritage speakers or students who have completed the beginning courses in Urdu (4002 or 4015) and can handle a faster pace. This course aims to refine and expand previously acquired language skills. Prior knowledge of Urdu at the levels of listening, speaking, reading, and writing is essential. In this course, special focus is directed to developing vocabulary and mastering relatively complex grammatical structures used in appropriate socio-cultural environments. Class sessions will be interactive. Students will engage with audio and video material to develop language skills in the class and at home as well as measure language comprehension. Meets with URDU 3016.

URDU 5040. Readings in Urdu Texts. (; 3 cr. ; Student Option; Periodic Fall & Spring)
Read authentic materials of various types to improve reading/speaking ability.

URDU 5993. Directed Study. (1-5 cr. [max 10 cr.] ; Student Option; Periodic Fall & Spring)
Guided individual readings.

Veterinary & Biomedical Sci (VBS)

VBS 1001. Introduction to Biotechnology. (BIOL,TS; 4 cr. ; A-F or Audit; Every Spring)
Basic understanding of cell biology/biotechnology. Laboratory exercises using

modern molecular biotechnology techniques. Lectures. History of biotechnology. Cell biology/biotechnology. Develop research plan.

VBS 2032. General Microbiology With Laboratory. (5 cr. ; A-F only; Every Fall & Spring)
Bacterial metabolism, growth/genetics, biology of viruses/fungi. Control of microorganisms. Host-microbe interactions, microorganisms/disease, applied microbiology. prereq: One semester each of college chemistry, biology

VBS 2100. Companion Animal Anatomy. (3 cr. ; A-F only; Every Spring)
Develop anatomical knowledge through study/dissection. Compare/contrast animal adaptations. Prereq: General Biology (e.g., BIOL 1009) is recommended

Veterinary Clinical Sciences (VCS)

VCS 2101. Topics. (; 1-8 cr. ; A-F only; Every Fall, Spring & Summer)
Topics class

VCS 2201. The Intersection of Cancer in Society and Technology. (3 cr. ; A-F only; Every Spring)
The course objectives are to discuss why cancer happens, the impact that cancer has on our society, and how we can use science and technology to defeat it. For most people, cancer is a mysterious and fearsome condition. This emotional response means that social stigmas are often tied to a cancer diagnosis. However, at its core cancer is a disease caused by mutations in a cell's DNA. In fact, the same mechanisms of mutations in DNA that lead cells to become cancerous are the drivers of evolution, so cancer risk can be considered as part of our evolutionary legacy. Moreover, few people realize that advances in cancer research and treatment are allowing millions of people (and pets) to lead healthy and fulfilling lives as cancer survivors. We will discuss the biological and evolutionary foundations for why cancer happens and advances in how we detect it, treat, and prevent it. The course is designed for students from all majors, and non-scientists are encouraged to enroll and participate. A better understanding by scientists and non-scientists alike of the risks for cancer, of its possible occurrence in virtually all animals, and of advances in diagnosis and treatment, will help demystify this condition and allow students to converse about it in an objective fashion. We have the tools to create a world where we no longer fear cancer, and our goal is to enroll motivated students from the University of Minnesota who will help us achieve this vision.

VCS 4606. Small Animal Management. (; 3 cr. ; A-F or Audit; Every Fall & Spring)
This online course provides an overview of small animal management. Species covered include dogs, cats, small mammals, reptiles, and birds. Course content covers public health, community education, general wellness care, and recognizing common diseases in small animals. Student learning is assessed through online quizzes, discussion participation, and group projects.

VCS 4992. Directed Readings in Veterinary Clinical Sciences. (; 1-6 cr. [max 12 cr.] ; A-F only; Every Fall, Spring & Summer)

Students read seminal works in veterinary medicine and literature pertaining to their area of interest. Final project evaluated by faculty member. prereq: [One-page proposal, bibliography of works to be read] submitted to faculty

VCS 4993. Directed Study in Veterinary Clinical Sciences. (; 1-6 cr. [max 12 cr.] ; A-F only; Every Fall, Spring & Summer)

Students expand their knowledge of a specific area. Final project evaluated by faculty member. prereq: One-page proposal submitted to faculty member

VCS 4994. Directed Research in Veterinary Clinical Sciences. (; 1-6 cr. [max 12 cr.] ; A-F only; Every Fall, Spring & Summer)

Students perform research in lab setting. prereq: One-page proposal submitted to faculty member

Veterinary Med Summer Research (VTMD)**VTMD 4999. Veterinary Medicine Summer Research.** (; 0 cr. ; No Grade Associated; Every Summer)

Veterinary Medicine Summer Research

Veterinary Medicine, Graduate (VMED)**VMED 5080. Problems in Veterinary Epidemiology and Public Health.** (; 1-3 cr. ; A-F or Audit; Every Fall & Spring)

Individual study on problem of interest to epidemiology or public health student.

VMED 5082. Diagnostic Epidemiology of Infectious Diseases. (; 2 cr. ; A-F only; Every Spring)

Theoretical principles, practical applications of diagnostic testing in populations. Examples related to infectious diseases in veterinary/human health. Basis of test performance, limitations, interpretations. prereq: Statistics course or instr consent

VMED 5090. Seminar: Veterinary Epidemiology. (; 1 cr. [max 3 cr.] ; S-N or Audit; Every Fall & Spring)

Each student leads at least one seminar. Reviews of current research, literature reviews, and technique development. Students and participating faculty participate in presentation, discussion, and administration of the seminars. prereq: Veterinary Medicine grad student

VMED 5101. Molecular and Cellular Basis of Nanoparticle Toxicity. (; 3 cr. [max 6 cr.] ; A-F or Audit; Every Fall)

Use of nanotechnology in scientific research. Impact of nanomaterials on biological systems.

VMED 5165. Surveillance of Foodborne Diseases and Food Safety Hazards. (; 2 cr. ; Student Option; Every Spring)

Principles/methods for surveillance of foodborne diseases. Investigation of outbreaks. Assessment of food safety hazards. Focuses

on integration of epidemiologic/lab methods. prereq: [PUBH 5330, [professional school or grad student]] or instr consent

VMED 5180. Ecology of Infectious Disease. (3 cr. ; Student Option; Every Fall)

How host, agent, environmental interactions influence transmission of infectious agents. Environmental dissemination, eradication/control, evolution of virulence. Use of analytical/molecular tools.

VMED 5181. Spatial Analysis in Infectious Disease Epidemiology. (3 cr. ; Student Option No Audit; Every Spring)

Spatial distribution of disease events. Exposures/outcomes. Factors that determine where diseases occur. Analyzing spatial disease data in public health, geography, epidemiology. Focuses on human/animal health related examples. prereq: Intro to epidemiology, statistics,

VMED 5182. Molecular biology for the Public Health Professional. (2 cr. ; Student Option; Every Spring)

This course focuses on introducing students to molecular biology lab tools that are used to investigate infectious diseases in public health settings. The course combines laboratory sessions during which students will learn and run molecular assays with computer lab sessions during which students will analyze molecular data.

VMED 5190. Effective Science Communication. (; 2 cr. ; S-N only; Every Fall)

Skills needed to research, organize, develop, and deliver an oral scientific presentation or to assist in finding, compiling, and organizing information for presentations, theses, or papers suitable for publication. prereq: Grad student

VMED 5210. Advanced Large Animal Physiology I. (; 1-3 cr. [max 6 cr.] ; Student Option; Every Fall)

Review of large animal physiology at level needed for specialty board certification or beginning research. Students present topics in physiology and supplement reading with clinical case material or journal articles.

VMED 5211. Advanced Large Animal Physiology II. (; 1-3 cr. ; A-F or Audit; Every Spring)

Large animal physiology for specialty board certification or beginning research. Students present topics in physiology and supplement reading with clinical case material or journal articles. prereq: instr consent; 5210 recommended

VMED 5232. Comparative Clinical Veterinary Dermatologic Pathology. (; 1 cr. [max 2 cr.] ; S-N only; Every Fall & Spring)

Microscopic pathology of basic dermatologic reactions and of variable disease states. prereq: DVM degree or foreign equiv

VMED 5240. Advanced Small Animal Pathobiology I. (1 cr. ; A-F only; Fall Even Year)

Biology, physiology, pathophysiology, and medicine of disciplines relevant to companion animals. Pathogenesis/treatment of diseases.

Developing hypotheses that can be translated into clinical research. Prereq CVM grad student, [DVM or foreign equiv] degree.

VMED 5241. Advanced Small Animal Pathobiology II. (1 cr. ; A-F only; Spring Even Year)

Overview of biology, physiology, pathophysiology, and medicine of disciplines. Underlying pathogenesis/treatment of diseases of companion animals. Developing hypotheses that could be translated into clinical research. Prereq CVM grad student, [DVM or foreign equiv] degree.

VMED 5242. Advanced Small Animal Pathobiology III. (1 cr. ; A-F only; Fall Odd Year)

Overview of biology, physiology, pathophysiology, and medicine. Underlying pathogenesis/treatment of diseases of companion animals. Developing hypotheses that could be translated into clinical research. Prereq CVM grad student, [DVM or foreign equivalent] degree.

VMED 5243. Advanced Small Animal Pathobiology IV. (1 cr. ; A-F only; Spring Odd Year)

Overview of biology, physiology, pathophysiology, and medicine. Underlying pathogenesis/treatment of diseases of companion animals. Developing hypotheses that could be translated into clinical research. Prereq CVM grad student, [DVM or foreign equiv] degree.

VMED 5295. Problems in Large Animal Clinical Medicine/Surgery and Theriogenology. (; 1 cr. [max 3 cr.] ; A-F or Audit; Every Fall & Spring)

Hospital cases using standardized format, audiovisual aids. Review literature pertaining to case. One or two cases presented by enrolled participants per month. prereq: VMed grad student, possess DVM

VMED 5310. Topics in Veterinary Clinical Pathology. (; 1 cr. [max 2 cr.] ; S-N only; Every Fall & Spring)

Modified rounds format. Cases from VMC used to explore cytology with associated chemistry/hematology data. Attendees/clinicians can request lab topics for discussion. Past topics have included lab measurement of chemical analytes, test sensitivity or specificity (e.g., ethylene glycol test, FELV test), lab testing for infectious agents. prereq: Grad student in CVM

VMED 5319. Veterinary Gross Pathology. (1 cr. [max 3 cr.] ; S-N only; Every Fall & Spring)

Diagnosing gross lesions of tissues. Evaluating images from wide variety of animals submitted to lab. Mock exams. Students prepare two in-depth reviews on topics covered during in course. Prereq Grad student in CMB or [VMED, [DVM degree or foreign equivalent], college consent]

VMED 5320. Advanced Veterinary Systemic Pathology I. (; 3 cr. ; A-F only; Fall Even Year)

Students review/summarize topics in systemic pathology using veterinary pathology textbooks and relevant updates from pathology and veterinary medical journals. Diagnostic cases in alimentary, respiratory, urinary, cardiovascular,

and hematopoietic system pathology. Students give 10-15 presentations with handouts for other students. prereq: Grad student in VMED or [CMB, [DVM degree or foreign equiv]] or instr consent

VMED 5330. Veterinary Descriptive Histopathology. (; 1 cr. [max 2 cr.] ; Student Option; Every Fall & Spring)

Weekly, one-hour microscopic slide presentations, reviews on wide variety of diseases in domestic/non-domestic animals. Students present microscopic slide cases and prepare discussions about disease entities, differential diagnoses, and ancillary tests. prereq: Grad student in VMED or [CMB, [DVM degree or foreign equiv]] or instr consent

VMED 5410. Scientific Writing and Speaking. (; 2 cr. ; A-F only; Fall Odd Year) Techniques of writing/publishing papers/theses. Manuscript preparation. Submission/review process. Proofreading. Publishing processes. Grant Writing. Oral/poster presentations at scientific meetings. prereq: Grad student in health sciences

VMED 5430. HIV/AIDS: Pathogenesis, Treatment, and Prevention. (; 1 cr. ; Student Option; Every Fall)

Exposure to pathogenesis, treatment, and prevention of HIV/AIDS from clinical faculty who are dealing with AIDS patients. Developing new questions and design experiments that have greatest chance of translating to clinical setting. prereq: Grad student

VMED 5440. Using Risk Analysis Tools: Estimating Food Safety Risks on the Farm to Table Continuum. (; 2 cr. [max 3 cr.] ; A-F only; Every Spring)

This applications-based course will provide the necessary risk-based tools to evaluate and mitigate the microbial and chemical risks in a food production chain—from the farm until consumption. Students will follow the risk analysis process as an integral part of science-based decision-making to estimate and manage food safety risks. Students will apply different qualitative and quantitative tools by using a computer.

VMED 5442. Quantitative Methods for Population Health. (3 cr. [max 6 cr.] ; Student Option; Every Spring)

This course reviews the principles and application of advanced methods for analysis of population health data, with a focus on animal health and infectious diseases. Analytical techniques that will be taught and applied during the course include risk assessment, spatial analysis, disease modeling, and disease economics.

VMED 5492. Seminar: One Health and Infectious Diseases of Wildlife. (2 cr. ; S-N only; Every Fall)

The course will explore the applied concept of One Health and infectious diseases of wildlife in weekly case studies. In each case study, students will gain an understanding of system dynamics, infer the interplay between humans, animals and the environment in the context of a given wildlife disease, and confront current disease management practices and challenges

for successfully mediating transmission and spread.

VMED 5496. Training in Swine Production and Management. (; 4 cr. ; S-N only; Every Fall & Spring)

Production module introduces techniques/protocols for swine production system operation. Research module covers applied research trials for viral/bacterial pathogens in pigs. prereq: VMED grad student or instr consent

VMED 5594. Research in Veterinary Medicine. (1-4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Independent study as determined by instructor. Usual activity includes conducting research in instructor's lab, though research in field may also be included. prereq: Jr, instr consent

VMED 5596. Swine Diseases and Diagnostics. (; 2-3 cr. [max 2 cr.] ; Student Option; Every Fall & Spring)

Review of recent advances in swine diseases; farm visits for on-farm disease diagnostics and control programs.

VMED 5621. Principles of Veterinary Anesthesiology. (; 2 cr. ; A-F only; Every Spring)

In-depth training in principles of veterinary anesthesiology. Lectures, anesthesia labs, presentations by students. prereq: VMed grad student, [DVM degree or foreign equiv], instr consent

VMED 5670. Bovine Surgery Practicum. (; 2 cr. ; S-N only; Every Fall & Spring)

Intensive training in ruminant surgery. Evaluation of food animal surgery principles, hands-on laboratory components. prereq: [VMed grad student, [DVM or equiv foreign degree]] or instr consent

VMED 5881. Food Production, Processing, and Supply Chain. (1 cr. ; S-N only; Every Spring)

Food commodities and agricultural crops play critical roles relevant to public health, energy and economic vitality, feeding the increasing global human population, and providing multiple outputs from feed for animals, to fuel for vehicles, transportation and energy. This course focuses on agricultural commodities. For 2019 we will focus on corn and dairy production systems in Minnesota. The commodity of interest will change from year-to-year to other commodities like pork and sugar beets ? which provide critical outputs for the state of Minnesota.

VMED 5895. Veterinary Public Health Integrated Learning Experience. (1-3 cr. ; S-N only; Every Fall, Spring & Summer)

Part of the curriculum for the master's degree includes an opportunity for students to develop a written document detailing applications of public health practice. Completion of the ILE allows students to synthesize aspects of public health into a document that can be utilized by public health professionals.

VMED 5896. Application of Veterinary Public Health. (0.5-6 cr. [max 12 cr.] ; S-N only; Every Fall, Spring & Summer)

The APEx, applied practice experience provides students an opportunity to learn first-hand about the organization, operations, and special activities of selected agencies, institutions and industries concerned with public health practice. This is a means of gaining additional insight into public health programs, personnel management, governmental relations, public relations, legislative support and, particularly, knowledge of special investigations or responses conducted by these organizations. Participation in the activities of public health practice programs external to the University adds a dimension of experience to the curriculum that enriches the student's training and may be beneficial in seeking employment.

VMED 5910. Grant Writing: What Makes a Winning Proposal?. (2 cr. ; Student Option; Every Spring)

Components of a strong proposal. Grant submission process. What reviewers look for. How to locate grant announcements that match research interests.

VMED 5915. Essential Statistics for Life Sciences. (3 cr. ; A-F or Audit; Every Fall)

This course is a broad overview of the principles and methods of statistical analysis used in life sciences research, including biological, veterinary, and translational research, and provides the background a new researcher needs to understand and apply commonly used statistical methods and the preparation needed for more advanced coursework. Classes will include general instruction and background information, detailed examples of how to perform the analyses, with actual data sets, and discussion on how the topic has been applied in biological research, including reading and assessing papers in the field. Computing will be performed using the R software environment, though students may use alternate software with permission. Topics will include: ? Descriptive statistics and exploratory graphics ? Understanding statistical inference and interpreting P-values and confidence intervals. ? One and two sample inference, including t-tests, proportion tests, and non-parametric alternatives ? Linear regression, including the effects of confounders ? ANOVA methods, including pairwise comparisons and multiple comparisons

VMED 5920. Food Defense: Prepare, Respond, Recover. (; 3 cr. ; A-F only; Every Fall)

Basic principles of preparedness/emergency response. Instructor may substitute topics if timelier topic arises. prereq: Grad or professional student or instr consent

VMED 5921. Protecting your Lunch: Food Defense Awareness. (; 1 cr. ; A-F only; Every Spring)

Protecting your Lunch: Food Defense Awareness presents current issues, challenges, concerns, and activities impacting global food defense. "Food Defense" is the sum of actions and activities related to prevention, protection, mitigation, response, and recovery of the food system from intentional acts of

adulteration and disruption. This includes intentional acts from both terrorism and criminal activities. This topics course incorporates case studies as well as current events that directly relate to food system disruption, cause food supply chain interruption, or may provoke intentional adulteration or food fraud.

VMED 5930. Antimicrobial Resistance (AMR) from a One Health Perspective. (; 1 cr. ; A-F or Audit; Every Spring)

Fundamentals of antimicrobial resistance (AMR) development, transmission, and risks to humans, animals, and the environment delivered by experts in the One Health concept (interconnection between people, animals, plants, and their shared environment). Review and development of research-based resources and methods for communicating scientific information to non-academic audiences. Multi-institution collaboration with online engagement during class meetings.

VMED 5989. Introduction to Applied Health Policy and Leadership. (; 1.5 cr. ; Student Option No Audit; Every Spring)

This course introduces students to policy analysis and leadership tools to navigate the complexities of policy-making and foster policy dialogue and action. We will apply a health lens to discuss contemporary policy issues, explore the different stages of the policy cycle, map the polarities of complex challenges, and apply implementation science techniques to guide policies from theory to impact. May be of particular interest to graduate students in the academic health sciences or HHH/OLPD. prereq: Graduate or professional degree in-progress or completed.

VMED 5990. Veterinary Public Practice Seminar. (; 0.5 cr. [max 2 cr.]; S-N only; Every Fall & Spring)

Interactive review of current public practice topics in environmental health/toxicology, infectious/parasitic diseases, public health administration/education, epidemiology and biostatistics, and food safety.

VMED 5994. Advanced Clinical Epidemiology. (; 1 cr. ; A-F only; Every Fall)

An in-depth focus on infectious disease epidemiology, with opportunities to apply epidemiologic principles to control infectious diseases in animal populations.

VMED 5998. Leadership to Address Global Grand Challenges. (1.5 cr. ; Student Option No Audit; Every Spring)

In this 5-day skills-based course, participants will learn and apply integrative leadership (also known as shared or facilitative leadership) strategies for addressing global grand challenges. Using global food system challenges as a basis for exploration, we will focus on leadership practices that foster collective action across diverse groups of people.

Veterinary Population Medicine (VPM)

VPM 1550. Introduction to the horse including care, handling, and recognizing

behaviors. (; 1 cr. ; Student Option; Every Fall, Spring & Summer)

Horse breeds, colors, behaviors. Basic care/handling. Online course, but includes three labs working with live horses.

VPM 1560. Introduction to Horseback Riding and Horse Health. (3 cr. ; Student Option; Every Fall, Spring & Summer)

Basic motor skills/commands necessary to ride horse. Focus on interaction of human body with horse's body to create movement. Basic horse care skills, grooming, taking temperature, using hoof tester, etc.

VPM 1901. Aquatic Toxicology, Water Safety, and the Society. (; 2 cr. ; A-F only; Every Fall)

Our planet Earth is dominated (>70%) by water. The hydrosphere contains about 1.36 billion cubic kilometers of water mostly in the form of a liquid (water) that occupies topographic depressions on the Earth. The second most common form of the water molecule on our planet is ice. If all our planet's ice melted, sea-level would rise by about 70 meters. Water is also essential for life. Most animals and plants contain more than 60% water by volume. Without water, life would probably never have developed on our planet. Water contains nutrients that are essential for life. Nutrients are extracted from rocks and sediments. At present, human activity is dumping harmful pollutants (poisons) in surface and ground water. Poisons distribute between water and sediments, depending on the properties of the toxin, soil characteristics and water chemistry. Therefore, poisons present in water may contaminate both the aquatic and the soil dwellers, and plants, thus contaminating the food chain for humans as well as animals. The overall aim of this course is to discuss (i) effects of water pollution on aquatic and terrestrial organism including humans, (ii) water quality issues and (iii) water safety. After completing this course, participants will be able to: -Understand physicochemical and solubility properties of water. -Compare and contrast toxins? behavior in water, soil, air and organisms. -Understand the concept of clean and polluted water. -Understand modes of action of toxic chemicals, types of effects from the molecular to the ecosystem level, and detoxification processes. -Understand food-chain contamination and ensuing toxicity.

VPM 1902. Garbage, Government, and the Globe. (; 2 cr. ; A-F only; Every Spring)

Garbage, in a broad sense, can be defined as anything (solids, liquid or gas) carelessly discarded because it is perceived to be worthless in our homes, businesses, institutions and factories. When humans were hunters and gatherers, they consumed what was needed, discarded what could not be used and moved on. Being part of nature, the discarded items degraded into reusable nutrients. The humans' interaction with the environment was well balanced and humans' footprints on the Earth were very minute, if at all. However, as the industrial revolution led to the development of large industries, humans began to invent things

that were not part of nature, thus the natural balance began to misbalance. This results in accumulation of garbage into the environment, resulting in pollution of the atmosphere, land and water sources. Recently, economic globalization has further increased the magnitude of environmental pollution and ensuing deterioration of public health. If the current trend is not reversed, planet Earth may eventually become uninhabitable. Therefore, the students registering in this course will: (1) learn the processes that facilitate generation and accumulation of garbage, (2) understand the mechanisms responsible for pollution of the Earth's environment, (3) characterize the health effects of the polluted environment, (4) strategize remediation steps that may halt or repair the damage and (5) interpret data in writing and verbally.

VPM 1903. Poison, Poisoning and Society. (; 2 cr. ; A-F only; Every Fall)

In the United States, approximately 50,000 people die each year as a result of unintentional poisoning, and another 800,000 are treated in emergency departments. The human-caused pollution of the environment (such as oil spill, poisonous gas leak, water pollution, global warming gas release, etc.) seriously impacts the health of millions of people and animals around the world. Despite such serious health consequences, people do not fully understand poisons or poisoning. In this course, students will learn some important aspects regarding poisons including, but not limited to the following. -What are poisons and what is poisoning? -Where do poisons come from? -What are the adverse effects of different types of poisons? -How to prevent poisoning? -What are the impacts of poisoning to the society? Chemicals encountered in everyday life will be used as examples to evaluate the hazards and risk of exposure and put them into perspective. Students will learn the basic principles of toxicology, tools for assessing the toxicology of chemicals, effects of chemicals on the body, and why some people are more sensitive to chemicals than others.

VPM 2020. Topics in Veterinary Population Medicine. (; 1-3 cr. [max 6 cr.]; Student Option; Every Fall, Spring & Summer) Topics shell. See title descriptions.

VPM 2400. Managed Captive Wildlife. (3 cr. ; A-F or Audit; Every Fall)

This course is an introduction to key issues at the interface of humans and managed captive wildlife. Topics include: the role of managed captive wildlife species in conservation, education, exhibition, agriculture, and research; biodiversity, urban wildlife, biosentinel science, ethics, and animal welfare; and an introduction to the principles and techniques of the care and management of wildlife species in captive settings.

VPM 2451. Introductory Concepts in Raptor Rehabilitation. (; 1 cr. ; A-F only; Every Fall)

This online course will provide a basic understanding of raptor rehabilitation. Topics include: goals of wildlife rehabilitation; regulatory policies and permits; ethical decision making; anatomy and physiology; diet and

nutrition; housing; restraint and handling; physical exam; and, emergency care.

VPM 2455. Introduction to Raptor Reconditioning and Release. (; 1 cr. ; A-F only; Every Spring)

This 1 credit online course will provide a basic understanding of raptor reconditioning and release, reneating of juveniles, and related management. Topics include: management in captivity; natural and captive behavior; principles of flight and exercise; flight evaluation; creance reconditioning technique; pre-release preparations, transport and release; reneating and release techniques for young raptors; and post-release monitoring.

VPM 2551. Biosecurity for Horse Farms. (; 1 cr. ; Student Option; Every Fall & Spring)

In the era of COVID-19, a need for a better understanding of general biosecurity principles has become clear. This online course provides a general introduction to principles of biosecurity as they pertain to the horse farm with a focus on small farms, boarding facilities, and hobby farm owners. The principles taught in this course also apply to larger enterprises. The information presented will apply to all disciplines of horse riding and horse businesses, and include biosecurity measures that protect horses as well as their humans. The student will obtain practical knowledge and tools that can be immediately applied. The course is taught by College of Veterinary Medicine faculty veterinarians with current, real-world experience in the management and prevention of equine infectious disease and horse husbandry.

VPM 3020. Topics in Veterinary Population Medicine. (; 1-3 cr. [max 6 cr.] ; Student Option; Every Fall, Spring & Summer)
Topics shell - see title descriptions

VPM 3021. Protecting your Lunch: Food Defense Awareness. (; 1 cr. ; A-F only; Every Fall & Spring)

Protecting your Lunch: Food Defense Awareness presents current issues, challenges, concerns, and activities impacting global food defense. "Food Defense" is the sum of actions and activities related to prevention, protection, mitigation, response, and recovery of the food system from intentional acts of adulteration and disruption. This includes intentional acts from both terrorism and criminal activities. This topics course incorporates case studies as well as current events that directly relate to food system disruption, cause food supply chain interruption, or may provoke intentional adulteration or food fraud.

VPM 4131. Immunology. (; 3 cr. ; Student Option; Every Spring)

Molecular, genetic, and cellular bases for humoral/cell-mediated immunity. Innate immunity. Antigen recognition by B and T lymphocytes. Interactions between lymphocytes and other cells of immune system. Cytokines. Immunoregulation. Key aspects of clinical immunology.

VPM 4400. Diseases in free-ranging and captive wildlife. (3 cr. ; A-F or Audit; Every Spring)

This course will provide a basic understanding of animal health and disease in free-ranging and managed captive wildlife. Topics include: epidemiology of disease, infectious and non-infectious diseases, and potentials impacts of disease on human health, managed agriculture and wildlife for both individuals and populations.

Vienna Executive MBA (VMBA)

VMBA 5700. Managerial Accounting. (; 4 cr. ; A-F or Audit; Every Spring)

How to analyze accounting for use in management decisions. Planning/control. Transfer pricing, performance measurements, cost behavior, cost allocation, activity based costing, standard costs.

VMBA 5701. Data Analysis and Decision Making. (; 4 cr. ; A-F or Audit; Every Spring & Summer)

Exploratory data analysis, basic inferential procedures, statistical process control, regression analysis, decision models.

VMBA 5702. Financial Management. (; 4 cr. ; A-F or Audit; Every Spring & Summer)

Theory/practice of finance from an analytical approach. Students apply concepts of risk, return, valuation to decisions that a corporate financial officer or person engaged in small business must make about sources/uses of funds during changing financial markets.

VMBA 5703. Marketing Management. (; 4 cr. ; A-F or Audit; Every Spring & Summer)

Developing/implementing most appropriate combination of variables to carry out a firm's strategy in its target markets. Analytic perspectives, concepts, decision tools of marketing for product offering decisions, distribution channel decisions, pricing decisions, communication program decisions.

VMBA 5704. Managing People and Organizations. (; 4 cr. ; A-F or Audit; Every Spring)

Theories/frameworks for analyzing behavior of individuals, groups, organization itself. Emphasizes making decisions, developing action plans. Concepts/principles associated with function of human resource management (e.g., personnel selection, reward/compensation, collective bargaining).

VMBA 5705. Operations Management. (; 4 cr. ; A-F or Audit; Every Fall)

Operations management function in different types of organizations. Emphasizes productive, innovative, competitive operations. Concepts/principles related to management of quality/innovation within service/manufacturing organizations.

VMBA 5706. Business, Government, and Macroeconomics. (; 4 cr. ; A-F or Audit; Every Fall)

Roles of government/business in society. Alternative systems of economics, political values. Social, political, economic, cultural conflicts affecting business sector.

VMBA 5707. Economics in Transition. (4 cr. ; A-F or Audit; Every Fall)

Technological, political, and ethical forces that are shaping the competitive environment. Theoretical considerations. Business responses to specific issues. Projects/cases for companies in East Central Europe.

VMBA 5709. Info Tech Mgmt. (4 cr. [max 16 cr.] ; A-F or Audit; Every Spring)

Various information technologies, their applications. Competitive advantages associated with information technology, organizational/managerial implications.

VMBA 5710. Advanced Financial Management for Global Markets. (; 4 cr. ; A-F or Audit; Every Spring)

Advanced financial concepts for corporate financial decisions at executive level. Investment, firm financing, global markets.

VMBA 5711. Managing Globalization (Guangzhou). (4 cr. ; A-F or Audit; Every Spring & Summer)

Developing international strategies for firms wishing to expand into global markets. Emphasizes analyzing opportunities/constraints posed by international environment. Putting global strategies into operation. Managing strategic alliances/networks.

VMBA 5712. Strategies for a Global Company: an Integrative Perspective. (; 6 cr. [max 36 cr.] ; A-F or Audit; Every Spring)

Multi-disciplinary perspectives from strategic marketing, corporate strategy, operations management. Involvement of faculty/corporate executives. Site visits to global companies, student projects. Capstone course.

VMBA 5713. Negotiations and Conflict Management. (; 4 cr. ; A-F only; Every Spring)

Typical challenges faced when negotiating. Strategies for managing challenges and improving skills as a negotiator and conflict manager.

VMBA 5714. Financial Accounting. (; 4 cr. ; A-F or Audit; Every Spring)

External accounting system used by firms to measure economic performance/financial position. Students analyze corporate financial reports. Impact of economic events. Discussions, cases. Role of financial reporting standards/intermediaries.

VMBA 5715. Corporate and Entrepreneurial Strategy. (4 cr. ; A-F or Audit; Every Fall & Spring)

The objective of the course is to help develop analytic skills in the identification of key issues and in the formulation of appropriate strategies for firms, both established and entrepreneurial, facing complex business situations. We also examine the process through which strategic decisions are made and implemented and discuss how strategy is different in the age of the internet.

Virology (VIRO)

VIRO 5030. Virology Research Presentations. (1 cr. [max 10 cr.] ; S-N only; Every Fall & Spring)

This course is designed to enhance knowledge in virology through research presentations as well as the critical evaluation

of presentations of other students and researchers. Presentation will include current virology research, both individual research projects and critical reading, and presentation of current literature. Previously OBIO 5030

Warsaw Executive MBA (WMBA)

WMBA 5658. Financial Management. (; 4.5 cr. ; A-F or Audit; Periodic Fall)

Essentials of financial management theory/practice. Time value of money, valuation of bonds/stocks, risk/return trade-off, capital budgeting, optimal investment decisions, financial analysis/planning, cost of capital, debt/equity choices, firm valuation, mergers/acquisitions.

WMBA 5662. Macroeconomic Business Environment. (; 3 cr. ; A-F or Audit; Every Spring)

Students apply methods of decision-making, and of business/public policy analysis, in various real situations drawn from experience of developed market economies.

Water Resources Science (WRS)

WRS 5050. Special Topics in Water Resources Science. (; 1-3 cr. ; A-F or Audit; Periodic Fall & Spring)

Practical topics for local water resource management. Policy and institutions, watershed science, civic engagement, assessment, communication, implementation practices, and administration. Requires working with a mentor in local water resource management. Online only.

WRS 5101. Water Policy. (; 3 cr. ; Student Option; Every Spring)

Socio-cultural, legal, and economic forces that affect use of water resources by individuals/institutions. Historical trends in water policy, resulting water laws in the United States. Institutional structures whereby water resources are managed at federal, state, and local levels.

WRS 5150. Watershed Specialist Training. (; 2 cr. ; S-N only; Every Fall & Spring)

Practical topics for water resource management professionals. Current policies and institutions, watershed science, civic engagement, assessment, communication, implementation practices, and administration. Requires working with a mentor in local water resource management. Online only.

Writing Studies (WRIT)

WRIT 1001. The Art of Explaining Things: Introduction to Technical Writing and Communication. (3 cr. ; A-F only; Every Fall & Spring)

This course introduces students to the field of technical writing and communication. What do technical communicators do? They explain things! Technical communicators are often tasked with explaining complex ideas to specific audiences through various means. Students will explore the history and current and future trends of the field

through a variety of readings including journal articles and industry publications. Topics in the course include ethics, global communication, collaboration, usability, digital writing technologies, and content management, as well as the rhetorical principles of audience, purpose, and context. Students will gain exposure to current practices in the field through guest speakers and assignments. Other assignments include oral presentations, analytical and research writing, and writing for the web. The format of the class includes lecture, student-led discussions, group activities, and peer review.

WRIT 1201. Writing Studio. (; 4 cr. ; A-F only; Every Fall, Spring & Summer)

Note: this course does not fulfill the first-year writing requirement. WRIT 1201: This course gives students a foundation in the study and practice of writing process and rhetorical frameworks for a variety of genres and skills to enhance writing in and beyond college. This course is for students who want more instruction, practice, and time to develop familiarity with writing tools and processes to support their future college writing and successful completion of WRIT 1301 (fulfillment of FYW requirement).

WRIT 1301. University Writing. (; 4 cr. ; A-F only; Every Fall, Spring & Summer)

WRIT 1301 introduces students to rhetorical principles that provide a framework for successful written communication in college and beyond. Students study and write in a variety of genres and disciplines, and in multimodal forms. The courses focus on writing as a way of knowing and learning to develop ideas through critical thinking, including analysis and synthesis. Based on the assumption that writing is a social activity, the course is a workshop format and requires active engagement in the writing process, including pre-writing, peer review, revision, and editing. Students develop information literacy and hone the ability to locate, evaluate, and effectively and ethically incorporate information into their own texts. The blended model combines two credit hours/week of small face-to-face class with two credit hours of online instruction in Canvas. Some sections are dedicated for international and multilingual students. WRIT 1301 fulfills the first-year writing requirement.

WRIT 1401. Writing and Academic Inquiry. (; 4 cr. ; A-F only; Every Fall, Spring & Summer)

WRIT 1401 students read and analyze increasingly challenging texts and are expected to produce increasingly sophisticated responses. Students analyze how writing works in varying contexts/genres and how it presents complex arguments. Students use and expand their writing process and revision to develop writing form/style and rhetorical content that contributes to conversations and provides new insight. Course work also includes academic genres of reading and writing; development of critical reading practices and critical thinking skills; analysis of writing for rhetorical principles of audience, purpose, and argumentative strategies; and emphasis

on performing research with electronic and print libraries. A properly cited research paper that includes a research proposal and an annotated bibliography is the culmination of the course. WRIT 1401 fulfills the first-year writing requirement.

WRIT 1915W. Arguing with Authority: The Past, Present, and Future of Higher Education. (CIV,WI; 3 cr. ; A-F only; Periodic Fall)

This freshman seminar will introduce students to the intellectual projects of studying and participating in higher education as a participatory institution by inviting freshmen into critical dialogue with past, present, popular, and academic representations of higher education and its civic purposes. We will examine the shifting role of the university in public life and the roles that students and other constituencies have played in shaping the character of higher education through writing and other activities. Designed specifically for first-year students, the course will combine academic skill-building with personal and collective reflection on the actual and possible purposes and values of higher education for individuals and the society.

WRIT 1925W. Magazines and New Media. (WI; 3 cr. ; A-F only; Every Fall)

In this seminar, we will study magazines and other smaller publications - some of which you've already read, some of which you haven't - to discuss and write about their significance as cultural artifacts. How can magazines, when seen as "composed" objects, help us with our own writing? How is the rise of the zine and e-zine responding to the evolving digital age? We will examine all aspects of the magazine, including its art, political statements, target audience, and history. Students will practice some of the forms that the class reads and create an e-magazine.

WRIT 3029W. Business and Professional Writing. (WI; 3 cr. ; Student Option; Every Fall, Spring & Summer)

In this course students practice writing and revising common business documents for today's business world. Students write memos, proposals, cover letters, resumes, and digital and web content as well as practice choice of appropriate formats and media. The course draws from current business practices and stresses workplace collaboration, broader issues of professional literacy, and responsive writing styles. Students practice rhetorical analysis and discuss concepts such as audience, purpose, tone, and context when writing and revising their documents. Students analyze and write from a variety of perspectives and contexts including formal (researched reports, proposals) and informal (email, social media) communication. Students also build a professional online presence through such platforms as LinkedIn.

WRIT 3101W. Writing Arguments. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)

Students learn about argument, drawn from a number of theories of argument. This goal is pragmatic: those theories provide a vocabulary for talking about argument and for developing

and refining students' own written arguments. Students get regular practice, coaching, and feedback on their writing skills, primarily as these concern argumentative writing. Students also learn how to analyze argumentative texts, drawn from popular culture, academic fields, and the public realm.

WRIT 3102W. Public Writing. (CIV,WI; 3 cr. ; A-F only; Every Fall & Spring)

Students in this class examine public documents and apply critical/rhetorical analysis regarding audience, purpose, message, power, and context. Students conduct research and write documents for public audiences on contemporary issues of interest.

WRIT 3152W. Writing on Issues of Science and Technology. (WI; 3 cr. ; A-F or Audit; Every Fall & Spring)

Science and technology are key parts of nearly every aspect of our lives, and, just as important, science and technology are highly debated topics in political, economic, social, public, and personal spheres. For example, consider debates regarding genetically modified foods, space exploration, vaccines, oil pipelines, or clean drinking water. This course will push you to consider the ways you think, feel, and write about science and technology. This course will ask you to examine the relationship between language and science and technology. We will spend the semester reading about science and technology, in addition to studying and practicing different strategies, techniques, and approaches for communicating about science and technology. Using rhetorical studies as a foundation, this course will give you the tools to more effectively engage with scientific and technological topics and debates. Finally, and perhaps most importantly, this course aims to foster engagement with scientific and technological conversations. Put simply, students should leave this course caring about scientific and technological issues and wanting to participate in the conversations that surround such issues.

WRIT 3221W. Communication Modes and Methods. (WI; 3 cr. ; A-F only; Every Fall & Spring)

This course presents a survey of fundamental theories and philosophies of communication. Students will become acquainted with several theories of language and linguistic meaning and with principles of non-verbal and relational communication, and will engage in reflection on differences between older and newer media or ?modes? of discourse (speaking vs. writing; conventional print vs. digital text, etc.). In addition to introducing theories and concepts, the course seeks to develop competencies in evaluating and applying them in the analysis of communication in various contexts including face-to-face conversations, ongoing interpersonal relationships, and digitally-mediated interactions.

WRIT 3244W. Critical Literacies: How Words Change the World. (AH,WI,DSJ; 3 cr. ; A-F or Audit; Every Spring)

This course is focused on understanding and using the insights into language and writing

that animate Critical Literacy movements in the United States. Literacy is usually thought of in terms of fundamental abilities to read and write about a reality outside of language. Critical Literacy is an intellectual and social movement that challenges this dominant understanding of literacy. Critical Literacy?s fundamental claim is that texts (and our practices for working with them) invite readers (and writers) to accept particular versions of reality as the Real Truth. Through historical and contemporary models, students will learn how efforts to question and transform dominant ways of using language have played an especially important role in struggles for greater justice by and for oppressed groups. Here, people have used the ideas and methods of Critical Literacy to question how racial, gender, social class, and other privileges structure our language practices and our daily experiences. Students will be invited to apply a critical understanding of literacy to their own writing as they analyze course texts and produce original essays on topics of interest to them.

WRIT 3257. Technical and Professional Presentations. (3 cr. ; Student Option No Audit; Every Fall)

In this course students develop oral presentation skills for technical or professional topics. Areas of study in the course include visual communication, audience analysis, presentation strategies, and presentation of complex research material. The course emphasizes use of digital technologies. Recommend that students take Comm 1101 or equivalent first

WRIT 3270. Special Topics. (; 1-3 cr. [max 6 cr.] ; Student Option; Periodic Fall & Spring) See Class Schedule.

WRIT 3315. Writing on Issues of Land and the Environment. (AH,DSJ; 3 cr. ; A-F or Audit; Every Spring)

This course explores how written texts help shape understandings of the land in the U.S. Students read and analyze historical texts that have contributed to colonialist understandings of nature and the land. Students will study how the rhetorical strategies of such texts helped to form exploitive relations with the land and enact violence against indigenous peoples. Historical and current texts written by native peoples provide a counter-narrative to the myth of progress. Emphasis in the course is placed on analyzing texts with an eye toward setting the ground for conversations aimed at achieving sustainability and justice. Students will also study how written texts are composed within material contexts that contribute to their understanding.

WRIT 3371W. Technology, Self, and Society. (TS,WI; 3 cr. ; A-F only; Every Fall)

Cultural history of American technology. Social values that technology represents in shifts from handicraft to mass production/consumption, in modern transportation, communication, bioengineering. Ethical issues in power, work, identity, our relation to nature.

WRIT 3381W. Writing and Modern Cultural Movements. (AH,WI; 3 cr. ; A-F or Audit; Every Fall)

This course explores how written texts help to shape modern art and cultural movements. Writ 3381 first develops an understanding of the manifesto form by reading primary examples written by artists from such movements as Cubism and Expressionism. Students study the complex written and visual strategies of those texts and how they contributed to social and political change in the modern world. Out of those attempts to change culture, students will be challenged to consider how particular writing strategies developed in the U.S. aimed at bringing about change in 1960s culture in areas such as the women's movement, the move toward racial equality, and the environmental movement. Toward the end of the course, the writings of current movements are taken up as building on and departing from past writing and rhetorical strategies. Students both read about and practice writing strategies studied in the course.

WRIT 3405W. Humanistic Healthcare and Communication. (AH,WI; 3 cr. ; Student Option; Every Spring)

Humanistic Healthcare and Communication focuses on critically therapeutic patient-provider communication. Topics surveyed include: health literacy, cultural and risk communication, health communication, narrative theory and digital medicine. These topics are brought to bear on three historical moments in the history of medicine when humanism entered or was displaced in medical practice. Students will be exposed to writings, visual arts and music created by physicians and nurses throughout history and write critical essays on these. These will prep students for the new MCAT exam. A variety of guest lecturers from the medical profession will discuss case histories that demonstrate the course themes in practice.

WRIT 3441. Editing, Critique, and Style. (; 3 cr. ; A-F only; Every Fall & Spring)

In this course, students will increase their understanding of how language works and will learn to make choices about language, style, and punctuation to create messages that are clear, concise, and useful. The course emphasizes technical communication, but the skills learned can be applied to any communication situation. Editing practice will include three levels of editing to make the documents comprehensible and useful in which students will not only polish their grammar and punctuation skills, but they will also learn how to explain and justify changes they make in documents. Topics also included in the course are editing methods for both paper and electronic copy and editing for organization and visual design.

WRIT 3562V. Honors: Technical and Professional Writing. (WI; 4 cr. ; A-F only; Every Fall)

Written and oral communication in professional settings, gathering research, analyzing audience, assessing and practicing multiple genres. Draft, test, revise present findings in oral presentation. Honors section includes discussion on scholarly readings in technical and professional writing as well as a final

project that must be addressed to a real-world audience.

WRIT 3562W. Technical and Professional Writing. (WI; 4 cr. ; A-F only; Every Fall, Spring & Summer)

This course introduces students to technical and professional writing through various readings and assignments in which students analyze and create texts that work to communicate complex information, solve problems, and complete tasks. Students gain knowledge of workplace genres as well as to develop skills in composing such genres. This course allows students to practice rhetorically analyzing writing situations and composing genres such as memos, proposals, instructions, research reports, and presentations. Students work in teams to develop collaborative content and to compose in a variety of modes including text, graphics, video, audio, and digital. Students also conduct both primary and secondary research and practice usability testing. The course emphasizes creating documents that are goal-driven and appropriate for a specific context and audience.

WRIT 3577W. Rhetoric, Technology, and the Internet. (TS,WI; 3 cr. ; A-F only; Every Fall & Spring)

This course examines the rich and complex ways people are seeking to inform and persuade others via the internet. Western rhetorical theories have adapted to address spoken, written, visual, and digital communication. The internet incorporates aspects of all of these modes of communication, but it also requires us to revisit how we have understood them. Students in Rhetoric, Technology, and the Internet will reinforce their understandings of rhetorical theories and the internet as a technology. The class will also ask students to read current scholarly work about the internet, and develop the critical tools needed to complement, extend, or challenge that work.

WRIT 3671. Visual Rhetoric and Document Design. (3 cr. ; A-F only; Every Fall & Spring)

This course approaches the challenges of document design by drawing upon principles from rhetorical theory and scholarship. In practical terms, this means that the design questions addressed in this class are understood in terms of specific audiences and specific contexts. Students in this class will pursue a blend of critical analysis ? drawing on rhetorical principles ? and document design. While Visual Rhetoric and Document Design assumes no baseline design training, class assignments will encourage students to put theory into practice and develop documents that reflect current best practices in print and digital spaces.

WRIT 3672W. Project Design and Development. (WI; 3 cr. ; A-F or Audit; Every Spring)

If you want to put design thinking, agile project management, teamwork, writing, research, analysis, and critical thinking on your resume, join Project Design and Development. You will study, plan, research, design, and

develop technical communication materials in a design-thinking, collaborative-writing environment. You'll work in teams to create a user manual and information graphic, promotional materials, and a social media campaign while planning and documenting your projects and productivity. You will leave the course with knowledge and skills you can put to work in any organization: small business, nonprofit, and corporate. The course develops competencies that the National Association of Colleges and Employers has named as most-valued by employers: critical thinking, written communication, collaboration, digital technology, leadership, and professionalism.

WRIT 3701W. Rhetorical Theory for Writing Studies. (WI; 3 cr. ; A-F only; Every Fall & Spring)

This course is designed to explore major issues and perspectives in rhetorical criticism, including foundational concepts from the history of rhetorical theory, elements of rhetorical studies, and methods of rhetorical analysis. Rhetoric is an art form with a diverse theoretical landscape, meaning that there is no singular, stable definition of the term; rather, rhetoric is a practice that has been used as an organizing principle for a variety of communicative acts ? written, spoken, and enacted. As such, the study of rhetorical theory and criticism begins with the understanding that human beings use language and symbols to shape our many worldviews. The skills obtained in this class will help you to understand the nature and function of the persuasive strategies that structure our everyday lives and arguments. As a writing-intensive course, you will also learn how to construct a piece of rhetorical criticism that draws upon a toolbox of ideas and methods to successfully articulate a rhetorical argument.

WRIT 3751W. Seminar: Theory and Practice of Writing Consultancy. (WI; 3 cr. [max 4 cr.] ; Student Option; Every Fall)

This course is a seminar in the theory and practice of teaching writing through one-to-one consultations. Our goal in this seminar is to develop as writers and writing consultants through investigating into, experimenting with, and reflecting upon our own literacy practices; reading carefully and discussing published research and theory as well as examples of our own and other students' writing; posing and exploring questions about writers, writing consulting, language and literacy learning, linguistic diversity, and the role of writing centers within higher education; observing, practicing, and reflecting on a variety of consulting strategies; and designing, conducting, and presenting our own writing center inquiry projects. Through reflective writing, in-class consultations, class discussions, and collaborative activities, we will learn together many approaches for conducting one-to-one conferences and for coaching students in their development as writers. prereq: Currently working in a University writing center, instr consent

WRIT 3896. Internship in Technical Writing and Communication. (; 3 cr. [max 6 cr.] ; A-F only; Every Fall, Spring & Summer)

This is an online course for students who are working in an approved internship in the field of technical communication. Students have the opportunity to apply the skills they have learned in the TWC major in a real-world situation. In the course, students are required to read materials, to submit bi-weekly progress reports on their position to an online forum, and respond to other students. Students are also asked to post examples of their projects and to rate their skills using the CLA Competencies and Rate Tool. The final project in the course is a 10-12 page final report that involves submitting a draft and meeting with the instructor. prereq: Writ 3562W and 24 credits completed in the Technical Writing & Communication major

WRIT 3993. Directed Study. (1-4 cr. [max 8 cr.] ; Student Option; Every Fall, Spring & Summer)

Supervised reading/research on topics not covered in regularly scheduled offerings. Intended primarily for upper division undergraduate students. prereq: instr consent, dept consent, college consent

WRIT 4431W. Science, Technology, and the Law. (CIV,WI; 3 cr. ; A-F only; Every Fall)

In this course students explore the effects of scientific and technological development on the law?and the effects of the law on scientific and technological development. In particular, students will read and discuss government regulation, constitutional guidelines and rights, and federal and state court precedents regarding privacy, intellectual property (patents and copyright), and health law. Specific topics include the following: Search warrants and Four Amendment rights, electronic surveillance law, national security and foreign intelligence, copyright and fair use, citizens' access to creative works, informed consent, medical expert testimony in the courtroom, and the right to medical treatment. Students will have the opportunity to express their opinions and display their analytical skills in three take-home essay exams. Students from all majors are welcome, including those students interested in law school.

WRIT 4501. Usability and Human Factors in Technical Communication. (; 3 cr. ; A-F only; Every Fall & Spring)

Usability is concerned with how people interact with design and technology; usability is commonly known as the "ease of use" of products and technologies by a range of users. This course emphasizes usability and user research and will explore the intersection of usability and technical communication. We will investigate definitions of usability and user-centered design principles, and we will explore a variety of usability research methods including heuristic evaluation, personas, and usability testing. The course will focus heavily on usability testing of web sites, a common technical communication task that involves observation and interviews of human participants interacting with a web site.

WRIT 4562. International Professional Communication. (; 3 cr. ; A-F only; Spring Even Year)

This course prepares students to navigate the increasingly global nature of communication and the challenges and opportunities it presents. Students learn how to develop content for and work with clients and colleagues from other cultures, communicate with multicultural audiences, and collaborate in virtual global teams using multiple synchronous and asynchronous technologies. The course includes work with peers and international scholars from various parts of the world. Projects include a metaphorical comparative analysis of cultures; management (global virtual team work) of a translation project with students from another country; interviews with managers/employees in multinational corporations; and curation work with an international archive on emerging technologies.

WRIT 4573W. Writing Proposals and Grant Management. (WI; 3 cr. ; A-F or Audit; Spring Odd Year)

This advanced-level Writing Studies course introduces students to the activities, responsibilities, challenges, and opportunities that characterize proposals for nonprofits and/or research/business. Students analyze unique proposal writing situations, including audiences (customers, reviewers, and teammates) and resources (collaborators, templates, and time). Students practice the entire process of proposal and grant writing: 1) describing the problem in context; 2) identifying sponsors and finding a match; 3) designing, writing, revising, and completing all proposal components; 4) conceptualizing and using persuasive visual elements; and 5) presenting and responding to stakeholders and sponsors.

WRIT 4662W. Writing With Digital Technologies. (WI; 3 cr. ; A-F only; Every Fall)

WRIT 4662W is an advanced level Writing Studies course that explores various digital writing technologies and provides multiple opportunities to assess writing situations and make appropriate decisions about digital form and production. Students will learn the basic building blocks of writing in Internet environments (text, sound, images, video) as well as the vocabularies, functionalities, and organizing structures of Web 2.0 environments, how these impact understanding and use of information, and how to produce these environments (i.e., multimedia internet documents) for interactivity and use. This course includes design projects and practice with apps, markup language, content management systems, video, and social media. prereq: Jr or sr or instr consent

WRIT 4664W. Science, Medical, and Health Writing. (WI; 3 cr. ; A-F or Audit; Every Fall)

This course explores the theories and practices of rhetoric and writing in science, medicine, and health (SMH). Students learn about genres of SMH communication including regulatory documents from the FDA, podcasts created by scientists for the public, patient blogs, and published research articles. The course also engages topics including accessibility, writing in regulated environments, writing for complex audiences, and engaging biomedical

and scientific research in writing. Students are challenged to consider how language, science, biomedicine, and health intersect and how different stakeholders such as patients, healthcare providers, scientists, government officials, and insurance companies engage in SMH communication.

WRIT 4995. Technical Writing and Communication Capstone. (1 cr. ; A-F only; Every Fall, Spring & Summer)

Capstone project addressing topic in writing studies related to WRIT course. Must be done in conjunction with concurrent 3xxx or 4xxx level course in Writing Studies that student is taking. Instructor permission required for registration.

WRIT 4999. Technical Writing and Communication Capstone. (3 cr. ; A-F only; Every Fall & Spring)

The Senior Capstone course is a culminating experience for all Technical Writing and Communication majors. This course is designed to facilitate individualized student projects that combine previous knowledge, skills, and experiences developed as a TWC major into a senior project. Specifically, students will design and carry out a project of their own design under the guidance of the instructor. Students taking this course should have completed the majority of the TWC core requirements. It is recommended students take it the last semester of their senior year.

WRIT 4999H. Technical Writing and Communication Honors Capstone. (; 3 cr. ; A-F only; Every Fall & Spring)

The senior capstone course is a culminating experience for all Technical Writing and Communication majors. This course is designed to facilitate individualized student projects that combine previous knowledge, skills, and experiences developed as a TWC major into a senior project. Specifically, students will design and carry out a project of their own design under the guidance of the instructor. Completing the honors thesis is a year long effort. Students graduating with Latin Honors should enroll in Writ 4999H during the first semester of their senior year. Students may register for 1 credit in WRIT 3993 their second semester. Students not graduating with Latin Honors should register for Writ 4999.

WRIT 5001. Introduction to Graduate Studies in Scientific and Technical Communication. (; 3 cr. ; A-F only; Every Fall)

This course offers an overview of the field of scientific and technical communication. Students learn about the history of the field including job titles, industries that hire technical communicators, and trends in the field. Students also learn about research methods (including audience analysis and usability testing); software and apps commonly used in technical communication; social issues in technical communication (including legal, ethical, and organizational); and international issues (including writing for regulated environments such as in the medical device industry). Projects are multi-modal and include written reports; slide presentations with and

without voice recordings; visual communication including user documentation and movies. Some projects are done individually but most are done in virtual teams. Weekly discussion forums provide students with opportunities to lead and summarize key themes from each week's topic. Students in this class participate within a community of technical communication professionals and typically have a background in technical communication, medical/science communication, engineering, software, usability, customer support, writing and communication, marketing, or similar area.

WRIT 5051. Graduate Research Writing for International Students. (; 3 cr. ; Student Option; Every Fall, Spring & Summer)

Graduate research writing emphasizes writing techniques, structures, style, and formal language for scholarly writing including research proposals and abstracts, critiques/reviews, and thesis/dissertations and publications. Special focus on field-specific scholarly expectations, documentation, structure/style, grammar, formal or scholarly vocabulary, and extensive revising/editing based on instructor and mentor feedback to meet graduate standards. Discussions. prereq: Grad student

WRIT 5052. Graduate Research Presentations and Conference Writing for Non-Native Speakers of English. (; 3 cr. ; Student Option; Every Fall & Spring)

Practice in writing/presenting graduate-level research for conferences or professional seminars. Delivery of professional academic presentations to U.S. audiences. Conference abstract, paper, and poster presentation. Communication in research process. Students select topics from their own research/studies. Format, style, transitions, topic narrowing, non-verbal presentation skills. prereq: [Grad student, non-native speaker of English] or instr consent

WRIT 5112. Information Design: Theory and Practice. (; 3 cr. ; A-F or Audit; Every Spring)

This course examines how verbal, visual, and multimedia content can be designed and combined to create meaning, improve comprehension, and make information more usable. Emphasis is placed on the rhetorical roles of visual elements in print and digital communications, and how technical communicators can use visual means to reach audiences, convey information, and achieve rhetorical goals. Students read and discuss theory, practice information design skills, and apply both to real communications projects suitable for inclusion in a professional portfolio. Projects focus on print and web content design and development; the information design process (plan, design, develop, layout, testing); project planning toward deliverables (web sites, signage, wayfinding); and universal design (color, symbols, etc.)

WRIT 5196. Internship in Scientific and Technical Communication. (; 3-6 cr. ; S-N or Audit; Every Fall, Spring & Summer)

Internship sites may include the University, industry, or government agencies. An internship proposal, progress report, internship

journal (optional), and final report with a letter from the internship supervisor are required.

WRIT 5270. Special Topics. (; 3 cr. [max 9 cr.]; Student Option; Periodic Fall & Spring) Topics specified in Class Schedule.

WRIT 5291. Independent Study, Reading, and Research. (; 1-3 cr.; Student Option; Every Fall, Spring & Summer) Supervised reading/research on advanced projects not covered in regularly scheduled offerings. prereq: instr consent, dept consent

WRIT 5501. Usability and Human Factors in Technical Communication. (; 3 cr.; A-F only; Every Spring)

Usability is concerned with how people interact with design and technology; usability is commonly known as the "ease of use" of products and technologies by a range of users. This course emphasizes usability and user research and will explore the intersection of usability and technical communication. We will investigate definitions of usability and user-centered design principles, and we will explore a variety of usability research methods including heuristic evaluation, personas, and usability testing. The course will focus heavily on usability testing of web sites, a common technical communication task that involves observation and interviews of human participants interacting with a web site.

WRIT 5531. Introduction to Writing Theory and Pedagogies. (; 3 cr.; A-F or Audit; Every Fall)

This course explores the nexus of theory and practice in terms of writing instruction and of technical writing and communication to help students identify their pedagogical positions and concrete practices. Designed as a collaborative, exploratory space for a community of teacher-scholars, it approaches the teaching of writing as a process that is both practiced and studied, is aided by reflection with others, and requires ongoing revision. Course texts address the scholarship of Composition, Rhetoric, and Technical Writing. Students put these texts in dialog, including with the "texts" of their classrooms, to examine and reflect on their teaching practices. The course centers acts of engagement and reflection and emphasizes pedagogical inquiry. Students learn to: place a range of theories on writing instruction in conversation with their teaching; reflect on classroom practices and pedagogical theories; articulate individual philosophies of teaching; explore pedagogical issues of personal interest; foster pedagogical "habits of mind" that serve students in classrooms at the UMN and beyond; and contribute to an active, supportive, and collaborative teaching community. prereq: Grad student

WRIT 5532. Practicum in Writing Pedagogies. (; 1 cr. [max 3 cr.]; S-N only; Every Fall & Spring)

WRIT 5532 is designed as a collaborative, developmental, and exploratory space for graduate instructors in the First Year Writing (FYW) program. The course approaches the teaching of writing as an iterative and

situated process that is both practiced and studied, is aided by reflection with others, and requires ongoing revision. Course texts include scholarship in Teaching and Learning, in Writing Studies, and in First-Year Composition. These texts will be brought into dialog with the WRIT 1301 classes all students are teaching. The course addresses such questions as: How do people learn, how do they learn writing, and how can instructors teach writing based on those understandings? How can instructors design environments, materials, and practices that equitably help students learn about writing and develop as writers? Class discussions and assignments also invite students to identify and address challenges, tensions, and pedagogical issues of personal interest; to develop habits of mind that will serve them in other classrooms in their teaching careers; and to articulate the classroom practices and pedagogies informing their teaching philosophies. Students in the RSTC MA and PhD programs take WRIT 5532 in spring of their first year after taking WRIT 5531 in fall term. Graduate instructors from other departments who teach WRIT 1301 must register for one credit of WRIT 5532 in the fall and one credit of WRIT 5532 in the spring during their first year teaching in the FYW program. Spring sections of WRIT 5532 are organized as biweekly reflective practice groups (RPGs). RPGs will build on fall term course content in discussions of readings, in teaching journal reflections, and to build teaching portfolios.

WRIT 5561. Editing and Style for Technical Communicators. (; 3 cr.; A-F only; Every Summer)

In this course, students learn strategies for editing and revising writing for technical and non-technical audiences. Students practice three levels of editing skills: proofreading, copyediting, and comprehensive editing. Strategies include advanced grammar and style, editing tools, quantitative data, global documents, and various style guides. Students also examine an editor's role with authors, in organizations, in global contexts, and in ethical situations. Editing projects focus on the three levels of editing, using proficient methods, collaborating between authors and editors, identifying audience and contexts, editing documents according to style guides, and using rhetorical principles to analyze and edit final documents.

WRIT 5570. Minnesota Writing Project Directed Studies. (; 1-3 cr. [max 9 cr.]; A-F or Audit; Every Summer)

Guided individual research into current theories/practices of writing and writing pedagogy.

WRIT 5662. Writing With Digital Technologies. (; 3 cr.; A-F only; Every Fall)

This course explores current and emerging digital writing technologies and teaches students to assess writing situations and make appropriate decisions about digital form, production, and scholarship. Students learn the basic building blocks of writing in Internet environments (text, sound, images, video, interactivity); the vocabularies,

functionalities, and organizing structures of Web 2.0 environments and how each impacts understanding and use of information; and how to produce Web 2.0 environments (i.e., multimedia internet documents) that facilitate interactivity and use. This course includes design projects and practice with apps, markup language (html and xml), and content management systems.

WRIT 5664. Science, Medical, and Health Writing. (; 3 cr.; A-F or Audit; Every Fall)

This course explores the theories and practices of rhetoric and writing in science, medicine, and health (SMH). Students learn about genres of SMH communication including regulatory documents from the FDA, podcasts created by scientists for the public, patient blogs, and published research articles. The course also engages topics including accessibility, writing in regulated environments, writing for complex audiences, and engaging biomedical and scientific research in writing. Students are challenged to consider how language, science, biomedicine, and health intersect and how different stakeholders such as patients, healthcare providers, scientists, government officials, and insurance companies engage in SMH communication.

WRIT 5671. Visual Rhetoric. (; 3 cr.; A-F only; Periodic Spring)

This course investigates current understandings of how visuals participate in and extend the rhetorical strategies long associated with speech and writing. Students explore developments in the discipline of visual rhetoric by engaging with an emerging canon of texts that survey the work of rhetoricians, graphic designers, graphic novelists, commercial artists, fine artists, and technical communicators. Emphasis is placed on the use of visuals in science and technology; identifying shared principles of persuasion through visual information; developing the vocabulary to comment on, critique, and create visuals; and assessing whether visuals meet the needs of intended audiences.

WRIT 5775. Rhetorical Traditions: Classical Period. (; 3 cr.; A-F or Audit; Fall Odd Year)

This course provides an intensive survey of rhetoric as understood and practiced in ancient Greece and Rome, and serves as an introduction to graduate-level study of historical rhetoric more generally. The course attends to the development of the discipline of rhetoric in the Classical world and to the recurring themes that constitute "the rhetorical tradition." Class discussions and assignments assess the epistemological foundations, ethical status, and socio-political importance of ancient rhetorical training and discourse. Primary readings (in English) include works by sophists and orators of the Greek Classical period, Isocrates, Plato, Aristotle, Cicero, Quintilian, and others. Secondary readings and class discussion will consider political, cultural, and philosophical contexts for ancient rhetorical theory, oratorical practice, and the teaching of speech and writing. This course will prepare graduate students for preliminary exams, research, and pedagogical encounters in rhetoric.

WRIT 5776. The Rhetorical Traditions: Modern Era. (3 cr. ; A-F or Audit; Fall Even Year)

This course is designed to acquaint graduate students with different traditions of rhetorical theory. It surveys a range of rhetorical tools/ methods, and sets out to assist students to find a clear purpose for using rhetorical theory and to develop a structured approach to their objects of criticism. It prioritizes Black, Indigenous, transnational, and anti-racist approaches to rhetoric, and situates those as foundational to the traditions of such theoretical traditions as semiotics, deconstruction, genealogy, affect theory, assemblage theory, and psychoanalysis. It is intended to prepare students for comprehensive exams, conference presentations, and pedagogical encounters with rhetoric.

Youth Development and Research (YOST)**YOST 1001. Seeing Youth, Thinking Youth: Media, Popular Media, and Scholarship.** (CIV; 3 cr. ; Student Option; Every Fall & Spring)

This course is an invitation to meet and engage with the field of Youth Studies. This is an introductory course to a subject you already know about? you've lived its content; thought about it; you may even written poems, made a video or posted a meme about this life-moment. Since you know this so well, why take a university course on it? You will leave this course better able to notice the young people around you; wonder about them and their lives; name, describe and analyze what you see and hear and read about youth. This course is about all young people. This means that we are attentive to including material about youth from diverse backgrounds, many ethnic/racial, social class, linguistic, and geographic locations or those who have a variety of physical and mental capacities, those who are ?normal? and ?typical? and those who are ?not?. Together, we will examine myths and stereotypes about youth, where they come from, and how to deconstruct them using a variety of lenses-- social, popular and news media, young adult novels, academic articles, biographies, and more. We will do this through engaging class discussions and activities. You will learn how to use critical ethnography ?in the field? where you will observe and write about youth in a variety of settings including malls, sporting events, busses, coffee shops, and music venues. We believe that an introductory college course is a space and time to reflect, analyze, and learn about what matters to you, about who you are and about the work others have done and what you want to do. In these ways, this course introduces ways of being an engaged and thoughtful student, citizen and professional, all of which require critical thinking skills and an ability to work across difference and diversity. In this course, students will develop skills in assessment, reflection/reflexivity, deconstruction, empathy and judgement; all precursors for professional decision-making in careers like youth work, policy, public health,

education, communications, and other fields. We hope this course may lead to reflecting on your occupational future and vocational call.

YOST 1366. Stories of Resistance & Change: Youth, Race, Power & Privilege in the U.S.. (DSJ,LITR; 3 cr. ; Student Option; Every Fall & Spring)

This course imagines literature as an opportunity to complement other understandings of youth, and to help those who work with children and adolescents to better understand their lived experiences. We will read classic and contemporary literary texts that respond to the needs, wants, and existential questions that surround young people's lives, and makes them visible to learners in the class who want to better understand children and adolescents in diverse settings across the United States. Youth Studies at the University of Minnesota, prepares students to work towards understanding and helping to improve the everyday lives of diverse youth. By being in this class, reading our course texts carefully, and by engaging in learning activities with classmates, students have the chance to take away new understandings from powerful stories about youth. In fact, the texts in this course contain important descriptions of how oppression looks and feels to young people as they navigate institutions and see the impacts of structural inequality on themselves, communities, families, and friends. The young people in these texts show tremendous agency, and show meaningful examples of resistance on large and small scales. We will work together with course texts about how young people challenge and are challenged by their surroundings, and take away new meanings about how young people have promoted social justice and change. Learning activities in this class will include reading, writing, quizzes and exams and a course project. In class learning activities include discussion, presentations, activities, and a high level of participation is expected. Why literature? Literature can be thought of as one way of knowing about the daily lives of youth. Because literature offers a rich detailed framework of meaning showing the diverse contexts of lives of children, teenagers and young adults, youth workers can use the tools of literature to make youth work meanings from literature in which young people are primary to the text. Literature can make up a new lens through which learners can understand the daily and everyday lives of youth, and can complement the important social science lenses you may already bring to the class. Students are encouraged to develop a new set of questions about youth as they use the formal tools of literature to read literary texts that represent a range of styles, formats, themes, and choices. Diversity and Social Justice Literature that centers on young people from multicultural settings offers an opportunity to think about what it is that students already know about youth from diverse backgrounds, and to question whether their understanding is correct or if there are gaps in knowledge. In other words, a course goal will be to identify epistemological gaps between what we think

we know about youth, race, gender, and power and privilege, and how that is confirmed and/ or made more complicated by a larger body of knowledge about social constructions of power and privilege. This course calls on our literary texts to challenge and deconstruct dominant narratives about youth and their communities. Learners in this course enter into an ongoing conversation about what social justice for youth means in the context of unequal distribution of power and constructions of privilege and oppression.

YOST 1368W. Youth Global Perspectives. (GP,WI,LITR; 4 cr. ; Student Option; Every Fall & Spring)

This course uses literature by a diverse array of global authors as a window into youth experience and representation. We identify dominant narratives constructed through education, culture, religion, and media, and examine how authors and readers offer counternarratives. We work within social justice and decolonizing frameworks to understand how global power relations and our own perspectives are shaped by U.S. and European imperialism. We embrace the liberatory and expressive possibilities of narrative, while also recognizing the constraints exercised by the publishing industry and English language dominance. Literature opens up conversations about the lived experiences of youth. It invites us to empathize with experiences beyond our own, and provides an opportunity to highlight how cultural contexts shape interpretation. Together we will read, reflect, and analyze global texts by, for, and about youth. Accountability for readings takes the form of quizzes and reading responses. Students build skills of critical analysis through writing assignments, examining the array of choices authors make and the impact they have on audiences. Class is structured as a collaborative and interactive experience, with an emphasis on small group activities and participation.

YOST 2101. Urban Youth and Youth Issues. (DSJ; 4 cr. ; Student Option; Every Fall & Spring)

This course explores issues faced by youth, especially those who live in or are characterized by our understanding of urban areas. We explore by asking questions like: ? Which youth are labeled as 'urban' and by whom?? ?What has contributed to notions of ?urban? and ?suburban??" ?What are the associated myths and stereotypes?? and ? How are urban communities policed and what are the consequences of this policing?? We will critically examine what the term ? urban youth? means, how it has evolved over time and place, its relationship to power and privilege, and its use as a ?code word? with implicit associations of race, poverty, and violence. Using a critical Youth Studies framework, which engages with the role of historical, social, cultural, geographical, and political contexts, we seek to understand how each of these axes of power-relations influence the opportunities and struggles of young people, their interaction with institutions and the construction of their identities in

particular places. This class is a part of the Community Engaged Learning (CEL) program. Students will combine direct work with youth in the community with classroom learning. The objective is for students to make valuable contributions to communities, gain practical experience and apply the knowledge gained in the classroom to their service learning work. Students will also be able to discuss, reflect and write about their community ? engaged experiences. This class offers a unique opportunity to engage with diverse youth in different settings thus gaining valuable skills that can be useful for future professional practice in many fields including, education, recreation, mental health, and youth work. prereq: YOST 1001 or instr consent

YOST 2241. Experiential Learning. (4 cr. ; Student Option; Every Fall & Spring)

Youth work is often described as 'highly experiential' and transformative. But what does that mean? Youth workers understand, sometimes intuitively, that 'learning by doing' makes sense, but why? Is all experience equally valid, moral, and educative? What makes an experience educative or mis-educative? What is the difference between experiential education and experiential learning? This course will explore a range of definitions given to experiential learning and will lay a sound theoretical foundation for understanding it, particularly in the context of youth work. This class is interactive and uses hands-on and in-the-field learning in its instruction. In any given class, students may hike, rock climb, practice meditation, engage in animal therapy, canoe, visit gardens, outdoor STEM classrooms or simply go on the lawn outside of the classroom in order to engage in youthwork ?icebreakers? and ?games.? The intention in this, is to learn by doing; to learn about by simultaneously learning how-to! Through experience, you will learn about the importance of place and history in experiential education; multiple theories and practices of experiential education, including the Learning Cycle Theory and educative and mis-educative experiences; methods of reflection and assessment, group facilitation, leadership skill development in youth; values curiosity and the outdoors. prereq: YOST 1001 or instr consent

YOST 3001. Introduction to History & Philosophy of Youthwork. (DSJ,HIS; 4 cr. ; Student Option; Every Fall & Spring)

This course exposes students to a depth of perspectives on young people and youth work. Exploring various historic and philosophical origins of ?normal? childhood, we unveil the way our modern understandings of child, youth, and adolescent draw upon a rich history of sexist, colonialist, and racist science. To do so we explore Indigenous, early European, Middle-Class, and W.E.I.R.D. (Western, Educated, Industrialized, Rich, Democratic) notions of childhood. We explore how these ideas are operationalized into practices on youth/youthwork. We explore how contemporary organizations of American youthwork and youth development, then took up and applied these ideas thus naturalizing

modern norms and expectations of child and youth. This course covers the philosophical and historical foundations of youthwork in a critical and interactive way through a review of youth, youthwork, and youth organizations set in the context of the past 500 years. The course is designed to encourage students to examine their familial histories, timelines and geographies and through collaborative and interactive learning, begin to explore how these histories, combined with others, helped to shape the ways that we think about youth and how this thinking collectively shapes youth policy, practice, and the institutions within which we meet and work with young people. All of this with the goal of becoming more effective and thoughtful when working with young people in youthwork settings. Whether you choose to work in youthwork settings or in other human service organization or agency, developing a sense of cultural humility and skills to understand historical data, philosophical frames and current practices will be critical to your success in professional arenas. prereq: YOST 2xxx or instr consent

YOST 3011. Young Voices: The Fight for Social Change in Croatia. (GP; 3 cr. ; A-F only; Periodic Summer)

This international immersion course explores the history, struggles, accomplishments, and experiences of Croatian young people who have engaged in social change efforts. Our focus will be on young people's involvement in a diverse range of social change movements and how these emerged, how they worked, and what caused them to decline.

YOST 3032. Adolescent and Youth Development for Youthworkers. (; 4 cr. ; Student Option; Every Fall & Spring)

In this course, we will explore the multitude of theories that have been proposed to describe, understand, and even explain young people in the second decade of life and beyond. Indeed, we will be studying development theories that have been used to explain your own life and experience. This gives us a unique perspective in the class. You have first hand experience that can be used to interrogate the theories and often illustrate both the strengths and weaknesses of each. Over the course of the semester, we describe, discuss, and critique six theories of adolescent and youth development, including: Social Justice Youth Development, Participatory Youth Development, Community Youth Development, Positive Youth Development, Adolescent Development, and Recapitulation. We begin with the most recent theory and then using academic archeology, dig back through time to understand not only the individual theories but also how they connect and join to each other. Along the way, we also discuss the social and cultural events and situations that influenced each theory?s development and often demise. A major goal of this class is to better understand where these theories come from, what they are connected to, and often how they are used to both support and marginalize young people. Class will be interactive, using both small and large group discussion, experiential learning activities, and

guest lecturers. The major assignment for the class is a grant writing project, where students will collaborate with a youth-serving organizing to develop a grant proposal that addresses the organization?s needs. This project will be used to deepen understanding of how to apply the theories we learn in class, as well as to develop skills around writing strong grant proposals for youth-serving organizations. prereq: YOST 1001 or 2101, [any Psych or CPsy course], or instr consent

YOST 3101. Youthwork: Orientations and Approaches. (4 cr. ; Student Option; Every Spring)

Within the U.S. there is an ongoing conversation about what values, knowledge, skills, and practice are basic to the field of youth work. The occupational title, youth worker, is not widely recognized with a set of knowledge, skills, and attitudes that distinguish it from other occupations that work with young people (teacher, coach, social worker). Often youth worker is taken to signify those who ? work with youth.? In recent years there have been attempts to clarify and specify what a youth worker does, whom a youth worker should be, and how one should be educated for this type of work. These debates now occur within international and national movements to ?professionalize? youth work. In this course, we enter this conversation by considering the multiple ways of becoming, being a youth worker, and doing youth work. Toward the end of the course, we will also explore how context?agency, street, and neighborhood? can have consequences on all three of these. To be knowledgeable participants in these conversations you must know the possible answers to at least four questions. Who are young people? What is youth work? Who are youth workers? Where is the location of the work? For each of these questions, we explore the diverse answers, given by scholars and practitioner, here in the United States and internationally. How one chooses to answer any one of these questions has consequences for the other three. Attention is also given to how you and I choose to answer these questions given our own experience of being a young person and our current interactions with young people. At the end of this course, you will be able to participate at a beginning level in the conversations that are of concern to youth work and enhance your direct work with, on behalf of, and/or for young people. In the process, you will have begun constructing and articulating a personal philosophy of youth work. prereq: One gen psy course, one gen soc course, or instr consent

YOST 3240. Special Topics in Youth Studies. (; 2-8 cr. [max 10 cr.] ; Student Option; Periodic Fall, Spring & Summer)

In-depth investigation of one area of youth studies. Teaching procedure/approach determined by specific topic and student needs. Topic announced in advance. prereq: [Two social sci courses, exp working with youth] or instr consent

YOST 3291. Independent Study in Youth Studies. (; 1-9 cr. [max 18 cr.] ; Student Option; Every Fall, Spring & Summer)

Independent reading or research under faculty supervision. prereq: instr consent

YOST 3325W. Project-Based Writing For Education and Human Development Majors.

(WI; 4 cr. ; Student Option; Every Fall & Spring)
Designed for those CEHD learners who seek to fulfill the upper level writing intensive requirement in a way that is relevant to their major and field of study, this course will support you as you manage a larger writing project. Learners in this course will form a community of writers, as each grapples with the challenges of a major project focusing on a meaningful problem or issue in your field of study. Some of the most important and most challenging work you face as you near graduation in your major is the work of bringing your academic training to bear on current issues in your field of study. By focusing on project-based writing, this course supports undergraduate learners in the endeavor to delve into and contribute to the work being done in your field to address a particular problem. You will propose a project, identify an audience, tailor your work to address your audience's needs, gather relevant information through primary and secondary research, and create a product that engages others and furthers the real-world work of solving problems. Collaborative activities and assignments will support you through the process. The course structure is flexible and designed to be responsive to individual needs and a variety of disciplinary contexts, so that students can receive feedback and guidance during different stages of capstone or thesis writing, or community engagement projects. Thus, you can anticipate that the majority of the work will focus on a project that you will propose based on your interests, needs, or connections to your writing work in your major. Course goals are to develop a writing process, understand the habits of writings, work through a larger research project, develop skill in the APA format, learn to use the University libraries, consider audience needs. In class work include: peer review, active learning activities designed around writing skill development, discussion, lecture, and presentation. Learners are expected to actively engage in the course material, participate in class and give and receive feedback about writing. prereq: 60+ undergraduate credits, declared major, or instr consent

YOST 4196. Youthwork Internship. (; 4 cr. [max 8 cr.]; Student Option; Every Fall & Spring)

This introduces students to the practice of youthwork and supports their professional development as a youth worker. The goal is to explore how we can become reflexive and critical practitioners. This is the required course for the Youth Studies major but is also open to students from other majors who want to explore the field of youthwork. Students can opt to pursue placement at a site already approved by the department or they can negotiate with the instructor to pursue an independent site. Using the University policy on undergraduate workload, the course hours are divided between seminar and in-

site placement hours (requirements will not go beyond that of a typical 4 credit course). The course requires students to participate in BOTH a weekly seminar and a supervised youthwork internship. The focus in the seminar is on integrating knowledge and youthwork skills for entry-level professional work with young people including topics such as professional ethics, identities and current issues in youthwork practice. The focus of the supervised fieldwork is on the experience of doing youthwork with real youth contextually and professionally teaches us about affecting change in the lives of young people. The Youth Studies program takes an interdisciplinary approach to youth work and youth development. Students will integrate different ways of understanding youth into their direct practice. The program also focuses on human rights and social justice. This means accounting for and responding to the many ways discursive and institutional power operates to silence young people. This includes the ways in which power structures what opportunities are available to young people of different genders, sexual orientation, ethnicities, race, classes, geographical locations, etc. Our approach to understanding and responding to these issues is to attend to young people's everyday lives and the idea of 'youth-in-the-world.' The Youth Studies program expects students to be self-reflexive and engage in an analysis of power and privilege from a micro/personal perspective and a macro/ policy perspective. Students will begin to craft responses to lessening these structures on the young people's everyday lived experiences. prereq: Declaration of youth studies major, or instr consent

YOST 4201. Facilitating Outdoor Experiences. (3 cr. ; A-F only; Periodic Fall)

This course will explore the theory and practice of leading outdoor recreation experiences for young people. It is particularly focused on technical outdoor living skills, judgement and decision making, risk management/site management, instructional strategies in the outdoor classroom, and the application of the Experiential Education model. NOTE: Student will not receive credit if they have previously taken Rec 3321 or YoSt 3321.

YOST 4202. Facilitating Outdoor Experiences - Winter. (3 cr. ; A-F only; Periodic Spring)

This course will explore the theory and practice of leading outdoor recreation experiences for young people. It is particularly focused on technical outdoor living skills both general and specific to winter, judgement and decision making, risk management/site management, instructional strategies in the outdoor classroom, and the application of the Experiential Education model. NOTE: Student will not receive credit if they have previously taken Rec 3322 or YoSt 3322.

YOST 4301. Communicating With Adolescents About Sexuality. (; 3 cr. ; Student Option; Periodic Fall & Spring)

This course will provide participants with increased knowledge and practical skills to communicate sensitively and effectively with

young people and their concerned persons about sexuality. Participants will explore a variety of adolescent sexual issues with a focus on healthy adolescent relationships, sexual development, gender, sexual orientation, and diversity. With this perspective as a base, other topics will include body image, laws regarding teens, sexual health and disease, dating and sexual violence, sexuality and cyberspace, and professional and ethical boundaries in working with youth. We will often analyze all of these issues through the lens of the various community/cultural, scientific and political debates that surround the issue of sexual health education here in the United States and abroad. Pertinent theory, research, strategies, and experience will be reviewed using readings, video, online resources, interactive web sites, and participant interaction in a safe, sensitive, and even fun atmosphere. prereq: YOST 1001 or instr consent

YOST 4314. Theater Activities in Youthwork and Education. (; 2 cr. ; Student Option; Every Spring)

Empowering methods of personal/creative development using experiential learning and theater activities to enhance creativity/ imagination. Approaches to working with youth in school and youth agency settings. Experiential learning, improvisational theater theory/practice. prereq: 1001 or 2101

YOST 4315. Youthwork in Schools. (; 4 cr. ; Student Option; Periodic Fall & Spring)

Most young people (12-18 years) in the U.S. spend at least 6 hours per day for at least 6 years in a school building, doing school work. There, they are students, and participate in adult designed classes, in co-curricular activities such as clubs and teams, and other activities, and in youth-formed worlds, such as jocks, nerds, stoners, furies, council kids, hicks, and the like. Professional staff learn to read and understand these youth primarily as students and less so as youth. Typically, educators learn some about adolescent development and psychology, about what is typical and common of young people in middle and high school. They also learn some about youth who are troubled, troubling, and in trouble. By and large, educators are practical folk who study and use practical knowledge so as to better teach and otherwise serve their students. This course intends to enrich the knowledge of school professionals in two ways: One, contribution will be centered focus on youth people and their life-worlds, in school, outside, and between the two, e.g. family, work lives, play lives, spiritual lives, friendship lives, etc. The second is a focus on youthwork as a craft orientation and occupation. In this view, most professional educators can approach some of their work as youthworkers, and they can work with designated youthworkers from the school and from community agencies in the service of young people and the school. The goals are more effective service for young people through deeper understanding of these persons and, reciprocally we believe, less existential burnout by educators, i.e. a loss of personal meaning in their work. This course

will include as resources, youth and adult educational professionals from the range of local educational settings, including public, religious and charter schools, and community-based, non-formal and informal, education programs. Field visits are required. prereq: Introductory course in education or instr consent

YOST 4316. Media and Youth: Learning, Teaching, and Doing. (; 2 cr. ; Student Option; Periodic Fall & Spring)

This interactive course will introduce interested youth workers to media as a tool for working with youth. It will review the theory and contemporary context of youth media practice. It will showcase exemplar youth media organizations from diverse communities and will introduce and provide hands-on practice with various forms of youth media. This class will focus on a theoretical framework of critical media literacy (CML). CML equips young people with opportunities and resources necessary for them to critically analyze, use, and produce various forms of media. Like traditional notions of literacy, critical media literacy depends on two interdependent components: analysis and production. In terms of analysis, media literacy is the ability to sift through and analyze the messages that inform, entertain and sell to youth every day. It is the ability to bring critical thinking skills to bear on all aspects of media? from online news outlets and podcasts to Facebook algorithms and the shrinking ownership of mass media. In terms of production, the course will provide exposure to and an opportunity to engage technical skills, artistic expression, contribute to public dialogue and to experience how young people are contributing to their worlds through youth media projects like: murals, graffiti, spoken word, music, documentaries, magazines, public service announcements, and digital storytelling. prereq: 1001 or 2101 or instr consent

YOST 4317. Youthwork in Contested Spaces. (3 cr. ; Student Option; Periodic Fall, Spring & Summer)

How does youth work change in contested spaces? Do youth workers require different competencies to work in a ?world that has been made strange through the desolating experience of violence and loss?? This course continually revisits these questions as we read about, research within, and talk to others who have worked in contested spaces. The course ends by describing and developing an understanding of youth work in current and post-violently divided societies internationally, such as Northern Ireland, Palestine, South Africa, and India. Veena Das? work in India around social suffering, will be used to frame the work and understand the overall aims and goals of community based youth work in such places. Indeed, youth work in contested spaces began in these worlds marked by suffering, loss, and a legacy of violence. One purpose of the course is to explore youth work practice in contexts marked by suffering, loss, and violence. During the first two thirds of the course, we begin to understand how contested spaces exist all around us, some that we are well aware of because we also experience and

are shaped by them, and others that exist only slightly further away from our own personal experience. To gain a deeper understanding of what it is like to work in contested space, students and faculty will talk with and visit different organizations and people working in different ?contested spaces.? Over two weeks we will talk with community members and young people to gain insight into how contested spaces provides background and context for growing up, what major issues young people face living and growing up in this space, and what work is currently going on to address the contested nature of the community. The course also supports an autobiographical turn, asking students to begin to reflect on, and understand the contested spaces that they too were a part of, either as victim or instigator. We end the course by analyzing the data we have collected on the neighborhood, our own personal experience of contested spaces and searching for themes and touchstones to guide youth work in such spaces. prereq: 1001 or 2101 or instr consent; 3101 recommended

YOST 4319. Understanding Youth Subcultures. (; 3 cr. ; Student Option; Periodic Fall, Spring & Summer)

Young people's participation in and understanding of subcultures, life-styles, and event cultures. Place of these in young people's identity, friendship, and life chances. prereq: [1001, one basic course in [ANTH or SOC]] or instr consent

YOST 4321. Work with Youth: Individual. (; 2 cr. ; Student Option; Periodic Fall & Spring)

This course is designed to give students concepts and practices for doing youthwork in a wide range of settings with individual youth. The focus will be on cultivating and expanding students? capacities for working with youth from an ethic of relational engagement and cultural responsiveness. This ethic is a relational stance that youth workers take, whether they are mentoring a youth in a Big Brother/Big Sister program, providing medical case management to HIV+ youth, doing programming at a community center, facilitating outdoor activities, leading arts-based youth programs, leading camp activities, or passing out condoms and toothbrushes as a street outreach worker. Emphasis is on taking up a reflexive practice that considers multiple perspectives; that accounts for the influence of prevailing cultural discourses that influence youth, youth workers, and their relationships; and that commits to the generating of multiple possibilities. We will approach youthwork as a political act that requires workers to articulate an ethical stance when engaging with young people. prereq: 1001 or 2101 or instr consent

YOST 4322. Work with Youth: Families. (; 2 cr. ; Student Option; Periodic Fall & Spring)

Young people develop in moments and interactions (Krueger, 1998). Many of their moments occur within families and families come in a wide variety of forms. The American Academy of Family Physicians locates family as, ?a group of individuals with a continuing legal, genetic, and/or emotional relationship. Society relies on the family group to provide

for the economic and protective needs of individuals, especially children and the elderly (1984, 2003). The stories, behaviors, dynamics, attitudes, and habits of families shape the identity and experience of young people. To understand and respect young people, and to participate in the creation of environments for healthy youth development, youth workers must learn how to understand and respect the role their families play in their everyday lives. This course introduces students to the social construct of ?family? as it intersects with traditional notions of adolescent development, their own experience, public policy, and youth work practice. Care is taken to honor the rich diversity of family structures found in the United States today, and to notice the impact cultural identity, economic status, education, ethnicity, gender, geography, and other important factors have on the nature of families and the experience of young people inside them. prereq: 1001 or 2101, or instr consent

YOST 4323. Work with Youth: Groups. (2 cr. ; A-F only; Periodic Fall & Spring)

Humans are social creatures. Throughout the evolution of the human species, the ?group? has been instrumental in survival and the transmission of culture between generations. It is generally accepted that the ?group? is a key building block of the human experience and it has been argued that the ?individual? only knows itself in relation to the ?group?. Because of its fundamental nature in human existence, the group has been a popular topic of study. Until recently, attempts to chronicle the phenomena of groups have been hampered by a ?reductionistic? framework. This attempt to reduce complex phenomena into small measurable parts to be studied has inhibited the ability to capture the ?systemic? nature of groups. The power of the group is the dynamic interaction and interrelation of its component parts. Advances in general systems and chaos theory have increased our ability to fully grasp the essence of a group. There is a difference between group process and group work. Group processes are naturally occurring phenomena present when a collection of individuals form around a purpose. Group work is the purposeful and intentional effort on the part of a practitioner to use group process to achieve a goal. This demands that the practitioner develop a working understanding of group process and develop the skills to effect group functioning. Numerous group work models have been developed to describe group process and subsequently prescribe the role of the practitioner as facilitator. Although group work?s heritage is tied to the field of Social Work, the preponderance of these models are based upon a therapeutic framework. Currently, the field of Youth Development is utilizing a solution-oriented participant centered perspective. This perspective is more in line with the early understanding of group work and is proving to be effective in helping youth develop the skills, knowledge, and attitudes to be successful. There are a number of challenges for the practitioner serious about developing their group work ability when working with youth: 1. Whereas developing

an understanding of group process may be obtained in a classroom setting, facilitation skills are best learned and honed through experience in real life settings. Group work is both a science and an art. 2. Not only must a practitioner develop a working understanding of groups, they must also have a working understanding of individuals because of the dynamic interplay between individual needs and group phenomena. 3. The developmental needs of youth dictate that the practitioner's role in working with groups of youth is different than if they were working with adults. 4. It is virtually impossible to be objective in working with people: a practitioner's own "life history" acts as a lens and filter that influences their interpretation of and strategies for interacting with the group. This is especially true in youth work where the practitioner, through interaction with youth, is confronted with their own adolescence. prereq: [1001, 4321 or 4322] or instr consent

YOST 4325. Improving Everyday Youthwork: Practical Program Evaluation.

(3 cr. ; Student Option; Every Fall)
Program evaluation can enable youth workers to improve the work they do with young people, to financially sustain their work, to communicate with colleagues in a community of practice with the intention of strengthening the youth work field, and to influence youth policy, program design, and practice. Many people who invest time or money in youth programs request program evaluation. As the emphasis on quality continues, youth workers will be expected to support evaluation, at minimum, and may also be asked to manage evaluation projects, either working with an internal or external evaluator, or doing evaluation as part of their job. Youth work positions now typically include these roles, regardless of settings. Evaluation can support ongoing professional development for youth workers. This course emphasizes how evaluation and applied research supports professional development and strengthens overall quality in youth programs. Evaluation and applied research provide frameworks and tools that support youth workers to describe, analyze, synthesize, and better understand how they can create high quality programs and support high quality practice for all young people. Evaluation is considered as both a tool- and a site for- critically examining issues of equity and social justice. The course includes readings and discussion on the social justice implications of evaluation and explores culturally responsive evaluation frameworks. During the feedback process for each stage of evaluation, a social justice lens is used to examine and critique the stage's process and outcomes. This course offers an introduction to evaluation and applied research for youth workers, through introducing evaluation and applied research concepts, terms, orientations, methods, and tools and their application. During the course, students (individually and in small and large groups) will design, carry-out, and report on an evaluation study. Students will both learn about evaluation and applied research as well as do it! By course conclusion, students will have the knowledge and skills to

design and conduct beginning level evaluation and applied research, for their own practice or other youth programs. prereq: 1001 or 2101, or instr consent

YOST 4401W. Young People's Spirituality and Youthwork: An Introduction. (WI; 4 cr. ; Student Option; Periodic Fall & Spring)

The purpose of this course is to begin to explore the topic of spirituality and its importance to youthwork practice. Typically, the spiritual experiences of young people have been the province of religious instruction or faith-based youthwork. Yet spiritual thoughts, feelings and experiences beyond top-down instruction are actual and necessary aspects of healthy youth development. Youth workers need not be employed by or volunteers in a faith-based organization to bring increased knowledge, appreciation, and awareness of spirituality to youthwork in any context. The range and extent of research concerning adolescent spirituality has grown substantially over the past twenty years. This conversation across disciplines in the academy raises important issues for practitioners. How will new research findings confirm or challenge their experience? How will new research impact everyday practice? This course enters the spaces of social, political, cultural, and religious institutions and practices, illuminating issues, topics, problems, and concerns for those who work with youth directly and on their behalf. We will consider what youthwork practices are most respectful of, and best able to facilitate spiritual development of young people in their everyday lives. Additionally, as an undergraduate writing intensive course, all undergraduate students will be expected to write frequently and use a variety of writing styles: autobiographical, journal/book critique, essay, field mapping/observation notes, and research in APA style. Students will be given feedback on each assignment, and regular class time will be devoted to writing skills and basic grammar. prereq: 1001 or instr consent

YOST 4402. Youth Policy: Enhancing Healthy Development in Everyday Life. (; 4 cr. ; Student Option; Periodic Fall & Spring)

Youth policy as formulated in response to youth issues, problems, and community/public concerns. Policy as political response to youth panics, as indirect youthwork, and as a community's moral compact with its young people. Perspectives explored are specific to student interests. prereq: [1001, 2002W] or instr consent

YOST 4411. Youth Research and Youth Program Evaluation. (4 cr. ; Student Option; Every Spring)

This course starts with the idea that research should be conducted inside and outside the walls of academia. At a basic level, youth workers conduct research everyday ? even if they don't consider it ?formal? research. We all have questions about what is going on in the everyday lives of young people ? and we all seek deeper understanding. Given that, there may be an ethical requirement to carefully consider the data used to understand young people. Historically and currently, research

with young people is being ?done to? and ? not with? young people. And often, that data is used to both shape our perceptions of what it is to be a young person and the policies that affect their daily lives. For example, consider what data on emotional regulation is commonly used and how that has shaped suspension policies in schools? Youth workers are often advocates for youth, but they may not consider research about young people as places for action and resistance. Students will begin class by exploring the purpose, definitions and methods of research most commonly used in youth work, with an emphasis on qualitative research as a process highly relevant to daily practice. Students will review a variety of perspectives on research that encourage a more critical eye on subjectivity, the social/political contexts around data and the acknowledgement from indigenous research methods that a researcher must articulate their relationship to the research question. This course will then move students through a full research experience from a problem to questions, from purpose to methods, towards data collection, analysis, writing and presentation, as a beginning researcher. Quite a challenge, so expect it to be imperfect and messy. By the end of the semester, students are not expected to complete a flawless research design and report, but to gain a deeper understanding of the research process, how to conduct and critique the process, and how to engage others to create potential change based on data. In practical terms, most students will work in a small group to determine research questions, develop a process for gathering data about the questions, analyze the data and create a report based on the findings. The process will be supported by readings, activities during class time and through highly focused consultations with research groups with faculty. prereq: YoSt B.S. declaration & basic research methods course, or instr consent

YOST 5011. Youth Voices: The Fight for Social Change in Croatia. (3 cr. ; A-F only; Periodic Summer)

This international immersion course explores the history, struggles, accomplishments, and experiences of Croatian young people who have engaged in social change efforts. Our focus will be on young people's involvement in a diverse range of social change movements and how these emerged, how they worked, and what caused them to decline.

YOST 5030. Youth Voices: The Fight for Social Change in Croatia. (3 cr. ; A-F only; Periodic Summer)

This international immersion course explores the history, struggles, accomplishments, and experiences of Croatian young people who have engaged in social change efforts. Our focus will be on young people's involvement in a diverse range of social change movements and how these emerged, how they worked, and what caused them to decline.

YOST 5032. Adolescent and Youth Development for Youthworkers. (; 4 cr. ; Student Option; Every Fall & Spring)

Application of theory/research about children/adolescents. How findings/theories facilitate understanding of behavior. prereq: [1001 or 2001 or 2002W or 2101], [any Psych or CPsy course]

YOST 5240. Special Topics in Youth Studies. (; 2-8 cr. [max 40 cr.] ; Student Option; Every Fall, Spring & Summer) In-depth investigation of one area of youth studies. Teaching procedure and approach determined by specific topic and student needs. Topic announced in advance. prereq: Two social sci courses, exper working with youth or instr consent

YOST 5291. Independent Study in Youth Studies. (; 1-8 cr. [max 16 cr.] ; Student Option; Every Fall, Spring & Summer) Independent reading and/or research under faculty supervision.

YOST 5301. Communicating With Adolescents About Sexuality. (; 3 cr. ; Student Option; Every Summer) How to communicate sensitively/effectively with adolescents and their concerned persons about sexuality in everyday life. Healthy sexual development (physical, emotional, ethical), sexual diversities. Gender/body image, disease, sexual violence, intimacy, sex in cyberspace. prereq: [Upper div AdPy course, exper working with youth] or instr consent

YOST 5314. Theatre Activities in Youthwork and Education. (; 2 cr. ; Student Option; Every Spring) Using experiential learning and theater activities to enhance creativity and imagination of youth workers and educators. Approaches to working with youth in school and agency settings. Application of experiential learning and improvisational theater theory/praxis. prereq: 1001 or 2101

YOST 5315. Youthwork in Schools. (; 4 cr. ; Student Option; Every Fall & Spring) Craft of youthwork as a framework to understand life-worlds of young people and a practice to enhance healthy development. How young people often make artificially/harmfully divide their lives into "school" and "not school." prereq: Introductory course in education or instr consent

YOST 5316. Media & Youth: Learning, Teaching, and Doing. (; 2 cr. ; Student Option; Periodic Fall & Spring) This interactive course will introduce interested youth workers to media as a tool for working with youth. It will review the theory and contemporary context of youth media practice. It will showcase exemplar youth media organizations from diverse communities and will introduce and provide hands-on practice with various forms of youth media. This class will focus on a theoretical framework of critical media literacy (CML). CML equips young people with opportunities and resources necessary for them to critically analyze, use, and produce various forms of media. Like traditional notions of literacy, critical media literacy depends on two interdependent components: analysis and production. In terms

of analysis, media literacy is the ability to sift through and analyze the messages that inform, entertain and sell to youth every day. It is the ability to bring critical thinking skills to bear on all aspects of media? from online news outlets and podcasts to Facebook algorithms and the shrinking ownership of mass media. In terms of production, the course will provide exposure to and an opportunity to engage technical skills, artistic expression, contribute to public dialogue, and to experience how young people are contributing to their worlds through youth media projects like: murals, graffiti, spoken word, music, documentaries, magazines, public service announcements, and digital storytelling. prereq: 1001 or 2101 or instr consent

YOST 5319. Understanding Youth Subcultures. (; 3 cr. ; Student Option; Every Summer)

Young people's participation in and understanding of subcultures, life-styles, and event cultures. Place of these in young people's identity, friendship, and life chances. prereq: 2001 or one course each in [Anth, Soc] or instr consent

YOST 5321. Work With Youth: Individual. (2 cr. ; Student Option; Every Fall, Spring & Summer) Basic assumptions underlying individual work with youth. Special issues and concerns of adolescents and of persons who work with them, especially those who work with youth in one-to-one interactions. prereq: 1001 or 2002W or instr consent

YOST 5322. Work With Youth: Families. (; 2 cr. ; Student Option; Every Fall, Spring & Summer) Theories and techniques of working with youth and their families. Practical methods of structural change. Developing effective communication. Decision-making and problem-solving systems. Winning the family's cooperation. Role of professional in influencing healthy family development. prereq: 1001 or 2002W or instr consent

YOST 5323. Work with Youth: Groups. (; 2 cr. ; Student Option; Every Fall & Summer) Social group work. Adolescent group needs and associations. Group process. Working with diverse groups of youth in community, in group living situations, and in group therapy. prereq: 1001 or 2002W or instr consent

YOST 5401. Young People's Spirituality and Youthwork: an Introduction. (; 4 cr. ; A-F or Audit; Every Spring) Adolescent spirituality, its relation to working with young people. Faith/spirituality as actual/necessary aspects of healthy youth development. Research, active community-based programs. Knowledge, attitudes, and skills to meet adolescent needs/wants. prereq: [2001, one course each in [Anth, Soc, CPsy]] or instr consent

YOST 5402. Youth Policy: Enhancing Healthy Development in Everyday Life. (; 4 cr. ; Student Option; Periodic Fall & Spring) Youth policy as formulated in response to youth issues, problems, and community and public concerns. Policy as political response

to youth panics, as indirect youthwork, and as a community's moral compact with its young people. Perspectives are explored specific to student interests. prereq: [2001, one course each in [FSoS, PolSci, Soc]] or instr consent

YOST 5950. Ways of Knowing in Youth Development Leadership: Using Research and Evaluation to Support Community. (; 3 cr. ; A-F only; Every Fall)

This course aims to stimulate students to think critically about youth development and youth work through exploring different ways of knowing. These paradigms each construct different understandings of young people and offer evidence to support diverse youth development practice and programs. Students will leave with a broad perspective of how youth development and youth work empirical evidence is constructed and used to support healthy youth development.

YOST 5952. Everyday Lives of Youth. (3 cr. ; A-F or Audit; Every Fall)

Youth as idea/lived-reality in scholarship, public discourse, and professional practice. Building practice of work with or on behalf of youth.

YOST 5954. Experiential Learning: Pedagogy for Community and Classroom. (3 cr. ; Student Option; Every Spring) Relationship between experience and learning in community and school settings. Emphasizes intentional application of experiential learning theory/practice to educational program development.

YOST 5956. Organizational Approaches to Youth Development. (3 cr. ; A-F or Audit; Every Fall)

Historical contexts, theoretical frameworks, organizational practices, and public policies that shape nonformal educational experiences of youth in community-based or school-linked settings.

YOST 5958. Community: Context for Youth Development Leadership. (3 cr. ; A-F or Audit; Every Spring)

Issues/policies in family, school, and community that drive the professional practice of community-based youth work. Practical projects explore what it means to be local, to build social capital for youth, and to involve youth in community change.

YOST 5960. Seminar in Youth Development Leadership. (1 cr. [max 4 cr.] ; S-N or Audit; Every Fall, Spring & Summer)

Group study of topics/issues. Course proposal, educational program development. Students participate in co-created learning experience with a group of peers. Four-course sequence. prereq: YDL student or instr consent

YOST 5962. Leadership Field Experience: Youth Development. (4 cr. ; S-N only; Every Fall, Spring & Summer)

Demonstration of leadership in practice. Project on youth, experiential pedagogy, and community/program settings. Focuses on public policy, advocacy, evaluation, pedagogical issues, program design, curriculum development, or applied research. prereq: YDL student
